Dumping, economic term expressing the export sale of a commodity at a price lower than in the domestic market. A practice since the 18th Century, it became prominent in the 19th. In the last 40 years large cartels of several major manufacturing countries pursued a policy of securing the export trade at dumping prices to kill competition. Laws imposing additional duties on dumped goods have been passed; first in Canada, 1904, in South Africa, 1914; and in 1921 in U.S.A., Great Britain, Australia and New Zealand.

Dunbar, an ancient seaport and town of East Lothian (Haddingtonshire), Scotland, on the coast of the Forth, 29 m. E. of Edinburgh; is a fishing station, and manufactures agricultural implements and paper; was, with its castle, which has stood many a siege, a place of importance in early Scottish history. Near it Cromwell beat the Scots under Leslie on Sept. 3, 1650. Pop. 3,800.

Dunbar, William, a Scottish poet, entered the Franciscan order and became an itinerant preaching friar, in which capacity he wandered over the length and breadth of the land, enjoying good cheer by the way; was some time in the service of James IV., and wrote a poem, his most famous piece, entitled *The Thirl and the Rote*, on the occasion of the King's marriage with the Princess Margaret Tudor, daughter of Henry VII. His poems were of three classes—allegorical, moral and comic, the most remarkable being *The Dance*, in which he describes the procession of the seven deadly sins in the infernal regions. Scott said he "was a poet unrivalled by any that Scotland has produced." (c. 1460-c. 1530).

Dunblane, a town in Perthshire, Scotland, land, 5 m. N. of Stirling, with a beautiful cathedral, which dates back as far as 1240. Pop. 4,900.

Duncan, Adam, Viscount, a British admiral, born at Dundee;

entered the navy in 1746; steadily rose in rank till, in 1795, he became admiral of the Blue and commander of the North Sea fleet; kept watch over the movements of the Dutch squadron for two years, till, at the end of that term, it put to sea. He came up with it off Camperdown, and totally defeated it, Oct. 11, 1797. (1731-1804).

VISCOUNT DUNCAN

Duncan, a landora, American revival of San Francisco; danced in New York, 1895; established schools at Berlin, 1904; Paris, 1914; Moscow, 1921. Married Sergei Essenlin about 1922, whom she afterwards divorced. She lost both her children by drowning and was herself killed in a motor accident at Nios. (1878-1927).

Duncansby Head, promontory 210 ft. high at the NE. extremity of Scotland, in Caithness. John of Groat's House is 2 m. W.

Dunciad, The, a satire by Pope in four books, the "fiercest" as well as the best of his satires, in which, with merciless severity, he applies the lash to his critics, and in which at first Theobald, but later by substitution Colley Cibber, figures as the King of Dunces.

Dundalk, capital of Co. Louth, Ireland (Eire), some 50 m. N. of Dublin; a place of considerable trade and manufactures; is an ancient city. Edward Bruce, the last king of all Ireland, was crowned and resided here. It has been besieged and taken by storm more than once. Pop. 14,000.

Dundas (of Arncliffe), the name of a Scottish family, many of the members of which have distinguished themselves at the Bar and on the Bench.

Dundas, Henry, Viscount Melville, a family; trained for the Bar; entered Parliament and rose to be Lord Advocate for Scotland. Opposed at first to Pitt, he became at last his ablest coadjutor in Parliament, and did important services in connection with the military and naval defences of the country. (1742-1811).

Dundee, a city and seaport of Angus (Forfar), Scotland, the third largest city in the country. It stands on the Firth of Tay, 10 m. from its mouth, at the N. end of the Tay Bridge. Marmalade is made, shipbuilding is carried on, and there are marine-engine works and sawmills, but the chief product is sailcloth and other coarse linen fabrics, Dundee being an important centre of the linen and jute trade. It is also the chief British port for whale and seal fishing. It is a royal burgh. Pop. 176,000.

Dundee, John, Graham of Claverhouse, Viscount. See Claverhouse.

Dundonald, of, entered the navy at the age of 17; became captain of the *Speedy*; captured in ten months 33 vessels; was captured by a French squadron, but had his sword returned to him; distinguished himself afterwards in a succession of daring feats. Selected to burn the French fleet lying at anchor in the Basque Roads, he was successful by means of fireships in destroying several vessels, but complained he was not supported by Lord Gambier, the admiral, a complaint which was fatal to his promotion in the service. Damaged otherwise, he went abroad and served in foreign navies, and materially

contributed to the establishment of the Republic of Chile and the Empire of Brazil. In 1830 he was restored by his party, the Whigs, to his naval rank, as a man who had been the victim of the opposite party. He afterwards vindicated himself in his *Autobiography of a Seaman*. 1775-1840).

Dunedin, the capital of Otago, in New Zealand, situated well south on the E. side of the South Isle, at the head of a spacious bay, and the largest commercial city in the dominion; founded by Scottish emigrants in 1848. Pop. 82,000.

Dunes, Battle of the (June 3, 1658), in which the French and English under Turenne defeated the Spanish under Condé and captured Dunkirk. English Royalists under the Duke of York (afterwards James II.) fought for Spain.

Dunfermline, an ancient burgh in Scotland, a place of interest as a residence of the early Kings of Scotland, and as the birthplace of David II., James I. and Charles I., and of Andrew Carnegie, and for its abbey, where are buried many of Scotland's kings and queens. It stands in the middle of a coalfield, and is the seat of extensive linen manufactures. Pop. 35,000.

Dungannon, a market town of Co. Tyrone, Northern Ireland, the ancient home of the O'Neills, Kings of Ulster. Pop. 3,700.

Dungarvan, a seaport and fishing town of Co. Waterford, Ireland (Eire), on the Bay of Dungarvan. Pop. 5,200.

Dungeness, a low headland of S. Kent, England, with a lighthouse and Lloyd's signalling station.

Dungeon (French "donjon," meaning a keep), in modern usage any small, vaulted room used as a prison, but originally the tower (or "keep") of a castle where the prison was.

Dunkeld, a town in Perthshire, Scotland, 15 m. NW. of Perth, with a fine 14th-Century cathedral of which the choir still serves as the parish church. The R. Tay, on which the town stands, is here crossed by a seven-arched bridge designed by Telford. Pop. 1,000.

Dunkery Beacon, a hill of Somerset, England, 1,700 ft. high, the highest point on Exmoor. It is owned by the National Trust.

Dunkirk, port of France, in the dept. of Nord, on the Straits of Dover. It has an extensive trade, many manufactures, notably of iron goods and jute and hemp, and oil refineries. During the World War it was an important British aircraft base. Pop. 35,000.

Dunlop, John Boyd, re-inventor of the pneumatic tyre (first patented by one Thompson in 1846), was born at Dregthorn, Ayrshire; removed to Belfast, 1887; there devised the Dunlop tyre, 1887. He sold out to Harvey Du Cros in 1889, removed to Dublin in 1892 and kept a drapery at Ball's Bridge, where he died. (1840-1921).

Dunmow, market town (Great Dunmow, Pop. 2,500) and village (Little Dunmow) of Essex, England. An ancient custom of Little Dunmow, now held at Ilford, awards a side of bacon, the Dunmow Flitch, to a couple who neither quarrel nor regret of their marriage for a year and a day after its celebration.

Dunne, Finley Peter, American humorist, creator of "Mr. Dooley," was born in Chicago; reporter on newspapers there, he wrote in the *Journal* the first sketches introducing that publican-philosopher. The first series was issued as *Mr. Dooley in Peace and War*, 1896. There were about half-a-sequels. (1861-1940).

Dunnet Head, a rocky peninsula in Caithness, the most northerly point in Scotland.

Dunnottar Castle, an old castle now in ruins, on the flat summit of a precipitous rock, 1½ m. S. of Stonehaven, Kincardineshire, Scotland, and connected with the mainland by a neck of land called the "Fiddle Head"; famous in Scottish history as a State prison, and as the place of safekeeping at a troubled period of the Scottish regalia, now in Edinburgh Castle.

Dunois, Jean, a French patriot, called the Bastard of Orleans, born in Paris, natural son of Louis of Orleans, brother of Charles VI.; one of the national heroes of France; along with Joan of Arc, compelled the English to raise the siege of Orleans, and contributed powerfully, by his sword, to expel the English from France after the death of that heroine. (1402-1468).

Dunoon, popular seaside resort of Argyllshire, Scotland, on the Firth of Clyde, 8 m. W. of Greenock. Pop. 12,000.

Dunraven, Earl of, Irish politician and soldier. He acted as war correspondent at the siege of Paris in 1870. On the establishment of the Irish Free State he became a senator. As a yachtsman he twice attempted to win the America Cup. (1841-1926).

Dunrobin Castle, mansion of Sutherlandshire, Scotland, on the Dornoch Firth, seat of the Duke of Sutherland. Part of it dates from 13th Century.

Duns, County and market town of Berwickshire, Scotland, 13 m. W. of Berwick-on-Tweed. Near is a hill, Duns Law, site of a Covenanters' camp in 1699, and original site of the town. Pop. 2,000.

Dunsany, Edward John Moreton Drax Plunkett, eighteenth Baron, Irish playwright, but born in London and educated at Eton and Sandhurst; fought in the Boer War and the World War. His first play, *The Glittering Gate*, produced at the Abbey Theatre, Dublin, in 1909. His best play was probably *The Gods of the Mountain*, 1911. Writes also novels, one of the best of which is *The Wise Woman*. (1878-).

Dunsink, hill and village of Co. Dublin, Ireland (Eire), the site of the College observatory.

John Duns Scotus, one of the philosophers of the 14th Century, whether he was native of England, Scotland or Ireland is uncertain; entered the Franciscan order, and from his acuteness got the name of "Doctor Subtilis"; lectured at Oxford to crowds of auditors, and also at Paris; was the contemporary of Thomas Aquinas, and the head of an opposing school of Scotists, as against Thomists, as they were called; whereas Aquinas proclaimed the Understanding as principle, he proclaimed the Will, from whose spontaneous exercise he derived all morality; with this separation of theory from practice and thought from thing (which accompanied it) philosophy became divided from theology, reason from faith; reason took a position above faith, above authority (in modern philosophy), and the religious consciousness broke with the traditional dogma (at the Reformation). (c. 1265-1308).

Dunstable, a market town of Bedfordshire, England, 5 m. E. of Luton, said to have been a Roman station. Here Henry VIII.'s marriage with Catharine of Aragon was annulled. Pop. 9,080.

Dunstaffnage, ruined castle of Argyllshire, Scotland, on Loch Fyne, 3 m. N.E. of Oban, traditional seat of the ancient Kings. Here the "Stone of Destiny" was kept before its removal to Rome.

Dunstan, St., an English ecclesiastic, born at Glastonbury; a man of high birth and connection as well as varied accomplishments; began a religious life as a monk living in a cell by himself; became Abbot of Glastonbury, in which capacity he adopted the rôle of statesman, and rose to great authority during the reign of Edgar, becoming Archbishop of Canterbury, ruling the nation with vigour and success, but with the death of Edgar his power declined, and he retired to Canterbury, where he died of grief and vexation; he is the patron saint of goldsmiths. (c. 909-988).

Dunster, a picturesque market town of Somerset, England, 23 m. NW. of Taunton, with an ancient castle, and a curious wooden Yarn Market.

Dunsterville, Major-General Lionel Kipling's "Stalky"; born at Lausanne; served in Waziristan and on North-West Frontier, 1894-1898; China, 1900; and in World War led the Dunster Force to Baku, 1918. Has written *Stalky's Reminiscences* and *Stalky Settles Down*. (1865-).

Dunwich, village of Suffolk, England, 4½ m. SW. of Southwold, the remains of a once-important town and harbour which disappeared owing to sea encroachment.

Duodecimals, a system of notation in arithmetic employing denominations of 12 as against the denominations of 10 in the decimal system. It is chiefly used by surveyors, enabling them to calculate the number of feet or inches in either a superficial or a three-dimensional area by twelfths. In the table for square measure 12 sq. in. is reckoned as 1 superficial prime, and 1 sq. ft. as 12 superficial primes. In cubic measure 12 cu. in. is 1 solid second, 144 cu. in. is 1 solid prime, and 1 cu. ft. is 12 solid primes.

Dupleix, Joseph, a French merchant, head of a factory at Chandernagore, who rose to be governor of the French settlements in India (1742), in the management of which he displayed conspicuous ability, defending them against the English and receiving the dignity of marquis. Jealousy at home and Clive's victories, however, led to his recall, and he was left to end his days in neglect and poverty, though he pleaded hard with the cabinet at Versailles to have regard for his sacrifices for his country. (1697-1703).

Duquesne, Abraham, Marquis, an illustrious naval officer of France, born at Dieppe; distinguished himself in many a sea engagement, and did much to enhance the naval glory of the country. Among other achievements plucked the laurels from the brow of his great rival, De Ruyter, by, in 1676, defeating the combined fleets of Spain and Holland under his command. Louis XIV. offered him a marshal's baton if he would abjure Calvinism, but he declined. He was the only one of the Huguenots excepted from proscription in the Revocation of the Edict of Nantes, but his last days were saddened by the banishment of his children. (1610-1685).

Duralumin, an alloy of aluminium (94 per cent.), containing also copper, magnesium, manganese and silicon. Invented in 1906 by Wilm, it is widely used, and after a heating process it obtains considerable strength.

Durance, a tributary of the Rhône in France, which, after a rapid course of 118 m., falls into that river by its left bank 3 m. below Avignon.

Durango, a large, mountainous, inland State of Mexico, crossed by the Sierra Madre on its W. side. The rainfall is slight, cotton, wheat and other crops are grown, but mining is the chief industry, the State being one of the richest mineral regions of Mexico. Silver has been worked since the

arrival of the Spanish, but iron, gold, copper, etc., also exist, iron in great quantities. Area 42,270 sq. m. Pop. 404,000. The capital, the centre of the commercial and mining activity, is a city of the same name.

Durazzo (*Durrës*), seaport of Albania, a place of importance under the Romans, and later held by Venetians and by Turks. Olive oil and grain are exported. Pop. 8,700.

Durban, the port of Natal, S. Africa, largest town in the Province, with a land-locked harbour. It is the centre of the Natal sugar industry and of almost the whole overseas trade of the Province. It is the seat also of a whaling industry and the terminus of the Imperial Airways biweekly service to South Africa. Pop. 259,000, of whom 94,800 are Europeans.

Durbar, a ceremonial State reception in India.

Dürer, Albrecht, the great early German painter, painter and engraver, born at Nürnberg, son of a goldsmith, a good man, who brought him up to his own profession, but he preferred painting, for which he early exhibited a special aptitude, and his father bound him apprentice for three years to the chief artist in the place, at the expiry of which he travelled in Germany and other parts. In 1506 he visited Venice, where he met Bellini, and painted several pictures; proceeded thence to Bologna, and was introduced to Raphael. His fame spread widely, and on his return he was appointed court-painter by the Emperor Maximilian, an office he held under Charles V. He was of the Reformed faith, and a friend of Melancthon as well as an admirer of Luther, on whose incarceration in Wartburg he uttered a long lament. He was a prince of painters, his drawing and colouring perfect, and the inventor of etching, in which he was matchless. He carved in wood, ivory, stone and metal, was an author as well as an artist, and wrote, among other works, an epoch-making treatise on proportion in the human figure, "it could not be better done" was his quiet, confident reply as a sure workman to a critic on one occasion. (1471-1528).

D'Urfe, Tom, a facetious poet; author of comedies and songs; a great favourite of Charles II. and his court. Of comedies he wrote some 30, which are all now discarded for their licentiousness, and a curious book of sonnets, entitled *Pills to Purge Melancholy*, came to poverty in the end of his days. (1653-1723).

Durga. See *Devī*.

Durham, an ancient city on the Wear, county town of Durham, with a noble cathedral and a castle, once the residence of the bishop; now a university seat. It is the heart of a county of the same name, rich in coalfields, and with numerous manufacturing towns. Area (county) 1,014 sq. m. Pop. (county) 1,486,000; (city) 18,000.

Durham, John George Lambton, first statesman, born in Durham Co.; a zealous Liberal and reformer, and a member of the Reform Government under Earl Grey, which he contributed much to inaugurate; was ambassador in St. Petersburg, and was sent out as governor-general and High Commissioner to Canada in 1838 to inquire into, and adjust, Provincial difficulties, but he remained at the head of affairs there only five months, resigning owing to criticism in England of his lenient treatment of the ring leaders of the rebellion in Lower Canada. His famous Report, issued in 1839, led to the union of Upper and Lower Canada and the institution of a Common Legislative Assembly responsible to the Executive Council. (1793-1840).

Durian, or *Durion*, fruit of the Malayan tree, *Durio subthinus*. It is enclosed in a prickly husk, the size of a coconut, but the fruit itself has a fine flavour, although an unpleasant smell.

Durra, *Sorghum vulgare*, a species of millet, cultivated for food in Asia and Egypt. It yields the glucoside, durrin.

Dursley, a market town of Gloucestershire, shire, England, 15 m. SW. of Gloucester, manufacturing agricultural tools, incubators, separators, etc. Pop. 3,000.

Duse, Eleonora, Italian actress, born near Venice, daughter of an actor; acted in Italy, S. America, Russia, U.S.A., London, Scandinavia and Paris, where she rivalled Bernhardt. Played a wide range of parts, including Shakespeare and Ibsen. Died in Pittsburgh. (1858-1924).

Dussek, Jan Ladislav, pianist and composer, born at Caslav, Bohemia, son of an organist. Wandered through Europe and came to London 1809, where he had great success; but bankrupted through part-ownership of a music-shop, fled to Hamburg, 1800. Was in various nobles' service and finished in Talleyrand's. Died at St. Germain-en-Laye. He wrote many melodious compositions for the pianoforte. (1761-1819).

Düsseldorf, a well-built town of Rhensish Prussia, on the right bank of the Rhine. It is a place of manufactures and has a fine picture-gallery with a famous school of art associated. The chief industries are iron and steel, cotton-spinning and weaving, paper-making, dyes, silks, etc. Pop. 498,000.

Dust, finely powdered earth, or other substance, such as coal, flour, etc. Specific mineral, vegetable or animal dusts are the cause of a number of occupational disorders, affecting the lungs in various ways. Cosmic dust consists of particles of matter floating on the outer layer of the atmosphere. The atmosphere itself is laden with dust. In large towns it has been calculated that dust particles are present in the air to the extent of one to a hundred thousand in every c.c. of air.

Dutch Auction, the article to be sold is first put up at the maximum price. If there is no offer, the price is then lowered by stages until a bid is made.

Dutch East Indies (*Netherlands Indies*), the exclusive name of the Dutch possessions.

They include Java and Madura, Celebes, the Moluccas, Billiton, Bali, Timor Archipelago, part of Borneo, New Guinea, etc. They are volcanic and fertile, and mainly covered with dense forest and rich in minerals, including tin, petroleum and precious stones. The natural resources are immense, but as yet little exploited except on Java. Exports include all kinds of tropical products, including spices, rice, sugar, coffee, tea, rubber, tobacco, etc. Capital Batavia on Java. Area 735,000 sq. m. Pop. 60,000,000. They were conquered by the Dutch East India Co. (founded 1602), and ruled by the company until its dissolution in 1795, when they came under the rule of Holland. See under the separate islands for a description of each.

Dutch Metal, or Dutch Gold Leaf, an alloy of varying proportions of copper and zinc, but usually somewhere in the region of 80 per cent. copper and 20 per cent. zinc. It is malleable and used as a substitute for gold leaf, though it tarnishes rapidly.

Duunvirs (*Duunviri*), the name of two magistrates who exercised in ancient Rome the public functions of keeping the Sibylline books containing the destinies of Rome. They were first appointed by Tarquin and replaced later by the Decemvirs.

Duveen, Sir Joseph Joel, Anglo-Dutch birth. He gave several works to national collections and built the Turner wing of the Tate Gallery. (1843-1908). His son Joseph Duveen, also a generous patron of art and donor of galleries to the National Portrait and Tate Galleries in London, was raised to the peerage in 1933 as Lord Duveen of Millbank. (1862-).

Dvina, the name of two rivers of Europe, near Russia, the Northern of which flows into the White Sea, being formed by the confluence of the Sukhona and the Yug near Velliki-Ustyug. It is connected by canal with the Neva and the Volga. Archangel is at the mouth. The Southern (also called the Duna) rises near the source of the Volga, and flows through Poland and Latvia to the Gulf of Riga, and is an outlet for Russian timber.

Dvinsk (Daugavpils), a town of Latvia, on the Dvina (Duna), with a trade in flax, hemp and timber; the scene of fighting (1915-1916) between Germans and Russians. Pop. 45,000.

Dvorák, Antonín, Bohemian composer. It was his *Stabat Mater*, composed in 1880 that won him international fame. His work shows great originality. (1841-1904).

Dwarf, a person of abnormally small stature by comparison with the standard measurement of the race to which he belongs. The condition is probably due to an abnormally small pituitary gland. Dwarfs are otherwise well formed, and remarkable for liveliness of temperament. A notable English dwarf was "Sir" Jeffery Hudson, who was only 18 in. high at nine years old and never more than 3 ft. 9 in. high, dwarf of Henrietta Maria and served in a cold pie before Charles I. in 1628. Another famous dwarf, Charles Stratton ("General Tom Thumb"), an American, only 2 ft. 7 in. high at 35 years old, came to England in 1848. Dwarf races also exist in Equatorial Africa, Asia and Oceania with an average height of about 4 ft.

Dwarf Stars, are those of comparatively small volume and brightness and of high density.

Dwarf Trees, Japanese. Both deciduous and evergreen trees, such, for example, as oak and pine, are grown, and mature at a foot high by means of careful pruning, and root restriction. Some, such as the Juniper, have small, slow-growing varieties which are suitable for growing in small trees in the rock garden.

Dyaks, or *Dyakas*, aborigines of Borneo, a race nearly allied to the Malays.

They were originally head-hunters, but the last decapitating tribes were dispersed by the Rajah of Sarawak in 1870. They now number over 2,000,000.

DYAK WAR CANOE

Dyce, William, a distinguished Scottish artist, born in Aberdeen, studied in Rome; settled for a time in Edinburgh, and finally removed to London; painted portraits at first, but soon took to higher subjects of art. His work was such as to commend itself to both German and French artists. He gave himself to fresco-painting, and as a fresco-painter was selected to adorn the walls of the Palace of Westminster and the House of Lords. His "Baptism of Ethelbert" in the latter, is considered his best work. (1806-1884).

Dyck, Van. See *Vandyck*.

Dyer, Reginald Edward Harry, brigadier-general; born at Simla, India; educated at Cork. Commissioned 1885; served in Burma and other campaigns.

Received C.B. for efficient command on E. Persia border in World War. In 1919, compelled to resign on account of his drastic method of quelling a rising at Amritsar (q.v.). The rising, however, was a formidable one, and the Hunter Commission of Enquiry merely found that he had been "unduly severe." (1864-1927).

Dyes, substances, usually themselves a fabric or other material in such a way as to resist the action of soap, water and, if possible, light. Until the development of modern chemistry, dyes were comparatively few, the chief of those previously known being indigo, madder and Tyrian purple. During the last half-century the range has been enormously widened, both in variety of colours and in the production of fadeless dyes.

Chemically, all dyes are carbon compounds containing carbon atoms in rings and one or more groups of atoms known as chromophores, together with such groups as $-NH_2$ and $-OH$ (auxochromes). Without the auxochrome(s) the substance may be coloured, but will probably not be a dye—i.e., anything coloured with it would lose the colour on washing.

There are several classes of dye, the chief being: (a) direct dyes, which will dye silk and wool directly; (b) mordant dyes, which will dye cotton (or wool, etc.) if the fabric is first steeped in a solution of mordant, such as alum, the object of the mordant being to form an insoluble coloured body with the dye; (c) vat dyes—e.g., indigo—in which the fabric is soaked in a solution of a soluble derivative of the dyestuff and then treated in such a way as to regenerate the dye itself, which is insoluble in the fibres; (d) ingrain dyes, which are actually produced within the fibres by suitable chemical reactions; an example is aniline black.

Fadeless dyes are mostly derivatives of the coal-tar substance anthracene, $C_{14}H_{10}$, whilst another ingredient of tar—viz., naphthalene, $C_{10}H_8$ —is the starting-point in the synthetic manufacture of indigo. Tyrian purple is itself now obtained synthetically. It is closely related to indigo, having two bromine atoms in place of two of the hydrogen atoms in the latter dye. The first synthetic dye was mauveine, prepared in 1856 by (Sir) W. H. Perkin, then a lad of 13.

Dykes, veins of igneous rock traversing sedimentary strata in a vertical direction, which originated through molten lava, being forced out through the cracks in the overlying rocks and solidifying. These dykes are often harder than the surrounding rock, and, consequently, they stand out above the surface when the latter has been removed by denudation.

Dymchurch, a village and seaside resort of E. Kent, England, on Romney Marsh, once notorious for its smugglers. Pop. 1,000.

Dymoke, the family whose head is the manor of Sorrelsbury, Lincolnshire, in right of succession to the Marmions, who held it in the 12th and 13th Centuries. The challenge on Coronation Day was last given in 1821 (George IV.'s Coronation).

Dynamics, the branch of mechanics which deals with the relations between forces and the motions caused by these forces. The principal laws of dynamics were discovered by Sir Isaac Newton, and may be shortly stated as follows: (1) Every body continues in a state of rest, or of uniform motion in a straight line, unless acted upon by some force. (2) Any change of motion of a body is directly proportional to the force applied and takes place

DYMOKES ARMOUR (17TH CENT.)

in the direction of the force. (3) To every action there is always an equal and opposite reaction. The third law may be understood by an example. Suppose a book of 2 lb. weight is resting on a table and consequently exerting a force of 2 lb. wt. on the latter, then the table is also exerting an upward force of 2 lb. wt. on the book.

Dynamite, an explosive invented by the Swedish chemist Alfred Nobel, in 1863-1867. It had been shown in 1846 by Sobrero that when glycerine is treated with a mixture of concentrated nitric acid and concentrated sulphuric acid, it is converted into a colourless liquid—nitroglycerine (*g.v.*) or glyceryl trinitrate—of extremely explosive nature. The explosion is very rapid and shattering, and since the liquid is likely to explode even on slight mechanical shock, its direct application is impracticable.

Nobel found that if nitroglycerine is absorbed in about one-third of its weight of kieselguhr (a variety of very fine sand) it forms a putty-like mass of a much more stable character; he called this dynamite. Dynamite is fired by means of detonators, and is used for blasting. It cannot be used as a propellant explosive in artillery, owing to its tremendously violent disruptive effect. Sawdust is sometimes substituted for kieselguhr, while if cork-charcoal is used as the absorbent, the carbo-dynamite so obtained has a much greater explosive power.

Dynos. See Electric Generators.

Dyne, the unit of force in the metric system, that force which gives a mass of one gram an acceleration of one centimetre per second per second.

Dysart, a royal borough, seaport and colliery town of Fifeshire, Scotland, on the Firth of Forth. Pop. 4,600.

Dysentery, an infectious disease, causing inflammation and ulceration of the large intestine. Once prevalent in temperate regions, it is now mainly a tropical disease, where it is often epidemic, especially when sanitary conditions are bad. It sometimes combines with scurvy or malaria. One form of dysentery is due to an animal parasite (a protozoa); another to bacilli. The chief symptom is painful diarrhoea, accompanied by the evacuation of blood and shreds of tissue in the faeces. Castor oil mixed with laudanum can be administered in early stages, but the drug of chief value in the cure is ipecacuanha. Dysentery may become chronic.

Dyspepsia, meaning bad digestion. A disordered digestion, so that the passage of food through the stomach is accompanied by pain and discomfort. There is an acute form following a fault in diet or due to poisoning. Excess of acidity in the gastric juices, combined with irregular meals and hurried feeding, produces a dyspepsia, which may lead to a chronic condition of catarrh of the stomach. Nervous dyspepsia is the inability of the stomach to digest or expel its contents, and results from nervous and mental exhaustion, accompanied by depression. Treatment in all cases of dyspepsia involves rest and extreme care in the diet.

Dysprosium, an element, exceedingly rare and not yet isolated. It is found in gadolinite and other rare earths of the same group. Symbol, Dy. Atomic weight, 162.5.

E

Eadmer, a celebrated monk of Canterbury, bury; friend and biographer of St. Anselm, author of a history of his own times (*Historia Novorum*), as also of Lives of several of the Saints; nominated to the bishopric of St. Andrews in 1120, but Alexander I. of Scotland refused to permit an English Archbishop of Canterbury to perform the ceremony of consecration. (c. 1060-1124).

Eagle, the name of the large birds of flight, forming the subfamily Aquilinae of the Falcons (Falconidae) and inhabiting all parts of the world. There are two main divisions of the family—viz., those with legs feathered all the way to the toes and those with bare legs (i.e., the tarsus unfeathered). The first section includes the genera *Aquila* (to which belongs the Golden Eagle), *Archibuteo* (the

GOLDEN EAGLE

Rough-legged Buzzards or Buzzard *Buteo* (including the Booted Eagle, S. Europe and Africa). The second division includes the five magnificent species of Sea-Eagles of the genus *Haliaeetus*. The Golden Eagle (*Aquila chrysaetos*) still breeds in the more remote parts of Scotland. Its nest or eyrie is usually built on cliffs or mountains. The Erne or White-tailed Sea-Eagle (*Haliaeetus albicilla*) has only ceased to breed in Britain in comparatively recent years.

The eagle has been adopted by various nations as an emblem of power, nobility and generosity, and in Christian art it is the symbol of meditation, and the attribute of St. John.

Ealing, parliamentary borough of Middlesex, England, a westerly suburb of London, until a century ago a small village. Pop. 117,000.

Ear, the organ of hearing, comprising the inner ear, the middle ear and the external ear. The inner ear contains a small coiled tube (cochlea) lodged in the skull and filled with fluid. It is separated by a membrane from the middle ear, or "drum," which is filled with air, and which in turn is separated by the tympanic membrane from the tube of the external ear leading to the auricle on the outside of the head.

Three small bones "auditory ossicles" stretch from the tympanic membrane across the middle ear and transfer vibrations to the inner ear, the fluid of which is set in motion. Interpreted by the auditory nerves connecting the organ of Corti in the inner part of the cochlea with the brain. The air pressure in the drum is kept constant by the Eustachian tube, which has an outlet in the pharynx. Attached to the cavity of the inner ear are three semicircular canals filled with fluid, and the sense of equilibrium is largely dependent on the movement of this fluid.

Earhart, Amelia (Mrs. G. Palmer Putnam), American aviator; born at Atchison, Kansas; served with the Red Cross in World War. She was the first woman to cross the Atlantic by aeroplane—Newfoundland to Burry Port (Wales), 1926. Flew from Newfoundland to Ireland in 1931; home, 1932.

and made the first solo flight from Honolulu to Oakland, Cal., in 18½ hrs., 1935. On July 2, 1937, while attempting a flight round the world, she was lost at sea with her navigator, Capt. Noonan, near Howland I. (1898-1937).

Earl, the oldest title of English nobility, a ranking third in the British peerage. Originally a concession to the dignity of earl was a large area of land held in feudal tenure, connected with judicial and administrative functions, and was connected therewith, and was a solemn service of investiture. The title lost its official character since the reign of Queen Anne when the investiture has been dispensed with, the office being conferred by letters-patent. The wife of an earl is a countess. The title is hereditary, the eldest son assuming during his father's lifetime the title of "viscount," which is in most cases the second title of the father.

Earl Marshal, the eighth great officer of State in England, the head of an office of very ancient institution, now the head of the college of arms, and hereditary in the family of the Dukes of Norfolk since 1678; is responsible for organization of all matters of high ceremonial, such as coronations, royal processions, etc.

Early Closing, the result of a movement for shortening the working hours of shop assistants and improving their working conditions. It was inaugurated at a meeting of drapers' assistants in 1842, but statutory provision only came many years later. The Shops Act of 1899 stipulated one seat for every three female assistants. The Shops Act of 1912 made a weekly half-holiday compulsory for every assistant. The Shops Act of 1920 ordered compulsory closing of shops at eight o'clock weekdays, nine o'clock Saturdays. Longer hours are permitted in the case of shops at holiday resorts, during special seasons like Christmas, and in exhibitions. There are also provisions for compulsory weekly half-holidays. The particular day for closing is fixed by the local authorities, and may vary at different seasons of the year and for different kinds of shops. Fines up to £20 may be inflicted for any infringement of the Act after a first offence. The headquarters of the Early Closing Association are in Ludgate Hill, London, E.C.

Early English, a term in architecture used to designate that particular form of Gothic architecture in vogue in England in the 13th Century, whose chief characteristic was the pointed arch.

Earn, a loch of Perthshire, Scotland, measuring 6½ m. by 3 m. broad. The R. Earn issues from it to join the Firth of Tay after a course of 46 m. Fish abound.

Ear-ring, a ring worn suspended from the lobe of the ear, which is usually pierced (though not always) to take a supporting pin. The custom of wearing ear-rings is one of the greatest antiquity, and has not always been confined to the female sex. Pendant jewels are often worn.

Earth, the planet on which we live, and one of the lesser planets of the Solar System (q.v.). In shape it is oblate spheroid—i.e., very nearly spherical, but slightly depressed at the two poles, the diameter at the equator being 7,926 m. and at the poles 7,900 m. The circumference of the earth at the equator is 24,902 m. The surface area is approximately 197,000,000 sq. m., nearly three-quarters of which is water. In the Solar System its orbit lies between those of Mercury and Venus. It has one satellite of its own, the Moon, which revolves round it. It is composed of an outer gaseous envelope and an inner globe. The gaseous envelope, known as the atmosphere (q.v.), consists of 78 per cent. nitrogen, 21 per cent. oxygen and

a small proportion of other gases. The lower regions of the atmosphere are frequently impregnated with water vapour as a result of evaporation of the water areas in the heat of the sun. The globe itself has a solid crust in which some 92 chemical elements occur either free or in combination.

The earth also has the properties of a gigantic magnet, with a N. magnetic pole and a S. magnetic pole, the N. pole of the compass being the one which points to the Northern magnetic pole. The magnetic N. and S. poles do not coincide with the geographical N. and S. poles, the geographical N. pole pointing upwards approximately in the direction of the pole-star.

The sun is the chief source of heat and light on the earth. The surface which is turned away from the sun is in darkness (night) and cold. The most important variations of heat and light are those caused by the earth's own motion inside the Solar System, which are two—viz., (1) its rotation on its own axis (an imaginary line passing through the true N. and S. poles) from W. to E., this causing the apparent rising of the sun in the E. every day, and the apparent setting in the W. The light of the sun reaches London some five hours earlier than it reaches New York, which is 3,200 m. further W. The complete rotation of the earth takes 24 hours, our time system being derived from the rotation itself. (2) Like other planets, it also revolves round the sun in an elliptical orbit (called the "ecliptic") the whole circuit taking approximately 365½ days, which is the Solar Year. The greatest distance from the sun is approximately 93,000,000 m. and the smallest distance approximately 90,000,000 m.

The axis of the earth is inclined at an angle of 23½° from the true vertical to the ecliptic, this giving rise to the phenomenon of the seasons. At one point in the revolution of the earth round the sun the tilt of the axis is such that the northern half of the hemisphere is inclined towards the sun, at another time the southern half. The hemisphere which is tilted towards the sun receives the rays more directly, and a warmer season (summer) is the result. At the equinoxes (March 21 and Sept. 22) the tilt of the earth's axis is across the rays of the sun, and equal day and night exists all over the face of the globe.

Earth, name given to that wire of a wireless set or other electrical apparatus which connects a certain part with the earth, and therefore keeps it at zero potential.

Earth Houses, known also as Yird Picts' Houses, underground dwellings in use in Scotland, extant even after the Roman evacuation of Britain. Entrance was effected by a passage not much wider than a fox burrow, which sloped downwards 10 or 12 ft. to the floor of the house. The inside was oval in shape, and was walled with overlapping, rough stone slabs. They probably served as storehouses, winter quarters and as places of refuge in times of war.

Earth Pillars, or Pyramids, structures found mostly in Switzerland in the moraines of glaciers in Valais, near Botzen, and also in the Tyrol. They range up to 100 ft. high, and are sometimes capped by a single boulder of limestone or sandstone. They once formed part of rock terraces, from which they have been cut off by rain. Specimens are also to be found in Colorado and at Fochabers, Scotland.

Earthquakes, disturbances of the times due to the contraction of a section of the crust of the earth caused by the cooling of the planet. The point at which the earthquake originates is the seismic focus, the point of the surface immediately above, where the effects

are most immediately felt, being the epifocus. The contraction of an interior section affects the support given by the underlying structures to the outer sections. This causes the folding movements or the subsidence of parts of the earth. The disturbances, which rarely last for more than two minutes, vary in intensity from a slight tremor to a violent convulsion, changing the appearance of the surface, and a series of disturbances may extend over a period of years, gradually diminishing in intensity and frequency. Another frequent cause is the movement of the earth's crust along existing fault planes, which may be horizontal, appearing as a crack or fissure, vertical, or partly horizontal and partly vertical.

Earthquakes occur most frequently round the Pacific coast and in regions which include the Alps, Caucasus and Himalayas. The most disastrous earthquakes of modern times have been those at Lisbon (1755), Krakatoe, in the Dutch E. Indies (1883), Japan (Tokyo and Yokohama) (1923), and Quetta (British Baluchistan) (1935).

Earthwork, mounds of earth raised as a defence in warfare, or to form the banks of canals, or the embankments for railways. The term also covers the barrows (q.v.), cairns and circles, such as those in Cernwall and Wales, constructed by primitive races and used as tombs or places of sacrifice, or merely as settlements.

Earthworm, a large group of annelids, of world-wide distribution, and represented in England chiefly by members of the family Hurlericidae. They are elongated in form, consist (like all the annelids) of many narrow rings in contact with each other, have a naked skin, and a fleshy or bluish colouring. They have no tentacles, no eyes and no teeth, but the mouth has a short proboscis. They progress through the ground by swallowing the earth as they burrow and casting it up, thus breaking, ploughing and ventilating the earth. The species found in Britain are never more than 10 in. in length, but some tropical species reach a length of 4 ft.

Earwig, the common name of the insects of the family Forficulidae, which is almost cosmopolitan in distribution. It has a body terminated by a pair of horny forceps, which in the males is considerably curved. The majority of species have two distinctive pairs of wings, of which the fore pair are very short and leathery, but the hind pair large and membranous. The hind pair fold fan-wise and transversely and at rest are completely concealed under the fore pair. As far as is known, they are seldom used in flight. The most important species is the common European earwig (*Forficula auricularia*), familiar in England and also in parts of N. America and New Zealand, where it has established itself. It is nocturnal, frequents dark places (under stones, bark, etc.) and at night feeds on leaves, petals of flowers, etc. The name is of uncertain origin.

EARWIG

Easement, in law a liberty, advantage or privilege, without profit, which one proprietor has in or through the estate of another, distinct from the ownership of the soil; as, e.g., a right of way, a water-course, a right to light (see *Light*, Ancient). Easements arise by custom; prescription or immemorial user for a certain time; by express grant; or by necessity—i.e., where it is absolutely necessary to the reasonable enjoyment of a property.

East, Sir Alfred, British landscape-painter; born and educated at Kettering; studied art in Glasgow and Paris. Exhibited

at Academy from 1883. Among his best paintings are "A Passing Storm" (in the Luxembourg), "The White Carnival" (Brussels) and "The Golden Valley" (Leeds). Knighted, 1916; R.A., 1913. (1849-1913).

East Anglia, Britain, one of the kingdoms of times, established in the early mid-6th Century, and at the height of its power in the early 7th. It comprised the counties of Norfolk and Suffolk. It has since been involved in frequent wars and for some time subject to Mercian domination, but it has since regained its independence, acknowledging the supremacy of Wessex. It was subject to the Danes from 878, when the Danes of East Anglia were expelled by Edward the Elder and the country was governed by English earls.

Eastbourne, a watering-place and health resort on the Sussex coast, England, between Brighton and Hastings and 66 m. S. of London. The famous cliff, Beachy Head, is included in the borough. Pop. 58,000.

Easter, an important festival of the resurrection of Christ; held on the first Sunday after the first full moon of the calendar which happens on or next after March 21, and constituting the beginning of the ecclesiastical year; the date of it determines the dates of other movable festivals. It derives its name from Eostre, a Saxon goddess of the Spring, whose festival was celebrated about the same time, and to which many of the Easter customs owe their origin. Easter can vary at present between March 22 and April 25, and there has been a strong movement to fix it, this resulting in the Easter Act of 1928, which fixes Easter as the first Sunday after the second Saturday in April though international acceptance is necessary before it is applied.

Easter Island (Rapa Nui), a small volcanic island in the SE. Pacific, 2,000 m. W. of Chile, to which it belongs, and the most easterly island of Polynesia. It is remarkable for remains of ancient stone statues of great size, the origin of which has given rise to much conjecture.

Eastern Church, in Church History, means the Greek Church, which formerly had its chief seat at Constantinople, and for its chief ruler the Patriarch of that capital, as opposed to the Western Church, which had its metropolis at Rome and was ruled by the Pope. The official designation is: "The Holy Orthodox Catholic Apostolic Eastern Church."

Eastern Question, problem relating to the existence of Turkish rule over European territory as affecting the European Powers. The Eastern Question became acute in the 19th Century owing to Turkish oppression of the subject Balkan peoples. Serbians and Montenegrins allied with Russia defeated the Turks at the Battle of Plevna (1877), but although by the Treaty of Berlin Turkish Territory in Europe was reduced, English and French jealousy of Russian predominance kept Turkey in power. As a result of the World War, however, Turkey-in-Europe was limited to some 9,260 sq. m. of East Thrace.

East Ham, a borough of Essex, England, sending two members to Parliament. It is part of Greater London, and is mainly industrial. Pop. 142,500.

East India Company, chartered by Queen Elizabeth in 1600; erected its first factories on the mainland in 1613 at Surat, but its most profitable trade in these early years was with the Spice Is., Java, Sumatra, etc. Driven from these islands by the Dutch in 1633, the Company established itself altogether on the mainland. Although originally created under royal charter for purely com-

mercantile purposes, it entered in 1689 upon a career of territorial acquisition, which culminated in the establishment of British power in India. Gradually, as from time to time fresh renewals of its charter were granted, it was stripped of its privileges and monopolies, till in 1868, after the Mutiny, all its powers were vested in the British Crown.

East Indies, a term variously applied to the Dutch E. Indies, to the Malay Archipelago; or to India, Indo-China, Malaya and the Malay Archipelago.

Eastlake, Sir Charles Lock, English painter, artist and author, born at Plymouth; studied painting in London and in Paris; produced the last portrait of Napoleon, which he executed from a series of sketches of the emperor on board the *Bellerophon* in Plymouth harbour. He travelled in Greece, and from 1816 to 1830 made his home at Rome. "Christ Weeping over Jerusalem," his greatest work, appeared in 1841; was president of the Royal Academy. (1793-1865).

Eastleigh, (with Bishopstoke) urban district of Hampshire, England, adjoining Southampton to the NE. Here are the Southern Railway's rolling-stock works. Pop. 18,000.

East London, seaport and seaside resort of S. Africa, with a fine harbour at the mouth of the Buffalo R.; the chief port for wool and mohair export in S. Africa. Pop. (white) 31,000.

East Lothian, a maritime county of Scotland, on the E., fronting the Firth of Forth and the North Sea, N. of Berwickshire; on the southern border lie the Lammermuir Hills; the Tyne is the only river; considerable quantities of coal and limestone are wrought, but agriculture is the chief industry, 64 per cent. of the land being under cultivation. Area 267 sq. m. Pop. 47,600.

Eastman, George, American scientist, inventor of the roll-film for photography and designer of the Kodak cameras; founder of the Eastman-Kodak Company, and Philanthropist. Died by his own hand. (1854-1932).

East Providence, township and summer resort on Rhode I., U.S.A., on Providence R., opposite Providence. Chemicals and electrical supplies are manufactured, and there is trade in oysters. Pop. 30,000.

East Prussia. See Prussia.

East River, the strait which separates Brooklyn, on Long I., and Manhattan and the Bronx (New York), lying between Long I. Sound and Upper Bay, about 15 m. long; is spanned by four suspension bridges.

Eau de Cologne, a perfume originally manufactured by Johann (or Giovanni) Maria Farina, an Italian who settled at Cologne in 1709, by distillation from certain essential oils with rectified spirit.

Ebbw Vale, urban district of Monmouthshire, England, 18 m. NW. of Newport. A colliery town with a large iron and steel works, it suffered severely in the post-war trade depression. Pop. 32,000.

Ebert, Friedrich, German statesman. Educated at an elementary school, he became a saddler in Heidelberg; at 22 he edited a Socialist newspaper, but was practically an unknown man when on the revolution of 1918 he was made Chancellor in succession to Prince Max of Baden. In 1919 he became first President of the German Republic. (1870-1925).

Ebonite, hard rubber, or a vulcanite, containing a larger proportion of sulphur and other such as

shellac, gutta-percha, antimony, etc. Its hardness ensures its taking a good polish, and despite its name it may resemble ivory, bone or horn. It acts as an electrical insulator.

Ebony, the heavy, hard, deep-black, heartwood of various species of

trees, genus *Diospyros*, of the natural order Ebenaceae, especially of the *Diospyros Ebenus* of India and Ceylon, the *Diospyros Melanoxylon* (Coromandel Ebony) of E. India and the *Diospyros Tomentosa* of N. Bengal. The trees are characterised by their jet-black bark, narrow trunk and the fact that until the heartwood is reached, the wood of the trunk is white. The heartwood is chiefly used for mosaic work, inlayings and ornaments.

EBONY TREE

Ebro, a river of Spain, rises in the Cantabrian Mts. in the province of Santander, flows SE. into the Mediterranean 80 m. SW. of Barcelona, after a course of about 465 m.

Ecarté, a card-game first played in the 19th Century. It is played by two persons with a pack of 32 cards, the twos, threes, fours, fives and sixes of each suit being discarded.

Ecbatana, the ancient capital of Media, situated near Mount Orontes (now Alvand); was surrounded by seven walls of different colours that increased in elevation towards the central citadel; was a summer residence of the Persian and Parthian kings. The modern town of Hamadan now occupies the site of it.

Ecce Homo (i.e., Behold the Man), a representation of Christ as He appeared before Pilate crowned with thorns and bound with ropes, as in the painting of Correggio, a subject which has been treated by many of the other masters, such as Titian and Vandyck.

Ecclefechan, a very small market town of Dumfriesshire, Scotland, 5 m. S. of Lockerbie, on the main road to Carlisle, noted as the birth and burial-place of Thomas Carlyle.

Eccles, a municipal borough of Lancashire, shire, England, a westerly suburb of Manchester, with manufactures of cotton and other textiles. Eccles cakes are well known. Pop. 44,500.

Ecclesfield, town of Yorkshire, England, in the W. Riding, 5 m. N. of Sheffield. Here are coal-mines and iron and steel works. Cutlery, tools and paper are made. Pop. 16,900.

Ecclesia, the general assembly of the free citizens of ancient Athens who met in the Pryx or place of assembly to discuss public business and to pass laws as prepared and laid before them by the Boule or Senate. The right to convene the Ecclesia was vested in the Boule.

Ecclesiastes (i.e., the Preacher), a book of the Old Testament, questionably ascribed to Solomon, and now deemed of more recent date as belonging to a period when the reflective spirit prevailed. It is written apparently in depreciation of mere reflection as a stepping-stone to wisdom. The standpoint of the author is a religious one. Experience supplies the data on which he rests, and his object is to expose the vanity of every source of satisfaction which is not founded on the fear,

and has not supreme regard for the commandments, of God, a doctrine which is the very ground-principle of the Jewish faith; but if vanity is written over the whole field of human experience, he argues, this is not the fault of the system of things, but due to the folly of man who, though made upright by God, has "sought out many inventions."

Ecclesiastical and Church Estate Commissioners, the

which looks after Church of England property and estates, being a permanent commission set up in 1836 under the Ecclesiastical Commissioners Act. The Commission to-day consists of the archbishops and bishops of the Church, the Deans of Canterbury, St. Paul's and Westminster, the Lord Chancellor, the Lord President of the Council, the Lord Chief Justice and a number of other representatives of Parliament, the Crown, the Church and the laity. It reports to Parliament every year.

Ecclesiastical Law, the law formerly administered in the ecclesiastical courts. It is derived from the civil (Roman) and canon law. In England it was instrumental in mitigating the rigour of the common law in certain particulars, especially in the matter of disposing of land by will, and in matrimonial causes. All this jurisdiction has long ago been transferred to the ordinary civil courts, but the principles have been engrafted on to the common law. The term is confined to-day to the branch of English Law dealing with Church of England matters, including plurality of benefices, the rights and duties of clergymen and the constitution of ecclesiastical courts. It is mainly based on Acts of Parliament. Except where Parliamentary sanction is required (as, e.g., for innovations touching doctrinal formulae), it is administered by the Church Assembly (q.v.), which can make provision in respect of any proposal which it has deliberated.

Ecclesiasticus, one of the books of the Apocrypha, ascribed to Jesus, the son of Sirach, admitted to the sacred canon by the Council of Trent, though excluded by the Jews. It contains a body of wise maxims, in imitation, as regards matter as well as form, of the Proverbs of Solomon, and an appendix on the men who were the disciples of wisdom. Its general aim, as has been said, is "to represent wisdom as the source of all virtue and blessedness, and by warnings, admonitions, and promises to encourage in the pursuit of it." It was originally written in Hebrew, but was extant only in a Greek translation executed in Egypt, professedly by the author's grandson, until in 1896 portions of the original Hebrew MSS. were discovered.

Echelon (French meaning ladder), an arrangement of battalions or of lines of troops in steps, i.e., the men are placed in ranks, each succeeding rank extending farther to the left or to the right than the line immediately preceding it.

Echidna, or Spiny Ant-eater, a family of mammals, having a long snout,

small mouth
long tongue
(with which
they catch the
ants on which
they live), no
teeth or tail and
claws adapted
for digging.

FIVE-TOED ECHIDNA

The species include the common, or five-toed, *Echidna* (*Echidna aculeata*) found in Australia and the three-toed *Echidna* (*Proechidna* *bruijii*) of New Guinea. They are burrowing animals about 18 in. long.

Echinoderms (Hk. "hedgehog-skin" from the Greek), the name of a large branch of invertebrates, including the sea-urchins (Echinoids), sea-cucumbers, star-fishes and other marine animals. They have a leathery integument, often covered with calcareous plates, taking the form of spines, hence the name.

Echo, a Greek legendary wood-nymph, according to Ovid in love with Narcissus, who did not return her love, in consequence of which she pined away till all that remained of her was her voice. According to another legend she rejected the advances of Pan, who thereupon made the shepherds tear her to pieces, only her voice remaining.

Echo, in acoustics, the imitative repetition of a sound due to the reflection of the sound-waves from an obstacle, and frequently noticeable in the neighbourhood of cliffs, high walls, clouds, etc. In building concert-halls, churches, etc., it is important to obviate echo.

Eckener, Hugo, German airman, born at Glensburg, doctor of Philosophy; in 1906 joined staff of Zeppelin Company, manager 1910, supervised air-raids upon England. Has piloted airships in civil flights since the war, in particular the Graf Zeppelin to the U.S.A. and S. America in an endeavour to prove the commercial possibilities of airships for passenger and mail trans-atlantic services. (1868-)

Eckington, a colliery town of Derbyshire, shire, England, 6 m. S.E. of Sheffield. Agricultural implements are made. Pop. 12,000.

Eckmühl (or Eggmühl), a village in Bavaria where Napoleon defeated the Austrians in 1809, and later gave to Davout, one of his generals, the title Prince of Eckmühl.

Eclampsia, a disorder accompanying pregnancy and occurring in the last five months, always serious, and in the last stages of pregnancy dangerous to mother and child. It is characterised by severe and alarming fits, the cause of which is unknown, though they are believed to be due to some poison in the system arising out of the pregnancy. One of the first symptoms is the presence of albumen in the urine. Medical attention is always essential.

Eclectics, so-called philosophers who attach themselves to no system, but select what, in their judgment, is true out of others. In antiquity the Eclectic philosophy is that which sought to unite into a coherent whole the doctrines of Pythagoras, Plato and Aristotle. There is an eclecticism in art as well as philosophy, and the term is applied to an Italian school which aimed at uniting the excellences of individual great masters.

Eclipse, the name of a famous race-horse of Arab stock of the middle 18th Century (born 1764), which was never beaten. The Eclipse Stakes, instituted 1886 and run at Sandown Park in mid-July, are named after the horse, which is the ancestor of most of the later English racehorses.

Eclipses, the obscuring of a heavenly body by the intervention of another heavenly body between it and the observer. Such phenomena are caused in particular by the sun, earth and moon being in one straight line. A solar eclipse occurs when the moon passes between the sun and the earth, when it may obscure the whole of the sun's disc (total eclipse), a portion of the disc (partial eclipse), or the whole of the central part leaving a bright rim (annular eclipse). The last total eclipse visible in England was in June 1877, and the next will occur in 1999. A lunar eclipse takes place when the moon passes into the earth's shadow; it may be either total or partial. In every year there are at least two and at most seven eclipses, either solar or lunar.

Ecliptic, the name given to the circular path in the heavens round which the sun appears to move in the course of the year, an illusion caused by the earth's annual circuit round the sun, in a plane inclined at an angle of $23\frac{1}{2}$ degrees to the equator; is the central line of the Zodiac (*q.v.*), so called because it was observed that eclipses occurred only when the moon was on or close upon this path.

Eclogue, the name of a short poem of a pastoral nature; applied to some of the work of Virgil and Horace, and in later times to poems by Spenser, Drayton, Fletcher and others.

Ecology, the branch of biology which studies the relations between animals and plants and their environment.

Economics, the science which deals with the production, distribution and consumption of the world's resources, such as food, clothing, building material, fuel, power, transport, etc., and the management of State income and expenditure in terms of money. Before the 19th Century it was known as "Political Economy." It embraces economic history and geography, social economy, economic statistics and applied political economy.

Ecuador, a republic of S. America, of Spanish origin; derives its name from its position on the equator; lies between Colombia and Peru; is traversed by the Andes, several of the peaks of which are actively volcanic. Tributaries of the Amazon drain from the E. slopes. With the exception of the Andean plateau, the country is a vast forest-land of valuable woods. The population consists of Peruvian Indians, negroes and Spanish Creoles. The chief agricultural products and exports are cocoa, coffee, rice, cotton and ivory nuts. Mineral resources include gold (cyanide ore), silver and petroleum. In 1935 the Constitution was abolished by Señor Febrerico Paz, who was placed in power by the Army and that of 1908 restored pending the drafting of a new. Area (including the Galapagos Is., which belong to Ecuador) 276,000 sq. m. Pop. 2,700,000.

Eczema, a skin disease now more frequently described as various kinds of dermatitis. It commences as a redness of the skin caused by dilation of the blood-vessels. The relaxed walls of the vessels allow fluid to be poured into the tissues of the skin, the outer layer of which begins to come off as scales. This outpouring of fluid may become so great as to form tiny blisters called vesicles, or to wash the outer layer of skin right off and leave a raw, red, weeping surface. It is caused by irritation either from the outside or from within, debilitating illness, etc., and treatment, which may include dieting, aims at allaying the cause and the irritation.

Edam, picturesque old town of Netherlands, on the Zuider Zee, 12 m. N.E. of Amsterdam. It is noted for its cheeses. Pop. 8,000.

Edda (*fl.* grandmother), the name given to two collections of old Icelandic literature based on the Norse mythology; the Elder, or Poetic, Edda, the collection of which was attributed to one Saemundur Sigfusson of an old Icelandic family who lived about 1050 to 1133; and the Younger, or Prose, Edda, collected in the next century by Snorri Sturleson. (1178-1241).

Eddington, Sir Arthur Stanley, astrophysicist, astronomer, director of the Cambridge Observatory; devoted himself to the study of astrophysics, in which sphere he has produced important results; wrote many books on astronomical subjects and on the application of the relativity theory of Einstein to astronomy and on philosophical aspects of it. He was knighted in 1930 and awarded the O.M. in 1938. (1882-).

Eddy, Mrs. Mary Baker, the American woman founder of Christian Science and the Church of Christ, Scientist. Her maiden name was Baker, and she was three times married, first to Major G. W. Baker, who died six months later, then to Dr. Daniel Patterson, whom she divorced after 10 years unhappiness, and finally to Asa Gilbert Eddy, who predeceased her. In 1875 she produced the sect's standard work, *Science and Health with Key to the Scriptures*, which has achieved wide circulation. (1821-1910).

Eddystone Lighthouse, situated on a low reef of rocks submerged at high tide, $1\frac{1}{4}$ m. S.W. of Plymouth; first built of wood by Winstanley, 1696; destroyed by a storm in 1703; rebuilt of wood on a stone base by Rudyard; burnt in 1755, and reconstructed by Smeaton of solid stone, this structure lasting for over 100 years before being dismantled; the present edifice, on a different site, was completed by Sir James Douglas in 1882, is 133 ft. in height, and has a light visible for $17\frac{1}{2}$ m.

Edelweiss (*Leontopodium alpinum*), a small flowering plant of the Compositae order found in the Swiss Alps, but readily transplanted. It grows to about 6 in. high, and has leaves and bracts covered with woolly hairs.

EDEL-
WEISS

Eden (*i.e.*, place of delight), the name of the garden where, according to Gen. ii. 8-14, man first resided after the creation; called Paradise in the Septuagint. A river flowed through it and branched into four arms, two of which have been identified as the Euphrates and the Tigris. In it was the tree of the knowledge of Good and Evil.

Eden, the name of two rivers, one in NW. England, rising in the Pennines and emptying into the Solway Firth at Rockliff. Carlisle is on its banks. The other is in Fifeshire, Scotland, passing Cupar and flowing to the North Sea at St. Andrews.

Eden, Rt. Hon. Robert Anthony, English statesman, son of Sir William Eden, of Windlestone Hall, Bishop Auckland. Served in the World War; went to Oxford University afterwards; was elected in 1923 M.P. for Warwick and Leamington, which constituency he has represented subsequently. He was Parliamentary Under-Secretary for Foreign Affairs in the first National Government, having rendered good service at the abortive Disarmament Conference. He was made Lord Privy Seal in 1934. When the National Government was reconstructed in 1935, he became Minister for League of Nations Affairs, and was prominent in the British effort to pursue the policy of collective action against Italian aggression in Ethiopia. On the resignation of Sir Samuel Hoare following the Hoare-Laval Pact, he took his place as Foreign Secretary. In the Spanish Civil War, it was he who initiated and carried through the policy of non-intervention. He resigned Feb. 1938, as a result of differences of opinion with the Premier, Mr. Neville Chamberlain, concerning a proposed Anglo-Italian pact. (1897-).

Edenbridge, a market town of Kent, England, 10 m. W. of Tunbridge Wells. Hever Castle, near by, was the home of Anne Boleyn, second wife of Henry VIII. Pop. 3,000.

Edenhall, village of Cumberland, England, 3 m. N.E. of Penrith. The Luck of Eden Hall is a goblet, damage to which will, says legend, bring ill-fortune to the mansion of Eden Hall. Wordsworth's poem is on this legend.

Edentata, an order of mammals, comprising the sloths, ant-eaters

and armadillos of S. and Central America and the pangolins and aardvarks of Africa. They are characterized by and take their name from their incomplete dentition, in many species teeth being absent altogether, in others there being no teeth in front of the jaws, and the cheek teeth having no enamel casing. See under Sloth, Ant-eater, Aardvark, Pangolin, Armadillo, etc., for descriptions of the main types.

PIBA ARMADILLO

Ederle, Gertrude, an American swimmer, the first woman to swim the English Channel, which she did from France to England in 14 hrs. 34 min., then a record, and still the women's record, in 1926, with the crawl stroke.

Edessa, an ancient city in Mesopotamia; figures in early Church history, and is reputed to have contained at one time 300 monasteries. It fell into the hands of the Turks in 1837; is regarded as the sacred city of Abraham by Orientals. Modern name Urfa. Pop. 31,000. Also the name of a town in Greece, capital of the dept. of Pella in Macedonia and ancient capital of Macedonia. Pop. 13,000.

Edgar, a king of Saxon England from 959 to 975, surnamed the Peaceable; promoted the union and consolidation of the Danish and Saxon elements within his realm; cleared Wales of wolves by exacting of its inhabitants a levy of 300 wolves' heads yearly. During his reign a new code of law was drawn up. St. Dunstan, the Archbishop of Canterbury, was the most prominent figure of the reign. (944-975).

Edgar the Atheling, a Saxon grandson of Edmund Ironside; was hurriedly proclaimed King of England after the death of Harold in the Battle of Hastings, but was amongst the first to offer submission on the approach of the Conqueror; spent his life in feeble attempts at rebellion; and lived into the reign of Henry I. (c. 1050-1130).

Edge Hill, a ridge in the S. of Warwickshire, England, which gave name to the first battle in the Civil War on Oct. 23, 1642, between the royal forces under Charles I. and the Parliamentary under Essex.

Edgeworth, Maria, novelist, born at Black Bourton, Oxfordshire, from her fifteenth year her home was in Ireland. She declined the suit of a Swedish count, and remained till the close of her life unmarried. Amongst the best known of her works are *Moral Tales*, *Tales from Fashionable Life*, *Castle Rackrent*, *The Absentee* and *Ormond*. Her novels are notable for their animated pictures of Irish life, and were acknowledged by Scott to have given him the first suggestion of the Waverley series. (1767-1849).

Edgeworth, Richard Lovell, an Irish landlord, father of Maria Edgeworth; had a genius for mechanics, in which he displayed a remarkable talent for invention; was member of the last Irish Parliament; educated his son in accordance with the notions of Rousseau; wrote on *Practical Education* in collaboration with his daughter. (1744-1817).

Edgware, town of Middlesex, England, 8½ m. from Marble Arch, on Watling Street. Here Handel was organist at the Church of St. Lawrence, and is said to have composed *The Harmonious Blacksmith* here. Pop. 5,000.

Edict, a proclamation in Roman times, made by a higher magistrate, consisting of the principles of administration which he would follow.

Edict of Nantes, an edict issued in 1598 by Henry IV. of France, granting freedom of worship and certain civic rights to the Huguenots. It was revoked by Louis XIV. in 1685.

Edinburgh, the capital of Scotland, on the Firth of Forth, a picturesquely situated amid surrounding hills; derives its name from Edwin, King of Northumbria in the 7th Century; was created a burgh in 1329 by Robert the Bruce, and recognised as the capital in the 15th Century, under the Stuarts. It has absorbed in its growth adjoining municipalities; is noted as an educational centre; is the seat of the Supreme Courts; has a university, castle and royal palace, and the old Scottish Parliament House, now utilised by the Law Courts. Brewing and printing are the chief industries, but the upper classes of the citizens are for the most part either professional people or living in retirement. Pop. 439,000.

Edinburgh Review, a celebrated quarterly review started in Oct. 1802, in Edinburgh to further the Whig interest. Amongst its founders and contributors were Horner, Henry Brougham, Francis Jeffrey and Sydney Smith, the latter being editor of the first three numbers. Jeffrey assumed the editorship in 1803, and in his hands it became famous for its incisive literary critiques, Carlyle and Macaulay contributing some of their finest essays to it. Ceased in 1929.

Edinburgh University, founded in 1583; was the last of the Scottish Universities to receive its charter; was raised to an equal status with the others in 1821. Its site was the famous Kirk o' Field, the scene of the Darnley tragedy; now consists of two separate buildings, one entirely devoted to medicine, and the other to arts and training in other departments.

Edirne (Adrianople), a city in Turkey at the junction of the R. Maritza and Tundja and on the high road between Belgrade and Istanbul, the Ottoman capital until 1453. In 1913, during the Balkan War, it was besieged and captured by the Bulgarians and Serbs, but restored to Turkey during the Second Balkan War. Ceded to Greece by Treaty of S. Vres, but restored to Turkey in 1922 by Treaty of Lausanne. Manufactures: silk, leather, woollens, perfumes. Pop. 150,000.

Edison, Thomas Alva, a celebrated American inventor, born at Milan, Ohio; started life as a newsboy; early displayed his genius and enterprise by producing the first newspaper printed in a railway train. Turning his attention to telegraphy, he revolutionised the whole system by a series of inventions, to which he subsequently added others, to the number of 500, the most notable being the megaphone, phonograph, kinetoscope, which was the forerunner of the cinema, a telegraph transmitter, and improvements in electric lighting. (1847-1931).

T. A. EDISON

Edmonton, urban district of Middlesex, England, a northerly suburb of London. Here Keats and Cowper lived, and Charles and Mary Lamb are buried. Pop. 78,000.

Edmonton, capital of Alberta, Canada, on the North Saskatchewan R. It is the seat of Alberta University, and has flour and saw mills and meat-packing

plants, and coal-mining, lumbering and other industries. It is the centre of a farming district, and is a fur trade depot. Pop. 79,000. **Edmund**, the name of two kings of England. **E. I.**, reigned 940-946. He was involved in strife with Northumbria, but reached peace through the services of Odo of Canterbury and Wulfstan of York. Later he ravaged Strathclyde, and eventually met his death at the hands of an assassin in 946. **E. II.**, surnamed Ironside, succeeded to the throne of England on the death of his father Ethelred the Unready in 1016, but reigned only seven months. He struggled bravely, and at first successfully, against Canute the Dane, but, being defeated, the kingdom was ultimately divided between them. (c. 980-1016).

Edmund, St. (Edmund Rich), Archbishop of Canterbury, born at Abingdon; while still at school made a vow of celibacy; sided as archbishop with the popular party against the tyranny of the King, Henry III., and the King's favourites. Henry appealed to the Pope for a legate, who, when appointed, opposed and thwarted Edmund, who eventually retired to France. He spent his last days in a monastery. (c. 1175-1240).

Edmund, St., King of East Anglia from 855 to 870. Little is known of his reign except that he fought a fierce battle with the Danes at Hoxne, being defeated and killed either on the field of battle, or subsequently as a martyr to the Christian faith. He was canonised and his shrine at Bury St. Edmunds became one of the most famous in Europe. (840-870).

Edom, or *Idumma*, a mountainous but not fertile country, comprising the S. of Judaea and part of the N. of Arabia Petraea, 100 m. long by 20 m. broad, peopled originally by the descendants of Esau, who were bitterly hostile to the Jews, the hostility dating from their refusal to allow the Jews access to Canaan through their country. (Num. xx. 14-21).

Education, the process of instruction and training whereby one is prepared for the demands of life. In Greece state schools flourished during Plato's time. In the 15th Century the revival of learning caused a widespread interest in secular education, and notable names are Erasmus, Melancthon, Vittorinus de Felire, Dean Colet and Ignatius Loyola. During the 18th Century education was still the privilege of the few. Adam Smith advocated compulsory elementary education in England, but it was not until 1880 that it arrived. In France state elementary education began in 1806. In England the Education Act made elementary education compulsory from the age of 5 to 10. The Act of 1918 raised the age to 14, and the leaving age becomes 15 in 1939, though the Education authorities will be able to grant exception in particular cases where a child can secure beneficial employment.

The instrument of local government in educational matters is the local Education Authority Committee of the council. They are responsible to the Board of Education, from whom they receive an educational grant of approximately 60 per cent. of local education costs. In the Government education is under the direction of the Education Minister, who is president of the Board of Education. No child of the appropriate age can be refused admission to a public elementary school on the grounds of class, wealth or poverty, religion, attainments or nationality. It is entirely free. The syllabus of instruction is laid down in the Code of the Board of Education, and includes mathematics, English and history, geography, science, art, music and physical training and, in many schools, hand-

depended on examination results, but this pernicious system was replaced by a Government inspection. Secondary or post-primary education consists of a course at a recognised secondary school, which pupils attend from the age of 11 to 16, and where they receive a more liberal education designed to fit them to enter for civil-service examinations, matriculation and commercial posts. At the end of the course there is held a General Schools Examination, which, in certain conditions, exempts the students from the London Matriculation, and therefore prepares the way for degree study at one of the universities. Scholarships make it possible for a pupil to undergo a course of university study at small cost to the parent.

During recent years the wide interest in secondary education led the Government to organise Central Schools for those pupils whose standard of attainment excluded them from the secondary schools, but justified further education of a lesser kind. Many technical schools and Polytechnics were set up in London by the great City Companies through the City and Guilds of London Institute, while an Act of 1889 gave local authorities power over technical and manual instruction for intending artisans. These have been extended by Trade Schools. There are also Evening Continuation Schools catering at nominal fees for people employed during the day, known since 1926 as Evening Institutes.

Other varieties of institute for further education are Schools of Commerce in London and the largest towns, such as the City of London College, which offers full-time senior courses, part-time day courses and evening classes. General subjects such as economics, literature, languages, history, art and music are taken also at such colleges as the Morley College and the Working-Men's College.

The peak of education is the university, of which there are twelve in England and Wales, Oxford and Cambridge being the oldest, London, Durham, and Manchester being the next to be founded. Education outside that provided by the State is in the hands of the public schools and the private preparatory schools which feed them. The public schools include Eton, Rugby, Winchester, Marlborough, etc.

The social services rendered by local education authorities are many. In 1902 they were given power to institute school medical inspection, and further powers were granted by the Ministry of Health Act of 1919. Other social services include school holiday camps for those unlikely to have a holiday, convalescent homes for the sick, and the provision of free meals for the destitute. During recent years educational methods have been the subject of examination, and there are schools which specialise in psychological teaching based on the principles of Froebel, Dalton and Montessori.

Education, Board of, the central authority for National Education in England and Wales, established in 1899 with a President, a Parliamentary Secretary and a Consultative Committee. The "Board" never meets as such.

Edward I., (Longshanks), King of England and (1272-1307), born in Westminster, son of Henry III., married Eleanor of Castile; came first into prominence in the Barons' War; defeated the nobles at Evesham (1265), and liberated his father; joined the last Crusade in 1270, and distinguished himself at Acre; returned to England in 1274 to assume the crown, having been two years previously proclaimed king; during his reign the ascendancy of the Church and the nobles received a check, the growing aspiration of the people for a larger share in the affairs of the nation was met by an ex-

Before 1895 grant from the Treasury

tended franchise, while the right of Parliament to regulate taxation was recognised; under his reign Wales was finally subdued and annexed to England, and a temporary conquest of Scotland was achieved. (1239-1307).

Edward II., King of England (1307-1327), fourth son of the preceding; was first Prince of Wales, being born in Caernarvon; being a weakling, was governed by favourites, Gaveston and the Despencers, whose influence, as foreigners and unpatriotic, offended the barons, who rose against him. In 1314 Scotland rose in arms under Bruce, and an ill-fated expedition under him ended in the crushing defeat at Bannockburn. In 1327 he was deposed, and was brutally murdered in Berkeley Castle. (1284-1327).

Edward III., King of England (1327-1377), son of the preceding, married Philippa of Hainault. During his boyhood the government was carried on by a council of regency. In 1328 the independence of Scotland was recognised, and nine years later began the Hundred Years War with France, memorable in this reign for the heroic achievements of Edward the Black Prince (q.v.), the king's eldest son. Associated with this reign are the glorious victories of Crécy and Poitiers, and the great naval battle at Sluys, one of the earliest victories of English arms at sea. These successes were not maintained in the later stages of the war, and the treaty of Bretigny involved the withdrawal of Edward's claim to the French crown. In 1376 the Black Prince died. (1312-1377).

EDWARD II

Edward IV., King of England (1461-1483), son of Richard, Duke of York, and successor to the Lancastrian Henry VI., whom he defeated at Towton. Throughout his reign the country was torn by the Wars of the Roses, in which victory rested with the Yorkists at Hedgeley Moor, Hexham, Barnet and Tewkesbury. In this reign little social progress was made, but a great step towards it was made by the introduction of printing by Caxton. (1442-1483).

Edward V., King of England for three months in 1483, son of the preceding; deposed by his uncle, Richard, Duke of Gloucester; was ultimately murdered in the Tower, along with his young brother. (1470-1483).

Edward VI., King of England (1547-1553), son of Henry VIII. and Jane Seymour. His reign, which was a brief one, was marked by a victory over the Scots at Pinkie (1547), Catholic and agrarian risings, and certain ecclesiastical reforms. (1537-1553).

Edward VII., King of Great Britain and Ireland, of the British Dominions beyond the seas and Emperor of India, succeeded his mother, Queen Victoria, Jan. 22, 1901. On March 10, 1893, he married Princess Alexandra, eldest daughter of Christian IX. of Denmark. He left four surviving children: George, who succeeded him, b. 1865; Louise, Duchess of Fife, b. 1867; Victoria, b. 1868; and Maud, b. 1869, who married Prince Charles of Denmark (King Haakon VII. of Norway since 1906). The King's eldest son, Albert Victor, b. 1864, died Jan. 14, 1892. Born Nov. 9, 1841. Died May 6, 1910. He was known as the Peacemaker.

Edward VIII. (Edward Albert Christian George Andrew Patrick David), King of Great Britain, Ireland, etc., from Jan. 20 to Dec. 10, 1936; born June 23,

1894, at Richmond, eldest son of the Duke and Duchess of York (afterwards George V. and Queen Mary); went to Osborne, 1907, and to Dartmouth, 1909. Invested Prince of Wales at Caernarvon, 1911. Went to Oxford, 1912. During the World War served in France, Egypt and Italy. After 1918 made tours throughout the Empire. He succeeded to the throne on his father's death, but abdicated, uncrowned, because of manifestations of widespread distaste in regard to his proposed marriage to Mrs. Wallis Warfield (formerly Mrs. Ernest Simpson), an American citizen. He left England immediately afterwards and married her at the Château de Condé, France, on June 3, 1937. After his abdication he was created Duke of Windsor. (1894-).

Edward George Nicolas Paul Patrick, Prince, eldest child of the Duke and Duchess of Kent, and grandson of George V. of England, born at Belgrave Square, London, on Oct. 9, 1935.

Edward, Lake (formerly Albert Edward), ward Nyanza, lake of Central Africa, between the Belgian Congo and Uganda, the source of a headstream of the Nile. It was discovered by H. M. Stanley in 1889.

Edward Medal, an award for acts of heroism performed by miners and quarrymen or to those who rescue them when in danger; established in 1907 by King Edward VII.

Edwards, Alfred George, first Archbishop of Wales; born at Llanymawddwy; educated at Jesus College, Oxford; headmaster Llandoverly College, 1876-1885; vicar of Carmarthen, 1885-1889; Bishop of St. Asaph, 1889-1934; Archbishop of Wales, 1920-1934. (1848-1937).

Edwards, John Passmore, philanthropist; born in Cornwall; as newspaper proprietor owned the *Exeter*; founded libraries, hospitals and other institutions in various parts of England, and established many clubs for working men and women. (1823-1911).

Edwards, Jonathan, a celebrated American divine; born in E. Windsor, Connecticut; graduated at Yale; minister at Northampton, Mass.; missionary to Housatonic Indians; was elected to the Presidency of Princetown College; wrote an acute and original work, *The Freedom of the Will*, a masterpiece of cogent reasoning; has been called the "Spinoza of Calvinism." (1703-1758).

Edward the Confessor, King of England (1042-1066), married Edith, daughter of the great Earl Godwin; was a feeble monarch of ascetic proclivities. His appeal to the Duke of Normandy precipitated the Norman invasion, and in him perished the royal Saxon line; was canonized in 1611 for his piety. (1004-1066).

Edward the Elder, King of the West Saxons from 899 to 924; was the son and successor of Alfred the Great; extended the Anglo-Saxon dominions.

Edwin, King of Northumbria in the 6th Century; through the influence of his wife Ethelburga Christianity was introduced into England by St. Augustine; founded Edinburgh; was defeated and slain in battle by the Mercians. (585-633).

Edwy, King of the Anglo-Saxons from 955 to 957; "persecuted and dethroned by the insolence of monks; exciting a superstitious people against him." The clerical party headed by Dunstan and Odo put his wife Elgiva to death. He was a weak ruler, lost all England N. of the Thames to his half-brother, whom he recalled Dunstan and made him Archbishop of Canterbury, but died 959.

Eel, a group of fishes of the order Apodes, with elongated bodies and no ventral fins. They

abound in both fresh and salt water practically all over the world. Various genera include the *Anguilla* (in which is placed the common Eel, *Anguilla anguilla*, which abounds

EEL (Larva, Elver and Mature Fish)

in British waters), the Conger-eels (c.c.), the Morays (*Muraena*) and the Serpent Eels. They are for the most part voracious feeders. Some, especially the Congers and Morays, grow to a great size (as much as 8 to 10 ft.), and some are capable of inflicting severe wounds even on man. The Common or Sharp-nosed Eel, to which the name is especially applied in England, can grow as long as 4 ft. and weigh up to 10 lb. It has a shiny skin covered with small oval scales and, owing to its ability to keep its gills moist, is able to live out of water. In the autumn some become silvery and descend to the sea, going then to the spawning-grounds in the Atlantic S. of the Bermudas. The elvers return to Europe, and may be seen ascending rivers in great numbers towards the end of the summer of their fourth year. This and other species have been popular as food since Roman times. There are large eel fisheries in Holland and Ireland.

Efflorescent Substances, a term

those crystalline substances which lose their water of crystallisation when exposed to the air and become amorphous, e.g., washing soda.

Egbert, King of Wessex, 802-839, a descendant of Cedric the Founder; after an exile of 13 years at the court of Charlemagne ascended the throne; reigned till 809, governing his people in tranquillity, when, by successful wars with the other Saxon tribes, he in two years became virtual king of all England, and received the revived title of Bretwalda. (d. 839).

Egede, Hans, a Norwegian priest, founder of the Danish mission in Greenland, whither he embarked with his family and a small colony of traders in 1721; leaving his son Paul (1708-1789) to carry on the mission, and returning to Denmark, he became head of a training school for young missionaries to Greenland. (1686-1758).

Eger, (Czech. Cheb), a manufacturing town in Bohemia (Czechoslovakia), on the R. Egge or Ohře, a 190-m.-long tributary of the Elbe; 91 m. W. of Prague, in the centre of a German-speaking district and near the German frontier. Wallenstein was murdered here in 1634. Pop. 31,500. There is another city of the same name in N. Hungary, manufacturing wine and soap. Pop. 30,000.

Egeria, a nymph who inhabited a grotto to the Camenae, some 16 m. from Rome, and whom, according to tradition, King Numa was in the habit of consulting when engaged in framing forms of religious worship for the Roman community. She figures as his spiritual adviser, and has become the symbol of such.

Egg. All animals are, at the beginning, in the state of impregnated ova, but the word egg is commonly applied to those ova or eggs which are extruded, and the young contained in them complete their development apart from the parent body. The female egg-cell is fertilised by the male gamete. The embryo of eggs is very small, but eggs vary in size, thickness of the shell and the quantity of yolk. The largest eggs are laid by birds, that of the ostrich being

the largest of all, while the humming-bird's egg weighs only a few grains.

Most birds' eggs are edible, but the common domestic hen's egg is the most nourishing and easiest digested. It consists of a calcareous shell, a thin membrane or skin, an albuminous substance called the "white," a yolk, and the central cavity of the yolk. It contains a certain quantity of oil, salt, carbon and nitrogen. The egg of the domestic fowl is white or brown in colour, but the eggs of wild birds are conspicuously coloured to harmonise with their surroundings. Reptile's eggs are smaller than those of birds, and the shell is skin-like. Fishes' eggs show extraordinary variety, and their innumerable quantity forms the hard roe of the fish. A sturgeon lays over 7 million eggs, many of which are destroyed or devoured.

Egham, a small town in Surrey, on the Thames, 20 m. W. of London; has in its vicinity Runnymede, where King John signed *Magna Carta* in 1215. Pop. 16,000.

Eglantine, a popular name of several English wild flowering plants. More properly it is the sweet-briar *Rosa Eglanteria*, but it has also been applied to the sweet-briar *Rosa rubiginosa* and by Milton (the "twisted eglantine") to the honeysuckle (*Lonicera Periclymenum*).

Egmont, Lamoral, Count of, born in Hainault, son of John IV., became attached to the Court of Charles V., by whom, for distinguished military and diplomatic services, he was appointed Governor of Flanders; came to England to ask the hand of Mary of England for Philip; fell into disfavour for espousing the cause of the Protestants of the Netherlands, and was beheaded in Brussels by the Duke of Alva; his career and fate form the theme of Goethe's tragedy *Egmont*. (1522-1568).

Egmont, Mount, one of the loftiest peaks in North I., New Zealand, is 8,270 ft. in height, and of volcanic origin. It is in the Taranaki district in the W. of the island.

Ego and Non-Ego (i.e., I and Not-Self), are terms used in philosophy to denote respectively the subjective and the objective in cognition, what is from self and what is from the external to self, what is merely individual and what is universal.

Egoism, the philosophy of those who, uncertain of anything but the existence of the Ego or I, resolve all existence as known into forms or modifications of its self-consciousness, and base their system of ethics on the good or happiness of the individual.

Egremont, (1) a town of Cheshire, England, 2 m. NW. of Birkenhead, connected by ferry-boat to Liverpool. Pop. 16,000. (2) A town of Cumberland, England, 5 m. SE. of Whitehaven. Iron ore is mined and there is a ruined castle. Pop. 6,000.

Egret, the common name of a number of birds of the Heron tribe,

characterised by their fine white plumage and in the nesting season by the ornamental plumage in the form of a long silky, "dorsal train" which they assume.

This dorsal plumage yields the "ospreys" (as they are known in the trade) so valuable as ornaments. Some of the chief species are the American Egret (*Herodias egretta*), the Little Egret (*Gareta garceta*), which occurs in Britain as a rare visitor, and the Snowy Egret (*Gareta candidissima*).

LITTLE EGRET

Egypt, a country in the N.E. of Africa; lies along the W. shore of the Red Sea, has a northern coastline on the Mediterranean, and stretches as far as the Anglo-Egyptian Sudan. The area is nearly 383,000 sq. m., a large proportion of which is desert, only about 13,000 sq. m. being cultivated. Its chief natural regions are three: Upper Egypt, the narrow alluvial valley of the Nile from Cairo to the Southern boundary; Lower Egypt, the delta of the Nile, from Cairo to the Mediterranean; and the desert plateau on each side of the Nile.

The river brings down fertilising mud and provides navigation as far as Aswân. The annual rainfall is small, and cultivation of the soil is possible only by extensive irrigation, the Aswân dam being a feature of the system, while barrages at Asyût and Fena regulate the water flow. In Upper Egypt the basin system of irrigation is employed. A network of canals includes that at Ibrahimîye and at Bahr-Yusuf. There are over 3,000 m. of railway, mostly State-owned, the chief lines being from Cairo to Alexandria and Damietta, Ismalia to Port Said and Suez, and an important line from Cairo to Shellat connecting with the steamer service to Wadi Halfa.

Most of the trade of Egypt is with the United Kingdom, Germany, India, Turkey, France, Japan and the U.S.A. The principal towns are Cairo, the largest town in Africa, and the capital, an administrative centre; Alexandria, a commercial port; Port Said, an important coaling-station at the northern end of the Suez Canal (q.v.); Asyût, the capital of Upper Egypt; Aswân, a rail centre; Suez, at the Red Sea extremity of the Canal, and Rosetta and Damietta, delta ports. Cereals, sugar, cotton and tobacco are important products. Mohammedan Arabs constitute the bulk of the people, but there is also a remnant of the ancient Coptic race.

The country, long a part of the Ottoman Empire, became a British Protectorate on Dec. 18, 1914, when Hussein Kamil was made the first Sultan, the deposed Khedive being Abbas Hilmi II. This removed Egypt from the suzerainty of Turkey. Hussein Kamil died in Oct. 1917, and was succeeded by Fuad, who was proclaimed King in 1922, and, dying in 1936, was succeeded by his son Faruk I. In March 1922 Egypt was made an independent kingdom, and in Aug. 1936, by the Anglo-Egyptian Treaty, the British Military occupation was terminated, with the qualification that the garrison of the Suez Canal is to remain until the Egyptian forces are sufficiently organised, the designation of Egypt as an ally, the development of military roads, railways and bridges and facilities for the passage of aircraft including the provision of landing-grounds and seaplane anchorages.

The noble monuments and relics of her ancient civilisation, chief amongst which are the Pyramids, as well as the philosophies and religions she inherited, together with the arts she practised and her close connection with Jewish history, give her a peculiar claim to the interested regard of mankind. Nothing, perhaps, has excited more wonder in connection with Egypt than the advanced state of her civilisation when she first came to play a part in the history of the world. There is evidence that 4,000 years before the Christian era the arts of building, pottery, sculpture, literature, music and painting were highly developed, her social institutions well organised, and that considerable advance had been made in astronomy, chemistry, medicine and anatomy. Already the Egyptians had divided the year into 365 days and 12 months, and had invented an elaborate system of weights and measures based on the decimal notation.

Recent exploration of Egyptian antiquarian remains received stimulation by the significant

discoveries of Mr. Howard Carter and the late Earl of Carnarvon with their discovery of the famous tomb of Tutankhamen in Thebes, in 1922. In 1925, in the neighbourhood of the Step Pyramid, the oldest stone building in the world was revealed—namely, the temple commemorating the jubilee of King Zoser—while a colonnade of 48 carved columns, the work of Imhotep, the first known architect, was brought to light. The temple to Pharaoh Akhenaton was discovered in 1926, and in the following year a secret tomb of Queen Hetepheres was unearthed at Giza.

Egyptology, the science, in the interest of Egyptian antiquities, such as the monuments and their inscriptions, and one in which of late years great interest has been taken and much progress made. See *Egypt*.

Ehrenbreitstein (i.e., broad stone of honour), a strongly fortified German town in the State of Prussia, on the Rhine, opposite Coblenz, with which it has communication by a bridge of boats and a railway viaduct; the fortress occupies the summit of the rock, which is precipitous; is about 400 ft. high, and has large garrison accommodation. Pop. 5,000.

Ehrlich, Paul, German chemist; M.D., 1898; discoverer of salvarsan, specific for syphilis, 1910; divided Nobel Prize for medicine with Metchnikoff, 1908. (1854-1915).

Ehud, son of Gera, a Benamite, a left-handed man and a deliverer or "judge" of Israel, who, under the guise of making a present to Eglon, the King of Moab, entered his chamber and thrust a dagger into his belly so that the haft went in and the fat closed over it. Ehud escaped, locking the door behind him, and led the Israelites against Moab, defeating them and slaying 10,000.

Eichhorn, Johann Gottfried, a German theologian and Orientalist, born in Dörrenzimmern, Franconia; a man of extensive scholarship; was the first to apply a bold rationalism to the critical treatment of the Scriptures. He was of the old school of rationalists, now superseded by the historico-critical. (1752-1827).

Eider Duck, the common name of a number of species of sea-

ducks, the Common Eider (*Somateria mollissima*) being an English resident species, the King-eider (*S. spectabilis*) and the Steller's Eider (*Polysticta stelleri*) occasional visitors. They all inhabit Northern regions, and yield the commercially valuable eider-down with which the female

COMMON EIDER

lines its nest. The Common Eider nests on rocky islands near the shore from the Färne Is. to Spitzbergen and is protected in Norway and Iceland.

Eiffel Tower, an iron structure on the banks of the Seine in Paris, France; designed by Alexandre Gustave Eiffel (1832-1923). It consists of three platforms, the platform at the summit being 985 ft. in height. The ascent is made by powerful lifts. It was erected 1887-1889.

Eigg, or Eeg, a rocky island in the Hebrides, W. Scotland, 5 m. SW. of Skye. Area 12 sq. m. Pop. 200. Here in a cave in the 10th Century the Macleods suffocated 200 of the Macdonalds, including women and children.

Eikon Basiliké (i.e., the Royal Likeness or Image), a book containing an account of Charles I. during his imprisonment, and ascribed to him

as author, but really written by Bishop Gandon, though the MS. may have been perused and corrected by the King. It was published shortly after the King's execution, and proved so popular that a reply to it was made by Milton in his prose *Eikonoklastes* ("image-breaker") in 1649.

Eildons, The, a "triple-crested eminence" near Melrose, Roxburghshire, Scotland. The central peak is 1,385 ft. high and overlooks Teviotdale to the S., associated with Sir Walter Scott and Thomas the Rhymer. They are of volcanic origin.

Einstein, Albert, German scientist, born at Ulm. In 1901 became a naturalised Swiss, until 1909. In 1914 appointed Director of the Kaiser Wilhelm Physical Institute at Berlin, where he lived till 1933, when, owing to his Jewish origin, he was deprived of his appointment. He came to England, later went to America and became a Professor at Princetown, N.J. He is famous for his researches in mathematical physics in connection with the quantum theory (q.v.), and more especially with relativity. His *General Theory of Relativity*, published in 1916, caused a revolutionary change in the scientific views of gravitation. (1879-). See *Relativity*.

Eire (Ireland), the official name since Dec. 29, 1937, of what was known previously (1922-1937) as the Irish Free State (q.v.). According to the Constitution which came into operation Dec. 1937, it was declared "a sovereign independent democratic State." The authority of the King of Great Britain is only recognised "as head of the British Commonwealth of Nations" for external purposes. The government is republican under a President (the first President being Dr. Hyde), and a National Parliament consisting of a House of Representatives (Dáil Éireann), and Senate (Seanad Éireann), the Senate being partly nominated and partly elective from panels. Irish (Gaelic) is the first, and English is recognised as the second official language. Eamon de Valera (q.v.), who has abolished the Parliamentary Oath of Allegiance to the British Crown, superseded the Governor-General by a President and substituted a form of "External Association" with the British Commonwealth of Nations for Dominion status, is the present President of the Executive Council.

The State comprises the southern portion of the island of Ireland (i.e., exclusive of Northern Ireland, the question of unification of the two being in abeyance until such time as some mutually agreeable arrangement between N. & S. Ireland is reached).

The area of Eire (Ireland) is 26,000 sq. m., embracing the provinces of Leinster, Munster and Connaught, with the Ulster Counties of Cavan, Donegal and Monaghan, with capital at Dublin. The population is slightly less than 3,000,000. Agriculture is the chief industry, cattle, sheep, pigs, horses and poultry being raised, and these and dairy products exported. The population is predominantly Catholic.

On April 25, 1938, an Anglo-Irish agreement was signed in London in an endeavour to dispose of outstanding differences, especially the question of the land annuities. It was agreed (in accordance with the Treaty of 1922) to transfer control of the coast-defence stations (one of the outstanding causes of friction) to Eire, to accept £10,000,000 from Eire in commutation of the annuities, and to reduce or remove the special and retaliatory customs duties on Irish and British imports respectively. See also *Ireland*.

Eisenach, a flourishing German manufacturing town in Thuringia, some 40 m. W. of Weimar; was the birth-place of Sebastian Bach; in the vicinity stands the castle of Wartburg, the hiding-place for

10 months of Luther after the Diet of Worms. Manufactures chemicals, pottery, dyes, electrical instruments, etc. Pop. 44,700.

Eisleben, a mining town in Prussian Saxony, 24 m. NW. of Halle; the birthplace and burial-place of Luther. Pop. 24,000.

Eisteddfod, a gathering of Welsh annual, at which, out of a patriotic motive, prizes are awarded for the encouragement of Welsh literature and music and the preservation of the Welsh language and ancient national customs. Competitions in singing, poetry, music, etc., are held. The ceremony dates back to the 6th Century, perhaps even earlier, and was revived in the late 18th Century.

Ekaterinburg (now Sverdlovsk), a Russian town on the Iset, on the E. side of the Ural Mts., the centre of the mining (coal, platinum and gold) industry; has various manufactures and a trade in the cutting and sorting of precious stones. Here, in a house belonging to Ipatiev, the Czar, Nicholas II., his wife, only son and four daughters were put to death in 1918. Pop. 400,800.

Eland, a genus of antelopes including the largest of all antelopes, and found almost exclusively in Central, W. E. and S. Africa. Horns occur in both sexes, those of the male being twisted and angulated in front. Both sexes also have a large dewlap. It is rapidly becoming extinct.

ELAND

Elandslaagte, village of Natal, S. Africa, 16 m. from Ladysmith, scene of a British victory over the Boers on Oct. 21, 1899, early in the S. African War.

Elasticity, the power of a body to regain its original form more or less completely after forcible deformation. Thus under ordinary conditions gases are perfectly elastic, whilst such a substance as putty is practically non-elastic. All bodies are elastic up to a point, which is called the elastic limit, and varies with each substance.

Elba, a small mountainous island in the Mediterranean between Corsica and Tuscany, with a bold, precipitous coast; belongs to Italy; has trade in fish, fruits, iron ore, marble, etc.; famous as Napoleon's place of exile from May 1814 to Feb. 1815. Pop. 29,500. Cap. Porto Ferrajo.

Elbe, the most important river in N. Germany; rises in the Riesengebirge, in Bohemia (Czechoslovakia), flows through Bohemia (where it is known to the Czechs as the Labe), then NW. through Germany, and enters the North Sea at Cuxhaven; 725 m. long, navigable 520 m.; abounds in fish. The chief tributaries are the Moldau (Vltava) in Bohemia, the Mulde, the Saale, the Havel and Elde. On the banks of the main stream stand Dresden, Magdeburg, Hamburg and Altona. It is navigable as far as Hamburg for ocean vessels. Under the Treaty of Versailles the river was internationalised from the point of its confluence with the Moldau and was placed under an International Commission on which Germany, Czechoslovakia, Great Britain, France, Italy and Belgium are represented.

Elberfeld, an important manufacturing and commercial centre, 16 m. E. of Düsseldorf; on the Wupper, and included with Barmen as a part of Wuppertal; noted for its textiles and dyeworks. Pop. (Wuppertal which includes Elberfeld, Barmen, etc.), 408,600.

Elbing, seaport of Germany, in E. Prussia, on the R. Elbing. Ship-building, iron-making and the manufacture of machinery, aircraft parts, textiles, etc., are carried on. It was a member of the Hanseatic League, Pop. 72,400.

Elbow, the hinged joint connecting the upper arm with the fore-arm, and formed by the humerus or bone of the upper arm and the ulna and radius or bones of the fore-arm, all three of which are covered with cartilage or gristle. The rounded end of the humerus fits into the cup-shaped socket formed by the upper ends of the ulna and radius.

Elbruz, the highest peak in the Caucasus Mts., in Russia, 18,571 ft. high.

Elburz, a lofty mountain range in N. Iran, S. of the Caspian, 650 m. long. The highest peak is Mt. Demavend.

Elder, a name given to certain office-bearers in the Presbyterian Church, associated with the minister in certain spiritual functions short of teaching and administering sacraments. Their duties embrace the general oversight of the congregation, and are of a wider nature than those of the deacons, whose functions are confined strictly to the secular interests of the church. They are generally elected by the church members, and ordained in the presence of the congregation. Their term of office is in some cases for a stated number of years, but more generally for life. The preaching or teaching elders are the ministers.

Elder, the popular name of the deciduous shrub of the genus *Sambucus* of

the natural order Caprifoliaceae. They are widely distributed. The Common Elder (*S. nigra*) or bourn-tree of Scotland abounds in Europe. It grows to a height of 20 ft. A volatile oil is yielded by the flowers and from the berry wine is made. The wood when polished furnishes material for fishing-rods. Other notable species are the Scarlet-berried Elder (*S. racemosa*), perhaps the most handsome of all, and the Dwarf Elder (*S. Ebuus*) or Danewort (q.v.).

COMMON ELDER

Eldon, John Scott, first Earl of, a celebrated English lawyer, born in Newcastle, of humble parentage; rose rapidly in his profession, and, entering Parliament, held important legal offices under Pitt; was made a Baron and Lord Chancellor, 1801, an office which he held for 26 years; was noted for his great share in formulating the principles of modern equity jurisprudence. (1851-1933).

El Dorado (El, the Gilded One), a fabulous country which many sought and which Orellana, the Lieutenant of Pizarro, pretended to have discovered in S. America, between the Amazon and Orinoco, and which he represented as abounding in gold and precious gems. The actual "city of gold" which was the conquistadors' quest was Manoa, in Guiana, and El Dorado, whose name was applied to the country and is now a synonym for fabulous wealth, was the cacique, or chief of it.

Eleanor of Castile, Queen of England and half-sister of Alfonso X. (q.v.) of Castile, surnamed the Wise, accompanied her husband to the Crusade in 1270, and is said to have saved him by sucking the poison from a wound inflicted by a poisoned arrow; was buried at Westminster. (1244-1290).

Eleanor of Guienne, Queen of France and afterwards of England, daughter of William I., Duke of Aquitaine, whom she succeeded, 1157; the same year married Louis VII. of

France; accompanied him to Palestine, 1147. The marriage was annulled in 1151. In 1159 she proposed to and married Henry of Anjou, who became Henry II. of England, 1154; aided the son Richard's rebellion, 1173, and was imprisoned till Henry's death, 1189. She acted as regent during her son, Richard I.'s absences. (1122?-1204).

Eleanor of Provence, Queen of England, daughter of Raymond Berenger IV., Count of Provence. She married Henry in 1236, and was the cause of much of Henry's favouring foreigners. Took the veil in 1276 and died at Amesbury, Wilts. Her eldest son was Edward I. (1221?-1281).

Eleatics, a school of philosophy in Greece, founded in the late 6th Century B.C. by Xenophanes of Colophon of which Parmenides and Zeno, both of Elea (whence the name), were the two leading adherents and advocates, the former developing the system and the latter completing it, the ground-principle of which was twofold—the affirmation of the unity, and the negation of the diversity, of being—in other words, the affirmation of pure being as alone real, to the exclusion of everything finite and merely phenomenal.

Elections (political). The procedure and conditions of political elections are defined in the Representation of the People Act of 1918. Upon the dissolution of Parliament a Royal Proclamation is announced calling for a newly elected Parliament. Then follows the nomination of candidates; membership of the House of Commons is now open to nearly all classes over 21 years of age. Nomination day is fixed by the Returning Officer, usually the sheriff of a county or in boroughs, the mayor, as the eighth day after the Proclamation. Polling then takes place by ballot (q.v.) at polling-stations, such as schools, etc., appointed by the Returning Officer, and after the counting of the votes by scrutineers the result is publicly declared.

There are numerous acts prohibited at elections by the Corrupt Practices Act. They include bribery, treating, undue influence, personation, payment for advertising and false statement. A candidate must appoint an election agent, who is responsible for the proper conduct of the candidate's election expenses, and he is responsible for the corrupt acts of any person who assists him. Subject to residence qualifications, all men or women over the age of 21 are eligible to vote except lunatics, idiots and aliens. A deposit of £150 must be made by the candidate on nomination, and this sum is returned if he secures more than one-eighth of the total poll.

Elector, The, or Kurfürst, of Germany, German princes who enjoyed the privilege of disposing of the imperial crown of the Holy Roman Empire; ranked next to the emperor, and were originally six in number, but grew to eight and finally nine. Three were ecclesiastical—the Archbishops of Mayence, Cologne and Treves, and three secular—the Electors of Saxony, the Palatinate and Bohemia, to which were added at successive periods the Electors of Brandenburg, of Bavaria and Hanover. The Holy Roman Empire was at last dissolved by Napoleon on Aug. 6, 1806, and after a history of some centuries the power of the electors came to an end, Aug. 6, 1806.

Electra, in Greek legend, the daughter of Agamemnon and Clytemnestra, who, with her brother Orestes, avenged the death of her father on his murderers (Aegisthus and Clytemnestra).

Electrical Circuits are closed systems of wires carrying an electric current which is represented as flowing from a point of high to a point of low potential. A steady current

must flow in a complete circuit from its source, through various conductors and back to its source again. The current flowing in a circuit may flow continuously in one direction (direct current, D.C.), or may reverse its direction at regular intervals (alternating current, A.C.).

Electrical Coherers.

When electric waves (wireless waves) fall on a loose heap of metallic particles the resistance of the heap of particles changes. Hence if a current passes from a battery through such a heap and through a galvanometer, the reading of the galvanometer changes when waves reach the metallic particles. A heap of metallic particles, suitably mounted in a tube, is called a coherer, and may be used to detect, but not to measure, wireless waves. After use, a coherer must be shaken or tapped to render it sensitive again.

Electrical Condenser, ment for

storing electricity. It consists essentially of two or more metal plates separated by layers of insulating material. The capacity of a condenser is the ratio of the charge stored to the potential difference between the plates, and is measured in farads, microfarads (millionths of a farad), or micro-microfarads (millionths of a micro-farad).

ELECTRICAL
CONDENSER

Electrical Potential. An electric current does work, and its electrical energy is thereby converted into other forms such as heat and light. It is found, however, that the same quantity of electricity sometimes produces greater, and sometimes smaller, quantities of heat and light. Electric currents do not produce a pressure, but there is some property of the electric current which is analogous to the pressure in a stream of water. This analogous property is called the electrical potential, or voltage. The potential difference between two points in an electrical circuit is found by measuring the electrical energy converted into other forms between the two points, and dividing this quantity by the number of coulombs of electricity which pass between the points. The unit of potential difference is the volt.

Electric Distribution.

Electric power is usually generated as three-phase alternating current. In Great Britain the power generated is purchased at specified prices by the Central Electricity Board, which retails the power to the distributing companies. The generating-stations are connected by the power-lines of the grid, and by this means a distant station is enabled to supply power to a district where the demand is temporarily heavy. The current is transmitted at a high voltage (33,000 or 132,000 volts), and is transformed to lower voltages for use.

Electric Fish.

A number of species of fish are provided with special organs with which they are able to give an electric shock, the organs being muscular modifications, the full shock being obtained when the circuit is completed by making contact with the fish at two separate points. Some of the species which are notable in this respect are the Electric Rays or Torpedoes

ELECTRIC CAT-FISH

which can disable a man, the Electric Eel (*Electrophorus electricus*) found in the Orinoco and Amazon and growing as large as 7 ft., and the Electric Cat-fish (*Malapterurus electricus*) found in the Nile and other parts of Africa, and in which the electric organ extends over the whole body. In most cases the shock is used for defensive purposes and for catching prey, and is usually followed by a period of exhaustion.

Electric Generators.

Owing to the fact that alternating current can be transmitted through power-cables more efficiently than can direct current, alternating current is usually employed in modern power circuits. An alternating-current generator consists of two chief parts, the rotor and the stator. The rotor is mounted on an axle, and is turned at high speed by a steam or water turbine. It consists of a number of electro-magnets with their poles directed away from the axle, and is surrounded by the stator, a steel shell which has copper conductors wound on its inner face. Currents are induced in these conductors, and are led away to the switches and distributing system. In large machines as much as 89 per cent. of the energy supplied by the turbine may be converted into electrical energy and supplied as such by the generator.

Electric Heaters and Lamps.

When an electric current flows through a conductor, heat is generated in the conductor. This fact is used in electric radiators and in incandescent filament lamps to heat a conductor to such a temperature that radiation occurs. In an electric radiator a spiral of non-oxidising material of high melting point (e.g., the alloy nichrome, 80 per cent. nickel, 20 per cent. chromium) is heated to about 1,300° F. by the current passing through it, and emits heat radiation. A reflector is placed behind the heating element to enable the radiation to be directed in some desired direction.

To obtain large quantities of light from an incandescent filament lamp, the filament must be heated to an extremely high temperature. For a given power-consumption more light is emitted when the temperature is increased, and the light emitted approximates in colour more closely to sunlight, which is regarded as the ideal type of light. The filament must therefore be made of a material such that it conducts electricity, has a high melting point, and does not evaporate rapidly at high temperatures. The metal tungsten is used at the present day. To prevent oxidation the filament is enclosed in a glass bulb containing the gas argon mixed with a small percentage of nitrogen.

Other lamps produce light by means of an electrical discharge through a gas or vapour. Such lamps are neon signs, mercury vapour and sodium vapour lamps. The light produced by these lamps is due to the conversion of electrical energy directly into light, and since the loss of energy as heat is smaller, these lamps have high efficiencies. They are generally unsuitable for domestic lighting on account of the colours of the light emitted, but this difficulty may be overcome by means of a thin layer of fluorescent material placed on the inside of a mercury vapour lamp. This layer absorbs the light emitted by the mercury and emits it as light of another colour. The light emitted by a carbon arc is due to the intense heating of the tips of carbon rods between which an electrical discharge is passed.

Electricity, manifests itself as static when certain materials, e.g., glass or amber, are rubbed. The substance when electrified in this way has the property of attracting small objects, such as scraps of paper. Experiment shows that a body may acquire

a charge of two different kinds, positive and negative, and that two bodies similarly charged repel one another, whilst two with unlike charges attract one another. Electricity appears as a flowing current or *voltaic electricity* when two plates in certain liquids are connected by a wire (see *Battery*); when a coil of wire is rotated in the neighbourhood of a magnet, as in a dynamo; and when the junction of two different metals is heated. For practical purposes currents are produced by the first two methods.

The most important effects of the current flowing in a conductor are (1) the heating of the conductor, utilised in lamps, electric fires, etc.; (2) the induction of a current in a neighbouring circuit, as in a transformer and the coils of a wireless set; (3) its influence upon a magnetic needle, made use of in the construction of instruments for measuring currents, e.g., galvanometers; (4) the motion given to a coil through which a current is flowing when placed between the poles of a powerful magnet; this is the fundamental principle of all electric motors; (5) electrolysis (q.v.); and (6) production of electromagnetic waves. The second and sixth effects only appear when the current is alternating, and in the case of the last named it must be of high frequency.

Electricity was originally looked upon as an invisible fluid contained in all bodies, a positive or negative charge being due to an excess or deficiency of the fluid; this was followed by the theory which postulated two fluids, negative and positive. Modern investigation has shown that a negative charge is due to electrons, which may be considered as the disembodied "atoms" of negative electricity and a current is due to the movement of these along the conductor.

Electricity, Atmospheric. The earth body, but is negatively charged with respect to the atmosphere and to more distant points. At points near the earth's surface the potential decreases at a rate of about 45 volts for each increase of height of 1 ft., but this potential gradient is much smaller at high altitudes, and fluctuates at all points from hour to hour. The atmosphere is not completely insulating, so the charge on the earth is continually leaking away into space. Although a number of theories have been put forward to account for the replenishment of the earth's charge, none is completely satisfactory, and its true explanation is not known.

During thunder-storms abnormal conditions exist, and intense electrical fields are produced between thunder-clouds and the ground. The clouds may be at a potential 1,000,000,000 volts higher than that of the ground, and lightning flashes are merely electrical discharges between adjacent clouds, or between clouds and the earth. The quantity of electricity stored during a flash is about the same as passes through an ordinary electric lamp in one minute, but the high voltage renders lightning destructive. The function of lightning conductors (see *Lightning*) which are fitted to buildings is to provide conducting paths by which the discharge may pass safely to earth.

Electricity, Conduction of. It is convenient to classify various substances as conductors of electricity, or as insulators, according as electricity passes easily through the substances or not. No perfect insulator is known, but for most purposes such materials as air and other gases, rubber, ebonite and paraffin, may be regarded as non-conducting. With a few exceptions, non-metallic substances, whether solids or liquids, are insulators. Metals and alloys are all comparatively good conductors. (For the conduction of electricity by solutions, see *Electrolysis*.) Most solid and liquid conductors

obey Ohm's law (q.v.). The resistance of a conductor of a given shape, and made of a given material, is directly proportional to its length and inversely proportional to its area of cross-section. Silver is the best conductor of electricity, but is seldom used, on account of its cost. Most conductors are made of copper, but aluminium is frequently used where the weight of a conductor is of importance—e.g., for overhead transmission lines. The resistivity of a pure metal increases when its temperature increases; that of a non-metal usually decreases. The resistivity of an alloy is usually greater than the resistivities of its constituent metals, but increases less rapidly when the temperature increases. Certain alloys (e.g., manganin, 84 per cent. copper, 4 per cent. nickel, 12 per cent. manganese, and constantan, 60 per cent. copper, 40 per cent. nickel) have the valuable property that their resistivity alters little when the temperature changes.

In metals an electric current consists of a flow of electrons or "atoms" of negative electricity, from the part at low potential to that at high potential. The convention, however, is to regard an electric current as flowing from points at high, to points at low potential. This convention arose before the true direction of motion was known, and is still retained for ordinary purposes. At ordinary pressures gases are insulators, but they can be rendered conducting by decreasing their pressures, and by other means. Positively and negatively charged atoms and molecules, as well as electrons are the particles the motion of which constitutes an electric current in a gas. Ohm's law is not true for currents in gases.

Electricity, Unit of. The unit of the kilowatt-hour or Board of Trade Unit, and is equivalent to 1,000 watts for one hour; 746 watts are equivalent to one horse-power.

Electric Lamps. See *Electric Heaters and Lamps*.

Electric Lighting and Wiring.

Electric lamps may be operated by direct, or by alternating current, but a lamp cannot be run economically except at the voltage for which it is designed. If the voltage is too high, the lamp will be efficient but its "life" will be short; if the voltage is low, its "life" will be long but its efficiency will be small. The correct voltage for use, and its power consumption, are marked on the bulb of a lamp. The current supplied passes through the main fuses, the meter, and the main switch to the distributing-box, where it divides and passes through further fuses to the separate circuits of the house, before returning via a similar path to the mains. The lamps are connected in parallel with one another so that the full voltage of the local mains is applied to each.

Heat is produced in any conductor through which a current flows, and if a current in a connecting wire becomes large it may generate in the wire sufficient heat to start a fire. It is to eliminate this risk that fuses are used. Each consists of a short length of wire enclosed in a protecting case. The fuse in a circuit is able to carry the normal current for the circuit, but if this becomes too large the fuse wire melts and breaks the circuit before a dangerously large current is reached.

Electric Motors. When a current flows in a coil of wire between the poles of a magnet, forces are exerted which tend to turn the coil. This

MAINS FUSE

principle is applied in the electric motor. A number of flat coils are wound on a laminated iron core, and constitute the armature of the machine. This is supported on an axle so that it is free to rotate between the poles of one or more electromagnets. In a direct-current motor the field windings of the electromagnets may be connected either in series or in parallel with the armature. Series-wound motors exert a powerful torque when they are running slowly (*e.g.*, when starting), and must not be run without a load. The speed increases considerably when the load is reduced. A shunt-wound motor (armature and field coils in parallel) must not be started with a load, can be run with no load, and runs at a nearly constant speed under all permissible loads. In the "Squirrel-cage" type of alternating-current motor the armature is not connected to the mains, but the armature current is produced by electromagnetic induction. The armature is driven by a rotating magnetic field produced by field magnets.

Electric Traction. Electric motors are particularly suitable for traction when a frequent service is required—*e.g.*, in congested districts—and in mountainous regions. The present practice is to generate the power required as alternating current, and to transmit it in this form to automatic sub-stations. Here it is rectified (converted to direct current), and is supplied in this form to the series-wound direct-current motors used to drive trains or trams.

Electrochemistry, the application of electrical operations in chemistry, dates from the later years of the 18th Century, when van Marum discovered that ozone (*q.v.*) is formed during the working of a frictional electrical machine. In 1800 Alessandro Volta invented the electric battery, and two years later Nicholson and Carlisle split up water into hydrogen and oxygen by passing an electric current through it. In 1807 Sir Humphry Davy isolated sodium and potassium by electrolysis (*q.v.*) of their fused hydroxides, while about the middle of the 19th Century Faraday showed that such decompositions were governed by definite electrochemical laws.

At the present time the chief ways in which electricity is applied to chemistry are: (a) in electrolytic processes; (b) in the silent discharge, as in the preparation of ozone; (c) in the glow discharge, as in the Lodge-Ottrell method of fume-precipitation; (d) in the production of high temperatures, as in electric furnaces (see *Furnaces*); and (e) in the spark discharge, as in the Birkeland-Eyde process for preparing oxides of nitrogen from the air. The theoretical side of electrochemistry has so greatly developed during the last 40 years that it now comprehends the principal portion of chemical philosophy. The structure of atoms, molecules, crystals and solutions are explained on electrochemical lines, while the perplexing problem of valency (*q.v.*) has been largely resolved in the light of electrochemistry.

Electrocution, a form of capital punishment used in the U.S.A. since 1888. A current of high-voltage electricity is sent through the body of the condemned criminal. The method is held to be less barbarous than those of other countries.

Electrode, name given to the plate or wire where an electric current enters or leaves a liquid, which is electrolysed. The positive electrode is known as the anode, the negative as the cathode. The name is also applied to the plates of a vacuum tube, X-ray bulb, or wireless valve.

Electrolysis, the decomposition of a substance by means of an electric current through it.

The process is carried out in a vessel known as an electrolytic cell, and the substance decomposed is called the electrolyte. The current is carried to and from the electrolyte by metallic or carbon plates (electrodes), of which the positive is called the anode and the negative the cathode. Solutions of acids, bases and salts in water are electrolytes, while the two latter classes are often electrolytes in the fused state as well.

According to the theory of electrolytic dissociation, propounded by Arrhenius in 1887 and afterwards extended and modified by Debye, Hückel and others, an electrolyte when dissolved in water is split up into charged atoms or groups of atoms known as ions; and when the current is applied (D.C., not A.C.), the positively charged ions are attracted to, and discharged at, the cathode, while the negatively charged ions are attracted to, and discharged at, the anode.

The products actually obtained at the electrodes may not be those immediately formed by the discharge of the ions, since secondary reactions may occur between the primary products themselves or between the primary products and the water present. Thus when fused salt (sodium chloride) is electrolysed between carbon electrodes, metallic sodium is obtained at the cathode and gaseous chlorine at the anode; but if a solution of salt is similarly electrolysed, the products at the cathode are hydrogen and sodium hydroxide (formed by the action of sodium upon water), the gaseous product at the anode being either chlorine, if the solution is concentrated, or oxygen (formed by the action of chlorine upon water) if the solution is dilute.

During electrolysis metals are liberated at the cathode, and this fact is made use of in the manufacture and refinement of many metals. Thus aluminium is made by the electrolysis of aluminium oxide dissolved in a molten aluminium mineral (cryolite), while crude copper is purified by electrolysis in a bath of acidified copper sulphate solution, the impure metal being made the anode and a thin sheet of pure copper being used as the cathode. On electrolysis copper is gradually transferred from the anode to the cathode, impurities remaining in solution or dropping to the bottom of the cell as a sludge.

Other substances prepared industrially by electrolysis are chlorine, sodium, sodium hydroxide, potassium chlorate, iodoform and sodium hypochlorite. The laws of electrolysis were discovered by Faraday, who showed that the weights of substances liberated during electrolysis are directly proportional to (a) the quantity of electricity passed, and (b) the chemical equivalents of the substances. (See *Equivalent*).

Electromagnetism. When an electric current flows in a wire, a magnetic field is produced in the space around the wire—that is, forces are exerted on a magnet placed anywhere near the wire. If the wire is in the form of a closely wound spiral, the magnetic field inside the spiral is strong, and if a bar of magnetic material—iron or steel, say—is placed inside the spiral, the bar is magnetised by the magnetic field of the coil. A powerful electromagnet may be produced in this way.

Electromagnets are widely used in electric motors and generators, in telephones, and as magnets for lifting iron and steel. Although an electric current magnetises a steel bar around which the current passes, it is not true that a bar magnet which lies inside a coil of wire produces a current in the coil. If, however, the magnet is moved relative to the coil, a current is produced while the magnet and coil are in motion. The current ceases when the motion ceases.

An electric current produced in this way is said to be produced by electromagnetism.

induction. The essential requirement for the production of an induced current in a circuit is that the magnetic field through the circuit should alter. The magnetic field may be altered by moving a permanent magnet relative to the circuit, by moving an electromagnet relative to the circuit, by changing the strength of the current in a neighbouring circuit, or even by changing the strength of the current in other parts of the same circuit. Electromagnetic induction is used in electric generators, in transformers, induction coils, magnetos and in wireless circuits.

Electron, the unit particle of negative electricity. Its mass is about $1/1840$ of that of the hydrogen atom, and it is one of the ultimate constituents of matter. The unit particle of positive electricity or positive electron is more generally known as the positron. Its mass and charge are the same in magnitude as those of a negative electron, but the charge is of opposite sign. Positive electrons have a very short life, since they readily combine with negative electrons, both entirely vanishing, with the emission of an equivalent amount of radiation.

Electrophorus, a device invented by Volta in 1775 for producing electrical charges. It consists

of a plate of ebonite, and a metal plate with an insulating handle. The ebonite is charged negatively by friction by rubbing it with a piece of flannel. When the metal plate is placed on the ebonite, two equal and opposite charges are induced on it, a positive charge on the side nearest the ebonite, and a negative charge on the other side. If it is connected electrically to earth for an instant and is removed by means of its insulating handle, it will be found to bear a positive charge of electricity. The charge on the ebonite is not altered during this process, so the metal plate can be discharged and charged again as often as is desired, without any further rubbing of the ebonite.

ELECTROPHORUS

Electrostatics, the study of electrical charges at rest. For more than 2,000 years it has been known that pieces of amber, after they have been rubbed possess the property of attracting other bodies. This effect is due to the fact that the rubbed amber acquires an electrical charge. Other substances behave in a similar manner and although the effect is more easily shown if the rubbed body is an insulator, conductors may be charged in the same way.

The charged body may have a positive or a negative charge. A negatively charged body possesses an excess of electrons, or "atoms of negative electricity"; a body charged positively has lost some of the electrons which are normally present in it. Bodies which are charged positively repel one another. Bodies which are charged negatively repel one another. But bodies which have dissimilar charges attract one another. An uncharged body is attracted by any charged body.

If an insulated conductor is held near a charged body and is connected to earth for an instant before the charged body is removed, the conductor becomes charged. The sign of its charge is opposite to that of the charge which produces it. Bodies charged in this way are said to be charged by induction, and this principle is applied in most of the electrostatic machines used for producing charges. The quantities of electricity produced

by electrostatic machines are too small to be of practical value.

To move a positive charge up to a positively charged body, work must be done. The amount of this work is a measure of the potential of the charged body. If charges are at rest on a conducting body the potential of all points on it and inside it is the same, and the whole charge resides on the outside of the conductor. An important deduction from the latter fact is that any two charges repel or attract one another with a force which is inversely proportional to the square of the distance between them.

Electrotherapy, the art of curing or alleviating a disease by the use of electricity, including the application of X-rays, galvanism, Faradic currents, sinusoidal currents, high-frequency currents and diathermy. The results produced may be divided into physiological, chemical, physical and mental, or combinations of them. An example of purely physiological results are those obtained when cancer cells are destroyed by X-rays. The introduction of drugs into the body by use of an electrical current (known as Medical Ionisation) is an example of a purely chemical effect. Local heating of the body by means of diathermy is a purely physical effect. The application of regulated electrical currents to the body, or to certain bodily organs, has also been found to be beneficial in such diseases as synovitis, arthritis and neuritis (by application of galvanism); to injured nerves or muscles and for muscular atrophy (by use of Faradism); high and low blood-pressure, neurosthenia, disability, gout and a number of other ailments (by high-frequency treatment).

Electrotyping, a method of copying in metal, usually copper, deposited by electricity. The copper shells are deposited on wax models, backed with metal.

Electrum, a word of ancient use in the East for amber, and also for a mixture of gold and silver, resembling amber in colour and used for coins in certain Greek states. Many such coins are still in existence. The metal electrum was also manufactured where natural supplies failed.

Elegy, a song expressive of sustained earnest yearning, or mild sorrow after loss, one of the most famous English elegies being Milton's *Lycidas*.

Elemental Spirits, a general name Middle Ages to salamanders, undines, sylphs and gnomes, spirits superstitiously believed to have dominion respectively over, as well as to have had their dwelling in, the four elements—fire, water, air and earth.

Elements. According to Aristotle (384-322 B.C.) all substances were to be regarded as composed of four simple bodies or elements—viz., fire, air, water and earth—the difference between one substance and another being ascribed to a difference in the proportions in which the four elements were present. This idea lasted for 2,000 years, but was rejected by the Hon. Robert Boyle (1627-1691) in his *Sceptical Chymist* (1661), in which he proposed not to postulate any preconceived number of elements, but to regard as elements all substances that could not be resolved into simpler ones.

This is still taken as the scientific criterion of an element. About 92 elements are known, ranging from hydrogen, with an atomic weight of unity, to uranium, with an atomic weight of 238. In the last few years artificially produced elements of greater atomic weight have been reported, but they have only a transient existence. Of the elements, by far the greater number are metals. The remainder are mainly non-metals, while a few share metallic

and non-metallic properties and are sometimes known as metalloids (e.g., arsenic and antimony).

Elements were classified by Mendeleeff (1868) on the basis of their atomic weights—i.e., the ratio of the weights of their atoms to the weight of the oxygen atom; or, more strictly, to one-sixteenth of the weight of the oxygen atom. He found that a marked periodicity of chemical properties manifested itself on this arrangement, and the system was known as the Periodic Classification. More recently, the atomic number has been found to be a better basis than the atomic weight, and the Periodic Classification so elaborated is free from anomalies that marred Mendeleeff's scheme.

Most of the so-called chemical elements are not homogeneous individuals, but mixtures of isotopes (q.v.). In practically all cases, however, except that of hydrogen, the isotopic varieties of an element so closely resemble one another in all their chemical properties that their separation from one another is a matter of extreme difficulty, and from the chemical point of view the isotopic mixture thus conforms to Boyle's definition.

Elephant, a sub-order of ungulates (hoofed mammals), of which there

are two living species, the Indian (*Elephas maximus*) and the African (*Elephas africanus*). The latter, which is distinguished by its enormous ears and hollow back, attains the greater size, and is hunted for the sake of its tusks, which may weigh as much as 220 lb. each. The former is more intelligent, and easily capable of being domesticated, and is used for ceremonial purposes, log transport, etc., though they rarely breed in captivity. The white elephant is a variety of this species. Of Indian elephants only the males, as a rule, have tusks, the tusks of the female being only small when there are any. The Indian elephant is found in India, Burma, Malay Peninsula, Cochin China, Sumatra, etc. A dwarf race is found in Africa. A number of species, including the Mammoth, are now extinct.

Elephantiasis, a peculiar skin disease, accompanied with abnormal swelling; so called because the skin becomes hard and stiff like an elephant's hide; attacks the lower limbs and scrotum. It is caused by a parasite, a tiny worm, which enters the blood-stream and reaches the lymph vessels, which become blocked and swell. It is chiefly confined to India and other tropical countries.

Eleusinian Mysteries, rites, initiation into which, as religiously conducive to the making of good men and good citizens, was compulsory on every free-born Athenian; celebrated annually at Eleusis, a town in ancient Attica, 12 m. NW. of Athens, in honour of Ceres and Persephone, and lasting nine days. Both men and women were initiated, and it was regarded as the most sacred of all the Greek religious festivals. Its celebration continued for some 1,800 years and was only finally abolished by Theodosius the Great.

Elevator, the rudder-like, movable plane at the tail of an aeroplane, used for raising or lowering the nose of the machine. Also the usual name, in America, of lifts and of the huge silos where grain is

Elgar, Sir Edward, British composer; born at Broadheath, near Worcester; composed the song *Land of Hope and*

AFRICAN ELEPHANT

Glory. He started as a music teacher at Malvern and composed his first cantata in 1892. It was not till *Caractacus* was produced in 1898 that he became famous. *The Dream of Gerontius* is perhaps his most popular work. He was knighted in 1904, received O.M. 1911; made Master of the King's Music (1924), baronet (1931). (1857-1934).

Elgin (Moray), county of Scotland. See Moray.

Elgin, the county town of Morayshire, Scotland, on the Lossie; created a royal burgh by David I.; has ruins of a fine Gothic cathedral and bishop's palace. Industries include manufacture of woollens. Pop. 8,800. Also the name of a city in Illinois, U.S.A., centre of a dairy farming district. Pop. 36,000.

Elgin, James Bruce, eighth Earl of statesman and diplomatist, born in London; governor of Jamaica and Canada negotiated important treaties with China and Japan; rendered opportune assistance at the Indian Mutiny by diverting to the succour of Lord Canning an expedition that was proceeding to China under his command; after holding office as Postmaster-General he became Viceroy of India (1861), where he died; his *Journal and Letters* were published in 1872. (1811-1863).

Elgin Marbles, a collection of ancient brought from Athens by the seventh Earl of Elgin in 1812, and now deposited in the British Museum, after purchase of them by the Government in 1816 for £36,000. These sculptures adorned certain public buildings in the Acropolis, and consist of portions of statues, of which that of Theseus is the chief, of alto-reliefs representing the struggle of the Centaurs and Lapiths, and of a large section of a frieze.

Eli, high priest, and last but one of the infant Samuel of the ruin coming on his house because of his sons' wickedness. At the age of 98, on hearing of their death and the capture of the ark by the Philistines, he fell back and broke his neck (1 Sam. i.-iv.).

Elia, the *nom de plume* adopted by Charles Lamb in connection with his *Essays*.

Elijah, a Jewish prophet, born in Tishbe, in Gilead, near the desert; prophesied in the reign of Ahab, King of Israel, in the 9th Century B.C.; revealed himself as the deadly enemy of the worship of Baal, 400 of whose priests he is said to have slain with his own hand. His zeal provoked persecution at the hands of the King Ahab and his consort Jezebel, but the Lord protected him, and he was translated from the earth in a chariot of fire, "went up by a whirlwind into heaven." His mantle fell on Elisha whom he had previously consecrated.

Eliot, George, the *nom de plume* of Mary Ann (or Marian) Evans, distinguished English novelist, born at Arbury in Warwickshire; was educated on evangelical lines but soon lost faith in supernatural Christianity; began her literary career with a translation of Strauss's *Life of Jesus*; became in 1850 a contributor and in 1851 assistant editor of the *Westminster Review*, and formed acquaintance with George Henry Lewes, with whom she lived, and who, it would seem, discovered her latent faculty for fiction. Her first work in that line was *Scenes from Clerical Life*, contributed to Blackwood in 1856. The stories proved a signal success, and were followed by a series of novels, beginning in 1859 with *Adam Bede* and ending with the *Impressions of Theophrastus Such* in 1879. These, with two volumes of poems, make up her works. Lewes died in 1873, and two years later she married an old friend, John Cross, and after a few months of wedded life died of inflammation of the heart. Her other novels

The Mill on the Floss—her masterpiece—*Silas Marner*, *Romola*, *Felix Holt*, *Middlemarch* and *Daniel Deronda*. (1818-1880).

Eliot, Sir John, champion of political liberty; represented St. Germans, Newport and Cornwall in parliaments of James I. and Charles I.; at first adhered to Buckingham, but later became his bitter opponent, speaking against him in the House of Lords on his impeachment and suffering imprisonment for it. He was active in insistence on the Petition of Right, 1628, which he helped to frame, and drew up the resolutions against illegal taxation which were read while the Speaker was held in the Chair. (c. 1592-1632).

Eliot, Thomas Stearns, poet; born in St. Louis, Missouri; educated at Harvard; naturalised British, 1927; professor of Poetry, Harvard, 1932-1933. Author of *The Waste Land* and other poems; also of essays, prose works and the drama *Murder in the Cathedral*. (1888-).

Elis, a district of Ancient Greece, on the coast of the Peloponnesus, sacred to all Hellas as the seat of the greatest of the Greek festivals in connection with the Olympian Games, a circumstance which gave a prestige to the inhabitants.

Elisha, a Jewish prophet, the successor of Elijah, who found him at the plough, and consecrated him to his office by throwing his mantle over him, which he again let fall on him as he ascended to heaven; exercised his office for 55 years, but showed none of the fire or austerity of his predecessor.

Elixir, a term employed in pharmacy to designate sweetened and aromatic spirituous preparations such as cascara sagrada, rhubarb and senna. In former times the term was used by alchemists for the essence which they fruitlessly sought in order to transmute base metals into gold.

Elizabeth, Queen of Edward IV. of England; eldest child of Sir Richard Woodville, afterwards Earl Rivers; extremely beautiful; married, c. 1452, Sir John Grey (son of Lord Ferrers), who was killed at St. Albans 1461, fighting for Henry VI. Being impoverished, she appealed to Edward, who married her, 1464. On Edward's flight, 1470, sought sanctuary at Westminster, where she gave birth to Edward V. (c. 1437-1492).

Elizabeth, Queen of England (1558-1603), daughter of Henry VIII.

and Anne Boleyn, born in Greenwich Palace; was an indefatigable student in her youth; acquired Greek and Latin, and a conversational knowledge of German and French. The Pope's opposition to her succession on the ground of being judged illegitimate by the Church strengthened her attachment to the Protestant faith, which was her mother's, and contributed to its firm establishment through her reign. During it the power of Spain was crushed by the defeat of the Armada; maritime enterprise flourished under Drake, Raleigh and Froisher; commerce was extended, and literature carried to a pitch of perfection never before reached. As a queen she was masterful and adroit, yet displayed the weakness of vanity and vindictiveness. The execution of Mary, Queen of Scots, is a blot upon her fame, and her intrigues with Seymour, Leicester and Essex detract from her dignity. Her wisdom was manifested in her wise choice of counsellors and leaders, and her patriotism endeared her to her people. (1558-1603).

QUEEN ELIZABETH

Elizabeth Angela Marguerite, Queen of George VI. of England; youngest daughter of Sir Claude George Bowse-Lyon, fourteenth Earl of Strathmore and Kinghorne; born Aug. 4, 1900; married at Westminster Abbey, April 26, 1923, to Albert, Duke of York, and became queen when he acceded to the throne as George VI. on Dec. 11, 1936. Her children are: the Princess Elizabeth and the Princess Margaret Rose.

Elizabeth Petrovna, Empress of Russia, daughter of Peter the Great and Catherine I., raised to the throne in 1741 when Ivan VI. was deposed. She assisted Maria Theresa in the war of the Austrian Succession; opposed Frederick the Great in the Seven Years War. Indolent and licentious, she left the affairs of the State mainly in the hands of favourites, but inherited some of her father's gifts as a ruler. (1709-1762).

Elizabeth of York, Queen of England and mother of Henry VIII.; eldest child of Edward IV. and his Queen, Elizabeth Woodville; born at Westminster. Married Henry, 1486. Stricken with grief at death of her eldest son, she failed to survive an imprisonment in the Tower. (1465-1503).

Elizabeth of York, Alexandra Mary, Princess, eldest child of George VI.; heir-presumptive to throne of Britain; born at Royal Lodge, Windsor Great Park, on April 21, 1926.

Elizabeth, Madame (Elizabeth Philippine Marie Hélène), French princess, youngest child of Louis the dauphin, only son of Louis XV.; was born at Versailles. On outbreak of the Revolution she went to Paris to be near her brother Louis XVI. She accompanied him in his flight, was arrested with him at Varennes and eventually guillotined. (1764-1794).

Elizabeth, Valérie Gabrielle Marie, queen-dowager (since 1934) of the Belgians, was born at Posenhofen; second daughter of Duke Charles Theodore of Bavaria; married, 1900, to Albert, afterwards King of the Belgians. (1876-).

Elizabethan Architecture,

a term applied to the style of architecture which flourished in the reigns of Elizabeth and James I., and was characterised by a revival of classic designs wrought into the decadent Gothic style. Lord Salisbury's house at Hatfield is a good specimen of this mixed style.

Elizabethville, a town of the Belgian Congo, named after the Queen of the Belgians, capital of Elizabethville province and not far from the N. Rhodesia border. Near are rich copper-mines. Pop. (white) 2,648.

Elk, or Moose (*Alces alces*), the largest member of the Deer family of mammals, found in the N. of Europe and in America, where it is more commonly called Moose. (The name elk is there applied to the Wapiti). It has big horns branching from a huge, palm-shaped base.

Elk, Irish, or Irish Deer (*Megaceros giganteus*), a gigantic extinct deer, standing 6 ft. at the shoulder, remains of which are common in Ireland. Varieties also existed formerly in England and other parts of Europe.

El Kantara, town of Egypt on the Suez Canal. Its Turkish advance guard was defeated; British in 1915.

ELK

Ell, a measure of length in cloth, formerly taken from the forearm, but now three-quarters of a yard in England. The term also appears in Flemish and French tables.

Elland, urban district of Yorkshire, England, in the W. Riding, 3 m. S.E. of Halifax. Woollen goods are made, and there are dye and iron works, etc. Pop. 18,382.

Ellenborough, Edward Law, Earl of, an English Conservative statesman, son of Baron Ellenborough, (1750-1818), Lord Chief Justice of England and leading counsel for the defence of Warren Hastings; entered Parliament in 1813; held office under the Duke of Wellington and Sir Robert Peel; appointed Governor-General of India, 1841; recalled in 1844; subsequently First Lord of the Admiralty and Indian Minister under Lord Derby. (1790-1871).

Ellen's Isle, islet in Loch Katrine, Perthshire, Scotland, immortalised in Scott's *Lady of the Lake*.

Ellerman, Sir John Reeves, Bart., shipowner, son of John Herman Ellerman of Hull, a native of Hamburg; was director Leyland Line, 1892; came to control a Mediterranean fleet, and the City, Hull, Bucknall and Wilson Lines. Baronet, 1905. Left a fortune of £26,000,000. (1862-1933).

Ellesmere Port, urban district (with Whitty) and canal port of Cheshire, England, 7 m. N. of Chester, at the junction of the Ellesmere Canal and Manchester Ship Canal. Pop. 19,000.

Ellice Islands, a group of British coral islands in the Pacific, North of Fiji, forming part of the Gilbert and Ellice Islands Colony. The Phoenix Isles form part of the Colony. Area 14 sq. m. Pop. 3,200.

Elliot, Jane (or Jean), Scottish poetess born in Teviotdale, and remembered for her lament, *The Flowers of the Forest*. (1727-1805).

Elliot, Rt. Hon. Walter Elliot, Conservative statesman, educated at Glasgow; obtained Military Cross for service in France. M.P., Lanark, 1918-1923; Kelvin-grove division of Glasgow, from 1924 onwards; Minister of Agriculture, 1932-1936; Secretary for Scotland 1936. In the Cabinet reshuffle of May 1938 he became Minister of Health. (1890-).

Elliott, Ebenezer, English poet, born in Rotherham parish, Yorkshire; an active worker in iron; devoted his leisure to poetic composition; wrote the *Corn-Law Rhymes* and other pieces. (1781-1849).

Ellipse, a plane figure in geometry, being the curved bounding line of a regular oval or the area contained therein. It is formed by the revolution of one point round two fixed points in such a way that the sum of the distances of the one point from the other two is always constant.

Ellipsis, in English syntax a term denoting the leaving out of a word or words from a sentence whereby the complete meaning is obtained by inference.

Ellis, Henry Havelock, author, born at head at sea; spent much of his childhood at sea; taught in New South Wales, 1875-1879; practised medicine briefly in England; has written much on obscure phases of sex, and *My Confessions*, 1934. (1852-).

Ellis Island, in New York harbour, the place where immigrants are examined before being allowed to land.

Ellora, an Indian village in Hyderabad, 19 m. N.W. of Aurangabad, famed for its Buddhist and Hindu cave and monastic temples, the most magnificent of which is hewn out of a solid hill of red stone, the

most beautiful being the Hindu temple of Kailās.

Ellwood, Thomas, a celebrated Quaker, born in Crowell, Oxfordshire; the intimate friend of Milton, to whom he suggested the idea of *Paradise Regained*; did much to extend Quakerism in England; his *Autobiography* is still read. (1639-1713).

Elm, the common name of 18 species of trees of the *Ulmus* genus of the

Ulmaceae family. They are natives of the temperate regions of the Northern hemisphere, and are easily cultivated, flourishing in almost any soil or situation. The common elm (*Ulmus campestris*) is abundant in England, France, Spain and Italy, sometimes attains great age and size, endures in smoky town conditions and is a feature of London parks. In former times its timber was used in making water-pipes and the keels of ships. *U. montana*, also indigenous to Great Britain, is the Scotch, or Wych Elm. Elms are liable to a disease resulting in the death of the tree.

ELM (Leaf and Seed)

Elman, Mischa, Russian-Jewish violinist, born at Tainoi, Kiev; trained at Odessa by Fiedelman; at St. Petersburg by Auer. Appeared: Berlin, 1904; London, 1905; New York, 1908. Was a prodigy as a boy, and has attained permanent recognition as one of the leading violinists. (1891-).

El Misti, another name for Arequipa, Peru, in the Andes, not far from the city of Arequipa, 18,640 ft. high.

Elocution, the training of the voice for public speaking. Special attention is paid to enunciation, voice-production, delivery and gesture. It was a feature of instruction in Greece and Rome as a branch of the science of oratory, and is as necessary in public speaking as the worth of the message. Elocution competitions are a feature of such local contests as eisteddfods.

Eloge, a discourse in panegyric of some illustrious person deceased, in which composition Fontenelle took the lead in France, and in which he was followed by d'Alembert, Condorcet, Flourens and others.

Elohim, a Hebrew word in the plural signifying God or one as God, but with a verb in the singular, signifying generally the one true God. According to the Talmud, it denotes God as just in judgment to all, in contradistinction to Jehovah, which denotes God as merciful to His people.

Elohists, a name given by the critics to the presumed author or authors of the earlier part of the Pentateuch, whose work in it they allege is distinguished by the use of the word Elohim for God. He is to be distinguished from the Jehovist, the presumed author of the later portions, from his use, on the other hand, of the word Jehovah for God.

El Paso, city and port of Texas, U.S.A., on the Rio Grande opposite Ciudad Juarez, Mexico. It trades in minerals, wool, hides and livestock. Pop. 103,000.

Elphinstone, Mountstuart, a noted historian; Indian civil servant and historian; co-operated with Wellesley in firmly establishing British rule in India; was Governor of Bombay where he accomplished many useful reforms, and issued the Elphinstone Code of Laws. Wrote a *History of India*, which earned for him the title of the "Tacitus of India." (1779-1869).

Elphinstone, William, an erudite and patriotic Scottish ecclesiastic and statesman, born in Glasgow. Held several high State appointments under James III. and James IV.; continued a zealous servant of the Church, holding the bishoprics of Ross and of Aberdeen, where he founded the university. (1431-1514).

Elsinore (Danish *Helsingør*), a seaport on the island of Zealand, in Denmark, 25 m. N. of Copenhagen; has a good harbour; is the site of scenes in Shakespeare's *Hamlet*. Pop. 16,000.

Eissler, Fanny and Thérèse, two famous dancers, born in Vienna. Fanny (1810-1884) by her art and great personal charm captivating the hearts of all Europe and America. Thérèse was created Baroness von Barnim after entering into amorganatic marriage with Prince Adalbert of Prussia. (1808-1878).

Elstow, village of Bedfordshire, England, 2 m. S. of Bedford, the birthplace of Bunyan.

Elstree, village of Hertfordshire, England, 7 m. S. of St. Albans. Large film studios have been constructed here. Pop. 3,500.

Elswick, a town in the vicinity of Newcastle, noted for the great engineering and ordnance works of the Armstrong company. Pop. 13,000.

Eltham, parish in the municipal borough of Woolwich, England, and the County of London. Here was formerly a royal palace. Pop. 28,000.

Ely, a cathedral city, in the fenland of Cambridgeshire, on the Ouse, 24 m. SE. of Peterborough; noted as the scene of Hereward's heroic stand against William the Conqueror in 1071. The cathedral, founded in 1083, is unique as containing specimens of the various Gothic styles incorporated during the course of 400 years. Pop. 8,400.

Ely, Isle of, a name given to the N. portion of Cambridgeshire, on account of its having been at one time insulated by marshes, being included in the region of the Fens; has been drained, and is now fertile land.

Elyot, Sir Thomas, English author and ambassador of the reign of Henry VIII.; ambassador to the Court of Charles V.; celebrated as the author of *The Governour*, the first English work on moral philosophy, and also of the first Latin-English dictionary. (c. 1490-1546).

Elysium, or The Elysian Fields, the abode of the shades of the virtuous dead in the nether world as conceived by the poets of Greece and Rome, where the inhabitants live a life of passive blessedness.

Elzevir, the name of an eminent family of printers residing in Amsterdam and Leyden. Louis, the first of them, started in Leyden in 1683. Their publications, mostly of classics, numbered many hundreds.

Emanation, The Doctrine of, a doctrine of Eastern origin, which derives everything that exists from the divine nature by necessary process of emanation, as light from the sun, and ascribes all evil and the degrees of it to a greater and greater distance from the pure ether of this parent source, or to the extent in consequence to which the being gets immersed in and clogged with matter.

Emanuel I., King of Portugal from 1495 to 1521. His reign inaugurated the golden period of Portuguese history, during which Portugal became the first maritime and commercial power in Europe; was the patron of Vasco da Gama and Albuquerque; issued an edict for the expulsion of the Jews from his kingdom. (1469-1521).

Embalming, the art of preserving the dead bodies from decay

by means of antiseptic agents applied both externally and internally. Although known to other people, e.g., the Peruvians, the art was chiefly practised among the Egyptians, and dates back to 4000 B.C. The thoroughness of the process depended on the expenditure, but usually involved the removal of the viscera, save the heart and kidneys, the extraction of the brain, the introduction of drugs to the cavities, and the pickling of the body in carbonate of soda, and the wrapping of it in linen. Experiments in embalming, more or less successful, have been made in recent times.

EGYPTIAN MUMMIES (Human Beings and Cat)

Embankments, a term used in road and railway engineering to denote an earthwork built in low-lying ground and designed to carry the road or railway lines; also the raised mounds or dykes built along rivers or at the sea-shore to prevent flooding, a form of structure very common in the Netherlands. In tropical countries they are often of cement or stone and form a prominent part of irrigation schemes. They are sometimes elaborated in the case of river-embankments into levees, such as are seen in the Thames and the Seine in France.

Embargo, an act by which a government prevents foreign ships from leaving port, especially following a declaration of war; but in recent times a term of grace is often allowed. Sometimes an embargo is laid upon a certain class of goods. During the Italo-Abyssinian War, for example, an embargo was placed on the despatch of munitions to Abyssinia, and a similar step was attempted in connection with the civil war which broke out in Spain in 1936.

Embassy, the residence of an Ambassador (q.v.), the house and its residents enjoying certain privileges over the nationals of the country.

Ember Days, four annually recurring periods of three days each, appointed by the Roman and English Churches to be devoted to fasting and praying; they are the Wednesday, Friday and Saturday after the first Sunday in Lent, after Pentecost, after Sept. 14, and Dec. 13.

Embezzlement, the fraudulent misappropriation of money or goods by an employee to his own use, when received by him for or on account of his employer. It is accounted a felony, and is punishable by penal servitude.

Embolism, a plug floating in the blood-stream and capable of causing a blocking of a blood-vessel. It can be either mechanical or infective, but one of the most common causes is the breaking off of a clot of blood from a thrombus. Embolism of the brain may lead to paralysis and apoplexy. Valvular disease of the heart, after a time, may cause the condition which is also often found in association with septic areas, especially in pyæmia, where the blood is infected by pus. Embolisms are most frequently associated with the after-effects of childbirth, with varicose veins and heart disease, and may end fatally.

Embracery, in law an attempt to induce, influence or corrupt a jury by promises, entreaties, money, etc., to induce them to favour one of the disputing parties. The penalties are fines and imprisonment, and the juror so embraced is also liable.

Embrasure, an opening in a parapet for the purpose of allowing

a gun to be fired through it. They are sometimes called *crenelles*. In architecture the term refers to the indent of a battlement, and also to the splay of a window, so named from the sloping front of the embrasure in fortification.

EMBRASURE
(CRENELLE)

Embroidery,

a method of working devices on woven substances. It is an ancient art, and there are many Biblical references to it. Originally handwork, it is now worked by machinery, and is popular in England and European countries. The instruments used are a needle and a frame to stretch the material while working. Special embroidery stitching is cushion, crewel, stem and button-hole. Some valuable specimens are in the Victoria and Albert Museum.

Embryo, the scientific term for the young of an animal while yet in the initial stage of development in the womb; also applied to the plant in its rudimentary stage within the seed.

Embryology, the study of the ante-natal development of man and animals, or, more generally, of the early changes that take place in the fertilised ovum of animals and plants. The female gamete or egg-cell is normally fertilised by fusion with a male gamete or sperm-cell, and the ovum then begins to divide into a number of cells. Three main layers of tissue are formed in the vertebrate embryo: an outer layer or ectoderm, a middle layer or mesoderm and an inner layer or endoderm. The major portion of the adult organism is derived from the mesoderm, the endoderm lining the alimentary canal and the ectoderm giving rise to the skin, the nervous system and the lens of the eye. Where development of the embryo takes place outside the body of the mother, as in birds, the necessary nutriment is supplied in the form of yolk. In mammals, including man, the embryo is directly nourished within the maternal body via the blood.

Emden, the chief port of the province of Hanover, in Prussia, situated at the outlet of the R. Ems; is intersected by canals; shipbuilding is the chief industry. Pop. 31,000.

Emerald, a precious stone of great value, allied in composition to the beryl; is of a beautiful transparent green colour; the finest specimens are found in Colombia.

Emerson, Ralph Waldo, an American of English Puritan descent, born in Boston, where he started in life as a Unitarian preacher and pastor, an office he resigned in 1832 for literature, in which he found he would have freer and fuller scope to carry out his purpose as a spiritual teacher. In 1833 he paid a visit to England. On his return the year after, he married, and, settling down in Concord, began his career as a lecturer and man of letters. By his *Essays*, of which he published two series, one in 1841 and a second in 1844, he commended himself to the regard of all-thinking men in both hemispheres. These embraced subjects one and all of spiritual interest, and revealed transcendent intellectual power. They were followed in 1846 by *Representative Men*, lectures delivered in Manchester on a second visit to and thereafter, at successive

periods, by *Society and Solitude*, *English Traits*, *The Conduct of Life*, *Letters and Social Aims*, besides a long array of poems. Speculatively, Carlyle and he were of the same school. (1803-1882).

Emery, a dull, bluish-black mineral of composition to the sapphire, but containing a varying quantity of iron oxide; is found in large masses; is exceedingly hard, and largely used in polishing metals, plate-glass and precious stones.

Emetic, a substance which causes vomiting. They are employed in cases of food irritation, biliousness, fever, ague. In cases of poisoning they should not be used if the poison is strongly irritant. Emetics used include warm water, salt water, mustard and water and ipecacuanha wine. The device of thrusting the fingers gently down the back of the throat is also frequently successful.

Emigrants, The (*Les Emigrés*), the aristocracy and of the partisans of the ancient régime who at the time of the Revolution, after the fall of the Bastille, fled for safety to foreign lands, congregating particularly in Coblenz, where they plotted for its overthrow, to the extent of leaguering with the foreigner against their country, with the result of confiscation of their lands and properties by the republic that was set up.

Emigration, movement of individuals from one country to another, usually from an overpopulated, highly developed country to a sparsely populated, undeveloped country, the movement which started on a large scale in the 19th Century from the Old World to America, Australia and South Africa. The U.S.A., alarmed at the influx of Europeans, has restricted every nation to an annual quota, while economic conditions in Canada, Australia and S. Africa in recent years have made it difficult for both British and non-British, and almost impossible for coloured people, to gain entry.

Attempts are made with moderate success to stimulate emigration by State assistance from overcrowded Britain to the undeveloped tracts of the Empire. Financial loans and reduced passages are arranged (though suspended during the world economic crisis) under these schemes, which are the outcome of the Empire Settlement Act of 1922. The body charged with the routine work of administering policy is the Oversea Settlement Department, Carlton House, Tothill Street, London, S.W. 1, under the auspices of the Dominion Office. In Feb. 1936 an Oversea Settlement Board was also set up to advise the Secretary of State for Dominion Affairs on specific proposals, for schemes of emigration within the Empire. The Chairman is the Under-Secretary of State. There is a Permanent Emigration Committee of the League of Nations, forming part of the International Labour Office, which publishes statistics of world emigration and concerns itself with the welfare of emigrants, as well as repatriation.

The peak of emigration from Great Britain was in 1913. The more stringent regulations limiting present-day emigration demand a high standard of health, character and capital resources, while improved conditions at home, including the various insurance schemes for unemployment, health, etc., rather tend to discourage emigration. Australia, however, is (1935) introducing health insurance legislation and otherwise enhancing opportunities for settlers.

Emin Pasha. See Schnitzer, Eduard.

Emir, a title bestowed on the descendants of Mohammed's daughter Fatma, the word denoting a "prince" or "ruler";

has lost this, its primary meaning. The emirs, of whom there are large numbers in Turkey, enjoy no privileges save the sole right to wear a green turban, the supposed favourite colour of Mohammed, though they hold a high social position. The title is also given to chieftains in N. Africa.

Emmet, Robert, a patriotic Irishman, born in Dublin; took part in an ill-planned Irish rebellion; was hanged for his share in an abortive attempt to seize Dublin Castle. (1778-1803).

Empedocles, a philosopher of Agrigento, in Sicily, "extolled in antiquity as a statesman and orator, as physicist, physician and poet, and even as prophet and worker of miracles," who flourished about the year 440 B.C. He conceived the universe as made up of "four eternal, self-subsistent, mutually undecidable, but divisible, primal material bodies, mingled and moulded by two moving forces, the uniting one of friendship and the disuniting one of strife."

Emperor, the title taken by the ruler of an empire. Originally Imperator, it meant full military power in the Roman Empire, but later developed into a high ruling title of sovereigns who had territory beyond their own country. The title is used by the British King, George VI. (Emperor of India), by the Emperor of Japan (the Imperial Son of Heaven), and has been assumed by the King of Italy with reference to Abyssinia. It was also the title of Halle Selassie (Emperor of Abyssinia).

Emperor Moth, a species of Lepidoptera, the *Satur-*

naï pavonia, a large moth, common in England. They are generally gray in colour, relieved by purple and orange. The wings bear eye-spots, and the larva is green with red and yellow spots.

Emphysema,

in medical science an abnormal inflation of a part of the body with air. It often occurs in bronchitis and asthma, and results in a degeneration of the lung tissues, rendering the breathing short and difficult. In serious cases surgical aid is necessary to free the accumulation of air.

Empire Day, a day, May 24, set off Queen Victoria's birthday.

Empire Free Trade, a theory the British Empire can become a self-sufficient economic unit; first advocated by Joseph Chamberlain in 1903. The idea was revived recently by Lord Beaverbrook, but the scheme does not commend itself to the Dominions, as conflicting with their economic nationalism, though some progress was made towards the ideal in 1932 under the Ottawa Agreement Act, and at other times when the Tariff system has been modified to give preferential treatment to the Dominions and Colonies.

Empire Marketing Board,

a body formed as an outcome of the Imperial Economic Committee of 1926 to foster trade with the Empire by promoting the marketing of Empire produce in the United Kingdom. Its chairman was the Secretary of State for Dominion Affairs. Its activities included the exhibition of posters, the distribution of leaflets to schools and newspaper advertisement. The Board was dissolved in 1933, its continued existence being rendered unnecessary by reason of the conclusion of inter-

imperial trade agreements at the Ottawa Conference, 1932, coupled with the passing of the Import Duties Act, 1932. There is now in existence a Colonial Marketing Board created for the purpose of improving the machinery for the marketing of British Colonial products.

Empires: the Roman, capital Rome, Augustus, 27 B.C., to that of Theodosius, A.D. 395; of the East, or Byzantine Empire, capital Constantinople being part of the Roman Empire, dated from 395 to 1453; of the West, capital Rome, dated from 395 to 476; the Holy, or Second Empire of the West, founded by Charlemagne, dated from 800 to 901; the German, or Holy Roman, founded by Otto the Great in 962, ended by abdication of Francis II. of Austria in 1806, though from it sprang the Austrian Empire, 1804 to 1918 and the German Empire was restored under William I. in 1870 and ended in 1918; the French, founded by Napoleon I., dated from 1804 to 1815, and as established by Napoleon III. dates from 1852 to 1870; of India, founded in 1876 under the crown of England.

Empiricism, a philosophical term that all knowledge is derived from the senses and experience alone, to the rejection of the theory of innate ideas. Locke and Hume, in modern times, are the great representatives of the school that advocates this doctrine.

Employers' Liability Act, an Act of 1880 designed to provide for the eventuality of accidents to workmen with regard to compensation where the causes of personal injury were defect in condition of works or machinery, etc., negligence of a superintending employee, or of an employee in charge of railway workings, such as points, signals, etc. Compensation is not payable if the workman knew of the defect and failed to notify it to a superior servant of the employer. Compensation must not exceed 3 years' earnings, and notice of the injury must be given within 6 weeks, and the action begun within 6 months of the accident, or in the case of death, 12 months. Actions must be brought in a County Court. See also *Workmen's Compensation*.

Employment Exchanges, formerly called Labour Exchanges, and instituted as offices for the mobilisation of labour, under the Labour Exchanges Act of 1909. Their work is to collect information as to unemployed workers and the needs of employers and establish contact between the two.

The exchanges are administered by the Ministry of Labour in any locality where they are considered necessary. A large part of the work is, of course, registration. Expenses are met by Parliamentary grants, and the head office is at Queen Anne's Chambers, Westminster. There are over 1,200 employment exchanges in the country, with a clearing office in each of the seven areas into which the country is divided for the purposes of organisation. The Unemployment Insurance Act of 1912 placed on the exchanges the task of payment in ordinary circumstances of benefits under the National Scheme of Unemployment Insurance.

The trades which appear to benefit most by these institutions are building, transport, metal, machine and implement industries, agriculture, textiles and general commerce, while the temporary Christmas staff of the Post Office is largely recruited through this medium. Vacancies filled by women workers include indoor domestic work, clothing industries, agriculture and the food and drink trades, while juvenile employment is also widely covered.

EMPEROR MOTH
(and Larva)

Empyema, a medical term signifying a diseased condition of the chest, in which pus accumulates in the pleura, cures of which are sometimes effected by drawing off the pus by means of tubes.

Empyrean, the highest heaven, or region of pure elemental whence everything of the nature of been conceived to emanate, whether phenomena of nature or the life of man.

Ems, (1) a river of NW. Germany, rises in Westphalia, and after a course of 205 m. discharges into Dollart Zee, an inlet of the North Sea; is navigable, and is joined to the Lippe by means of a canal, and similarly to Dortmund. (2) A celebrated German watering-place, on the Lahn, near Coblenz; its warm mineral springs were known to the Romans. Pop. 7,000.

Emu, a family of large birds (the *Drom. nova-hollandia*), of which there is only one living species (the *Dromas nova-hollandia*), and even that, owing to constant hunting, is now practically extinct. It is a native of Australia, stands from 5 to 6 ft. high and is very fleet of foot. The nest is a shallow pit in the ground and its food is vegetables, seeds, fruits and roots. It is closely allied to and resembles the Cassowary, but lacks the horny helmet.

EMU

Enamel, a vitreous compound, easily fusible, and coloured in various tints by the admixture of different metallic oxides; is fused to the surface of metals for utility and ornament; was known to the European and Asiatic ancients, and has maintained its popularity to the present day. Various schools for the revival of the art of enamelling have been formed, of which the Byzantine, Rhenish and Limoges are the most noted.

Encaustic Painting, an ancient style of decorative art somewhat similar to enamelling. It consisted in overlaying the surface (e.g., of walls) with wax, then inlaying a coloured design, the whole being subsequently treated with heated wax and polished.

Enceladus, in Greek mythology, one of the hundred-armed giants that revolted against Zeus and who, as he fled and took refuge in Sicily, was transfixed by a thunderbolt and buried under Etna.

Encephalitis Lethargica, a disease popularly known as "sleepy sickness," apparently of recent origin, no cases having been known before 1917. It is probably due to some unidentified microbe. The symptoms (which vary according to the severity of the attack and which in mild cases may not be apparent at all) are wakefulness at night, drowsiness and double vision by day and weakness of movement of the arms and legs somewhat resembling "shaky palsy." It attacks children chiefly, but not exclusively, and has forced itself on to public notice on account of the inexplicable after-effects, which often include a complete change of character, the normal healthy child sometimes becoming chieftain, destructive and otherwise unmanageable.

Encke, Johann Franz, a celebrated German astronomer, born at Hamburg; determined the orbit of the comet of 1850; calculated the time of the revolution of the comet which now bears his name, and which appeared in 1819; determined also the distance of the sun by the two transits of Venus in 1761 and 1769. (1791-1865).

Encyclical Letter, a letter addressed to the bishops of the Church, condemnatory of prevailing errors or counselling them how to act concerning public questions of the day.

Encyclopedia, a name of Greek derivation, given to works which embrace within their pages a more or less complete account, in alphabetical order, of the whole field of human knowledge, or of some particular section of it. Attempts in this direction were made as far back as Aristotle's day, and various others have since been made from time to time, according as the circle of knowledge widened, but the earliest use of the word was in a German publication of 1541. Amongst famous encyclopedias which have appeared, mention may be made of the French *Encyclopédie* (q.v.); the *Encyclopedia Britannica*, Edinburgh (1768-1771); the German *Encyklopädie*, begun in 1813 by Erach and Gruber; the *Grand Dictionnaire Universel du XIX^{ème} Siècle* (1865-1878) of Larousse; while the largest of all is the Chinese encyclopedia, in 5,020 vols., printed in Peking in 1726.

Encyclopédie, a French encyclopedia, consisting of 28 vols., to which a supplement of 5 vols. was added; edited by d'Alembert and Diderot; contributed to by a number of the eminent savants of France, and issued in 1751-1777, it helped to feed, but did nothing to allay, or even moderate, the fire of the Revolution.

Endemic, a term applied to diseases of certain countries and localities, and which arise from strictly local causes, e.g., neighbouring swamps, bad sanitation, impure water, climate, etc.

Enderby Land, a tract of land in the Antarctic, in the African quadrant.

Endocrine Glands, forming part of the equipment of the secretive organs of the body, and consisting of thyroid, parathyroid, pituitary, pancreas, suprarenal and part of the sex glands. They give off substances which affect physical growth and sex development. The various glands are closely interrelated, and recent research has shown that their action is intimately associated with psychological reactions in the human character, and that emotional conditions are therefore based on purely physical phenomena. There are various diseases associated with abnormal conditions of these glands, such as goitre, diabetes and abnormal blood pressure. Patent medicines offer extracts of endocrine gland secretion, but scientific research is by no means conclusive, and most theories concerning their scientific value are as yet hypothetical. Such medicines include pituitrin, thyroxin and epinephrin.

Endor, a place on the S. of Mount Tabor, in Palestine, where the sorceress lived who was consulted by Saul before the Battle of Gilboa, and who professed communication with the ghost of Samuel (1 Sam. xxviii. 7).

Endorsement, the writing of one's name on the back of a cheque or bill of exchange as a formal signification of approval or ratification. Special endorsement is made when the value is to be transferred on order. Endorsement in a general sense implies agreement.

Endowment Insurance, a particular form of insurance whereby in consideration of the payment of agreed premiums the insured person receives an agreed sum on a specified date, or, if death occur previously, the full sum assured is payable, immediately the claim is allowed, to his next of kin. If the policy is "with profits," the sum insured

is increased by an addition of interest, of recent years in the region of 2 per cent. annually, but actually depending on the "profits," which in their turn depend on the mortality rates experienced by the company, the expense rates and interest earned on funds.

Endymion, in Greek legend, a beautiful shepherd, whom Selene, according to one version of the story, carried off to Mount Latmus, in Caria, where, as she kissed him, he sank into eternal sleep.

Enema, a liquid solution, commonly of soap, soap and water or oil, prepared for injection into the bowels through the rectum in order to relieve constipation and allied stoppages and empty the bowels before an operation. The term also refers to the instrument used.

Energy, in science, is defined as that work, which can perform mechanical work, work being done when a force acts upon a body in such a way as (a) to cause it to move if it is at rest, (b) to cause it to stop if it is in motion, (c) to alter its velocity if it is in motion. Energy is capable of assuming many forms, all of which are interconvertible; thus there is light energy, heat energy, electrical energy, kinetic energy (i.e., the energy possessed by a body in virtue of its motion), potential energy (i.e., the energy possessed by a body in virtue of its position) and chemical energy.

Energy and work are measured in various units—e.g., the erg, which is the work done by a force that produces a velocity of 1 cm. per sec. when it acts for 1 sec. upon a mass of 1 gm.; the foot-pound, or work done in raising a mass of 1 lb. through a vertical height of 1 ft.; and the kilogram-metre, or work done in raising a mass of 1 kg. (1,000 gm.) through a vertical height of 1 metre. It has been shown in recent years that matter may be converted into energy—e.g., by the mutual annihilation of positive and negative electrons.

Enfield, a town in Middlesex, 10 m. N.E. of London, has a celebrated Government rifle factory. Pop. 68,000.

Enfranchisement, the extension of political rights to peoples or classes of peoples; giving them the right of representation in the government.

Engadine, a noted Swiss valley in the canton of the Grisons, stretches about 65 m. between the ranges of the Rhaetian Alps. Is divided into the Lower Engadine, wild and desolate, and the Upper Engadine, fertile and populous, and a favourite health resort. The river Inn flows through it, its waters collected here and there into lakes.

Engels, Friedrich, a Socialist, the friend of Karl Marx; an active propagandist of socialistic theories; author of several works on Socialism. (1820-1896).

Enghien, Louis de Bourbon, Duc d', an ill-fated French Royalist, born at Chantilly; joined the Royalists under his grandfather, Prince of Condé, and took part in the Rhine campaign against the Republicans; was suspected of being concerned in a Bourbon plot to assassinate the Emperor Napoleon; was seized in the neutral territory of Baden, brought to Vincennes, and, after an inconclusive and illegal trial, shot by Napoleon's orders. (1772-1804).

Engineering, in the narrower sense, and using machines or engines, but applied in its wider sense to the design, construction and maintenance of public works such as docks, irrigation schemes, embankments, railways and marine engineering, etc. There are four principal divisions of engineering: civil, electrical, mechanical and mining. (See Civil Engineer).

Electrical engineering is concerned with the

construction, installation and maintenance of electrical machinery and engines, such as power-stations, lighting, heating, tramways and railways, and machinery for the transmission of electrical energy, such as dynamos, accumulators, switch-boards, cables, etc., as well as telegraphy and wireless apparatus. In a sense electrical engineering is secondary to that of steam or mechanical engineering, since electricity is not a prime mover; the initial power, which the electrical engineer helps to transmit, must come from steam or internal-combustion engines, or from wind- or water-power.

Mining engineering is the science of the building, erection and working of apparatus for establishing mines, the boring of the earth's surface, and the geological exploration and survey of mining areas with reference to metal-bearing ores.

Mechanical engineering is the most extensive branch of the profession, and includes the work of designing, constructing and operating steam-engines, oil-engines, gas-engines and petrol-engines and is thus, the basis of modern transport. The science embraces such subjects as the study of mechanics of the engine, boilers, fuels, turbine action and the internal-combustion engine, of which last the aeroplane engine is the most advanced form, and the engineer concerned requires to study additional problems. The engine, for example, has a very slight mounting and varying air-pressures and temperatures. The need for a minimum of weight combined with a maximum of energy, together with economy of fuel consumption, confront him with additional problems.

Agricultural engineering deals with the questions of mechanically propelled tractors, engines for driving pumps, dynamos for lighting, chaff- and root-cutting machinery, milk-separating and other dairy machinery. An engineer who gives advice as an expert on engineering work is called a "consulting engineer," and is generally one with great experience and expert knowledge of the particular problem.

To persons with an aptitude for mechanical and constructional work, and with a taste for mathematics and physics, engineering offers attractive facilities in the choice of a career. An intending student should undertake a two or three years' course of study at an engineering school, after preparation which can be obtained at a local trade school from the age of 14. At the age of 18 he may seek entrance to the preliminary examination of the Institutions of Civil, Automobile or Mechanical Engineers, but should have passed an examination nearly parallel to the London Matriculation of the University of London. Exemption is granted if he is a graduate of a university, or if he has obtained a higher certificate at the General Schools Examination. The range of subjects of examinations and a detailed syllabus may be obtained from the Institutes concerned.

Among the most prominent problems of modern engineering is the economical production of power, owing to the rapid substitution of mechanical power for most forms of manual labour, combined with shorter working periods, a world shortage of coal and oil and increasing world population. Hence the steam-engine is being superseded by the internal-combustion engine and by electricity. A feature of this advance is the adaptation of motor-engines to enable them to draw power from oil products obtained from coal.

Engineering Union, Amalgamated, the principal Trade Union of British engineering workers, formed in 1920 by the amalgamation of several previously existing unions, the principal being the Amalgamated Society of

Engineers, the regular army, dating from 1772, whose duties consist of the construction of fortifications, military railways, bridges, mines, etc., the manning and maintenance of searchlight units and military balloon services. Officers are trained at the Royal Military Academy, Woolwich, and the School of Military Engineering at Chatham.

BADGE OF ROYAL ENGINEERS

England, the largest and most populated division of the island of Great Britain. It comprises along with Wales the southern portion. It is separated from the Continent on the E. and S. by the North Sea and English Channel, and from Ireland on the W. by St. George's Channel and the Irish Sea, while Scotland forms its northern boundary. Its greatest length N. and S. is 430 m., and greatest breadth 370 m. It is of an irregular triangular shape, has a long and very indented coastline (1,800 m.); is divided into 40 counties (with Wales 52); has numerous rivers with navigable estuaries, whose transit is facilitated by a network of railways, roads and canals.

It is mountainous in the N. The Pennine Range stretches down through the centre of the country as far as Derbyshire. There is a mountain system (the Cambrian system), also in Wales and high moorlands in Devonshire, Somerset and Cornwall. Otherwise the country consists of undulating plains 80 per cent. of the whole being of some agricultural value. Coal and iron are found in abundance, and copper, lead, zinc and tin in lesser quantities, but it is in the extent and variety of its industrial development that England is without an equal. The climate is mild and moist, and, owing to the equatorial drift current, popularly known as the Gulf Stream (q.v.) whose waters wash its western shores, very equable.

Under a limited monarchy and a widely embracing franchise, the people of England enjoy an unrivalled political freedom. Since Henry VIII.'s time, the national religion has been an established Protestantism, but all forms are tolerated. In 1896 education was made free. The name England is derived from Angle-land, or land of the Angles, a Teutonic people who, with kindred Saxons and Jutes, came over from the mainland in the 5th Century, and took possession of the island, driving Britons and Celts before them. Admixtures to the stock took place during the 11th Century through the Danish and Norman conquests. England annexed Wales in 1284, and was united with Scotland under one crown in 1603, and under one Parliament in 1707. Area (England and Wales) 58,300 sq. m. Pop. (England and Wales) 40,000,000.

English Channel, See Channel, English.

Engraving, a process of relief printing from a raised surface. A roller with pigment on it passes over the design, touching only the raised portion. Wood-engraving is typical of the process. Copper-plate engraving, called intaglio, consists of cutting the design into a flat surface. The plate is then inked and wiped, leaving the pigment in the recesses. The paper is pressed over the whole surface with soft backing. The tool used is a graver or burin. Etching requires the use of a mordant acid to eat into the plate. Dürer, Van Dyck, Hogarth and Whistler were famous in the art.

Engrossing, a practice in commerce of buying large quantities of a certain class of goods in order to control

the market price, and thus assume a large profit. At one time it was illegal, but by an Act in 1844 the operation was legally recognised.

Enlistment, the act of joining the regular armed forces. Until 1802 the system was conducted by private agents, who received a commission for each recruit. It is now controlled by the Adjutant General, and is regulated by the Enlistment Acts of 1871 and 1881. The recruit receives on demand a recruiting paper from one of the centres, and submits to a preliminary military examination by the recruiting officer. After a medical examination he must attest before a magistrate, take the oath of allegiance and finally be approved by the authorities. A false declaration constitutes a punishable offence. A recruit may buy himself out of the service during his first three months unless national conditions are unfavourable.

Ennerdale, lake of Cumberland, England, 3 m. long by 1 m. wide. It serves as a reservoir for Whitehaven.

Ennis, the county town of Co. Clare, Ireland (Eire), 20 m. NW. of Limerick; there are ruins of an abbey. Pop. 5,500.

Enniscorthy, a market town of Co. Wexford, Ireland (Eire), 14 m. NW. of Wexford, an agricultural centre, with ruins of a Norman castle. Pop. 5,500.

Enniskillen, the county town of Fermanagh, Northern Ireland, on an isle in the river which joins Lower and Upper Loughs Erne; the scene of the defeat of James II.'s troops by those of William of Orange. Pop. 5,000.

Ennius, Quintus, an early Roman poet, the father of Roman epic poetry, born in Rudiae, Calabria; promoted the study of Greek literature in Rome; of his poems, dramatic and epic, only a few fragments are extant. (239-169 B.C.).

Enns, town of Upper Austria, near the junction of the Enns and Danube. Pop. 4,000.

Enoch, a godly man, who lived in antediluvian times among a godless race and whom the Lord in judgment removed from the earth to return Himself later with a flood in order to clear the world of the ungodly.

Enoch, The Book of, an apocryphal book, quoted from by Jude, discovered over a century ago, composed presumably about the 2nd Century, though subsequently enlarged and ascribed to Enoch. It professes to be a series of revelations made to the patriarch bearing upon the secrets of the material and spiritual universe and the course of Providence, and written down by him for the benefit of posterity.

Enschede, town and railway junction province, of Netherlands in Overysel, a centre of the cotton industry. Pop. 87,000.

Ensign, the flag flown on a vessel to indicate its nationality. The white ensign is flown by the Royal Navy and the Royal Yacht Squadron, the red by the merchant service and the blue by certain yacht clubs and the Royal Naval Reserve. The staff from which the flag is flown is the Ensign Staff. The term also refers to an obsolete rank in the Army corresponding to that of second lieutenant. It was this officer's former duty to carry the ensign of the regiment.

Ensilage, a process of storing crops such as hay, etc., while green, to serve as winter food for cattle. Formerly stored in a pit, the hay is now placed in an air-tight silo, constructed of brick or cement.

Entablature, a term in classic architecture applied to the

ornamental portion of a building which rests in horizontal position upon supporting columns; is subdivided into three parts, the lower portion being called the *architrave*, the middle portion the *frieze*, and the uppermost the *cornice*. The depth assigned to these parts varies in the different schools, but the whole entablature generally measures twice the diameter of the column.

Entail, used in connection with the practice of limiting the inheritance of estates to a certain restricted line of heirs. Attempts of the kind are of ancient date; but the system as understood now, involving the principle of primogeniture, owes its origin to the feudal system. Sometimes the succession was limited to the male issue, but this was by no means an invariable practice. In modern times the system has been, by a succession of Acts of Parliaments (notably the Cairns Act of 1882 and the Law of Property Act 1925), greatly modified, and greater powers given to the actual owner of alienating the estates to which he has succeeded, a process which is called "breaking the entail."

Entebbe, the administrative capital of Uganda Protectorate, E. Africa, on Lake Victoria.

Entente Cordiale, a close and standing between two or more countries, with common interests and needs, such as the alliance between England and France fostered by Edward VII.

Enteric Fever. See Typhoid Fever.

Enteritis, general term in medicine for inflammation of the small intestine, in mild cases known also as diarrhea, which may be then the only symptom. It is common in the tropics, and is liable to become chronic in hot-weather conditions. The symptoms are pain in the abdomen, caused by inflation, a coated tongue and uncertain appetite.

Entertainments Duty, a tax on enter-

Entomology, the branch of zoology which deals with the study of insect life, and divided into classification, anatomy and physiology, bionomics or life history and habits, embryology, cytology, ecology and paleo-entomology, or the study of fossilised insect forms. The science is represented in London by the Royal Entomological Society and professors and amateur students are admitted. The science has assumed an economic importance and much research into the diseases of animals and plants has been undertaken, the most important of which to humanity is the work of Sir Ronald Ross in identifying the mosquito as a malaria-carrying parasite. Other activities include the study of insect pests such as the boll-weevil and its destructive work in cotton plants.

Entre-Minho-e-Douro, ^{most} north
early province of Portugal, between the Douro

and Minho Rs. A mountainous district, well cultivated and thickly populated. Chief town, Oporto. Area 2,790 sq. m. Pop. 1,304,000.

Entre Ríos, province of NE. Argentina, between the Paraná and Uruguay Rs. Partly forest, partly marshlands, but largely prairie; cattle, sheep and horses are raised, cereals, vines and timber grown. Capital Paraná. Area, 30,240 sq. m. Pop. 680,000.

Enver Pasha, leader of the "Young Turks," born at Apana on the Black Sea. Helped revolution in Macedonia, 1908. Attaché in Berlin. Brought about assassination of War Minister, Nazim Pasha, 1913; became virtual ruler of Turkey. After Turkish collapse in World War went to Russia; fought for both sides alternately. He was killed leading an insurrection in Turkestan. (1881-1922).

Environment, a term of extensive use in biological science, especially employed to denote the external conditions which go to determine modifications in the development of organic life to the extent often of producing new species.

Enzymes, substances, very small quantities of which can bring about chemical change, *e.g.*, *invertase*, found in yeast, which converts cane-sugar into glucose; *diastase*, which changes starch into glucose, and *pepsin*.

Coanthropus Dawsoni. See Pilt-

Eocene, the geological strata laid down at the beginning of the Tertiary Period. This age is represented in England by the London clay and thin beds of sand and gravel. The fossils found indicate that this country then enjoyed a tropical climate. In Eocene times mammals multiplied and began to gain ascendancy, and great earth movements began.

Eon de Beaumont, Charles d', the "Chevalier d'Eon," a noted French diplomatist, born in Tonnere, Burgundy; adopted a woman's dress for purposes of disguise; was ambassador at the English Court, but degraded and recalled by Louis XVI., and condemned to wear feminine garb till the close of his life. (1728-1810).

Eos, the goddess of the dawn, the daughter of Hyperion, and the sister of Helios and Selene. See **Aurora**.

Epact, formerly used for finding Easter, is the age of the moon on Jan. 1 of any particular year.

Epaminondas, a famous Theban statesman and soldier, defeated Sparta in the great victory of Leuctra, and during his lifetime raised Thebes to a position of dominant power; was slain in the battle of Mantinea in 362 B.C., whom again successfully engaging the Spartans. Blameless in his private life as he was heroic in the field, he figures as the great hero of Theban history. Born about 418 B.C.

Epée, Charles Michel, Abbé de l', a Versaillais; noted philanthropist, born at Versailles; took holy orders, but was divorced from them on account of Jansenist views. Devoted his life to the instruction of deaf-mutes, for whom he founded an institute and invented a language of signs. (1713-1789).

Epéhy, town of France, in the dept. of Somme, 13 m. S. of Cambrai. It was captured by the British in 1917, lost March 1918 and recaptured Sept. 1918.

Epernay, town of France, on the Marne, 20 m. NW. of Châlons, the centre of the champagne industry. Frequently bombarded during the World War, it was a German objective in the Second Battle of the Marne, 1918. Pop. 21,900.

Ephemera, known popularly as May flies, a class of insect,

resembling dragon-flies, which live in the adult stages for only one day. The larva state, however, lasts in some species for three years. They are found by ponds and the banks of rivers in summer. The body is thin and the wings, of which there are two pairs (the hind pair much smaller than the other), filmy. They bear two or three thread-like tails at the rear of the abdomen.

Ephemera vulgata

Ephesians, The Epistle to the, a presumably circular letter of St. Paul to the Church at Ephesus, among other Churches in the East, written to show that the Gentile had a standing in Christ as well as the Jew, and that it was agreeable to the eternal purpose of God that the two should form one body in Him. It contains Paul's doctrine of the Church, and appears to have been written during his first imprisonment in Rome (61-63). It appears from the spirit that breathes in it and the similar thoughts and exhortations contained, to have been written at the same time as the Epistle to the Colossians.

Ephesus, a city of Asia Minor, originally an ancient Greek colony; under Roman domination it was a free city and included many Jews; was famous for its temple of Artemis (or Diana), one of the wonders of the world; was visited by Paul twice; was a centre of learning and the arts.

Ephod, a richly and emblematically embroidered vestment worn by the high-priest of the Jews, and consisting of two parts, one covering the breast and supporting the breastplate, and the other covering the back, these being clasped to the shoulders by two onyx stones with names inscribed on them, six on each, of the 12 tribes, and the whole bound round the waist with a girdle of gold, blue, purple, scarlet, and fine-twined linen. The word is also applied by some to an image covered with gold, the same being an object of worship (see Judges viii. 27).

EPHOD

Ephori (i.e., overseers), the name of five magistrates annually elected in ancient Sparta from among the people as a check to the authority of the kings and the senate. They had originally to see to the execution of justice and the education of youth.

Ephraim, one of the 12 tribes of Israel, descended from Ephraim, the second son of Joseph by his wife Asenath; the one to which Joshua belonged, located in the centre of the land; powerful in the days of the Judges, the chief of the tribes that revolted under Jeroboam after the death of Solomon, and often gave name to the whole body of them.

Epic, a poem that treats of the events in the life of a nation or a race or the founder of one, agreeably to the passion inspiring it and in such form as to kindle and give the heroism thereof in the general; or a poem in celebration of thoughts, feelings and feats of a whole race; or compositions of this kind.

Engrossed, and *Odyssey* of Homer, the *Aeneid* of Virgil, the *Divine Comedy* of Dante and the *Lost of Milton* are famous.

Epictetus, a celebrated Stoic philosopher, of the 1st Century A.D., originally a slave; lived and taught at Rome but after the expulsion of the philosophers retired to Nicopolis, in Epirus; was lame, and lived in poverty; his conversations were collected by Arrian, and his philosophy in a short manual under the Greek name of *Enchiridion of Epictetus*, written, as is alleged, in utter oblivion to the fact that "the end of man is an action, not a thought."

Epicureans, a sect of philosophers who derived their name from Epicurus, and who divided the empire of philosophy with the Stoics at the birth of Christ. They held that the chief end of man was happiness, that the business of philosophy was to guide him in the pursuit of it, and that it was only by experience that one could learn what would lead to it and what would not. They scouted the idea of reason as regulative of thought, and conscience as regulative of conduct, and maintained that our senses were our only guides in both. In a word, they denied that God had implanted in man an absolute rational and moral principle, and maintained that he had no other clue to the goal of his being but his experience in life, while the distinction of right and wrong was only a distinction of what was found conducive to happiness and what was not. They had no faith in or fear of a divine being above man any more than of a divine principle within man, and they scorned the idea of another world with its awards, and concerned themselves only with this.

Epicurus, a Greek philosopher, born in Samos, of Athenian origin; settled at Athens in his thirty-sixth year, and founded a philosophical school there, where he taught a philosophy in opposition to that of the Stoics. Philosophy he defined as "an activity which realises a happy life through ideas and arguments," summing itself up "in ethics, which are to teach us how to attain a life of felicity." His system comprised "the three branches included in philosophy, viz., logic, physics and ethics," but he arranges them in reverse order, logic and physics being regarded only as the handmaids of ethics; for he "limited logic to the investigation of the criterion of truth," and physics he valued as disilluminating the mind of "the superstitious fear that went to disturb happiness." He was a man of a most temperate and blameless life, and it is a rumour on him to charge him with summing up happiness as mere self-indulgence, though he regarded "virtue as having no value in itself, but only in so far as it offered us something—an agreeable life." (342-270 B.C.)

Epicycle, an expression used in the astronomy. The old belief that the celestial bodies moved in perfect circles round the earth was found to be inadequate to explain the varying position of the planets, a difficulty which led Ptolemy to invent his theory of epicycles, which was to the effect that each planet revolved round a centre of its own greater or less, but that all these centres themselves moved in procession round the earth, a theory which fell to pieces before the investigations of Kepler and Newton.

Epidaurus, a town of ancient Greece, on the Peloponnese; was at one time an independent State and an active centre of trade but was chiefly noted for its famous temple of Esculapian, to which people flocked to be cured of their diseases, ruins of magnificent theatre are still extant here.

Epidemic, a name given to infectious diseases which, arising suddenly in a community, rapidly spread through its members, often travelling from district to district, until often a whole country

affected. The theory of the transmission of disease by microbes has largely explained the spread of such scourges, but the part which atmospheric and other physical, and perhaps psychic, causes play in these disorders is still matter of debate, especially as regards epidemic mental diseases. See *Endemic*.

Epiglottis, a covering of tissue which swallows, closes the larynx during swallowing. It is connected to the back of the tongue. It is yellow in colour and is elastic. A ligament leads from the epiglottis inside the larynx.

Epigoni (the Descendants), the name given to the sons of the Seven who perished before Thebes. They avenged the death of their fathers by razing Thebes to the ground. The war first and last has been made the subject of epic and tragic poems. *Æschylus* has a tragedy on the subject.

Epigram, in modern usage, is a neat, witty and pointed utterance, briefly couched in verse form, usually satiric, and reserving its sting to the last line. The Latin epigrammatists, especially *Martial* and *Catullus*, were the first to give a satirical turn to the epigram, their predecessors the Greeks having employed it merely for purposes of epitaph and monumental inscriptions of a laudatory nature.

Epilepsy, a violent nervous affection, manifesting itself usually in sudden convulsive seizures and unconsciousness, followed by temporary stoppage of the breath and rigidity of the body; popularly known as "falling sickness"; attributed by the ancients to demoniacal possession. The milder form is known as "petit mal," the craver, "grand mal."

Epilogue, the closing passage or peroration of a speech in Greek oratory; now applied to a concluding comment of a drama recited before the curtain at the end of the play. It was a feature of Restoration plays, and is employed by writers of novels to-day either to point the moral of the story or to emphasise its theme.

Epimenides, a philosopher of Crete of whom it is fabled that he fell asleep in a cave when a boy, and that he did not awake for 57 years, but it was to find himself endowed with all knowledge and wisdom. He was invited to Athens during a plague to purify the city, on which occasion he performed certain mysterious rites with the effect that the plague ceased. The story afforded Goethe a subject for a drama entitled *Das Epimenides Erwachen*.

Epimetheus (i.e., Afterthought), the brother of Prometheus (Forethought), who in spite of the warnings of the latter opened Pandora's box, and let loose a flood of evils on the earth, which oppress it to this day.

Épinal, the capital of the dept. of Vosges, in France, and a strong fortress in the French eastern system of defence; charmingly situated at the foot of the Vosges Mts., on the Moselle; is elegantly built, and has ruins of an old castle, surrounded by fine gardens, an old church and a fine library, &c.; there are industries in cotton, paper, &c.; and printing. Pop. 30,000.

Pinay, Madame d', a French writer, unhappily married in her youth; became notorious for her illicit intimacy with Rousseau and Grimm; her *Mémoires et Correspondance* give a lively picture of her times. (1726-1783).

Epiphany, as observed in the Christian Church, is a festival held on the 12th day after Christmas, Jan. 6, also called in England Twelfth Night, in commemoration of the manifestation of Christ

to the Magi of the East; but up to the close of the 4th Century the festival also commemorated the incarnation of Christ as well as the divine manifestation at His baptism.

Epirus, was the NW. portion of ancient Hellas, Dodona its capital, where there was an oracle, and Acheron, one of its rivers; in 1466 became part of the Ottoman Empire, but is now incorporated almost entirely in Greece, a small part being in Southern Albania.

Episcopacy, the name given to the system in which there are superior and inferior orders among the clergy, as between that of bishop and that of a presbyter; called also Prelacy.

Epistaxis, the medical term for nose bleeding. See *Hæmorrhage*.
Epistle, in form a letter, though usually the term is applied to the less spontaneous type of letter, written for effect and benefit of the immediate recipient, but of posterity also. The most famous of all Epistles are those of St. Paul to the various churches (Colossians, Ephesians, etc.) and included in the Bible.

Epitaph, an inscription placed on a tombstone in commemoration of the dead interred below. The natural feeling which prompts such inscriptions has manifested itself among all civilised peoples and not a little of a nation's character may be read in them. The Greeks reserved epitaphs for their heroes, but amongst the Romans grew up the modern custom of marking the tombs of relatives with some simple inscription, many of their sepulchres being placed on the side of the public roads, a circumstance which explains the phrase, *Siste, viator*—"Stay, traveller"—found in old graveyards.

Epithalamium, a nuptial song, sung before the bride, in honour of the newly wedded couple, particularly among the Greeks and Romans, of which Theocritus and Catullus have left notable examples, though the *Epithalamium* of Edmund Spenser is probably the finest specimen extant.

Epithelioma, or Trade Cancer, a common form of cancer of the skin, often associated with some chronic irritation, e.g., soot, paraffin, etc.

Epithelium, a tissue which clothes internally; composed of cells held together by intercellular substance. Externally it forms the epidermis and internally lines the brain, alimentary and respiratory tracts.

Eponym, the term applied to a person to whom is mythically ascribed the origin of a country or people, or even of a place; thus Iorus was the eponymous ancestor of the ancient Dorians.

Epping Forest, as it now exists in the SE. of Essex, is a remnant—5,600 acres—of the famous Epping or Waltham Forest, which once extended over all Essex, and which then served as a royal hunting-ground; is now a favourite pleasure-ground and valuable field for explorations of botanical and entomological collectors. The market town of Epping is to the N. Pop. 5,000.

Epsom, a market town in Surrey, Eng., land, skirting Banstead Downs, 15 m. SW. of London; formerly noted for its mineral springs, now associated with the famous Derby and other races. Pop. 27,000.

Epsom Salt, known chemically as magnesium sulphate heptahydrate, $MgSO_4 \cdot 7H_2O$. It was discovered in a spring at Epsom in 1695, and finds some application as a purgative. It is also obtained at Seidlitz and in America and is found in sea-water.

Epstein, Jacob, British sculptor. Born New York, he studied in Paris and came to London. He made busts of well-known people in highly original style, and aroused a storm of controversy with his unconventional "Rima" in Hyde Park in 1929 and subsequently with his "Day," "Night" and "Genesis." One of his latest sculptures is his "Consummatus est," a colossal recumbent figure of Christ which could only be viewed from a ladder. He is also notable for his bronzes, chiefly of people. (1880-).

JACOB EPSTEIN

Equation, Chemical, indicates how the reaction, atoms concerned in a reaction are arranged before and after the reaction. Thus the equation $\text{NaOH} + \text{HCl} = \text{NaCl} + \text{H}_2\text{O}$ is interpreted as follows. NaOH is the formula for one molecule of sodium hydroxide (caustic soda), consisting of one atom of sodium, Na, one of hydrogen, H, and one of oxygen, O. Similarly HCl is the formula for one molecule of hydrochloric acid consisting of one atom of hydrogen, H, and one atom of chlorine, Cl. Sodium hydroxide and hydrochloric acid react together molecule for molecule and yield one molecule of sodium chloride, NaCl (common salt), and one molecule of water, H_2O . If the relative weights of the atoms (atomic weights) are known, a chemical equation reveals also the proportions by weight in which the substances react, and the weights of the products. When gases are involved in the reaction, the equation enables the reacting volumes also to be calculated, for the molecular weight in grams of all gases occupies 22.4 litres at 0°C . and 760 mm. (of mercury) pressure. An equation does not state the conditions under which the reaction it represents occurs.

Equator, an imaginary line encircling the earth at equal distances from the poles. It forms the dividing line between the N. and the S. hemispheres. On maps it is latitude 0° .

Equerry, an officer who rides with the King or royal prince on State occasions, and on the staff of the King's Master of Horse. Formerly they were placed in charge of the Royal Stables.

Equilibrium, in chemistry, is the state in a mixture of substances when no apparent change takes place in the composition of the mixture. Thus water under ordinary conditions is an equilibrium mixture of H_2O molecules with a small proportion of hydroxyl ions, OH^- , and hydroxonium ions, H_3O^+ . In physics, a body is said to be in equilibrium when it is in a state of rest although acted upon by two or more forces, and three types of physical equilibrium are distinguished—viz., neutral, stable and unstable. In neutral equilibrium the equilibrium is not disturbed by any change in the position of the body—e.g., a uniform sphere on a level surface. In stable equilibrium a slight displacement of the body produces no great change of position, and if left to itself, the body regains its original state—e.g., one of those toys, weighted at the bottom, which cannot be overturned. In unstable equilibrium a slight displacement is sufficient to cause a complete change of position—e.g., a walking-stick balanced upright on the finger.

Equinoctial Points are the two points at which the celestial equator intersects the Ecliptic (q.v.), so called because the days and nights are of equal duration when the sun is at these points.

Equinoxes, the times at which the sun is at the Equinoctial Points (q.v.), viz., March 21 and Sept. 22, called respectively the vernal and the autumnal equinoxes in the northern hemisphere, but *vice versa* in the southern; at these times the sun is directly over the equator, and day and night are then of equal length over the globe.

Equites, The, a celebrated equestrian order in ancient Rome, supposed to have been instituted by Romulus and restricted to the better class of citizens. At first purely military, it was at length invested with the judicial functions of the Senate, and the power of farming out the public revenues; gradually lost these privileges and became defunct.

Equivalent, in chemistry, the number of units of weight of an element which will combine with or take the place of 8 of the same units of oxygen, or 1.008 of the same units of hydrogen.

Erasmus, Desiderius, a famous scholar Rotterdam, and man of letters, born in

Rotterdam; illegitimate son of one Gerhard; conceived a disgust for monkish life during six years' residence in a monastery at Steyn; wandered through Europe and amassed stores of learning at various universities; visited Oxford in 1498, and formed a lifelong friendship with Sir Thomas More; was for some years professor of Divinity and Greek at Cambridge; edited the first Greek Testament; settled finally at Basel, whence he exercised a remarkable influence over European thought by the wit and tone of his writings, notably the *Praise of Folly*, the *Colloquia* and *Adagia*. He has been regarded as the precursor of the Reformation; aided the Reformation by his scholarship, though he kept aloof as a scholar from the popular movement of Luther. (1466-1536).

ERASMUS

Erastianism, the right of the State to the decisions of the Church that happen to involve civil penalties. See *Erastus*.

Erastus, Thomas, an eminent physician, whose fame rests mainly on the attitude he assumed in the theological and ecclesiastical questions of the day. He defended Zwingli's view of the Eucharist as a merely symbolical ordinance, and denied the right of the Church to inflict civil penalties, or to exercise discipline—the power of the keys—that belonging, he maintained, to the province of the civil magistrate. (1524-1583).

Erato (i.e., the Lovely), the muse of erotic poetry and represented with a lyre in her left hand.

Erbium, a chemical metallic element belonging to the rare earth group. Symbol Er, atomic number 68, atomic weight 167.64.

Ercildoune, Thomas. See *Rhymer*, Thomas Th.

Erckmann-Chatrian, the name Émile Erckmann (1822-1899) and Louis Chatrian (1826-1890), two French writers, both of Lorraine, published a number of successful novels mostly dealing with the republican and Napoleonic campaigns; *Doctor Mathus*, *The History of a Conspiracy of 1813* and *Waterloo* are the best known.

Erdgeist, the Spirit of the Earth, Faust as assiduously weaving at the Time-

Loom, night and day, in death as well as life, the earthly vesture of the Eternal, and thereby revealing the Invisible to normal eyes.

Erebus, in Greek mythology, a region of utter darkness in the depths of Hades, into which no mortal ever penetrated, the proper abode of Pluto and his Queen with their train of attendants, such as the Erinyes, through which the spirits of the dead must pass on their way to Hades; equivalent to the valley of the shadow of death.

Erebus, Mount, an active volcano of South Victoria Land. Alt. 12,370 ft.

Erechtheus, or **Erichthonius**, the mythical first King of Athens; favoured and protected from infancy by Athena, to whom accordingly he dedicated the city. He was worshipped afterwards as a god and the Erechtheum, a temple on the Acropolis was erected in his honour. It is fabled of him that when an infant he was committed by Athena in a chest to the care of Aegleus and Herse, under a strict charge not to pry into it. They could not restrain their curiosity, opened the chest, saw the child entwined with serpents, were seized with madness, and threw themselves down from the height of the Acropolis to perish at the foot.

Erfurt, a town in Saxony, on the Gera, 14 m. W. of Weimar, formerly capital of Thuringia, with many interesting buildings, amongst the number the 12th-Century Gothic cathedral, the monastery of St. Augustine (changed into an orphanage in 1819) in which Luther was a monk; the Academy of Sciences and the fine library; various textile factories and other industries flourish. Pop. 145,000.

Erg, the unit of work and energy in the metric system; the work done in moving 1 cm. against a force of 1 dyne. See **Energy**.

Ergot, a diseased state of grasses, etc., but a disease chiefly attacking rye, produced by a fungus developing on the seeds. The drug "ergot of rye" is obtained from a species of this fungus.

Eric, the name of several of the kings of Denmark, Sweden, and Norway, the most notorious being Eric XIV., King of Sweden, the son of the noble Swedish King Gustavus Vasa, who aspired to the hand of Elizabeth of England and challenged his rival Leicester to a duel; afterwards sought Mary of Scotland, but eventually married a peasant girl who had nursed him out of madness brought on by dissipation. Was deposed after a State trial instigated by his own brothers, and ultimately poisoned himself in prison eight years later. (1533-1577).

Ericaceae, a large natural order of plants, containing some 50 genera and 1,350 species. They are found all over the world except in desert areas and in hot, damp parts of the tropics. The four subdivisions of the family are the Rhododendroideae containing amongst other species the Rhododendrons; the Arbutioideae containing amongst others the Arbutus; the Vaccinioideae; and the Ericoideae containing the genus Erica (the typical genus), which includes the *E. cinerea* and *E. tetralix*, respectively the fine-leaved and cross-leaved British heaths.

Ericht, Loch, lake of Scotland, in wild Inverness-shire, partly in Perthshire. The R. Ericht drains it into Loch Rannoch.

Ericsson, John, a distinguished Swedish engineer, born in Långban-shyttan; went to England in 1826 and to United States of America in 1839, where he died; invented the screw propeller of steamships; built warships for the American navy, and amongst them the famous *Monitor*. His

numerous inventions mark a new era in naval and steamship construction. (1803-1889).

Eric the Red, a Norwegian chief who discovered Greenland in the 10th Century, and sent out expeditions to the coast of N. America.

Erie, a city of Pennsylvania, U.S.A., on Lake Erie, with a fine harbour. Its industries are numerous and important. Pop. 116,000.

Erie, or "Barge" Canal, from Buffalo to Albany, New York State, links Lake Erie with the Hudson R., thus providing communication between the Canadian lakes and the Atlantic Ocean; is 365 m. in length. It is a part of the New York State Improved Canal System.

Erie, Lake, the fourth in size among the giant lakes of N. America, lies between Lakes Huron and Ontario, on the Canadian border, is 240 m. long and varies from 30 to 60 m. in breadth; is very shallow, and difficult to navigate; icebound from December till about April.

Erigena, Johannes Scotus, a rationalistic scholar and mystic, the most distinguished of Irish birth; taught at the Court of Charles the Bald in France, probably died in 877, though one story says that he was summoned by Alfred to Oxford in 877 and died Abbot of Malmesbury.

Erin, the ancient Celtic name of Ireland, being the dative case of the Gaelic word Eriu, and used still in poetry.

Erinyes, The (*i.e.*, the roused-to-anger, otherwise in Greek the Eumenides, and in Latin, the Furies), the Greek goddesses of vengeance, were the daughters of Night, begotten of the blood of the wounded Uranus, and at length reckoned three in number, Alecto, Tisiphone and Megera. They were conceived of as haunting the wicked on earth and scourging them in hell. They were of the court of Pluto, and the executioners of his wrath.

Eris, the Greek goddess of strife or discord, sister of Mars, who, sowing the seeds thereof among the gods to begin with, threw the golden apple at the feast of Peleus and Thetis, and has since continued to sow discord among men.

Erith, England, on the Thames, 12 m. E. of London, formerly a naval station. Pop. 33,000.

Eritrea, a colony belonging to Italy, extending from Cape Kasar 670 m. along the western shore of the Red Sea to a point in the Strait of Bab-el-Mandeb; bounded N. by Egypt, W. by Abyssinia, S. by French Somaliland. Massawa is the capital, Asmara the seat of government. The coastline is hot and unhealthy, at least for Europeans, but the highlands of the interior enjoy a more temperate climate. It was from here that one half of Italy's effort was directed which resulted in the capture of Adowa and finally of Addis Ababa, and the institution in 1936 of the new Italian Colony of Italian East Africa, which incorporates Eritrea. Area (Eritrea) 45,700 sq. m. Pop. 600,000.

Erivan, a fortified town in Transcaucasia, situated 30 m. N.E. of Mount Ararat on an elevated plateau; was ceded to Russia in 1828 by Persia. Is now capital of the Armenian S.S.R.; has a hydro-electric station and is of increasing industrial importance. Pop. 111,500. An administrative district engaged in fruit culture and wine manufacture of the Armenian S.S.R. bears the same name.

Erlangen, a Bavarian town on the Regnitz; has a celebrated Protestant university, founded by Wilhelmina, sister of Frederick the Great; was a place of

refuge for the Huguenots in 1685; manufactures in gloves, mirrors and tobacco are carried on, and brewing. Pop. 32,000.

Erl-King, or *Erlkönig*, a Norse impetuous fear which haunts and kills us even in the guardian embrace of paternal affection; is the subject of a ballad by Goethe.

Ermine, a valuable fur, being the winter coat of the Stoat (*q.v.*).

In summer the stoat has a reddish-brown coat. This in winter becomes white, though the tail remains black.

Erne, a river of Ireland, flowing past Enniskillen, through Upper and Lower Lough Erne (in Co. Fermanagh) to empty into Donegal Bay at Ballyshannon.

Ernest Augustus, Duke of Cumberland and King of Hanover, fifth son of George III., born at Kew, educated at Göttingen. Served in campaigns, 1793-1794; lost left eye at Tournay. Made Duke, 1799. In St. James's Palace, 1810, he was nearly killed by a head-wound probably inflicted by his valet who was found dead. Married Frederica, daughter of the Duke of Mecklenburg-Strelitz, 1815. Succeeded to the throne of Hanover on death of William IV., 1837. His only son, George V. of Hanover, was blind. (1771-1851).

Ernie, Rowland Edmund Prothero, Baron, author and editor, born at Clifton-on-Teme, son of rector of Whippingham. Educated at Marlborough, and at Balliol College, Oxford. Editor, *Quarterly Review*, 1894-1899. M.P., Oxford University, 1914-1919. President Board of Agriculture, 1916-1919. Ennobled, 1919. Wrote biographies, and on agriculture. Edited Letters of Gibbon and Byron. (1852-1937).

Eros (in Latin, *Cupido*), the Greek god of love, the son of Aphrodite, and the youngest of the gods, though he figures in the cosmogony as one of the oldest of the gods, and as the uniting power in the life of the gods and the life of the universe; was represented at last as a wanton boy from whose wiles neither gods nor men were safe.

Eros, one of the asteroids or minor planets discovered at Berlin by Dr. Witt in 1898; approaches at times within 14 million miles of the earth; careful measurements of its orbit enable the distance of the earth from the sun to be determined with exactitude.

Erse, a name sometimes used for the Gaelic language (*q.v.*).

Erskine, Ebenezer, founder of the Secession Church of Scotland, born in Berwickshire; minister at Portmouck for 28 years; took part in the patronage dispute and was suspended (1733), when he formed at Gairney Bridge, near Kinross, the nucleus of the Secession Church. (1680-1754).

Erskine, Henry, a famous Scottish lawyer, second son of the Earl of Buchan, born in Edinburgh; called to the Bar and became Lord Advocate; a Whig in politics; brought about useful legal reforms. He was noted as a brilliant wit and orator. (1746-1817).

Erskine, Thomas, first Baron, a famous lawyer, youngest son of the Earl of Buchan, born in Edinburgh; spent his early years in the navy, and afterwards joined the army; resigned in 1775 to enter upon the study of law; called to the Bar in 1778; a King's Counsel in 1783; created a Baron and Lord Chancellor in 1806; was engaged in all the famous trials of his time;

an unrivalled orator in the law courts; his speeches rank as masterpieces of forensic eloquence. (1750-1823).

Ervine, St. John Greer, playwright, novelist, born in Belfast; manager, Abbey Theatre, Dublin, 1915; author of *Jane Clegg*, a play based on his own novel of the same name, *The First Mrs. Fraser* and *Anthony and Anna*. Novels include *The Foolish Lovers* and *The Wayward Man*. Dramatic critic of *The Observer*. (1883-).

Erysipelas, known popularly as "St. Anthony's Fire" and "Rose," a febrile disease, due to the germ streptococcus and manifesting itself in acute inflammation of the skin, which becomes vividly scarlet and ultimately peels; confined chiefly to the head and face; is contagious and recurrent.

Erythema, a medical term used loosely to designate a diseased condition of the skin; characterised by a scarlet or dark-red rash or eruption, distinct from erysipelas. It is the first sign of dermatitis (inflammation of the skin).

Erzgebirge, a range of mountains lying between Saxony and Bohemia (Czechoslovakia) and separating the two; the highest peak is the Keilberg, 4,052 ft.; is rich in various metallic ores, especially silver and lead.

Erzurum (Erzerum), a famous city in Asiatic Turkey, capital of a vilayet of the same name, 125 m. S.E. of Trebizond; situated on a fertile plain 6,300 ft. above sea-level; is an important entrepôt for commerce between Europe and Asia; is irregularly built, has a fortress, is famed for its iron and copper ware; fell into the hands of the Turks in 1517; figured as a military centre in many Turkish wars; was taken by the Russians in 1878; was a scene of Armenian massacres by the Turks in 1895; was captured by the Russians in 1916. Pop. (vilayet) 386,000; (town) 33,000.

Esau, the elder son of Isaac, who sold his birthright to his twin brother Jacob for a mess of red pottage; called Esau because he was born "red, all over like a hairy garment." He was a cunning hunter, led a predatory life, and was the forefather of the Edomites. A second time Jacob outwitted him when by craft he obtained his father's blessing.

Esbjerg, a seaport and fishing town of Denmark, in Jutland, on the North Sea. It exports, mainly to Great Britain, bacon, eggs and dairy produce. Pop. 27,000.

Escalators, moving stairways, which have come into use in modern times in underground railways and lofty buildings in order to facilitate the movement of pedestrian traffic and to avoid congestion. They consist essentially of a continuous series of steps or small platforms on wheels drawn by chains round a continuous track which brings each step in turn to the point where passengers step on and carries each step then up or down to the point where passengers alight.

Escarpment, a term in geology for a side gradually sloping. Examples are the chalk escarpments of the South Downs and the Chiltern Hills.

Eschatology, the department of theology which treats of the so-called last things, such as death, the intermediate state, the millennium, the return of Christ, the resurrection, the judgment, and the end of the world.

Escheat, a legal process whereby tenure of land used to revert to the lord on the occasion of the tenant's death without heirs, intestate. In most cases it reverted to the King, as the King was regarded, with the exception of a very few properties which had been in the possession of one family since 1290, as the overlord in a feudal sense and as retaining a residual interest in it. Formerly escheat occurred after conviction of a capital crime in England. Escheat has been abolished in England.

Escorial, or *Escorial* (i.e., place of ashes), a huge granite pile, built in the form of a gridiron, 30 m. NW. from Madrid, and deemed at one time the eighth wonder of the world; was built in 1563-1584; was originally dedicated as a monastery to St. Lorenzo in recognition of the services which the Saint had rendered to Philip II. at the battle of St. Quentin, and used at length as a palace and burial-place of kings.

Escudo, the unit of Portuguese coinage; divided into 100 centavos.

Escutcheon, in heraldry, a shield bearing armorial bearings.

Esdraëlon, a flat and fertile valley in Galilee, called also the valley of Jezreel, which, with a maximum breadth of 9 m., extends in a NW. direction from the Jordan at Beth-shean to the Bay of Acre. Allenby gained a great victory over the Turks here in Sept. 1918.

Esdras, the name of two books of the Bible, Apocrypha, the first, written 2nd Century B.C., containing the history of the rebuilding of the Temple and the restoration of its cultus; and the second, written probably between 81 and 96 A.D., a forecast of the deliverance of the Jews from oppression and the establishment of the Messianic kingdom. In the Vulgate the name Esdras I. is given to what is called the Book of Ezra in the Authorised Version; Esdras II. to the Book of Nehemiah and the Esdras I. and II. become Esdras III. and IV.

Esh, colliery village of Durham, England, 5 m. NW. of Durham. Here is a Roman Catholic college. Pop. 10,000.

Esher, urban district (with Thames Ditton, Surrey, and Long Ditton) of Surrey, England, 15 m. SW. of London. Near is Sandown Park race-course. Pop. 17,000.

Esher, Reginald Esliot Brett, second Viscount, succeeded first Viscount 1899. M.P. Penryn and Falmouth, 1880-1883; became Constable of Windsor Castle. Published *Letters of Queen Victoria*. As member of commission on conduct of S. African War, inaugurated reconstitution of War office on its present lines. Some of the principal changes were the formation of the Army Council, the abolition of the office of Commander-in-Chief and the creation of the post and duties of the Chief of the Imperial General Staff. (1852-1930).

Esher, William Esliot Brett, first Viscount, count, judge, son of Rev. Joseph George Brett of Chelsea; Barrister, 1846; M.P. Heston, 1866-1868; Solicitor-General (knighted) and Justice of Common Pleas, 1868; Justice of Appeal, 1876; Master of the Rolls, 1883; Baron Esher, 1885; retired as Viscount, 1897. (1815-1899).

Esk, the name of several Scottish streams: (1) in Dumfriesshire, the Esk of young Lochinvar, has a course of 31 m. after its formation by the junction of the North and South Eaks, and flows into the Solway; (2) in Edinburgh, formed by the junction of the North and South Eaks, joins the Firth of Forth at Musselburgh; (3) in Angus (Forfar), the South Esk discharges into the North Sea at Montrose, and the North Esk also flows into the North Sea 4 m. N. of Montrose. There is a E. Esk in the N. Riding of Yorkshire, England, also, and one in Cumberland.

Eskimo, or *Esquimaux*, an aboriginal American Indian stock, in all not amounting to 40,000, thinly scattered along the northern seaboard of America and Asia and in many of the Arctic Islands. Their physique, mode of living, religion and language are of peculiar ethnological interest. They are divided into tribes, each having its own territory, and these tribes in turn are subdivided into small communities, over each of which a chief presides. The social organisation is a simple tribal communism. Christianity has been introduced amongst the Eskimos of South Alaska and in the greater part of Labrador. In other parts the old religion still obtains, called Shamanism, a kind of fetish worship; much of their folk-lore has been gathered and printed. Fishing and seal-hunting are their chief employments. They are of good physique, but of primitive habits, most of their implements and weapons resembling those of neolithic man; their name is supposed to be an Indian derivative signifying "eaters of raw meat."

Eskimo Dog, a dog found among the Eskimo, about the size

of a pointer, wolf-like in appearance, with thick hair of a dark grey or black and white; half tamed, but strong and sagacious; invaluable for sledging.

Esksehir, (anc. Dorylæum), town of Asiatic Turkey, a railway centre. It is capital of a vilayet of the same name. There are valuable deposits of meerschaum in the district. Pop. (vilayet) 183,000; (town) 47,000.

Esoteric (i.e., those within), a term coined possibly by Pythagoras and used to denote teaching intended only for the initiated, and intelligible only to them.

Espalier, a frame, usually of wood and wire, on which plants, especially fruit trees, are trained to grow. It affords protection to the fruit during winds when the fruit is liable to fall before it is ripe. Apple and pear trees are most commonly treated in this manner.

Esparto Grass (*Stipa tenacissima*), a grass native to N. Africa and Spain, and extensively used in writing-paper manufacture. It is grown in gardens in Great Britain for ornamental purposes. Another grass, *Lygum Spartum*, is also used in paper manufacture.

Esperanto, a universal language invented by Dr. Ludwig Zamenhof of Warsaw in 1887; with root-words selected from European languages, a simple grammar and syntax, and phonetic pronunciation, its knowledge is easily acquired.

Espionage, the practice of employing agents to discover the secrets and military dispositions of foreign countries. Such secret agents are extensively employed by most of the major countries, the service demanding great personal courage and ingenuity, perfection in the language of the country to which the agent is going, and the use of disguise, artifice, secret codes, etc. One of the most famous spies of modern times was Mata Hari, a Javanese woman who acted as a German spy in France during the World War, being caught and shot.

Espirito Santo, a small and swampy maritime province of Brazil, lying on the N. border of Rio de Janeiro; does some trade in timber, and is one of the chief coffee-producing states. Cotton and sugar are also produced. Area 12,308 sq. m. Pop. 834,000. Cap. Victoria.

ESKIMO DOG

Espiritu Santo, the largest of the islands of the New Hebrides belonging to Great Britain. Cannibalism is still practised on it.

Esquimaux, a seaport in British Columbia, Canada, on Vancouver I., and an important naval station, with naval yard and dry dock. Pop. 8,500.

Esquire, originally meant a shield-bearer, and was bestowed upon the two attendants of a knight, who were distinguished by silver spurs, and whose especial duty it was to look after their master's armour; now used widely as a courtesy title, though strictly only applicable to sons of peers and knights, those entitled to a coat-of-arms and certain holders of dignified offices (e.g., J.P.'s) and callings (e.g., barristers).

Essay, a literary composition, upon a subject of general interest consisting rather of comments than a reasoned treatise. The true essay deals with general subjects, and not specialised or scientific topics, its purpose being, not instruction, but moral reflection. It became popular after the 16th Century, especially in such publications as the *Spectator*, *Tatler* and *Rambler*, where such notable names as Addison, Steele, Samuel Johnson, Pope and Gay figure. Bacon's essays, however, were of the thesis character. Lamb is the supreme English essayist, charming and inimitably spontaneous. Goldsmith, Hazlitt—full of moralizing and brilliant in vocabulary—Macaulay, and Carlyle, pungent in criticism—are among other earlier English essayists. Emerson is the chief American essay-writer. In France, Montaigne's essays had a profound effect upon French literature, and Sainte-Beuve and Anatole France were masters of the essay. This form of literature is less generally popular to-day in England, though the work of Augustine Birrell, Froide, A. C. Benson, A. G. Gardiner, G. K. Chesterton, Robert Lynd, Hilaire Belloc, E. V. Lucas, A. A. Milne and Ivor Brown affords intellectual delight to the reading public.

Essen, a town in the Rhine province of Prussia, 20 m. N.E. of Düsseldorf, the seat of the famous Krupp steel-works. Pop. 654,000.

Essence, a concentration of the virtues of a substance in a smaller mass—e.g., beef essence, coffee essence. In medicine it is a solution of essential oils in alcohol, while in philosophy it is that which constitutes the being of a thing or that which makes it what it is.

Essenes, a religious communistic fraternity that grew up on the soil of Judea about the time of the Maccabees, and had establishments in Judea when Christ was on earth, as well as afterwards in the time of Josephus. They led an ascetic life, practised extreme ceremonial cleanliness, were rigorous in their observance of the Jewish law, and differed from the Pharisees in that they gave to the Pharisaic spirit a monastic expression. They represented Judaism in its purest essence, and in the spirit of their teaching came nearer Christianity than any other sect of the time.

Essential Oils, aromatic vegetable oils which are used as essences and perfumes. Many of them can be produced synthetically.

Essequibo, an important river in British Guiana, 820 m. long, navigable for 50 m. to small craft, flows northward into the Atlantic.

Essex, a county in the S.E. of England, between Suffolk on the N. and Kent on the S., faces the North Sea on the E.; is well watered with streams; has an undulating surface; is chiefly agricultural; brewing is an important industry, and the oyster fisheries of the Colne are noted; Chelmsford is the county town. Area 1,536 sq. m. Pop. 1,755,000.

Essex, Robert Devereux, second Earl of, a favourite of Queen Elizabeth,

born in Netherwood, Hereford; served in the Netherlands under Leicester, his stepfather; won the capricious fancy of Elizabeth; lost favour by marrying clandestinely the widow of Sir Philip Sidney, but was restored, and led a life of varying fortune, filling various important offices, till his final quarrel with the Queen and execution. (1567-1601).

ROBERT, SECOND EARL OF ESSEX

Essex, Robert Devereux, third Earl of, son of preceding; commander of the Parliamentary forces against Charles I.; the title died with him, but was conferred on the present family in 1681. (1691-1646).

Esslingen, an old historic and important manufacturing town in Württemberg, on the Neckar, 9 m. S.E. of Stuttgart; has a citadel and the Liebfrauen Church, which is a fine Gothic structure with a spire 246 ft.; is a noted hardware centre, and celebrated for its machinery; a good trade is done in textiles, fruit and sparkling wines.

Estate, in law, either property in land, called real estate, or personal property, which includes anything of a movable nature such as valuables, jewellery, securities, etc. The estate may be either in absolute ownership, for a life only, or held in trust for beneficiaries under a settlement by deed of gift or will. In bankruptcy the term is used to comprehend the total assets and liabilities of the bankrupt. Of a deceased person it refers to the total assets remaining at the time of death.

Estate Duty. See Death Duty.

Este, an ancient and illustrious Italian family from which, by an offshoot founded by Welf IV., who became Duke of Bavaria in the 11th Century, the Guelph Houses of Brunswick and Hanover, also called the Este-Guelphs, trace their descent. Of the Italian branch the most noted descendant was Alphonso I., a distinguished soldier and statesman and patron of art, whose second wife was the infamous Lucrezia Borgia. His son, Alphonso II., is remembered for his cruel treatment of Tasso, placing him in prison for seven years as a madman who dared to make love to one of the princesses.

Esterhazy de Galantha, the name of a powerful and famous Hungarian family holding the rank of Princes of the Empire from the 17th Century.

Esters, in organic chemistry, compounds of an acid and an alcohol, comparable to the metallic salts in inorganic chemistry which are compounds of an acid and a metallic element.

Esther, The Book of, a book of the Old Testament, which takes its name from the chief figure in the story related, an orphan Jewess and ward of her cousin Mordchai, who, from her beauty, was chosen for the royal harem and raised to be consort to the King. It is read through in the Jewish synagogues at the feast of Purim. It is observed that the name of God does not occur once in the book.

Eston, urban district of Yorkshire, England; land, in N. Riding, 4 m. S.E. of Middlesbrough. Cleveland ironstone is quarried and there are iron-foundries, blast-furnaces, etc. Pop. 31,000.

Estonia, a republic of Europe, on the Baltic Sea, S. of the Gulf of Finland. Latvia bounds it on the S. and Lake Peipus forms the greater part of the

Russian boundary. Formerly a part of the Russian Empire, it achieved independence in 1918. Government by Diet elected by proportional representation every year and with a President at the head elected every 5 years was established in 1934. A referendum in 1936 yielded a large majority in favour of replacing the Diet by Corporations and establishing a corporative system of government. Much of the land is forest, but about one-half arable, meadow and pasture land, and agriculture and dairy-farming are the chief industries. Butter and other dairy products and timber are the chief exports; also textiles, Estonia having near Narva, one of the largest cotton factories in Europe. The capital and chief port is Tallinn (Ger. Reval). There is a university at Tartu (Ger. Dorpat). Area 18,350 sq. m. Pop. (mainly Estonians, but including a few Russians) 1,126,000.

Estremadura, a coast province of Portugal, between Boira and Alentejo, watered by the Tagus; richly fertile in many parts, but sparsely cultivated; silk is an important and increasing industry; Lisbon is the chief city, and with Setúbal monopolises the trade; salt, fruits, wine and oil are exported. Area 6,937 sq. m. Pop. 1,833,000. Also name of a district in Spain between Portugal and New Castile, now divided into the provinces of Badajoz and Cáceres. Total area 16,118 sq. m. Pop. 1,260,000.

Estuary, the outlet of a river where it meets the sea. The estuary canalises the incoming tide of the sea, and in a narrow estuary, such as that of the Severn, the water at high tide may rise 60 ft.

Étaples, a town in the dept. of Pas-de-Calais, France, a popular seaside resort.

Etching, a form of engraving. Prints zinc or copper, the etched lines of which have been corroded into the plate by acid. The metal plate is first coated with a wax amalgam, and the design is drawn on this soft ground with an etching-needle. The plate is then submerged in an acid bath, and the etched lines are thus bitten into the plate. The plate may be given more than one immersion for the sake of deeper lines, the lighter lines, sufficiently "bitten" at the first immersion, being previously "stopped out."

Eteocles, a son of Oedipus, King of Thebes, agreed on the banishment of his father to govern the State alternately with his brother Polynices, but, failing to keep his engagement, the latter appealed to his guardian, out of which there arose the War of the Seven against Thebes, which ended in the slaughter of the whole seven, upon which the brothers thought to end the strife in single combat, with the result that each fell by the sword of the other.

Ethane, a colourless, gaseous hydrocarbon, resembling methane in its properties, and forming a common constituent of the natural gas issuing from the earth in petroleum fields.

Ethelbert, a King of Kent, in whose reign Christianity was introduced by St. Augustine and a band of missionaries in 597; drew up the first Saxon law code. (552-616).

Etheldreda, St., a Saxon princess, whose name, shortened into St. Audrey, was given to a certain kind of lace, whence "tawdry." She took refuge from the married state in the monastery of St. Abb's Head, and afterwards founded a monastery in the Isle of Ely. (680-679).

Ethelfleda, "Lady of the Mercians," eldest daughter of Alfred the Great; married, c. 880, Ethelred, Earl of Mercia; after whose death, c. 913, she con-

tinued his wars against Scandinavians and Welsh in conjunction with her brother Edward the Elder. She fortified Chester and recaptured Stafford, Derby and Leicester. (d. 918).

Ethelred I., King of Saxon England (866-871), a predecessor and brother of Alfred; his reign was a long and unsuccessful struggle with the Danes. He fought six battles with them in 871, losing four, including Wilton, the last, but winning the battle of Ashdown.

Ethelred II., the Unready (i.e., "without counsel"), a worthless King of Saxon England (979-1016), married Emma, daughter of Richard, Duke of Normandy (his second wife), a step which led in the end to the claim which issued in the Norman Conquest. During his reign the country suffered from invasions of the Northmen and after losing the battle of Maldon in 991, then and in succeeding years he endeavoured to buy them off with money (Dane-geld). In 1002 he arranged the St. Brice's Day massacre of the Danes in England, which led eventually to the conquest of the country by Canute.

Ethelwulf, King of the West Saxons, afterwards of Kent; said to have been Bishop of Winchester; succeeded his father Egbert, 839, in kingship of Wessex. In his reign the Danes first wintered in the Isle of Sheppey. He defeated them at Ockley. He was succeeded in turn by four of his sons, his youngest son being Alfred the Great. (d. 858).

Ether, a volatile liquid prepared from the distillation of alcohol and sulphuric acid at high temperature; is colourless, and emits a sweet, penetrating odour; is highly combustible; a useful solvent, and an important anesthetic.

Ether, The, non-material medium supposed to permeate the whole of space and to transmit the waves of light, radiant heat, and electromagnetic radiation. It is by no means certain that the ether (or aether) has a real existence; it was postulated because of the difficulty of imagining "waves" in the absence of a medium to undulate. There is, however, no doubt that so-called "empty" space has definite physical properties, and if so it cannot be truly empty. Hence, while expressing no opinion on the ultimate nature of the ether, physicists continue to use the conception on account of its convenience.

Etherege, Sir George, the originator of the kind of comedy containing a vein of lively humour and witty dialogue which was afterwards displayed by Congreve and Farquhar; has been called the "founder of the comedy of intrigue." He was the author of three clever plays, entitled *Love in a Tub*, *She Would if She Could* and *The Man of Mode*. (c. 1634-c. 1691).

Ethics, the science which treats of the right and wrong and of the moral sense by which they are discriminated.

Ethiopia, a term loosely used in ancient times to indicate the territory inhabited by black or dark-coloured people; latterly applied to an undefined tract of land stretching S. of Egypt to the Gulf of Aden, which constituted the kingdom of the Ethiopians, a people of Semitic origin and speaking a Semitic language called Ge'ez, who were successively conquered by the Egyptians, Persians and Romans; are known in the Bible; their first king is supposed to have been Menelik, son of Solomon and the Queen of Sheba; their literature consists mostly of translations and collections of saws and riddles; the original language is no longer spoken, having been superseded by Amharic. See also *Abyssinia*.

Ethnology, a branch of anthropology, the science which treats of the human race as grouped in tribes or nations, but limits itself to tracing the origin and distribution of races, and investigating the physical and mental peculiarities and differences exhibited by men over all parts of the globe. One of the problems of the science is to decide between the monogenous and polyogenous theories of the origin of the race, and investigation inclines to favour the former view. The polyogenous argument, based on the diversity of languages, has been discarded, as, if valid, necessitating about a thousand different origins, while the monogenous position is strengthened by the ascertained facts that the different racial groups are fruitful amongst themselves, and present points of mental and physical similarity which accord well with this theory. Ethnologists now divide the human race into four main groups: the *Ethiopian* or *negro*, the *Mongolian* or *yellow*, the *American*, and the *Caucasian* or *white*.

Ethyl, in chemistry, a monad fatty hydrocarbon radical formula, C_2H_5 ; denoted by the symbol Eth or E. Its numerous compounds include ethyl-acetate, which is used as a stimulant, ethyl-alcohol, which has been detected in growing plants, as in the fruit of the parsnip, and also formed during the fermentation of dough; ethyl-oxalate, a colourless, oily liquid used in the preparation of tartaric acids; ethyl nitrate, used in making the liquor ethyl nitritus; ethyl chloride, obtained by passing hydrogen chloride into alcohol.

Ethylamine, a liquid resembling ammonia in odour and properties. Formula $NH_2C_2H_5$; also called amido-ethane. It is obtained by distilling ethyl isocyanate with caustic potash. It is a powerful base, decomposing metallic salts. Forms a double salt with platinum chloride.

Ethyl Chloride, a liquid obtained with hydrochloric acid. It is used externally on the skin to produce a form of local anaesthesia (by freezing), and also as a general anæsthetic for very short operations.

Ethylene, a colourless gas forming a small percentage of coal-gas, to which it imparts a luminous flame. It is prepared by the removal of the elements of water from alcohol, and is used for various purposes—e.g., as an anæsthetic, as a source of ethane and for the artificial production of yellowness (to simulate ripeness) in unripe green fruits, such as oranges and grapefruit, which have to be transported over great distances and would otherwise arrive over-ripe. Formula C_2H_4 .

Etiology, an account of the causes of disease, anything, but more especially in medicine, the study of pathology. The causes of disease may be either: (a) predisposing or remote, (b) exciting or immediate, or (c) determining. Age and hereditary predisposition are important factors; while climate, hygienic conditions, and temperament are all considerations in practical medicine.

Etive, a sea-loch in Argyllshire, Scotland, is an inland extension of the Firth of Lorne, about 20 m. in length, and varying in breadth from 2 to 4 m., the mountain scenery along the shores being grandly picturesque. The river which bears the same name rises in Rannoch Moor, and joins the loch after a S.W. course of 15 m. Both loch and river afford salmon-fishing.

Etna, a volcanic mountain on the E. E. coast of Sicily, 10,758 ft. high. A striking feature is the immense ravine, the Valle del Bove, splitting the eastern side of the mountain, and about 5 m. in diameter; on the flanks are many smaller cones. Etna

is celebrated for its many and destructive eruptions. Its observatory, built in 1880, at an elevation of 9,675 ft. above sea-level, is the highest inhabited dwelling in Europe.

Eton, a town in Buckinghamshire, Eng., land, on the Thames, opposite Windsor and W. of London; celebrated for its public school, Eton College, founded in 1440 by Henry VI.

Étretat, seaside resort of Normandy, France, in the dept. of Seine-Inférieure. Pop. 2,000.

Etruria, the ancient Roman name of a region in Italy, W. of the Apennines from the Tiber to the Macra in the N.; inhabited by the Etruscans, a primitive people of Italy; at one time united in a confederation of twelve States but gradually absorbed by the growing Roman power. Its people were famous for their artistic work in iron and bronze. Many of the Etruscan cities contain interesting remains of their early civilised state; but their entire literature, supposed to have been extensive, has perished, and their language is only known through monumental inscriptions. Their religion was polytheistic, but embraced a belief in a future life. There is abundant evidence that they had attained to a high degree of civilisation. The status of women was high, the wife ranking with the husband. Their buildings still extant attest their skill as engineers and builders. Vases, mirrors and coins of fine workmanship have been found in their tombs, and jewellery which is scarcely rivalled; while the tombs themselves are remarkable for their furnishings of chairs, ornaments, decorations, etc., showing that they regarded these sanctuaries more as dwellings of departed spirits than as sepulchres of the dead.

Etruria, district of Staffordshire, England, part of Stoke-on-Trent, where Josiah Wedgwood established pottery works in 1769. It gives name to certain beds of marls and clays in the N. Midlands, useful for pottery making.

Ettrick, a Scottish river that rises in Selkirkshire and joins the Tweed, 3 m. below Selkirk; the Yarrow is its chief tributary. A forest of the same name once spread over all Selkirkshire and into the adjoining counties. The district is associated with some of the finest ballad and pastoral poetry of Scotland.

Ettrick Shepherd, James Hogg (q.v.).

Etty, William, a celebrated painter, born in York; rose from being a printer's apprentice to the position of a Royal Academician; famous as a colourist, concentrating especially on the beauty of Woman. "Youth at the Prow and Pleasure at the Helm" is one of his masterpieces. (1787-1848).

Etymology, the science which treats of the origins and meanings of words and word-forms, tracing their history and growth through various languages ancient and modern.

Eubœa, or *Negropontos*, the largest of the Grecian Isles, skirts the mainland on the S.E., to which it is connected by a bridge; it is about 80 m. in length; has fine quarries of marble, and formerly famous mines of iron and copper in the mountains; Chalcis is the chief town. In ancient Greek days it played an important part in history on account of its command of sea routes and of its corn and cattle. In 1830 it became a part of the independent Greek state. Pop. 154,000.

Eucaine, a synthetic drug also called ben-effects, though less poisonous, and used as a local anæsthetic, especially for eye operations and extraction of teeth.

Eucalyptus, a genus of some 230 trees belonging to the order

Myrtaceae, and for the most part native to Australasia, where they are a characteristic part of the flora, though two or three species are found in India and Malaya and are cultivated elsewhere (e.g., Algeria and Italy) for commercial purposes. They are rapidly growing trees, some species reaching a height of 300 ft., with a circumference of from 30 to 40 ft., or even more. The timber of some species is valuable for building construction. A volatile oil (Eucalyptus oil) is secreted by (*E. paniculata*) glands on the leaves. *E. globulus* is particularly valuable on this account. The oil is a valuable medicinal remedy, being efficacious in throat affections, influenza, bronchial catarrh, etc.

EUCALYPTUS

Eucharist, the Holy Communion, especially in one aspect—viz., the giving of thanks. The giving of thanks at the first Communion was evidently closely analogous to what is termed "grace before meat." It partly implied an acknowledgment of divine goodness in producing food, at the time represented by bread and wine, for sustenance; but as this was no ordinary feast, but one in which every act was symbolical, it chiefly denoted thanksgiving for the benefits derived from the approaching death of Christ, which the bread and wine prefigured.

Euchre, écarté, a card game, being a form of seven and the ace being discarded, chiefly played in the U.S.A. The highest card is the knave of trumps, technically known as the right bower, and the next the knave of the same colour, called the left bower.

Eucrase, a transparent mineral, green, blue or white in colour, and of vitreous lustre except on the cleavage face where it is pearly; composed of silica, alumina, beryllium and sesquioxide of iron, found in Brazil and the Urala.

Euclid of Alexandria, a famous Greek geometer, whose book of *Elements* held its place as an English school-book until recent years. The books which superseded it are based to a greater or less extent upon Euclid's work. He founded a school of mathematics in Alexandria, and flourished about 300 B.C.

Eudæmonism, the doctrine that the production of happiness is the aim and measure of virtue and the chief end and good of man, a doctrine held by Aristotle.

Eudiometer, any instrument for ascertaining the quantity of oxygen contained in a given bulk of aeriform fluid. The first eudiometer was devised by Priestley, the discoverer of oxygen, whose instrument was founded on the idea of subjecting a measured volume of air to a substance which would absorb the oxygen of the air. But Ure's and all modern instruments consist essentially of a graduated straight or U-shaped glass tube fitted at the top with platinum electrodes, and inverted over mercury.

Eugène, François, Prince of Savoy, a renowned general, born in Paris, and related by his mother to Cardinal Mazarin. He renounced his native land and entered the service of the Austrian Emperor Leopold; first gained distinction against the Turks, whose power in Hungary he crushed in the great victory of Peterwardein (1697); co-operated with Marlborough in the War of the

Spanish Succession, and shared the glories of his great victories, and again opposed the French in the cause of Poland. (1663-1736).

Eugenics, in modern biology, the application of the findings of the study of heredity to human beings, with the object of devising practicable schemes to improve the physical and mental qualities of future generations. As a study, eugenics was founded by Sir Francis Galton (1822-1911), cousin of Darwin and a famous anthropologist. Gregor Mendel advanced the science further by his researches into the transmission of hereditary physical characteristics (his "natural law of inheritance"). The Eugenics Society was formed in London to promote the study of national eugenics and publishes a quarterly magazine.

Eugénie, ex-Empress of the French, born in Granada, second daughter of Count Manuel Fernandez de Montijo and Marie Manuela Kirkpatrick of Closschurn, Dumfriesshire; married to Napoleon III. in 1853; had to leave France in 1870, and lived at Chislehurst, Kent. (1826-1898).

Eugenius IV., Pope born at Venice; his pontificate was marked by a schism created by proceedings in the Council of Basel towards the reform of the Church and the limitation of the papal authority, the issue of which was that he excommunicated the Council and the Council deposed him. (d. 1447).

Eugenol, or **Eugenic Acid**, an aromatic oil, obtained by shaking oil of cloves or oil of pimento with alcoholic potash. It is used in medicine as a cure for toothache.

Eulenspiegel (i.e., Owl-glass), the hero of a popular German tale, which relates no end of pranks, fortunes, and misfortunes of a wandering mechanic born in a village in Brunswick; he was buried in 1250 at Mölin, near Lübeck, where they still show his tombstone sculptured with an owl and a glass.

Eumenides (i.e., the Well-meaning), a name given to the Erinyes (q.v.) or Furies, from a dread of calling them by their true name.

Eunomius, an Arian divine, born in a sect (the Ennomians) who maintained that the Father alone was God, that the Son was generated from Him, and the Spirit from the Son; was Bishop of Cyzicus, a post he resigned. (d. 391).

Eunuch, in the ancient world and, later, in certain oriental countries, persons who had charge of the sleeping apartments of well-to-do households; though the term became applied particularly to one who had been castrated in order to serve as attendant in a harem. Eunuchs were usual adjuncts to an Eastern Court, and are frequently depicted on slabs of Nineveh. They often had great influence in high places and were renowned for their fidelity.

Eupatoria, a Russian town on the Crimean coast, 40 m. N.W. of Simferopol; has a fine Tartar mosque, and does a large export trade in hides and cereals; during the Crimean War was an important military centre of the Allies.

Eupen-Malmédy, a district of Belgium, until 1919 in Rhenish Prussia, but then ceded under the Treaty of Versailles. In 1926 it was joined to the province of Liège. It is a rich dairy-farming district, S. of Aix-la-Chapelle. Eupen, the chief town of the district, is engaged in industry. Area (Eupen and Malmédy) 380 sq. m. Pop. (district) 62,000; (town) 12,500.

Euphemism, is in speech or writing pleasant or indelicate word or expression by the use of one which is less direct, and which

calls up a less disagreeable image in the mind. Thus for "he died" is substituted "he fell asleep," or "he is gathered to his fathers." So also the Greeks called the "Furies" the "Eumenides," "the benign goddesses."

Euphrasia, a genus of flowering order Scrophulariaceae, *E. officinalis* being Eye-Bright, a common British species. The flower is white or lilac and purple-veined, with yellow upper lip.

Euphrates, a river in West Asia, formed by the junction of two Armenian streams; flows SE. to Kurna, where it is joined by the Tigris. The combined waters—named the Shat-el-Arab—flow into the Persian Gulf; is 1,700 m. long and navigable for 1,100 m. It was the scene of much fighting between Britain and Turkey during the World War.

EYE-BRIGHT

Euphrosyne, the cheerful one, or life in the exuberance of joy, one of the three Graces. See **Graces**.

Euphuism, an affected bombastic style of language, so called from *Euphues*, a work by John Lyly written in that style.

Eure, a dept. of France, in Normandy, so called from the R. Eure, which traverses it, largely engaged in agriculture and live-stock (particularly horse) raising. Area 2,330 sq. m. Pop. 306,000. Cap. Evreux.

Eure-et-Loir, a dept. of France lying directly S. of the preceding; chief rivers, the Eure in the N. and the Loir in the S.; engaged chiefly in agriculture but with some manufactures. Area 2,291 sq. m. Pop. 255,000. Cap. Chartres.

Eureka (i.e., I have found it), the exclamation of Archimedes on discovering how to test the purity of the gold in a crown. He discovered it, tradition says, when taking a bath.

Eurhythmic, essentially harmony in proportion, but the term specially denotes the Jacques-Dalcroze method of teaching music, through bodily interpretation.

Euripides, a famous Greek tragic dramatist, born in Salamis, of wealthy parents; first trained as an athlete, and then devoted himself to painting, and eventually to poetry. He brought out his first play at the age of 25, and is reputed to have written 80 plays, of which only 18 are extant, besides fragments of others. Of these plays the *Alcestes*, *Bacchæ*, *Iphigenia in Aulis*, *Electra* and *Medea* may be mentioned. He won the prize for tragedy five times; tinged with pessimism, he is nevertheless less severe than his great predecessors Sophocles and Aeschylus, surpassing them in tenderness and artistic expression, but falling short of them in strength and loftiness of dramatic conception. Sophocles, it is said, represented men as they ought to be, and Euripides as they are. (c. 480-406 B.C.).

Euroclydon, a north-easterly wind of the whirlwind kind, which blows in the Mediterranean in early spring; later called Gregale. It is the wind which is described in Acts xviii. 14 as having caused St. Paul's shipwreck.

Europa, in Greek mythology, a maiden daughter of Agenor, King of Phenicia, whom Zeus, disguised as a white bull, carried off to Crete, where she became by him the mother of Minos, Rhadamanthus and Sarpedon.

Europe, the second smallest of the five continents into which the land surface of the globe is divided, is geographically a peninsula of Asia. Its area is about 3,750,000 sq. m., representing about one-fourteenth of the total land area of the globe. The natural line of demarcation between Europe and Asia is the Ural Mts., Caspian Sea and Caucasus, but neither political frontiers nor natural features are related to those boundaries. In the N. Europe is within the arctic zone, and in the S. it is separated from Africa by the Mediterranean Sea. In the NW. a continental shelf extends for over 100 m. W. of Ireland, where there is a steep drop in the bed of the Atlantic Ocean from about 100 fathoms to 1,000 fathoms. This continental shelf was at one time part of the land area of Europe, but with the exception of the British Isles it was submerged by what is now the North Sea.

The present land area may be divided into four structural divisions: (1) *North-West Region*, comprising the Highlands of N. Britain and Scotland and Scandinavia, also the lower plateau of Finland. The Highlands are ancient block formations, thrown up by upheavals of the earth's crust, worn and glaciated, while on their margins are the Lowlands of Holland, Denmark, S. Sweden and the N. German plain, alluvial areas resulting from the flow of the rivers northwards from the Highlands of (2) the *Central European Region*. This region includes the central plateaux of Spain and France, and the complex Highland systems of Central and S. Germany and Czechoslovakia, ancient block-plateau masses combined with folded mountains which have suffered denudation and then further upheaval by the earth's movement. It is this highland system which is rich in minerals.

(3) *The Russian Plain*, a vast area of ancient sedimentary rocks, bounded by the Urals, which structurally link up with the NW. Highlands.

(4) *A South Region*, comprising the folded mountain ranges; the Pyrenees, the Alps with the Apennines and Dalmatian Alps, and extending eastwards to include the Carpathians, Balkan Mts. and Caucasus. In the formation of these mountains depressions were formed by subsidence, these being now the Mediterranean Sea, and the plains of N. Italy and Hungary.

Europe is 3,370 m. across in its greatest length from Cape St. Vincent to the Urals; greatest breadth 2,400 m. from Nordkyn to Cape Matapan. Europe lies in the N. Temperate zone. Except in summer, westerly winds, bringing rain, prevail over the whole continent. In the W. conditions are oceanic; coast warmed by the Gulf Stream; winters mild; summers cool; rain sufficient for agriculture. Mediterranean region: winters mild; summers hot; rain insufficient for agriculture. The summer high-pressure conditions in the S. are due to the northerly movement of the pressure belts. Central Europe: winters cold, several months below freezing.

Europe is well supplied with rivers and lake systems. The main rivers rise in (1) the Valdai Hills—the Don, Dnieper and Volga, flowing SE. and S., and the Drina, flowing N.; and (2) the Alps—the Danube and Po, flowing SE., the Rhône, S., and the Rhine, NE. There is little natural vegetation remaining in Europe with the exception of the tundras in the N., the afforested mountain systems (coniferous, and towards the South deciduous), the forests of N. Russia, and in the SE. the steppes (grasslands) merging into semi-desert. Coal measures and iron deposits are distributed throughout Europe. Most important minerals are also mined, including precious metals (Urals, Germany, especially in Austria), but precious stones are rare.

There are three chief races among the people of Europe: (1) *Mediterranean Race*, short, dark complexion, long-headed, introduced megalithic culture into W. Europe in the New Stone Age, and akin to ancient Egyptians; found to-day especially in S. France, Spain, S. Italy; (2) *Nordic Race*, tall, fair, long-headed, emigrated to Europe from S. Russian steppes; inhabiting to-day Scandinavia, Denmark, N. Germany; (3) *Alpine Race*, broad-headed, medium tall, introduced an agricultural culture into Europe at the same time as the Mediterranean race; inhabiting the highlands of Central Europe, S. Germany, Central France, S. Belgium. The Slav races inhabiting Russia and the Balkans are akin to the Alpine race.

The present population of Europe is about 550,000,000. The chief languages are Aryan: Celtic, Teutonic, Slavonic and Romanic. Magyar and Basque are non-Aryan. Religion is predominantly Christian: Roman Catholics, Orthodox Catholics, and Protestants. There are 10,000,000 Jews and some 5,000,000 Mohammedans. Politically, Europe is divided into 35 self-governing States (including Kingdom of Iceland, Free City of Danzig and Vatican State).

Europium, a chemical metallic element belonging to the rare earth group. Symbol Eu, atomic number 63, atomic weight 152.0.

Eurydice. See Orpheus.

Eusebius Pamphili, a distinguished early Christian writer, born in Palestine. Bishop of Caesarea in 313; headed the moderate Arians at the Council of Nicea, who shrank from disputing about a subject so sacred as the nature of the Trinity; wrote a history of the world to A.D. 328; his *Ecclesiastical History* is the first record of the Christian Church up to 324; also wrote a *Life of Constantine*, who held him in high favour. Many extracts of ancient writers no longer extant are found in the works of Eusebius (about 264-340).

Eustachio, Bartolommeo, an Italian physician of the 16th Century; settled at Rome, made several anatomical discoveries, among others those of the tube from the middle ear to the mouth, and a valve on the wall of the right auricle of the heart, both called *Eustachian* after him. (d. 1574).

Euterpe, the Muse of lyric poetry, represented in ancient works of art with a flute in her hand.

Euthanasia, easy, painless death; or a putting to death by painless means. It is an offence against the criminal law to take it into one's own hands to relieve a patient, in however great pain, by taking his life, whether by painless means or not. Plato and More were advocates of induced euthanasia of aged folk.

Euxine, a Greek name for the Black Sea (q.v.).

Evander, an Arcadian, who is said to have come from Greece with a colony to Latium and settled in it 60 years before the Trojan War, and with whom Aeneas formed an alliance when he landed in Italy. He is credited with having introduced the civilising arts of Greece.

Evangelical, a term applied to all those forms of Christianity which regard the atonement of Christ, or His sacrifice on the Cross for sin, as the ground and central principle of the Christian faith.

Evangelical Alliance, of Christians of all countries and denominations holding evangelical principles, founded in London (1846) to fight especially religious indifference and the power of the Pope.

Evangelist, a name given in the early Church to one whose office it was to persuade the ignorant and unbelieving into the fold of the Church.

Evans, Sir Arthur John, distinguished born in Hartford-

shire; conducted archaeological and ethnographical research in the Balkans and in Crete, in the latter country discovering the pre-Phoenician script; excavated the prehistoric palace of Knossos; was keeper of the Ashmolean Museum at Oxford (1884-1908), and is a member of numerous foreign antiquarian and learned societies. (1851-

Evans, Edith Mary.

English actress, born in London; first appearance, King's Hall, Covent Garden, 1913, in *Troilus and Cressida*. Has appeared in many plays, including Shakespeare's and Shaw's and revived Restoration Plays (in particular *The Way of the World*, 1924). (1888-

Evans, Sir George de Lucy, an English general, born in Ireland; served in the Peninsular War; was present at Quatre-Bras and Waterloo; commanded the British Legion sent to assist Queen Isabella in Spain, and the second division of the army in the Crimea and the East; was for many years a member of Parliament. (1787-1870)

Evans, Mary Ann, the real name of Evans, George Eliot (q.v.).

Evaporation, liquid (or, less frequently, a solid) into a gas or vapour. If a liquid is introduced into the vacuum space (Torricellian vacuum) above the mercury in a barometer tube, the level of the mercury falls, owing to the fact that vaporisation of the liquid takes place. For the same liquid at the same temperature, the fall in level is always the same, supposing that there is sufficient of the liquid for some of it to remain unevaporised. The difference between the original and final heights of the mercury in the tube is known as the vapour pressure of the liquid at the temperature concerned.

With rise of temperature, the vapour pressure of a liquid rises, and when it reaches the value of the external pressure (e.g., the pressure of the air when the liquid is heated in an open vessel) the liquid boils; thus, when the pressure of the air is 760 mm. of mercury, alcohol boils in an open vessel at 78.4° C., because at this temperature its vapour pressure becomes 760 mm. Many liquids, such as alcohol, water, ether and benzene, have appreciable vapour pressures even at ordinary temperatures; hence if these and similar liquids are left exposed to the air, they more or less quickly evaporate. Evaporation will obviously be hastened by heating; it is also accelerated by the passage of a current of air over the liquid, since the particles of vapour formed are more quickly removed from the neighbourhood, and so prevented from re-entering the liquid.

Evelyn, John, an English writer, born in Surrey; travelled in France and Italy during the Civil War, where he devoted much time to gardening and the study of trees; was author of a celebrated work entitled *Sylva* or *A Discourse of Forest Trees*, etc.; did much to improve horticulture and introduce exotics into this country; his *Diary* is full of interest, and justly famous for the fullness, variety and fidelity of its records. It was discovered in 1817 in an old clothes-basket. (1620-1706).

CRETAN STATUE
OF A GODDESS

Evening Primrose, (*Oenothera biennis*), a

flowering plant of the order Onagraceae. It is a biennial, bearing large pale-yellow flowers with a sweet scent. It opens at night and attracts the moths by which it is fertilised. Other species of *Oenothera*, also known as *Goldfish*, are annuals and perennials and of different colouring.

EVENING
PRIMROSE

Everest, Mount, the highest mountain in the world; is one of the Himalayan peaks in Nepal, India; is 29,141 ft. above sea-level; named after Sir George Everest (1790-1866), a famous military engineer. A successful flight over the summit was made by the Houston Expedition in 1933, but no successful attempt to climb the mountain has yet been made, though many lives have been lost and a point within a few hundred feet of the top has been reached.

Evergreens, shrubs which remain green throughout the year, the new leaves growing concurrently with the shedding of the old; includes all conifer trees (except larch), box, holly, yew, etc.

Eversley, NE. of Basingstoke; the burial-place of Charles Kingsley, who for 31 years was rector of the parish.

Everton, Lancashire, famous for its toffee. Here is a Roman Catholic college. Has a famous football club at Goodison Park, which was founded in 1879 and was an original member of the Football League. The club won the F.A. Cup in 1906 and 1933, and has several times headed the League (1st Division).

Everyman, the title of a morality play of the 15th Century. The characters are Everyman, God, Death, Good Deeds, Knowledge, Beauty, Strength, etc. Everyman is summoned by Death, and all his friends forsake him, except Good Deeds.

Evesham, a town in Worcester, the scene of the battle in the Barons' War (1265) between Prince Edward (afterwards Edward I.) and Simon de Montfort; has remains of an 8th-Century Benedictine abbey. Pop. 8,800.

Eviction, or **Disseisin**, the legal process whereby a person is forcibly dispossessed of his holding of premises of which he is tenant. A landlord may recover possession against his tenant in a county court on the expiry of a notice to quit, or if six months' rent is in arrear if in the contract of tenancy there is a proviso for re-entry, and if there is not sufficient distress on the premises. In the case of a house protected under the Rent Restrictions Acts, the Courts require satisfaction on several essential points before they will grant an eviction order.

Evidence, proof—direct, circumstantial, oral or documentary—of allegations in issue between parties in an action at law. Evidence is customarily taken in court by oral examination of witnesses, but evidence irrelevant to the issue should not be admitted. Hearsay evidence is also not admitted, with certain exceptions. By the Criminal Evidence Act (1938) no person need incriminate himself, and although an accused person may give evidence on his own behalf, he is not compelled to do so. A husband or wife is not compelled to give evidence against the other spouse all he or she may do so; but there are

exceptions, as e.g. under the Criminal Law Amendment Act, the Vagrancy Act, etc., when the wife of the accused can be called as a witness for the prosecution. Real (Lat. res, thing) evidence means any article used in connection with the subject of inquiry. Prima facie evidence means sufficient evidence to justify suspicion. "King's Evidence" is that given by an accused against an accomplice. A "leading question" means one which suggests the answer desired by Counsel, and such questions, therefore, may not be put to one's own witnesses; but any question may be put in cross-examination provided the matter arises out of the examination-in-chief, and also questions as to credit or character, when they are at issue or are relevant. Certain evidence is excluded in court nowadays on the grounds that it is contrary to public policy that it should be disclosed. Certain professional confidences—e.g., of doctors and lawyers—is sometimes treated as "privileged."

Evil Eye, a superstitious belief that of exercising a baneful influence on others, and even animals, by the glance of the eyes. The superstition is of ancient date, and is met with among almost all races, as it is among illiterate people and savages still. It was customary to wear amulets as protection against the evil eye.

Evolution, the theory that the several animals on the globe were not created in their present form, but have all been evolved by modifications of structure from cruder forms under or coincident with change of environment, an idea which has been applied to everything organic in the spiritual as well as the natural world.

The theory of evolution as developed to-day dates from Darwin's *Origin of Species* (1859), and is based on the consideration of (1) the growth of new types and variations of type; (2) heredity, by which some variations are transmitted to subsequent generations; (3) the struggle for existence, (4) selection of those attributes best fitted for the struggle; (5) the tendency of like types to be isolated and to breed together. The forerunners (apart from the great German philosopher Hegel) of Darwin, were the 18th Century biologists, notably Linnaeus and Buffon, the former giving an elaborate account of plant-life, the latter of animal-life.

The post-Darwinian theories of evolution have sought to extend his principle of organic evolution to the inorganic, out of which it is asserted the former evolved. This evolutionary process was mechanistically explained by Spencer and others, but cosmic evolution has been given a less mechanistic explanation as "creative evolution" by Bergson or "emergent evolution" by Lloyd-Morgan. It is postulated that in all organic evolution a formative part has been played by something akin to the conscious mind of man, and out of which, indeed, the latter evolved. The method of evolution has long ago superseded the *a priori* in the writing of history; one of the most brilliant expositions of the method in this sphere was the work *Antient Law* by Sir Henry Sumner Maine.

Evora, a city of Portugal beautifully situated in a fertile plain 70 m. N. of Lisbon, capital of an administrative district of the same name stretching from the coast to the Spanish frontier; once a stronghold, as the ramparts and a citadel show, and the seat of an archbishop; it abounds in Roman antiquities. Area (district) 2,860 sq. m. Pop. (administrative district) 180,000; (town) 12,000.

Évreux, capital of the dept. of Eure, on the Rton, 67 m. N.W. of Paris; is an elegant town; has a fine 11th-Century cathedral and an episcopal palace with an old

clock-tower. Interesting ruins have been excavated in the old town; is the seat of a bishop. There is some industrial activity, particularly in metal-founding. Pop. 19,300.
Ewald, Johannes, a Danish dramatist, poet, and lyricist, born in Copenhagen; served as a soldier in the German and Austrian armies; studied theology at Copenhagen; disappointed in love, he devoted himself to poetical composition; ranks as the founder of Danish tragedy and is the author of some of the finest Danish lyrics. (1743-1781).

Ewell, village of W. Surrey, England, 1 m. N.E. of Epsom, with remains of Henry VIII.'s palace, Nonsuch. Pop. 8,000.

Ewing, Sir James Alfred, British scientist, professor of engineering at Tokyo, Dundee and Cambridge, and vice-chancellor of Edinburgh University. His researches were mainly in connection with physics, especially magnetism. His results are of great practical importance in the construction of dynamos, electric motors, etc.; took charge of the Government cypher department during the War. (1855-1933).

Excalibur, the magic sword of King Arthur, which only he could unsheathe and wield. When he was about to die he requested his knight, Sir Bedivere, to throw it into a lake close by, who with some reluctance threw it, when a hand reached out to seize it, flourished it round three times, and then drew it under the water for good.

Excavation, the removal of earth from a site, either for archaeological or engineering purposes. In the latter application it refers particularly to an uncovered cutting or hollowing out of the earth, in contradistinction to tunnelling. Engineering excavation is usually carried out by means of machines, called excavators. The machine employed in most operations is very similar in structure to a crane. The jib, however, is capable of being brought into any required position, as, for instance, against a bank of earth. The pronged scoop cuts into the earth, and the load is then hoisted and deposited into lorries.

Excess Profits Duty, a tax varying from 40 to 80 per cent., imposed in 1915, during the World War, on profits in excess by £200 or more of those made prior to 1914, the standard by which the excess profits were measured being the average of profits of any two of the three years preceding the War. Exemption was given to farmers and to people engaged in certain specified professions and employments. Though successful in producing money, the tax was not economic, as it encouraged wasteful expenditure by the taxpaying firm. It was abolished in 1921. In 1937 a new tax, called the National Defence Contribution, was introduced by Mr. Chamberlain to finance rearmament, and bore some resemblance to the old E.P.D. It was levied on the increase of profits in industry over £2,000 in any accounting year, and was not applicable to incomes from employment or professions.

Exchange, the receipt of a commodity against a payment, or in return for another commodity, presumably of equal value. Barter as practised by commercially undeveloped peoples and as adopted by some nations during the post-War slump is one of the simplest and most primitive forms of exchange. Commercially, exchange now refers to the general exchange of goods between nations rather than between in-

dividuals. As such it denotes the method of settling debts between two countries, largely effected by means of Bills of Exchange.

Exchanges, a comprehensive term for the various methods by which debts contracted between countries in the course of international trade are settled. Debts between merchants of different countries are assessed in terms of the currency of one country in relation to the currency of the other country; the relative values of the two currencies being reckoned from day to day. Settlement of debt can be made either by payment of bullion, by the transference of international securities, or by Bills of Exchange. The latter method is that most frequently employed.

The exchange value of currency and the market price of bills are affected by the amount of indebtedness if this is large, the importing or debtor country has to pay more for the money of the creditor country, since as the indebtedness increases the demand for money to meet that indebtedness increases also. Foreign Exchanges have been seriously disturbed in recent years, in the first place by the disturbance in the normal flow of trade by the World War and by the readjustment to normal trading afterwards, secondly by the abnormal influence of huge indemnity and war debt payments, and finally by attempts to secure temporary trade advantages by means of deliberate currency depreciation. In England the machinery of the Exchange Equalisation Fund (established in 1932) has gone far to obviate difficulties through rapid fluctuations of exchanges.

Exchequer, the King's court of revenue, instituted either by William I. or Henry I. The name comes from the check cloth which covered the table at which the judges sat. By a method reminiscent of a game of chess, counters were moved on the squares, and represented value according to their position. This process was carried out between the representatives of the Exchequer and those who had to account for money received, the balance being struck according to the final position of the counters. The Chancellor of the Exchequer, as chief officer of the court, exercised both judicial and financial functions until 1873, when the former were abolished; and the work of exchequer as a court of common law was transferred to the King's Bench Division. The practical work of the Exchequer in dealing with the public revenue was made over to the Paymaster-General and the Treasury, the receipts being paid into the Bank of England. See also *Chancellor of the Exchequer and Treasury*.

Exchequer and Audit Department, a department of the British governmental administrative machinery under the control of the Comptroller and Auditor-General, and charged with the function of authorising issues from the Exchequer and auditing and reporting to the House of Commons on all Government expenditure. It was established in 1866.

Exchequer Bills, Government securities, said to have been invented by the Earl of Halifax, and first issued in 1686 in the reign of William III. They were issued for periods of five years, and at first in small sums at a variable rate of interest. They became the chief source of Government borrowing, issued in anticipation of taxes.

Excise, a duty charged on home-produced articles, usually levied on articles of stable consumption, such as beer and spirits, so that the estimated revenue can be relied upon. It is sometimes levied on certain commodities as a countervailing tax to a

Customs duty on imported goods of the same nature, when the latter tax is not imposed in order to protect the home-product. If a commodity is manufactured at home and abroad, a customs duty tends to keep out the foreign article. An excise duty by taxing the home product as well makes that particular commodity as full a source of revenue as possible. All licences come under the heading of excise, except that for motor vehicles. The excise duties yielded £104,000,000 in 1936-1937. The duties were first imposed by the Long Parliament in 1643 to raise funds for the civil war against Charles I. and levied on wine, beer, tobacco and other articles.

Excommunication, an ecclesiastical punishment inflicted upon heretics and offenders against the Church laws and violators of the moral code; was formulated in the Christian Church in the 2nd and 3rd Centuries. It varied in severity according to the degree of transgression, but in its severest application involved exclusion from the Eucharist, Christian burial, and the rights and privileges of the Church; formerly it had the support of the civil authority, but is now a purely spiritual penalty. There are passages in the New Testament (e.g., 1 Cor. v. 5) which imply some sort of physical punishment in the hope of spiritual regeneration. The right to excommunicate is not exercised by the Anglican Church.

Exe, a river rising in Exmoor and flowing through Somerset and Devon, entering the English Channel at Exmouth; is navigable for small vessels for about 8 m. from its mouth.

Execution in law refers to (a) the execution of capital punishment (q.v.). (b) The carrying out of judgments in civil actions, the usual process being by writ addressed to a sheriff or other officer of the Crown, who is authorised by the writ to recover the sum due from the debtor out of his "goods and chattels," plus interest at 4 per cent. and to pay such proceeds into Court to satisfy the judgment creditor. (See *Distrain*). (c) Execution of a deed denotes the act of sealing and delivering it. This means no more than signing it and adopting a wafer as one's seal, and getting the signature duly attested. (d) Execution of wills. See *Executor*.

Executive, a body appointed to administer the affairs of a country, a corporation, a company or a club. Politically, the Government executive is the supreme body, governing according to existing laws and initiating new laws. In an absolute monarchy the executive is the King, but his powers were usually vested in the King's Council, from which the modern executive has developed. The judicial functions which once belonged to the executive body have been separated from it, and under the English parliamentary system the executive is chosen from the legislature. In Great Britain the executive is the Cabinet, chosen by the Prime Minister from members of his own party. Its existence is dependent on a parliamentary majority.

Executor, in law, a person appointed under a will to carry out the wishes of a testator after his death. His duties may be limited or absolute. The appointment may be made by someone else by the deceased. Any person, except a lunatic, may act as executor. A corporation or a firm may be appointed; if the latter, the grant is made to the individual members of the firm. Once an executor accepts the duty, he cannot renounce executorship, but after probate the administration of the estate may be transferred to the Public Trustee under the Public Trustee Act of 1906 if the gross capital value of the estate is less than £1,000. Executors are liable for negligence in dealing

with the accounts, and may be held responsible for illegal acts of co-executors.

Exegesis, that branch of theology which deals with the interpretation of the Scriptures. It denotes not only the study of the text and its bearing on doctrine, but also embraces the whole science of elucidating the Scriptures. The term is Greek in origin, and Philo may be regarded as the father of exegetical work.

Exequatur, the instrument officially recognised by the Government of the country to which he is accredited and authorising him to exercise his functions.

Exeter, the county town of Devon, England, on the Exe, about 9 m. from its mouth. A fine old town still partially walled, its chief glory is its small but very beautiful cathedral, Norman and Decorated in style. There is also an old Guildhall and a bishop's palace, and remains of a castle. It has a university college and a famous public school. Pop. 66,000.

Exhibition, a benefaction or endowment for the maintenance of scholars in the English Universities. Most of the Oxford and Cambridge colleges have such awards at their disposal. Similar grants are also made by other educational authorities—e.g. the Whitworth Exhibitions for engineering students.

Exhibitions. The holding of public exhibitions to encourage trade is essentially a development of the earlier half of the 19th Century, a number of such public shows taking place throughout the Continent, following various displays of applied art products in Paris and elsewhere, in the first two decades of the century. The first great international exhibition was the famous one held in the Crystal Palace in Hyde Park and opened by Queen Victoria in 1851, the property on its removal and re-erection in Sydenham becoming a national property, and remaining so until its total destruction by fire in 1936. The next great international exhibitions were in Vienna, 1863, Paris, 1878 and again in Paris in 1889—L'Exposition Universelle, the chief permanent feature of which was the Eiffel Tower; and in 1905, also in Paris, one of the largest ever held.

London's principal exhibitions of more recent years were those at Earl's Court 1884 and 1914; the Franco-British and Japanese-British at the White City, Shepherd's Bush, in 1908 and 1910 respectively; and the British Empire Exhibition opened at Wembley in 1924, which occupied a site of over 200 acres and comprised many highly ornamental buildings, especially the Indian pavilion, and a display on loan of valuable paintings. Other recent exhibitions have been a British Empire Exhibition at Buenos Aires, 1931; the World's Fair at Chicago, 1933; Johannesburg Exhibition, 1936, and the Glasgow Exhibition, 1938. Numerous exhibitions are also held by individual trades, or interests.

Exhumation, the removal of interred human remains. In English law it is sacrilege and also a misdemeanour to disinter a corpse buried in consecrated ground, unless with lawful authority—as e.g. in cases of suspected foul play, when the Home Office grants an exhumation order, or a coroner during an inquest orders disinterment for medical investigation.

Exile, banishment from one's country by authority either in perpetuity or for a limited period; also the voluntary abandonment of one's country and removal to a foreign country for purposes of residence. Outlawry and transportation in the past involved exile. Magna Charta abolished outlawry of freemen otherwise than by the law of the land. Transportation of criminals was finally abolished in 1864.

Exmoor, an elevated stretch of vale and moorland in the SW. of Somerset, NE. of Devonshire; has an area of over 100 sq. m., 25 of which are covered with forest; Dunkery Beacon its chief height; red deer and a special breed of ponies are to be found there.

Exmouth, a noted seaside resort on the Devonshire coast, England, at the mouth of the Exe, 9 m. SE. of Exeter. Pop. 14,600.

Exmouth, **Edward Pellew**, Viscount, admiral, born at Dover of Cornish descent; entered navy, 1770; rose through combination of skill and bravery in many battles, and in particular in the bombardment of Algiers, to release Christian slaves in 1816. He was created Baron Exmouth in 1814; Viscount in 1816. (1757-1833).

Exodus (i.e., the Going Out), the second book of the Bible, being the book of the Old Testament which records the deliverance of the children of Israel from Egyptian bondage, and the institution of the moral and ceremonial laws for the nation; consists partly of history and partly of legislation.

Exogamy, a custom compelling a man to marry outside his tribe, clan or totem; the opposite of endogamy. The custom is widespread, especially in E. and Central Africa, among the "blackfellows" of Australia and the N. American Indians.

Exorcism, conjuration by God or Christ, or some holy name, of some evil spirit to come out of a person. It was performed on a heathen as an idolater, and eventually on a child as born in sin prior to baptism. In the Roman Catholic Church, exorcism is still retained in the baptismal service.

Expansion (in physics), increase in length, area or volume of a body effected by rise of temperature, reduction of pressure or any other physical or chemical cause. The coefficient of linear expansion of a body is the increase in length divided by the original length—i.e., the "fractional increase" in length, per degree rise of temperature; and similarly the coefficient of cubical expansion is the fractional increase in volume per degree rise of temperature. Exceptions to the general rule that bodies expand by heat are copper oxide, vulcanised rubber, iron beyond red-heat. When its temperature is reduced to 40° F. (4° C.), water reaches its maximum density and also expands slightly. Change of form results from change of temperature in the case of all bodies that are not homogeneous.

Expectation of Life, in life insurance, the number of years which, on the law of probability, a person of a given age or occupation may hope to live. This is remarkably certain as to masses of people, but very much otherwise as to individuals. Tables showing the expectation of life are used by Insurance Companies for the purpose of determining premiums for policies, whether maturing at a certain age or payable at death. The first reliable English tables were those published a century ago by W. Farr, the Deputy Registrar-General.

Expeditionary Force. In the British Army organisation, provision is made permanently for dispatching an expeditionary force for operations overseas. The British Expeditionary Force which went to France in Aug. 1914 comprised only four divisions of infantry and one cavalry division, together with artillery, reinforcements arriving the following month.

Explosives, substances which readily decompose under certain conditions, such as ignition or mechanical shock, immediately yielding large quantities of gas, to the expansive force of which the destructive properties of the explosive are

due. The oldest effective explosive is gunpowder, said to have been discovered by Roger Bacon in the 13th Century, and still extensively employed—e.g., in fireworks and sporting cartridges. It consists of potassium nitrate (nitre or saltpetre) 75 parts, sulphur (brimstone) 10 parts, and carbon (charcoal) 15 parts; the proportions may be varied within limits according to the purpose for which the powder is intended.

Among the more important modern explosives are nitroglycerine (properly glyceryl trinitrate), an oily liquid made by acting upon glycerine with a mixture of concentrated nitric and sulphuric acids; dynamite, which consists of nitroglycerine absorbed in a fine siliceous earth ("kieselguhr") or sawdust; ammonal, a mixture of ammonium nitrate and aluminium powder; lyddite or melinite (chemically known as picric acid or 2:4:6-trinitrophenol), made by acting upon carbolic acid (phenol) with concentrated nitric and sulphuric acids; and T.N.T. (trinitrotoluene), made by acting with a similar mixture of acids upon toluene, a liquid allied to benzene and found, like the latter, in coal-tar.

Probably the most violently explosive substance known is nitrogen trichloride, NCl₃, an oily liquid made by passing excess of chlorine into ammonia solution; this and similar substances are much too sensitive to be of any practical value, useful explosives being necessarily required to have a reasonable degree of stability. In view of this stability, explosives usually have to be fired by means of detonators, such as mercury fulminate, which are more easily exploded, and whose explosion provides the necessary flash or shock to fire the main explosive.

Exports, goods or produce sent out of a country. It is axiomatic in a political economy that imports should be paid for by exports; and when the value of a country's total exports is below that of its total imports, it is said to have an adverse "balance of trade." Great Britain has for many years imported more goods than she has exported, and this has continued even since the return to a protective tariff; but in order to arrive at the true economic position, account must be taken of "invisible imports," such as interest on securities or on capital invested abroad, freight services, etc.

In the time of J. S. Mill it became accepted that the profit on a country's exports consisted in the difference between the price at which the goods were bought and carried and the price at which they were sold, thus discarding the old fallacy of looking solely to the profits of traders and ignoring the price to the consumer. The chief items of United Kingdom exports are articles wholly or mainly manufactured, the imports being chiefly food and raw material.

Extradition, the return of a criminal, from a country where he has sought refuge to a country where he wanted for trial. Treaties to effect this are signed between Great Britain and America in 1842 and with France in 1843, since which similar treaties have been signed with most countries. Anyone accused of a crime punishable with twelve months' imprisonment or more is returnable from one part of the British Dominions to another as a fugitive offender. The main Act of Parliament governing extradition from Great Britain is that of 1870, and only applies where an Extradition Treaty has been signed with another country.

Extra-Territoriality, or **Extraterritoriality**, the privilege given by international law to ambassadors and their families of being considered outside the territory, and therefore the jurisdiction, of the State to which they are sent. Similar privileges are or have been granted under Treaties by non-Christian

countries to citizens of Christian States resident in those countries. Thus European subjects resident in China were for long outside the Chinese Courts, and there were similar agreements or capitulations with Turkey for securing immunity to foreigners in that country or in its dependencies, including Egypt. (See also *Capitulations*.)

Extreme Unction, one of the seven sacraments of the Catholic Church; an ointment of consecrated or holy oil administered by a priest in the form of a cross to a sick person at the point of death, upon the eyes, ears, nose, mouth, hands and face, which is presumed to impart grace and strength against the last struggle.

Eyam, a village of Derbyshire, England, 5 m. N. of Bakewell. It has a Runic cross and other antiquities. Three-quarters of its population perished during the Great Plague. Pop. 1,206.

Eyck, Jan van, a famous Flemish painter (c. 1389-1440), born in Maseyck; was instructed by his elder brother Hubert (c. 1370-1426), with whom he laboured at Bruges and Ghent; reputed to have been the first to employ oil colours, but the two were particularly noted for their skill in mixing colours. Their masterpieces are to be seen at Ghent, Bruges, Berlin, Paris and Antwerp, and in the National Gallery, London.

Eye, the organ of vision, and one of the most delicate parts of the bodily mechanism of nearly all living things. It is simple or compound, single or multiple, fixed or movable; it is sometimes deeply embedded in a bony socket, and sometimes projects from a sensitive and retractile horn. In general principles, however, the structure is similar. The eye system consists of the socket or orbit; the optic nerve; the globe or eyeball, with its contents; the external muscles which move it; the lachrymal or tear apparatus; the nerves and vessels which supply the parts and the mass of fatty and cellular substance which isolates and supports them.

The globe contains the parts directly concerned with vision, and consists of a sphere with three different coverings: the outer, or protective cornea, and sclerotic, or tough fibre; the centre, partly muscular and partly a vascular pigment, the iris, and an inside nervous screen, the retina. Its firmness is due to the contained fluid matter with which the globe is filled. The pupil is a round hole in the middle of the iris, the coloured portion, and it is through this aperture that light enters as in the camera.

The optic nerve, having entered the interior of the eyeball, branches out into the fine membrane of the retina. The movements of the eyeball are controlled by six muscles, called recti and oblique. The eyelids which protect the eyeball consist of muscular fibre between a soft external skin, and a smooth internal surface, and the action of closing them operates the lachrymal or tear-glands by which the surface of the eye is washed and irritating matter removed. The liquid is watery, containing a minute portion of salt ingredients in solution, and is called the aqueous humour. In the front portion of the eye is the crystalline lens, about one-sixth of an inch thick, of gelatinous substance, arranged onion like, in successive coats. It has the form and function of a double convex lens. The eyes of insects and some animals often consist of myriads of simple eyes grouped in one compound organ.

EYE

- (1) retina; (2) optic nerve; (3) lens; (4) cornea; (5) vitreous humour; (6) lower eyelid

The human eye is subject to a number of diseases, including in the very old occasional yellowing of the crystalline lens resulting in a lack of perception of blue. Faulty sight can take the form of astigmatism, myopia and hypermetropia.

Eyebright, a popular name for *Euphrasia* (q.v.), a British wild plant of the natural order Scrophulariaceae, so called on account of its former reputed as a cure for afflictions of the eye.

Eyemouth, fishing town of Berwickshire, Scotland, 8 m. NW. of Berwick, with a good sheltered harbour. Pop. 2,300.

Eylau, a small town, 23 m. SE. of Königsberg, the scene of a great battle between Napoleon and the Russian and Prussian allies on February 8, 1807; the night was interrupted by darkness, under cover of which the allies retreated, having had the worst of the day.

Eyra (*Felis eyra*), a small wild weasel-like species of cat, reddish-brown in colour, found in S. America in thick forest areas.

EYRA

Eyre, Edward John, explorer and colonial governor, born in Yorkshire; emigrated to Australia in 1832; successfully explored the interior of NSW, Australia in 1841; lieutenant-governor of New Zealand in 1846, governor of St. Vincent in 1854, and of Jamaica in 1862; recalled in 1865, and prosecuted for harsh treatment of natives, but was acquitted; his defence was championed by Carlyle, Ruskin and Kingsley; J. S. Mill supported the prosecution. (1815-1901).

Eyre, Lake, lake of S. Australia. With an area of 4,000 sq. m., in dry seasons it becomes a salt marsh.

Eyston, George Edward Thomas, Captain, British racing motorist and consulting engineer; an old Cambridge Rowing blue; served in the World War and was awarded the M.C.; after the War took to motor racing and secured the world's land speed record in Nov. 1937 with an average speed of 312.20 m.p.h. and again in Sept. 1938 at Bonneville Salt Flats, Utah, U.S.A., in his "Thunderbolt" at an average speed of 337.5 m.p.h. (1897-).

Ezekiel, a Hebrew prophet; a man of captive to Babylon 597 B.C., and was banished to Tel-abib, on the banks of the Chebar, where, with his family about him, he became the prophet of the captivity and the rallying centre of the Dispersion. Here he foretold the destruction of Jerusalem as a judgment on the nation, and comforted them with the promise of a new Jerusalem and a new Temple on their repentance and their return to the Lord. His prophecies (see the Book of Ezekiel in the Bible) arrange themselves in three groups—those denouncing judgment on Jerusalem, those denouncing judgment on the heathen, and those announcing the future glory of the nation.

Ezra, a Jewish scribe of priestly rank, and full of zeal for the law of the Lord and the restoration of Israel. He was a captive in Babylon before leading his fellow-exiles back to Jerusalem; author of a book of the Old Testament, which records two successive returns of the people from captivity, and embraces a period ranging from 376 to 457 B.C., being a continuation of the book of Chronicles, its purpose being to relate the progress of the restored theocracy in Judah and Jerusalem, particularly as regards the restoration of the Temple and of the priesthood.

F

Faber, Frederick William, a Roman Catholic divine, and hymn-writer, born at Calverley, Yorkshire; at Oxford he won the Newdigate Prize in 1836; but under the influence of Newman joined the Church of Rome (1845). His fame chiefly rests on his fine hymns, *Pilgrims of the Night* being one of the most famous. (1814-1863).

Fabian, St., Pope from 236 to 251; martyred with St. Sebastian during the persecution of Decius.

Fabian Society, a Socialist organisation, founded in 1883, which "aims at the reorganisation of society by the emancipation of land and industrial capital from individual and class ownership, and vesting of them in the community for the general benefit"; has lectureships, and issues *Essays and Tracts*; Bernard Shaw, H. G. Wells and Sidney Webb (Lord Passfield), have been among its members; the name of the Society is derived from Quintus Fabius (Maximus Verrucosus), whose principle in war was wariness rather than violence.

Fabii, a celebrated family of ancient Rome. In 477 B.C. the Fabii, 308 in number, perished in combat with the Veii, leaving behind a single youth, Quintus, from whom descended subsequent generations of the name.

Fabius, Quintus (Maximus Verrucosus), a renowned Roman general, five times consul, twice censor and dictator in 221 B.C.; famous for his cautious generalship against Hannibal in the Second Punic War, harassing to the enemy, which won him the surname of "Cunctator" or delayer—whence the phrase "Fabian tactics." (303-203 B.C.).

Fabius, (Rullianus), a noted Roman general, five times consul and twice dictator; waged successful war against the Samnites in 323 B.C.

Fabius Pictor, the oldest prose-writer of Roman history, of which fragments now remain of his *Annals*, from which Livy and other writers drew some of their material. Lived about 225 B.C.

Fabliaux, a species of metrical tales of a light and satirical nature in vogue widely in France between the 12th and 14th Centuries; some of the stories may have been of Oriental origin, but they were infused with the French spirit of the times; La Fontaine, Boccaccio and Chaucer drew freely on them; they were marked by all the vivacity and perspicuity, if also lubricity, of their modern successors in the French novel, and comic drama.

Fabre, Jean Henri, French naturalist, was born at St. Léon, in Aveyron.

For a time a teacher in several French colleges, he eventually devoted himself to the study of insects, especially wasps, bees and spiders, whose habits and social life he described with remarkable minuteness in a number of widely popular books. (1823-1915).

JEAN FABRE

Fabricius, Gaius, a Roman of the old school, distinguished for the simplicity of his manners and his incorruptible integrity; his name has become the synonym for a poor man who in public life deals honourably and does not enrich himself; was consul 282 B.C.

Fabricius, or Fabrizio, Girolamo, a famous Italian anatomist, born in Aquapendente; became professor at Padua in 1562, where he gained a world-wide reputation as a teacher. Harvey declared that he got his first idea of the circulation of the blood from attending his lectures. (1537-1619).

Faccioliati, Jacopo, Italian lexicographer, born at Torreglia; became professor of theology and logic at Padua; in collaboration with his pupil, Egidio Forcellini (1688-1768), began the compilation of a new Latin dictionary, which was completed and published after his death. This work has been the basis of all subsequent lexicons of the Latin language. (1682-1769).

Facial Angle, the angle formed by the line from the nostrils to the ear, and the other from the front part of the upper jawbone to the most prominent part of the forehead. It is used by some anthropologists to indicate degrees of intelligence among members of the animal kingdom.

Factor, an agent employed to act in business on behalf of another person or concern. His usual duty is to receive consignments of goods, sell them and remit, either in money, bills or purchased goods, their value to his employer. He must preserve goods entrusted to him from damage. He is paid by factorage, or commission, and his function differs from that of a broker in that he has possession of the goods and his transactions are in his own name.

Factory Acts, came into being early in the 19th Century to regulate hours and conditions of labour. The first two Acts, those of 1802 and 1819, were directed chiefly against unhealthy conditions in cotton mills and glaring abuses of child labour. Numerous additional Acts, covering conditions in every kind of industry, were summarised in the Consolidating Acts of 1878 and 1901. Since then factory legislation has frequently been extended, and a new factory code came into operation in July 1938. This code (the Factories Act, 1937) controls in detail the conditions in which all factory work is done, and, for women and young persons, the maximum number of hours that they may work in any week and the maximum number of hours (overtime) in excess of the standard which they may work in any year. The hygienic requirements of the new code in regard to lighting, heating, ventilation, cleansing and so on are on the whole stricter than those of the older Acts. There are also many new and important requirements for safety.

Faculty, a branch of learning in a university. In former times the faculties were theology, law, medicine and art; to-day they comprise science, art, history, philosophy, etc. The term is also applied to some of the professions, and a group of professors is sometimes referred to as a faculty. The word is also used in church law, and means a licence, especially a marriage licence, authority for the granting of which is with the Court of Faculties of the Archbishop of Canterbury. An incumbent who wishes to make any alteration in a church must obtain a grant of Faculty by the Ordinary by applying to the bishop of the diocese.

Faed, John, a Scottish artist, son of a millwright, born in Kirkcubright; was elected an A.R.S.A. in 1847, and R.S.A. in

1851; his paintings, such as the "Cottar's Saturday Night," are chiefly of humble Scottish life. (1819-1902).

Faed, Thomas, brother of the preceding, born in Kirkcudbright; distinguished himself in his art studies at Edinburgh; went to London, where his pictures of Scottish life won him a foremost place among his contemporaries; was elected R.A. in 1864 and honorary member of the Vienna Royal Academy. (1826-1900).

Faenza, an old Italian cathedral town, 31 m. S.E. of Bologna; noted for its manufacture of majolica ware, known as "faience." Pop. 22,000.

Faërie Queene, the name of an allegorical poem by Edmund Spenser, in which twelve knights were, in twelve books, to represent as many virtues, described as issuing forth from the castle of Gloriana, Queen of England (Elizabeth), against certain impersonations of the vices and errors of the world. Such was the plan of the poem, but only six of the books were finished, and these contain the adventures of only six of the knights, representing severally Holiness, Temperance, Chastity, Friendship, Justice and Courtesy.

Fagus, a genus of trees of the natural species found in northern temperate regions, the principal species being *F. Sylvatica*, the beech tree native to Great Britain.

Fahrenheit,

Gabriel Daniel, a celebrated German physician, born in Danzig; spent much of his life in England, but finally settled in Holland; (Leaf, flower and nut) famous for his improvement of the thermometer by substituting quicksilver for spirits of wine and inventing a new scale, the freezing-point being 32° above zero and the boiling 212° (1686-1736).

Fainéants, the name given to the kings of France of the Merovingian line from 670 to 751, from Thierry III. to Childeric III., who were subject to their ministers, the mayors of the palace, who discharged all their functions.

Fainting, or Syncope, a loss of consciousness, due to an insufficient supply of blood to the brain. The patient falls unless supported, and there is facial pallor, with a very feeble pulse and clamminess of the skin. The treatment of a fainting fit consists in laying the patient upon his back with his feet raised, loosening his clothing and giving him as much fresh air as possible by opening windows and doors. Smellingsalts may be applied to the nose, but brandy and other stimulants should never be administered so long as the patient is unconscious and unable to swallow.

Fair, a periodical meeting of buyers and sellers, originating in early times before town life, when people resorted to them to purchase goods required during the ensuing year. They were the principal markets until the 18th Century. In England they are diminishing in number and importance, and are now centres of open-air amusement at holiday festivals where coco-nut shies, swings, roundabouts and ingenious mechanical amusements are provided. The famous annual fair at Nijni-Novgorod (Gorky) in Russia, now discontinued, used to attract visitors from all over the world and millions of pounds changed hands. To-day the fair is becoming merged more and more into the great industrial exhibition, such as that held in Paris in 1889 or Glasgow in 1938.

BEECH

(Leaf, flower and nut)

Fairbairn, Andrew M., Scottish theologian born in Edinburgh; received the charge of the Evangelical Church at Bathgate, and subsequently studied in Berlin. In 1873 became Principal of the Airedale Congregational College at Bradford; was Muir Lecturer on Comparative Religions in Edinburgh University in 1881-1883, and Principal of Mansfield College, Oxford, in 1888-1909, author of *The Place of Christ in Modern Theology*, and several other scholarly works. (1838-1912).

Fairbanks, Douglas, American cinema actor. Born at Denver, Colorado, he started as a stage actor, but deserted the stage for the screen in 1915, soon making a name for himself for daring acrobatic feats in film work. He married Mary Pickford, the cinema star, in 1920, but was divorced, and in 1936 married Lady Ashley. (1883-).

Fairfax, Thomas, Lord, a distinguished Parliamentary general, nephew of Edward Fairfax (c. 1572-1635) of Denton, Yorks., the translator of Tasso; born at Denton; served in Holland, but in 1642 joined the Parliamentarians. After distinguishing himself at Marston Moor, he was appointed commander-in-chief of the New Model Army, and in 1645 routed the King at Naseby. Was superseded by Cromwell (1650) and retired into private life until Cromwell's death, when he supported the restoration of Charles II. to the English throne. (1612-1671).

Fair Head, or Benmore, a sheer promontory of columnar basalt, 636 ft. high, on the coast of Co. Antrim, Northern Ireland.

Fairies, imaginary supernatural beings conceived of, often, as of diminutive size, but of human shape, who are animated more or less by a spirit of mischief out of a certain loving regard for, or humorous interest in, the affairs of mankind, whether in the way of thwarting or helping. Belief in fairies, in one form or another, is found all over the world, but is strongest among primitive peoples. It is presumably as old as mankind itself, and in Christian communities is one of the surviving relics of paganism.

Fair Isle, a small island in the Shetland lands, between the remainder of that group and the Orkneys. Fishing, sheep-rearing and knitting are carried on.

Fair Maid of Kent, the Countess eventually wife of the Black Prince, so called from her beauty. (1328-1385).

Fair Maid of Norway, Margaret, daughter of Eric II. of Norway, and granddaughter of Alexander III. of Scotland; died on her way from Norway to succeed her grandfather on the throne of Scotland, an event which gave rise to a struggle for the crown by rival competitors. (1283-1290).

Fair Rosamond, Rosamond Clifford, the mistress of Henry II. According to the popular legend she was kept in a secret bower at Woodstock, in the heart of a labyrinth which only he could thread.

Faith, St., a virgin martyr who, in the 4th Century, was tortured on an iron bed and afterwards beheaded.

Faith Healing, the practice of curing bodily infirmities by faith in the Divine power alone, without the intervention of medicine. It is a form of mental suggestion, and can be traced back to long before Christian times. Several modern Christian sects incorporate a belief in faith healing among their tenets, taking as their example the miracles recorded in the Bible, and cases of miraculous healing are a common feature of "revival" movements. Religious pilgrimages, such as that to the shrine at Lourdes, and the practice of touching for the

King's Evil, which survived in England until the days of Queen Anne, are among many examples of the widespread belief in faith healing.

Faiyum, a fertile province of Upper Egypt, lies W. of the Nile, 65 m. from Cairo, is in reality a southern oasis in the Libyan desert, irrigated by means of a canal running through a narrow gorge to the Nile valley; its area is about 670 sq. m., a portion of which is occupied by a sheet of water, the Birket-el-Kerim (35 m. long), known to the ancients as Lake Moeris, by the shores of which stood one of the wonders of the world, the famous "Labyrinth." Also the name of a town in the province. Pop. (prov.) 554,000; (town) 63,000.

Fakenham, market town of Norfolk, England, 20 m. SW. of Cromer, with a fine old church and a corn market. Pop. 3,000.

Fakir (lit. poor), a member of an order of monkish mendicants in India and adjoining countries who, from presumed religious motives, practice or affect lives of severe self-mortification. In many cases they are charlatans whose "holiness" is assumed for the purpose of preying upon the fears and reverence of the superstitious.

Falaba, fortified town of W. Africa in Sierra Leone, near the frontier of French Guinea, at a junction of trade routes. Pop. 6,000.

Falaise, a French town in the dept. of Calvados, on the R. Ante, 22 m. SSE. of Caen; the birthplace of William the Conqueror. Pop. 7,000.

Falcon, the name of a genus of long-winged birds of prey belonging to the family Falconidae (which includes the Eagles and Hawks) distinguished by their habit of taking their quarry while it is in motion. They have great powers of flight, are muscularly very strong, and have keen sight. The species are numerous, and include the Peregrine Falcon, formerly abundant in Great Britain, the Merlin, Hobby and Kestrel.

Falconer, Hugh, British botanist and paleontologist, born in Forres, Elginshire; studied at Aberdeen and Edinburgh; joined the East India Company's medical service; made large collections of fossils and plants; became professor of Botany in Calcutta; was instrumental in introducing the cultivation of tea and cinchona into India, and discovered the *asafoetida* plant; died in London. (1808-1865).

Falconer, William, Scottish poet, born in Edinburgh, the son of a barber; spent most of his life at sea; perished in the wreck of the frigate *Aurora*, of which he was purser; author of the well-known poem, *The Shipwreck*, inspired by his own experience of a wreck. (1732-1769).

Falconry, the practice of employing and capture of other birds on the wing, or sometimes of animals such as rabbits, hares, or in the East, where the sport probably originated, deer. It was a favourite pastime with all classes in the Middle Ages, but is seldom followed to-day. Hawks are trained as cyasses (i.e., birds taken from the nest and reared in confinement) to attack their prey and return. Birds trained after capture are called passage hawks. The birds are hooded till the prey is sighted; after the kill they are recalled by the "lure" and re-hooded. Shrikes were often employed to reveal the presence of suitable prey, especially when herons were being hunted. *The Bells*

FALCON WEARING HOOD BEFORE RELEASE

of *St. Albans* (1481) is the earliest printed treatise on hawking in English.

Faldstool, the name of the folding stool, without arms used by a bishop when not installed in the throne of his own cathedral. Also the name of the small desk with kneeling-stool used by Anglican clergy especially when reading the litany.

Falernian Wine, a wine produced originally in Falernum, a mountain in Italy; often referred to in the *Odes* of Horace, in whose time the region of N. Campania in which it was produced was called Falernus Ager.

Faliero, Marino, a Venetian doge, elevated to that position from the army, in which he had served with distinction, having routed the Hungarians at Zara in 1346. Owing to an affront, he joined a conspiracy against the patricians, but was betrayed and condemned to death; is the subject of celebrated dramas by Byron and Swinburne. (1279-1355).

Falkenhayn, Erich von, German general; born at Burg Bolshau, Thorn; entered Prussian army 1880; served in the China expedition, 1900-1903; became a lieutenant-general, 1913, and Prussian War Minister, 1913-1915; succeeded von Moltke, 1914, as chief of the general staff; directed offensives against Russia and Serbia, 1915-1916; advised Verdun attack, which failed; surrendered Eastern command and office of chief-of-staff to Hindenburg, July 1916; subsequently commanded in Rumania and Caucasus. (1861-1922).

Falkirk, a town in Stirlingshire, Scotland, 26 m. NW. of Edinburgh, noted for its cattle-markets and the iron-works in its neighbourhood. Its port is Grangemouth, 3 m. to the NE. Wallace was defeated here in 1298 by Edward I., as were the British forces by the Young Pretender in 1746. Pop. 37,000.

Falkland, a royal burgh in Fifehire, Scotland, 10 m. SW. of Cupar. The ancient palace of the Stuart kings, here, rich in historical associations, was restored by the Marquis of Bute in 1888. Pop. 800.

Falkland, Lucius Cary, Viscount, soldier, scholar and statesman, son of Sir Henry Cary, Viscount Falkland; entered the service of the new Dutch Republic, but soon returned to England and settled at Great Tew, Oxfordshire, where he indulged his studious tastes; after joining Essex's expedition into Scotland, he sat in Parliament, and in 1612 became Secretary of State; suspicious of Charles's weakness and duplicity, he as much distrusted the Parliamentary movement, and fell at Newbury fighting for the king. (1610-1643).

Falkland Islands, a group of islands, 240 m. E. of Tierra del Fuego, forming a British Crown Colony; discovered in 1592 by Davis; annexed by France in 1764, but later purchased by Spain and finally ceded to Great Britain in 1771, by whom they were occupied in 1833 and used as a convict settlement until 1852; besides E. and W. Falkland there are upwards of 100 small islands, mostly barren; wheat and flax are raised, and whale and seal oil is exported, but sheep-farming is the main industry. The chief town is Stanley, in E. Falkland. Pop. 2,400.

Falkland Islands, Battle of the, fought on Dec. 8, 1914, in the early stages of the World War. A strong British squadron, under Vice-Admiral Sturdee, sent out to seek the five German cruisers under Admiral von Spee which had destroyed Admiral Craddock's squadron near Coronel, sighted them off the Falklands; in the ensuing action the *Scharnhorst*, flying von

Spee's flag, the *Gneissau*, the *Leipais* and the *Nürnberg* were sunk. The *Dresden* escaped, but was destroyed the following March. British casualties were only 6 killed, but the Germans lost 2,000 men.

Fallacy, an error which arises from some reasoning and the study of which is a prominent part of the science of logic. Fallacies are generally divided into two classes, material and logical. The former are due to a misconception of the subject, commonly caused by prejudice or inaccurate observation, while the latter, known as the syllogism, arise from error or carelessness in expression or from a violation of the established rules of argument.

Fallopius, *Gabriele*, Italian anatomist, born at Modena; professor of Anatomy at Pisa and at Padua; the Fallopiian tubes which connect the ovaries with the uterus, first accurately described by him, are called after his name, as also is the duct which transmits the facial nerve after it leaves the auditory nerve. (1523-1562).

Fallow, land in which no seed is sown for a year, in order that the soil may be left exposed to the disintegrating action of the atmosphere and thereby partly recover its fertility. Rotation of crops and scientific manuring have largely superseded fallowing in recent times.

Fallow Deer (*Cervus dama* or *Dama dama*), the name of a member of the deer family native to S. Europe, N. Africa, Asia Minor, etc., and kept and bred in English parks. Its hide bears white spots in the summer, though it is a uniform lightish brown in winter.

Fall River, a city of Massachusetts, U.S.A., the centre of the cotton-manufacturing industry. Pop. 115,000.

Falmouth, a seaport of Cornwall, England, on the estuary of the Fal, 18 m. N.E. of the Lizard; its harbour, one of the finest in Great Britain, has repairing yards and two graving-docks. St. Mawes Castle and Pendennis Castle date from Tudor days. Fishing is actively engaged in, and there are exports of copper, granite and china clay. Pop. 13,000.

False Pretences, or the obtaining by a false representation by words, writing or conduct of a past or existing fact, is a misdemeanour. To secure a conviction the prosecution must prove that the property was obtained by means of the false pretence, and also the intent to defraud. Obtaining money or goods on the promise of some future act or conduct that is not intended to be kept does not by itself constitute false pretences.

Falsetto, an Italian term, signifying a false or artificial voice. It is produced by contracting the ligaments of the glottis, the voice being thus raised about an octave higher.

Falster, the name of a Danish island in the Baltic Sea, S. of Sæ, very fertile. Pop. 50,000.

Famagusta, seaport of Cyprus, on the E. coast, the ancient Arsinoe. Its walls, fine Gothic cathedral (used as a mosque) and remains of a castle are notable. A railway connects the town with Nicosia. Pop. 8,000.

Familiists, or The Brotherhood of Love, a sect founded in Holland by Hendrick Niclaes (d. c. 1580), which affected to love all men as brothers and dispensed with dogma and ceremony. Introduced into England about 1552, the teaching still had adherents a century-and-a-half later.

Family, the social unit of a father, mother and their children. The earliest

family unit was based on relationship to the mother—viz., matriarchy—still seen in the Nanyars of Malabar, among whom fatherhood is restricted simply to procreation. With this may be compared the Tibetan polyandric customs, where a woman lives with a number of brothers, each of them her husband, while the eldest has the authority of a father. The relative numbers of women and men affected family relationships. Polygamy is a natural phenomenon where women outnumber men, and this state exists to-day in Ashanti and Australian aboriginal tribes. A true patriarchal unit was the Roman family. By this time women had acquired a lower status than men, and fatherhood took to itself a certain dignity, the wife being included among her husband's property. He was the final arbiter in family affairs. In civilised countries to-day the family is based upon monogamy, one husband and one wife.

Famine, a shortage of food resources of a district are threatened with starvation. The condition is caused usually by drought, floods or destructive storms, while crop diseases, invasion by pests, such as the locust, and adverse economic conditions following war are other contributory causes. Formerly, famine inevitably followed a series of droughts, but modern transport and scientific irrigation have done much to minimise the danger. Famine is especially prone to occur in primitive or only partially-developed countries such as China and India, both of which have been repeatedly ravaged by famine of the severest kind.

Fan, a light hand implement used to cause the face, a draught of cool air to play upon

the face. There are two kinds: the folding and non-folding. The latter, frequently made of feathers or a screen of parchment or fabric, were known to the ancients, especially in Egypt, India, China and the Near East, and were commonly used as religious or ceremonial emblems; when of large size, they were usually fixed on a pole. Folding fans were invented by the Japanese in the 7th Century and occupy an important place among their customs and culture. They became popular in Italy and Spain in the 16th Century; and Paris soon took a lead in their manufacture, carrying them to the highest pitch of artistic perfection in the reign of Louis XIV.

HEAD OF AN
ANCIENT EGYPTIAN
FAN

Fanariots, the descendants of the Greeks of noble birth who remained in Constantinople after its capture by Mohammed II. in 1453, so called from Fanar, the quarter which they inhabited; they rose at one time to great influence in Turkish affairs.

Fandango, a lively and popular Spanish dance, especially in favour among the Andalusians; is in 3-4 or 6-8 time, and is usually danced to the accompaniment of guitars and castanets.

Fanning Island, British island of the Gilbert and Ellice Island Colony; it is a cable station; guano and mother-of-pearl are produced. Area 15 sq. m. Pop. (with Washington I.) 399.

Fans, an aboriginal tribe dwelling between the Gaboon and Ogowe Rs., in western equatorial Africa; they are skilful workers in linen and pottery, brave and intelligent and of good physique, but are addicted to cannibalism and fetish-worship.

Fanshawe, Sir Richard, diplomatist and poet, born at Ware Park, Hertford; entered the Inner Temple and after a Continental tour became attached to the English embassy at Madrid; sided with the Royalists on the outbreak of the Civil War; was captured at the Battle of Worcester, but escaped and shared the exile of Charles II.; on the Restoration negotiated Charles's marriage with Catharine of Braganza and became ambassador at the courts of Spain and Portugal; translated Camoens' *Lusiad* and other romantic and classical poetry. (1608-1686).

Fantasia, a musical composition which does not follow the regular divisions of musical form, but is reminiscent of an improvisation which the word "fantasia" formerly implied; also, a selection of popular tunes from an opera, etc., incorporated into a continuous instrumental piece.

Fantis, an African tribe of the Gold Coast, enemies of their conquerors, the Ashantis; fought on the side of the British in the Ashanti War (1873-1874), but although of strong physique, proved cowardly allies.

Farad, the unit of electrical capacity named after Faraday; a condenser has a capacity of one farad when a charge of one coulomb increases its potential by one volt; the microfarad is the millionth part of a farad.

Faraday, Michael, a British chemist and physicist, born at Newington Butts, near London, of poor parents; received a meagre education, and at 13 was apprenticed to a bookbinder, but devoted his evenings to chemical and electrical studies, and became a student under Sir H. Davy, who, quick to detect his ability, installed him as his assistant; in 1827 he succeeded Davy as lecturer at the Royal Institution, and became professor of Chemistry in 1833; was pensioned in 1835, and in 1858 was allotted a residence at Hampton Court; in chemistry he made many notable discoveries, e.g., the liquefaction of chlorine, while in electricity and magnetism his achievements cover the entire field of these sciences, and are of the first importance. (1791-1867).

Farce, a form of drama consisting of an absurd kind of comedy. Originally the farce was a religious play, in which the ecclesiastical Latin tongue was "stuffed" with interpolations in the common language (Latin, "farciare," to stuff).

Farcy, a form of glanders, a serious contagious disease affecting horses, asses and mules. The term is usually restricted to glanders of the skin, and is characterized by the occurrence of "farcy buds," or hard, prominent swellings.

Fareham, a market town of Hampshire, England, 5 m. NW. of Portsmouth. A flourishing seaport in the Middle Ages, it now has manufactures of bricks, tiles, rope and leather. Pop. 11,500.

Farwell, Cape, southernmost point of Greenland, on a small island, 1,000 ft. in altitude. Swift currents and drifting ice make navigation dangerous.

Farinaceous Foods, those containing starch, such as the potato, peas and beans and the cereals, such as wheat, barley and rice. Dried foodstuffs in the same class are tapioca, sago and arrowroot. Maize contains most starch of the grain foods, and though it is not popular as a staple food, it is used in the form of cornflour. These foods have a dietetic value, supplying heat and energy without forming flesh, unless taken immoderately.

Faringdon, a market town of Berkshire, shire, England, 17 m. SW. of Oxford, the centre for a rich agricultural district; it has a fine old church. Pop. 3,000.

Farm, a tract of land, used for pasturage or tillage (see Agriculture), together with buildings usually comprising a farm-house, dwellings for the labourers and out-buildings such as barns, stables, byres, sheds and pigsties. The farmer is either the owner of the land or the tenant and in European farms rent is often paid in the form of a proportion of the produce. The rights of a farm-tenant are embodied in the Agricultural Holdings Act of 1923. A prominent feature of the most modern farms is the extensive use of machinery, often electrically operated, for such tasks as milking, haymaking and the cutting, grinding and crushing of food for livestock. Motor power, too, has largely superseded horses for transport and tillage.

Farman, Henri, French airman. Starting life as a painter, he took

EARLY FARMAN
BIPLANE

to cycle and motor racing. In 1907 he took up flying, and won several prizes for record flights. During the World War he co-operated with his brother Maurice in producing airplanes for the French and British armies. One of the foremost pioneers in the development of airplanes, especially biplanes. (1873-1920).

Farnborough, an urban district of Hampshire, shire, England, 21 m. N. of Aldershot. In the neighbourhood are an R.A.F. aerodrome and part of Aldershot camp, and at Farnborough Hill is the mausoleum of Napoleon III., the Prince Imperial, and Empress Eugénie, who dwelt here. Pop. 16,000.

Farne, or Farne Isles, The, also called the Staples, a group of 17 islets 2 m. off the N.E. coast of Northumberland, many of which are mere rocks visible only at low water. They are marked by two lighthouses, and are associated with a heroic rescue by Grace Darling in 1838; on House Isle are the ruins of a Benedictine priory.

Farnese, the surname of a noble family celebrated in Italian history. The Farnese Palace at Rome, a magnificent example of Renaissance architecture, was largely the creation of Michelangelo; it now houses the French embassy.

Farnese, Alessandro, attained the papal chair as Paul III. in 1534; the excommunication of Henry VIII. of England, the founding of the Order of Jesuits (1540), and the convocation of the Council of Trent (1542), mark his term of office. (1468-1549).

Farnese, Pietro Luigi, a natural son of Farnese, Pope Paul III., who bestowed honours and estates on him, including the duchy of Parma; he was assassinated in 1547 after a life of debauchery, and is remembered chiefly for the prominent but unenviable part he plays in Benvenuto Cellini's *Autobiography*.

Farnham, a market town of Surrey, England, 10 m. W. of Guildford; the birthplace of William Cobbett, whose grave is here. It has an ancient castle. Pop. 18,000.

Farnol, John Jeffery, novelist, was born in Birmingham, entered an engineering shop, married at 20 and went to America; scene-painter, Astor Theater, New York; wrote fiction, at first for English and American magazines. Author also of popular novels including *The Broad Highway*, *The Amateur Gentleman*, *Chronicles of the Imp*, *Bellame the Smith*. (1878-).

Farnworth, an urban district of Lancashire, England, 24 m. SW. of Bolton. Cotton-spinning is carried on and there are collieries, ironworks and brick-works. Pop. 29,000.

Faro, a card game popular in America and usually played for stakes. During the Louis XIV. period in France it was prominent among card games, and the pack contained a picture of King Pharaoh, hence the word Faro.

Faroe Islands (i.e., sheep islands), a group of 22 islands of basaltic formation, about 200 m. NW. of the Shetlands; originally Norwegian, they now belong to Denmark; agriculture is limited, and fishing and sheep-farming chiefly engage the natives; there is an export trade in wool, fish and wild-fowl feathers. The people, who still speak their old Norse dialect, although Danish is the language of the schools and law courts, are Lutherans, and enjoy a measure of self-government. They send a representative to the Danish Rigsdag. Area 540 sq. m. Pop. 25,700.

Farouk, King of Egypt, succeeded his father Fuad on the latter's death in 1936. (1920-).

Farquhar, George, comic dramatist, famous for his wit, of which he soon gave abundant proof in his dramas, *Love and a Bottle* being his first, and *The Beau Stratagem* his last, written on his deathbed; died young; he commenced life on the stage, but threw up the profession in consequence of having accidentally wounded a brother actor while fencing. (1678-1707).

Farr, William, statistician, born in Kenley, Shropshire; studied medicine, and used in London; obtained a post in Registrar-General's office, and rose to be head of the statistical department; issued various statistical compilations of great value for purposes of insurance. (1807-1883).

Farragut, David Glasgow, a famous American admiral, of Spanish extraction, born at Knoxville, Tennessee; entered the navy as a boy; rose to be captain in 1855, and at the outbreak of the Civil War attached himself to the Union; distinguished himself by his daring capture of New Orleans; in 1862 was created rear-admiral, and two years later gained a signal victory over the Confederate fleet at Mobile Bay; was raised to the rank of admiral in 1866, being the first man to hold this position in the American navy. (1801-1870).

Farrar, Frederick William, a celebrated divine and educationist, born at Bombay; graduated with distinction at King's College, London, and at Cambridge; was ordained in 1854, and became headmaster of Marlborough College; was for some years a select preacher to Cambridge University, and held successively the offices of honorary chaplain and chaplain-in-ordinary to the Queen; became Canon of Westminster, Rector of St. Margaret's, archdeacon, chaplain to the House of Commons, and Dean of Canterbury; his many works include the school-plays *Eric*, or *Little by Little*, and *St. Winifred's*, biographical essays, and *Lives of Christ* and *St. Paul*, besides the *Early Days of Christianity*, and several volumes of sermons. (1831-1903).

Farren, Elizabeth (Countess of Derby), actress, daughter of a surgeon and apothecary of Cork who spelt his name Farran and took to the stage. She acted from childhood; first London appearance, Haymarket, 1777, as Miss Hardcastle in Goldsmith's *She Stoops to Conquer*. One of her greatest performances was as Lady Townly in Vanbrugh's *Provoked Husband*. She married, in 1797, the twelfth Earl of Derby. (c. 1759-1829).

Farriery, the process of shoeing horses; a horse's hoofs are composed of a brittle, horny substance which requires protection from the effects of hard wear and certain climatic conditions. The hoof is first pared

level and a shoe fitted while it is red hot and fixed with a minimum of short, thick nails. The art is important, as a badly fitting shoe will result in injury to the horse.

Farthing, the smallest English copper coin, four of which equal in value the penny, and in circulation since 1672. Actually they are made of bronze, and until 1897 were a bright golden colour when new, but confusion with half-sovereigns led to their being darkened before issue.

Farthingale, a loop-shaped frame of wood or whale bone from which hung the voluminous skirt worn by women during the 17th Century. From it the crinoline developed. The hoop, the last remains of the farthingale, went out of fashion during the reign of George IV.

Fasces, a bundle of rods bound round the helve of an axe, and borne by the lictors before the Roman magistrates in symbol of their authority at once to scourge and decapitate. The same symbol has been adopted, and is used as the emblem of the Fascist Party in modern Italy.

Fascism, "the doctrine by which the State is centred in one person who is the complete master." This definition was once used by Benito Mussolini (q.v.), founder of the movement in Italy. In 1919 the nucleus of the Fascist party appeared in Milan, called the Fascio di Combattimento (Union of Combat). Their emblem was an axe, representing authority—i.e., the State—and a bundle of rods, such as was carried by the lictors of the Roman Empire, to imply union, while the Fascist arm salute was also derived from early Roman history. The uniform shirt was inspired by Garibaldi (q.v.) but the colour became black, since the original red had become associated with communism. By 1922 Mussolini had overcome communist opposition and the King called upon him to form a Government.

Fascism is intensely nationalist, the State is to be the only true expression of the individual. Opponents were punished or compelled to escape abroad and Parliament was displaced by the Fascist Grand Council. The people were organised into Syndicates or Guilds, which replaced the former trades unions. Strikes and lock-outs were declared illegal, and all disputes were to be settled by an Adjudicating Board, whose legal organisations were declared in 1932 to be authorised "to carry out the will, not of the membership, but of the State, which makes use of the organisation."

Great changes were made. Agriculture was fostered in order to help Italy become self-sufficient, and a treaty was made with the Pope whereby greater harmony resulted between Church and State. Unemployment was attacked by a great public works scheme and new roads, electrification of railways and land drainage were undertaken.

Economically Fascism may be called State-controlled capitalism, since the State reserves the right to intervene in the process of distribution, and limit the employment of the means of production, in the public interest, and though private ownership is allowed, it is liable to be superseded by the State in individual cases where it is not being administered to a maximum of efficiency. The banks, too, while under the virtual control of their own bankers, are responsible to the State, and are not free to operate without State approval. The economic nationalism of Fascist Italy is seen in its attempts to secure greater colonising development. Its ambition is the growth of a great Italian empire and the conquest of Abyssinia is one step towards it.

Fashoda, town on the Upper Nile French force under Major Marchand. The British demanded their evacuation, and the incident nearly resulted in war before diplomatic exchanges led to the retirement of the French in December.

Fasti, the name given to days among the Romans on which it was lawful to transact business before the pretor; also the name of books among the Romans containing calendars of times, seasons and events.

Fasting, the act of abstaining either completely or partially from food and drink, usually practised as a part of religious observance. Many religious penances include partial fasting. Catholics, for example, eat no meat on a Friday and during Lent (q.v.) luxury foods such as sugar, etc., are given up. The practice is an ancient one, and was common during the Assyrian and Greek periods. The Day of Atonement is observed amongst the Jews by fasting. Fasting is also practised by Mohammedans (during the month of Ramadan) and in other religions. Fasting is also sometimes recommended by practitioners in the cure of certain gastric ailments.

Fastnet, a rocky islet off the S. coast of Co. Cork, Ireland (Elre), with a lighthouse.

Fastolf, Sir John, a distinguished soldier of Henry V.'s reign, who with Sir John Oldcastle shares the doubtful honour of being the prototype of Shakespeare's Falstaff, but unlike the dramatist's creation, was a courageous soldier, and won distinction at Agincourt and at the "Battle of the Herrings." After engaging with less success in the struggle against Joan of Arc, he returned to England and spent his closing years in retirement at Norfolk, his birthplace. (1378-1459).

Fatalism, a doctrine in philosophy, and prominent in the Mohammedan faith, that man is the subject of his destiny and to struggle against it is futile. Various forms of fatalism appear in the philosophy of Spinoza, Hegel and Herbert Spencer.

Fata Morgana, a mirage occasionally observed in the Strait of Messina, in which, from refraction in the atmosphere, images of objects, such as men, houses, trees, etc., are seen from the coast under or over the surface of the water. Literally, in Italian, the words mean Fairy Morgana, the reference being to a lady of Arthurian legend who was the pupil of the wizard Merlin.

Fates, The, in the Greek mythology, the three goddesses who presided over the destinies of individuals—Clotho, Lachesis and Atropos. Of these three sisters, Clotho the youngest held the distaff, while Lachesis spun the thread of human life and destiny, and Atropos with a pair of scissors cut the thread of life.

Father, in English law, the natural guardian, ian and custodian of his children and responsible person for their maintenance. He may be deprived of the custody on a divorce or on the application of the mother if it appears to the courts in the interests of the child to do so.

Fathers of the Church, the early teachers of Christianity and founders of the Christian Church, consisting of five *Apostolic Fathers*—Clement of Rome, Barnabas, Hermas, Ignatius and Polycarp, and of nine in addition called *Primitive Fathers*—Justin, Theophilus of Antioch, Irenaeus, Clement of Alexandria, Cyprian of Carthage, Origen, Gregory Thaumaturgus, Dionysius of Alexandria, and Tertullian. The dis-

tinctive title of *Apostolic Fathers* was bestowed upon the immediate friends and disciples of the Apostles, while the *patristic* period proper may be said to commence with the 2nd Century, but no definite date can be assigned as marking its termination, some closing it with the deaths of Gregory the Great (804) and John of Damascus (c. 750), while Catholic writers bring it down as far as the Council of Trent (1545-1563). Discarded among Protestants, the Fathers are regarded by Catholics as decisive in authority on points of faith, but only when they exhibit a unanimity of opinion.

Fathom, a measure of 6 ft. used in taking marine soundings, originally an Anglo-Saxon term for the distance stretched by a man's extended arms; is sometimes used in mining operations.

Fatigue, a term in physiology denoting loss of functional energy due to muscular strain. In this condition the cells of the muscles excrete waste which poisons the system. Recovery follows a period of rest. Metals also suffer from a condition called fatigue. A piston-rod, for example, is constantly in a state of strain due to alternate tension and compression, and the accumulated result will lead to the rod-breaking. Similarly an axle reaches breaking-point as the result of the innumerable shocks it suffers, though each one is less than its immediate ability to withstand.

Fatima, (1) the favourite daughter of perfect women of Islamic tradition. (2) the last of Bluebeard's wives, and the only one who escaped being murdered by him.

Fatimides, a Mohammedan dynasty which assumed the title of caliphs and ruled N. Africa and Egypt, and later Syria and Palestine, between the 10th and 12th Centuries inclusive; they derived their name from the claim (now discredited) of their founder, Obaidallah al-Mahdi, to be descended from Fatima, daughter of Mohammed and wife of Ali; they were finally expelled by Saladin in 1169.

Fats, compounds known chemically as glyceryl esters of fatty acids; when split up by treatment with superheated steam they yield glycerol (glycoline) and the acid—e.g., stearic acid, palmitic acid, oleic acid. One molecule of glycerol can react with either one, two or three molecules of a fatty acid, and the esters so formed are differentiated by such names as monostearin (glyceryl monostearate), distearin (glyceryl distearate) and tristearin (glyceryl tristearate); the tri-compounds are the commonest, and the most important of them are tristearin, tripalmitin and triolein.

Fats are essential constituents of food, and have many industrial applications—e.g., in soap-making (see Soap). Oils of a vegetable and animal origin resemble fats in being composed of carbon, hydrogen and oxygen, and in general structure, but differ from them in containing comparatively less hydrogen. They can, however, be easily converted into fats by gently heating them in a current of hydrogen in the presence of nickel shavings as a catalyst; this process is known as the hardening or hydrogenation of oils, and is extensively practised on the commercial scale for making artificial lard, etc., particularly when the market price of fats is high.

Faucit, Helena Saville, a famous English actress; made her debut in London (1836), and soon won a foremost place amongst English actresses by her powerful and refined representations of Shakespeare's heroines under the management of Macready; she retired from the stage in 1851 after her marriage with Theodore Martin; in 1885 she published studies on *Some of Shakespeare's Female Characters*. (1817-1898).

Fault, a term in geology applied to an interruption in certain of the strata of rocks of the earth's crust, or to the result of a fracture of the strata when the strata on one side is pushed up or has sunk; the resulting ridge being planed away by denudation.

FAULTS (GEOLOGICAL)

They result from continuous strain in the crust of the earth, and occur in the sedimentary or stratified rocks.

Fauna, a term used by naturalists to the animal kingdom found in a particular district. Terrestrial fauna is that of the earth, and marine fauna that of the sea.

Fauns, divinities of the woods and fields of flocks, among the Romans, and guardians of flocks.

Faunus, a god, grandson of Saturn, who figures in the early history of Latium, first as the god of fields and shepherds, and secondly as an oracular divinity and founder of the native religion, afterwards identified with the Greek Pan.

Faure, François Félix, President of the French Republic, born in Paris; carried on business in Touraine as a tanner, but afterwards settled in Havre and became a wealthy shipowner. He served with distinction as a volunteer in the Franco-German War; entered the Assembly in 1881, where he held office in various Cabinets; was elected President in 1895. (1841-1899).

Faust, Johannes. See **Fust**.

Faust, or Doctor Faustus, a reputed professor of the black art, a native of Germany, who flourished at the end of the 15th Century and the beginning of the 16th Century, and who is alleged to have made a compact with the devil to give up to him body and soul in the end, provided he endowed him for a term of years with power to miraculously fulfil all his wishes. Under this compact the devil provided him with a familiar spirit, called Mephistopheles, attended by whom he traversed the world, enjoying life and working wonders, till, the term of the compact having expired, the devil appeared and carried him off amid display of horrors to the abode of penal fire. This myth, which has been subjected to manifold literary treatment, has received its most significant rendering at the hands of Goethe, such as to supersede and eclipse every other attempt to unfold its meaning. It is presented by him in the form of a drama, in two parts of five acts each, published in 1808 and 1832 respectively. Marlowe treated the theme in *Dr. Faustus*, and Gounod did a celebrated operatic version.

Faustina, Annia Galeria, called Faustina Senior, wife of Antoninus Pius, died three years after her husband became emperor. (104-141).

Faustina, Annia, Junior, wife of the Emperor Marcus Aurelius, daughter of the preceding. Both she and her mother are represented by some historians as profligate and unfaithful, and quite unworthy of the affection lavishly bestowed upon them by their husbands and the institutions for poor girls (called *Faustinianæ*) founded in their honour. (c. 130-175).

Favart, Charles Simon, French dramatist and composer of operas, born in Paris, where he became director of the Opéra Comique. During a temporary absence from Paris he established his Comedy Company in the camp of Marshal Saxe during the Flanders campaign. His memoirs and correspondence give a bright picture of theatrical life in Paris during the 18th Century. (1710-1792).

Faversham, a riverport of Kent, England, land, an ancient town with remains of an abbey founded by Stephen. It has oyster-fisheries, powder-mills and breweries, and trades in coal, timber, fruit and hops. Pop. 10,000.

Favre, Jules Claude Gabriel, a French Lyons; called to the Paris Bar in 1830; a strong Republican, he joined the Revolutions of 1830 and 1848; held office as Minister of the Interior in the New Republic, and, disapproving of the *coup d'état*, resumed practice at the Bar; defended the Italian conspirator Orsini and in 1870, on the dissolution of the Empire, became Minister of Foreign Affairs; mistakes in his negotiations with Bismarck led to his resignation and resumption of his legal practice. (1809-1880).

Fawcett, Henry, statesman and political economist, born at Salisbury. Though blind, it was his early ambition to enter the arena of politics, and he devoted himself to the study of political economy, of which he became professor at Cambridge. Entering Parliament, he became Postmaster-General under Gladstone in 1880. He wrote and published works on Political Economy. (1833-1884).

Fawcett, Dame Millicent Garrett, G.B.E., feminist pioneer, daughter of Newson Garrett, merchant, of Aldeburgh, Suffolk, and sister of Elizabeth Garrett Anderson. In 1867 married Henry Fawcett and began her campaign for women's suffrage which culminated in 1918 in the Representation of the People Act giving voting rights to some six million women. After the South African War she was sent out to report on concentration camps, concerning which there had been much criticism. After the Great War she was made a D.B.E., and a G.B.E. in 1925. (1847-1929).

Fawkes, Guy, a notorious English conspirator, born of a respected Yorkshire family; having spent a slender patrimony, he joined the Spanish army in Flanders; was converted to the Catholic faith; and on his return to England allied himself with the conspirators of the Gunpowder Plot (q.v.), and was arrested in the cellars of the House of Commons when on the point of firing the explosive; was tried and executed. (1570-1606).

Fayal, a small island among the Azores (q.v.), and belonging to Portugal; Horta, with an excellent bay, is its chief town.

Fayolle, Marie Émile, Marshal of France, born at Le Puy, an artillery officer who had retired as brigadier-general before the outbreak of the World War, but was recalled and made a divisional commander and later an army commander. Was sent with French forces to the help of Italy after the Italian reverse at Caporetto, 1917. Afterwards played a prominent part on the Western front. Created Marshal in 1921. (1852-1928).

Feast, Jewish, of Dedication, a feast in commemoration of the purification of the Temple and the rebuilding of the altar by Judas Maccabæus in 164 B.C., after profanation of them by the Syrians; of the *Passover*, a festival in April on the anniversary of the exodus from Egypt, which lasted eight days, the first and the last days of solemn religious Assembly; of *Pentecost*, a feast celebrated on the fiftieth day after the second of the *Passover*, in commemoration of the giving of the law on Mount Sinai; both this feast and the *Passover* were celebrated in connection with harvest, what was presented in one in the form of a sheaf being in the other presented as a loaf of bread; of *Perim*, a feast in commemoration of the preservation of the Jews from the wholesale threatened

massacre of the race in Persia at the instigation of Haman; of *Tabernacles*, a festival of eight days in memory of the wandering tent-life of the people in the wilderness, observed by the people dwelling in bowers made of branches erected on the streets or the roofs of the houses; it was the Feast of Ingathering as well.

Feathers, an epidemiostructure forming the covering of birds, consisting of a long, central shaft branching from which are a series of barbs. The axis is in two parts: the base, a quill, which is a hollow, horny tube partly inserted in the skin; and the upper portion, the tapering shaft.

Featherstone, a colliery town of in the W. Riding, 2 m. SW. of Pontefract. Pop. 15,000.

Featherweight, in racing, the lightest weight allowed under the rules to be carried by a horse in a handicap. In boxing a featherweight must not be over 9 stone in weight.

Febrifuge, a drug or cooling drink taken for the purpose of driving out or allaying fevers, the more common effect of which is to increase perspiration and so reduce the temperature. Quinine, salicylic acid and antipyrin are typical febrifuges or "antipyretics."

February, the second month of the year, was added along with January to the end of the original Roman year of 10 months by Numa; derived its name from a festival offered annually on the 15th day to Februus, an ancient Italian god of the nether world; was assigned its present position in the calendar by Julius Caesar, who also introduced the intercalary day for leap-year.

Fécamp, a seaport and fishing town in the dept. of Seine-Inférieure, 25 m. N.E. of Havre; has a fine Gothic Benedictine church, a harbour and lighthouse; exports the celebrated Benedictine liqueurs. Pop. 17,000.

Fechner, *Gustav Theodor*, physiologist and psychophysicist, born in Gross-Särchen, in Lower Lusatia; became professor of Physics in Leipzig, but afterwards devoted himself to psychology; laid the foundations of the science of psychophysics in his *Elements of Psychophysics*; wrote besides on the theory of colour and galvanism, as well as poems and essays. (1801-1887).

Federalist, a name in the United States for a supporter of the Union and its integrity as such; a party which was formed in 1788, but dissolved in 1820; has been since applied to a supporter of the integrity of the Union against the South in the late Civil War.

Federal Reserve System, introduced in U.S.A. by Congress in 1913 by way of reforming American finances and freeing the banking world there from Wall Street's control. Under the system there are some 12 Federal Reserve banks vested with powers in their several areas, somewhat analogous to those possessed in England by the Bank of England. Every national bank is compelled to join the system. Each of the regional banks has large Government deposits; each issues paper currency.

Federation, a union of States where the members retain autonomy in certain specified matters, but matters of common interest (e.g., foreign relations) are absolutely under the control of a Federal Government. It is not a loose combination from which any member can withdraw at will, nor is it a union in which local autonomy is subordinated to an overshadowing central government. Canada was the first free autonomous federation within the British Empire acknowledging common allegiance

to the Crown. The Union of South Africa also is a federation, but the ordinances of the constituent provinces are subject to the veto of the Central Government. A Confederation, as opposed to a federation, insists on the individual independence of each State or society in the common union, and denies the supremacy of the common or Central Government. Of the loose German Confederation established at the Vienna Congress in 1815. The American Civil War, indeed, was fought not merely on the slavery issue, but also on the greater question whether the Union should be that of confederate or federated States. See also *Confederation*.

Federation of British Industries ("F.B.I."), a voluntary association of manufacturers and producers for the promotion of their several and mutual interests and for the encouragement and development generally of British manufactures. It was established in 1916 and incorporated in 1921. It publishes most useful economic supplements, a "business barometer" and lists of British manufacturers. It keeps a vigilant eye on all changes in customs imposts or duties and fiscal changes, whether in England or abroad. Headquarters are in Westminster.

Feisal, King of Iraq, was born at Taif, Ibn Ali, first King of the Hejaz; educated at Constantinople. In 1910 assisted the Turks in quelling tribes of Asir; in 1913 became deputy for Jeddah in the Turkish Parliament. Escaped from Damascus, 1916, and assumed command of rebels at Medina. With the assistance of T. E. Lawrence, he prepared the way for the British army in Palestine and Syria. Proclaimed King of Syria, 1920; but deposed by the French. The British Government in 1921 made him King of Iraq. (1885-1933).

KING FEISAL

Felix, the name of five Popes: I., St. Felix, Pope from 269 to 274, said to have been a victim of the persecution of Aurelius; F. II., Pope from 356 to 357, the first anti-pope, having been elected in place of the deposed Liberius who had declined to join in the persecution of Athanasius, was banished on the restoration of Liberius; F. III., Pope from 483 to 492, during his term of office the first schism between the Eastern and Western Churches took place; F. IV., Pope from 526 to 530, was appointed by Theodoric in face of the determined opposition of both people and clergy; F. V., Pope from 1439 to 1449. **Felix**, a Roman procurator of Antioch, a Jew, in the time of Claudius and Nero; is referred to in Acts xxiii. and xxiv. as having examined the Apostle Paul and listened to his doctrines; was violent in his habits, and formed an adulterous union with Drusilla, said by Tacitus to have been the granddaughter of Antony and Cleopatra; was recalled in A.D. 62.

Felixstowe, a popular seaside resort SE. of Ipswich, with a naval wireless station and an R.A.F. seaplane station. Pop. 12,000.

Fell, a celebrated English divine; Royalist in sympathy, he continued throughout the puritan ascendancy loyal to the English Church, and on the Restoration became Dean of Christ Church, Oxford, and a royal chaplain; was a good and charitable man, and a patron of learning; in 1676 was raised to the bishopric of Oxford; he was the object of the well-known epigram, "I do not like thee, Dr. Fell, The reason why I cannot tell." (1625-1686).

Fellah, the name applied contemptuously by the Turks to the agricultural labourers of Egypt. The Fellahin (pl. of Fellah) comprise about three-fourths of the population. They are of good physique, and capable of much toil, but are, despite their intelligence and sobriety, lazy and immoral. Girls marry young and the children grow up amidst the squalor of their mud-built villages. Their food is of the poorest, and scarcely ever includes meat. Tobacco is their only luxury.

Felling, a colliery town of Durham, England, a SE. suburb of Gateshead. Pop. 27,000.

Fellowship, a collegiate term for a status which entitles the holder (a Fellow) to a share in their revenues, and in some cases to certain privileges as regards apartments and meals in the college, as also to a certain share in the government. Formerly Fellowships were usually life appointments, but are now generally for a prescribed number of years, or are held during a term of special research. The old restrictions of celibacy and religious conformity have been relaxed.

Felo-de-Se, or **Self-murder**, in English law the crime which a man at the age of discretion and of a sound mind commits when he takes away his life.

Felony, originally a crime which involved a total forfeiture of lands or goods or both, to which capital or other punishment might be superadded, according to the degree of guilt. To-day a felony is generally defined as one of the more serious crimes, as opposed to a misdemeanour, which is one of the less serious. Forfeiture of goods and lands is no longer a part of the punishment, and capital punishment is only retained for a very few felonies. One difference in the procedure for trying a felony and a misdemeanour is that a person charged with a felony has a right to challenge, without stating a reason, any member of the jury (up to a total of 20). The tendency of modern legislation is to make new crimes misdemeanours; beyond this, and the fact that in the early days of common law a crime was usually a felony, no rough and ready rule can be laid down for distinguishing between felonies and misdemeanours.

Felsite, a name sometimes given by geologists to a group of acid volcanic rocks, more often termed rhyolites. They are composed of a crypto-crystalline aggregate of felspar and quartz in which porphyritic crystals are often embedded.

Felspars, a group of minerals abundant in most igneous rocks. The most common varieties are orthoclase (a silicate of potash and alumina) and plagioclase (a silicate of alumina and soda or lime).

Felstead, or **Felsted**, village of Essex, England, 3 m. SE. of Dunmow, with a famous public school. Pop. 2,000.

Felt, a fabric manufactured by matting together ("felting") wool, hair and fur by steam-heated rollers or pressers. The process ensures the retention by the mixture of air particles within its texture, and thus gives to felt its heat-insulating quality. It is widely used for protecting hot-water pipes against frost. Asphalted felt is employed in roof construction. For hat manufacture other materials are also used, including silk and vegetable fibres.

Feltham, an urban district of Middlesex, England, 4 m. E. of Staines, with nursery and market gardens. Pop. 16,000.

Felton, John, an ex-army officer, who, on account of a grievance, assassinated the Duke of Buckingham at Portsmouth in 1678. He was hanged at Tyburn.

Felucca, a small, long, narrow and very fast type of vessel used in the Mediterranean and on the Nile. They are undecked, and are propelled by oars or lateen sails. They are used in the Mediterranean for coasting voyages and as fishing vessels, though less extensively than formerly.

Feminism, belief in or advocacy of the influence of women in spheres conventionally reserved to men, or, more briefly, the movement for the equality of the sexes. The movement for extending the franchise to women in England had its intellectual origin in the writings of John Stuart Mill. But the great practical difficulty to emancipation lay in women's legal disabilities in the matter of acquiring their own property, a difficulty which was to a great extent removed by the Married Women's Property Act, 1882.

Legislation for extending the franchise to women always passed the Commons from 1886 until 1911, but until that year was always vetoed in the Lords. Agitation by "suffragettes," coupled with the provocative writings of dramatists and publicists, forced the subject into the forefront of politics. After the work done by women during the Great War it became difficult to withhold the franchise from them, and in 1918 a Bill granting limited franchise was passed—the full equality in this respect being attained in 1928.

Fencing, the art or art of using a sword or foil in attack or defence.

Its development began after the disappearance of armour and the advent of firearms or, in other words, when swords replaced lances and battle-axes for personal combat.

But in these earlier days the German, Italian and Spanish schools of swordsmanship were devoted rather to the use of the two-handed sword and poignard, and modern fencing begins properly with the use of the rapier as taught by Italian masters, though the sword and heavy buckler were considered more gentlemanly in England for a long time, and fencing with the rapier was not well established until the early 17th Century.

Fencing as a modern sport, or recreation, may be divided into fencing with foils, with épées and with sabres. Foils and épées are used for thrusting only. The sabre has a cutting edge also. The foil has a straight, flexible steel blade tipped with a round button. Points are only counted for a hit on the target, a square on the front of the body (excluding the arms), and only when the hit is made according to certain rules. The épée is a heavier weapon, with a guard for the hand, and usually ending in a tiny four-pronged button to mark the hits. Points are counted for hits on any part of the body, including the wrist and foot. Masks and padded clothes are used as a protection for the body.

Fénelon, François de Salignac de la Motte, a famous French prelate and writer, born in the Château de Fénelon, in the province of Périgord; at the age of 15 came to Paris, and, having already displayed a remarkable gift for preaching, entered the Plessis College, and

four years later, joined the Seminary of St. Sulpice, where he took holy orders in 1875. His directorship of a seminary for female converts to Catholicism brought him into prominence, and gave occasion to his well-known treatise *De l'Éducation des Filles*. In 1885, after the revocation of the Edict of Nantes, he conducted a mission for the conversion of the Huguenots of Saintonge and Poitou, and four years later Louis XIV. appointed him tutor to his grandson, the Duke of Burgundy, an appointment which led to his writing his *Fables, Dialogues of the Dead, Télémaque*, and *History of the Ancient Philosophers*. In 1694 he became abbé of St. Valéry and in the following year Archbishop of Cambrai. Soon after this ensued his celebrated controversy with Bossuet (*q.v.*) regarding the doctrines of Quietism (*q.v.*), a dispute which brought him into disfavour with the king and provoked the Pope's condemnation of his *Explication des Maximes des Saints sur la Vie intérieure*. The rest of his life was spent in the service of his people, to whom he endeared himself. His works are extensive, and deal with subjects historical and literary, as well as philosophical and theological. (1651-1715).

Feng Yu-Hsiang, China's "Christian" general. Impressed by the Christian missionaries' devotion in the Boxer Rising, he was converted to Christianity in 1903 while a private in the army. After the Great War he became prominent as one of the warring generals, the virtual ruler of Mukden and for a time of Peking as well. (1880-).

Fenians, an Irish political organisation for its object the overthrow of English rule in Ireland and the establishment of a republic there. The movement was initiated in the United States soon after the great famine in Ireland of 1846-1847, which, together with the harsh exactions of the landlords, compelled many Irishmen to emigrate from their island with a deeply-rooted sense of injustice and hatred of the English. The Fenians organised themselves as far as possible on the model of a republic, having a senate at the head, a president called the "head-centre," and various "circles" established in many parts of the U.S.A. They collected funds and engaged in military drill, and sent agents to Ireland and England. An invasion of Canada in 1866 and a rising in Ireland in 1867 proved abortive, as also the attack on Clerkenwell Prison in the same year. Another attempt on Canada in 1870 and the formation of the "Skirmishing Fund" for the use of the "Dynamitards" and the institution of the "Glan-na-Gael" leading to the "Invincibles" and the Phoenix Park murders (1882) were later manifestations of this movement. The Home Rule Land League, and Sinn Féin movements superseded the Fenian. The name was taken from an ancient military organisation called the Fianne Eirinn, said to have been instituted in Ireland in 300 B.C.

Fennec (*Canis*, or *Vulpes*, *Zerda*), a pretty little fox-like animal, about 10 inches long, with a tail of half that length. Has light fawn fur, large cheeks, sharp, foxy snout, and tremendous erect ears. It is indigenous to N. Africa and the Sahara. The name is Moorish.

FENNEC

Fennel, the name of several species of plants, including *Foeniculum officinale* of the natural order Umbelliferae.

It is a fragrant garden plant bearing small yellow flowers, finely-divided leaves and laterally compressed seeds. The leaves are sometimes used in cookery, and the seeds as a carminative. The seeds of fennel-flower (*Nigella sativa*), an annual of the buttercup (*Ranunculaceae*) family, are used in Palestine and Egypt for flavouring curries. The pith of Giant Fennel (*Ferula Communis*), another umbelliferous plant, is used in Mediterranean regions as tinder.

Fenny Stratford, a market town of Buckinghamshire, England. St. Martin's day is here celebrated by salvoes from six little cannons (Fenny Poppers). Pop. 4,600.

Fens, The, the district extending north and east from Cambridge to Lincoln, England, large areas being below the level of the Wask. The country has been well drained, and tracts are under cultivation; is famous for its wild-fowl and fishing. Among its famous cathedrals and churches are those of Peterborough, Crowland and Ely.

Fenton, former urban district of Staffordshire, England. Since 1910 a part of the borough of Stoke-on-Trent. Earthenware is made. Pop. 27,000.

Fenton, Elijah, English poet; born at Shelton, Staffordshire; collaborated with Pope in translating the *Odyssey*. (1683-1730).

Ferdinand, Tsar of Bulgaria. He took formation of the Balkan Alliance against Turkey in 1912, and was largely responsible for the second Balkan War of 1913. Soon after the opening of hostilities he brought his country into the World War on the side of the Central Powers, and in 1918 he abdicated in favour of his son Boris. (1861-).

Ferdinand the Catholic, V. of Castile, II. of Aragon and Sicily, and III. of Naples, born in Sos, in Aragon, married Isabella of Castile in 1469, a step by which these ancient kingdoms were united under one sovereign power. Their joint reign is one of the most glorious in the annals of Spanish history, and in their hands Spain quickly took rank amongst the chief European powers. In 1492 Columbus discovered America, and the same year saw the Jews expelled from Spain and the Moorish power crushed by the fall of Granada. In 1500-1501 Ferdinand joined the French in the conquest of Naples, and three years later managed to secure the kingdom to himself, while by the conquest of Navarre in 1512 the entire Spanish peninsula came under his sway. He was a shrewd and adroit ruler, whose undoubted abilities, both as administrator and general, were somewhat marred by an unscrupulous cunning. (1452-1516).

Ferdinand I., German Emperor (1556-1564), born in Alcalá, in Spain, son of Philip I., married Anna, a Bohemian princess, in 1521; was elected King of the Romans (1531), added Bohemia and Hungary to his domains. (1503-1564).

Ferdinand II., German Emperor (1619-1637), grandson of the preceding and son of Charles, younger brother of Maximilian II., born at Graz; his detestation of the Protestants, early instilled into him by his mother and the Jesuits, under whom he was educated, was the ruling passion of his life, and involved the empire in constant warfare during his reign. An attempt on the part of Bohemia, restless under religious and political grievances, to break away from his rule, brought about the Thirty Years' War. By ruthless persecutions he re-established Catholicism in Bohemia, and reduced the country to subjection; but the war spread into Hungary and Germany, where Ferdinand found himself opposed by a confederacy of the Protestant States of Lower Saxony and Denmark,

the Protestant cause being in the end successfully sustained by the Swedish hero, Gustavus Adolphus who had opposed to him the imperial generals Tilly and Wallenstein. His reign is regarded as one of disaster, bloodshed, and desolation to his empire, and his connivance at the assassination of Wallenstein will be for ever remembered to his discredit. (1578-1637).

Ferdinand III., German Emperor (1637-1657), son of the preceding, born at Graz; more tolerant in his views, would gladly have brought the war to a close, but found himself compelled to face the Swedes reinforced by the French. In 1648 the desolating struggle was terminated by the Peace of Westphalia. The rest of his reign passed in tranquillity. (1608-1657).

Ferdinand, King of Rumania. He succeeded to the throne in 1914, and it was largely due to his influence that Rumania threw in her lot with the Allies in 1916. He refused to sign a treaty forced on his country after the collapse of the army, and was exiled. He returned in 1918 and reformed Rumania on democratic lines. He married Marie, a granddaughter of Queen Victoria in 1892. (1865-1927).

Ferdinand I., King of the Two Sicilies, third son of Charles III. of Spain, succeeded his father on the Neapolitan throne (1759), married Maria Carolina, daughter of Maria Theresa; joined the Allies in the struggle against Napoleon, and in 1806 was driven from his throne by the French but was reinstated at the Congress of Vienna. In 1816 he constituted his two States (Sicily and Naples) into the kingdom of the Two Sicilies, and in the last four years of his reign ruled, with the aid of Austria, as a despot. (1751-1825).

Ferdinand II., King of the Two Sicilies, grandson of the preceding and son of Francis I. After the death of his first wife, a daughter of Victor Emmanuel I., King of Sardinia, he married the Austrian princess Maria Theresa, and fell under the influence of Austria during the rest of his reign. In 1848 he was compelled to grant constitutional rights to his people, but was distrusted, and an insurrection broke out in Sicily. With merciless severity he crushed the revolt, and by his savage bombardment of the cities won the epithet "Bomba." A reign of terror ensued, and in 1851 Europe was startled by the revelations of cruel injustice contained in Gladstone's famous Neapolitan letters. (1810-1869).

Ferdinand VII., King of Spain, son of Charles IV. He appealed to Napoleon in 1807 to support the King, his father, and himself; but his letter was discovered, and his accomplices exiled. The following year the French entered Spain, and Charles abdicated in favour of his son Ferdinand; but soon after, under Napoleon's influence, the crown was surrendered to the French and Joseph Bonaparte became king. In 1813 Ferdinand was reinstated, but found himself immediately met by a demand of his people for a more liberal representative government. The remaining years of his reign were spent in an interminable struggle against these claims, in which he had French support under Louis XVIII. (1784-1833).

Ferdinand III., Grand-duke of Tuscany and Archduke of Austria, born at Florence; succeeded to the government of Tuscany in 1790; introduced many wise measures of reform, which brought peace and prosperity to his State; reluctantly joined the coalition against Napoleon in 1795, but two years later entered into friendly relations with France, and in 1801, in order to save his State being merged in the Cisalpine Republic, undertook to make

payment of an annual subsidy. Later he formed an alliance with Austria, and was by Napoleon driven from his possessions, which were, however, restored to him in 1814 by the Peace of Paris. (1769-1824).

Ferghana, district in Uzbekistan, a Central Asian republic of the U.S.S.R., named from the Ferghana mountain range, which traverses it; cotton and silk are manufactured; the inhabitants are Uzbeks. Area 60,000 sq. m. Pop. 600,000.

Ferguson, Robert, a notorious plotter, who took part in Monmouth's invasion in 1685 and was prominent in the various plots against Charles II. and James II., but after the Revolution turned Jacobite; published a history of the Revolution in 1706. (c. 1637-1714).

Fergusson, Sir Charles, seventh Baronet, British general, born at Edinburgh and educated at Eton and Sandhurst. Joined the Grenadier Guards 1883 and the Egyptian army in 1895, doing active service in the Sudan where he was severely wounded. In the World War he commanded the 5th Division and later the 2nd and 17th Army Corps; was military governor of the occupied German territory subsequently. He was Governor-General and Commander-in-Chief of New Zealand, 1924-1930. (1865-).

Fergusson, James, a writer on the history and art of architecture, born in Ayr; went to India as an indigo-planter, but afterwards gave himself up to the study of the rock-temples; his *History of Architecture*, in 4 vols. is a standard work. (1808-1886).

Fergusson, Robert, a Scottish poet, born in Edinburgh; his first poems appeared in Ruddiman's *Weekly Magazine*, and brought him a popularity which proved his ruin; some years of unrestrained dissipation ended in religious melancholia, which finally settled down into an incurable insanity. His poems, collected in 1773, have abundant energy, wit and fluency, but lack the passion and tenderness of those of Burns. He was, however, held in high honour by Burns, who regarded him as "his elder brother in the Muses." (1750-1774).

Ferishta, Mohammed Kasim, a Persian historian, born at Astrabad, on the Black Sea; went at an early age, accompanied by his father, to India, where his life was spent in the service, first of Murtaza Nizam Shah, in Ahmednagar, and afterwards at the Court of the Prince of Bijapur. His famous *History of the Rise of the Mohammedan Power in India*, finished in 1609, the writing of which occupied him for 20 years, is still a standard work, and has been translated into English. (c. 1570-1611).

Fermanagh, a county in the SW. of Ireland, a hilly surface, especially in the W.; is well wooded, and produces indifferent crops of oats, flax and potatoes; some iron, and quantities of limestone, are found in it. The Upper and Lower Loughs Erne form a waterway through its centre; chief town, Enniskillen. Area 635 sq. m. Pop. 54,800.

Fermat, Pierre de, a French mathematician, born near Montauban; made important discoveries in the properties of numbers, and with his friend Pascal invented a calculus of probabilities. (1601-1665).

Fermentation, the process of obtaining alcohol from carbohydrates. The enzymes present in yeast convert sugar first into glucose and then into alcohol and carbon dioxide. Beer is produced by the action of the diastase in the grain which hydrolyses the starch to maltose (malt-sugar), which is then fermented with the added glucose. In the case of wines the sugars of the fruit are fermented by the bloom-

Fern, the popular name applied in common to all the cryptogamic (flowerless) plants of the class Pteridophyta, of which there are many genera and many species, herbaceous and arborescent, true ferns and fern-like plants. They reproduce from spores, the spores or germ-cells of the fern being liberated from the *sporangia* to germinate in moist earth. Each cell divides and forms an aggregate of little cells, laid flat like a leafy scale, called the *prothallus*. Under the prothallus small reproductive organs, the *antheridia* (male) and *archegonia* (female), are formed, and only when fertilisation has taken place can the germ-cell develop into a grown fern.

FERNS: LADY-FERN (left) AND 'HART'S TONGUE'

Fernandez, John, a 15th-Century Portuguese traveller who visited Central Africa on a mission for Henry the Navigator; he is said to have been the first European to travel inland from the African coast.

Fernandez, Juan (John), a Spanish navigator, discovered the islands off the coast of Chile that bear his name. (d. in 1602). On the island of Juan Fernandez, belonging to Chile, Alexander Selkirk (the original of Robinson Crusoe) had his adventures.

Fernando Po, a mountainous island, with an abrupt and rocky coast, in the Bight of Biafra, W. Africa. The volcano, Mount Clarence (9,300 ft.), rises in the N. The island is covered with luxuriant vegetation, and yields maize and yams, some coffee, palm oil and wine, though the chief export is coffee; is inhabited by the Bubi, a Bantu tribe, and is the chief of the Spanish Guinea Isles. Pop. 20,900. Chief town Santa Isabel.

Ferney (Ferney-Voltaire), a village in the dept. of Ain, France, 4 m. from Geneva, where Voltaire lived (1758-1778). Pop. 1,200.

Ferns, a town in Co. Wexford, Ireland (Eire). It has an episcopal palace and was once seat of a bishop. Pop. 1,600.

Ferozepore, the chief town of the district of the same name in the Punjab, India, a few miles S. of the Sutlej; is strongly fortified, and contains a large arsenal. The present town was laid out by Lord Lawrence. Pop. 64,000. **Ferozepore District**, lies along the S. bank of the Sutlej; came into the possession of the British in 1835; cereals, cotton, sugar and tobacco are cultivated.

Ferrara, a fortified and walled Italian city, capital of the province of the name, situated on a low and marshy plain between the dividing branches of the Po, 30 m. from the Adriatic. It has many fine ecclesiastical buildings and a free University founded in 1264, with a large and valuable library, but only a handful of students; a fine old Gothic castle, the residence of the Este, still stands. It was the birth-place of Savonarola, and the sometime dwelling-place of Tasso and Ariosto; once prosperous, it has now fallen into decay. Pop. (prov.) 350,000; (city) 119,000.

Ferrara, a broadsword bearing the name of Andrea Ferrara, one of the Italian family famous in the 16th and 17th centuries for the quality of their swords.

Ferrari, Gaudenzio, Italian painter and sculptor, born at Valdagno, in Piedmont; many of his paintings and frescoes are to be found in the Lombard galleries, and principally in Milan. His work is character-

ised by bold and accurate drawing, inventiveness and strong colouring. (1484-1516).

Ferrari, Paolo, Italian dramatist, born at Modena; produced his first play at the age of 25. His numerous works, chiefly comedies, and all marked by a fresh and piquant style, are the finest product of the modern Italian drama. (1822-1889).

Ferret (*Putorius fectidus*); carnivorous animal of the family Mustelidae,

very like the polecat, of which it is sometimes described as a domesticated variety; originally a native of Africa, brought to Europe in Roman times. It is used

FERRET

in catching rabbits and rats. The colour of the fur is white or yellowish, eyes pink, average length 14 in.

Ferrier, Sir David, Scottish physician and neurologist, born at Aberdeen, wrote on the brain, and founded the journal called *Brain*. F.R.S., 1876. Knighted, 1911. (1843-1928).

Ferrier, Susan Edmonston, a Scottish novelist, born in Edinburgh, where her life was chiefly spent, her father being Clerk in the Court of Session, and a colleague of Sir Walter Scott; her novels *Marrage*, *The Inheritance*, *Destiny*, etc., are rich in humour and faithful as pictures of Scottish life and character. (1782-1854).

Ferrocyanides (and **Ferricyanides**), complex cyanides of iron with another metal, e.g., potassium or sodium. Potassium ferrocyanide is a yellow crystalline solid ("yellow prussiate of potash") of the formula $K_4Fe(CN)_6$; it has several minor industrial and analytical uses—e.g., in the preparation of Prussian blue (obtained as a blue precipitate on adding it to a solution of ferric chloride) and in calico-printing. Potassium ferricyanide is an orange-red, crystalline solid ("red prussiate of potash") of the formula $K_3Fe(CN)_6$; it has few applications, but is used in making blue-prints, and both the ferrocyanide and ferricyanide are used in analysis as a test for iron (ferrous and ferric) salts. Unlike the simple cyanides of potassium and sodium, the ferrocyanides and ferricyanides are comparatively non-poisonous.

Ferrol, a strongly fortified seaport in Galicia, Spain, 12 m. N.E. of Coruña, on a narrow inlet of the sea which forms a splendid harbourage, narrow at the entrance and capacious within, and defended by two forts. It possesses one of the largest Spanish naval arsenals; manufactures linen and cotton, and exports corn, brandy and sardines. Pop. 30,500.

Ferry, a privilege granted by the Crown, by prescription presuming such a grant, or by Act of Parliament. The person operating a ferry is under certain obligations to the public, and in return possesses the monopoly of the ferry existing for a recognised volume of traffic. He cannot claim compensation against any other form of competition (e.g., the building of a bridge). He is not held in any way to be the owner of the water over which the ferry is operated. If he carries goods, he is subject to the liabilities of the common carrier.

Ferry, Jules François Camille, a distinguished French statesman, born in Saint Die, in the Vosges; offered uncompromising opposition to the party of Louis Napoleon; as a member of the Corps Legislatif he opposed the war with Prussia, but as central mayor of Paris rendered signal service during the siege by the Germans; as Minister

of Public Instruction in 1879 was instrumental in bringing about the expulsion of clerical influence. As Prime Minister in 1880 and again in 1883-1885 he inaugurated a spirited colonial policy, which involved France in war in Madagascar, and brought about his own downfall. (1832-1893).

Ferryhill, a town in Co. Durham, with ironworks. Coal-mining is carried on in the district. Pop. 10,400.

Fertilisation, the natural process of the male and female germ-cells become fused and result in the production of a new organism of the same species. In plants, pollination takes place when the pollen-grain extends into a tube, which is lowered through the stigma and style to the ovary and unites with the ovule. Fertilisation follows if the male cell or spermatoplasm fuses with the egg-cell or ooplasm of the ovule.

Fertilisers. It is seldom that cultivated land is naturally rich enough to yield the maximum attainable crop. Hence arises the need for fertilisers, particularly to supply the full desirable quantity of nitrates and phosphates. Well-rotted farmyard manure is an ideal fertiliser, but insufficient of it is available, and chemistry has therefore been called upon to manufacture artificial fertilisers. Of these, the most important are: (1) nitrates and other nitrogenous compounds, and (2) phosphates.

Sodium nitrate or "nitrate of soda," NaNO_3 , occurs naturally in vast deposits as Chile saltpetre or *caliche* in the Atacama desert of S. America, whence several million tons are exported annually. But the cost of carriage and the danger of interruption of supplies in times of war have led most manufacturing countries to prepare sodium nitrate from the nitrogen of the atmosphere.

Ammonium sulphate is another widely used nitrogenous fertiliser. This is obtained to some extent as a by-product in the manufacture of coal-gas, but the major portion is now prepared by neutralising synthetic ammonia with sulphuric acid. *Ammonium nitrate* is prepared in a similar way from ammonia and nitric acid. *Nitro-chalk* is a mixture of ammonium nitrate and calcium carbonate. Calcium cyanamide (popularly "cyanamide") is a substance of the formula CaCN_2 , made by strongly heating calcium carbide in nitrogen.

Among phosphatic fertilisers the chief is *superphosphate of lime*, a mixture of gypsum (calcium sulphate dihydrate) and calcium hydrogen phosphate; it is soluble in water, and therefore available to plants, whilst phosphorite is not. *Double superphosphate* is similar to superphosphate, but contains no gypsum; its phosphorus content is thus much greater. *Basic slag* is a phosphatic fertiliser obtained as a by-product in the manufacture of steel. Potassium sulphate (K_2SO_4) and other potassium salts are used to supply deficiencies of potash in soil.

Fesse, or *Fess*, term in heraldry for one of the ordinaries, being a horizontal band across the field or surface of a shield. The fesse point is at the centre of the shield.

Festubert,

Battle of, British attack in the World War launched over a frontage of 4 miles on May 9, 1915. It centred on the village of Festubert, but failed to achieve any spectacular results (in spite of the gallant conduct of Canadian troops) owing to a shortage of

FESSE

shells for the preliminary bombardment. The defeat led to the overthrow of the Government, the formation of the first Coalition Government with Asquith as Prime Minister, and to the creation of the Ministry of Munitions.

Festus, *Porcius*, Roman procurator of Judaea, c. A.D. 58-62, successor to Felix (q.v.). Paul—left captive by Felix—when examined at Caesarea by Festus, appealed to Caesar. Before Paul sailed for Rome, Festus, in an interview whereat Herod Agrippa II. was present, said Paul was crazed with much learning. (Acts xxiv. 27-xxvi. 30).

Fetishism, the worship of a fetish, or fetich, an object superstitiously invested with divine or demoniac power, and as such regarded with awe and worshipped; the word is from the Portuguese *feitico*, magic.

Fettes College, a school near Edinburgh, founded by Sir William Fettes (1750-1836), who left funds to accumulate for the purpose. It was opened in 1870; it accommodates about 250 boys.

Feuchtwanger, Lion, German Jewish author. Born in Munich and educated there and in Berlin, he first came before public notice with his *Jew Süß*, a book which told graphically of 18th Century Germany, and had a phenomenal sale in 1927 all over the world; later he wrote *The Ugly Duchess*. (1884-).

Feudalism, or the Feudal system, that system which prevailed in Europe during the Middle Ages and in England from the Norman Conquest, by which vassals held their lands from the lord-superior on condition of military service when required.

Feuillans, a reformed brotherhood of 1577 by Jean de la Barrière, abbot of the Cistercian monastery at Feuillans, in Languedoc. The movement thus organised was a protest against the laxity which had crept into the Church, and probably received some stimulus from the Reformation, which was then in progress. The Feuillans settled in a convent in the Rue St. Honoré, Paris, which in after years became the meeting-place of a revolutionary club, which took the name of Feuillans. Founded in 1790 by Lafayette, La Rochefoucauld, etc., the club was composed of members of the respectable propertied classes, whose views were more moderate than those of the Jacobins. They could not hold out against the flood of revolutionary violence, and on March 28, 1791, a mob burst into their place of meeting and dispersed them.

Feuillet, Octave, a celebrated French novelist, born in Saint-Lô, in La Manche; started his literary career as one of Dumas' assistants, but made his first independent success in the *Revue des Deux Mondes* by a series of tales, romances, etc., begun in 1848. In 1862 he was elected a member of the Academy, and later became librarian to Louis Napoleon. His novels, of which *Le Roman d'un Jeune Homme Pauvre* and *Sibylle* are the most noted, are graceful in style, and reveal considerable dramatic force, but often lapse into sentimentality. (1821-1890).

Fever, a symptom of various disorders (e.g., the acute infective fevers, due to bacterial infection, which include enteric, erysipelas, meningitis, diphtheria, scarlet fever, smallpox, measles, chickenpox, mumps, whooping cough) characterised by a rise in the bodily temperature. Malignant fever is that, like yellow fever, in which the blood deteriorates. Intermittent fevers or agues recur at definite intervals. At the onset an attack of cold shivering or "rigor" causes the temperature to rise, while heat is further

kept in by the contraction of the blood-vessels, making the skin feel cold. A period follows of dry heat, thirst, lassitude and nervous derangement. Baths and wet-packs are useful in lowering temperature. Among antipyretic drugs quinine is valuable. Fever passes either gradually (*lysis*), or suddenly (*crisis*), as in pneumonia, accompanied by profuse perspiration.

Feverfew (*Chrysanthemum Parthenium*), a plant of the natural

order Compositae, native to Europe, and so named from its supposed properties as a febrifuge. It has much-indentured leaves, and bears small white flowers.

Fez, the largest city in Morocco, of which it is the second capital; is surrounded by walls and prettily situated in the valley of the Sebou, a stream which flows through its centre and falls into the Atlantic 100 m. to the E. It has been for many centuries one of the most important of the sacred cities of Islam; has many fine mosques, the Sultan's palace, and an important university; is yet a busy commercial centre, although signs of decay appear all over the city, and it carries on an active caravan trade with Central Africa. Pop. 144,000.

Fez, A Turkish head-dress, a stiff, round, brimless cap, usually red, the colour of a dye manufactured from berries at Fez in Morocco.

Fezzan, an Italian province lying to the S. of Libya, to which it is politically united; in character partakes of the desert region to which it belongs, being almost wholly composed of barren sandy plateaux, with here and there an oasis in the low valleys, where some attempt at cultivation is made. It is sparsely populated. Murzuk is the chief town.

Ffestiniog, a town in Merionethshire, quarrying district. Pop. 9,100.

Fiacre, a hackney carriage, originated in France in the 17th Century; was named after the Hôtel St. Fiacre in Paris which itself was named after St. Fiacre, the son of King Eugene IV. of Scotland, who died a hermit in France, A.D. 670.

Fiars, an expression in Scottish law given to the prices of grain which are determined by the respective sheriffs in the various counties assisted by juries. The Court for "striking the fiars" is held towards the end of February in accordance with Acts of Sederunt of the Court of Session. The prices fixed are used in the settling of contracts where no prices have been determined, e.g., in fixing stipends of ministers of the Church of Scotland, and are found useful in other ways.

Fiat (Latin meaning "let it be done"), a decree, especially an order or warrant made out by a judge or other public officer allowing certain legal proceedings to take

Fibre, thread-like substance which is a component part of animal or vegetable tissue. Organically, fibres are part of the substance which constitutes muscle, brain and nerve tissue. The term also refers to the thread prepared from fibrous material, either of vegetable origin (e.g., cotton, lute, etc.), animal (wool and silk), or mineral (asbestos). Fibres prepared synthetically include artificial silk and filaments of spun glass.

Fibula, a long, thin bone in the leg, on the outer side of the shin-bone, and stretching from knee to ankle. The lower extremity forms a bony projection pro-

tecting the ankle-joint. Fibula is also the name given to a brooch or buckle and clasp, such as those which were worn in very early days.

Fichte, Johann Gottlieb, a celebrated German philosopher, born in Upper Lusatia; a man of an intensely thoughtful and noble nature; studied theology at Jena, and afterwards philosophy; became a disciple of Kant, and paid homage to him personally at Königsberg; was appointed professor of Philosophy at Jena, where he enthusiastically preached a system which broke away from Kant, and which he published in his *Wissenschaftslehre* and his *System der Sittenlehre*; obliged to resign his chair at Jena on a charge of atheism, he removed to Berlin, where he rose into favour by his famous *Address to the Germans* against the tyranny of Napoleon, and after a professorate in Erlangen became head of the New University, and had for colleagues such men as Wolff, Humboldt, Schleiermacher, and Noeander. He fell a victim to the War of Independence which followed, dying of fever caught through his wife and her nursing of patients in the hospitals, which were crowded with the wounded. Besides his more esoteric philosophical works, he was the author of four of a popular cast, viz., *The Destiny of Man*, *The Nature of the Scholar*, *The Characteristics of the Present Age* and *The Way to the Blessed Life*. (1762-1814).

Fichtelgebirge, a mountain chain so called from its having once been covered with pines, Fichtel meaning a pine. In its valleys rise tributaries of the Elbe, Rhine and Danube. Considerable quantities of iron, copper and lead are found, which give rise to a smelting industry. The climate is cold and damp and does not attract much tourist traffic.

Ficino, Marsilio, an eminent Italian Platonist, born in Florence; in 1463 became president of a Platonic school, founded by Cosimo de' Medici, where he spent many years spreading the doctrines of Plato and ancient philosophy generally; entered the Church in 1473, and under the patronage of Lorenzo de' Medici was appointed to the canonry of Florence Cathedral. His interest in classical studies helped considerably to further the Renaissance. (1433-1499).

Fiction, Legal, a term of pleading which survived in English law from Roman, where it was probably the earliest agency whereby law was made to square with society; means that the plaintiff makes a fictitious averment which the defendant is compelled to accept, the court allowing the case to go forward on the fictitious basis which brings it within the provision. The classic instance of a legal fiction in English law was that which was used in actions relating to title to land when, in order to secure a speedier process, the fiction of an ejectment suit was imported into the case the parties to the suit being two imaginary individuals named "John Doe" and "Richard Roe." Legal fictions are now comparatively rarely used except, however, in company law and practice.

Fidei Defensor (Latin for "Defender of the Faith"), title given by the Pope to King Henry VIII. of England in 1521, in return for his services in writing a book in defence of the Catholic doctrine of the Sacraments; still borne by English rulers, and appears as "Fid. Def." or "F.D." in inscriptions on coins.

Fides, the Roman goddess of fidelity, and steadfast adherence to promises and engagements. Numa, built a shrine for her worship and instituted a festival in her honour. In later times a temple containing a statue of her dressed in white adorned the temple of Jupiter, on the Capitol at Rome.

FEVERFEW

Fief, a term used in feudal times for property held in fee from a superior—i.e., in return for services rendered. The words fee and feu (Scottish) are derived from it.

Field, Cyrus West, brother of the following, born at Stockbridge, Massachusetts; was first a successful paper manufacturer, but, turning his attention to submarine telegraphy, was instrumental in establishing cable communication between England and America, and founded the Atlantic Telegraph Company in 1856; afterwards interested himself in developing the overhead railway in New York. (1819-1892).

Field, David Dudley, an eminent American jurist, born at Haddam, Connecticut; for 57 years a prominent member of the New York Bar, during which time he drew up, under Government directions, political, civil and penal codes; interested himself in international law, and laboured to bring about an international agreement whereby disputes might be settled by arbitration and war done away with. (1805-1891).

Field, Nathaniel, playwright, one of the "principal actors" named in the First Folio Shakespeare, was born at Cripplegate. Acted in Jonson's *Cynthia's Revels*, 1600; in *The Poetaster*, 1601; in the title-part of Chapman's *Bussy d'Ambois*, 1606. Author of *A Woman as a Weathercock* and *Amends for Ladies*. Collaborated with Massinger in *The Fatal Dowry*. (1587-1633).

Fieldfare (*Turdus phærix*), a bird of the Thrush family, found in most parts of Britain in winter and spring; brownish, with bluish-grey head; its note is harsh, and it feeds on insects, worms and berries.

Field-Glass, an optical instrument composed of two small parallel telescopes, used by naturalists and in the Army, Navy, etc., for viewing distant objects. A variety, the prismatic field-glass, has extensible arms which enable it to be used at various angles and in several positions.

Fielding, Henry, a famous novelist, "the father of the English novel," born at Sharpham Park, Glastonbury, son of General Edmund Fielding and a cousin of Lady Mary Wortley Montagu; was educated at Eton and at Leyden, where he graduated in 1728; led for some years a dissipated life in London, and achieved some celebrity by the production of a series of comedies and farces, now sunk into oblivion. In 1735 he married Miss Charlotte Craddock, and after a brief experiment as a theatre lessee studied law at the Middle Temple, and was called to the Bar.

Literature was, however, his main pursuit, and in 1742 he came to the front with *Joseph Andrews*, a burlesque on Richardson's *Pamela*, in which his powers as a novelist first showed themselves. In 1743 followed three volumes of *Miscellanies*, including *Jonathan Wild*.

After his wife's death he turned again to law, but in 1745 we find him once more engaged in literature as editor of the *True Patriot* and afterwards of the *Jacobite's Journal*. Tom Jones, his masterpiece, appeared in 1749, and three years later *Amelia*. Journalism and his duties as a justice of the peace occupied him till 1754, when ill-health forced him abroad to Lisbon, where he died and was buried. His books are not always found a valuable reading by present-day readers. (1707-1754).

Field-Marshal, the highest rank in the British army, the rank being the baton which is carried and the emblem of crossed batons on the uniform. It was first conferred on the Duke of Argyll and the Earl of Orkney by George II. in 1736. The rank is conferred as an honour

occasionally on members of other royal families, those so distinguished at present being the Emperor of Japan and Alfonso of Spain. The King of England as head of the army holds the rank. There are 11 others.

Field-mouse, the name of several species of rodents of the

family Muridae (rats and mice), widely distributed throughout the world, and resembling in general characteristics other species of the same family, field-voles, etc. The best known species is the Common English Field-mouse (*Mus agrestis*).

FIELD-MOUSE

Field of the Cloth of Gold,

a plain near Guisnes, where Henry VIII. had an interview with Francis I. of France in June, 1520; so called from the magnificence displayed on the occasion on the part of both sovereigns and their retinue.

Fields, Grace, English variety actress, born at Rochdale. Real name originally Stansfield; married Archie Pitt (Selling). Began as vocalist in a Rochdale cinema, 1906. First London appearance, 1915, at the old Middlesex Music Hall, in a revue, *Fes, I Think So*, brought from Manchester. Began film career, 1931. C.B.N., 1938. (1898-).

Fiery Cross, The, a war symbol in the shape of a burning stick dipped in animal blood, formerly sent from village to village among the Highland clans as a call to arms.

Fiery Serpent, a plague sent by Israelites when they grumbled in the wilderness. Many people were bitten and died. Those who looked on the brazen serpent made by Moses lived. (Numbers xxi, 6-9).

Fiesole, a small town in Italy 3 m. from Florence, in beautiful surroundings, with many villas of rich Florentines; the convent of the painter Fra Angelico was here.

Fife, maritime county in the E. of Scotland, jutting out into the North Sea, washed by the Firths of Tay and Forth on the N. and S. respectively; has for the most part a broken and hilly surface, but is extensively cultivated, while the "How of Fife," watered by the Eden, is a fertile valley, richly wooded; valuable coal deposits are worked in the S. and W.; includes the towns of Kirkcaldy, St. Andrews, Cupar, Kincardine and Dunfermline. Area 505 sq. m. Pop. 278,000.

Fife, a flute-like musical instrument, used mainly in Army bands, to accompany the drum, pitched one octave higher than the flute, and having generally a single key.

Fife, Duke of, Alexander William George James Duff, Earl of Fife in Irish peerage; styled Viscount Macduff from 1857; Liberal M.P., Elgin and Nairn, 1874-1879; succeeded to Earldom, 1879; Earl in U.K. peerage, 1885; in 1889 married Louise, eldest daughter of the Prince of Wales (who became Edward VII.), and was made Duke; died at Ascot. (1849-1912). By special provision, the title descended to his daughter, the Princess Alexandra Victoria Alberta Edwina Louise. (1891-).

Fifth-Monarchy Men, a party of extreme levelling tendencies, who, towards the close of the Protectorate, maintained that Jesus Christ was about to reappear on the earth to establish a fifth monarchy that would supersede the four preceding—the Assyrian, the Persian, the Macedonian and the Roman. Some of them conspired to murder Cromwell, but were detected and imprisoned till he died.

Fig, a fruit-tree of the genus *Ficus*, order in warm climates. The fruit is round or oblong, differently coloured according to the species, of which there are a great number, including the pipal-tree (*F. religiosa*), the banyan (*F. indica*), and the india-rubber tree (*F. elastica*). The species especially cultivated for the fruit is the *F. carica*, the fruit being usually dried and boxed for market.

FIG

Figaro, a name given by the French dramatist Beaumarchais to a cunning and intriguing barber who figures in his *Barbier de Séville* and his *Mariage de Figaro*, and who has since become the type of all such characters. Several operas have been written on these comedies, notably by Mozart and Rossini. The name has been adopted by a well-known French newspaper.

Fiji, a group of islands in the S. Pacific Ocean, between 15° and 22° S. lat. and 178° E. and 178° W. long.; sighted by Tasman in 1643, though first discovered, properly speaking, by Cook in 1769; first came into prominence in 1858, when the sovereignty was offered to England and declined, but in 1874 were made a crown colony. They number over 200 islands, of which some 80 are inhabited, Viti Levu and Vanua Levu being the largest; Suva is the capital; sugar, bananas, vanilla, tea and coffee are cultivated. The islanders are Melanesians mingled with Polynesians and of medium height and dark skinned. Area 7,000 sq. m.; Pop. 200,000.

Filbert, an oval nut, the fruit of the cultivated *Corylus* or hazel; the kernel is sweet to the taste, being oily and farinaceous.

File, (1) an instrument with a serrated surface, the serratures being cut upon the blade, either single or criss-cross, by means of a chisel or by machinery; (2) an orderly succession, especially a regimented line of soldiers; (3) an orderly collection of papers, etc., arranged for easy reference.

Filey, a seaside resort and fishing town, 7½ m. S.E. of Scarborough, E. Riding of Yorkshire, England. The shore is protected by Filey Brigg, forming a natural breakwater. Pop. 4,000.

Filibuster, a name given to buccaneers who infested the Spanish-American coasts or those of the West Indies, but more especially used to designate the followers of Lopez in his Cuban expedition in 1851, and those of Walker in Nicaragua in 1855; a name now given to any lawless adventurers who attempt to take forcible possession of a foreign country.

Filigree, a name given to a species of goldsmith's ornamental work fashioned out of fine metallic (usually gold or silver) wire into lace-like patterns; the art was skillfully practised by the Etruscans and Egyptians, and in Central Asia and India, and was popular in Victorian times.

Filioque Controversy, a controversy as to whether the Holy Spirit proceeded from the Father and the Son or from the Father only, the Western Church maintaining the former and the Eastern the latter.

Filipino, a native of the Philippine Is., especially a member of the Christianised race of Malay stock, generally with some admixture of Spanish blood.

Fillan, St., a name borne by two Scottish prince of the 8th Century, first abbot of the monastery on the Holy Loch in Argyll, and afterwards laboured at Strathfillan, Perthshire; (2) or Faelan, known as "the leper," had his church at the end of Loch Earn, Perthshire; a healing well and chair are associated with his name.

Filter, a device for straining a liquid in order to separate from it any solids it may contain. Paper and nickel gauze filters are used in chemistry, or substances may be filtered through a funnel, the neck of which is plugged with cotton-wool. See also Filtration.

Filtration, the operation of removing solid particles from a liquid in which they are suspended by passing the liquid through a material of which the pores are smaller than the particles; pouring tea through a tea-strainer is a crude example of filtration. Filtration is often employed to free water and other liquids from bacteria; thus the Chamberland, Doulton, Berkefeld and Maassen filters are made of special clay or earthen, so that the pores in them are smaller than even the smallest bacteria visible under the microscope. It should be remarked that viruses exist capable of passing any practicable filter yet made, so that filtered water is not necessarily safe to drink.

Finance Acts, the annual Taxing Act, passed by Parliament to embody the provisions of the Budget proposed by the Chancellor of the Exchequer. Each proposal for an alteration of taxation contained in the Finance Bill is carried as a resolution before the Bill becomes law. The Finance Act is followed by the Appropriation Act, by which money is allotted from the consolidated Fund to the service of the year. The Finance Act, as a money bill, cannot be rejected by the House of Lords.

Finch, a passerine bird of the family Fringillidae, of which there are some 600 species, 40 native to Great Britain. Notable are the Crossbills, the Hawfinch, Greenfinch, Bullfinch, Chaffinch and Linnet. They are song-birds, and feed mostly on berries and seeds.

BULLFINCH

Finch, Henage, (first Earl of Nottingham, Lord Chancellor of England, called to the Bar in 1645; at the Restoration was appointed Solicitor-General, and took an active part in prosecuting the regicides; in 1670 he became Attorney-General, and in 1675 Lord Chancellor. (1621-1682).

Finchley, municipal borough of Middlesex, sex, England, 7 m. N. of London, of which it is a residential suburb. There is but little left of the common, once famous as a resort of highwaymen, and where Jack Sheppard, one of the most notorious, was captured in 1784. Pop. 59,000.

Findhorn, a river of Inverness-shire, Scotland, flowing through Nairn and Moray to the Moray Firth.

Findon, a fishing village of Kingsdown-shire, Scotland, from which Findon or Finnan haddocks take the name.

Fine Arts, from the French *beaux arts*, covering all human activities devoted to the creation of beauty, and including painting, poetry, architecture, sculpture, and dancing with the minor arts, such as goldsmith's work, and the decorative arts, derived from them.

Finedon, a village in Northamptonshire, England, 3½ m. from Wellingborough, of which it now forms part; manufactures boots and shoes; agriculture and stone quarrying are carried on in the district. Pop. 4,100.

Fingal, or *Finn*, hero of Gaelic mythology, represented by Ossian (q.v.) to have ruled over the kingdom of Morven in the West Highlands; is identical with Finn McCool or McCumhall, famous in Irish legend.

Fingal's Cave, a remarkable cave of basaltic formation (q.v.) on the coast of the Isle of Staffa; and the name of a song-cycle by Mendelssohn.

Finger-prints, impressions of the ridges on the ball of the fingers. Since their formation does not change throughout life, and the finger prints of no two persons are the same, they are invaluable for identification, especially in criminal investigation, and the finger-prints of all convicted persons are filed for reference. Classification is by the number of ridges and by characteristics known as whorls and composite whorls, loops and arches, and deltas. It is the combination of these characteristics which determines identification.

Finisterre, or *Finistère*, (French for "land's end"), the most westerly department of France, washed on the N. by the English Channel, and on the S. and W. by the Atlantic; has a rugged and broken coastline, but inland presents a picturesque appearance, with tree-clad hills and fertile valleys. The climate is damp, and there is a good deal of marshy land; mines of silver, lead, etc., are wrought, and quarries of marble and granite. Fishing is largely engaged in; and the manufacture of linen, canvas and pottery, are important industries, while large quantities of grain are raised. Area 2,730 sq. m. Pop. 757,000.

Finisterre, or *Finistère*, Cape, in NW. Spain, the scene of several naval engagements between the French and British.

Finland, a republic on the gulfs of Finland and Bothnia, ceded by the Swedes to Russia in 1809, and since the Great War independent. The coastline is deeply indented, and fringed with small islands; the interior, chiefly elevated plateau, consists largely of forest land, and is well furnished with lakes, many of which are united by canals, one connecting Lake Saima with the Gulf of Finland. Various cereals (barley, oats, rye, etc.) are grown, and there is a varied and valuable fauna; fishing is an extensive industry; timber, dairy produce, paper pulp, matches, etc., are exported. The people are mainly Lutherans; there are three universities, and education is highly advanced; Finnish and Swedish are the two languages of the country. There is an excellent Saga literature, and the beginnings of a modern literature. The Finns came under the dominion of the Swedes in the 12th and 13th centuries, and were Christianised by them. Capital, Helsinki. Area 134,500 sq. m. Pop. 3,800,000.

Finnmark, province of Norway, in the extreme N., with a rocky and indented coast and a barren and mountainous interior; fishing the main industry of the inhabitants, who are chiefly Lapps. Pop. 53,000.

Finnpe, the native inhabitants of Finland, and formerly of parts of Sweden and Norway; probably a Ural-Altaic people; their language is allied to Estonian and Hungarian.

Finsbury, metropolitan borough of London, adjoining the City to the N.; includes Clerkenwell; industries are watchmaking, jewellery, furniture, printing, etc. Area 599 acres. Pop. 65,000.

Finsen, Niels Ryberg, physician, born in Faroe Isles; was one of the first to experiment with light rays in the treatment of certain diseases, such as smallpox and lupus; the Finsen lamp is named after him; was awarded the Nobel Prize for medicine in 1903. (1860-1904).

Fiords, deep indentations forming inlets of the sea, especially on the coast of Norway, overlooked by high mountains and precipitous cliffs.

Fir, a general name for various species of coniferous trees of the genus *Abies*, characterised by rounded needle-shaped leaves and by bearing cones. The silver fir (*Abies pectinata*) and the balsam fir (*Abies balsamea*) are notable species. The name fir is often used also for other trees of the genus *Pinus*, such as the Scotch fir.

Fir-bolg, in Irish tradition a race of the early inhabitants of Ireland, of the pre-Celtic population. See also *Ossian*.

Firdausi, or *Firdus*, the pseudonym of Abū'l Kasim Mansur, great poet of Persia, born near Tus, in Khorassan; flourished in the 10th Century A.C.; spent 30 years in writing the *Shah Namah* (*Book of Kings*), a national epic, but having been cheated out of the reward promised by Sultan Mahmud, he gave vent to bitter satire against his royal master and fled the court; for some time he led a wandering life, till at length he returned to die at his birthplace.

Fire, was probably first made known to man by some natural conflagration, such as one caused by lightning, or the lava of a volcano. Fires from such sources were probably kept continuously burning before the art of making fire by friction was discovered. Among savage tribes in many parts of the world the perpetual fire was associated with the life and prosperity of the King, and even in Rome the fire kept burning by the Vestal Virgins was supposed to be connected with the preservation of the State. The connection of fire with the sun may well have been observed as a result of the spontaneous outbreak of grass fires in tropical climates.

Firearms. The use of gunpowder to propel projectiles was first developed in Europe, cannon discharging balls of stone being used in sieges during the 14th Century. The first cannon were made of iron bars bound together by iron hoops to form a tube. In a chamber at one end—the breech—the projectile was placed with the charge, which was fired through a touch-hole by a red-hot wire. Later, balls of lead and iron were used as shot. Few improvements were made before 1500, when bombards came into use—pieces with short barrel and large bore, the forerunners of the modern mortar.

The earliest hand-guns were miniature cannon, and were worked on the same principle. They were introduced into England in the reign of Edward III.

The hand culverin, served by two men, as well as the smaller matchlock or arquebus, was fired by a slow match. Later the wheel-lock and (about 1600) the flint-lock were improved forms of ignition. In the former sparks were struck from pyrites by a serrated wheel; in the latter from a flint by the action of a hammer. About 1800 the percussion cap superseded the flint-lock, the hammer striking a fulminate to generate sufficient heat to ignite the priming. In the 19th Century the smooth-bore musket gave way to the rifle, and breech-loading was adopted, a reversion to the methods used in the early cannon. See also *Lee-Enfield Rifle*; *Rifle*.

FIREARMS
(Hand Culverin)

Fire Brigade. Fire brigades have existed from early times, in Babylon, Egypt and Rome. In England it was not until after the Great Fire of London (1666) that serious fire-fighting efforts were made. In the 18th Century the various insurance companies united to form brigades. In the 19th Century the Metropolitan Board of Works, and later the L.C.C., took over the duty of fire protection in London, and now almost all local authorities maintain fire brigades. At first leather buckets and hand-squirts were almost the sole equipment, but to-day pumping engines discharge 300 to 1,000 gallons of water per minute at a pressure of some 250 lb. per sq. in.

Modern equipment includes hose elevators, mechanically-extending ladders, asbestos suits and gas masks. For private protection against fire, chemical extinguishers, buckets of sand or water, and automatic sprinkler systems may be installed. Outside droncher installations prevent the spread of fire from one building to another. Every building occupied by, or used for the employment of, more than 20 persons must be provided with adequate means of escape from fire, and any building more than 50 feet high must possess a fire-escape. At present (1938) plans for the extension and development of fire brigades to cope with the effects of bombing raids in the event of war are being pushed forward.

Fire Damp, an inflammable gas produced in coal-mines, where it is a source of danger to life, as, when mixed with air to a certain percentage, it becomes explosive. It is chiefly methane or marsh-gas with some admixture of carbonic acid gas and nitrogen.

Firefly, a winged beetle (*Elater noctilucus*) light from yellow spots on various parts of the body, found especially in tropical America; the name is sometimes also applied to the wingless female glow-worm (*Lampyris noctiluca*).

Fire of London, The, lasted for four days in Sept., 1666, and is vividly described in Pepys' diary. Some 13,000 houses and 90 churches, including St. Paul's Cathedral, were burnt, and practically the whole of the City from the Tower to the Temple was razed to the ground.

Fireship, a ship filled with inflammable material and fitted with grappling-hooks, the idea being that the wind should drive it burning among the ships of an enemy fleet. Fireships were first used in the British navy by Lord Howard against the Spanish Armada in 1588.

Fireworks, sulphur, etc., which, on

being discharged into the air, explode and cause displays of coloured lights. Gunpowder, invented by the Chinese, has for many centuries been used by them for the manufacture of fireworks and crackers. Among types of fireworks are Roman candles, which eject stars amid an effusion of sparks, and Bengal lights, which give out a steady blue flame; the latter are used also for signalling, as are rockets. The Catherine wheel is an example of another type of firework on a fixed frame, in this case a revolving wheel. Firework displays are often given on occasions of mass rejoicing. On Nov. 5 the Gunpowder Plot is annually commemorated in England by firework displays.

FIREWORKS
(1) Sky Rocket;
(2) Prince of
Wales Feathers;
(3) Mine of Serpents;
(4) Roman
Candle

Fire-worship, worship of fire especially as embodied in the sun; particularly as connected with the Zoroastrians of ancient Persia.

Firmament, a name given to the vault of the sky conceived as a solid substance studded with stars.

Firman, a Persian word denoting a mandate or decree; among the Turks the term was formerly applied to government decrees; the word is also used in India to denote a permit to trade.

First Aid, the preliminary treatment, necessitated by an accident, designed to prevent any fatal results before the arrival of skilled medical aid or before the sufferer can be taken to a hospital. It covers all emergency measures, from the application of iodine or other disinfectant to a wound, to artificial respiration (q.v.) in cases of suffocation and drowning. First aid to prevent bleeding is important in cases of a cut artery. The artery must be pressed on the side nearest the heart, although pressure is not possible if broken bone or glass is present. Venous bleeding is prevented by pressure on the side farthest from the heart. First-aid treatment of fractures involves supporting the broken bone, generally with the aid of a splint. Various kinds of poisoning also call for suitable first-aid measures.

First Empire, that of Napoleon I., emperor of the French by a decree of the Senate on May 18, 1804. The Empire lasted until the restoration of the Bourbons in 1814.

First Fruits, or Annates, the proceeds of an ecclesiastical benefice during the first year it is held; in England assigned to the Pope in 1306, but after 1534 payable to the King. In 1703 they were assigned for the support of poor clergy and were consolidated with Queen Anne's Bounty (q.v.) in 1838.

First Offenders Act, an Act in 1887, determining the conditions on which a first offender might be released on probation if charged with certain offences. It was superseded by the Probation of Offenders Act in 1907.

First of June, Battle of (1794), a naval battle off Ushant, in the wars following the French Revolution, in which the French fleet, acting as convoy to grain ships from America, was defeated by the British under Earl Howe.

First Republic, proclaimed in France on Sept. 21, 1792, by the National Convention, following the overthrow of the Bourbon regime by the Revolution. The National Convention was succeeded by the Directory in 1795, and the Consulate in 1799. The Republic ended with the establishment of the First Empire (q.v.).

Firth, or Frith, a Scottish word, related to the Norwegian fiord, for a narrow arm of the sea stretching inland, or for the estuary of a river, such as the Firth of Clyde.

Firth, Mark, Sheffield steel manufacturer (1819-1880), and well-known philanthropist.

Fish, a class of vertebrates adapted to aquatic life. Fish breathe by taking in water through the mouth and passing it over internal gills, absorbing the oxygen into the blood, and ejecting the water through the gill-opening. A characteristic organ is the air-bladder, which is a tube, in some species connected with the gut. It is filled with gases, and by means of its expansion the fish can accommodate itself to the different pressures at various depths.

Fish are also equipped with fins, by means of which they move and maintain equilibrium, the movements of the tail and tail-fin providing the chief propulsive force, while the dorsal,

anal, and pelvic fins act as keels. The pectoral fins are used for balancing and steering, while they are also able to check the fish in its forward movement. Most fish are covered with scales as well as skin. The eyes are similar to those of land vertebrates, but fish do not see far. The sole use of the nostrils is for smell. The species of fish are very varied, and adapted to widely different conditions of life. They are divided into two classes: *Selachii*, including sharks and rays; and *Pisces* or bony fishes.

Fish, *Royal*, a term in English law, designating fish of certain species (e.g., whales, porpoises, sturgeon, etc.), which are held to belong to the Crown, no matter by whom caught, if in British waters.

ROYAL FISH
(STURGEON)

Fisher, *Andrew*, Australian politician. Of Scottish birth, he emigrated in 1883 and became a Labour M.P. for the Commonwealth. In 1904 he was Minister of Trade, and later leader of the Labour Party. In 1908, from 1910 to 1913, and in 1914 he was Prime Minister. He left Australian politics in 1915 to become High Commissioner in London. (1862-1928).

Fisher, *Herbert Albert Laurens*, statesman, historian and educationist; educated at Winchester and New College, Oxford (of which he became Warden, 1925), Paris and Göttingen. Chichele Lecturer on foreign history, 1911-1912. Minister of Education, 1916-1918; he carried through the Education Act of 1918. M.P. for English Universities, 1918-1926. His best-known work is his *History of Europe*. (1865-).

Fisher, *John*, Bishop of Rochester, born in Beverley; was distinguished at Cambridge, and became professor of Divinity there; in 1504 he was elected Chancellor of the University and made Bishop of Rochester, but incurred the royal displeasure by opposing Henry VIII's divorce of Catherine of Aragon; was sent to the Tower in 1534 for refusing to take the oath of succession; was created a cardinal, but was beheaded by order of the King ere his hat arrived; was canonised in 1935. (1459-1535).

Fisher, *John*, first Baron, of Kilverstone, age of 13, and saw service in the Crimean War, in China and at Alexandria. He represented the navy at the Hague Conference of 1899, was commander of the Mediterranean Fleet, and in 1902 became Second Lord of the Admiralty. For six years from 1904 he was First Lord, and in that office introduced dreadnoughts, battle-cruisers and submarines. Resigning in 1910, he was reappointed at the outbreak of the World War, but finally resigned in 1915 owing to differences of opinion with Winston Churchill and Asquith, principally on the Dardanelles campaign. (1841-1926).

Fisheries. The fish has formed an important article of food since the earliest times, and to-day the fisheries are an important part of the economic life, especially of Great Britain, Russia, America, China, Norway and Japan. The North Sea fisheries are mainly herring and cod; Alaska and Columbia River, salmon; Gulf of Mexico, shrimp; New England, cod, mackerel, halibut, lobster, clams. Japan, with Korea, leads the world in fisheries. The United States fisheries produce a catch of about 1,000,000 tons annually, two-thirds of which are cod, haddock and herring; U.S.A. fisheries, 1,250,000 tons of fish of over 100 kinds, including crabs. Other countries with considerable fisheries are France, whose fisheries have an annual value of somewhat

over one-third of that of Great Britain; Norway, chiefly cod, whale and herring, and Canada, each of an annual value of about one-fourth of that of Great Britain; Spain, which, before the Civil War, had fisheries nearly equal to those of Norway; Newfoundland, chiefly cod; and Australia.

Fishguard, Pembrokeshire, Wales, 15 m. from Haverfordwest. G.W.R. Railway steamers ply between here and Ireland. Pop. 5,000.

Fitch, *John*, American inventor, born in Connecticut; in 1785 brought out a model steam-boat with side wheels, and in 1788 and in 1790 constructed larger vessels, one of the latter being for some time employed as a passenger-boat; some of his plans are said to have fallen into Robert Fulton's hands and given him the idea of his steamship. Committed suicide at Bardstow, Kentucky. (1743-1798).

Fitzgerald, *Edward*, English scholar, born in Suffolk; educated at Cambridge. His first book, *Euphrasia*, a dialogue on youth, appeared when he was 42, *Polonius* and some Spanish translations followed, but his fame rests on his translations of Persian poetry, and especially on his rendering of the 11th Century poet, Omar Khayyám. (1809-1883).

Fitzgerald, *Lady*, a daughter of Egalité and Mme. Genlis, called Pamela. Distinguished for her beauty and enthusiasm for liberty, she became the wife of Lord Fitzgerald. (d. 1831).

Fitzgerald, *Lord Edward*, younger son of the Duke of Leinster, born at Carlton Castle, near Dublin; joined the English army and served with distinction in the American War. In 1784 he was elected to the Irish Parliament, and opposed the English Government; joined the United Irishmen in 1796, and began plotting the rising of 1798. His scheme was betrayed, and he was arrested in Dublin after a determined resistance, during which he received wounds of which he died in prison. (1763-1798).

Fitzherbert, *Mrs.*, a Roman Catholic lady, maiden name Maria Anne Smythe, with whom, after her second widowhood, George IV. while Prince of Wales, contracted a secret marriage in 1785, which, however, under the Royal Marriage Act, was declared invalid. (1756-1837).

Fitzmaurice, *Edmond George*, Baron, English Liberal politician and biographer, son of Fourth Marquess of Lansdowne; twice Under-Secretary for Foreign Affairs; in 1877 published his *Life of Lord Shelburne*. Also published a *Life of Lord Granville* and a biography of Sir William Petty. (1846-1935).

Fitzroy, a river in Queensland flowing into Koppell Bay. It is formed by the junction of the Dawson and Mackenzie R., and is navigable to Rockhampton.

Fitzroy, *Algernon*, 1st Mar. Edward, British politician. Entering the House of Commons in 1800 as a Conservative, he was made Speaker in 1828. (1809-).

Fitzroy, *Robert*, admiral, navigator and meteorologist, born at Anpton Hall, near Bury St. Edmunds; in 1828-1830 conducted a survey of the coasts of Patagonia and Tierra del Fuego, a work he continued while commanding the *Beagle* (1831-1836), in which Darwin accompanied him; in 1843-1845 was Governor of New Zealand; published accounts of his voyages, etc.; committed suicide. (1805-1865).

Fitzsimmons, *Robert*, prizefighter, born at Haleson, Cornwall; taken to New Zealand, 1871; became amateur champion of New Zealand. In 1890 went to U.S.A.; won middleweight world

championship from Dempsey, New Orleans, 1891; heavyweight world-championship from Corbett, Carson City, 1879. Beaten, Coney Island, 1899, by Jeffries; whom he fought again, 1902. Beaten by Jack Johnson 1907. (1862-1917).

Fitzstephen, William, biographer of Thomas à Becket, and was present at his murder. As preface to the Life of Becket, Fitzstephen wrote an invaluable description of the London of his time. (died about 1191).

Fitzwilliam, William, Earl, a politician of George the Third's time. The excesses of the French Revolution caused him to come over from the Whigs and support Pitt; favoured Catholic emancipation during his Lord-Lieutenancy of Ireland, but was recalled; held office under Grenville in 1806, and took some part in the Reform Bill agitation of the day. (1748-1833).

Fitzwilliam Museum, at Cambridge, developed from a collection of books and pictures left to the University by Richard, Viscount Fitzwilliam, who died in 1818; the museum is housed in a building designed in Greek style by G. Basevi in 1837.

Fiume, a port in Italy on the Adriatic, 40 m. S.E. of Trieste; a new town of spacious and colonnaded streets and many fine buildings has grown up on the ground sloping down from the old town; has an excellent harbour, and flourishing industries in paper, torpedoes, tobacco, etc. For some years after the World War its ownership was disputed between Italy and Yugoslavia. It was seized in 1918 by irregular Italian troops under D'Annunzio (q.v.), the airman-poet, who held it for nearly two years before the Treaty of Rapallo made it a Free State in 1920. After Fiume had again been occupied by Italian troops it was made capital of the Italian province of Carnaro. Pop. 54,000.

Five Mile Act, passed in 1665, prohibited dissenters from preaching within five miles of a town. It was repealed in 1689.

Flag, in botany, a popular name of certain British species of plants, belonging to the genus *Iris* (order Iridaceae), with long, sword-shaped leaves and blue or yellow flowers.

Flag, a symbolically designed rectangle of textile material attached to a staff, used as a national emblem, or for signalling. From the military badges of wood or metal carried by the ancient Egyptians, Assyrians and Greeks developed the Roman standard; the *velum*, or cavalry flag, was a piece of cloth attached to a cross-bar at the end of a spear. In England the first national banners had a religious significance, the present Union Flag being composed of the crosses of St. George, St. Andrew and St. Patrick. The various British dominions all have flags of their own, most of them being developments of the Union Jack.

Flagellants, medieval sect, which first arose in Italy in 1260, and subsequently appeared in other quarters of Europe, members of which scourged themselves in public processions in atonement for their own and others' sins. They were condemned by the Church and suppressed.

Flageolet, a non-reed, wood-wind instrument, seldom used in modern orchestras, having been mainly replaced by the piccolo.

Flag-Lieutenant, an officer in the British navy attached to an admiral and responsible for the transmission of his orders.

Flag-Officer, a naval officer commanding a squadron; in the British navy generally an admiral, vice-admiral or rear-admiral, so styled owing

to the fact that when in command of a fleet his flag is flown at the masthead of the flagship.

Flagship, that ship of a fleet which flies the admiral's flag, usually the St. George's Cross, red on a white ground.

Flambard, a Norman who came over with the Conqueror to England and became chaplain to William Rufus, being in 1099 made Bishop of Durham; founder of a college at Christchurch, Hants. (d. 1138).

Flamborough, a village in the E. Riding of Yorkshire, 2 miles E. of Flamborough Head, on which stands a lighthouse. Pop. 1,900.

Flamboyant, the name given from the flame-like windings of its tracery, to a florid style of architecture in vogue in France during the 15th and 16th Centuries.

Flame-flower, a popular name for the *Kniphofia*, a liliaceous plant with spikes of red and orange flowers, blooming in late summer.

Flamens, priests elected in Rome by the people and consecrated to the service of a particular god, such as Jupiter, Mars, etc.

Flamingo, a long-legged, long-necked bird with peculiarly hooked bill and deep pink plumage, belonging to the family Phoenicopteridae, found in temperate and tropical lands; possesses affinities with the storks on one side and the Anseres on the other; chiefly a wader, but also flies and can swim in deep water.

Flaminius, Caius, a Roman tribune and consul, who constructed the Flaminian Way; perished at Lake Trasimene, where he was defeated by Hannibal in the Second Punic War, 217 B.C.

Flaminius, Titus Quinctius, a Roman consul, who defeated Philip of Macedon and proclaimed the freedom of Greece. He called for the surrender of Hannibal, who chose to take poison rather than fall into his hands. (230-174 B.C.).

Flammarion, Nicolas Camille, French astronomer, born at Montigny-le-Roi; worked mainly at Paris and Juvisy, author of many popular astronomical works. (1842-1925).

Flamsteed, John, the first astronomer-royal of England, born near Derby; astronomer-royal in 1675. From the Observatory of Greenwich, specially built for his use, he catalogued the fixed stars and supplied Newton with useful information bearing on his lunar theory. At first he was paid only £100 a year and so supplemented this by teaching and by taking holy orders, being presented to the living of Burytown in Surrey, which he held till his death. (1644-1719).

Flanders, the land of the Flemings, borders upon the N. Sea; formerly included, besides the present Belgian provinces of E. and W. Flanders, part of Zealand, and of Artois, in France. The ancient county dates from 862, when Charles the Bold of France raised it to the status of a sovereign county, and bestowed it upon his son Baldwin I. It has successively belonged to Spain and Austria, and in Louis XIV.'s reign a portion of it, now known as French Flanders, was ceded to France, the remainder, except for Zealand which became Dutch, in 1714 was made the Austrian Netherlands, and in 1831 was incorporated with the new Kingdom of Belgium (q.v.). From 1914 to

FLAMINGO

1918 it was the scene of the most severe fighting and the heaviest British losses of the World War. There is a strong movement for self-government in the Flemish provinces of Belgium, which Germany fostered for her own purposes during the World War.

Flandrin, Hippolyte, a French painter, born in Lyons; was a pupil of Ingres; represented the 19th Century religious movement in art. (1809-1864).

Flannel, a soft woollen material of loose weave, warm though not of strong texture, formerly much woven in Wales, and used for undergarments; it has now lost much of its popularity. Rochdale is a centre of its manufacture.

Flash Point, the lowest temperature at which the vapour of petrol, etc., will ignite.

Flat, a musical sign (b) which indicates that the note to which it is prefixed is lowered by a semitone. The sequence of flat keys may be found by counting successively a perfect fifth downwards from the preceding tonic—e.g., C, F, Bb, Eb, etc.

Flat, a single floor or part of a floor of a building, designed as a residence separate from the remainder of the building; popular, especially in recent years, as a dwelling in preference to a house among many inhabitants in the large cities of Europe and America; flats are frequently built in large blocks, with communal restaurants, baths, games facilities and other services.

Flat-fish, class of marine fishes, Pleurocentridae, characterised when mature by a flattened body and the presence of both eyes on the same side. Species found in British seas include the halibut (largest of all flat-fish), plaice, flounder, witch, dab, turbot, brill and sole. The eyeless side is usually unpigmented and kept towards the sea-bed.

Flat-foot, a deformed condition of the foot, so that the inner edge of the foot rests on the ground. It may be due to lack of nourishment in early years combined with much standing or walking with the toes turned out, and can usually be corrected by suitable treatment in its early stages.

Flatford, a beauty spot in the parish of East Bergholt on the R. Stour, Suffolk. Flatford Mill and Dedham Mill have attained fame in the pictures of John Constable.

Flatulence, the production of gas in the stomach or bowels as a result of mal-digestion or of the fermentation of food in the intestine. The gases formed are mostly carbonic acid and marsh gas.

Flaubert, Gustave, French novelist, born in Rouen; author of *Madame Bovary*, a study of provincial life, which became the subject of a prosecution, and is the parent of the modern realistic novel, and *Salambo*, wonderful for its vigour and skill in description. (1821-1880).

Flax (*Linum usitatissimum*), a plant of the order Linaceae, grown in the Argentine,

India and Ulster, bearing blue flowers; cultivated from early times for its fibre, which is woven into linen. The seeds are removed by "rippling," and the stems laid in troughs of water to "ret" (rot) until the fibres are easily separated out. Linseed oil is extracted from the seeds, and the residue is made into oil-cake.

Flaxman, John, an eminent sculptor, born in York; exhibited at the age of 13, and won the silver medal of the Royal Academy at 14. For some years he supplied the Wedgwoods with designs for their famous

FLAX

pottery, and from 1787 to 1794 lived in Rome. In 1810 became professor of Sculpture to the Royal Academy. Besides many fine statues of eminent men and much exquisite work in bas-reliefs, he executed a series of noble designs illustrating Homer, Dante and Æschylus. (1755-1826).

Flea, general name for a number of wingless insects that live as parasites on various animals, including man, who is infested by the common flea (*Pulex irritans*), which sucks his blood; another species, the African jigger, bores its way into the foot, causing serious inflammation; the flea is remarkable for its great power of jumping, being able to cover 200 times its own length in a single movement.

Fleabane, name for plants of the genera *Conyza* and *Erigeron*, both of the order Compositae; from the former a volatile oil is prepared which keeps away insects, and the scent of the *Erigeron acris* serves the same purpose.

Flecker, James Elroy, British poet. A he used Eastern life as a background for poems and a poetic play *Hassan* for which Dellus composed incidental music; died at Davos, Switzerland, of consumption. (1884-1915).

Fleet Marriages, clandestine marriages, suppressed in 1754; performed without licence by the chaplains of Fleet Prison, London.

Fleet Prison, a celebrated London Street; was a debtors' prison as far back as the 13th Century. It was demolished in 1842, and on its site now stands the Congregational Memorial Hall.

Fleetwood, borough and port at the mouth of the R. Wyre, Lancashire, England, 9 m. N.E. of Blackpool. There are steamer services to Belfast, Scotland and the Isle of Man; the principal industry is steam trawl-fishing. Pop. 23,000.

Fleetwood, Charles, a Cromwellian officer; fought as lieutenant-general against the King at Worcester, and acted as lord-deputy in Ireland; on the death of Oliver Cromwell advised the abdication of Richard Cromwell. (d. 1692).

Fleming, Sir John Ambrose, physicist, famous for his researches in electrical engineering, particularly in connection with wireless telegraphy and telephony; inventor of the thermionic valve. (1849-).

Flemish School, a school of painting 15th Century, to which Rubens, Vandyck and Teniers belonged.

Flensburg, German seaport, in Schleswig-Holstein, at the S. end of the Flensburg Fjord, with a good harbour. It has breweries, iron-works, paper-mills and a large coal trade. Pop. 56,800.

Fleshy School, a name given by the realistic school of poets, including Rossetti, William Morris and Swinburne.

Fletcher, Andrew, of Saltoun, Scottish patriot and politician; entered the Scottish Parliament, but got into trouble through his opposition to James, Duke of York, and fled to Holland. For the next seven years he was a political refugee. He took part in the Rye House Plot and in Monmouth's invasion. His estates were restored in 1688, and he again sat in the Scottish Parliament. He was an active promoter of the abortive Darien Scheme, and a strong opponent of the Union of 1707. (1655-1716).

Fletcher, Giles, an English poet, born in London; author of a fervid and imaginative poem, *Christ's Victory and Triumph*, which won the admiration of Milton (1588-1623).

Fletcher, John, English dramatist, the son of a bishop of London; was left an orphan and in poverty; collaborated with Beaumont in the production of the plays published under their joint names, and also with Massinger and Jonson; died of the plague. (1579-1625).

Fletcher, Phineas, poet, brother of Giles, Norfolk; celebrated for his poem the *Purple Island, or the Isle of Man*, an ingenious allegory descriptive of the human body and its vices and virtues. (1582-1650).

Fletton, Old, a parish of Huntingdonshire, England, 1 m. from Peterborough, famous for the bricks produced there. Pop. 7,500.

Fleur-de-Lis (i.e., lily-flower), badge of three golden fleurs-de-lis

on a blue field, borne from the days of Clovis on their arms by the Kings of France, and thus the symbol of the French monarchy.

Fleury, André Hercule de, Cardinal, French statesman, born at Lodève, studied philosophy in Paris; became a doctor of the Sorbonne and almoner to the Queen and King Louis XIV., who subsequently made him Bishop of Fréjus and tutor to his son Louis. In 1726 he was chosen Primo Minister by Louis XV., and created a cardinal. He carried through a successful war with Germany, which resulted in the acquisition of Lorraine by France. (1653-1743).

Flies, with gnats and midges, form the order of insects called Diptera, characterised by the possession of two wings—i.e., the front pair; the "halteres," which are two appendages on either side of the thorax, taking the place of hind wings. The halteres give equilibrium and also, it is thought, contain an organ of hearing.

There are a vast number of species, the life-histories varying accordingly. All flies pass through a larval stage, the majority from eggs, although some species produce living larvae; the tsetse-fly, for instance, deposits full-grown larvae which turn instantly into pupae.

Flight-Lieutenant, a commissioned officer in the Royal Air Force, holding rank equivalent to a Naval lieutenant or an Army captain.

Flinders, Matthew, a naval officer, born in Lincolnshire; explored the coast of Australia with George Bass, and charted the Gulf of Carpentaria; experienced shipwreck and imprisonment by the French in Mauritius; wrote a graphic account of his voyage to Australia. (1774-1814).

Flint, (1) a maritime county of N. Wales, between Lancashire and Denbigh, with a detached portion lying to the N. of Shropshire; low stretches of sand form its foreshore, but inland it is hilly, with fertile valleys in which dairy-farming is extensively carried on; county town, Mold. Area 255 sq. m. Pop. 113,000. (2) Seaport on the estuary of the Dee, 13 m. NW. of Chester; has ruins of a castle of Edward I.'s time, with interesting historical associations; in the neighbourhood are copper-works and lead- and coal-mines. Pop. 7,600.

Flint, a mineral composed mainly of silica, found in chalk in irregular masses covered with a white crust. When the nodules are split, the flint is seen to be grey or black in colour, and translucent. It is used for road-surfacing, and in glass- and pottery-making; primitive man used it extensively for making weapons and domestic utensils.

Flintlock, a gun-lock of Spanish invention, introduced about 1630. In a musket of this type the hammer held the flint, and when the hammer fell, it opened the flash-pan and struck sparks from the cover of the pan, thus igniting the priming powder. The flintlock remained in use until superseded by the percussion cap, about 1830.

Floating Debt, that part of the National Debt which consists of treasury bills and short-term exchequer bonds. Sums borrowed by the Government from the Bank of England are also included.

Floating Islands, sometimes formed of masses of driftwood on which débris, vegetation, etc., gradually form a soil, but more commonly portions of river-banks detached by the force of the current; they are to be met with off the mouths of the larger American, Asian and African rivers, and sometimes in inland seas and lakes.

Flodden, Battle of, fought on Flodden Hill, a low spur of the Cheviots, 6 m. S. of Coldstream, between James IV. of Scotland and the English under the Earl of Surrey on Sept. 9, 1513; it resulted in the crushing defeat of the Scots, who lost their king and the flower of their nobility, an event celebrated in Jean Elliot's *Flowers of the Forest*; a spirited account of the battle is given in the sixth canto of Scott's *Marmion*.

Flogging, in English law a punishment on males in cases of robbery with violence, robbery or assault with intent to rob by a person armed with a weapon, conviction as an incorrigible rogue, discharging firearms at or using any substance with intent to injure or alarm the sovereign, having or attempting to have carnal knowledge of a girl under 13 years. It may be inflicted on males under 16 years for larcenies or malicious damage. Corporal punishment may be inflicted on children at the order of a magistrate, on conviction for an indictable offence. Females may not be given corporal punishment. It is an authorised punishment in the Army and Navy. A Commission appointed to investigate the matter reported in 1938 in favour of its abolition, except in cases of assault by a convicted prisoner upon a prison officer and a Penal Reform Bill introduced late in the year incorporated this.

Flood, Henry, Irish Nationalist, trained at Dublin and Oxford; entering the Irish Parliament, he soon won a place in the front rank of Irish politicians; from 1775 to 1781 he was Vice-Treasurer of Ireland; to Grattan's Irish Bill of Right he offered bitter opposition, holding it to be an altogether inadequate measure; in 1783 he was returned to the English House of Commons, but failed to make his mark. (1732-1791).

Flood Lighting, a form of civic illumination, whereby for purposes of display prominent buildings, monuments, etc., are lighted at night in such a way as to illuminate the features of the building with no diffusion.

Floods occur in lowlands traversed by a river whose channel is not deep enough to carry away any abnormal flow of water due to heavy rain, melting snow, etc. The rainy seasons often bring severe flooding of such large rivers as the Mississippi, Hwang-ho, Ganges, Nile and Rhine. Disastrous flooding of the Ohio and Mississippi Rr. in 1937, made over 1,000,000 persons homeless. In June 1938, breaches in the bank of the Hwang-ho (Yellow R.) in China caused either by the Chinese themselves or by Japanese gunfire flooded thousands of square miles of land, killed many thousands and held up the Japanese advance in the province. Methods of flood control are the building of levees and

FLEUR-DE-LIS

dykes, spillways and reservoirs. Floods are also caused by inundation from the sea (as in Bengal in 1876, 200,000 lives being lost), torrential rain and cloudbursts.

Flora, goddess of flowers and gardens and divinity, the spring, an early Roman divinity.

Flora, a name given to the collective plant life of a country or district, or to a list of the plant forms occurring therein.

Florence (Italian, *Firenze*), city of Italy, in Tuscany, 50 m. from the coast, on both sides of the Arno; the outlying suburbs are singularly beautiful, and are surrounded by finely wooded hills, bright with gay villas and charming gardens; the old city itself is full of fine buildings of historic and artistic interest; chief amongst these is the cathedral, or Duomo, begun in 1298, with its grand dome and campanile (293 ft.), by Giotto. In the Middle Ages it was an independent City State, the city of Dante, Petrarch, Michelangelo, Leonardo da Vinci, Boccaccio, Machiavelli, Galilei and many more of Italy's great men; from 1864 to 1870 it was the capital of Italy. It has many fine art galleries; is an educational centre, and carries on trade in straw-plaiting and silk. Pop. 323,000.

Florida, "Land of Flowers," the most forms a peninsula on the E. side of the Gulf of Mexico, and has on its eastern shore the Atlantic; has a coastline of 1,150 m.; the chief physical feature is the amount of water surface, made up of 19 navigable rivers and lakes and ponds to the number of 1,200, besides swamps and marshes. The climate is equable, and for the most part healthy. Fruit-growing is largely engaged in. Timber, cotton, grape-fruit and tobacco are grown, and phosphates produced. There are extensive fisheries. The state contains many holiday resorts. The capital is Tallahassee. Area 56,700 sq. m. Pop. 1,035,000.

Florida Keys, a chain of small islands, and reefs off the southern extremity of Florida, extending for a distance of about 230 m. The islets, of which Key West (a summer resort) and Key Largo are the chief, were once much used by buccaners.

Florin, a coin, originating in Florence, after which an English gold coin first issued by Edward III. in 1327, and valued at 6s. was named. The present silver coin, value 2s., was first issued in England in 1849; since 1937 the word "florin" has not appeared on it.

Florio, John, the translator of Montaigne, born in London, of Italian parents; was a tutor of foreign languages for some years at Oxford; published an English-Italian dictionary called a *World of Words*, but his fame rests on his translation of Montaigne, which Shakespeare used freely. (1553-1625).

Flotilla, a term of Spanish origin, denoting a small fleet, or a fleet of small ships. It is now used especially of a fleet of destroyers, a destroyer of specially heavy type being known as a flotilla leader.

Flounder, a flatfish (*Pleuronectes fuscus*), resembling the plaice, though

much smaller and more elongated, dark green or brown in colour as a rule, though albino varieties are found and specimens coloured on one side only. The eyes are large, the mouth is twisted, and the lower jaw protrusive. It inhabits inshore waters and

FLOUNDER

river-mouths of temperate countries, especially N. Europe.

Flour, a fine powder produced by the milling of cereals—e.g., rye, barley and wheat. The latter possesses a large amount of gluten which when moistened, causes the flour to form a paste and is therefore most commonly used for bread. Ordinary wheat-flour is produced from grain from which the husk has been removed. If the husk is retained, a wholemeal flour is milled, much rougher in texture. Wheat-flour contains about 75 per cent. starch and very little fat, while wholemeal flour is enriched by the proteins and salts in the bran.

Flower, the part of a plant which contains its reproductive organs. The shape, colour and scent of a flower are specific aids to the process of reproduction, and attract the bees, butterflies, etc. which often act as fertilising agents. A flower is thought to be a modification of a leaf-shoot, terminating in an inflorescence instead of leaves.

Flowers vary greatly in form as between different species. A typical flower consists of a calyx or cup made of leaf-like bracts called sepals. The calyx encloses petals which are of a beautiful texture and often the most attractively coloured part of the flower. In many monocotyledonous plants, such as the daffodil, the sepals are themselves very like petals. In dicotyledonous plants the calyx is closer and more protective.

Within the petals are the stamens, the male part of the flower. At the end of each is the anther containing the pollen. The stamens surround the female organ, the pistil, which consists of three parts: the top (stigma) which catches the pollen for fertilising the seeds; the stem or style; and at the bottom the ovary containing the ovules or unfertilised seeds. Not all flowers, however, are self-fertilising; in some plants the stamen is in one flower and the pistil in another.

Fluke, or Liver Fluke, a parasitic worm (*Distoma hepaticum*), flat and lanceolate, of the order Trematoda. Its eggs hatch in damp ground, and the fluke begins its life as a parasite on a certain species of water-snail. Passing out, it enters into a cyst, clinging to grass stems. If this grass is eaten by a sheep or goat, the fluke passes into the biliary duct, causing "liver-rot." Its eggs in great numbers are expelled from the sheep through the bowels. It is rarely found in man.

Fluorescence, the property of certain substances when illuminated; the emitted light is as a rule of different wave-length (i.e., colour) and emission only takes place whilst the substance is illuminated.

Fluorine, a non-metallic chemical element belonging to the same family as chlorine, bromine and iodine ("halogens"). It is extremely active chemically, and though its existence had been known since the 18th Century it was first isolated only in 1886, by the French chemist Moissan. Symbol F, atomic number 9, atomic weight 18.00. It is a very poisonous yellowish gas; a solution of its compound with hydrogen, hydrogen fluoride or hydrofluoric acid is used for etching glass.

Fluorspar, a mineral composed of fluoride of lime, used as a flux and for the production of hydrofluoric acid, which is used for etching glass.

Flushing, a Dutch seaport on the island of Walcheren, at the mouth of the western Scheldt; has an active shipping trade, docks, arsenals, etc. Pop. 22,000.

Flute, a non-reed, wood-wind instrument, extensively used both for orchestral and solo work. The chief type is the concert-

flute, with a compass of three octaves from Middle C. The flute underwent great changes during the 18th Century, when the Boehm system of fingering, now the most widely used, and the cylindrical instead of the conical bore, were introduced. The player holds the instrument transversely, placing the lower lip to the embouchure, and so directing his breath that it strikes the opposite edge. The column of air is thus set into vibration. The opening and stopping of the holes has the effect of determining the length of this column, thus varying the pitch of the sound produced.

Fluting, in architecture, the vertical channelling of the face of a column. In Norman architecture the fluting was often spiral or zig-zag. The flutes on the Doric columns of ancient Greece were 20 in number, shallow and elliptical, those on the Ionic columns 24 in number and semi-circular.

Flux, a substance used to bring about the fusion of metals; or by combining with one part of an earthy mixture they enable another part (i.e., a third metal) to be extracted in a pure state. Salts of potassium and sodium borax, lime, etc., are used as fluxes.

Fluxions, a method, invented by Sir Isaac Newton, of determining the rate of increase or decrease of a quantity or magnitude whose value depends on that of another which itself varies in value at a uniform and given rate. The method of fluxions led to the invention of the calculus. See **Calculus**.

Flycatcher, the name in common of all the insect-eating birds of the family Muscipidae, closely related to, and some species being difficult to distinguish from, the Warblers; also closely related to the Thrushes. The common spotted Flycatcher (*Muscicapa striata*) is an English visitor, arriving from Africa in May. The bill is short, fringed with bristles and flattened at the base. It darts at insects from a perch, pursuing and catching them on the wing.

Fly-fishing, the sport of angling, using artificial fly, as bait a natural or artificial fly. Salmon, trout and grayling are caught in this way in rivers and lakes. Artificial flies are cunningly contrived to represent different varieties of lower-flies. The "fly" must be cast so that it alights on the water in a natural manner.

Flying Boat, a type of aircraft designed for landing on water, in which the body itself serves as a boat and is not supported by floats, as in the case of a seaplane.

Flying Buttress, in Gothic architecture, a buttress attached only at one point to the mass of masonry whose outward thrust it is designed to counteract. It frequently overleaps the aisles to support the clerestory.

Flying Corps, Royal, the military air arm organised by the British War Office in 1912. In 1917 it was amalgamated with the Royal Naval Air Service to constitute the Royal Air Force, under the control of a separate Air Ministry.

Flying Dutchman, a legendary Dutch captain, fated, for his sins, to scour the sea and never reach port, who appeared from time to time to sea-captains as on a black spectral ship, and from the terror he inspired made them change their course. The legend is the subject of an opera by Wagner and a story by Marryat.

FLYING BUTTRESS

Flying Fish,

fish with wings or tails so adapted that they can leap or travel a certain distance through the air over water; they are generally tropical. There are

FLYING FISH

two main genera, the *Exocoetus* or flying herring (true flying fish), and *Dactylopterus* or flying gunnarl. In the case of those of the *Exocoetidae* family the wings are enlargements of the pectoral fins (in the two-winged types such as *Exocoetus parvifasciatus*) and of both pectoral and pelvic fins in the four-winged types (e.g., *Cypselurus Paecilopterus*).

Flying-Fox, or Fox-Bat, the common name of a number of fruit-eating bats of the Pteropodidae family, with fox-like faces, native to Malaysia and India. Two species are particularly noteworthy—viz., *Acerodon jubatus*, the Philippine Fruit-Bat, on account of the large size it reaches (4 to 5 ft. across the wings), and *Pteropus medius*, on account of the damage it does to fruit-gardens in India.

Flying-Squirrel, the common name of a group of squirrel-like rodents of Europe, S. Asia and N. America, distinguished from the ordinary squirrel by a development of the skin between the feet on either side, which gives the animal a lateral expansion and buoys it up when leaping. They are placed in the genus *Petaurista* of the family Sciuridae, are natives of S. Asia and brightly coloured.

Flywheel, a heavy wheel connected to an engine to control its speed and rotating when the engine is in motion. It must be of sufficient size and weight to offset any undue suddenness in the engine's acceleration while, on the other hand, any slackening of speed is counterbalanced by the considerable momentum gained by the flywheel. The purpose of the flywheel is therefore to ensure the smooth running of the engine, enabling it to keep a uniform speed if required.

Foch, Ferdinand, French general. Born at Tarbes, son of a civil servant. Joined the army in 1870. His first active service was in 1914, after he had made an international name as a strategist. At first he served under Joffre, being in command of the armies of the North, and in 1916, when Nivelle was given Joffre's command, Foch was sent on various missions. In March, 1918, when the final German offensive threatened to break through the allied lines he became supreme general of both the French and British troops, stemmed the attack, and brought the war to a successful end before the close of the year. Foch was a military genius of the first order. (1851-1929).

Fog, a cloud of condensed vapour caused by moist air in contact with cold ground or water; or, contrariwise, by cold air in contact with water warmed by the sun, as in a pond or marsh. Over industrial areas the fog is surcharged with particles of smoke and dust, round which the vapour condenses. When dense, it hinders visibility and disorganises traffic. On railways, detonators placed on the line act as fog signals, exploding when the train hits them. At sea, ships must give signals by siren every 2 minutes when under way during fogs.

Foggia, the capital town of the province of the same name in Apulia, Italy; has an ancient cathedral and traces of a former imperial palace, and is an important wood-trade centre. Pop. 65,500.

Fo-Hi, the mythical founder of the Chinese Empire, is said to have introduced cattle-rearing, instituted marriage and invented letters.

Föhn, a warm, dry wind which sweeps down the Alpine valleys from the mountains; cases are on record where it has melted two feet of snow in twelve hours.

Foil, a sheet of metal beaten to the thinness of paper—e.g., tinfoil and gold-foil (thicker than gold-leaf). Jewellers use foil as a background for precious stones, to set off their brilliancy; hence the metaphorical use of the word. The layer of tin and quicksilver used as backing for a mirror is also so called.

Foix, *Gaston de*, French military captain, nephew of Louis XII., from his daring exploits called the Thunderbolt of Italy; he beat the Swiss, routed the Papal troops, captured Brescia from the Venetians, and gained the battle of Ravenna against the Spaniards, who was slain when pursuing the fugitives. (1489-1512).

Fokker, *Antony Herman Gerard*, Dutch air-engineer. He went to Germany at the age of 20, and was a pioneer of aviation there, the German Government taking an interest in his work and buying the machine, named after him, which was extensively used in the World War; has since been concerned with aeroplane production in the Netherlands and U.S.A. (1890-).

Foleshill, a part of the county borough of Coventry, Warwickshire, England, on the Coventry and Oxford Canal.

Foley, *John Henry*, Irish sculptor, born in Dublin; statues of Hampden, Burke, J. S. Mill, Goldsmith, etc., brought him fame, and he was commissioned by Queen Victoria to execute the figure of Prince Albert in the Albert Memorial; the equestrian statues of Hardinge and Outram in India are also his work. (1818-1874).

Folio, a sheet of paper folded once so as consisting of sheets so folded; a page in an account-book; a page on which are written a certain number of words—in English legal and parliamentary documents, a folio represents 72 words, in America 100 words.

Folk-dancing, the traditional method of popular dancing spontaneously followed in rural surroundings, as opposed to the formal dancing of the ballroom and the stage. Much has been done in Great Britain in recent years to revive old country dances owing to the work of the English Folk-Dance Society.

Folkestone, a seaport and holiday resort on the coast of Kent, England, 7 m. SW. of Dover; has a fine harbour and esplanade; is much engaged in the herring and mackerel fisheries, and is the port for the cross-channel steamer service to Boulogne. Pop. 36,000.

Folklore, the body of traditional knowledge, ledge and beliefs peculiar to a race of people; first became the subject of scientific study in conjunction with sociological and anthropological research in the 19th Century. Its material includes stories, legends, children's rhymes, saws and superstitions, of which the long-forgotten origin and meaning may often be elucidated by reference to the history or religious practices of antiquity, or, frequently, by comparison with similar beliefs and practices in surviving primitive communities. The Brothers Grimm in Germany were pioneers in collecting the folklore of their country. In 1878 the Folklore Society was founded in England to further the study in this country.

Folkmoot, a popular assembly of political, judicial, and other administrative functions, held in each shire, and hence also called Shiremoot.

Folk-song, the general name for the carols and the like, whether secular or religious,

which has grown up by popular tradition in any country, and often throws valuable light on its former history and customs. The collecting of folk-songs is now carried on systematically by students, who note down the words and music of songs heard at country gatherings and cottage firesides.

Fomentation, a soft, damp dressing, applied to a part of the body to relieve pain and lessen inflammation. A simple fomentation may be made by soaking several thicknesses of flannel in boiling water, wringing them out by twisting in a towel, and applying them as hot as they can be borne; it should be renewed as soon as it grows cool. Turpentine, laudanum, etc., are sometimes used for fomentations.

Fomorians, an ancient race of gods taken over from the pre-Celtic race known in Irish story as the Fírlboigs. Though the later Celts regarded them as baneful, they were really peaceful deities of the soil. The most prominent was Balor of the Evil Eye.

Fonseca, *Manoel Deodora da*, Brazilian statesman and first president; served against Paraguay, 1868-1870; Governor of Rio Grande do Sul, 1868-1887; dismissed for persistent republican activity. Sent, Dec. 1888, to command army corps on frontier of Matto Grosso; returned and headed insurrection that deposed the Emperor Pedro, 1889. Elected, Feb. 1891, president for four years. Fonseca proved incapable, and resigned in November. (1827-1892).

Font, a receptacle of stone or lead for the water used in baptism, generally placed at the W. end of a church in the section called the baptistery. Stone fonts were often carved with elaborate symbolical designs.

FONT

Fontainebleau,

a town on the left bank of the Seine, 35 m. SE. of Paris, and famous for a château or palace of the kings of France, and the forest that surrounds it. The château, founded towards the end of the 10th Century, was enlarged and embellished by successive kings, beginning with Francis I., and was the place where Napoleon signed his abdication in 1814. It is now a national monument. Pop. 13,000.

Fontenoy, a village in Belgium, 5 m. SW. of Tournai, where Marshal Saxe beat the English, Dutch and Austrians under the Duke of Cumberland in 1745. Pop. c. 800.

Fonthill Gifford, village 2 m. from Tisbury, Wiltshire, England. Nearly are the ruins of Fonthill Abbey, built by William Beckford (of *Vathek* fame) in 1795 at a cost approaching £300,000; it largely collapsed in 1825.

Food, anything taken into the body of an animal or plant from which it is able to derive material for the growth and renewal of tissue and for the provision of bodily heat and energy. Man's food requires to be so varied that all the essential constituents required by the body may be present. Foods may be divided into two classes: body-building foods and "fuel" foods. The former are the nitrogenous foods, and are of prime importance because without nitrogen the body cannot maintain correct metabolism.

The nitrogenous foods are called *proteins*. Protein is the chief body-building material by means of which the tissue used up by the output of energy is repaired. The principal source of protein as food is the lean of various

kinds of meat. It is also an important constituent of milk, cheese and eggs. Vegetable protein is contained especially in peas, beans, and lentils. The amount of protein daily necessary to a human being depends on the amount of muscular energy expended. Mental stress and the expenditure of nervous energy also demand an increase of nitrogenous food to repair waste tissue. A growing child requires additional protein.

All foods other than proteins may be classed as fuel foods—that is to say, they never become part of the living tissue, but are burnt up by the body in order to produce bodily heat and consequently energy. Foods for this purpose are divided into carbohydrates and fats. The former include all kinds of starch and sugar, starch being converted into sugar in the process of digestion. Natural sugar which can be easily assimilated is found in fruit and vegetables and also in honey. Refined cane-sugar and beet-sugar are not so readily digested, and have to undergo a conversion process during digestion in the same way as starch. The chief sources of starch are the cereals; potatoes, rice and bananas also contain it.

Carbohydrates should form about two-thirds of the total amount of food taken, and should bulk large if muscular work is undertaken. People also need more starchy food in cold weather than in hot. The fats are also sources of heat and energy; under this head come all animal fats, such as suet, lard, etc., as well as butter and cream, and the vegetable fats—e.g., olive oil, cotton-seed oil, nut butter, margarine (also made from animal fat). The fish fats are cod-liver oil and halibut-liver oil, and fat is also contained in the yolk of an egg. Apart from the general functions of food outlined above, all classes of food in being "burnt up" by the body leave a residue of mineral matter, various salts of calcium, phosphorus, iron, magnesium, sodium, iodine, etc., and these mineral salts are essential to health; the composition of the blood, bones and teeth, and the working of the glandular system depending on them. Other vital food factors of essentially vegetable origin are the vitamins, of which some six have been distinguished as being present in various foods. Diseases such as scurvy and beri-beri are due to a deficiency of certain vitamins. In addition to food, four to six pints of water are required daily.

Food Control. started in Great Britain in 1917 as a war measure, with the establishment of a Food Ministry. Rationing cards for meat, sugar, butter and tea were issued to the public, and maximum prices were fixed by law to check profiteering.

Fool. See Jester.

Fools, Feast of, a festival of wild mirth in the Middle Ages, held on various dates in different places, often on Jan. 1, in which many of the rites and ceremonies of the Church were travestied.

Foot. (1) The extremity of the lower limb, below the ankle, consisting of a bony framework forming two arches, one from heel to toe, the other from side to side of the instep. At the back are the tarsal bones, with the calcaneum which forms the heel; further forward are the metatarsal bones, terminating in the 14 phalanges, forming the toes. The whole foot is supported by muscles and ligaments, the arch of the instep being supported in particular by the two plantar ligaments, running the length of the foot. (2) An English lineal measure, consisting of 12 inches, the third part of a yard the standard average length of a man's

quantity of stream-accent.

Foot and Mouth Disease,

a disease of sheep, cattle and swine which is so infectious that stringent orders are made prohibiting the movement of animals in areas where it has broken out, and ordering the destruction of the infected. It is occasionally caught by man. Some compensation is paid for animals destroyed. Outbreaks early in 1938 necessitated standstill orders involving nearly the whole country. The distributing agency is unknown, though rats and migrant starlings have been blamed.

Football, Association, the leading winter game of Great Britain, in which a ball is propelled by the feet only, only the goalkeeper being allowed to use his hands. It first took modern shape in the schools towards the end of the 18th Century, but was not played according to definite rules until 1863, in which year the Football Association came into being. In 1871 the F.A. Cup competition was started, largely confined to old public-school clubs. In the following year international matches were inaugurated. Payment of professionals was not fully sanctioned till 1885, but the question continued to agitate the football world, and led in 1907 to the formation of the Amateur F.A., now again affiliated to the parent body. The Football League was formed in 1888, and ever since, the game has grown steadily in popularity, crowds of over 100,000 having watched the Cup Final. On the Continent the game has lately been taken up with great enthusiasm.

The game is played with 11 men on each side, the formation being 5 forwards, 3 half-backs, 2 full-backs and a goalkeeper.

In 1911 a new off-side rule was enacted, which ruled that a player could not be off-side in his own half of the field. When a player plays a ball, any other player of the same side who at the moment of playing is nearer his opponents' goal-line is off-side unless three or more of his opponents are at such moment of playing nearer their own goal-line. The field of play should not be more than 130 yds. long or less than 50 yds. wide. The goal-posts are 8 yds. apart; the goal area is a space 20 x 6 yds. in front of the goal, and the penalty area is a space 44 x 18 yds. in front of the goal. The ball is kicked off at the beginning of each half and after each goal by the centre-forward in the centre of the field within the kick-off circle, 20 yds. in diameter.

In the season 1936-1937 a new rule came into force whereby a player is not allowed to try to kick the ball while it is in the goalkeeper's hands. It is also made illegal for the goalkeeper to punt the ball at the goal-kick. The goalkeeper is not allowed to handle the ball outside his own penalty area and in any event may not carry it more than four steps.

The ball is round, leather-covered, weighing 13-15 oz., circumference 27-28 in. A goal is scored when the ball is kicked or headed between the goal-posts and under the bar. A goal may be scored from a free-kick. The English League matches were instituted in 1888, and there are now three Divisions.

Football, Rugby, the handling code of the game, which started at Rugby School in 1823, when a boy named William Webb Ellis took the ball in his hands and ran with it down the field, an innovation that was recognised in 1841. Clubs playing under the new rules were started at the universities and among old public-school boys, and in 1871 the Rugby Union was formed, international matches beginning in the 'seventies. No professionalism is allowed by the Rugby Union, a rule that led in 1893 to the formation of the Northern Union, rechristened the Rugby League in 1922.

In its early days the game was played with

about 50 players on each side, but later this was reduced to 30, and in 1876 the number was fixed at 15. The usual arrangement of the field is 3 forwards, 2 half-backs, 4 three-quarters and 1 full-back. The formation adopted by the New Zealand "All-Blacks" team, which toured England with such success in 1905-1906, was 3 forwards, 1 half-back, 2 five-eighths, 3 three-quarters and 1 full-back. An alternative formation is to play 7 forwards in the scrummage.

The present rules were drawn up in 1896. When a player touches down the ball behind his opponents' goal-line, a try is scored, 5 points; 5 points if converted by kicking the ball from a place-kick over the crossbar and between the uprights of the goal. A goal from a "drop" kick scores 4 points; a place-kicked goal from a "mark" (i.e., when a player catches the ball kicked by an opponent and simultaneously makes a "mark" with his heel) scores 3 points; a penalty goal also 3 points.

The field of play must not exceed 110 yds. in length, nor 75 yds. in breadth. The goal-posts must exceed 11 ft. in height, and are 18 ft. 6 in. apart, the cross-bar being 10 ft. from the ground. A player is off-side if he enters the scrummage from his opponents' side, or if the ball is kicked, touched, or run with by one of his own side behind him. He cannot be off-side in his own in-goal. The ball is oval, leather-covered, length 11 to 11½ in., length circumference, 30 to 31 in.; width circumference, 25½ to 26 in.; weight 13 to 14½ oz.

Foote, Samuel, English actor and play-wright, born in Truro, Cornwall, of good family; was educated at Oxford, and studied law, but ruined himself by gaming, and took to the stage; he became the successful lessee of Haymarket Theatre in 1741, where, by his inimitable powers of mimicry and clever comedies, he firmly established himself in popular favour. (1720-1771).

Foot-Pound, in mechanics, the unit measured; the amount of energy to raise a weight of 1 lb. through a distance of 1 ft.

Foraminifera, one of the most primitive forms of animal life, consisting of cells of protoplasm surrounded by a skeleton of limy material; they live in the ocean and their remains settle on the bottom as an ooze, e.g., globigerina ooze; some limestones are built up of their remains.

Forbes, a town of New South Wales, Australia, on the R. Lachlan, occupied in wool manufacture and the surrounding district in sheep-rearing. Pop. 5,400.

Forbes, Duncan, of Colledon, distinguished lawyer and politician, born in Buncnew; called to the Scottish Bar in 1799; took an active part in putting down the rebellion of 1715, and in 1722 entered Parliament; three years later he was appointed Lord Advocate and Lord President of the Court of Session; during the 1745 rebellion he was active in the Hanoverian interest; was a devoted Scot, and unweariedly strove to establish the country in peace. (1685-1747).

Forbes, Jean Rosita, explorer, has journeyed in many lands, especially Arabia and East Africa; Kufara and Syria in 1890; Amir in 1893-1894; Abyssinia (Cinema expedition) 1894-1895. Has written travel-books and ten novels. (1893-).

Forbes-Robertson, Sir Johnston, British actor. Trained as a lawyer, he turned his attention to the stage, joined the Bancroft company, and proving a success started managing on his own account. He appeared in several Shakespearean rôles and retired in 1913. (1837-).

Force, that which changes the state of a body from motion to rest or from rest to motion, or alters its rate of motion. The acceleration of a body is in proportion to the force exerted upon it, but is in inverse proportion to its mass. The unit of force is the dyne, which is the amount of force needed to give to a body of mass 1 gramme an acceleration of 1 cm. per second. The poundal is the unit which gives to a mass of 1 lb. an acceleration of 1 ft. per second.

Forcing (plants), a term used in horticulture for bringing flowers into bloom, or vegetables into a state of fitness for eating, earlier than their normal and proper season. Rock-plants, bulbs, and many other plants may be forced into bloom in an unheated greenhouse earlier than in an unheated garden. In a heated greenhouse protected and sub-tropical, and summer-flowering plants may be induced to bloom in winter according to the temperature of the greenhouse. Early carrots and half-hard annuals may be forced by sowing in a cold frame; and a hot-bed, a frame which is placed over newly turned manure, gives sufficient heat to force such plants as marrow, cucumber and celery.

Ford, Edward Ouslow, sculptor; born in London; executed numerous statues and busts, examples of which are in the Tate Gallery, London. (1852-1901).

Ford, Henry, American motor manufacturer. He produced his first car in 1892, and in 1903 organised a company of his own at Detroit to exploit a cheap car, attaining a production of a million cars a year by 1920. By that time he was a millionaire, and a philanthropist. An ardent pacifist, he chartered a liner in 1915 to sail to Europe in an effort to stop the World War. In recent years has been the leading industrialist in the U.S.A. in opposition to President Roosevelt's New Deal. (1863-).

HENRY FORD

Ford, John, dramatist, born in Jellington, N. Devon; studied at Oxford, and entered the Middle Temple in 1602; in 1606 appeared his first poetic work, *Fame's Memorial*, and for the next 33 years he was a prolific writer of plays, chiefly tragedies, collaborating in some cases with Dekker and Webster; *The Broken Heart* and *Perkin Warbeck* are among his best-known works. His grip on the greater human passions, and his power of moving presentment, are undoubted. (1586-1639).

Foreign Enlistment Act, 1870, regulates the conduct of British subjects during hostilities between foreign States with which Great Britain is at peace. The Act punishes British subjects who accept commissions or engagements in the fighting services of any foreign State which is at war with another foreign State with which Britain is at peace. It also punishes the building of ships for any foreign country which is at war with any friendly State.

Foreign Jurisdiction. The administration of British law in countries outside the dominion of the Crown is regulated by the Foreign Jurisdiction Act of 1890, extended by a further Act in 1913. The power of exercising jurisdiction in foreign countries may be acquired by the Crown as a result of treaty or capitulation, and is usually vested in the consular officers. The jurisdiction is generally limited to British subjects or persons under British protection, and covers civil and

criminal cases. The Foreign Jurisdiction Act may also apply in a British Protectorate, where the territory, not having been annexed, remains outside the normal colonial administration.

Foreign Legion, a military unit made up of men who are foreigners to the country in whose service they are engaged. The most noteworthy is the French *régiment étranger*, organized in 1831 and now forming a permanent regiment of five battalions based on Algeria. Recruits are accepted for service of 5 years without proof of identity. A foreign legion of Swiss and Germans volunteered for British service in the Crimean War. Foreign legions served in Spain in the Carlist War (1873-1876) and in the Civil War which broke out in 1936.

Foreign Office, a British Department of State, established in 1782, when the Secretaryship of Foreign Affairs was created in place of the former Secretary for the Northern Department of Europe. The Foreign Secretary, who is always a member of the Cabinet, is assisted by two or three Parliamentary Under-Secretaries, who form part of the Government, also by a permanent Under-Secretary and four Assistant Under-Secretaries. All dealings with foreign Powers and with British representatives abroad are conducted through the Foreign Office, and beyond his formal duties, the function of the Foreign Secretary is to shape the policy of H.M. Government in all foreign affairs.

Foreland, North and South, two rocky promontories on the E. coast of Kent, which lie 16 m. apart; have the Downs and Goodwin Sands between them; they are well marked with lighthouses.

Forensic Medicine, jurisprudence, a branch of legal science in which the principles of medicine are applied to the purposes of the law, originating out of the frequency with which medical points arise in the administration of justice, e.g., in murder trials and in cases where insanity is involved.

Forestalling, in commerce, the practice of buying or contracting for merchandise before it is placed on the market, so as to increase the demand and sell again at an enhanced price. It was illegal in England until 1844.

Forest Gate, a populous suburb of E. London in the County Borough of West Ham, 5 m. from the City. Pop. 18,700.

Forest Laws, laws enacted in ancient times for the purpose of guarding the royal forest lands, such as the New Forest in Hampshire, as hunting preserves. Up to the time of Henry III. they were of excessive harshness, death being a not infrequent penalty for any infringement. The privileges of forest have now fallen into abeyance, as also the special Forest Courts, while many of the royal forests, which in Henry VIII.'s time numbered 69, have been disafforested.

Forestry, the art of planting trees, involving a knowledge of the geographical distribution of forest-lands, of the methods of planting and transplanting, propagation, and storage of seeds, prevention of insect pests, and of the economic uses of various kinds of timber and of the best means of developing and managing forest land for economic purposes. The forest area of the world is nearly 5 billion acres, including Europe 759,000,000 acres, Canada 800,000,000, U.S.A. 650,000,000, tropical S. America 530,000,000, Asiatic Russia over a thousand million, and Central Africa 230,000,000. There are four main forest regions: (1) the zone of coniferous trees over the N. parts of

Europe, Asia and America; (2) that of the catkin-bearing trees (oaks, beeches, etc.), over the remainder of the N. extra-tropical regions; (3) that of the mixed forests, which includes the whole of the tropics; and (4) that of the rigid-leaved woods (eucalyptus, myrtles, etc.), confined to a part of S. Africa and two-thirds of Australia.

Forestry Commission, a body appointed by the Government under the Forestry Act, 1919 to 1927. Its function is to promote the study of forestry in England, develop afforestation and provide grants for that purpose. The Crown Woods were transferred to the Commission in 1924, and a great deal more land has been acquired.

Forfar, the county town of Angus of Dundee; (Forfarshire), Scotland, 14 m. N.E. of Dundee; manufactures linen; was once an important royal residence, and was made a royal burgh by David I. Pop. 9,800.

Forfarshire, now called Angus, a maritime county on the E. side of Scotland, lying N. of the Firth of Tay. Strathmore and the Carse of Gowrie are fertile valleys, where agriculture and cattle-rearing flourish, and which, with the Braes of Angus in the N. and the Sidlaw Hills to the S., make up a finely diversified county. Jute and linen are the most important articles of manufacture, of which Dundee and Arbroath are centres. The county is particularly rich in antiquities—Roman remains, castles, priories, etc. Pop. 270,000.

Forfeiture, a penalty whereby a person loses the title to his property as a result of some illegal act. In this sense it is now practically obsolete. But offences against customs regulations, and similar crimes, may involve forfeiture of the goods concerned.

Forgery, the act of falsifying or altering a written document with general intent to defraud. In common law it is a misdemeanour, but by special statutes forgery in a number of cases is punishable as a felony with penal servitude for any period from three years.

Forget-me-not,

or *Myosotis* (Mouse-Ear), a

plant of the order Boraginaceae. Its flowers are blue, pink or white, in one-sided coiled spikes, without bracts. There are several garden species in England, as well as an alpine species, grown as a rock-plant.

FORGET-ME-NOT

Formaldehyde,

a colourless gas with a pungent, suffocating smell obtained by passing a mixture of air and methyl alcohol vapour over a heated copper spiral; formula, $\text{H}\cdot\text{CHO}$. It is usually sold as a solution in water (with a little methyl alcohol) under the name of formalin; the latter finds wide application as a disinfectant and as a preservative of anatomical specimens. The chief use of formaldehyde is in the manufacture of plastics.

Formalin. See Formaldehyde.

Forma Pauperis, in a legal phrase used in connection with the right given to poor persons to sue, or defend an action in the High Court. Any person may sue or defend "in forma pauperis" on proof that he is not worth £25, his wearing apparel and the subject-matter of the action excepted. He must lay a case before counsel, who must certify that he has a cause of action or defence. The Court may then assign him a solicitor and counsel, who cannot refuse their services without good reason.

Formby, a town and urban district 8 m. E. of Ormskirk, Lancashire, England. Formby Point, a residential district, known as Formby-by-the-Sea, has a promenade with view of the Mersey. The district is agricultural. Pop. 7,900.

Formic Acid, so called because it (Latin, *formica*), is secreted by ants (Latin, *formica*), is a weak acid of the chemical formula $H\text{-COOH}$; it is a colourless, syrupy liquid setting at 8.3°C . to a mass of white crystals. Boiling-point 101°C . It is manufactured by heating sodium hydroxide (caustic soda) with carbon monoxide under pressure, when the two substances combine to yield sodium formate, from which the free acid may be obtained by adding sulphuric acid.

Formosa (Japanese, Taiwan), a large island off the coast of China, from which it is separated by the Fukien Channel, 90 m. broad. Formosa was ceded to Japan by the Chinese in 1895. It is an island of much natural beauty, and is traversed N. and S. by a fine range of hills; is famed for its bamboos, and exports rice, tea, camphor and fish. Area 13,900 sq. m. Pop. 5,250,000.

Formula, in mathematics, a set of symbols whereby properties of numbers are expressed in succinct fashion; thus the formula $a^2 - b^2 = (a + b)(a - b)$ implies that the difference of the squares of two numbers is equal to the product of their sum and difference. In chemistry a formula is used to denote a molecule of a substance, and indicates the numbers of atoms of which the molecule is composed; thus H_2SO_4 denotes one molecule of sulphuric acid, consisting of two atoms of hydrogen, one atom of sulphur and four atoms of oxygen. Sometimes a chemical formula is expanded so as to show the supposed spatial relationships of the atoms in the molecule.

Forres, a royal burgh in Morayshire, Scotland, on the Findhorn, 2 m. from the sea and 10 m. SW. of Elgin; has ruins of a castle—once a royal residence—and a famous "Stan'in Stane," Sueno's Stone, 25 ft. high, dating from the year 900. Pop. 4,200.

Forster, John, English writer, born in Newcastle, was educated for the Bar, but took to journalism, and soon made his mark as a political writer in the *Examiner*; he subsequently edited the *Foreign Quarterly Review*, the *Daily News* (succeeding Dickens), and the *Examiner* (1847-1856). He was the author of several historical sketches, but his best-known works are his biographies of Goldsmith, Landor and Dickens. (1812-1876).

Forster, William Edward, statesman, born in Bradpole, Dorset, son of a Quaker; in 1861 he became member of Parliament for Bradford; in succession Under-Secretary for the Colonies, Vice-President of the Council of Education, and a Privy Councillor. His chief legislative measure was the Elementary Education Bill of 1870, which, as a member of Gladstone's Cabinet, he carried through Parliament, two years after which the Ballot Act was introduced by him. As Irish Secretary in 1880 he made an earnest effort to grapple with the Irish problem, but, losing the support of his colleagues over the imprisonment of Parnell and other Land League leaders, he resigned. (1818-1886).

Fortaleza, a seaport and capital of the State of Ceara, Brazil. The harbour is shallow; trades in coffee and rubber. Pop. 140,000.

Fort Augustus, a small village in the Caledonian Canal, 33 m. SW. of Inverness; the fort, built in 1716 and enlarged in 1730, was utilised as a barracks during the disturb-

ances in the Highlands, but after being dismantled and again garrisoned down to 1857, it finally in 1876 passed into the hands of the Benedictines (a.v.), who have converted it into an abbey and college. Pop. c. 1,000.

Fort-de-France, the capital and most important town of the island of Martinique, French W. Indies. It is situated on a fine harbour and has marine batteries, an arsenal, cathedral and municipal theatre. The town was burnt down in 1890 following a cyclone. Pop. 43,500.

Fortescue, Sir John, English lawyer, born in Somersetshire; was called to the Bar at Lincoln's Inn, and in 1442 became Lord Chief Justice of the Court of King's Bench. He was a staunch Lancastrian during the Wars of the Roses, and shared the exile of Queen Margaret and her son Edward, for whom he wrote in dialogue form his famous *De Laudibus Legum*, a treatise still read; was taken prisoner at the battle of Tewkesbury. He died at the age of 90. (c. 1385-1475).

Fortescue, Hon. Sir John William, historian of the British Army, was fifth son of the third Earl Fortescue. The issue of his large-scale History began 1899, and finished with the thirteenth volume in 1930. He was Librarian at Windsor Castle, 1905-1926. (1859-1933).

Fort George, a fortress on the Moray Firth, 12 m. NE. of Inverness; was built in 1748, and is now the headquarters of the Seaforth Highlanders.

Forth, the junction of Duchray Water and the Avonduh, streams which rise one on Ben Lomond and the other on Ben Venue, and which, after 14 and 9 m., unite at Aberfoyle. The river thence flows with many windings, called Links, through some of the fairest country of the eastern lowlands to Alloa (51½ m.), where begins the Firth, which stretches 51 m. to the North Sea, and which at Queensferry is spanned by a massive railway bridge known as the Forth Bridge. (1882-1890).

Fortification, the preparation and strengthening of de-

fensive works about a city or other place of importance, to defend it against hostile attack which has been practised from the beginning of organised warfare. The Mesopotamians and Greeks fortified their towns, and the famous walls of Troy were believed to have a mythical origin. Thick walls of stone were almost impregnable against ancient attacking methods, and the catapults and battering-rams of the Romans were on the whole ineffective means of destroying fortifications. The bastions of the medieval castle also withstood attack successfully and enabled a flanking fire to be directed against the besiegers battering against the curtain wall.

PILL-BOX

With the introduction of artillery and the use of iron shot, attack gained an advantage against defence. The ravelins or out-works were extended further in successive stages to keep the artillery at a distance from the main works; and this has been the central problem facing military engineers right up to the present day. The greatest expert in fortification until recent times was Sebastian de Vauban (1633-1707). In the 19th Century the penetrating power of artillery increased, explosives became more destructive, and the fortifications of Paris built in 1846 proved unable to withstand bombardment in the Franco-Prussian War. At the beginning of

the World War the Belgian fortresses were rapidly demolished. Field fortifications, however, entrenchments, bomb-proof shelters, and small concealed "pill-boxes" built of concrete, proved more effective as defence, although no fortifications of this impermanent character were proof against the howitzer shell.

All the experience gained in the World War has been put to use in the most extensive system of fortification at present existing—the so-called Maginot Line which defends the NW. frontier of France where it is contiguous with Germany and Luxemburg. It consists of a line of casemates, connected by extensive underground systems of works, gas-proof and bomb-proof. The line is kept permanently garrisoned and stocked with provisions, ammunition, etc.

Fort Sumter, an island fort in Charleston Harbour, S. Carolina, U.S.A., at which was fired the first shot in the American Civil War, in April 1861.

Fortuna, a Roman divinity, the goddess of luck, of luck, and especially good luck; is represented in art as standing poised on a globe or a wheel, to express her inconstancy.

Fortunate Islands, two islands the ancients to have been situated in the Atlantic, far to the W. of the African Coast. They were so named because the souls of the blessed were believed to reside there. The name has also been given to the Canary Is., which some suppose are the origin of the tradition.

Fortunatus, a character in a popular German legend, who possessed a *purse*, out of which he was able to provide himself with money as often as he needed it, and a *cap*, by wearing which, and wishing to be anywhere, he was straightway taken there; these, by his own free election and choice, he got conceded to him by the Upper Powers, and they proved a curse to him rather than a blessing.

Fortune-telling, the practice of events by means of astrology, divination, crystal-gazing or palmistry, is of very ancient origin. The laws in England against fortune-telling were formerly severe, and even to-day under acts of 1743 and 1842 a fortune-teller is liable to imprisonment as a disorderly person.

Fort William, (1) a small burgh in Inverness-shire, 86 m. SW. of Inverness, near the southern end of the Caledonian Canal. The railway station stands on the site of the old fort, which in 1655 was built by monks. A meteorological observatory was erected here in 1889. (2) port in Ontario, Canada, on the Kaministiquia It., at head of Lake Superior; an important railway junction with 86 m. of landlocked harbour. It is a great distributing centre and has grain elevators, with iron and other mineral deposits near by. Pop. 20,500.

Fort Worth, city of Texas, U.S.A., has petroleum, meat-packing and railway industries. Pop. 165,500.

Forum, a public place in Rome and Roman cities where the markets and courts of justice were held and popular assemblies met for civic business.

Fosdick, Harry Emerson, American Baptist minister; born at Buffalo, New York; educated at Colgate University and Union Theological Seminary; became professor of Practical Theology at the latter in 1915 and, later, pastor of Riverside Church, New York. Author of many popular religious books. (1878-).

Fosseway, The, one of the great Roman military roads in Britain, probably following the course of an earlier

Celtic road, running from SW. to E.; its course was from Exeter, through Bath, Silchester, Leicester and Lincoln.

Fossil, traces of the existence of any

body, whether animal or vegetable, which has been buried in the earth by natural causes" (Lyell). Fossils therefore are any portion of an animal or vegetable organism, such as the shells of molluscs, the skeletons of corals, bones of vertebrate animals, leaves of plants, etc., which have undergone a process of petrification by pressure and

by the complete infiltration of mineral matter. The term "fossil" also includes the moulds or "casts" of shells, the fossilised footprint of an animal, or any other mark of the former presence of a living organism. The study of fossils is called paleontology.

Foster, Myles Birket, English water-colour artist, born in North Shields. His earliest work was done in wood-engraving under the direction of Landells, and many of his sketches appeared in the *Illustrated London News*. Following this he executed, in collaboration with John Gilbert, a series of illustrations for the works of Goldsmith, Cowper, Scott and other poets, in which he exhibited a rare skill in rural scenes. In 1861 he was elected a member of the Water Colour Society. (1825-1899).

Fotheringhay, a village in Northamptonshire, on the Nen, 9 m. SW. of Peterborough; the ruined castle there was the scene of the execution of Mary Queen of Scots, in 1587. Pop. 200.

Foucault, John Bernard, a French physicist, born in Paris; distinguished for his studies in optics and problems connected with light; demonstrated the rate of the rotation of the globe by the oscillation of a pendulum. (1819-1868).

Fouché, Joseph, Duke of Otranto, born in Nantes, in France, a member of the French National Convention, who voted for the death of Louis XVI.; became Minister of Police under Napoleon; falling into disfavour, was sent into exile, but recalled to Paris in 1814; advised Napoleon to abdicate at that time and again after Waterloo; served under Louis XVIII. for a period but was obliged at length to quit France for good; died at Trieste. (1763-1820).

Foula, a high and rocky islet among the Shetlands, 32 m. W. of Lerwick. Its sandstone cliffs on the NW. are 1,220 ft. in height, and rise sheer from the water. It is sparsely peopled. Fishing is almost the sole pursuit.

Foulis, Robert and Andrew, celebrated printers; were brought up in Glasgow, where Robert, the elder, in 1743 became printer to the university. His press was far-famed for the beauty and accuracy of editions of the classics. Andrew subsequently joined his brother. An academy, started by the brothers in 1753 for engraving, moulding, etc., involved them eventually in financial ruin. They have been called the "Scottish Elzevirs" (Robert, 1707-1776; Andrew, 1712-1775).

Foundations, the substructure supporting a building, designed not only to bear the immediate weight of the walls, columns, etc., but also to distribute it evenly and in accordance with the weight-bearing capacity of the soil beneath the foundations; the term is generally used for the base of a building sunk below the

FOSSIL AMMONITE

surface of the ground, preferably below the reach of frost; for buildings for which permanence is required, the foundations should go very much deeper.

Foundling Hospitals, institutions for the rearing of children who have been deserted by their parents; they exist in most civilised countries; the first foundling hospital was established at Milan in 787, and others arose in Germany, Italy and France before the 14th Century; the Paris foundling hospital is a noted institution of the kind, and admits legitimate orphans and children pronounced incorrigible criminals by the court; the London foundling hospital founded by Captain Thomas Coram, which supports about 500 children, was moved from Guilford Street, London, to Redhill in 1926.

Fountain, a spring or an unceasing natural or artificial. The term is also applied to the architectural setting or artificial superstructure to such a continuous flow of water. Fountains are either designed in the form of a basin into which the water is conveyed through a spout, often ornamental, or their principal feature may be the display of water by means of jets and sprays. If, for decorative effect, the water is allowed to overflow from the basin, the latter must be carefully adjusted to give an even flow of water all round. Fountains in Mohammedan cities are generally enclosed, surrounded with colonnades and tiled paving.

Fountain of Youth, the magic of which Sir John Mandeville wrote, as possessing the power to restore the aged to youth, which was believed to be on an island in the Bahamas group; Ponce de Leon, a Spanish adventurer, sailed to Florida in quest of it in the 16th Century.

Fountains Abbey, a Cistercian abbey, 2 m. from Ripon, in the W. Riding of Yorkshire, England. It was founded by Thurstan, Archbishop of York, in 1132, and dissolved by Henry VIII. in 1540. Beautiful ruins of the buildings still remain.

Fouquier-Tinville, Antoine Quentin, a French revolutionary, born near Artois; member of the Jacobin Club, Attorney-General of the Revolutionary Tribunal; was guillotined after the fall of Robespierre. (1747-1795).

Fourier, Francois Marie Charles, French socialist, born at Besancon; as agent in cloth business, travelled in W. Europe; served two years in army; became agent for a provision merchant and saw much to disgust him with the commercial system. Proposed the creation of colonies or Phalanxes, to embrace finally all mankind, who should dwell in Phalanxes or standardised homesteads. Wrote *Le Nouveau Monde Industriel et Socialiste*, 1829, and other works. His failure to establish any phalanxes never convinced him there was any fault in his philosophy. Died in prison. (1772-1837).

Fourier, Jean Baptiste Joseph, Baron, physicist; French mathematician and physicist; Prefect of Isere, 1801-1814; Baron, 1808. Perpetual Secretary for Mathematical Sciences, Academy of Sciences, 1822; Studied theory of heat. Devised Fourier's Series, 1807. (1768-1830).

Fourteen Points, a summary of aims put forth by President Woodrow Wilson in Jan. 1918. They affirmed the principle of national self-determination and autonomy, the reduction of armaments, the impartial consideration of colonial distribution, and the freedom of the seas. The League of Nations was inaugurated in Point No. 14. The Fourteen Points were intended as the basis

of the Peace Treaty between Germany and the Allied and Associated Powers.

Fourth Dimension, according to Einstein's Theory of Relativity, the dimension which would indivisibly the three spatial dimensions with that of time to form a curved "continuum," and within which occur all material phenomena. With the other three dimensions it composes space-time. The theory was put forward to account for certain physical phenomena observable in the movements of stars and atoms, not explained by Newton's laws of gravitation, which are held to be applicable only to the world as observed by man.

Fourth Estate, the daily press, so called by Edmund Burke, pointing, in the House of Commons, to the reporters' gallery.

Fourth of July, the anniversary of American Independence in 1776.

Fourth Party, a small group in the English Parliament formed by Lord Randolph Churchill in 1880, consisting of four or five dissident Conservatives; its influence was much greater than its numbers suggest; A. J. (later Earl) Balfour worked with it for a time.

Fowey, a market town and shipping port 8 m. from St. Austell, Cornwall, England, on W. side of R. Fowey. Several Crusading vessels sailed from here to the Holy Land. The forces of Lord Essex surrendered to Charles I. here, 1644. Exports china clay, china stone and coal. Pop. 2,600.

Fowler, Sir John, civil engineer, born in Sheffield; was actively engaged in the construction of numerous railways (notably the London and Brighton and Metropolitan), and in dock and bridge building; carried through important works in Egypt in 1885, and, with Sir B. Baker, designed the Forth Bridge, on the completion of which he received a baronetcy. (1817-1898).

Fox (and Fox-hunting). The foxes constitute a genus (*Vulpes*) of carnivorous animals of the Dog (Canidae) family of mammals. They are distributed over most of the N. part of the Northern hemisphere and southwards in Mexico, Morocco, India and China. The colour of their coats varies from buff to grey. They are not gregarious animals. Among the notable species are the Arctic Fox (*Vulpes lagopus*), an important fur-bearing species, being blue in summer and white in winter; the Common Fox (*Vulpes alopec* or *V. vulpes*) which is found in Britain and has long been hunted.

The fox-hunt did not take its present form until about 1750, when hounds were first trained for the sport. Foxes are hunted by the scent secreted by glands beneath the tail. They inhabit "earth" in large woods, spinneys, osier-beds and gorse thickets. Their habits are nocturnal. Pairing takes place in February, and the cubs are born in April. September and October are devoted to cub-hunting, to "blood" the young hounds and train them for hunting proper. The season begins on Nov. 1.

The officials of the hunt are the Master (M.P.H.), in whose hands is the management of the hunt and of the field; a huntsman, who supervises the feeding and training of hounds; the whipper-in (two for large packs), who turns the hounds to the sound of the horn, whips them off a wrong scent and checks them at the end of a hunt.

Fox, Charles James, an eminent Whig statesman, third son of Henry Fox, first Lord Holland, born in London; was educated at Eton and Oxford, and at the age of 19 sat in Parliament for Midhurst. He held office under Lord North, but quarrelled with the premier and went over to the Whigs, then led by Rockingham; here he came under the influence of Burke, and with him offered uncompromising opposition to the American War. In the Rockingham ministry which followed he was Foreign Secretary, and subsequently joined North in the short-lived coalition ministry of 1783. During the next 14 years he was the great opponent of Pitt's Government, and his brilliant powers of debate were displayed in his speeches against Warren Hastings and in the debates arising out of the French Revolution, in which he advocated a policy of non-intervention. His sympathy with the French revolutionaries cost him the friendship of Burke. During a retirement of five years he wrote his *History of James II.* On Pitt's death in 1806 he again came into office as Foreign Secretary, but died shortly afterwards. (1749-1806).

Fox, George, founder of the Quakers, born at Fenny Drayton, Leicestershire; son of a poor weaver, and till his twentieth year plied the trade of a shoemaker; conceived that he had a call to withdraw from the world and give himself up to a higher ministry; about 1646 began his crusade against the religion of mere formality, and called upon men to trust to the "inner light" alone. His quaint garb won him the title of "the man with the leather breeches," and his mode of speech, with his "thou's" and "thee's," subjected him to general ridicule; but by his earnestness he gathered disciples about him who adopted his principles and in the prosecution of his mission he visited Wales, Scotland, America and various parts of Germany, not without results. Many years of his life were spent in prison, but his teaching drew him a large number of adherents, and Quaker centres were formed in Holland and Germany as well as in this country. (1642-1691).

Foxe, John, martyrologist, born in Bowton, Lincolnshire; in 1545 he resigned his Fellowship of Magdalen College, Oxford, espousing the doctrines of the Reformation, and for some years acted as a private tutor in noble families; during Queen Mary's reign he sought refuge on the Continent, where he met Knox and other leading Reformers; he returned to England on the accession of Elizabeth, and was appointed to a prebend in Salisbury cathedral, but his Nonconformist leanings precluded his further preferment; his most famous work is his *Book of Martyrs*, first published in Latin, the English version appearing in 1563. (1516-1587).

Foxe Channel, a strait N. of Hudson Bay, Canada, separating Baffin Land from the Canadian mainland and from Southampton I.

Foxglove a popular name for the digitalis (*D. purpurea*). It is indigenous in the British Isles, where it is found as a common wayside plant, generally with a purple flower. The leaves contain digitalin and are actively poisonous.

Foxhound, a crossbreed of greyhound and terrier, especially bred and trained for foxhunting, keen-scented and capable of sustained speed. They are trained to cub-hunting at 18 months, and thereafter are usually in their prime for three or four seasons and used for fox-hunting.

FOXGLOVE

Fox-terrier, a small dog which has been bred in England

for several hundred years as being particularly suitable for "bolting" foxes and badgers. There are two varieties, the smooth-haired and wire-haired, differing little except in the nature of the coat. They are white in colour, and have patches of black or tan on the head, body and legs.

FOX-TERRIER

Foxtrot, a popular dance of American origin, introduced into England at the beginning of the 20th Century; it grew so much in favour that it temporarily ousted the waltz.

Foyers, Fall of, a fine cascade, having a fall of 165 ft., on the lower portion of the Foyers, a river of Inverness-shire, which enters Loch Ness on the E. side, 10 m. N.E. of Fort Augustus.

Foyle, a inlet of the sea about 20 m. long, between counties Donegal (Thironall, Ireland, Elre) and Londonderry, Northern Ireland. The R. Foyle empties into it. It has been the subject of dispute as to fishing rights between N. Ireland and the Irish Free State.

Fraction, in mathematics or mensuration, a division of a given unit; thus an ounce is a fraction of a pound. It is expressed either as a vulgar fraction, by two numbers, the upper, or numerator, being written above a line, and the under, or denominator, below it; thus, $\frac{1}{2}$ means two fifth parts of unity; or as a decimal fraction, by extension of the ordinary decimal method of numeration to cover tenths, hundredths, etc., of unity, a point being written after the unit figure; thus .4 means four-tenths, or two-fifths, of unity. A fraction whose numerator is smaller than its denominator is called proper; if otherwise, improper.

Fracture, a skeletal injury to the body by the violent breaking of a bone, at any point, but usually at a distance from the joint. When the skin is unbroken, the fracture is "simple"; a "compound fracture, where the skin is lacerated, sometimes with accompanying hæmorrhage, is more serious owing to the danger of infection and the difficulty of setting caused by splintering. The manner in which the bone is broken may be either oblique, transverse, spiral, comminuted or pulverised, or green-stick (of immature bones of young persons). Diagnosis is aided by the X-ray, and careful setting, followed by rest, is essential to recovery.

Fracture, in geology, an irregular breakage in a rock or mineral not occurring in a plane of natural cleavage. Various kinds of fracture are distinguished by the designations "even," "uneven," "conchoidal" or shell-like (i.e., one side concave, the other convex), "splintery" or scaly, and "hackly" (i.e., covered with sharp unequal points).

Fragonard, Jean Honoré, a French artist, born in Grasse, gained the "prix de Rome" in 1754, and afterwards studied in Rome; was a member of the French Academy, and during the Revolution became keeper of the Musée. Many of his paintings are in the Louvre, and are characterised by their free and luscious colouring. (1733-1806).

Fram (Norwegian name, meaning "forward"), a ship especially designed for Arctic exploration by Dr. Fridtjof Nansen and used by him in 1893. The strength of the ship, combined with the sloping sides, successfully withstood the pressure of the ice.

Framlingham, an ancient market town on R. Ore, Suffolk, England, 7 m. from Saxmundham. The church contains several monuments of the Howard family. There are a corn exchange and castle ruins. Framlingham College, for boys, was founded in 1876. Pop. 2,100.

Frampton, Sir George James, sculptor; entered Royal Academy schools, 1881; R.A., 1902; knighted, 1908. Works include "Peter Pan," Kensington Gardens; Edith Cavell Memorial, in London; statues of Queen Victoria at Calcutta, Winnipeg, etc.; and figures on St. Mary's spire, Oxford. (1860-1928).

Franc, a silver coin ¹⁸³⁶ fine, the monetary unit of France since 1799, nominally equals about 2d. in English currency (£1 = 124.21 francs); before the World War was valued about 9½d. (£1 = 25.2 francs), and was also in use in Belgium and Switzerland, and under other names in Italy, Spain and Greece; since the War has fluctuated considerably in value, and was re-stabilised on a gold basis in 1928.

France, a country of Western Europe, and one of the "Great Powers." Area 212,995 sq. m. Pop. (1931 census) 41,508,000. France occupies a geographical position of peculiar advantage, having a S. foreshore on the Mediterranean and a W. and N. seaboard washed by the Atlantic and the English Channel, possessing altogether a coastline of upwards of 2,000 m., while to the E. it abuts upon Belgium, Germany, Switzerland and Italy. It is divided into 90 departments, including Corsica.

It is mainly composed of lowland and plateau, but has the Cevennes in the S. while the Pyrenees and Alps (with the Vosges and Ardennes farther N.) lie on its S. and E. boundaries. Rivers abound, and form, with the splendid railway, canal and telegraph systems an unrivalled means of internal communication; but there are very few lakes.

It enjoys on the whole a fine climate, which favours the vineyards in the centre (the finest in the world), the olive groves in the S. and the wheat and beetroot region in the N. There are also considerable iron deposits. Its manufactures include silk, wine and woollen goods, and in fine artistic work it is without an equal. The colonies have a total area of over 5,000,000 sq. m., and include Algeria, Madagascar, French India, French Indo-China, French W. Africa, French Equatorial Africa and French Somaliland.

The French are a people of keen intelligence, of bright, impulsive and vivacious nature; urbane, cultured and pleasure-loving in the cities, thrifty and industrious in the country. Few races have given so rich a bequest to the literature and art of the world. Roman Catholicism is the dominant form of religion, but Protestantism and the Jewish religion are also State supported. The Government is a Republic, and there are two legislative chambers—a Senate and a Chamber of Deputies.

Originally occupied by Celts, the country, then called Gallia, was conquered by the Romans between 58 and 51 B.C., who occupied it till the 4th Century, when it was overrun by the Teutons, including the Franks, who became dominant; and about 870 the country, under Charles the Bald, became known as France.

There was no central authority until the reign of Hugh Capet (987). He and his successors, especially Louis VI. (le Gros), established the royal power. In the 14th and 15th Centuries the Valois dynasty was strengthened after the Hundred Years' War. Following the success of Charles VI.'s generals and Joan of Arc, the English were finally driven out of France by Charles VII. (1450).

War in Italy, begun by Charles VIII. (1494), was inflamed by the rivalry of Francis I. and Charles of Spain, and followed by the Wars of Religion (1562). Henry IV. inaugurated the dynasty of the Bourbons. The Edict of Nantes pacified France, and thanks to Richelieu, Louis XIII. reigned absolute.

The power consolidated by Mazarin and Colbert was compromised by Louis XIV.'s wars. Absolutism became further discredited until overthrown by the Revolution and the execution of Louis XVI. (1793). France had henceforth a constitution, and saved from invasion by the National Convention, was given a strong central government by Napoleon. In 1815 the Bourbons were restored. After the Liberal Revolution (1830) Louis-Philippe became king, and the constitutional charter was promulgated. A further revolution (1848) overthrew Louis-Philippe. Prince Louis Napoleon was elected president, but a *coup d'état* (1851) re-established the Empire.

The Second Empire was prosperous, but its foreign policy was disastrous. After the Franco-Prussian War (1870-1871) a National Assembly was set up, and Napoleon was deposed. The Third Republic survived the Communist Revolution in 1871, and a period of consolidation was not checked until the World War.

In 1919 reconstruction became imperative. Clémenceau's power did not long survive the war. Briand's pacific policy was defeated in 1922 by Poincaré, who with the occupation of the Ruhr pursued an aggressive policy of making Germany pay. In 1924 Herriot evacuated the Rhineland, and stabilised Europe. Poincaré returned to power to save the franc. Successful, he resigned in 1928. Briand dominated foreign policy either as premier or foreign minister until his death (1932).

Herriot's ministry failing on financial questions, was followed by instability which ended with riots in Paris (Feb. 1934). A strong coalition government was formed under Doumergue. In 1935 Laval, Premier, with Flandin, Foreign Minister, came to an understanding with Italy. Consequently France actively condemned Germany's violation of the Versailles Treaty. In May 1936 a swing to the Left in the Elections made Blum, the leader of the Popular Front, Premier. His Government dissolved the Fascist League, dealt satisfactorily with a number of industrial strikes, and during the Spanish Civil War maintained with Great Britain a strict policy of non-intervention. During 1936 and 1937 a series of financial crises occurred, and in 1938 Daladier formed a strong government to restore prosperity.

France, Anatole, pen name of Jacques Anatole, Anatole Thibault, French novelist.

Son of a Parisian bookseller, he published his first work in 1868, and soon made a name as a writer of satire; received the Nobel Prize for literature in 1921. Among his works are *Penguin Island* and *The Revolt of the Angels*. (1844-1924).

ANATOLE FRANCE

Francesca, Pietro della, an Italian painter, sometimes called Piero.

Borghese after his native place; did fresco-work in Florence and at Loretto; painted pictures for the Duke of Rimini, notably "The Flagellation"; was a friend of Raphael's father; some of his pictures are in the London National Gallery. (1430-1492).

Francesca da Rimini, a beautiful lady of the 13th Century, whose pathetic love

story finds a place in Dante's *Inferno*. She was betrothed by her father, the Lord of Ravenna, to Giovanni of Rimini, but her affections were engaged by Paolo, his brother. The lovers were found together by Giovanni and murdered by him.

Francesco di Paula, or **St. Francis of Paola**, founder of the order of the Minims, born in Paula, in Calabria; took up his abode in a cave, where the severe purity and piety of his life attracted to him many disciples. Subsequently he founded an ascetic brotherhood, called the Minims; now reduced to a few members, mostly in South Italy. (1416-1507).

Franche-Comté, an ancient province of France, viceroy in the E. of France, centring round Besançon, added to the crown of France in the reign of Louis XIV. at the peace of Nimeguen in 1671.

Franchise, the right to elect members to Parliament. Originally confined to freeholders of land and the clergy, the right was extended under the Reform Bill of 1832. In 1885 votes were given to all males over 21 who were resident ratepayers, lodgers in unfurnished rooms rented at more than £10 a year, and certain classes of servant. Women, peers and imbeciles were excluded. The Representation of the People Act of 1918 extended the vote to women over 30 and abolished all property qualifications, and in 1928 the franchise was further extended to women over 21.

Francia, Dr. José Gaspar Rodríguez de, dictator of Paraguay, born near Asunción, in Paraguay; a lawyer; in the revolutionary uprising which spread throughout Spanish South America, Paraguay played a conspicuous part, and when in 1811 she declared her independence Francia was elected secretary of the first national junta, and two years later one of two consuls. Eventually, in 1814, he became dictator, a position he held till his death. He is the subject of a well-known essay by Carlyle. (1757-1840).

Francis, St., of Assisi, founder of the Franciscan order, born in Assisi, in Umbria; began life as a soldier, but during a serious illness was converted, and devoted himself to a life of poverty and self-denial. His enthusiasm provoked emulation, and some of his neighbors associated with him and formed a brotherhood, which gave rise to the order. After being approved by the Pope, it rapidly spread both in and beyond Europe, engaging in missionary work and preaching; is still one of the most numerous of Roman Catholic religious orders. Franciscan nuns are called "Poor Clares." St. Francis was specially famous for his love of Nature and the lower animals.

Francis, St., of Sales, Bishop of Geneva, born at Sales, near Amiens, founder of the Order of the Visitation; was sent to persuade the Calvinists of Geneva back to the Church of Rome, and applied himself zealously to the reform of his diocese and the monasteries; wrote the famous *Devout Life*. (1567-1622).

Francis I., King of France, 1515-1547; repatriated Milan, 1515; aspired to Imperial crown, 1519. Met Henry VIII. of England on the Field of the Cloth of Gold, 1520. Defeated by Emperor Charles V. and captured at Pavia, 1525; lost Italian possessions. Defeated Charles at Ceresole, 1544, but was compelled by alliance of Charles with Henry to make peace with former at Crepy. (1494-1547).

Francis II., King of France, 1559-1560, succeeded. A weak-minded boy; married Mary Queen of Scots, 1558. (1544-1580).

Francis I., Holy Roman Emperor, 1745-1765; son of Duke of Lorraine; married Maria Theresa, daughter of

Emperor Charles VI. Was succeeded by his son Joseph. (1708-1765).

Francis II., Holy Roman Emperor, 1792-1806, Austrian Emperor from 1804; son of Emperor Leopold II. Defeated repeatedly by Napoleon. Last holder of the Imperial title. (1768-1835).

Francis, Sir Philip, British politician, and author; educated at St. Paul's School; clerk in Secretary of State's office and War Office. Appointed to Council of Bengal, 1773. Wounded in India in duel with Warren Hastings. In Parliament at intervals, 1784-1807; prominent accuser of Hastings. (1740-1818).

Franciscans, or **Minorites**, an order of friars founded by St. Francis of Assisi in 1208; they were in particular pledged to absolute poverty, though in later times they were allowed to hold property in common. They were divided into a First Order of friars, a Second of nuns and a Third of lay disciples. In later times several internal disputes led to divisions in the order, and there are now three main branches, Capuchins, Conventuals and Franciscans of the Leonine Union.

Francis Ferdinand, Archduke of Austria and

the Emperor Francis Joseph's heir. His assassination at Sarajevo on June 28, 1914, was the immediate cause of the World War. (1863-1914).

Francis Joseph,

Emperor of Austria and King of Hungary; succeeded to the throne in 1848 on the abdication of his uncle, Ferdinand I. The Hungarian difficulty was the chief problem of the early part of his reign, with which he at first dealt in a spirit of harsh oppression, but the desire for national autonomy was met by the creation of a dual monarchy in 1867, Francis being crowned King of Hungary. He was on the throne when Austria declared war on Serbia in 1914. Other important events were the cession of Lombardy to Sardinia in 1859 and of Venice in 1866, after an unsuccessful war with Prussia. (1830-1916).

Frack, César Auguste Jean Guillaume Hubert, musical composer; born at Liège; naturalised in France, 1870. Had distinguished career at Paris Conservatoire. Wrote several symphonies, oratorios and operas, including *Le Valet de Ferme* (1852); *Huida* (1855). (1822-1890).

Franco, General Francisco, leader of Spanish rebel forces in the Civil War of 1936, spent most of his early military service in Morocco; in 1933 was in command in the Balearic Is., and in 1935 Chief of Staff of the Spanish Army; later he was sent to the Canary Is. by the Spanish Socialist government, whence in July 1936 he flew to Tetuan, Morocco, and thence to the mainland to open hostilities in the Civil War. In Oct. 1936 he was declared Commander-in-Chief and "Chief of the Spanish State." (1893-).

Franconia, former name of a district in Central Germany (a portion of the kingdom known as Austrasia), which, as the home of the Franks, was regarded as the heart of the Holy Roman Empire; the emperors long continued to be crowned within its boundaries; subsequently it was divided into two duchies, East Franconia and Rhenish Franconia; the latter was abolished in 1501 and the former much diminished; from 1806 to 1837 the name had no official existence, but in 1837 the names Upper, Middle and Lower Franconia were given to the three northern divisions of Bavaria.

ARCHDUKE FRANCIS FERDINAND

Franco-Prussian War was a war precipitated on the one hand by Bismarck's policy of unifying and extending Germany under Prussian domination, and on the other by Napoleon III.'s disastrous ventures in foreign policy, his failure to obtain from Bismarck the reward promised to him as a price for non-intervention in the war against Austria, and finally his refusal to admit the candidature of the Hohenzollern Prince Leopold for the throne of Spain. France declared war in Aug. 1870.

Marshal MacMahon was immediately defeated at Wissemburg and Wörth, and General Frossard at Spicheren. On Sept. 1 MacMahon was again defeated at Sedan, when on his way to relieve Bazaine, who was besieged at Metz. The following day Napoleon III. surrendered and was made a prisoner of war. A Government of National Defense was formed at Paris, and refused to yield to Prussian domination; but in 10 weeks Paris was besieged. In September Strasbourg surrendered; in October, Metz; and the Prussians occupied Orléans.

Following Bismarck's rapid advance and victory at Spangenhain early in 1871, Paris capitulated. Peace was ratified in Frankfurt in May. France ceded Alsace and E. Lorraine, Metz and Strasbourg. A large indemnity was also imposed, to be paid within three years, during which period a garrison of German troops was to remain on French soil.

Franc-Tireurs, (i.e., free-shooters), chiefly peasants, who carried on a guerrilla warfare against the Germans in the Franco-Prussian War; were at first denied the status of regular soldiers by the Germans and mercilessly shot when captured, but subsequently, having joined in the movements of the regular army, they were when captured treated as prisoners of war.

Frankau, Gilbert, novelist, whose mother was the novelist known as Frank Danby; educated at Eton, began writing poetry in 1910. His first novel *One of Us*, 1912, was in verse. His second prose novel, *Peter Jackson* (1919) and *Masterson* (1926) are his most successful works. Author also of *The City of Fear* and *Gerald Cranston's Lady*. (1884-).

Frankenstein, a student in a romance of Mrs. Shelley. He created a soulless monster, yet a being not without craving for human sympathy; this creature, purely animal and powerful for evil, eventually kills his creator. Popularly, though erroneously, the name is often applied to the monster itself who, in the story, is unnamed.

Frankfort-on-the-Main, one of the free cities of Germany, a centre of importance under the Kaisers and the seat of the Diet of the Germanic Confederation, and one of the great banking centres of the world; birthplace of the poet Goethe, and the seat of a University. Pop. 550,000.

Frankfort-on-the-Oder, a town of Prussia, in the province of Brandenburg, 51 m. S.E. of Berlin; is a well-built town; is actively engaged in the manufacture of machinery, chemicals, paper, etc. Pop. 78,000.

Frankincense, a resinous product of the genus *Boswellia*. It is found in round, pinkish gleebrakes, covered with white powder; has a sweet smell when burnt, and is a common ingredient of incense.

Franklin, under the feudal system a tenant to the sovereign alone; subsequently the term was applied to what may be regarded as a yeoman farmer.

Franklin, Benjamin, born in Boston, U.S.A., youngest son of a tallow-

chandler; received a meagre education, and at the age of 12 became apprenticed to his brother, a printer and proprietor of a small newspaper; subsequently made his way almost penniless to Philadelphia, where he worked as a printer. In 1724 he came to England and for 18 months laboured at his trade in London, when he returned to Philadelphia, and there became proprietor of the *Pennsylvania Gazette*. In 1732 began to appear his *Poor Richard's Almanac*, which was great success.

BENJAMIN FRANKLIN

Four years later he entered upon a public career, rising through various offices to the position of Deputy Postmaster-General for the Colonies, and sitting in the Assembly; carried through important political missions to England in 1757 and 1764, and was prominent in the deliberations which ended in the declaration of American independence in 1776. He visited France and helped to bring about the French alliance, and, as American minister, signed the Treaty of Independence in 1783; was subsequently minister to France. His name is also associated with scientific discoveries, notably the discovery of the identity of electricity and lightning. (1706-1790).

Franklin, Sir John, Arctic explorer, shire; entered the navy in 1800. Was present at the Battle of Copenhagen; shortly afterwards accompanied an expedition, under Captain Flinders, to explore and survey the coasts of Australia; wrecked; subsequently distinguished himself at the Battle of Trafalgar. In 1818 he was second in command of an unsuccessful expedition sent out under Captain Buchan to discover a North-West Passage, and in 1819 he was chosen to head another Arctic expedition, which, after exploring the Saskatchewan and Coppermine Rs. and adjacent territory, returned in 1822. Franklin was created a post-captain, and in 1829, knighted. In 1845 was put in command of an expedition, consisting of the *Erebus* and *Terror* for the discovery of the North-West Passage. The expedition never returned. Many relics of this unfortunate explorer were found, demonstrating the discovery of the North-West Passage, but the story of his fate has never been precisely ascertained. (1786-1847).

Franks, the name given in the 3rd Century to a confederation of Germanic tribes, who subsequently grouped themselves into two main bodies called the Salians and the Ripuarians, the former dwelling on the Upper Rhine, and the latter on the Middle Rhine. Under their king, Clovis, the Salians overran Central Gaul, subjugating the Ripuarians, and extending their territory from the Scheldt to the Loire, whence in course of time they gradually developed the kingdom of France. The Franks were of a tall and martial bearing, and thoroughly democratic in their political instincts.

Franz, Robert, musical composer, born in 1843, in Halle. His first songs appeared in 1863, and were cordially appreciated by Mendelssohn and other masters. In 1868 ill-health forced him to resign his musical appointments in Halle. He published upwards of 250 songs. (1815-1892).

Frascati, a town in the Rome province of Italy, 12 m. S.E. of Rome. It is much visited by tourists and there are interesting ruins in the neighbourhood. The district produces good wine, oil and grain. Pop. 12,300.

Fraserburgh, a seaport on the N.E. coast of Aberdeenshire, Scotland. It has a good harbour. Industries include herring-fishing and machine-tool manufacturing, and there is a large timber trade. Pop. 2,700.

Fraser River, the chief river of British Columbia (named after Simon Fraser, the explorer, in 1808), is formed by the junction near Fort George of two streams, one rising in the Rockies, the other flowing out of Lakes Stuart and Fraser. It discharges into the Georgian Gulf, 800 m. below Fort George. Rich deposits of gold are found in the lower basin, and an active industry in salmon-catching and canning is carried on.

Fratricelli (i.e., Little Brethren), a religious sect in Italy in the 13th Century, which continued to exist until the close of the 15th. They were an offshoot from the Franciscans (q.v.), who sought to enforce more rigidly the laws of St. Francis, and declined to accept the pontifical mitigations. Ultimately they broke away from the authority of the Church, and maintained a separate organisation, having declared the Church in a state of apostasy. Their régime of life was of the severest nature; they begged their daily food from door to door, and went clothed in rags.

Fraud, the wilful deception of one person by another. In English law a plea of fraud can be maintained only on proof of the following three points: (1) that a statement has been made representing as true something that was really false, and was made on the assumption that the deceived person would act on it; (2) that the person who made the false statement was either aware that it was not true or recklessly unconcerned whether it was so or not; (3) that the person deceived acted on the false statement and thereby suffered loss. A contract entered upon as the result of fraudulent representations cannot be enforced against the party defrauded. The maxim, *fraus vitiat omnia* (fraud vitiates everything), implies that once fraud is proved, any transaction induced by it is at once vitiated, and at any stage of the proceedings.

Fraunhofer, Joseph von, German optician, born in Straubing, Bavaria; rose to be manager of an optical institute at Munich and eventually attained to the position of professor in the Academy of Sciences. He is chiefly remembered for his observation of the dark lines in the solar spectrum, since called after him the Fraunhofer lines. (1787-1826).

Fraunhofer Lines, the fine black lines crossing the solar spectrum, first observed by Wollaston in 1802, and later studied by Fraunhofer (above). The lines correspond to the wave-lengths of light absorbed in the reversing layer of the sun.

Frazer, Sir James George, British archaeologist and writer, born in Glasgow. He made a study of mythology and folklore, and published in 1890 *The Golden Bough*, a monumental study of comparative religion. He was knighted in 1914; O.M., 1925. (1854-).

Frederick VI., of Denmark, became the insanity of his father; succeeded the latter, 1808. His reign is noted for the abolition of feudal serfdom and the prohibition of the slave-trade in Danish colonies, and the granting of a liberal constitution in 1831; while his participation in the maritime confederation between Russia, Sweden and Prussia led to the destruction of the Danish fleet off Copenhagen in 1800 by the British, and his sympathy and alliance with Napoleon brought about the bombardment of Copenhagen in 1807, and the cession of Norway to Sweden in 1814. (1768-1839).

Frederick III., German emperor, born at Potsdam; fought at Königgratz in 1860, and in 1870 in the Franco-Prussian War; married the Princess Royal of England; succeeded his father, William I., but fell a victim to a serious throat malady after a reign of only 101 days. (1831-1888).

Frederick I., surnamed Barbarossa (Red-beard), of the house of Swabia, Emperor of the Holy Roman Empire (q.v.) from 1152 till 1190. His reign is the most brilliant in the annals of the empire, and he himself among the most honoured of German heroes. His vast empire he ruled with iron rigour, extending his sovereign rights to Poland, Hungary, Denmark and Burgundy. The great struggle of his reign, however, was with Pope Alexander III. and the Lombard cities, whose right to independence he acknowledged by the treaty of Constance (1183). He was drowned in Cilicia in the crusade against Saladin and the Moslem power. His lifelong ambition was to secure the independence of the empire, and to subdue the States of Italy to the imperial sway. (1123-1190).

Frederick II., called the Wonder of the preceding, the World, grandson of the preceding. He was crowned emperor in 1215, at Aix-la-Chapelle, having driven Otto IV. from the throne. He gave much attention to the consolidating of his Italian possessions, encouraged learning and art, and had the laws carefully codified. He was opposed by the Papal power and the Lombards. In 1228 he gained possession of Jerusalem, of which he crowned himself king. His later years were spent in struggles with the Papal and Lombard powers, and darkened by the treachery of his son Henry and of an intimate friend. He was a man of outstanding intellectual force and learning. (1194-1250).

Frederick V., Electoral Prince Palatine; succeeded to the Palatinate in 1610, and married Elizabeth, daughter of James I. of England. An attempt to head the Protestant union of Germany and his usurpation of the crown of Bohemia brought about his ruin and expulsion from the Palatinate in 1620 by the Spaniards and Bavarians. He took refuge in Holland, but two years later his principality was given to Bavaria by the emperor. (1596-1635).

Frederick I., first King of Prussia, third Elector of Brandenburg, and son of the Great Elector Frederick-William, whom as elector he succeeded in 1688. He extended his territory by purchase; supported William of Orange in his English expedition, and lent assistance to the Grand Alliance against France, for which he received the title of King of Prussia, being crowned such in Königsberg in 1701. (1657-1713).

Frederick II., King of Prussia from 1740 to 1786, surnamed "The Great," grandson of the preceding, and nephew of George I. of England, born in Berlin. After his marriage in 1733 he resided at Rheinsburg, indulging his taste for music and French literature, and corresponding with Voltaire. He came to the throne with the ambition of extending and consolidating his power. From Austria, after two wars (1740-1744), he wrested Silesia, and again fought the empire in the Seven Years' War (1756-1763), while in 1778 by force of arms he acquired the Duchy of Franconia. As administrator he was emi-

FREDERICK II.

nently efficient, the country flourished under his rule. (1712-1786).

Frederick Louis, Prince of Wales from 1729; eldest son of George II. and father of George III.; born at Hanover; Duke of Gloucester, 1717; of Edinburgh, 1727. Came to England, 1728; married Augusta, daughter of the Duke of Saxe-Gotha, 1736. Hated by his parents, he maintained an opposition court, finally at Leicester House, where he died. (1707-1751).

Fredericksburg, city of Spottsylvania county, Virginia, U.S.A. In the American Civil War the Confederates defeated the Union forces here in 1862. It has leather and woollen manufactures. Pop. 7,000.

Frederick-William, Elector of Brandenburg, born in Berlin; became ruler of Prussia in 1640, and in 1648 by the Treaty of Westphalia secured large accessions of territory, afterwards creating a strong standing army, introducing various industries into Prussia, re-organising the finances, and rebuilding and beautifying his capital, Berlin; was the founder of modern Prussia, and is known as the "Great Elector." (1620-1688).

Frederick-William I., King of Prussia, born in Berlin, ascended the throne in 1713. In 1720, at the peace of Stockholm, he received part of Pomerania with Stettin for espousing the cause of Denmark in her war with Russia and Poland against Sweden. The rest of his reign was passed in improving the status of his country. (1688-1740).

Frederick-William II., King of Prussia, nephew of Frederick the Great (q.v.); succeeded to the throne in 1786, but soon lost favour by indolence and favouritism. In 1788 the freedom of the press was withdrawn, and religious freedom curtailed. He involved himself in a weak and vacillating foreign policy, wasting the funds accumulated by his uncle in a useless war with Holland. At the partition of Poland in 1793 and 1795 various districts were added to the kingdom. (1744-1797).

Frederick-William III., King of Prussia from 1797 till 1840; abandoned his position of neutrality towards Napoleon and declared war in 1806; defeat followed at Jena and in other battles, and by the Treaty of Tilsit (1807) Prussia was deprived of half her possessions. Under the able administration of Stein the country began to recover itself, and a war for freedom succeeded in breaking the power of France at the victory of Leipzig (1813), and in 1815 her lost territory was restored. (1770-1840).

Frederick-William IV., King of Prussia from 1840 till 1861. His reign is marked by the persistent demands of the people for a constitutional form of government, which was finally granted in 1850. A year previously he had declined the imperial crown offered by the Frankfurt Diet. In 1857 he became insane, and his brother was appointed regent. (1795-1861).

Fredericton, the capital of New Brunswick, Canada, situated on the river St. John; is the seat of a bishopric and of a university; has an extensive lumber trade. Pop. 8,800.

Free Church of England, or Reformed Episcopal Church, a religious sect numbering about 12,000 members with 50 churches. It was founded in the middle of the 19th Century, as a protest against the spread of "High Church" views in the established Church of England.

Free Church of Scotland, an ecclesiastical body formed by secession from the Church of Scotland; in 1800 the greater part joined with the United Presbyterians to form the United Free Church of Scotland, and a long dispute took place over the property of the body, eventually settled by a Royal Commission.

Free Cities of Germany, were cities which enjoyed sovereign rights within their own walls, independent representation in the Diet, and owned allegiance solely to the emperor. Their internal government was sometimes democratic, sometimes the opposite. Their peculiar privileges were obtained either by force of arms, by purchase, or by gift of the emperors, who found in them a convenient means of checking the power of their feudal lords. Most of them lost their privileges in 1803, but Frankfurt-on-Main continued to be independent until 1866, and Hamburg, Lübeck and Bremen until 1871.

Freehold, by English law, real property is theoretically held from the Crown in return for such services as a free man would render to his lord; hence the name freehold. Freehold amounts in practice to absolute ownership, and the freehold tenant may dispose of the property by conveyance or, after his death, by will. There were formerly three kinds of freehold estate: fee simple, fee tail and estates for life. By the Law of Property Act of 1925, legal estates in tail and for life were abolished, and freehold property is now legally held to exist only in fee simple.

Freeman, one enjoying certain municipal immunities or privileges within a city or borough, including a share in any revenue obtained from property owned by the Corporation. Honorary freedom is often conferred as a mark of esteem upon any eminent person, not necessarily a resident in the city or borough, or upon one who has done a signal service to the city or borough. Apart from this, a resident only, or the near relative (i.e., wife, son or daughter) of one already admitted, may be admitted to freedom.

Freeman, Edward Augustus, historian, born at Mitchley Abbey, Staffordshire; was a Fellow of Trinity College, Oxford; examiner in the School of Law and Modern History; in 1884 he was elected Regius Professor of Modern History at Oxford. He was the author of many scholarly works ranging over the whole field of history, his fame, however, mainly resting on his great *History of the Norman Conquest*. (1823-1892).

Freemasonry, in modern times is the name given to a worldwide institution of the nature of a friendly benevolent society, having for its objects the promotion of social intercourse amongst its members, and, in its own language, "the practice of moral and social virtue," the exercise of charity being particularly commended. By a peculiar grip of the hand and certain passwords members are enabled to recognise each other, and the existence of masonic lodges in all countries enables the freemason to find friendly intercourse and assistance wherever he goes.

Its origin is found in the masonic brotherhoods of the Middle Ages, and some of the names, forms and symbols of these old craft guilds are still preserved. In an age when great cathedrals and monasteries were rapidly springing up masons were in great demand, and had to travel from place to place, hence signs were adopted by which true masons might be known amongst each other and assisted. The idea of utilising this secret method of recognition for general, social and charitable purposes, without reference to the

mason's craft, seems to have originated in the Edinburgh Lodge, where, in 1600, speculative or theoretical masons were admitted.

In its present form of organisation it dates back to 1813, when the "United Grand Lodge of Ancient Free and Accepted Masons of England" was formed. The Grand-Master is always a member of the Royal Family.

On the continent of Europe Freemasonry has become involved with politics, and has been suppressed in recent years in Italy, Germany and elsewhere; it is strongly attacked as a "secret society" by the Roman Catholic Church. It is widespread in the U.S.A., where its total membership is about 3½ millions.

Free Port, name given to a port at which ships of all nations may discharge or load cargo without payment of customs or other duties, save harbour dues. They were created in various Continental countries during the Middle Ages for the purpose of stimulating trade, but the system of bonded warehousing has superseded them.

Freestone, a builder's term for various stones, which do not split into layers, and which are capable of being cut into large blocks, uniform in colour and texture, and able to be carved.

Freethinkers, the name given to various writers and others who opposed the supernatural authority of the Christian Church; first came into use in the 18th Century. They were and are often wrongly confused with atheists; their attitude, however, is strictly an agnostic one.

Freetown, the capital of Sierra Leone, and principal seaport of British W. Africa, situated on the northern extremity of the Sierra Leone peninsula, forming a fine natural harbour which affords good anchorage close to shore for largest ships. Pop. 59,600, mainly non-European.

Free Trade, the name given to the former commercial policy

of England, first elaborately set forth by Adam Smith in his *Wealth of Nations*, the repeal of the Corn Laws in 1846 being the first step towards its adoption. Strictly used, the term is applicable only to international or foreign trade, and signifies a policy of strict non-intervention in the free competition of foreign goods with home goods in the home markets. Differential duties, artificial encouragements (e.g., bounties, drawbacks), to the home producer, all of which are characteristic of a protective system of trading, are withheld, the belief being entertained by free-traders that the industrial interests of a country are best served by permitting capital to flow into those channels of trade into which the character and resources of the country naturally dispose it to go. About 1903 began under Joseph Chamberlain a strong movement in England—the Tariff Reform Movement—directed to its abolition; and the change of circumstances after the World War led in 1932 to its supersession by a protective system.

Free Will. Whether man is morally a free agent or a being whose actions are predetermined by past events beyond his control, has long been one of the chief matters of philosophical controversy. Descartes and Hume postulated the absence of contingency in man's conduct, while Kant excepted the spiritual realm from the necessity which he observed in the material

world. Under the influence of physical science, later 19th Century philosophy tended to deny human free will, but at present it is in greater favour, at least within a limited field. In Christianity St. Augustine laid down the principle of free will as a fundamental belief of the Church. The doctrine of absolute pre-destination, however, advanced by Luther and Calvin, took a strong hold of Protestant belief at the time of the Reformation.

Freezing Mixtures, mixtures used for producing low temperatures, usually on a small scale now that efficient mechanical refrigerators are readily available. A mixture of ice and salt gives a temperature of about -23°C , while other common freezing mixtures are (a) ammonium nitrate, sodium carbonate and water, (b) ammonium chloride, potassium nitrate and water, and (c) sodium sulphate crystals (Glauber's salt) and concentrated hydrochloric acid. For lower temperatures, a mixture of solid carbon dioxide and ether may be used; this will quickly freeze mercury.

Freiberg, in the centre of the Saxon mining district, 90 m. SW. of Dresden; is an old town, which arose upon the discovery of its silver-mines in 1163. It has a fine old cathedral, and a famous school of mines; the manufactures comprise gold and silver work, wire, chemicals, etc. Pop. 36,000.

Freiburg, or Fribourg, (1) a Swiss canton between Bern and Vaud, and having three enclaves in the latter; the population consists chiefly of French Catholics; is hilly; dairy-farming, watch-making, and straw-plaiting are the chief industries. Area 650 sq. m. Pop. 143,000. (2) Capital of the canton, is situated on the Sarine, 19 m. SW. of Bern; the river is spanned by a suspension bridge, there is an old Gothic cathedral with one of the finest-toned organs in Europe, and a University. Pop. 21,600.

Freiburg, town in Baden, Germany, at the W. side of the Black Forest, and 3½ m. NE. of Basel; has a Gothic cathedral famous for its architectural beauty, and a university; has important manufactures in silk, cotton, thread, paper, etc.; is the seat of a Catholic archbishop, and is associated with many stirring events in German history. Pop. 100,000.

Freight, the price paid for the transportation of goods by land or sea from one place to another; the term was originally restricted to sea transport only, but is now extended to all transport, including passenger.

Freischütz (i.e., Freeshooter), a legend-ary hunter who made a compact with the devil whereby of seven balls six should infallibly hit the mark; and the seventh be under the direction of the devil, a legend which was first among German troops in the 13th and 14th Centuries, and has given name to one of Weber's operas.

Fremantle, a seaport town in W. R., 10 m. from Perth, of which it is practically a suburb; the first ingoing and outgoing port of call for steamships; has saw-mills and soap and leather factories. Pop. 25,500.

Frémont, John Charles, an American explorer, born in Savannah, Georgia; in 1843 explored the South Pass of the Rockies, and proved the practicability of an overland route; explored the Great Salt Lake, and the upper reaches of the Rio Grande; rendered valuable services in the Mexican War; after unsuccessfully standing for the Presidency in the anti-slavery interest, he again served in the army as major-general; a scheme for a southern railway to the Pacific brought him into trouble with the French Government in 1873, when he was tried and condemned for fraud. (1813-1890).

JOSEPH
CHAMBERLAIN

French, John Denton Finkstone, 1st Earl of Ypres, British general; first entered the navy, but transferred to the army in 1874, seeing service in Egypt. He was given command of the cavalry in the Boer War, was made a Major-General and established his reputation at Kimberley and Bloemfontein. When a Field-Marshal in 1914 he resigned on account of the incident at the Curragh, but he was appointed to lead the British Expeditionary Force in the World War in August, and was in command at Mons, the Marne, the Aisne and the first battle of Ypres. In 1916 he was superseded by Haig, and in 1918 became viceroy of Ireland. He was created viscount in 1915, Earl in 1921, and granted £30,000 in 1919. (1852-1925).

EARL OF
YPRES

French Equatorial Africa, embraces the four colonies of Gabon (105,000 sq. m.), Middle Congo (173,000 sq. m.), Oubangui-Chari (236,000 sq. m.) and Chad (400,000 sq. m.). The chief towns of each of these colonies are respectively, Libreville, Brazzaville, Bangui and Fort-Lamy. The colonies are under the authority of a Governor-General with an administrative council. Their total population is about 3,320,000, including about 5,000 Europeans.

French Guiana, or *Cayenne*, French colony in S. America, between Brazil and Dutch Guiana; fertile but unhealthy; produces gold, cocoa and timber; contains an important penal settlement. Area 34,700 sq. m. Pop. 47,400. The capital is Cayenne.

French Guinea, W. African coast, N. of Sierra Leone. The area is 96,000 sq. m. The chief town, Konakri, has a population of 8,800. Population of colony, 2,050,000 of whom 3,000 are Europeans.

French Revolution, the great upheaval in France at the end of the 18th Century, which was caused by the evils of the taxation and land-owning system, which oppressed the lower classes, and the influence of Rousseau on the middle classes who demanded a greater share of government. The disorganised state of national finances compelled Louis XVI. to call the States-General in May, 1789, for the first time for many years, and the Third Estate broke away the following month to form the National Assembly. In July the Paris mob stormed the Bastille, and forced the Royal Family to flee to Paris. A new body called the Legislative Assembly was formed in 1791, and the monarchy was overthrown in 1792, France being declared a Republic. In 1793 a committee of Public Safety was formed and the Reign of Terror started, the king and Robespierre, one of the leaders of the revolution being among the victims of the guillotine. A Directory was formed in 1795, and in 1799 Napoleon Bonaparte became Consul and ultimately Emperor.

French West Africa, consists of Senegal, French Guinea, Ivory Coast, Dahomey, French Sudan, Mauritania, Niger and the Dakar area. The total area is about 1,600,000 sq. m. Pop. 14,470,000. The Governor-General is assisted by a council. Ground-nuts, cocoa and other tropical products are exported. The capital is Dakar.

Frensham, a town on the E. Wey, 4 m. from Farnham, Surrey, England, a beauty spot much resorted to for fishing, etc. Pop. 5,000.

Frere, Sir Henry Bartle Edward, diplomatist and colonial governor, born near Abergavenny; entering the East India Company in 1834, as the chief-commissioner in Sind did much to open up the country by means of canals, roads, etc.; during the Mutiny he distinguished himself by the manner in which he suppressed the rising in his own province; from 1862 to 1867 he was Governor of Bombay; in 1867 he was knighted, and five years later carried through important diplomatic work in Zanzibar; his last appointment was as Governor of the Cape; the Kaffir and Zulu Wars involved him in trouble, and in 1880 he was recalled, having effected little. (1815-1884).

Frere, John Hookham, English politician and author, born in London; in 1799 became Under-Secretary for Foreign Affairs; a year later he was envoy to Lisbon, and subsequently minister to Spain; in his early days he was a contributor to the *Anti-Jacobin*, and shares with his school-fellow Canning the authorship of the *Needy Knife-Grinder*; but he is best known by his fine translations of some of Aristophanes's plays. (1769-1846).

Fresco, the art of painting on walls which have been damped so as to permit of the colour sinking into the lime. There were two methods, the *fresco secco* and the *fresco buono*. In the first the wall was sprinkled with water, and the colours were then worked into the damp surface; in the second process, in which finer and more permanent effects were obtained, the artist worked upon the fresh plaster of the wall (which was laid for him as he proceeded), pounding or tracing his designs with a stylus. Only colours which are natural earths can be employed, as they require to be mixed with lime, and are subject to the destroying effect of that substance. As a method of mural decoration it was known to the ancients, and some of the finest specimens are to be seen in the Italian cathedrals of the 14th and 15th Centuries. The art is still in vogue, but can only be practised successfully in a dry climate.

Freshwater, village and holiday resort 19 m. W. of Newport, Isle of Wight, England. Tennyson long resided in the neighbourhood. Pop. 3,100.

Fresnel, Augustin Jean, French physicist, born in Broglie, Eure. As an engineer he rose to be head of the Department of Public Works at Paris. In 1825 he was elected an F.R.S. of London. He made discoveries in optical science which helped to confirm the undulatory theory of light, and invented a compound lighthouse lens. (1788-1827).

Fresno, city in California, U.S.A., on the Southern Pacific Railway, 207 m. S.E. of San Francisco; the surrounding district, extensively irrigated, produces abundance of fruit, and raisins and wine are largely exported. Pop. 53,000.

Fretwork, the name given to open-work designs cut in thin boards or panels of wood. The board, on which the design is first drawn, is laid on a V-shaped rest. The fret-saw is a thin blade held in a frame, similar to a hack-saw for cutting metal. The blade is first inserted through a hole cut in the wood, then tightened up in the frame. A mechanical saw can be used, the operator merely guiding the wood.

Freud, Sigmund, Austrian psychologist, founder of the study of psychoanalysis; professor at Vienna; he applied his methods successfully to many cases of nervous disorders. He has written several books on dreams and nervous diseases, including *The Interpretation of Dreams*. In 1938 he left Vienna to escape Nazi persecution, and came to England. (1856-

Freyr, in the Scandinavian mythology the god who rules the rain and sunshine, and gives peace, wealth and abundant harvests. The wooing of Gerda, daughter of the giant Gymer, by Freyr is one of the most beautiful stories in the northern mythology. His festival was celebrated at Christmas, and his first temple was built at Upsala.

Freytag, Gustav, German novelist and dramatist, born in Kreuzburg, Silesia; from 1839 to 1870 was teacher of German language and literature at Breslau; from 1879 resided at Wiesbaden. His many novels and plays and poems place him in the front rank of modern German litterateurs. Several of his novels have been translated into English, including his masterpiece, *Soll und Haben* (Debit and Credit). (1816-1895).

Friar (i.e., brother), a name applied generally to male members of Catholic religious orders who, unlike monks, travelled about, whereas the monk remained secluded in his monastery. Many orders of friars arose in the 13th Century, especially the Grey Friars or Franciscans, the Black Friars or Dominicans, the White Friars or Carmelites, Augustinians or Austin Friars, and later the Crutched Friars or Trinitarians.

Friar's Crag, a beauty spot in Cumberland, England, consisting of a rocky promontory on the N.E. shore of Derwentwater. It is owned by the National Trust.

Friction, the resistance a body meets when sliding over another. If the lower body is tilted, an angle will ultimately be reached at which the upper body begins to slide over it; this angle is called the limiting angle. At the limiting angle, the weight of the upper body, its reaction or pressure upon and perpendicular to the lower body, and the friction, are in equilibrium, and the friction is then known as the limiting friction. Friction is reduced, though it can never be completely eliminated, by making the surfaces in contact as small and as smooth as possible, and by the application of a lubricant such as oil or graphite. The advantage of ball-bearings is that sliding contact is largely replaced by rolling contact.

Friday, the sixth day of the week, so called as being consecrated to Frigg or Freyja, the wife of Odin; is proverbially a day of ill luck; by Catholics kept as a day of abstinence from meat in memory of the Crucifixion, and by Mohammedans as the weekly day of special devotion.

Frideswide, Saint, patron saint of Oxford; said to have been a Merclan princess and martyr; Cardinal Wolsey transformed her monastery into Christ Church College. (c. 650-c. 735).

Fridtjof Nansen Land, an uninhabited archipelago in the Arctic Ocean, N. of Nova Zembla, formerly known as Franz Josef Land; was discovered and partly explored in 1873-1874 by Payer and Weyprecht. Arctic animals are found in good numbers. It is considered an excellent base for expeditions in quest of the North Pole.

Friedland, a town in Prussia on the R. Alle, 21 m. from Königsberg. Napoleon defeated the Russians and Prussians here in 1807. Pop. 3,200.

Friedrichshafen, town in Württemberg, Germany, on Lake Constance. It is a holiday resort, whence steamers ply to other towns on the lake. Its industries include boat-building and ship construction, the lake forming a testing-ground for the machines. Pop. 13,500.

FRANCISCAN MONK

Friendly Islands. See Tonga Islands.

Friendly Societies, associations for mutual aid in sickness, unemployment, old age, etc. Such societies developed from the medieval guilds, and some date back to the 16th Century. Legislative encouragement was not given until 1793, and many friendly societies, being allied to trade unions, suffered under the disabilities imposed by the Combination Acts of 1799 and 1800. When these were removed, the friendly societies attached to various trades flourished again, and the movement was encouraged by the Act of 1850, which admitted as friendly societies the various federated "orders"—e.g., the Independent Order of Odd Fellows, the Manchester Unity, established 1816, and the Ancient Order of Foresters, established 1834. All friendly societies (including "Orders," with various branches; Benefit Societies; Deposit Societies and Collecting Societies) are regulated by an Act of 1896, amended in 1908. Since that date, the work of the societies has expanded in spite of the growth of State relief, and although affiliation has reduced the actual number of societies, membership continues to increase. Most of them are approved societies for National Health Insurance purposes.

Friends, Society of, a community of Christians popularly known as Quakers, founded in 1648 by George Fox (q.v.), and differing from other sects chiefly in their belief in an "inner light," and their rejection of clergy and sacrament as media of grace. They refuse to take oaths, and are opposed to war and slavery. In England they number about 30,000; in the U.S.A. about 110,000.

Friesland, the most northerly province of the Netherlands, with a rich soil; low-lying and pastoral; protected by dykes. Area 1250 sq. m. Pop. 415,000.

Frieze, the middle band of an entablature between architrave and cornice, or more usually the decoration of that band; hence, frequently, any band of applied decoration. In the Doric order it was divided by vertical bands (triglyphs) into panels (metopes) decorated with sculptured groups.

Frigate, originally an oared Mediterranean sailing-ship. In the 17th Century many such ships were built for the British Navy, but the Seven Years' War saw the first vessel built of the type later technically known as a frigate—a fast, full-rigged ship with upper deck, spar deck and lower deck, carrying guns which by 1808 had increased in number to 50.

Frigate-bird, a tropical fish-eating sea-bird of the order

Ciconiiformes, allied to the cormorant; characteristics are short legs, broad wings, long forked tail and powerful flight. It forces other sea-birds to disgorge their food.

FRIGATE-BIRD

Frigga, a Scandinavian goddess, the wife of Odin; worshipped among the Saxons as a goddess mother; represented the earth.

Frimley, town in Surrey, England, 30 m. SW. of London; now forms an urban district with Camberley. It is mainly residential. Pop. 16,800.

Frinton-on-Sea, seaside resort in Essex, England, 7 m. NE. of Clacton. Pop. (with Walton) 7,300.

Frisian Islands, a number of islands parallel with and close to the coasts of the Netherlands and NW. Germany. The largest are Texel, Terschelling and Ameland, all belonging to the Netherlands.

Frisians, a Low German people, who occupied originally the shores of the North Sea about the mouths of the Rhine and Ems; distinguished for their free institutions; tribes of them at one time invaded Britain, and form a strain in the population especially of East Anglia.

Frith, William Powell, English painter, born near Ripon, Yorkshire; his works frequently depict crowds, his subjects varied and interesting, and among his most popular pictures are "Derby Day" and "The Railway Station." (1819-1909).

Frobisher, Sir Martin, famous English navigator, born near Doncaster; thrice essayed the discovery of the North-West Passage during Elizabeth's reign; accompanied Drake to the West Indies; was knighted for his services against the Armada; conducted several expeditions against Spain; was mortally wounded when leading an attack on Brest. (1535-1594).

Froebel, Friedrich, a German educationist who followed Pestalozzi in devising a system of physical and intellectual training for young children; founder of the famous Kindergarten system. (1782-1852).

Frog, an amphibious animal of the family Ranidae, common over most of the world except Australia. It is tail-less, squat, with long hind-limbs, short fore-limbs, pointed snout, bulging eyes and cleft tongue, the point of which lies back-wards towards the throat. It hibernates at the bottom of ponds during winter, coming out in spring to mate, the females producing eggs which float on the water. In summer the frog has a more or less terrestrial life in wet, grassy places, feeding on flies, worms, etc. It generally croaks only during mating-time. The eggs hatch into tadpoles with external gills. Later the gills disappear, and the head and body are rounded together, propelled by a long tail. Some species are used for food in France and elsewhere.

FROG

Frogbit, a water-plant of the genus *Hydrocharis* (*Hydrocharis morsus-ranae*), of the order Hydrocharitaceae. It is monocotyledonous and the leaves are ribbon-like; common in still ponds.

Frog-hopper (*Aphrophora*: froth-bearing), a small insect of the family Cercopidae, belonging to the sub-order Homoptera. They jump considerable distances. The larva surround themselves in froth, known as "cuckoo-spit."

Frogmore, a royal residence and Park, the burial-place of Queen Victoria and Prince Albert, her consort.

Froissart, Jean, a French chronicler and visited England in the reign of Edward III., and was sent thence to Scotland to collect more materials for his chronicles; after this he wandered about Europe to add to his store; he died in Flanders. His chronicles, which extend from 1325 to 1400, are written with grace and neatness. (1337-1410).

Frome, market town in Somersetshire, England, on border of Wiltshire, on the river of the same name, 15 m. from Wells. Industries are cloth manufacturing, printing, metal works and iron foundries. Pop. 16,104.

Fronde, a name given to a revolt in France in opposition to the Court of Anne of Austria and Mazarin during the minority of Louis XIV. The war passed through two phases; first a war on the part of the people and the parlement, called the Old Fronde, which lasted from 1648 till 1649, and then a war on the part of the nobles, called the New Fronde, which lasted till 1652, when the revolt was crushed by Turenne and the royal power triumphed.

Frost, a climatic condition occurring when falls below 32° F., and water, plant juices, etc., freeze. Black frost is frost sufficiently intense to blight vegetation and turn it black, but without the presence of hoar or white frost. See also Hoar-frost.

Froude, James Anthony, English historian and man of letters, born at Totnes, Devon. Trained originally for the Church, he gave himself to literature, his chief work being the *History of England from the Fall of Wolsey to the Defeat of the Spanish Armada*, in 12 vols., of which the first appeared in 1854 and the last in 1870. He also wrote a *Life of Carlyle*, *Nemesis of Faith*, and *Short Studies of Great Subjects*. He ranks as one of the masters of English prose, though his accuracy in detail is questionable. (1818-1894).

Fruit, that part of a plant which contains the seed; the fertilised and developed gynaecium or pistil. The gynaecium, the female section of a plant, contains the ovary, within which are the carpels containing the ovules, and the style and stigma. When the ovule is fertilised, it develops into what is known as the seed, and the receptacle (i.e., the axil part of the flower which supports the pistil) becomes enlarged and fleshy for its protection, forming the pericarp. The external layer of the pericarp or "skin" is called the epicarp, the inner layer the endocarp, and the middle layer the mesocarp.

Botanically, the pod of a pea, the samara of a sycamore and the poppy capsule are fruits, but the term is more usually restricted to the various kinds sold commercially as "fruit." In addition to apples and pears, classed as "pomes" or pseudocarps, as they develop from the receptacle as well as from the ovary, fruit may be divided into "drupes" (stone fruit), "drupels" or little drupes, and berry fruits. Stone fruit develops from the ovary alone, the receptacle withering after fertilisation. Each fruit is formed from a separate two-ovule carpel. When one ovule is fertilised, it forms the seed, round which the wall of the ovary thickens. The seed is found within the stone, and round the latter forms the pulp enclosed by the skin. A nut is a fruit in which the ovary develops, but the mesocarp becomes woody and not fleshy. The class of stone-fruits or drupes include cherries, plums, peaches, nectarines, almonds, damsons, apricots, bullaces and sloes. The class of fruit called drupels is that in which the fleshy part develops round each seed, as above, but several seeds cluster together, as the raspberry and blackberry. The value of the drupes, with the exception of the almond, lies in the fleshy edible mesocarp. Berry fruits (e.g., gooseberries, currants and grapes) are distinguished from drupes by the fact that the whole pericarp is succulent, and there is no hard endocarp or stone round the seed.

Fry, Charles Burgess, English cricketer; educated at Repton, and Wadham College, Oxford, being captain of University football and cricket clubs; held world's record for long jump; captained England's team in test-matches, 1912. Honorary director, naval training-ship *Mercury*. Later wrote many books and articles on cricket. (1872-).

Fry, Mrs. Elizabeth, philanthropist, born in Norwich, third daughter of John Gurney, the Quaker banker; devoted her life to prison reform and the reform of criminals, as well as other benevolent enterprises; she has been called "the female Howard." (1780-1845).

Fryatt, Capt. Charles, British seaman, who was in charge of the steamship *Brussels* when she was attacked in March 1915 by a German submarine which he rammed, for which he was shot in Bruges on his capture by the Germans in June 1916. (1872-1916).

Fuad, King of Egypt, succeeded his brother as Sultan in 1917, and on the declaration of Egypt's independence in 1923 became king. (1868-1936).

Fuad Pasha, Turkish statesman and diplomatist, much esteemed and honoured at foreign courts, at which he represented Turkey, for his skill, sagacity and finesse; became Minister of Foreign Affairs in 1853; was hostile to the pretensions of Russia; during the Crimean War commanded troops on the Greek frontier. (1814-1869).

Fuchow (Fochow), a Chinese city, the capital of the province of Fukien, situated on the R. Min, 125 m. N.E. of Amoy. Massive walls 30 ft. high enclose the original town, but the extensive suburbs reach down to the river, which is bridged, and is a convenient waterway for trading with the interior; it was made a free port in 1842, and is the centre of a busy trade in tea, timber and textiles. Pop. 323,000.

Fuchsia, a flowering plant of the order Onagraceae, with funnel-shaped hanging flowers, mostly red or purple; native to America, but cultivated as a garden plant in Great Britain, and in the West of Ireland as a hedge-plant.

FUCHSIA

or **Magenta**, a crystalline **Fuchisine**, aniline dye, first used as such in 1859; resembles the fuchsia in colour.

Fuels, substance used to produce heat by their combustion in the air. Practically all fuels are either carbon or compounds of carbon, and thus represent reservoirs of energy stored up by the activity of green plants (see *Carbon-Assimilation*); the chief are coal, coke, peat and wood among solids, petroleum (including petrol, paraffin oil and heavy oil) and alcohol among liquids, and coal-gas, water-gas, producer-gas, natural gas and hydrogen among gases. Of these, only the last is non-carbonaceous.

The process of combustion results in the conversion of the fuels into carbon dioxide, water, etc., by reaction with atmospheric oxygen, heat being evolved during the oxidation. The modern tendency is to use gaseous fuels where possible, since here the cost of transport is least and the flexibility of application greatest.

Fugger, the name of a family of bankers, at Augsburg who rose to great wealth and eminence in Germany, particularly under the Emperors Maximilian and Charles V., to whom they lent vast sums of money; were created counts of the empire by Charles.

Fugue, a form of musical composition, which is announced and answered, often with slight variations, by different instruments, and then subjected to a discursive development. It was greatly developed by Bach.

Fuji-yama, a volcano and the highest mountain (12,425 ft.) in Japan; is 60 m. west of Tokyo; dormant since the eruption of 1707.

Fukien, mountainous seaboard province of S. China, opposite the island of Formosa, producing tea, sugar, ginger, camphor, timber and porcelain clay. Area 62,000 sq. m. Pop. 11,760,000.

Fulahs, a mixed race of the Upper Sudan General and Darfur, of superior physique and intelligence, mostly Mohammedans.

Fulda, the capital of the province of Hesse-Nassau, Germany on R. Fulda, noted for its ecclesiastical buildings, among which is the Benedictine abbey founded in 744. Chief industries are clothing and textiles. Pop. 25,000.

Fulgurite, a rock which has been fused in sandy soil lightning sometimes produces a deep bore, fusing and vitrifying the sand or gravel to a depth as great as 20 ft.

Fulham, a borough of SW. London, on the Thames, opposite Putney, with the palace of the bishops of London and a large electrical power station. Pop. 150,000.

Fuller, Thomas, historian, divine and wit, born in Northamptonshire; entering into holy orders, he held several benefices in the Church of England, and a prebend in Salisbury Cathedral; lost favour under the Commonwealth; wrote a number of works, in which are combined gaiety and piety, good sense and whimsical fancy; among them are the *History of the Holy War*, the *Church History of Great Britain* and the *Worthies of England*, the last his principal work and published posthumously. (1608-1661).

Fuller's Earth, name given to various soft clays of fine texture, containing alumina, obtained from the oolite and chalk systems and formerly used in the "fulling" or cleansing of wool.

Fulminate of Mercury, a highly explosive used for detonating dynamite and gun-cotton.

Fulton, Robert, an American engineer, born in Pennsylvania; began life as a painter, but soon turned to engineering. He was one of the first to apply steam to the propulsion of vessels, and devoted much attention to the invention of submarine boats and torpedoes. In 1807 he built a steamboat to navigate the Hudson River, with a very slow rate of progress, however, making only five miles an hour. Other inventions included machines for dredging and a submarine boat. (1765-1815).

Fume-precipitation, a method invented by Sir Oliver Lodge and F. G. Cottrell for removing by electrical means the dust and other solid particles from furnace-gases, etc. The principle is to pass the gases through a pipe along the axis of which a wire electrode is fixed; the electrode and pipe are connected to the respective terminals of a high-voltage (c. 100,000 volts) direct-current supply, and as heavy a discharge as just avoids the passage of sparks is sent between them. The dust particles become charged and are attracted to, and deposited upon, the electrode of opposite charge.

Fumigator, one of various substances which give off germicidal or insecticidal fumes. Sulphurous acid produced by burning sulphur is most commonly used for freeing rooms from vermin. The room is first stripped, windows, chimneys, etc., are stopped up, and the sulphur is left burning, the door being tightly sealed and not opened for at least 24 hours. Chlorine is also a powerful germicide; formalin vapour, camphor, resin and volatile oil such as eucalyptus are used as mild disinfectants. A hot-air or steam fumigator is used for disinfecting clothes and portable property.

Fumitory, a flowering plant of the genus *Fumaria*, formerly used in medicine. The stems are brittle and filled with watery juice. From *Fumaria officinalis* fumaric acid and the alkaloid fumarine are obtained.

FUMITORY

Funchal, the capital of Madeira, at the head of a bay on the S. coast, and the base of a mountain 4,000 ft. high, extends a mile along the shore, and slopes up the sides of the mountain; famous as a health resort. Pop. c. 31,000.

Function, in mathematics, a variable quantity, the value of which depends on another quantity or other quantities; to take a simple example, the length of life of a set of motor-car tyres is a function of the mileage. If y is a function of x , this fact is represented mathematically by the equation $y = fx$; x is called the independent variable and y the dependent variable.

Fundamentalism, a 20th Century religious movement, mainly in U.S.A., affirming the absolute and literal truth of the Bible, especially its miraculous element, and consequently opposed to much of modern science. It came into prominence in 1925 at the trial of a school-master named Scopes, for teaching evolution in the State of Tennessee.

Funded Debt, originally that part of the National Debt which was charged against a special fund established with a view to its repayment; now the name for any State debt on which normally interest is paid without a definite obligation for repayment of principal by a given date. In Great Britain it includes Consols, Annuities, Conversion Loan, Consolidated Loan and War Loan.

Fundy Bay, an arm of the sea between New Brunswick and Nova Scotia; it is of difficult navigation owing to the strong and rapid rush of the tides.

Fünen, islands, separated from Zealand on the E. by the Great Belt and from Jutland on the W. by the Little Belt; it is flat except on S. and W., fertile, well cultivated, and yields crops of cereals.

Fungus, a comprehensive term for various cryptogamic plants of the group *Thallophyta*, including mushrooms, toadstools, rust, smut, mildew and mould. Fungi are related to algae, from which they are descended, and to lichens. Distinguishing characteristics of a fungus are an absence of chlorophyll or green colouring-matter, and a structure made up of intertwined threads (hyphae), instead of organically fused tissue. Fungi feed on organic matter, and like animals, absorb oxygen and give off carbon dioxide. Some fungi, e.g. the mushroom, are edible.

Fur, the thick, soft hair covering the bodies of certain mammals. It has from the earliest times been used in the manufacture of clothing for human beings, the furs especially used for this purpose being those of small carnivorous animals, such as the mink, sable, stoat, marten, etc., and also amphibious rodents, such as the beaver and musk-rat. Fur is a non-conductor of heat, and is light and warm for clothing. When cut from the skin, fur is used in the manufacture of felt for felt hats, etc., the fur of the beaver being especially valuable in this respect. In recent years fur-bearing animals have been largely raised in captivity; in Canada alone there are over 7,000 fur farms. Materials resembling fur are now frequently produced from vegetable materials.

Furies. See *Erinyes*.

Furlough, leave of absence granted to a soldier other than an officer, who while on furlough may not leave the United Kingdom. The term is also used of officers' leave from foreign service.

Furnace, a structure in which heat is generated and applied. There are four main types of furnace—viz., coal or coke-burning, gas-burning, oil-burning and electric. Where the material has to be heated in contact with the fuel, as in smelting iron and burning limestone, a solid fuel is usually preferred; thus in the former operation the iron ore, mixed with other minerals to give a fusible slag, is heated with coke in a blast furnace about 70 to 100 ft. high, lined with a fire-resisting substance. Blasts of hot air are forced in at the bottom through pipes known as tuyeres (*tuyeres*), and the carbon monoxide formed by the partial combustion of the coke reduces the iron ore to metallic iron, which sinks in the molten state to a well beneath and is tapped off at intervals.

In reverberatory furnaces the fuel is combusted in a separate chamber, and the hot gases are led over a hearth on which the material to be heated is spread; the roof of the hearth is vaulted so as to reflect and focus downwards as much heat as possible. In gas-fired furnaces coal-gas, water-gas and producer-gas are the chief fuels; they are sometimes preheated and are burned in apparatus working on the familiar Bunsen-burner principle.

The oil for oil-fired furnaces is sprayed into the combustion chamber from atomisers, while in electric furnaces (invented by the French chemist Moissan) the heat is generated by striking an arc between electrodes made of carbon or some other suitable material.

Furness, an area of N. Lancashire, cut off from the rest of the county by Morecambe Bay. It has extensive ruins of the ancient Furness Abbey. The chief town, Barrow-in-Furness, has commodious docks and iron works. Pop. of town, 68,400.

Furniss, Harry, artist and caricaturist, born in Wexford; on staff of *Punch* from 1880 and 1894; started a humorous paper of his own without success and afterwards engaged in lecture tours. (1854-1925).

Furnivall, Frederick James, English philologist, born at Egham, Surrey; specialised in Early and Middle English Literature; founder and director of numerous societies for promoting the study of special works, such as the Early English Text Society, Chaucer, Ballad, and New Shakespeare Societies, and editor of publications in connection with them. (1825-1911).

Furse, Charles Wellington, British artist. After studying at the Slade School and in Paris he made a name for open-air portrait painting, sport and country life being his most successful themes. "The Return from the Ride" and "Diana of the Uplands" are in the Tate Gallery. (1868-1904).

Furth, a town in Bavaria, at the confluence of the R. Pegnitz and Rednitz, 8 m. from Nuremberg. Manufactures mirrors, toy and fancy goods. Pop. 77,000.

Furtwängler, Wilhelm, German musician, conductor; born in Berlin-Schöneberg; studied in Munich; conducted opera there and in other German cities. Director of Berlin Philharmonic Orchestra, 1922. Has frequently visited England and America with great success. (1856-).

Fusan, a seaport in the S.E. of Korea, on the Korean Strait. It is the terminus of the railway from Seoul. Pop. 150,000, including many Japanese.

Fuse, an electrical safety device, consisting of a strip of fusible metal (i.e., of low melting point) fitted to a fireproof

frame and fixed between terminals. If the current carried by the fuse exceeds a fixed value, the fuse melts, disconnecting the current.

Fuseli, Henry, properly **Fuselli**, a famous painter, portrait-painter, born in Zurich; came to England at the age of 23, and met Sir Joshua Reynolds; after eight years spent in study of the Italian masters, and Michelangelo in particular, he returned to England and became an R.A.; he painted a series of pictures, afterwards exhibited as the "Milton Gallery." (1741-1825).

Fusel Oil, name given to the higher series, especially amyl alcohol; it is used for various industrial purposes.

Fusible Metal, a bismuth alloy, with melting point below 100° C., commonly used for safety plugs in the furnace crown of steam boilers; when the water falls below a certain level, they melt and allow the water and steam to escape, extinguishing the fire.

Fusilier, a foot soldier so named from the fusil, or light musket, he carried. The name has remained, there being now six regiments of fusiliers, including the Royal Scots Fusiliers, raised by the Earl of Mar in 1679; the 7th or Royal Fusiliers, raised during the Month Rebellion in 1685; the Royal Welch Fusiliers, and the Lancashire Fusiliers, both raised under William

EARLY FRENCH FUSIL

III. in 1688; and the Royal Inniskilling Fusiliers.

Fust, Johann, a rich burgher of Mainz, associated with Gutenberg and Schöffer, to whom, with them, the invention of printing has been ascribed. He is sometimes supposed to have been the original of the Faust legend. (d. 1468).

Fustian, various heavy textile materials, of cotton, including velvet, moleskin and corduroy. The pile is produced by means of extra warp threads woven in loops over wire.

Futures, term in commerce applied to the purchase of a commodity (merchandise, stocks and shares) with a view to delivery at a future date. The practice lends itself to speculation in that a person may sell in the hope that by the time of delivery the price will have fallen and he can re-purchase at a cheaper rate.

Futurism, like Post-impressionism and Cubism, a modern movement in art, especially painting, emphasizing the importance of the subjective side of the artist's conception. Its origin is associated with the name of the Italian poet Marinetti.

Fylfot, an alternative name for the **Fylfot**, Swastika (q.v.).

Fyne, Loch, an arm of the sea in Argyll, Scotland, extending N. from Bute to Inveraray, and from 1 m. to 5 m. broad; famed for its herrings.

Fyzabad, the old-time capital of Gujrat, in India; 78 m. E. of Lucknow; a troop-station, but of declining importance. Pop. 66,000.

G

Gaba Tepe, a headland on the Gallipoli Peninsula, Turkey. During the World War Australian and New Zealand forces, under General Birdwood, disembarked 2 m. N. of Gaba Tepe in April 1915, and, though unable to make progress, held their positions until their withdrawal in the following December.

Gabbatha, the place where Pilate's judgment-seat was erected when he pronounced sentence on Christ; (John xix. 13); it stood outside the prætorium, for sentence had to be pronounced in the open.

Gabelentz, Hans Conon von der, a distinguished German philologist, born at Altenburg; was master, it is said, of 80 languages; contributed treatises on several of them, his most important work being on the Melanesian. (1807-1874).

Gabelle, an indirect tax, especially one on salt, the term applied to a State monopoly in France in that article, the exaction in connection with which was a source of much discontent; the people were obliged to purchase it at government warehouses and at extravagant, often very unequal, rates; the impost dates from 1286; was abolished in 1789.

Gabelsberger, Franz Xaver, inventor of the system of shorthand that is most used in German countries. (1789-1849).

Gabes, a town 805 m. S. of Tunis. It is European quarter, and Djara and Mensez, the native quarters. There is trade in grain, dates, bananas and other fruit, and hides. Pop. 15,000.

U E.

Gable, a triangular-shaped piece of wall pitched roof; a decorative feature of German Renaissance and of the Elizabethan style in England.

Gaboon, a French colony in W. Africa fronting the Atlantic, between the Cameroon country and the Belgian Congo, and forming part of French Equatorial Africa; in the NW. is the great Gaboon estuary, 40 m. long and 10 m. broad at its mouth, with Libreville, the capital, on its N. bank; along the coast the climate is hot and unhealthy, but it improves inland; the natives belong to the Bantu stock. The French settled in it first in 1842, but only after the explorations of De Brazza in 1876-1888 were they able to extend and colonise it. Rubber, palm oil, coffee, cocoa, cotton and ivory are produced. Area 104,000 sq. m. Pop. 389,000 (1,300 whites).

Gaboriau, Émile, French novelist, famous for detective stories, in which *The Lerouge Affair*, *Monsieur Lecq* and *Staves of Paris* are best known; born at Sanjon. (1835-1873).

Gabriel, an angel, one of the seven in the traditions of both the Jews and the Moslems as discharging the highest functions, and in the Gospel especially as announcing the forthcoming birth of Jesus to the Virgin Mary, and that of John Baptist to Zacharias.

GABLE

Gad, (1) a god of fortune, probably of Babylonian origin, identified with the planet Jupiter; his name occurs in place-names such as Bael-gad and indicates a local cult. (2) One of the Jewish tribes inhabiting the E. of the Jordan, deriving its name from the seventh son of Jacob. (3) A prophet, follower of David, whose seer and counsellor he was (2 Sam. xxiv.); he wrote a history of David's reign (1 Chron. xxix.).

Gadames, or **Ghadames**, an oasis and town in Italian Libya, situated in the SW. corner of Tripoli, on the N. border of the Sahara; the fertility of the oasis is due to hot springs, from which the place takes its name; high walls protect it from sand-storms; it is an entrepôt for a large caravan trade with the interior, and is connected by a motor road with Tripoli; the inhabitants are Berbers and Arabs. Pop. 7,000.

Gadara, a town of ancient Palestine, of which extensive ruins only now remain. The site is on the E. side of the Jordan, 6 m. from the Sea of Galilee.

Gaddi, the surname of a celebrated family of Florentine artists; the principal members were: **Gaddo** (1260-1332), painter and worker in mosaic and a friend of Cimabue and Giotto; **Taddeo** (1300-1366), his son, a pupil of Giotto and the most eminent member of the family; and **Agnolo** (1330-1396), son of Taddeo. The work of the Gaddi family consisted almost entirely of religious pictures characteristic of the period.

Gades, the ancient name of Cadiz (q.v.).

Gadolinium, a metallic chemical element belonging to the group of rare-earth metals. Symbol Gd, atomic number 64, atomic weight 157.3. Named in honour of Gadolin, a Swedish chemist.

Gadshill, an eminence in Kent 2½ m. NW. of Rochester; the scene of the robbery by Falstaff and his companions (Shakespeare's *Henry IV*, pt. 1). Dickens resided here from 1860 until his death in 1870.

Gaekwar, the hereditary title of the over Baroda (q.v.), in Gujarat, India.

Gaelic, the ancient language of Scotland and Ireland; of Celtic origin, its introduction dating from about the commencement of the 8th Century; was the official and Court tongue in Scotland until the 11th Century, when English began to supersede it; is still spoken in parts of both countries, there being over 7,000 persons in Scotland speaking Gaelic only in 1931, while Irish Gaelic, or Erse, has been revived in Eire.

Gaels. Exact information on the origin and movements of the Celtic tribes which invaded and settled in Neolithic Britain defies research. The following facts, however, are established. There were two successive waves of Celtic invaders: fair, high-statured people of a round-headed type, unlike the long-headed, dark inhabitants whom they displaced. The earlier invaders were the Gaels or Goidels, who drove the people of Neolithic Britain into the remote parts of W. Ireland and N. Scotland, and themselves settled in the interior, whence they spread to certain districts of Ireland and Scotland.

In Scotland they divided into two groups, those in the Highlands being known later as Picts, and those in the Lowlands later as Scots. These people were to a certain extent displaced by the later invaders, the Brythonic or British people, who in turn settled in the interior regions and spread to Wales. The language of the Brythonic invaders is called "Cymric," and is distinct from the "Gaelic" of the earlier invaders. Some authorities base on this divergence of language a theory

that the Gaelic and Brythonic peoples were of entirely different races.

The more generally accepted theory, however, is that differences of language are to be explained by the fact that the two peoples developed their own culture widely separated from each other. The Celts probably came originally from Central Europe. There are traces of the earlier immigrants, the Gaels, in the Baltic region and the Rhine and Moselle valleys, and of the later in the Alps, Gaul and Spain.

Gaeta, a fortified seaport of S. Italy, NW. of Naples; a favourite watering-place of the ancient Roman nobility; it is rich in classic remains, and in its day has witnessed many sieges; the inhabitants are chiefly employed in fishing and a light coast trade. Pop. 8,000.

Gage, Thomas, English general; son of the first Viscount Gage; he served in the Seven Years' War, and took part in 1755 in Braddock's disastrous expedition in America; in 1760 he became Military Governor of Montreal, and three years later Commander-in-Chief of the British forces in America; as Governor of Massachusetts he precipitated the revolution by his ill-tempered severity, and after the battle of Bunker's Hill was recalled to England. (1721-1787).

Gaia, or **Ge**, in Greek mythology, the *alma mater* of living things, both in heaven and on earth, called subsequently Demeter, i.e. Gemeter, Earth-mother.

Gainsborough, a market town of England, on the E. bank of the R. Trent, 18 m. NW. of Lincoln. Here in 1013, the Danes landed under King Swegen, whose supposed tomb is in the district. There is a cattle market, and the industries include ship-building and engineering. Pop. 18,700.

Gainsborough, Thomas, English portrait- and landscape-

painter, born at Sudbury, Suffolk; he early displayed a talent for drawing, and at 14 was sent to London to study art; at 19, shortly after his marriage, he set up as a portrait-painter at Ipswich; in 1760 removed to Bath, where he had many wealthy and fashionable sitters, and in 1774 to London, where he became a rival in portrait-painting of Sir Joshua Reynolds. Ruskin declared him to be the greatest colourist since

Rubens; among his most famous pictures are portraits of Mrs. Siddons, the Duchess of Devonshire and the Hon. Mrs. Graham, as well as "Shepherd Boy in the Shower," "The Seashore" and "The Blue Boy." (1727-1788).

Gairdner, Lake, a salt-water lake in S. Australia, about 90 m. SW. of Lake Torrens. It is 100 m. long and 40 m. broad, but its area is much reduced in dry seasons.

Gairloch, a village of Ross and Cromarty, Sutherland, 30 m. NW. of Achnashene. The neighbourhood is well wooded. Pop. 2,000.

Gaius, a Roman jurist of the 2nd Century, concerning whose life hardly anything is known. By the Romans themselves he was included among the five jurists whose pronouncements were authoritative. His most important work, the *Institutes*, which served as a basis for Justinian's celebrated *Institutes*, was unknown to modern students until 1816, when it was restored from a palimpsest discovered by Niebuhr at Verona.

THOMAS
GAINSBOROUGH

Galago, a family of mammals, allied to Africa; the lemurs, found in SW. Africa; it is popularly known as the "bush baby," and feeds on insects. It is remarkable for its large ears and eyes.

GREAT GALAGO

Galapagos,

a group of islands, 13 in number, barren on the N., but well wooded on the S., situated on the equator, 600 m. W. of Ecuador, to which they belong. All bear English names, bestowed upon them by the buccaners of the 17th Century; Albemarle I. makes up more than half of their area; they are volcanic in formation, and some of their 2,000 craters are not yet extinct; their fauna is of peculiar scientific interest, as exhibiting many species unknown elsewhere, and includes tortoises and lizards of gigantic size; besides the islands proper there is a vast number of islets and rocks. Area 3,000 sq. m. Pop. 2,000.

Galashiels, a burgh of Selkirkshire, Scotland, on the R. Gala. It is a centre of the woollen industry, and there are also tanneries. Pop. 13,000.

Galata, a suburb of Istanbul, Turkey, on the S. extremity of the Bosphorus, where the European merchants reside.

Galatea, a nymph to whom Polyphemus, made love, but who preferred Acis to him, whom therefore he made away with by crushing the latter under a rock, in consequence of which the nymph threw herself into the sea. See also *Pygmalion*.

Galatia, an ancient district of Asia Minor which was invaded and taken possession of by a horde of Gauls in the 3rd Century B.C., whence the name; in 25 B.C., under Augustus, it became a Roman province, and after many vicissitudes was annexed by the Ottoman Turks in the 14th Century A.D.

Galatians, *Epistle to the*, an epistle of St. Paul to the churches in Galatia, probably written at Ephesus about the year A.D. 58. Apparently a discontented party within the Church had been insisting upon the need for a formal observance of the Jewish law, with its rites and ritual. In this epistle Paul urges the Galatians to turn a deaf ear to such agitators, asserts the independence of the faithful from the Mosaic law, now superseded by the law of Christ, and urges them to "stand fast in the liberty wherewith Christ had made them free," and not to pin their faith to circumcision and the formalism of the law.

Galatz, or *Galacz*, a river-port of Rumania, on the Danube, 80 m. above the Sulina mouth of the river, and 166 m. N.E. of Bucharest; the new town is well laid out, and contains some fine buildings, including a cathedral. Its harbour is one of the finest on the Danube; a great export trade is carried on in grain and timber, while textiles and metals are the chief imports. Pop. 102,000.

Galaxy. See *Milky Way*.

Galba, *Servius Sulpicius*, Roman emperor from June, A.D. 68, to Jan., 69; elected at the age of 73 by the Gallic legions to succeed Nero, but for his severity and avarice was slain by the Praetorian guard, who proclaimed Otho emperor in his stead. (5 B.C.—A.D. 69).

Gale, *Thomas*, English antiquary; became professor of Greek at Cambridge in 1666 and Fellow in 1669; Dean of York,

1697; noted for his editions of classical writers and works on early English history. (c. 1636-1702).

Galen, a famous Greek physician born in Pergamum, in Asia Minor; after studying in various cities, he settled in Rome, and eventually became physician to the emperors M. Aurelius, L. Verus and Severus; of his voluminous writings 83 treatises are still extant, treating of many subjects, philosophical as well as medical; for centuries after his death his works were accepted as authoritative in the realm of medicine. (c. 131-c. 201 A.D.).

Galena, or *Lead-glance*, the ore from which metallic lead is chiefly extracted; consists principally of lead sulphide, together with silver and other impurities, and occurs as bluish-grey cubic crystals in veins of crystalline rocks or in carboniferous limestone.

Galerius (*Galerius Valerius Maximianus*), Roman emperor, born in Dacia, of lowly parentage; rose from a common soldier to be the son-in-law of the Emperor Diocletian, who in 292 nominated him Caesar, ruling over Illyricum and the valley of the Danube; in 305, on the abdication of Diocletian, he became head of the Eastern Empire, which he continued to rule until his death in 311; his name is associated with a cruel persecution of the Christians under Diocletian.

Galiani, *Ferdinando*, an Italian political economist and man of letters; born at Chieti and educated for the Church; held several important offices under the Neapolitan Government; in Paris became the associate of Grimm and Diderot; his *Treatise on Money* is a milestone in the history of economics. (1728-1787).

Galicia, a captaincy-general and formerly a kingdom and province in the NW. corner of Spain fronting the Bay of Biscay and the Atlantic; now divided into the four provinces, Coruña, Lugo, Orense and Pontevedra; the county is hilly, well watered, fertile and favoured with a fine climate, but is only very partially cultivated; some mining is carried on. The chief river is the Miño, and among the larger towns are Coruña, Santiago, Vigo, Lugo and Ferrol. Area 11,254 sq. m. Pop. 2,270,000.

Galicia, a district of Poland extending N. of the Carpathian Mts.; it is a fertile region watered by the Dniester, Vistula, Pruth and other rivers, and is still largely covered with forest; the products include timber, grain, hemp, flax and tobacco; coal, iron, copper and salt are mined, and there are petroleum wells; cattle and hides are exported. The chief towns include Lemberg (Lwow) the capital—Cracow, Tarnopol, Stanislawow and Przemyśl. Galicia (hitherto Polish) was annexed by Austria in 1778, but gained its independence after the World War, and became a subject of contention by Poles and Ruthenians; it was officially recognised as Polish territory in 1923.

Galileans, a fanatical sect, followers of one Judas of Galilee, who fiercely resented taxation by the Romans, and whose violence contributed to induce the latter to vow their extermination.

Galilee, the northern division of Palestine, divided into Upper and Lower Galilee; it is about 60 m. long and 30 m. broad. It was the scene of most of the chief events in the life of Christ, at that time being a Roman province.

Galilee, *Sea of*, an expansion of the Jordan, 12½ m. long, and 3 m. broad, enclosed by steep mountains, except on NW. It is remarkable in being nearly 100 ft. below the level of the Mediterranean. The Jordan has been harnessed to supply electric power to Tiberias and other towns.

Galilei, *Galileo*, Italian mathematician, physicist and astronomer, was born at Pisa, Feb. 15, 1564. He studied medicine, and did not turn his attention seriously to physical science until the sight of a lamp swinging in the cathedral started him upon the investigations that led him to discover the isochronism of the pendulum (1581). Obligated by poverty to leave the university, he lectured in Florence and Pisa, where he used the Leaning Tower to demonstrate his discovery of the laws of falling bodies. Professor of mathematics at Padua in 1592, he invented the first practical telescope (1608) and used it to make several astronomical discoveries of the first importance.

A treatise which he published in 1613 supporting the Copernican theory of the universe drew upon him the persecution of the bigoted; the Copernican system was stigmatised as heretical, and Galileo was forbidden to hold or teach it. Undaunted, he issued a new treatise in 1632, which was immediately condemned by the Inquisition, its author being convicted of heresy, imprisoned for some months and forced to recant. He died at Florence, Jan. 8, 1642.

Galileo's discoveries and inventions are among the most important ever made. Besides these already mentioned, they include the invention of the hydrostatic balance, of a rudimentary thermometer and an improved microscope and of the use of pendulums to regulate clocks, while his discoveries in physics paved the way for those of Newton.

Gall, *Franz Joseph*, the founder of phrenology, born at Tiefenbrunn, Baden; in 1785 he established himself as a physician in Vienna, where he pursued investigations on the nature of the brain and its relation to the cranium; in 1796 he lectured on his theory that mental and moral qualities may be deduced from the external configuration of the skull. (1758-1828).

Gall, *St.*, an Irish monk who, about 585, France, accompanied *St. Columban* to France in his missionary labours, but, being banished thence, went to Switzerland, and founded a monastery on the Lake of Constance. The Swiss town and canton of *St. Gall* are named after him. (c. 550-645).

Gallas, a Hamitic race occupying the S. and central parts of Abyssinia; energetic, intelligent and war-like; they follow mostly pastoral occupations; they number over four millions (or more than one-half the population of Abyssinia), and are mostly heathens.

Gall-bladder, a pear-shaped sac lying under the right lobe of the liver, and acting as a reservoir for the bile secreted by that organ; from the gall-bladder the bile passes into the duodenum, where it plays an important part in digestion. The function of the gall-bladder includes the concentrating of the bile by removing water from it, but even if it is removed or stopped up, bile can still reach the duodenum from the liver. Bile stored by the gall-bladder, however, has a lower percentage of water than pure liver-bile. The chief disorders of the gall-bladder are catarrh of the bile-ducts, often accompanied by jaundice and gall-stones.

Galle, or *Point de Galle*, fortified seaport town, prettily situated on a rocky promontory in the S.W. of Ceylon; there is a good harbour, but the shipping, which at one time was extensive, has declined since the rise of Colombo. Pop. 38,000.

Galleon, a man-of-war or armed merchant in the 16th Century. The foremast and mainmast were square-rigged, the mizen carried a lateen; there were three or four decks carrying batteries; at prow and stern were high bulwarks.

Galley, a long, narrow, single-decked ship-of-war, often with a beak for ramming, extensively used in the 16th

Century by the Venetians and Genoese. The Venetian galley carried three masts with lateen sails, but depended mainly on its oars, 50 or 60 in number. These were worked by slaves, five or six being chained to each bench. It was a common practice to man Christian ships with captive Moslems, and *vice versa*. Up to the 18th Century criminals in France were condemned to row in the galleys.

GALLEY

Gall-fly, a hymenopterous insect of the family Cynipidae. The larva develops while completely enclosed in a gall, which is an abnormal growth of a plant (such as an oak-apple), caused probably by a poison excreted by the larva.

Galliard, a lively dance in triple time, popular in Europe, especially Italy, during the 16th and 17th Centuries.

Gallican Church, the Catholic Church in France, which, while sincerely devoted to the Catholic faith and the Holy See, refused to concede certain rights and privileges which belonged to it from the earliest times; it contended that infallibility was vested not in the Pope alone, but in the entire episcopal body under him; maintained the supreme authority of general councils and that of the holy canons in the government of the Church, and insisted that the temporal power of kings was held independently of the pope. These contentions were summed up in a declaration of the French clergy in 1682, their opponents being known as "Ultra-montanists."

Galli-Curci, *Amelita*, Italian soprano singer. Born in Milan in 1889, she studied at the local conservatoire, won a prize there at 16, and made her opera debut at Rome in 1900, subsequently singing in S. America, New York and London.

Gallieni, *Joseph Simon*, French general and administrator; fought in defence of Bazelles, 1870. Lieutenant-Colonel and Governor of Upper Senegal, 1886. Served in Sudan and Tongking. Governor of Madagascar, 1890-1905. General, 1899. Governor of Paris, 1914, organised victory of the Marne. Minister of War, 1915-1916. (1849-1916).

Gallienus, *Publius Licinius*, Roman Emperor from 260 to 268, and for seven years (253-260) associated in the Government with his father, the Emperor *Valerian*; under his lax rule the Empire was repeatedly invaded, while in the provinces a succession of usurpers, known as the Thirty Tyrants, sprang up; in 268 he was murdered by his own soldiers whilst besieging the rebel *Aureolus* at Milan.

Gallio, *Junius Annaeus*, the Roman pro-consul of Achaia in the days of *St. Paul*, before whom the Jews of Corinth brought an appeal against the Apostle, which he treated with careless indifference as an affair of his (*Acts xviii*), in consequence of which his name has become the synonym of an easy-going ruler or prince. He was a brother of *Seneca*, the philosopher. (d. 65 A.D.).

Gallipoli, a fortified seaport town in of Brindisi, on a rocky islet in the Gulf of Taranto, close to the mainland, with which it is connected by a bridge of 12 arches; a fine cathedral and huge tanks hewn out of the solid rock for the storage of olive-oil are objects of interest. Pop. 8,000.

Gallipoli, a fortified seaport of European Turkey, on a peninsula of the same name at the western end of the Sea of Marmora, at the mouth of the Dardanelles, 90 m. S. of Edirne (Adrianople); it was the first city captured by the Turks in Europe (1356), and the peninsula was the site of the Dardanelles campaign (1915-1916) during the World War. The Turkish name is Gelibolu. Pop. about 25,000.

Gallipoli Campaign, a campaign of the first year of the World War, undertaken on Turkey's renunciation of her original policy of neutrality after closing the Dardanelles to the British fleet. This action cut off direct communication between Great Britain and Russia. At the same time there was evidence that Bulgaria intended to form an alliance with the Central Powers.

At the instigation mainly of Winston Churchill, the British Government decided to force the passage, relieve Russia and check the eastward extension of Germany's power. The original plan in Jan. 1915 was to force the Dardanelles with the fleet alone, but this was abandoned as impracticable. Sir Ian Hamilton was accordingly appointed to reinforce the naval attack by landing a force of Australians, New Zealanders and British Territorials.

His scheme was to land forces at various points on the Gallipoli Peninsula, mainly at Cape Helles and "Anzac" Cove, and make a massed attack on the stronghold of Krithia. There was, however, no accurate information on the nature of the country, and the real strength of the Turkish army was unknown. Moreover, the supplies of ammunition and of trained soldiers were inadequate.

Three attacks on Krithia in April and May were repulsed with overwhelming loss. In August a fresh attempt was made and troops were landed at Gaba Tepe and Suvla Bay, but the result was equally disastrous. Sir Ian Hamilton was superseded by Sir Charles Monro, who was commissioned by the Coalition Government to evacuate the position. This was completed by the end of 1915 without a single loss.

Gallium, a metallic chemical element, named in honour of France (Latin *Gallia*), or perhaps of its discoverer, Lecoq (Latin *gallus*) de Boisbaudran. It belongs to the same group as boron, aluminium, indium and thallium. Symbol Ga, atomic number 31, atomic weight 69.72.

Galloway, a district in the SW. of Scotland, co-extensive with Wigtown and Kirkcudbright, though formerly of considerably greater extent; the industry of the population is limited chiefly to agriculture, the rearing of sheep and cattle and fishing, while it is still noted for a small but hardy breed of horses called Galloways.

Galloway, Mull of, a rocky promontory, of Wigtownshire, forming the extremity of the peninsula called the Rhinns of Galloway; the most southerly point in Scotland, it rises to a height of 210 ft., and is crowned by a powerful lighthouse.

Gallows, a structure for the execution by hanging, consisting of two posts with a horizontal beam from which depends the rope.

Gall-stones, obstructions formed in the duct leading from the gall-bladder. They consist of unexpelled deposits of bile-pigment, combined with lime, and encrusted with a crystalline substance called "cholesterin." They may be numerous and small like gravel, or large, the size of an egg. Their removal often necessitates an operation.

Galston, a town of Ayrshire, Scotland, on the R. Irvine, 4 m. E. of Kilmarnock. Industries include coal-mining, weaving and lace-making. Pop. 6,300.

Galsworthy, John, British novelist and playwright. Educated

at Harrow and Oxford, he became a barrister, but spent most of his time writing and travelling. *The Island Pharisees*, published in 1904, was his first notable work, and was followed by a number of books, mostly realistic studies of upper middle-class life during the early twentieth Century, of which the sequence known as *The Forsyte Saga* is the most important. *The White Monkey* (1924), *The Silver Spoon* (1926) and *Swan Song* (1928), which together form a trilogy, extend the Forsyte motif to modern times. Among the best known of his plays are *The Silver Box* (1906), *Strife* (1909), *The Skin Game* (1920), *Loyalties* (1922) and *Escape* (1926). (1867-1933).

JOHN
GALSWORDTHY

Galt, a town of Ontario, Canada, 56 m. SW. of Toronto, on the Grand R. Power for its numerous industries is obtained from Niagara Falls. Pop. 13,600.

Galt, John, Scottish novelist, born at Irvine, Ayrshire; educated at Greenock, where he held a post in the Custom-house for a time; as secretary of the Canada Land Co. (1826-29) was responsible for much pioneer work in opening communications in Ontario, where, also, he founded the town of Guelph. His best novels, *The Ayrshire Legalees*, *The Annals of the Parish*, *Sir Andrew Wylie*, *The Entail* and *The Provost*, are unexcelled in their way. (1779-1839).

Galton, Sir Francis, British scientist and explorer, born at Birmingham, a cousin of Charles Darwin; studied medicine, and in 1844-1846 travelled in Syria, Egypt and the Sudan; in 1850 explored Damaraland and other parts of S. Africa. Subsequently turned his attention to meteorology, anthropology and eugenics (a science founded by himself); especially noted for his researches in heredity. (1822-1911).

Galvani, Luigi, an Italian physiologist, born at Bologna, where he became professor of Anatomy in 1762; celebrated for his discoveries in animal electricity, originating in his observation of the muscular contractions in the legs of frogs when in contact with different metals. The word "galvanism" is derived from his name. (1731-1798).

Galvanising, a process whereby iron and steel products are given a coating of zinc as a preventative against rust. There are two principal methods: hot-dipping and electro-galvanising. In the first the metal to be galvanised is dipped in molten zinc after having been first cleaned and treated with a flux. The deposition of zinc by the electro-plating process is suitable only for small articles.

Galvanometers. These instruments, which

are used for the detection of electric currents, are of three principal types. The moving-coil galvanometer has a coil of fine wire suspended between the poles of a permanent magnet. When a current passes through it the coil rotates and turns a pointer.

Moving iron galvanometers depend for their action on the magnetisation of one or more pieces of iron by a current which

GALVANOMETER

passes through a stationary coil. The current in a hot-wire galvanometer passes through a fine wire, heats it, and causes it to sag and move a pointer.

Moving-coil galvanometers are usually more accurate and more reliable than those of the other types, but cannot be used with alternating currents. Moving iron instruments are cheap and robust, and can be used for alternating currents of moderate frequencies. For high frequencies a hot-wire galvanometer must be used. Any galvanometer can be converted into an ammeter or a voltmeter by the addition of conductors of suitable resistances.

Galveston, city and seaport of Texas, U.S.A., situated on a low island of the same name at the entrance of Galveston Bay into the Gulf of Mexico and connected with the mainland by a causeway 2 m. long; it has a splendid harbour, and ranks as the third cotton port of the world; it has a medical college and a large trade in grain, oil and timber, as well as important manufactures. In 1900 the city was devastated by a tidal wave, 5,000 lives being lost; it is now protected by a vast sea-wall. Pop. 53,000.

Galway, a maritime county in the W. of Connaught, Ireland (Eire), in the province of Connaught; area 2,375 sq. m.; Lough Corrib (25 m. long) and Lough Mask (12 m. long), stretching N. and S., divide the county into E. and W. districts: the former is boggy, yet arable; the latter, including the picturesque district known as Connemara, is wild and hilly, with a rocky and indented coast. The Suir, Shannon and Corrib are the chief rivers; the Slieve Aughty Mts. in the S., and the Twelve Pins (2,395 ft.) in the W., are the principal mountains; fishing, some agriculture and cattle-rearing are the chief employments; there are many interesting cromlechs and ruins. Area 2,293 sq. m. Pop. 168,000.

Galway, the capital of Connaught, Ireland (Eire), and of the county of that name; situated on the N. side of Galway Bay, at the mouth of the Corrib R., 45 m. NW. of Limerick; the cruciform church of St. Nicholas (1390), Lynch's Castle and remains of a monastery (1396) are noteworthy; the town is the seat of a University College; fishing is an important industry, while wool and black marble are exported. Pop. 13,000.

Gama, Vasco da, Portuguese navigator, and the discoverer of the route to India round the Cape of Good Hope, born at Sines, in Alemtejo; already an experienced mariner, he was in 1497 despatched by King Emanuel I. on his celebrated voyage, in which he rounded the Cape and reached Calicut, in India; in 1499 he returned to Portugal, being received with great honour; three years later he led an expedition to Calicut to avenge the massacre of a small Portuguese settlement founded there the year before; on his way he founded the colonies of Mozambique and Sofala, and after inflicting a cruel punishment upon the natives of Calicut, returned to Lisbon in 1503; and went into retirement at Evora; in 1524 he was appointed Viceroy of Portuguese India, but died at Cochín soon after his arrival; the incidents of his famous first voyage round the Cape are celebrated in Camoens' memorable poem *The Lusads* (1499-1524).

Gamaliel, a Jewish rabbi, the instructor of St. Paul in the knowledge of the law, distinguished for his tolerant spirit and forbearance in dealing with the Apostles in their seeming departure from the Jewish faith. (Acts v. 34).

Gambetta, Léon Michel, French statesman, born at Cahors, of Italian and Jewish descent. Called to the Bar in 1859, he soon came into prominence on account of his advanced republicanism and hostility to the Empire; deputy for Marseilles,

1869; proclaimed the Republic after the Battle of Sedan, and as Minister of the Interior (1870), took vigorous measures to defend Paris. When the city was invested, he escaped to Tours in a balloon, and, as virtual ruler of France, made heroic attempts to repel the invading Germans, but resigned after the surrender of Paris, and sat for Strasbourg in the Assembly. After the war, as leader of the Republicans, he employed his fiery oratory against conservatives, royalists and clerical reactionaries, being fined and imprisoned in 1877 for libelling President MacMahon; in 1879 he became President of the Chamber and in 1881 Premier, but his power was already waning when he died as a result of a revolver accident. (1838-1882).

Gambia, (1) a river of W. Africa, flowing for about 1,000 m. through French Guinea, Senegal and Gambia Colony, and discharging into the Atlantic at Bathurst through a deep estuary; light craft can ascend as far as the Barraconda Rapids, 350 m. from the mouth and about 150 m. farther when the river is in flood.

(2) A British colony and protectorate in W. Africa extending along both banks of the R. Gambia to a distance of 6 m. and for about 250 m. from its mouth. Bathurst, on the island of St. Mary, at the mouth of the river, is the capital, and, together with Georgetown and some adjoining land and islands, it forms the colony proper, which has an area of 69 sq. m. and a pop. of 14,000. The remainder of the territory constitutes the protectorate (area 4,000 sq. m.; pop. 185,000). The country consists largely of creeks and swamps, and communication is chiefly by launches and steamers. Ground-nuts are the chief export, and small quantities of millet, rice, cassava and indigo are also produced.

Gambier, James, Baron, British admiral, born in the Bahamas; at 22 became a post-captain; under Lord Howe distinguished himself against the French at the Battle of the First of June (1794); in the following year he was made Rear-Admiral, and in 1799 Vice-Admiral; Governor of Newfoundland, 1802-1804; for his part in the bombardment of Copenhagen (1807) was made a baron. A dispute with Lord Cochrane at the Battle of Aix Roads against the French led to his being court-martialled, but he was honourably acquitted; Admiral of the Fleet (1830). (1756-1833).

Gambling Laws. Laws making debts irrecoverable at law were passed in the reigns of Charles II. and Queen Anne. By the Gaming Act of 1845 all wagering and gaming contracts were declared void, and no action can be brought at law to recover debts incurred in this way; however, once a bet or other wager has been paid, the money cannot be recovered.

In the case where a creditor agrees to refrain from taking some effective action against a debtor which he has a legal right to take (such as exposing him as a defaulter and so, possibly, subjecting him to social or professional damage), in consideration of receiving payment of his debt by some mutual arrangement, this constitutes a fresh and binding contract, enforceable at law; it must be noted, however, that the contract must not include, on the creditor's side, a promise to abstain from taking legal action for the recovery of the original debt, such debt being, of course, irrecoverable.

Betting transactions not being valid at law, commissions based upon them are likewise unenforceable, and the same applies where an agent pays or promises to pay debts incurred by him on behalf of a principal. But if the principal wins a bet, he is legally entitled to any money in respect of it received by his agent from a third party.

Ready-money football betting was prohibited in 1920, and to write, print, publish or knowingly circulate any advertisement or coupon relating to such betting is an offence punishable by fines.

Gamboge, a resin obtained from *Garcinia Cambogia*, a tree of Slam, Cambodia and Cochinchina. It is used in medicine and as a yellow pigment for paint and varnishes.

Game Reserve, tracts of land which have been reserved in their natural condition for the preservation of game. Canada is the foremost country in protecting its native animals. Animal parks and reserves of that Dominion total nearly 55,000 sq. m.; S. Africa has the Kruger National Park, where lions and elephants, among many other animals, may be seen in their native haunts. The most notable reserve, for both animals and birds, in the United States is the Yellowstone National Park.

Gamma Rays, name given to electromagnetic radiations of very short wave-length emitted by certain radioactive substances; they have enormous powers of penetration.

Gandak, river in British India. It rises in the Nepal Himalayas and flows SW., but on entering British India turns to the E. and forms the boundary between the United Provinces and Bihar, eventually entering the Ganges opposite Patna. During the rainy season it often floods large areas.

Gandhi, Mohandas Karamchand, Indian politician and Nationalist leader;

born at Porbandar, in Kathiawar, studied law in London and became a barrister of the Inner Temple; in 1923 went to S. Africa, where he became a vigorous champion of the rights of Indian settlers; after the World War he embarked in India upon a campaign of opposition to what he conceived to be British injustice and oppression, which was characterised by professedly non-violent tactics known as "passive resistance," "civil disobedience" and "non-co-operation." However, his investment by the National Congress with the fullest powers was followed by serious disorders, and in 1922 he was sentenced to six years' imprisonment, but was released less than two years later; again imprisoned for a few months in 1930 for a breach of the salt law; subsequently his energies were directed rather towards social and humanitarian progress than towards politics, his efforts to improve the lot of Hindu "untouchables" being especially noteworthy. (1869-).

Gando, a native State in N. Nigeria, upon the NW. border of Sokoto, of which it is a dependency; the inhabitants belong to the Fulah race, and are Mohammedans; Gando is also the name of the capital, an active centre of the cotton trade.

Ganesha, a Hindu god represented as having an elephant's head and four arms; the inspirer of cunning devices and good council, also the patron of letters and learned men.

Ganges, the great sacred river of India, has its source in an ice-cave on the southern side of the Himalayas, 8 m. above Gangotri, at an elevation of 10,300 ft. above the sea-level; at this, its first stage, it is known as the Bhagirathi, and not until 153 m. from its source does it assume the name of Ganges, having already received two tribu-

raries; issuing from the Himalayas at Sukhi, it flows in a more or less southerly course to Allahabad, where it receives the Jumna, and thence makes its way by the plains of Bihar and past Benares to Goolanda, where it is joined by the Brahmaputra; the united stream, lessened by innumerable offshoots, pursues a SE. course till joined by the Meghna, and under that name enters the Bay of Bengal; its most noted offshoot is the Hooghly, upon which Calcutta stands, which pursues a course to the W. of the Meghna; between these lies the Great Delta, which begins to take shape 220 m. inland from the Bay of Bengal; the Ganges is 1,557 m. in length, and offers for the greater part an excellent waterway; by Hindus it is held in great reverence as a sacred stream whose waters have power to cleanse from all sin, while burial on its banks is believed to ensure eternal happiness, and to be cast into its waters after death is to gain eternal peace.

Ganges Canal, constructed mainly for irrigating the arid land stretching between the Ganges and the Jumna Rs., originally extended from Hardwar to Cawnpore and Etawah, but has since been greatly enlarged, and at present (including branches) has a total extent of 3,700 m., of which 500 m. are navigable; it has contributed to mitigate suffering caused by famines by affording a means of distributing ready relief.

Ganglion, a small mass of nerve-cells, situated in the course of a nerve, and into which other nerves run. The ganglia of the sensory nervous system lie near the roots of the nerves in the spinal cord, while the ganglia of the sympathetic system are located in various parts of the body, the largest being the solar plexus, in the abdomen.

Gangrene, the mortification of any part of a living body, due to interruption of the blood-supply owing to injury or disease. There are two kinds of gangrene: dry and moist. Dry gangrene is characterised by a shrivelling of the dead part, which turns a dark-brown colour; a line of demarcation appears between the dead and the normal tissue, and in course of time the affected part may separate entirely from the rest of the body. In moist gangrene, which is the more serious form, there is much swelling and discoloration, with putrefaction and a foul discharge; the line of demarcation is absent, and the whole limb may be gradually involved. Owing to modern methods of surgery, cases of gangrene are far less prevalent than they used to be.

Gannet, a large, web-footed sea-bird, with white plumage, except

upon the head and neck, which are cream-coloured; the wing-gulls are dark brown, and there are patches of dark-blue, naked skin round the eyes; the blue-grey beak is almost straight and about 6 ins. in length. Gannets feed on fish, which they catch by diving, sometimes from astonishing heights. They frequent rocky coasts, and are found on the islands off the N. and W. coasts of the British Isles, and notably on the Bass Rock in the Firth of Forth.

Ganymedes, a beautiful youth, whom Zeus, attracted by his beauty, carried off, disguised as an eagle, to heaven; having had immortality conferred upon him, he was made cup-bearer of the gods instead of Hebe.

GANDHI

GANNET

Gao, Karvah, or Karvah, a Persian black-smith, whose sons had been slain to feed the serpents of the reigning tyrant, he raised his leather apron on a spear, and with that for a standard excited a revolt; the revolt proved successful, and the apron became the standard of the new dynasty, which it continued to be till supplanted by the crescent.

Garbo, Greta (Greta Louisa Gustafson), Swedish film-actress, born in Stockholm, at 14 entered a department store; attended dramatic school attached to Royal Theatre, Stockholm; began film career, 1922, appearing in *The Attraction of Gosta Berling*; afterwards went to Hollywood and starred in a number of films which brought her worldwide fame, including *Mata Hari*, *Anna Christie*, *Queen Christina*, *Anna Karenina* and *Marie Walenska*. (1905-).

Garcia, Manuel, Spanish singer and composer, born in Seville in 1775; in 1808 he went to Paris with a reputation already gained at Madrid and Cadix; later became world-famous as an operatic tenor; in 1825 he visited the United States; spent his last years in Paris as a teacher of singing; died 1832. His eldest daughter was the celebrated Madame Malibran, and his son, Manuel (1805-1904), a noted teacher of singing, was the inventor of the laryngoscope.

Gard, a dept. in the S. of France, between the Cevennes and the Rhone; slopes to the Rhone and the sea, with a marshy coast; produces wine and olives, and is noted for its silk-culture and breed of horses. Area 2,376 sq. m. Pop. 395,300.

Garda, Lake di, the largest of the beautiful Alpine scenery, between Lombardy and Venetia. It is 32 m. long, and from 2 to 10 m. broad. Its water is remarkably clear, and has a maximum depth of 1,135 ft. It is studded with many picturesque islands.

Garde Nationale, of France, a body of armed citizens organized in Paris in 1789 for the civic defence. In 1795 they helped to repress the Paris mob, and in the Revolutions of 1830 and 1848 supported the revolutionaries; in 1871 they were dissolved by the National Assembly.

Garden Cities originated in a scheme put forward in 1898 by Sir Ebenezer Howard to counteract the increasing congestion of the population in large towns, and the consequent depopulation of the countryside, by the establishment of industrial areas in rural surroundings, with ideal living conditions for the inhabitants. In addition to having proper sanitation, water, light and power, such "garden cities" were to be built on a pre-arranged plan, restricted as to size and surrounded by an agricultural zone. Letchworth, near Hitchin, established in 1903, was the first garden city, and the success of the scheme led to the founding of Welwyn, near Hatfield, in 1920.

Gardenia, a genus of trees and shrubs with large white flowers. They are indigenous to S. and tropical Africa and to Asia.

Gardening. In planning a garden it should be studied in relation to the house, as highway, simplicity and logical construction are of first importance. Interest may be given by emphasizing any dominant feature of the land to be laid out, such as a bank or a group of trees. The garden must also be so designed that the majority of

the flower-beds are not screened from the sun, as it is more difficult to cultivate flowers in shady places.

The soil must be carefully studied. It is more satisfactory to stock the garden at first with flowers that suit the soil, and later to introduce into prepared places those flowers for which there may be an individual preference. When the proposed design for the garden is complete, preferably on paper, and a list of selected plants has been made, it is necessary to prepare the soil ready for planting. This is best done between November and March. Bastard trenching is the best method of cultivation; it consists in turning over the soil two spits deep, always keeping the top spit on the surface.

To enrich the soil, stable manure may be dug into the lower spit, and may also be applied as a mulch on the surface during March. Lime is also good for the soil, as it helps to break up heavy clay and destroys insect pests, but it must not be applied at the same time as manure. Hoeing the surface of the soil in summer is also important, as it aerates the ground, prevents it from cracking, reduces the need for watering and disturbs insects.

Planting should not be done when the ground is either frozen or water-logged; early winter or early spring are preferable to mid-winter. If the garden is small, such trees as laburnum or birch are suitable, or the bush forms of larger flowering trees. Flowering shrubs are generally preferable to laurel or privet. Perennial flowers that are hardy and easy to grow in a sunny herbaceous border are lupins, delphiniums, coreopsis, gaillardias, peonies, poppies, early flowering chrysanthemums and Michaelmas daisies. These plants are tall growing; for the front of the border the choice may be pinks, catmint and violas.

It is best to group flowers in bold masses of colour, with at least three plants of one kind together. Biennials that may be included in the herbaceous border are wallflowers, forget-me-nots and sweet williams, all of which with antirrhinums and dahlias are suitable for summer bedding in formal flower-beds. Annuals that are reliable and full of colour are nasturtiums, stocks, scarlet flax, lavatera, virginia stock and candytuft. In a shady border such perennials as campanula, peonies, lilies-of-the-valley, geranium ibericum and anemone japonica will bloom. A rock-garden is best built in a sunny, open position, and between the rocks there should be deep pockets of loam, mixed with peat and silver sand, which makes an ideal soil for most rock-plants.

Gardens generally include roses; ramblers that grow quickly and bloom well are Paul's Scarlet Climber, Alberic Barbier and New Dawn, while reliable bush roses are Caroline Testout, Hugh Dickson and Shot Silk. The small polyantha roses such as Orleans and Karen Poulsen, are the easiest class to grow, and they bloom over a long period. The lawn should be renovated in April or August, and should be mown weekly from March to November. It is also benefited by rolling, and in winter should be prodded all over with a fork. The soil in the vegetable-garden needs the same cultivation as that in the flower-garden, and to avoid impoverishing it, a regular rotation of crops should be practised. Fruit-trees may be grown in even a small garden, the cordon fruit-tree occupying only half a square yard of ground.

Gardes Suisses, a celebrated corps of the French army, formed in 1615 for defence of royalty, and numbering 2,000. During the Revolution they gallantly defended the Louvre, but were almost annihilated by the infuriated Paris mob (1792). The corps was disbanded in 1830.

GARDENIA
FLORIDA

Gardiner, Colonel James, a Scottish officer of dragoons, noted for his bravery; served under Marlborough and fell at Prestonpans. (1688-1745).

Gardiner, Samuel Rawson, English historian, born at Ropley, Hants; his chief works are those dealing with English history from the time of James I. to the Protectorate; noted for his accuracy and impartiality. (1829-1902).

Gardiner, Stephen, English ecclesiastic, secretary to Cardinal Wolsey; conducted the proceedings against Catherine of Aragon for King Henry VIII. He was later made Bishop of Winchester, was imprisoned under Edward VI, and reinstated under Mary, and made Lord Chancellor. (1483-1555).

Gare Loch, a sea loch of Dumbarton-shire, Scotland; a branch of the Firth of Clyde. It is about 7 m. long and 1 m. in width.

Garfield, James Abram, President of the United States, born at Orange, Ohio; brought up in poor and humble circumstances, he studied until he was able to enter college, graduating at William's College, Mass., in 1856; in the following year he became President of Hiram College, Ohio, and, devoting himself to the study of law, in 1859 became a member of the State Senate; he took an active part on the side of the Federalists in the Civil War, and distinguished himself in several engagements, rising to be major-general; entered Congress in 1863, and soon came to the front, becoming eventually leader of the Republican party; in 1880 he became a member of the Senate, and next year was elected President; his efforts to purify and reform the civil service made him many enemies, and on July 2 he was shot by a disappointed place-hunter, dying two months later. (1831-1881).

Gar-fish, or Sea Pike, an edible fish (*Belone belone*) found in the warmer parts of the ocean, and related to the flying-fish; its body is slender with long and pointed jaws; its bones are green.

GAR-FISH

Gargoyle,

on a building, a projecting spout, designed in the shape of a hideous or grotesque monster, and designed to carry the water from a gutter clear of the masonry. Some of the most famous gargoyles are those on the Cathedral of Notre Dame at Paris.

Garibaldi, Giuseppe, Italian patriot, born at Nice; a sailor, and an associate of Mazzini for the liberation of his country, but being convicted of conspiracy, fled to S. America, where, both as a privateer and a soldier, he gave his services to the young republics struggling there for life; returned to Europe (1848) and took part in the defence of Rome against the French, but, being defeated, fled to New York; joined the Sardinians against Austria, and in 1860 set himself to assist in the overthrow of the kingdom of Naples and the union of Italy; landing at Marsala, he defeated the Neapolitans at Calatafimi, Reggio and Volturno and entered Naples. With the country united under Victor Emmanuel, Garibaldi's mission was accomplished, but he had several more campaigns to fight; opposing the Government he had helped to establish, he was defeated and taken prisoner at Aspromonte (1862), but pardoned, and at Mentana (1867) unsuccessfully encountered the French and Papal troops; he offered his sword to France in 1870 and won several victories over the Germans. Towards the end of his life he was an invalid. (1807-1882).

Garlic, bulbous plants with radical leaves, some long and narrow, others oval and tubular; all have the distinctive garlic odour; the flower-stem bears an umbel of numerous white, yellow or blue flowers; the petals are spread out with stamens attached at their base.

GARLIC

Garnet, a precious stone of Garnet, a vitreous lustre, and usually of a dark-red colour, resembling a ruby, but also found in various other shades, e.g., black, green and yellow. The finest specimens come from Ceylon, Peru and Greenland.

Garnett, Edward, English writer, born at Lichfield; entered the British Museum, and in 1890 became keeper of printed books; his writings include *Relics of Shelley*, *The Age of Dryden*, and biographies of Milton, Carlyle, and Emerson; he was a noted literary critic. (1835-1906). His wife, Mrs. Constance Garnett, became known for her translations of Turgenev, Chekhov and other Russian authors.

Garnett, Henry, a noted Jesuit, implicated in the Gunpowder Plot; educated in the Protestant faith, he early turned Catholic and joined the Jesuit order in Italy; in 1588 he returned to England as Superior of the English Jesuits, and engaged in various intrigues; on the discovery of the Gunpowder Plot he was arrested, found guilty of cognisance of the Plot, and executed. (1555-1606).

Garnett, Richard, English philologist, born at Olney, Yorkshire; entered the Church, and in 1829 became priest-vicar of Lichfield Cathedral, but in 1838 was appointed Assistant Keeper of Printed Books in the British Museum; one of the founders of the Philological Society. (1789-1850).

Garnishee Order, a court obtained by a creditor who has secured a judgment summons against his debtor, requiring a third party who owes money to the debtor to make payment to the first creditor instead of to the debtor. The third party concerned is known as the Garnishee.

Garonne, a river of SW. France which rises in the Val d'Aran, in the Spanish Pyrenees; 26 m. from its source it enters France near Pont du Roi, and after it passes Toulouse flows NW.; joined by the Save, 20 m. below Toulouse, and farther on by the Tarn and the Lot, it gradually widens into the Gironde estuary, which opens on the Bay of Biscay and at the head of which stands Bordeaux; it has a length of 357 m., and is freely navigable as far as Toulouse.

Garrick, David, English actor, born at Hereford; educated at Lichfield and for some months a pupil of Samuel Johnson; in 1737 accompanied Johnson to London, with the intention of entering the legal profession, but soon abandoned the idea and started in the wine business with his brother; in 1741 he commenced his career as an actor, making his first appearance as a harlequin; in the autumn of the same year he achieved immediate success as Richard III.; in 1747 he became co-patentee of Drury Lane Theatre, which he directed until his retirement from the stage in 1776; he was buried in Westminster Abbey. (1717-1779).

Garrison, William Lloyd, American journalist, born at Newburyport, Mass.; apprenticed to a printer, he became at 19 editor of the local *Herald*, and in 1829 joint-editor of the *Genius of Universal Emancipation*; his vigorous denunciation of slavery involved him in a charge of libel and brought about his im-

prisonment; at Boston, in 1831, he founded his celebrated *Liberator*, in which, in the face of great difficulties and violent opposition, he advocated the abolition of slavery till the cause was won in 1865. (1804-1879).

Garrotting, a form of robbery with violence of which an outbreak took place in England about 1862; the robber approached his victim from behind and half-strangled him with a scarf or similar object. A special Act passed in 1863 imposed flogging as a penalty, but the offence had practically ceased before the Act became law.

Garry Lake, a lake in the NW. Territories of Canada, lying in the course of the Back R. near the boundary of the Arctic Circle.

Garter, The Most Noble Order of the, a celebrated order of knighthood

instituted in 1344 by King Edward III.; the original number of the knights was 26, of whom the sovereign was head; it is the highest order of knighthood, and its initials are K.G.; the insignia of the order includes surcoat, mantle, star, etc., and especially a garter of blue velvet worn on the left leg below the knee, and bearing the inscription in gold letters *Honi soit qui mal y pense*; ribbon, Garter Blue; election to the order lies with the sovereign.

ORDER OF THE GARTER
(Star and Collar)

Garter King-of-Arms, an officer of the Garter and the principal King-of-Arms in England, by whom arms are granted under the authority of the Earl Marshal. The office was instituted by Henry V. in 1420.

Garvin, James Louis, British journalist, born at Birkenhead; began his career on the *Newcastle Chronicle*, 1891-1899, becoming known as an Irish Nationalist; joining the *Daily Telegraph*, he became a Tory and a prominent supporter of Joseph Chamberlain, editor of *The Outlook*, 1905-1906 and of *The Observer* from 1908; editor *Fall Mail Gazette*, 1912-1915, and of the 13th and 14th editions of the *Encyclopædia Britannica*. (1868-).

Gascoigne, Sir William, English judge, born at Gawthorpe, Yorkshire; appointed King's Serjeant in 1397 and Chief Justice of the King's Bench in 1400; his impartial devotion to justice was strikingly exemplified in his refusal to pass sentence of death on Archbishop Scrope; the story of his committing Prince Henry to prison, immortalised by Shakespeare (*Henry IV.*, pt. 2), is unauthenticated; nor was he continued in office after Henry IV.'s death, a successor being appointed 9 days later. (c. 1350-1419).

Gascony, an ancient province of SW. France, lying between the Atlantic, the Pyrenees, and the Garonne; it included several of the present departments; the province was of Basque origin, but from 1380 to 1451 was under English sovereignty; it was added to the territory of the French crown in 1593; the Gascons are of dark complexion and small in stature, vivacious and boastful, but have a high reputation for integrity.

Gas Engine, an internal combustion engine using as a fuel coal-gas, producer-gas, or the waste gases from blast furnaces; the first practical gas engine was built by Lenoir, a Frenchman, in 1860; improvements appeared in the designs of the Otto engine (1876), the Clerk engine (1886), and later in the Stirling engine.

Gases, *Poison*, general name for gases which have been or may be used in warfare to disable or incommode the enemy forces. They may be classified in four groups: (1) Lung-irritant gases, such as chlorine and phosgene; (2) non-irritant gases, chiefly compounds of arsenic, such as D.A. (diphethyl-chloroarsine) and others known as D.M. and D.C.; (3) tear gases, such as C.A.F. (chloroacetophenone) K.S.K. and B.B.C.; (4) blister gases, the chief of which are mustard gas (dichloroethyl sulphide) and Lewisite (chlorovinylidichloroarsine). Such gases were first used in the World War, and they have been employed in various conflicts since 1918, although international conventions restricting their use have been made. The development of methods to counteract their results is an increasingly important part of defensive war preparation.

Gaskell, Mrs. Elizabeth, *née Stevenson*, English novelist, born in Chelsea and brought up at Knutsford, in Cheshire, a place which inspired her masterpieces *Cranford* (1851-1853). Her remaining works include *Mary Barton*, *Sylvia's Lovers* and the *Life of Charlotte Brontë*. (1810-1865).

Gas Laws, the laws underlying the behaviour of gases when subjected to changes of temperature and pressure, etc. *Boyle's law* states that the volume of a given mass of gas varies inversely as the pressure upon it, if the temperature is constant ($V \propto \frac{1}{P}$ if T is constant); thus if a certain weight of gas occupies 10 c.c. at a pressure of 1 atmosphere (760 mm. of mercury), it will occupy 5 c.c. at 2 atmospheres, 2 c.c. at 5 atmospheres, 1 c.c. at 10 atmospheres, 20 c.c. at half an atmosphere, and so on—provided always that the temperature remains unchanged.

Charles's law states that the volume of a given mass of gas varies directly as the absolute temperature (i.e., centigrade temperature + 273°) if the pressure is constant. A third law may be deduced from the first two—viz., that the pressure exerted by a given mass of gas varies directly as the absolute temperature if the volume remains constant. Combining the three laws into one equation, we may write (for a given mass of gas) $PV = T \times a \text{ constant}$, where P = the pressure, V = the volume, and T = the temperature in degrees (absolute). The constant is usually written R , so that the "gas equation" becomes $PV = RT$. If the weight of gas concerned is the molecular weight in grams, the value of R (the "gas constant") is approximately 2.

The gas equation in this simple form is true only for a "perfect" gas—that is, a gas which shows no deviation whatever from the gas laws of Boyle and Charles. It need hardly be said that no such gas actually exists, although at low pressure and high temperatures most gases approach "perfection." The equation $PV = RT$ is therefore only an approximation, but describes the behaviour of normal gases under ordinary conditions sufficiently well for most purposes.

Gay-Lussac's law, or the law of gaseous volumes, states that when gases react the volumes in which they do so are in a simple numerical relation to one another, and to the volume of the product if that is gaseous. Thus 1 volume of nitrogen combines with 3 volumes of hydrogen to form 2 volumes of ammonia, and 1 c.c. of carbon monoxide will combine with 0.5 c.c. of oxygen, yielding 1 c.c. of carbon dioxide.

Avogadro's hypothesis states that equal volumes of all gases, under the same conditions of temperature and pressure, contain equal numbers of molecules. This has been approximately verified in numerous cases by direct experiment, and is therefore sometimes

described as *Avogadro's law*. *Graham's law* states that the rates at which different gases diffuse (through unglazed porcelain, etc.) are inversely proportional to the square roots of their respective densities.

Gas Manufacture. At the present day the gas-works in the British Isles alone use 18,000,000 tons of coal and produce over 320,000,000,000 cu. ft. of gas annually. The coal is heated strongly in iron or fireclay retorts, in the absence of air, and four main products are formed—viz., coal-gas, coal-tar, gas-liquor (ammoniacal liquor) and coke. Of these, the coke is left in the retorts, while all the others are at first in the gaseous state. The crude gas leaving the retort-house is passed into a water-cooled condenser, where the gas-liquor and coal-tar condense to the liquid state and flow down into underground liquor- and tar-wells.

The coal-gas, now partly purified, still contains hydrogen sulphide ("sulphuretted hydrogen") and some residual ammonia; it is therefore passed through washers, commonly consisting of large cases containing thin strips of wood kept constantly damp with water. Since ammonia is very soluble in water, the coal-gas is washed clean of this substance, and the ammonia solution is run off into the liquor-well. The hydrogen sulphide, which is removed both because it has an unpleasant smell and because the sulphur it contains is valuable, is extracted in the "purifier." This consists of a large cast-iron vessel filled with trays each carrying a layer of moist bog-ore (iron oxide, Fe_2O_3). The iron oxide reacts with the hydrogen and is itself converted into iron sulphide, from which sulphuric acid may be manufactured. The purified gas now passes through the main meter and thence into the gasholder.

The composition of typical coal-gas is roughly as follows: hydrogen, 50 per cent.; methane or marsh-gas, CH_4 , 32 per cent.; carbon monoxide, CO , 8 per cent.; ethylene, C_2H_4 , 4 per cent.; nitrogen, 6 per cent. Of these gases, all except nitrogen are inflammable. Hydrogen, methane and carbon monoxide burn with bluish, non-luminous flames. The luminosity of the ordinary coal-gas flame is chiefly due to the ethylene.

In modern practice, coal-gas is usually mixed with water-gas before delivery to the customer, but since water-gas (a mixture of carbon monoxide and hydrogen made by passing steam over white-hot coke) has less heating value than coal-gas, it is frequently enriched by spraying crude petroleum into it in a superheater; the product is called carburetted water-gas.

Coal-gas is principally required as a source of heat, and is therefore now sold on the basis of the therm, which is the amount of heat required to raise the temperature of 100,000 lb. of water through 1 Fahrenheit degree—i.e., one therm = 100,000 British Thermal Units. The combustion of 1,000 cu. ft. of the gas commonly supplied yields about 5 therms.

Gasolene, another name, used chiefly in America, for petroleum motor spirit or benzine.

Gaspé Peninsula, an eastern section of the Province of Quebec, Canada, between the Gulf of St. Lawrence and Chaleur Bay. It is largely forest land, and there are rich fisheries. Area 4,550 sq. m. Pop. 40,500.

Gassendi, Pierre, French mathematician and philosopher, born in Provence; lecturer in Theology at Digne (1612), professor of Philosophy at Aix (1617) and of Mathematics at Paris (1645); declared against scholastic methods in favour of empiricism; became the head of a school opposed to Descartes; adopted in part the

philosophy of Epicurus, contributed to the science of astronomy, and was the friend of Kepler, Galileo and Hobbes. (1592-1655).

Gasteropods, a class of molluscs having a ventral muscular process which serves as a foot; they include snails, slugs, whelks, etc.

Gastritis, inflammation of the lining of the stomach; it may be caused by excessive drinking of tea or alcohol, etc., taking cold drinks when over-heated, by unsuitable diet generally or by poisons; it may also follow injury. The symptoms include a feeling of heaviness after meals, vomiting, heartburn and constipation. Treatment varies to some extent with the cause, but, in general, warm fomentations applied to the stomach give relief, while an emetic and an aperient may be administered with benefit.

Gate of Tears, Mandeb, in the Red Sea, so called from the shipwrecks associated with it.

Gates, Horatio, an American general, born in England, at Maldon, Essex; served as an English officer in America till the peace of 1763, and then retired to Virginia; in the War of Independence he fought on the side of America, and, as commander of the northern army defeated the English at Saratoga in 1777, but in 1780 he suffered a crushing defeat by Cornwallis at Camden, and was court-martialled, though eventually acquitted. (1728-1806).

Gateshead, borough and seaport of Durham, England, situated on the S. bank of the Tyne, opposite Newcastle, with which it is connected by five bridges; it has extensive ironworks, foundries, and shipbuilding yards, and soap, glass and chemical manufactories. Pop. 123,000.

Gath, a city of the Philistines, prominent in the story of David. Its site is not certain, but remains on a cliff 12 m. N.E. of Ashdod have been identified with it.

Gatling, Richard Jordan, American inventor, born in Hertford County, N. Carolina; graduated in medicine, but devoted his attention to inventing agricultural machinery, including a steam plough and machines for sowing and thinning cotton and grain; in 1862 he evolved the machine gun known by his name. (1818-1903).

Gatun, a town in the Panama Canal Zone, where part of the canal works are situated. Gatun Lake, in the vicinity, has been converted into a reservoir by the construction of the Gatun dam. The latter is over 1½ m. long and ½ m. wide at its broadest point.

Gatwick, Surrey, England, with a station on the Southern Railway; in 1936 Gatwick Airport, near by, was opened, with a separate station.

Gauchos, a name bestowed upon the natives of the pampas of S. America; they are of Indo-Spanish descent, and are chiefly engaged in ranching, being dextrous horsemen, and skilled users of lasso and bolas; the wide-brimmed sombrero and loose poncho are characteristic features of the dress which they wear.

GASTEROPOD (Whelk)

GAUCHO

Gaudeamus, the first word of the "Gaudeamus igitur, juvenes dum sumus" (Let us then rejoice while we are young).

Gauden, John, Bishop of Worcester; protested against the trial of Charles I. and claimed to be the author of the celebrated *Eikon Basilike* or the *Portraiture of his Sacred Majesty in his Solitudes and Sufferings*, which had previously been attributed to the King himself. (1605-1662).

Gauge, an instrument of measurement of which there are many kinds. The wire or plate gauge is a steel plate numbered with panelled-sided notches of various widths round the edge. The "number" of a wire is ascertained by trying which notch is just sufficiently wide to allow it to pass. The carpenter's gauge is a sliding measure for striking a line parallel to the straight side of a piece of wood. The term gauge is also applied to the width between the inside of the metals of a railway track. In England 4 ft. 8½ ins. is the standard gauge for passenger railways.

Gauguin, Paul, French painter, born in Paris; travelled in Peru and Martinique, and about 1888 became a leader of the Impressionists in Brittany; in 1895 settled for good in the South Seas, living as one of the natives. A pioneer of Post-Impressionism, his paintings, woodcuts and carvings caused a sensation. (1848-1903).

Gaul, the name the ancients gave to two distinct regions: Cisalpine Gaul, a province on the Roman side of the Alps, embracing the N. of Italy, as being long inhabited by Gallic tribes; and Transalpine Gaul on the other side of the Alps, and extending from the Alps to the Pyrenees, from the Atlantic to the Rhine; subdued by Julius Caesar 58-50 B.C. and divided by Augustus into four provinces.

Gaunt, John, Duke of Lancaster, fourth son of Edward III., born at Ghent; in 1362 succeeded to the estates of his father-in-law, the Duke of Lancaster; having in 1372 married, as his second wife, the daughter of the King of Castile, he made an unsuccessful attempt to seize the Castilian throne; in the later years of Edward III.'s reign he took an active part in public affairs, and by his opposition to the national party and overbearing conduct towards the Commons made himself obnoxious to the people; for selfish motives he supported Wycliffe for a time; in 1386 made another ineffectual attempt to gain the crown of Castile; in later years was engaged in France. (1340-1399).

Gauntlet, a steel glove of mail or plate to protect the hands and

wrists in battle. Gauntlets were first introduced as separate portions of armour in the 14th Century. There were a number of patterns. In the "Forbidden

GAUNTLET

Gauntlet" the plate over the fingers was prolonged and locked to the wrist when the hand was shut, thus preventing the weapon from being wrenched from the grasp.

Gaur, or *Lakshnaui*, the ancient capital of Bengal, now in ruins, but with Hindu remains of exceptional interest, is situated 8 m. S. of English Bazar, between the rivers Ganges and Mahanadi; the city is believed to have been founded in the 11th Century; it fell into decay after the Mogul conquest in 1575, and pestilence and the deflection of the Ganges into a new channel accelerated its fate.

Gauss, unit used in electricity for the measurement of magnetic induction, named after K. F. Gauss.

Gauss, Karl Friedrich, German scientist, born at Brunswick; was director of the observatory at Göttingen for nearly 50 years; his researches and writings covered the fields of astronomy, physics, mathematics, electricity and optics; he made important discoveries in magnetism, and was pronounced by Laplace the greatest mathematician in Europe. (1777-1855).

Gautama, the name of the family of a Rajput clan which at the time of his birth was settled on the banks of the Rohina, a small affluent of the Gogra, about 140 m. N. of Benares.

Gautier, Théophile, French poet, Tarbes; began life as a painter, but, turning to literature, soon attracted the attention of Sainte-Beuve by some studies in the old French authors; joined the romantic school, and in 1830 published his poem *Albertus*, and in 1835 his famous novel *Mademoiselle de Maupin*; for many years was art critic for Paris newspapers; his greatest works include the novels *Captain Fracasse* and *La Moinie* and the lyrics *Emaux et Camées* (Enamels and Cameos); known for his exquisite literary style. (1811-1872).

Gavarni, Paul, the nom de plume of Sulpice Guillaume Chevalier, French caricaturist, born in Paris; began life as an engineer's draughtsman, but soon became a cartoonist; most of his best work appeared in *Le Charivari*, but some of his bitterest and most earnest pictures, the fruit of a visit to London, appeared in *L'Illustration*; he also illustrated Balzac's novels, and Sue's *Wandering Jew*. (1804-1866).

Gavazzi, Alessandro, Italian anti-papal agitator, born in Bologna; admitted into the order of Barnabite monks; he later became professor of Rhetoric at Naples; an energetic supporter of Pius IX. in his liberal policy, he afterwards withdrew his allegiance; joined the Revolution of 1848, and ultimately fled to England; served Garibaldi as chaplain, 1860; as an anti-papal lecturer he showed considerable oratorical powers. (1809-1889).

Gavelkind, a tenure obtaining in Kent, Northumberland and Wales (principally in the first-named), which provided for descent of property to all the sons alike, the oldest to have the horse and arms and the youngest the homestead; said to represent the so-called tenure common to the country previous to the Norman Conquest. It was abolished by the Law of Property Act, 1925.

Gaveston, Piers, Earl of Cornwall, the pernicious favourite of Edward II., was the son of a Gascon knight; made an earl in 1307, he was regent in 1308 and viceroy of Ireland, 1308-1309; twice banished at the instance of the nobles, because of his evil influence over the King and his arrogance; captured at Scarborough by the Earl of Pembroke, he was seized by the Earl of Warwick and beheaded. (d. 1312).

Gavotte, a French dance of the 17th-18th Centuries similar to the minuet, but quicker.

Gay, John, English poet, born at Barnstaple; wrote *Rural Sports*, *Fables in Verse* and the lyrical drama *The Beggar's Opera* (1728), his masterpiece, which was received with great enthusiasm, and has been frequently revived; a sequel, *Polly*, gave great offence at Court; he was buried in Westminster Abbey. (1685-1732).

Gaya, chief town of a district of the same name in Bengal, on the Phalgu, 57 m. S. of Patna; it is a great centre of pilgrimage for Hindus, and has associations with Buddha; 100,000 pilgrims visit it annually. Pop. 88,000.

Gay-Lussac, **Joseph Louis**, French chemist and physicist, born at St. Leonard, Haute-Vienne; at the Polytechnic School, Paris, his abilities attracted the attention of Berthollet, who appointed him his assistant in the government chemical works at Arcueil; in 1809 he became professor of Chemistry at the Paris Polytechnic School; in 1829 he had become chief assayer to the Mint; in 1832 was elected to a similar chair at the Jardin des Plantes; seven years later was created a peer of France; his name is associated with many notable discoveries in chemistry and physics. (1778-1850).

Gaza, a town of Palestine, 50 m. SW. of Jaffa, situated on a mound at the edge of the desert, 3 m. from the sea, it is the capital of the S. province and an airport. In Biblical times it was a Philistine town of which Samson carried away the gates (Judges xvi. 3). Pop. 19,000.

Gazelle, a group of graceful, medium-sized antelopes, with slender legs, short tails, and usually short-haired, light-coloured coats; their horns curve gracefully in various shapes, but the females are hornless in some of the genera.

Gazette, **The**, an official newspaper, in which government and legal notices are published, issued on Tuesdays and Fridays; the first "gazette" was a Venetian newspaper issued in 1536 and so called because a "gazetta," a Venetian coin a little less than a farthing in value was charged for attending a public reading of the news-sheet.

Gdynia, a seaport of Poland, 12 m. NW. of Danzig. It was established in 1920 as a port of the corridor allotted to Poland after the World War, and is a serious rival to Danzig. Pop. 30,000.

Gean. See **Wild Cherry**.

Gearing. Belt, chain and toothed gearing are forms of mechanism for converting a rotary motion about a given centre into a rotary motion about another centre. In the case of a belt, the power is transmitted through the friction between the belt and the pulleys, and in the case of toothed gearing the power is transmitted through the stresses in the material of the teeth. Chain gearing is similar to belt gearing, except that in place of the friction drive there is positive drive between the teeth on the sprocket wheels and the links of the chain.

Gecko, the name of a family of lizards, known also as wall-lizards. The skin is soft and covered with small, hard granules; the tail is delicate, readily broken and quickly regenerated, and the claws are well developed; a sucker-like apparatus on the feet enables geckoes to run along smooth walls and ceilings with ease; they are natives of warm climates.

Ged, **William**, the inventor, tor of stereotyping, born at Edinburgh, where he worked as a goldsmith; endeavoured to push his new process of printing in London but, disappointed in his workmen and his partner, returned to Edinburgh

and died in poverty; an edition of Sallust and two prayer-books were stereotyped by him. (1690-1749).

Geddes, **Rt. Hon. Sir Auckland**, British politician, born at Edinburgh, studied medicine and prior to the World War was Professor of Anatomy in Dublin and at McGill University, Montreal; became successively Director of Recruiting, 1916, Minister of National Service, 1917, Minister of Reconstruction, 1918, President of the Board of Trade, 1919, and Ambassador to U.S.A., 1920-1923. (1879-).

Geddes, **Hon. Sir Eric**, British politician, brother of the preceding. Born in India, he went to America early in life to do railway work; in 1904 he became general manager of the North-Eastern Railway Co., and in the World War was appointed Deputy Director-General of Munitions and, later, Director-General of Military Railways. He then entered Parliament, and became successively Controller of the Navy, First Lord of the Admiralty and Minister of Transport. In the post-war Coalition Government he was entrusted with "the axe" to cut departmental expenditure. He abandoned politics for commerce in 1922. (1875-1937).

Geddes, **Jenny**, an Edinburgh worthy, who on July 23, 1837, immortalised herself by throwing her stool at the head of Laud's bishop as he proceeded from the desk of St. Giles's to read the *Collect* for the day, exclaiming as she did so, "Deil colic the wame o' thee, fause loon, would you say Mass at my lug!" which was followed by great uproar.

Geddes, **Sir Patrick**, British botanist and biologist, after being professor of Botany at Dundee (1883-1920), he was appointed to the chair of Sociology and Civics at Bombay in 1919; known for his researches in evolution, biology and sex; an advocate of town-planning and projects for social reform. (1854-1932).

Geelong, a city of Victoria, Australia, Melbourne. The gold discoveries of 1851 gave a stimulus to the town, which is now a busy centre of the wool trade, and has tanneries and paper works, etc. The harbourage is excellent, and in summer the town is a favourite resort. Pop. 40,000.

Gefle, a seaport of Sweden, capital of the province of Gefleborg; situated on an inlet of the Gulf of Bothnia, 60 m. NNW. of Uppsala; has an interesting old castle and a school of navigation, and, since a destructive fire in 1869, has been largely rebuilt. Pop. 39,000.

Gehenna, the valley of Hinnom, to the S. of Jerusalem, for which it served as a vast refuse-pit; became the symbol of hell from the fires perpetually burning to consume the rubbish.

Geikie, **Sir Archibald**, Scottish geologist, born in Edinburgh; at the age of 20 he joined the Geological Survey, and in 1867 became Director of the Survey for Scotland; in 1871 he became Murchison professor of Geology at Edinburgh, and in 1881 was appointed chief director of the Geological Survey of the United Kingdom; in 1891 he was knighted; President of the British Association in 1892 and of the Royal Society, 1908-1913; wrote many works on geology. (1835-1924).

Geikie, **James**, Scottish geologist, brother of the preceding, born in Edinburgh; in 1882, after serving 21 years in the Geological Survey of Scotland, he succeeded his brother in the chair of Geology at Edinburgh; his principal work as a scientist is *The Great Ice Age* (1874); his literary sympathies appear in his admirable translations of *Songs and Lyrics of Heine*. (1839-1915).

GAZELLE

GECKO

Gelatine, an albuminoid protein obtained from bones, skins and other animal tissue. It is widely employed in industry and commerce, the purer forms, for example, being used for jellies, confectionery and other foodstuffs, while the coarsest varieties yield glue.

Gelderland, a province of the Netherlands, bounded by Prussia on the S. and E. and by the Zuider Zee on the NW. The chief rivers are the Rhine, Vassel, Maas and Waal. It is an agricultural and fruit-growing district. Area 1,941 sq. m. Pop. 891,000.

Gelignite, a gelatinised explosive, the average composition of which is nitro-glycerine 60 per cent., nitro-cellulose 4 per cent., wood meal 8 per cent., and nitrate of potash 28 per cent. It is largely used for blasting.

Gellert, or Kithart, a famous dog which figures in Welsh tradition of the 13th Century, and whose devotion and sad death are celebrated in a fine ballad written by the Hon. William Robert Spencer (1790-1834). The story is as follows: Prince Llewellyn on returning one day from the chase discovered the cradle of his child overturned and bloodstains on the floor. Immediately concluding that Gellert, whom he had left in charge of the child, had been the culprit, he plunged his sword into the breast of the dog and laid it dead. Too late he found his child safe hidden in the blankets, and by its side the dead body of an enormous wolf. Gellert's tomb is still pointed out in the village of Beddgelert on the S. of Snowdon.

Gellert, Christian, a German poet, fabulist and moralist, born in Saxony; professor of Philosophy at Leipzig, 1751; distinguished for his influence upon German literature, which he helped to broaden and free from pedantic formalities, thus foreshadowing the romanticism of Schiller and Goethe. (1715-1769).

Gellius, Aulus, a Latin author, born at Africa; a miscellany in twenty books which ranges discursively over learned topics of all kinds, and is valuable as abounding in extracts from ancient writings no longer extant. (c. 130-180).

Gelon, tyrant of Syracuse from 485 to 478 B.C.; rose from the ranks, gained a victory in 480 B.C., on the day of the Battle of Salamis, over a large host of Carthaginians who had invaded Sicily; d. 478 B.C., leaving behind him an honoured memory.

Gem, a precious stone, especially when cut and polished. Beauty, durability and rarity are the three most desirable qualities in gems. They may be divided into three groups: transparent, translucent and opaque. The transparent form the largest group, and this may again be divided according to the presence or absence of colour.

Among stones having colour, the diamond holds first place. Other stones, such as "fired" zircon, white sapphire, white topaz and rock-crystal, may reflect light from the surface or from the interior, but none of them glows like the diamond. No colour other than a trace of steel-blue can be tolerated in stones of this category.

In order to reveal the beauty of the stone, the lapidary requires to exercise much skill in the disposition of the facets. A coloured stone depends for its attractiveness rather on its intrinsic hue than on the cutting. The tint must not be too light nor too dark in shade. The lapidary can to some extent control these shades by cutting the former deep and the latter shallow.

Of the small group of translucent stones—those which pass light, but are not clear enough to be seen through—the most important is

the opal, which, together with certain others of the group, owes its merit to the same optical effect as that characterising soap-bubbles, tarnished steel and so forth, and not to any intrinsic coloration.

The last group, comprising opaque stones, has but a single representative among ordinary gem stones—namely, turquoise. In this stone light is scattered and reflected from layers immediately contiguous to the surface, and the colour is due to the resulting absorption.

Gemini, the third sign of the zodiac, which the sun enters about May 21. The constellation of Gemini, which contains the two bright stars Castor and Pollux—named after the twin heroes of the ancient Greeks—does not now correspond with the zodiacal sign, owing to the precession of the equinox.

Gemsbok, the S. African name of the *Oryx gazella*, an antelope of the

GEMSBOK

Gendarmes

(i.e., men-at-arms), a military police force in France charged with maintaining the public safety. The gendarmierie is considered a part of the regular army, and is divided into legions and companies, but the pay is better than that of an ordinary soldier. In the 14th and 15th Centuries the name was applied to the heavy French cavalry, and later to the royal body-guard of the Bourbons.

Gender, in grammar one of the categories into which words are divided according to the sex, natural or figurative, of the objects which they represent. In English, words denoting males are said to be of the masculine gender, those denoting females of the feminine gender, and those denoting inanimate objects or abstract ideas of the neuter gender.

Genealogy is the science by which the origin of families is traced. Its chief use is in connection with questions of heritage and the right of ownership of property. Genealogical records carefully preserved by private families may often be of great historical interest.

General, the title of an officer in the British Army ranking immediately below a field-marshal. In descending order come the titles of lieutenant-general and major-general. The rank of brigadier-general formerly followed, but "brigadier" alone is now retained.

General Assembly, the governing body and highest ecclesiastical court in the Presbyterian Church of Scotland, Ireland and the United States of America. It is composed of both clerics and laymen, and possesses both judicial and legislative power. The Assembly is presided over by an elected minister known as the Moderator.

General Paralysis of the

Insane (G.P.I.), a serious disease marked by degenerative changes of mind and body and resulting from syphilitic infection. The progress of the disease is gradual, the symptoms including progressive loss of muscular power, with inability to co-ordinate the muscles, squinting and double vision, slurred speech and tremulous and altered handwriting; paralytic seizures may

occur, and the gait becomes stumbling and unsteady, until finally the patient is entirely bedridden. Meanwhile the character alters for the worse; grandiose and wildly extravagant ideas may be expressed, or, more generally, there may be acute depression, ending in complete insanity. All these symptoms are brought about by destructive changes in the brain tissue caused by the poisons of the syphilitic germs. G.P.I. was formerly an inevitably fatal disease, but a recently evolved method of fever therapy gives a fair chance of recovery in a large proportion of cases; it consists of injecting the patient with malaria, which leads to the destruction of the syphilitic germs in the brain, in conjunction with the administration of certain compounds of arsenic.

General Strike. The, the strike of all unions belonging to the Trades Union Congress which started on May 4, 1926, and which was designed to coerce the Government into agreeing to the terms of the miners in the coal stoppage which had begun three days before. After eleven days, singularly free from real disturbance, the strike was unconditionally called off.

Genesis, the first book in the Bible, so containing an account of the origin of the world, of the human family and of the Jewish race.

Genetics and Heredity.

The term genetics was applied by William Bateson in 1906 to that department of biology which deals with the transmission of hereditary characters and with the origin of variations in species and individuals. It is thus wider in its connotation than heredity, which Sir J. Arthur Thomson defined as "the relation of genetic continuity between successive generations" or "the arrangements which make like beget like, or tend to beget like."

In other words, heredity seeks to understand why offspring are like their parents, while genetics is also concerned with why they are not exactly alike. The resemblance of a general character between parents and offspring is due to the fact that when the fertilised egg-cell begins to divide to form an embryo, some of the daughter cells retain a close similarity to the egg-cell and give rise to the reproductive organs; in due course, at sexual maturity, the reproductive organs set free some of their undifferentiated germ-cells, which, after fertilisation with similar cells from an individual of the opposite sex, begin the cycle of changes over again.

It is, however, not merely in the early setting-apart of the germ-cells that the mechanism of heredity lies; more minute particulars are also concerned. The nucleus of a cell (see Cell) contains protoplasmic material known as the chromatin network, and when the cell is about to divide, a noteworthy sequence of changes begins to take place. The chromatin network unravels itself and splits up into a number of short, thick rods called chromosomes. Each chromosome then divides accurately into halves, and one half of each passes towards one end of the cell, the remaining half passing with its fellows towards the other end.

Having reached their destinations, one bundle of half-chromosomes joins up to form one daughter-nucleus, while the other bundle forms a second; so that, in the production of the two new nuclei, there has been a most careful and thorough-going division of the original nuclear material. Each daughter-nucleus takes half of the main protoplasm (cytoplasm) of the parent cell, and thus two daughter-cells are formed.

The minute exactness with which the division of the chromatin network is effected

has led to the inescapable conclusion that the chromosomes are the carriers—or at least the main carriers—of the hereditary character, and this conclusion has been amply confirmed by the work of Mendel and others upon the artificially controlled inter- and cross-breeding of plants and animals. The results are in very close agreement with those which, on the mathematical theory of probability, we should expect on the assumption that the chromosomes carry independent factors or "genes," each of which is responsible for one or more definite hereditary feature (see Mendelism).

Whether acquired characters—i.e., modifications acquired by an individual and not possessed by its parents—can be transmitted to offspring is a question still hotly debated by biologists, as it has been for the last century. It is probable that the solution may be found in the recognition of other factors as concerned in heredity—such, for example, as the hormones. Thus sex inheritance seems to be controlled by the chromosomes, yet in many cases the sex of a male animal has been altered by administration of hormones obtained from the reproductive organs of a female of the same species, and *vice versa*.

Geneva, (1) a canton of Switzerland, extremity of the Lake of Geneva; the surface is hilly, but not mountainous and is watered by the Rhône and Arve; the soil is unfertile, but the patient industry of the inhabitants has made it fruitful; the cultivation of the vine, fruit-growing and the manufacture of watches, etc., are the chief industries; a large majority of the people speak French. Area 109 sq. m. Pop. 171,000. Also the name of the capital of the canton, situated at the SW. end of the lake, at the exit of the Rhône; the town existed in Caesar's time, and after being subject in turn to Rome and Burgundy, long won its independence in conjunction with Bern and Freiburg. In Calvin's time it became a centre of Protestantism, and its history, down to the time of its annexation by Napoleon in 1798, is mainly occupied with the struggles between the oligarchical and democratic factions. On the overthrow of Napoleon it joined the Swiss Confederation (1815). Since 1847 the town has been largely rebuilt and handsomely laid out. Among many fine buildings are the Cathedral of St. Peter (1124), and the academy founded by Calvin. The Rhône flows through it, and encompasses an island which forms part of the city. It has many literary and historical associations, and was the birthplace of Rousseau. In 1919 it became the headquarters of the League of Nations and the International Labour Office, located in the magnificent new Palace of the Nations. Pop. 124,000.

Geneva, Lake of, or Lake Leman, stretches in crescent shape between Switzerland and France, curving round the northern border of the French department of Haute-Savoie; length, 45 m.; greatest breadth, 9 m.; maximum depth, 1,022 ft. On the French side precipitous rocks descend to the water's edge, and contrast with the wooded slopes of the north. Many streams pour into it, notably the Rhône, which flows out at Geneva.

Geneva Conventions,

international agreements arising out of conferences held at Geneva in 1864, 1888 and 1906 with the object of lessening the sufferings of those wounded in war; an important result of which was the establishment of the Red Cross Society in 1870.

Genevieve, the patron saint of Paris, born at Nanterre; by her prayer the city, then called Lutetia, was saved from the ravages of Attila and his Huns. She is buried in the Church of St. Etienne-du-Mont at St. Denis. (a. 422-512).

GENGHIS KHAN

Genghis Khan (i.e., Very Mighty Ruler), a celebrated Mongol conqueror, born near Lake Baikal, the son of a Mongol chief; his career as a soldier began at the age of 13, when he boldly assumed the reins of government in succession to his father; by his military skill and daring example he raised his people to a position of supremacy in Asia, and established a kingdom which, at his death, stretched from the Volga to the Pacific, and from Siberia to the Persian Gulf. (1162-1227).

Genista, a genus of plants of the natural order Leguminosae, comprising some 90 species found in Europe, North Africa and the Western parts of Asia, 3 in Britain, including the Needle-gorse or petty whin (*Genista anglica*) which has large thorns, and the Dyer's Greenwood (*G. tinctoria*) which has no thorns. The pollen is conveyed to insects by an explosive mechanism released by the weight of an insect.

Genius, in Roman mythology, was the tutelary spirit which accompanied every man throughout his life and presided over his destiny. It was related to the principle of reproduction and the continuation of families, and was worshipped by each individual on his birthday. The corresponding tutelary spirit of females was known as Juno, while each place also had its presiding genius, visualised as a snake.

Genlis, Stephanie Félicité, Comtesse de, celebrated French novelist, born at Champocérl, near Autun, Burgundy. At the age of 15 she was married to the Comte de Genlis, who was afterwards a victim of the Revolution. In 1770 she became lady-in-waiting to the Duchess de Chartres, and in 1781 the Duke appointed her governess to his sons, among whom was the future King, Louis-Philippe. She was a voluminous writer of moral tales, comedies, etc., and her works amount to about 90 vols., among them being the celebrated *Memoirs of her life and times*. (1746-1830).

Genoa, a city and the chief commercial seaport of Italy, at the foot of the Apennines as they slope down to the Gulf of Genoa. The encircling hills behind form a fine background to the picturesquely laid-out city. There is excellent harbourage, as well as three dry-docks, a graving-dock, and large shipbuilding yards, while an active export and import trade is carried on. There are iron-works, cotton and cloth mills, match factories, etc.; the streets are narrow and irregular, but many of the buildings, especially the ducal palaces and the cathedral, are of great historical and architectural interest; there is an excellent university, a public library and an Academy of Fine Arts. Pop. 625,000.

Genre Painting, the term applied to painting which seeks to portray scenes and figures from everyday life, the interest of which does not lie in a dramatic or historical direction.

Gens, the name in use among the Romans for what we understand by the word clan, consisting of a group of families bearing the same name and tracing their descent from a common ancestor.

Genseric, King of the Vandals, son of Godigisel, founder of the Vandal Kingdom in Spain, and half-brother of Gunderic, whom he succeeded in A.D. 428; from Spain he crossed to Africa, annexing the land lying W. of Carthage, and later Carthage itself; he next organised a naval force, with which he systematically pillaged Spain, Italy, Greece and parts of Asia Minor, sacking Rome in 455; until his death in 477 he continued master of the seas, despite strenuous efforts of the Roman emperors to crush his power. (428-477).

GEOGRAPHY

Gentian, the common name of herbaceous plants of the genus *Gentiana*, supposedly named after King Gentius of Illyria, who is said to have discovered their medicinal qualities. The gentians are mostly perennials, and are either dwarf alpine or erect tufted plants. The flowers are generally bright blue, and more rarely yellow and white. The root of several species is used in medicine as a bitter stomachic. Native British species include *Gentiana Amarella*, *G. campestris*, *G. verna*, and *G. Pneumonanthe*.

GENTIANA
AMARELLA

Gentiles, a term applied in the Scriptures to those not belonging to the Jewish race. The Mormons apply the term to those not belonging to their church.

Gentlemen-at-Arms,

next to the Yeomen of the Guard the oldest corps in the British army, is the bodyguard of the sovereign. Formed by Henry VIII. in 1509, it now consists of a captain, lieutenant, standard-bearer, adjutant, harbinger and 39 members, whose duties are limited to attendance at State ceremonies.

Gentz, Friedrich von, German politician while in the Prussian civil service he warmly sympathised with the French Revolution, but his zeal was modified by perusal of Burke's *Reflections* a treatise he subsequently translated, and in 1802 he entered the Austrian public service; in the capacity of a political writer he bitterly opposed Napoleon; he was secretary at the Congress of Vienna and many of the subsequent congresses. (1764-1832).

Genus, in biology is a subdivision of the animal or vegetable world ranking next above species, and containing a number of species having like characteristics.

Geoffrey of Monmouth,

a celebrated British chronicler and ecclesiastic born in Monmouth, where he was educated in a Benedictine monastery; in 1151 he was made Bishop of St. Asaph; his Latin *Chronicon sive Historie Britonum* contains a circumstantial account of British history compiled from Gildas, Nennius and other early chroniclers interwoven with current legends and pieced together with additions from his own fertile imagination, the whole professing to be a translation of a chronicle found in Brittany; this remarkable history is the source of the stories of King Lear, Cymbeline, Merlin, and of Arthur and his knights as they have since taken shape in English literature. (c. 1100-1154).

Geoffroy Saint-Hilaire,

Étienne, French zoologist and biologist, born at Étampes; professor of Zoology in the Museum of Natural History in Paris (1793); accompanied Napoleon to Egypt as a member of the scientific commission, returning with rich collections; went on a scientific mission to Portugal in 1808; professor of Zoology in the Faculty of Sciences at Paris (1809), the main object of his scientific writing was to establish, in opposition to the theories of his friend Cuvier, his conception of a grand unity of plan pervading the whole organic kingdom. (1772-1844).

Geography, the study of the earth and its distributed phenomena and man's reaction to them. The science is divided into various branches. Mathematical geography examines and explains the size and shape of the earth, its movement and place in the solar system and its representation by cartography or map-making. It is an exact

science, undertaken only by experts, and requiring the use of accurate and delicate instruments.

Physical geography deals with the earth's physical features—i.e., contours or land-heights, rivers, shapes of land-masses and oceans, climate, etc., while the last-named embraces meteorology, or the study of weather systems and wind movements in conjunction with barometric air-pressures. The study of the earth's crust is a separate science—geology.

Biogeography is the study of the living things of the earth, and includes phytogeography, which is concerned with the distribution of living plants on the earth's surface, and zoogeography, dealing with the distribution of animals; while anthropogeography treats of the distribution and condition of mankind on the earth, and this branch leads to the most important aspect of geography—i.e., political and economic geography.

Political geography is the organised knowledge of States and boundaries, different races and their manner of living, language and government, etc. Economic geography deals with the distribution of the earth's resources of food, clothing, fuel, raw materials and the consequent industries of mankind, as well as commerce, transport, etc.

The beginnings of geography were made chiefly by the early explorers who explored the coast of Africa from the Mediterranean lands of the Greek and Roman Empires, and by later adventurers who continued the quest for knowledge of unknown territory. Scientific geography began in Egypt and Greece with the study of the seasons and the necessity of fixing boundaries between States.

The size of the earth was roughly determined by Eratosthenes of Cyrene (276-194 B.C.) as a result of his land survey of the distance between Alexandria and Syene (Assuan). Since then the search for further information has continued, and except chiefly for some areas in the Arctic and Antarctic Circles, the geographical knowledge of the earth's surface is almost complete.

The modern teaching of geography is assisted greatly by wireless talks by experts and by the use of film-projectors, while the subject is approached as much with the aim of discovering the reasons for geographical data as for the mere acquisition of the latter. It must be remembered that geography which considers man and his relationship to the earth is liable to constant change as the natural causes which lead to the concentration of large and densely crowded masses of people within certain areas may cease to operate should a change, say, in climate or configuration of the earth's surface take place.

Geology, the science which deals with the structure and history of the earth, and more particularly with the nature and origin of the rocks which compose the earth's crust or lithosphere: it also includes the study of past forms of life—both animal and vegetable—as evidenced by their fossilised remains.

The chief types of rocks of which the earth's crust is composed are: (1) sedimentary, or those rocks, such as chalk, limestone and sandstone, which have been dissolved from the original plutonic rocks by denudation or other means, and deposited upon the beds of streams and oceans in successive flat layers or strata; (2) igneous or plutonic, comprising the original rocks, such as granite, which crystallised into their present form upon the cooling of the molten or plastic material of which the earth was at one time composed; and (3) metamorphic, the last being formed by the alteration or metamorphosis of both igneous and sedimentary rocks.

The sedimentary rocks, in order of age and beginning with the oldest, are classified as

follows: Pre-Cambrian, Cambrian, Ordovician, Silurian, Devonian and Old Red Sandstone, Carboniferous and Permian (constituting together the Archæan and Primary Series); Triassic, Jurassic and Cretaceous (constituting together the Secondary Series); Eocene, Oligocene, Miocene, Pliocene and Pleistocene (constituting together the Tertiary Series). The Pleistocene rocks are therefore the most recent, apart from those deposits which are still in course of formation and which are described as Holocene or Quaternary.

Paleontology is the branch of geology concerned specifically with fossils, which are of interest not merely in themselves, but as "daters" of the strata in which they occur. Petrology, in its two divisions of petrography and petrogenesis, deals with the composition and mode of origin of rocks, respectively; it makes wide use of chemical and physical methods, and was greatly advanced by H. C. Sorby (1826-1903) who introduced the microscopic examination of thin sections of rocks.

Geometry, one of the principal branches of mathematics, dealing with the properties of space. It probably originated in ancient Egypt, where frequent surveys, necessitated by the obliteration of boundaries by the Nile floods, resulted in the evolution of empirical rules for the construction of angles, etc., and the calculation of areas. This rudimentary knowledge was elaborated and extended by the Greeks, eventually culminating in a logical system of geometry which was epitomised for posterity in the famous *Elements* of Euclid (c. 300 B.C.).

The Greek method of demonstrating a proposition was, essentially, to proceed by a series of logical sequences from certain assumptions which, though incapable of being proved, may be considered as truths self-evident to a normal intellect; these assumptions are known as axioms. A proposition, having once been proved, may be used in the solving of fresh propositions, but no unproved statement may be taken for granted unless it is self-evident and incapable of definition.

Euclidean, or pure geometry, is conventionally divided into elementary and higher geometry. Elementary geometry is itself divided into two branches: (1) plane geometry, which investigates the properties of space in a plane of two dimensions; it treats the definition, construction and properties of lines, angles and figures (such as squares, rectangles, triangles, circles, etc.) and the solving of problems involving them; and (2) solid geometry, which is concerned with space of three dimensions—that is to say, with bodies having thickness—and therefore substance or solidity—as well as area; such are the cube, pyramid, prism, etc.

Higher Euclidean geometry is largely concerned with conic sections, or the particular curves arising from the division of a cone in various ways, and having the form of an ellipse, parabola or hyperbola. Projective geometry, evolved early in the 19th Century, is an extension of the geometry of Euclid, and is concerned with the properties and behaviour of straight lines and planes projected to infinity.

Analytical geometry, devised about 1637 by René Descartes, consists essentially of the application of algebraic methods to geometry. The position of a point on a given line may be represented by means of a number, or co-ordinate, which expresses the distance of the point from some other given point on the line. To denote the position of a point in a given plane two co-ordinates are required, these lines at right angles to one another can be drawn in space, and to denote the position of a point in space three co-ordinates are required. When the positions of points are thus re-

presented by sets of co-ordinates, curves and surfaces are represented by algebraic equations, and the properties of the latter can be investigated by solving the equations.

Starting from a set of axioms such as those laid down by Euclid, it is possible to build up, by logical deduction, a system of geometry which is entirely consistent in itself. The validity of such a system, however, when applied to the physical world, depends on the validity of the axioms as applied to the physical world. Until the 18th Century it was not doubted that actual space was of such a nature that Euclidean geometry applied to it consistently. Since then, however, other systems of geometry have been devised—associated with the names of Lobachevski, Riemann, Beltrami, Minkowski and Einstein, among others—each consistent in itself, and founded upon postulates different from, and inconsistent with, those of Euclidean geometry.

George I., King of Great Britain from 1714 to 1727, and first of the Hanoverian line; son of Ernest Augustus, Elector of Hanover, and of Sophia, granddaughter of James I. of England; born in Hanover. In 1682 he married his cousin, the Princess Sophia Dorothea of Zell, and in 1698 became Elector of Hanover. He co-operated actively with Marlborough in opposing the schemes of Louis XIV., and commanded the Imperial forces (1707-1709). In accordance with the Act of Settlement, he succeeded to the English throne on the death of Queen Anne. His ignorance of English prevented his taking part in Cabinet councils, a circumstance which had important results in the growth of constitutional government, and the management of public affairs during his reign devolved chiefly upon Sir Robert Walpole. The abortive Jacobite rising of 1715, the South Sea Bubble (1720), and the institution of Septennial Parliaments (1710), are among the main events of his reign. In 1694 he divorced his wife on account of an amour with Count Königsmark, and kept her imprisoned abroad till her death in 1720, while he himself during these years lived in profligacy with his mistresses. (1660-1727).

GEORGE I.

George II., King of Great Britain from 1727 to 1760, and Elector of Hanover, born in Hanover, son of preceding; in 1702, he married Caroline of Anspach, and in 1714 was declared Prince of Wales; distinguished himself at the Battle of Oudenarde (1708). The period of his reign is one of considerable importance in English history; Walpole and subsequently Pitt were the great ministers of the age; war was waged against Spain and France; the last Jacobite rising was crushed at Culloden (1746); English Power was established in Canada by the brilliant victory of Wolfe at Quebec (1759); an empire was won in India by Clive; the victory of Minden (1759) was gained in the Seven Years' War; Methodism sprang up under Wesley and Whitefield; while a great development in literature and art took place. Against these, however, must be set the doubling of the National Debt, mainly due to the Seven Years' War, and a defeat by the French at Fontenoy (1745). (1683-1760).

George III., King of Great Britain from 1760 to 1820, and King of Hanover (Elector from 1760 to 1815), eldest son of Frederick Lewis, Prince of Wales, and grandson of preceding, born in London. In 1761 he married Princess Charlotte Sophia of Mecklenburg-Strelitz, by whom he had

fifteen children. More English in sentiment and education than his two predecessors, George's main interest was centred in his English kingdom, and never during his long life did he once set foot in his Hanoverian possessions. The purity of his domestic life, his devotion to England, and the pathos attaching to his frequent fits of insanity, won him the affections of his people, an affection, however, sorely tried by his obstinate blundering. The 60 years of his reign present a succession of domestic episodes, far-reaching in their consequences to England and to the civilised world; the conclusion of the Seven Years' War left England predominant in North America, and with increased colonial possessions in the West Indies, etc., but under the ill-guided and obstinate policy of Lord North she suffered the loss of her American colonies, an event which also involved her in war with France and Spain. In 1788 the famous trial of Warren Hastings began, and next year came the French Revolution. The great struggle with Napoleon followed, and gave occasion for the brilliant achievements of Nelson and Wellington. During these long years of war the commercial prosperity of England never slackened, but through the inventions of Hargreaves, Arkwright and Crompton increased by leaps and bounds; freedom of the press was won by Wilkes; and in 1800 the union with Ireland took place. The majestic figure of Pitt stands out amidst a company of brilliant politicians that included Burke, Fox and Sheridan. Literature is represented by a line of brilliant writers that stretches from Johnson to Keats, and includes the names of Burns, Cowper, Scott, Coleridge, Shelley and Byron. (1738-1820).

George IV., King of Great Britain from 1830 to 1836, eldest son of the preceding, born in London; in consequence of his father's insanity he became Regent in 1811; a tendency to profligacy early displayed itself in an intrigue with Mrs. Robinson, an actress; and in 1785, in defiance of the Royal Marriage Act, he secretly married Mrs. Fitzherbert a Roman Catholic; in 1795 he publicly espoused Princess Caroline of Brunswick, whom later he endeavoured to divorce; the Burmese War (1824-1826), the victory of Admiral Codrington at Navarino (1827), the Repeal of the Text and Corporation Acts (1828), and the passing of the Catholic Emancipation Bill (1829), were occurrences of some importance in a somewhat uneventful reign. (1762-1830).

George V., King of Great Britain, Ireland and of the British Dominions beyond the Seas, Emperor of India, etc.; born at Marlborough House, London, on June 3, 1865, the second son of Edward VII. and Queen Alexandra; entered the Navy in 1877 and in 1901 became a commander, but gave up his active career at sea on becoming heir-apparent to the throne by the death of his elder brother, the Duke of Clarence, in 1892; the same year he was made Duke of York, and in July 1893 married Princess Victoria Mary of Teck; in 1901, after a tour of the Empire, was made Prince of Wales; succeeded to the throne on the death of his father, May 6, 1910, and was crowned on June 22, 1911, the same year visiting India with the Queen. The outstanding event of his reign was the World War, with its aftermath of social and economic turmoil, through which the popularity of the throne and personal affection for the King and Queen steadily increased, as was shown by the anxiety manifested during the King's critical illness in 1928, the unprecedented enthusiasm which attended the Silver Jubilee in May 1935, and the great outburst of national grief following the death of the King, which it placed on Jan. 20, 1936, at Sandringham, as one of the most important events of his

sign, apart from the World War, were the granting of votes to women, the establishment of the Irish Free State (1922), the formation of the first Labour Government (1924), the General Strike (1926), the economic crisis (1931), and the introduction of the new Indian constitution (1935). (1865-1936).

George VI. (Albert Frederick Arthur George), King of Great Britain, Ireland and the British Dominions beyond the Seas, Emperor of India, etc.; born at Sandringham on Dec. 14, 1895, second son of George V.; was trained for the Navy, and was present at the Battle of Jutland in 1916; in 1918 he became a captain in the Royal Air Force; on April 26, 1923, married Elizabeth, daughter of the Earl of Strathmore; was created Duke of York in 1920; conspicuous before his accession for his interest in Industrial Welfare and in Boys' Clubs, visiting every year a boys' camp at Southwold, which he established—an activity with which not even his accession to the throne was permitted to interfere. In Dec. 1936 ascended the throne on the abdication of his brother, Edward VIII.; was crowned at Westminster Abbey on May 12, 1937. (1895-).

George II., King of Greece; upon the deposition of his father, King Constantine, by the Allied Powers in 1917, he was excluded from the succession on account of his pro-German sympathies and in favour of his younger brother. However, Constantine was restored to the throne in 1920, and on his abdication in 1922 Prince George succeeded him; he was himself forced to abdicate in 1924, but was restored to the throne by plebiscite in Nov. 1935. (1890-).

George, Henry, American author and political economist, born at Philadelphia; in 1858 settled in California as a printer; his views on the question of land reform were set forth in *Our Land and Land Policy* published in 1871, and in 1879 appeared his most celebrated work, *Progress and Poverty*, in which he promulgated the theory that to the increase in economic rent and land values is due the lack of increase in wages and interest which the increased productive power of modern times should have ensured. He proposed the levying of a tax on land so as to appropriate economic rent to public uses, and the abolition of all taxes falling upon industry and thrift. He lectured in Great Britain, Ireland and Australia. (1839-1897).

George, St., the patron saint of chivalry and of England; adopted as such in the reign of Edward III.; believed to have been born in Armenia, and to have suffered martyrdom under Diocletian in A.D. 303. He is represented as mounted on horseback and slaying a dragon, conceived as an incarnation of the evil one.

George Lake. (1) a lake in the U.S.A., 33 m. long and 1 m. in average breadth. It is 2 m. S. of Lake Champlain, with which it is connected by a stream. (2) A salt-water lake in New South Wales, Australia, about 25 m. SW. of Goulburn. It is 25 m. long and 8 m. broad, but occasionally in dry seasons it is diminished. It is 2,180 ft. above sea-level. (3) A lake in Uganda, with an outflow into Lake Edward.

George Town, capital of the island Settlements, of Penang, Straits Settlements. It ranks as the first port of the Straits Settlements after Singapore; large quantities of sugar, tin and rice are exported. Pop. 101,000.

Georgetown, (1) capital of British Guiana, Guiana; situated at the mouth of the Demerara R., it was founded by the Dutch in 1784; the town is neatly

laid out, and has some handsome buildings, but is considered unhealthy; there are manufactures of cigars, soap, boots and chocolate. Pop. 67,600. (2) A former city of the district of Columbia, U.S.A., now included (since 1878) in the city of Washington; it stands on the Potomac, at its confluence with Rock Creek and is a terminus of the Chesapeake and Ohio Canal.

Georgia, one of the 13 original States of the American Union, lies to the S., fronting the Atlantic between Florida and S. Carolina; is divided into 155 counties; Atlanta being the capital and Savannah the chief port. It has numerous rivers, and is low and swampy for some miles inland, but rises into plateaux in the interior; the Appalachians and Blue Mts. intersect it in the NW. Excellent crops of wheat and fruit are grown among the hills, and rice in the lowlands, while immense quantities of cotton are raised on the islands skirting the coast. Tobacco is an important crop, and the vast forests of pitch-pine supply an increasing lumber trade. The mountain lands are rich in minerals, including manganese, bauxite, clay, fuller's earth and stone. The State was named after George II. in 1733 by the founder, James Oglethorpe. Area 59,000 sq. m. Pop. 2,900,000.

Georgia, a Republic in the Caucasus, a member of the Soviet Union. Bounded N. and NE. by the Caucasus Mts., S. by Armenia and Turkey, E. by the Azerbaijan Republic and W. by the Black Sea, it has an area of 26,000 sq. m. It is intersected by steep valleys and watered by numerous streams draining from the Caucasus Mts., including the Kura and Rion and their affluents, several of which have been harnessed for irrigation and hydro-electric schemes. Tea is an important crop, cotton, tobacco, wine and silk are produced for export, and there are large and valuable forests. The chief mineral is manganese, while coal is also mined and there are oil-wells and mineral springs. Georgia was a kingdom for 2,000 years, during which time it suffered from Macedonian, Turkish, Mongol and Russian incursions. Annexed by Russia in 1801, it remained a Russian province until 1918, when it became an independent republic. In 1921 soviet government was established and Georgia joined the Transcaucasian Federation. The chief town is Tiflis, and other large towns are Batumi, Kutais, Sukhumi and Poti. Pop. 3,000,000.

Georgian Architecture.

In general, the smaller Georgian and Queen Anne house is frequently set back from the road behind simple iron railings and displays a straight, two-storied front raised upon a basement flat. The principal features are the sash-windows symmetrically arranged with wooden bars, the central doorway with consoles, entablature and pediments, and a boldly projecting console cornice protecting the walls from rain. The house has generally a plain hipped roof, with simple dormer windows.

GEORGIAN ARCHITECTURE (10 DOWNING STREET)

Georgian Bay, the NE. arm of Lake Huron, Canada. It is almost enclosed by Manitoulin I. and Sauguen Peninsula, in Ontario Province, and is about 120 m. long and 50 m. broad.

Gera, a town of Germany, situated on the White Elster, 35 m. SW. of Leipzig; has broad streets and fine buildings, with a castle and an ancient Town Hall; there is a large woollen industry, as well as manufactures of machinery, musical instruments, iron and leather goods. Pop. 84,000.

Geranium, a genus of plants belonging to the natural order Geraniaceae; they are chiefly annual or perennial herbaceous plants with palmately lobed leaves and regular five-petalled flowers. A characteristic elongated beak-like process attached to the ovary gives the genus the popular name of "Crane's-bill." The Geraniums are widely distributed, species being found in all climates; several occur naturally in the British Isles, of which perhaps the most familiar is *Herb Robert*, or *Stinking Crane's-bill*, from its pungent odour. The common garden "geraniums" are not correctly so called, being in reality members of the genus *Pelargonium*, which, however, is also included in the order Geraniaceae.

HERB ROBERT

Gérard, François Pascal Simon, Baron, French painter, born in Rome; came to Paris when a youth, where he studied painting under David; in 1795 his "*Blind Belshazzar*" brought him to the front, whilst subsequent work as a portrait-painter raised him above all his contemporaries; his masterpiece, "*Entry of Henri IV. into Paris*," procured him a barony at the hands of Louis XVIII. (1770-1837).

Gerizim, a mountain 2,848 ft. in height, on the S. of the valley of Shechem, opposite Ebal, upon the slopes of which half the tribes of Israel assembled to hear the blessings and cursings read to them by Joshua, upon their arrival in Canaan (Josh. viii. 30-35); on the mountain are ruins of a Byzantine basilica, built on the site of an ancient Samaritan temple.

German, Sir Edward (Edward German Jones), British composer, born at Whitchurch, Shropshire; attended Royal Academy of Music, 1880-1887, and was an orchestral violinist before becoming known as a composer; among his best-known works are: music to *Henry VIII.*, 1892; the operas, *Merrie England*, 1902, *The Princess of Kensington*, 1903 and *Fallen Fairies*, 1909; and King George V's Coronation March, 1911; knighted, 1928. (1862-1936).

German Catholics, a sect formed in 1844 by secession from the Catholic Church of Germany, under the leadership of Johann Ronge; it arose from a controversy following the exhibition of the Holy Coat of Trier and the superstitious influence ascribed to it.

Germanicus Caesar, Roman general, son of Nero Claudius Drusus and Antonia, daughter of Mark Antony; he served with distinction under his uncle Tiberius in Dalmatia and Pannonia and in A.D. 12 was elected consul; a brilliant campaign against the Germans provoked the jealousy of Tiberius, who transferred him to the East, where he died near Antioch; his youngest son Caligula succeeded Tiberius as emperor. His wife Agrippina was put to death, together with two sons. His daughter Agrippina was mother of Nero. (15 B.C.-A.D. 19).

Germanium, a metallic element, belonging to the same sub-group as carbon, silicon, tin and lead. Symbol Ge, atomic number 32, atomic weight 73.80. Its existence, under the name of *eka-silicon*, was predicted in 1871 by Mendeleeff, but it was not discovered until 1886.

German Measles, an infectious disease resembling a mild form of measles and scarlet fever and chiefly affecting children. The symptoms are slight fever, headache, shivering and enlargement of the glands of the neck, accompanied by a rash appearing first on the face and spreading downwards. The rash lasts from 24 to 48 hours. Treatment consists in confinement to bed with a light and nourishing diet.

German Silver, an alloy composed of copper, nickel and zinc in varying proportions; used for the manufacture of small objects, such as spoons and forks, and also for electrical resistances.

German Volga Republic,

an autonomous Republic of the U.S.S.R., formed chiefly of portions of the old provinces of Saratov, Samara and Astrakhan. The chief industry is agriculture, which has to be assisted by irrigation from the Volga, which intersects the Republic. Wheat, barley, maize and other cereals, and sunflower-seeds are the chief crops, and there are manufactures of flour, tobacco, leather and motor tractors. The area is 27,000 sq. km.; capital, Pokrovsk. The territory was settled in 1760 by German colonists, invited by Catherine the Great, and Germans still comprise the bulk of the population; it became an autonomous Republic in 1924. Pop. 571,000.

Germany, Republic of Central Europe; it is bordered by Switzerland, Italy and Czechoslovakia on the S., by the North Sea, the Baltic and the Danish frontier on the N., by France, Belgium and Holland on the W., and on the E. by Poland and Lithuania. The area is 181,700 sq. m.; pop. 65,000,000. After the World War, Germany lost Alsace-Lorraine to France, East Prussia and Posen to Poland, part of Silesia-Holstein to Denmark, while part of Danzig became a free city.

The main physical divisions are: (1) the great lowland plain stretching from the centre to the Baltic and North Sea, well watered by the Elbe, Weser, Elbe, Oder and their tributaries, in which agriculture employs a large number of workers, and cereals, tobacco and beetroot are raised; (2) the mountainous district in the interior, of which the Fichtelgebirge is the central knot, in which vast forests abound, and where rich deposits of coal, fire-clays, iron and other metals give rise to iron-works and potteries; (3) the basin of the Rhine, on the W., where the vine is largely cultivated, and extensive manufactures of silks, cottons and hardware are carried on; the district of Westphalia, in this region, is the centre of the steel and iron works, and includes the industrial towns of Essen, Dortmund, Düsseldorf and Krefeld. Throughout Germany there were in 1937 137,000 m. of roads, and 36,000 m. of railway lines, chiefly State property; 63 per cent. of the people are Protestants; education is compulsory and very highly developed.

Until 1918, when the Emperor, Wilhelm II., abdicated, the constitution of the Empire was based upon a decree of 1841. The presidency of the empire belonged to the crown of Prussia, to which was attached the title of German Emperor; the latter, in addition to his normal prerogatives, assumed supreme control of the Navy and Army. He was almost absolute, and appointed the Imperial Chancellor, who was responsible to him alone. Legislation was in the hands of the Bundesrath (Federal Council) and the Reichstag (Imperial Diet), elected by universal suffrage.

At the revolution of 1918 Germany became a Republic, and in the following year elections were held for a National Assembly. Under the new constitution all power was vested in the

State and derived from the people. Besides the Reichstag (or Parliament), there is a Council consisting of representatives of the various federated States. The first president was Ebert, and on his death in 1925 Field-Marshal von Hindenberg was elected.

During 1929, owing to severe economic depression and consequent unrest a National Socialist party led by Adolf Hitler was formed (now known as the Nazi party). In 1933 the Nazis came into power, and Hitler was made Chancellor. Von Hindenberg died the next year, and the office of president was united with that of chancellor in the person of Hitler, who chose to be known as "Führer," or Leader. He confiscated the funds of the Communist Party, to which he was bitterly opposed, expelled Jews from key positions and began a persecution of that race in an attempt to secure an "Aryan" population. In 1936 the Nazis, in contravention of the Locarno Treaty, re-occupied the demilitarised Rhineland zone, and in 1937 they repudiated the Peace Treaty of Versailles, claiming equality with the other Great Powers (especially with regard to the question of armaments); in the same year Hitler launched a campaign for the restoration of Germany's colonies.

Further strength was added by the unification of the Reich, by which local powers of States such as Bavaria practically disappeared. In economic and social policy, the capitalist framework was retained, and labour was organised to take its place in a "corporate" or totalitarian state, while in 1937 an attempt was made to make the country economically independent by the manufacture of synthetic substitutes for such vital raw materials as rubber and petroleum. In March 1938 Hitler seized upon a political crisis in Austria (q.v.) as a pretext to annex that country, which was incorporated in the "Greater Reich." In October 1938 large areas of Czechoslovak territory, including all mainly German-speaking areas were secured under threat of war, the new boundaries being settled without plebiscite by an International Committee of Ambassadors.

Germiston, a town in the Transvaal, Union of S. Africa, situated in a gold-mining area, 9 m. E. of Johannesburg. Pop. (European) 33,000.

Germs. See Bacteria.

Gérôme, Jean Léon, French painter, born at Vesoul; he studied at Paris, travelled in Italy and the East, and in 1863 was appointed professor of Painting in the Paris School of Fine Arts; among his most famous pictures are "The Age of Augustus and the Birth of Christ," "Roman Gladiators in the Amphitheatre," "Cleopatra and Caesar" and many oriental and dramatic subjects. (1824-1904).

Gerry, Elbridge, American politician, born at Marblehead, Mass.; member of the Massachusetts Congress, 1774-1775; advocated war with Great Britain; entered the National Congress as anti-federalist, 1789; envoy to France, 1797; Governor of Massachusetts, 1810-1812, in which capacity, by an unfair redistribution of the electoral districts in the State, he gave undue advantage to his own party, which led to the coining of the word "gerrymander"; He was Vice-President of the Republic, 1812. (1744-1814).

Gerstäcker, Friedrich, German author and traveller, born at Hamburg; for six years led a wandering life in America, a narrative of which he published on his return to Germany; in 1849 he undertook a journey round the world; in 1860-1868 travelled extensively in Africa and America. (1816-1872).

Geryon, a King of Erythra (i.e., red of the world, with three bodies and three

heads. His herd of oxen and their guard, a giant shepherd and his dog, the two-throated Orthros, were carried off by Hercules at the behest of his fate.

Gesta Romanorum ("the Exploits of the Romans"), a collection of short didactic stories—not, however, solely Roman—written in Latin probably towards the close of the 13th Century; their authorship is unknown. The stories are characterised by naive simplicity, and have served as material for many notable literary productions; thus Shakespeare owes to this work the plot of *Pericles* and the incidents of the caskets and the pound of flesh in *The Merchant of Venice*, Chaucer *The Man of Law's Tale* and Longfellow his *King Robert of Sicily*.

Gethsemane, an enclosed garden or the brook Kidron, half a mile from Jerusalem, at the foot of Mount Olivet, the scene of the Agony of Christ.

Gettysburg, a town in Pennsylvania, 35 m. SW. of Harrisburg; pop. 5,600; during the American Civil War it was the scene of General Meade's famous victory over the Confederates under General Lee on July 3, 1863. Here, on November 19, 1863, Lincoln delivered his famous Address at the dedication of the National Cemetery, and on one of the hills stands a Statue of Liberty.

Geum, a genus of herbaceous perennial including some 40 different species, of which the water avens (*Geum rivale*), with small orange flowers, and the wood avens (*Geum urbanum*), are found in Britain. The water avens and several other species are cultivated in gardens (borders and rockeries) for the sake of their foliage and flowers.

Geysers, volcanic fountains which from time to time, under the expansion of steam, eject columns of steam and hot water. The most remarkable examples occur in Iceland, N. America and New Zealand. The celebrated Great Geyser, 70 m. N. of Reykjavik, in Iceland, ejects a column of water 60 ft. in height, but this performance is far exceeded by those of some of the geysers in Yellowstone National Park, U.S.A., which frequently emit jets of 250 ft. or more.

Ghats, or Ghauts, Eastern and Western, two mountain ranges running parallel with the E. and W. coasts of S. India; the latter skirts the Malabar coast between 30 and 40 m. from the sea, rising to nearly 5,000 ft., and exhibiting fine mountain and forest scenery; and the former which has a much lower mean level borders the E. of the Deccan, of which tableland it here forms the buttress; the two ranges converge into one a short distance from Cape Comorin.

Ghazi, King of Iraq (Mesopotamia) from 1933, succeeding his father, the first King, Faisal; was educated in Europe; in 1933 married Aliyah, daughter of King Ali of the Hejaz. (1912-).

Ghazipur, a town of India, on the Ganges, 44 m. NE. of Benares, capital of the district of Ghazipur, in the United Provinces; the headquarters of the Government Opium Department, it has a trade in rose-water, sugar and tobacco; here are the ruins of the Palace of Forty Pillars. Pop. 25,000.

Ghaznevids, a Mohammedan dynasty, numbering 19 monarchs, that began their rule at Ghazni, Afghanistan,

WOOD AVENS (*Geum urbanum*)

and rapidly extended it so that at its height it stretched from the Tigris to the Ganges and from the R. Darya (Jaxartes) to the Arabian Sea. Their first monarch was a Turkish ex-slave named Alptagin, who about A.D. 962 wrested the stronghold of Ghazni from the Samani rulers of Bokhara. The third and greatest of the Ghaznevids, Mahmud, reigned 997-1029, and completed the extension of their empire. In the reign of their 18th monarch, Khusru Shah, Lahore became their capital, their former territories outside India having been overrun by the Ghôrî, who in 1186 took Lahore from Khusru Malik, the last Ghaznevid.

Gheel, a town in Belgium, 26 m. S.E. of Antwerp; it has been for centuries celebrated as an asylum for the insane, who are boarded out among the peasants; these cottage asylums are under government control, and the board of the patients in most cases is guaranteed. Pop. 18,000.

Ghent, a city of Belgium, capital of Flanders, situated at the junction of the Scheldt and the Lys, 34 m. N.W. of Brussels. Rivers and canals divide it into numerous quarters, connected by more than 200 bridges. In the older part are many quaint and interesting buildings, notably the cathedral of St. Bavo (13th Century). It is the first industrial city of Belgium, and is a great emporium of the cotton, woollen and linen trades; there are foundries and manufactures of soap, paper, tobacco and machinery; flowers are grown on a large scale, and the flower-shows, held every five years, are famous; a ship-canal connects the city with Terneuzen, on the Scheldt, 22 m. to the N. Ghent figures in history from the 7th Century; in the Flemish and Burgundian wars it fought against Charles the Bold; it was incorporated in the Netherlands in 1814, but became a Belgian possession in 1830. Pop. 165,000.

Ghetto, an Italian word applied to the street or district set apart in Italian cities for the Jews, to which in former times they were restricted; the term is now applied to the Jews' quarters in any city; equivalent to the English "Jewry".

Ghibellines, a political party in Italy to the 14th Centuries, maintained the supremacy of the German emperors over the Italian States in opposition to the Guelphs (q.v.).

Ghiberti, Lorenzo, Italian sculptor and designer, born at Florence; his first notable work was a grand fresco in the palace of Malatesta at Rimini in 1400, and subsequently he helped to beautify churches in Florence and Siena, but his most famous achievement was the execution of two doorways, with bas-relief designs, for the baptistery at Florence, which Michelangelo declared fit to be the gates of Paradise. (c. 1378-1455).

Ghilan, a province of NW. Persia, between the SW. border of the Caspian Sea and the Elburz Mts. It is low-lying, swampy and unhealthy towards the Caspian, but the rising ground to the S. is more salubrious. Wild animals are numerous in the vast forests. The soil, where cleared, is fertile and well cultivated. The Caspian fisheries are valuable. The people are of Iranian descent, and speak a Persian dialect.

Ghirlandajo (i.e., Garland-maker), nickname of Domenico Ghirlandi, an Italian painter, born at Florence; began his career as a designer in gold, but later devoted himself to fresco and mosaic work. Of his many great frescoes important specimens are "The Massacre of the Innocents," at Florence, and "Christ calling Peter and Andrew," at Rome; Michelangelo was for a time his pupil. (1449-1494).

Giants, in Greek mythology, were a great stature and strength, who thought by their violence to dethrone Zeus, but, with the assistance of Hercules, were overpowered and buried under Etna and other volcanoes. They were distinct from the Titans, though often confounded with them.

Giant's Causeway, a promontory of columnar basaltic rock in N. Ireland, projecting into the North Channel from the Antrim coast at Bangor Head, 7 m. N.E. of Portrush; an unequal surface 300 yds. long and 30 ft. wide is formed by the tops of the 40,000 closely packed, vertical columns of basalt, left by a prehistoric volcanic outpouring.

Giant Stars, are those of large volume and brightness and low density like Arcturus, Betelgeuse and Aldebaran.

Giaour, the Turkish name for one who is not a Mohammedan, and especially for a Christian.

Gibbon, the name of a family of anthropoid apes, native to the Malay

peninsular and parts of China. A s s a m a n d neighbouring regions. They are generally black or grey in colour, are of slender, delicate build with attenuated limbs, and devoid of tails. They are agile tree-dwelling, feeding upon leaves and fruit.

GIBBON

Gibbon, Edward, English historian, born in Putney; his early education was hindered by a nervous complaint, but a wide course of desultory reading in a measure repaid the lack of regular schooling, and when at the age of 15 he was entered at Magdalen College, Oxford, he possessed, as he himself quaintly puts it, "a stock of erudition which might have puzzled a doctor, and a degree of ignorance of which a schoolboy might have been ashamed"; 14 months later he became a Roman Catholic, and in consequence was obliged to quit Oxford; in the hope of reclaiming him to the Protestant faith he was placed in the charge of a Calvinist minister at Lausanne; under the latter's kindly suasion he speedily discarded Catholicism, and during five years' residence established his learning on a solid foundation. Shortly after his return to England in 1758 he published in French an *Essay on the Study of Literature*; in 1774, having inherited his father's estate, he entered Parliament, and from 1779 to 1782 was one of the Lords Commissioners of Trade and Plantations; in 1776 appeared the first volume of his great history, *The Decline and Fall of the Roman Empire*; in 1781 his great work was finished at Lausanne, where he had resided since 1753. (1737-1794).

Gibbons, Grinling, English woodcarver, born at Rotterdam; through the influence of Evelyn he obtained a post in the Board of Works, and his marvellous skill as a woodcarver won him the patronage of Charles II., who employed him to furnish ornamental carving for the Chapel of Windsor; the ceiling of a room at Petworth is considered his masterpiece; he also did some notable work in bronze and marble. (1648-1723).

Gibbons, Orlando, English composer, born at Cambridge. In 14 he obtained the post of organist in the Royal Chapel, London, and in 1823 filled the

post at Westminster Abbey. In 1625 he was in official attendance at Canterbury on the occasion of Charles I.'s marriage, but he did not live to celebrate the ceremony, for which he had written the music. (1583-1625).

Gibbs, Sir Philip, English journalist and author, was a famous war correspondent in the Balkan Wars and the World War; best known for his novels, *The Street of Adventure*, *The Unchanging Quest* and others; and has also written on foreign affairs and social subjects. (1877-).

Gibeon, an ancient town of Palestine on the northern slopes of a hill 6 or 7 m. S. of Bethel. It is remembered as the spot over which Joshua bade the sun stand still; its inhabitants, for a trick they played on the invading Israelites, were condemned to serve them as "hewers of wood and drawers of water." (Joshua ix. and x.).

Gibraltar, British Crown colony and fortress, situated on a promontory of rock, in the S. of Spain; the rock is about $\frac{1}{2}$ m. in length and about $\frac{1}{4}$ m. in average breadth, and has a maximum height of over 1,400 ft.; it is connected with the mainland by a spit of sand $1\frac{1}{2}$ m. long; the British lines and the Spanish lines, or La Línea, on the mainland, are separated by a neutral zone. The town of Gibraltar lies at the NW. corner of the Rock, and is a trade entrepôt for N. Africa; the Rock is hollowed into tunnels and galleries, and comprises a network of heavy batteries. Gibraltar was annexed to Great Britain by Admiral Sir George Rooke in 1704, and successfully withstood many attempts to recover it. Apart from its enormous strategic value, commanding as it does the entrance to the Mediterranean, it is an important coaling-station and naval base. Pop. 21,000 (including naval and military).

Gibson, Charles Dana, American artist, born at Roxbury, Massachusetts. As a black-and-white artist became famous for his drawings of "the Gibson girl," a type of American womanhood; later turned to oils and has been successful in portraiture; has illustrated the *Prisoner of Zenda* and published books of drawings. (1867-).

Gibson, John, English sculptor, born at Llyffyn, near Conway, Wales, of humble parentage; after serving an apprenticeship to a cabinet-maker in Liverpool, he took to carving in wood and stone, becoming a pupil of Canova and afterwards of Thorwaldsen in Rome; and of his best work mention may be made of "Theseus and the Robber," "Amazon thrown from her horse," and statues of George Stephenson, Peel and Queen Victoria. (1790-1866).

Gide, André, French novelist and critic, born in Paris. First publication, *Les Cahiers d'André Walter*, 1891. Other works include: *Les Nourritures Terrestres*, 1897; *L'Immoraliste*, 1902; *Si le Grain ne Meurt*, 1924. Once conducted the *Nouvelle Revue Française*. (1869-).

Gidea Park, district of Essex; it includes the village of Hare Street, and forms a garden suburb of Romford, from which it is about a mile distant.

Gideon, one of the most eminent of the Judges of Israel, famous for his defeat of the Midianites at Gilboa, and the peace of 40 years' duration which it ensured to the people under his rule. (Judges vi. to xii.).

Gielgud, John, British actor-producer, born in London; son of Frank Gielgud and his wife Kate Terry Lewis; educated at Westminster, Lady Benson's School and Royal Academy of Dramatic Art, Langham Place, Old Vic, 1921. His production of *Hamlet* at the New Theatre, 1934, if in the title-role, ran to 155

performances. He has had numerous other personal successes, an outstanding one being as Richard II. in *Richard of Bordeaux*, 1933. (1904-).

Giessen, town of Germany, the capital of the province of Upper Hesse. Situated at the confluence of the Wieseck and the Lahn, 40 m. N. of Frankfurt-on-the-Main, it has a number of old buildings and a university, founded in 1607. There are foundries and engineering-shops and manufacturing of rubber, leather, tobacco and beer. Pop. 36,000.

Gifford, William, an English man of letters, born at Ashburton, Devonshire; left friendless and penniless at an early age by the death of his parents, he first served as a cabin-boy, and subsequently for four years worked as a cobbler's apprentice. Through the generosity of a local doctor, and afterwards of Earl Grosvenor, he obtained a university training at Oxford, where in 1792 he graduated. A period of travel on the Continent was followed in 1791 by his celebrated satire the *Baviad*, and in two years later by the *Moriad*. His editorship of the *Anti-Jacobin* (1797-1798) procured him favour and office at the hands of the Tories. The work of translation, and the editing of Elizabethan poets, occupied him till 1809, when he became the first editor of the *Quarterly Review*. His writing is vigorous, and marked by strong partisanship, but his bitter attacks on the new literature inaugurated by Wordsworth, Shelley, Keats and others reveal a prejudiced and narrow view of literature. (1757-1826).

Giggleswick, a parish and village in the W. Riding of Yorkshire, 16 miles NW. of Skipton; chiefly known for its celebrated public school, founded in 1512. Pop. 786.

Gijón, seaport of Spain, on the Bay of Biscay, 20 m. NNE. of Oviedo; it has two harbours, protected by moles, and is a favourite bathing-resort; it is an important industrial centre. Pop. 57,000.

Gila Monster, a lizard, found in the especially Arizona, about 15 in. long, with thick tail; its colour is dark green, with marked bands of yellow.

GILA MONSTER

Gilbert,

Sir Alfred, British sculptor, born in London; studied at South Kensington, Florence and Rome; exhibited at Royal Academy, 1882; R.A., 1892, knighted 1932. His notable works include the statue of Queen Victoria at Winchester, 1888; and the tomb of the Duke of Clarence, Windsor, 1927; also the statue of "Eros" in Piccadilly Circus; as a goldsmith, he produced some outstanding designs. (1854-1934).

Gilbert, Sir Humphrey, English colonist and navigator, born near Dartmouth, Devon, half-brother of Sir Walter Raleigh; served in the army, and in 1569 was made Governor of Munster, Ireland; later, fought in the Netherlands; in 1578 made an unsuccessful voyage in search of the Northwest Passage to the Indies; nothing daunted, he repeated the attempt in 1583, and this time annexed Newfoundland and established the first English colony in America, at St. John's; perished in a shipwreck off the Azores, on the return journey. (c. 1539-1583).

Gilbert, Sir John, English artist, born at Blackheath; deserted commerce for art; became an A.R.A., 1872, and R.A., 1876; known for his historical and genre pictures in oil and water-colours, and especially for his splendid illustrations in editions of Shakespeare, Cervantes, Scott and other authors. (1817-1897).

Gilbert, Sir William Schwenck, English born in London; entered the Civil Service, but deserted it for the Bar, being called in 1864; published *The Bab Ballads*, with his own illustrations, 1869; next wrote several successful comedies and dramas, and in 1871 began to collaborate with Sir Arthur Sullivan in the popular series of Savoy operas which includes *The Mikado*, *The Yeomen of the Guard*, *The Gondoliers*, *Iolanthe*, *Trial by Jury*, *H.M.S. Pinafore*, *Patience*, *Ruddigore*, *Princess Ida*, *The Sorcerer*, *Utopia Limited*, etc.; he was knighted in 1907. (1836-1911).

SIR W. S. GILBERT

Gilbert Islands, or Kingsmill Group, a group of coral islands in the Pacific, lying on the equator between 176° and 180° E. long.; they are 16 in number, and together have an area of 166 sq. m., discovered in 1788, they were declared a British protectorate in 1892, and in 1915 were annexed as part of the Gilbert and Ellice Is. colony; copra and phosphates are the chief products. Pop. 4,200.

Gilead, a region of Transjordan, extending along the E. of the Jordan, at a general level of 2,000 ft. above the sea, the highest point, near Ramoth-Gilead, being 3,597 ft.

Giles, St., the patron saint of cripples, beggars and lepers whose feast falls on Sept. 1; was himself a cripple due to his refusal to be cured of a wound, that he might learn to mortify the flesh; is reputed to have once had a long interview with St. Louis, without either of them speaking a word. (Lived in the 6th or 7th Century).

Gilgamesh Epic, an old Babylonian epic the fragmentary remains of which were found inscribed on 12 tablets in Assurbanipal's library at Nineveh. It narrates the adventures of Gilgamesh, ruler of Erech and Enkidu, a kind of Caliban, and in some respects the story resembles that of Nimrod.

Gill, a term used in connection with the measurement of spirit and sometimes wine, and denoting 1 pint.

Gill, Eric, British sculptor, born at Brighton; educated there and at Chichester Art School; served apprenticeship to an architect. His first sculpture was "Mother and Child," 1910; executed "Stations of the Cross" in Westminster Cathedral, 1913. "Christ Driving the Moneylenders out of the Temple" for Leeds University War Memorial, 1922-1923, and many other highly original designs, including decorations for a number of modern buildings, such as Broadcasting House, London; also notable as a wood-engraver and type-designer. (1882-).

Gillingham, market town of Dorset, Stour. The district has flour-mills and bacon factories, and brewing and brickmaking industries. Pop. 3,300. Also the name of a municipal borough of Kent, including within its boundary Old and New Brompton and a portion of High Street, Chatham; situated on S. bank of R. Medway, it has an interesting old church, and was formerly the site of an archbishop's palace. Pop. 61,000.

Gillray, James, English caricaturist, born in Chelsea; successively a letter-engraver and an actor, he became a caricaturist after studying the works of Hogarth, and from about 1780 onwards produced numerous patriotic caricatures directed

against France, and keenly satirical cartoons ridiculing, in particular, George III. and his court. (1757-1815).

Gin, a spirit distilled from maize, barley, rye or other grain. Its alcoholic content is 40-50 per cent. The characteristic flavour is derived from oil of turpentine or juniper, though manufacturers of different brands have their own secret methods of flavouring.

Ginchy, a village of France 7 m. E. of Albert, which figured in the Battles of the Somme in 1916. A British war memorial to the Guards was erected here in 1928.

Ginger, the rhizome of *Zingiber officinale*, a reed-like perennial plant, native to the warmer regions of Asia, which has been introduced into most of the tropical parts of the world. The rhizome has a pleasant aroma, and is used as a spice, in medicine, and in making wine and sweetmeats.

Ginseng, the root of a plant of the genus *Panax*, a native of Korea and Manchuria. It is valued, particularly by the Chinese, for its medicinal qualities, which are probably more imaginary than real.

Gioberti, Vincenzo, an Italian philosophical and political writer, born at Turin; in 1825 he was appointed to the chair of Theology at Turin, and in 1831 chaplain to the Court of Charles Albert of Sardinia; two years later was exiled on a charge of complicity in the plots of the Young Italy party; in 1847 he returned to Italy, and shortly afterwards became Prime Minister of a short-lived government; his later years were spent in diplomatic work at Paris; in his philosophical writings he reveals Platonic tendencies, while his political ideal was a confederated Italy, with the Pope at the head and the king of Sardinia as military guardian. (1801-1852).

Giolitti, Giovanni, Italian statesman, born at Mondovì; educated at Turin, where he became King's Procurator. After holding various official posts, he became a deputy in 1882; Minister of Finance, 1889-1900; Premier, 1892-1893; suffered impeachment in consequence of Banca Romana scandal, Premier again for several periods up to 1921; neutralist in World War; instrumental in carrying through the treaty of Rapallo (1920); welcomed Fascism, but later turned against it. (1842-1928).

Giordano, Luca, Italian painter, born at Naples; studied at Naples, Rome and other places; in 1692 he received a commission from Charles II. of Spain to adorn the Escorial; he was famous in his day for marvellous rapidity of workmanship, but this fluency combined with a too slavish adherence to the methods of the great masters has somewhat robbed his work of individuality; his frescoes in the Escorial and others in Florence and Rome are his finest work. (1632-1705).

Giorgione (i.e., Great George), the sobriquet given to Giorgio Barbarelli, one of the early masters of the Venetian school, born near Castelfranco, in the NE. of Italy. At Venice he studied under Giovanni Bellini, and had Titian as a fellow-pupil. His portraits are among the finest of the Italian school, and exhibit a freshness of colour and conception and a firmness of touch unsurpassed in his day. His works deal chiefly with scriptural and pastoral scenes, and include a "Holy Family" in the Louvre, "Virgin and Child" in Venice. (c. 1478-1510).

GINGER PLANT

Giotto, Italian artist, born near Florence; he was a shepherd's boy, and at 10 years of age, while tending his flock and drawing pictures of them, was discovered by Cimabue, who adopted him as his pupil. Among the finest of his existing works, which are practically all religious in character, are frescoes at Assisi, illustrating the life of St. Francis, at St. Peter's in Rome and Santa Croce in Florence, and above all, those in the chapel of the Arena at Padua. While other artists of the time still painted in the old conventional style, Giotto went to Nature for his types, and led the way for a transition in art; in architecture, his masterpiece is the Campanile, or bell-tower, at Florence. (c. 1267-1337).

Gippsland, a district of SE. Victoria, Australia, which took its name from Sir George Gipps, who was governor of New South Wales, 1838-1846. It has an area of 13,900 sq. m., much of which is agricultural; mining is carried on for coal, lead, gold, silver and copper. The district has absorbed large numbers of settlers from the United Kingdom. The chief town is Sale.

Giraffe, an African hoofed mammal, characterised by a long neck, long legs and short body. It has two unbranched horns, covered with soft fur, which, though not the outgrowth of the skull, become joined to the frontal and parietal bones in the adult; these horns are sometimes lacking in the female. In colour the giraffe is usually light fawn with darker spots. An adult specimen may stand nearly 19 ft. in height, and thus it can readily browse upon the leaves of trees, being assisted by the length (18 in.) of its flexible tongue. Giraffes inhabit open country S. of the Sahara, and congregate in herds.

GIRAFFE

Girgenti, a town in Sicily, on the side of the mountain on which stood the acropolis of Agrigentum, about 58 m. S. of Palermo. Porto Empedocle, its port, has a large trade in sulphur. Pop. 33,000.

Girl Guides, an international organization for girls run on the lines of the Boy Scouts and founded by Sir Robert (afterwards Lord) Baden-Powell in 1910, and incorporated by charter in 1915. The aim of the movement is the development of character culminating in happy citizenship, and it provides girls with the opportunity of undergoing a course of education outside the school on four particular lines, viz., character and intelligence, skill and handicraft, physical health and hygiene, and service for others and fellowship. The movement has three branches; Brownies, for those between eight and eleven years; Girl Guides, for those between eleven and sixteen; and Rangers, for those over sixteen. It has spread over thirty-three countries and has a membership of over 1,300,000.

Gironde, a maritime department of SW. France, facing the Bay of Biscay on the W. and bordering Charente-Inférieure and Landes on the N. and S. respectively; area, 4,140 sq. m.; the Garonne and the Dordogne flow through it, forming the Gironde estuary; sand dunes fringe the coast, interspersed with lagoons and salt marshes. Wheat, rye, maize and oats are grown, as well as some tobacco, but the chief product is wine, which includes such famous vintages as Graves, Médoc and Sauternes. Bordeaux is the capital. Pop. 881,000.

Girondins, or Girondists, a party holding moderate republican opinions in the French Revolution. The leaders of it were from the Gironde district, whence their name; they were in succession members of the Legislative Assembly and of the Convention, and numbered among them such names as Condorcet, Brissot, Roland and Carnot. Overpowered by the Jacobins in June 1793, they were arraigned before the Revolutionary tribunal on Oct. 24, and on the 31st twenty-one of them were guillotined; the remainder, with few exceptions, perished later either in the same way or by suicide.

Girton College, one of the two university colleges for women at Cambridge; founded in 1869 at Hitchin and moved in 1873 to Girton, a village 2½ m. NW. of Cambridge; the students attend all the university lectures and sit for the examinations; they are now allowed to proceed to the B.A. degree under the same conditions as men students.

Girvan, a burgh and seaport of S. Ayrshire, 63 m. SW. of Glasgow, on the left bank of the R. Girvan, near its confluence with the Clyde. It has a safe harbour, with a good fishing industry, and is a well-known holiday resort. Pop. 5,300.

Gisborne, a port of New Zealand, situated on Poverty Bay, in Cook county, N. Island. Captain Cook landed near here in 1769. There is a steamer service and a daily motor service between Napier and Gisborne, a distance of 148 m. Pop. 15,000.

Gissing, George Robert, British novelist, born at Wakefield; he published his first book, *Workers in the Dawn*, at the age of 22; tried work as a clerk, emigrated to America, returned to tramp the streets of London, and told of his experiences in *New Grub Street*, 1891; his remaining works include *Thyrza*, *Demos*, *The Whirlpool*, *The Nether World* and *The Private Papers of Henry Ryecroft*. Most of his work is pervaded by gloom and pessimism. (1857-1903).

Givenchy, a village in France, 6 m. from Bethune. Pop. 400. This village and the town of La Bassée, 2 m. to the E., formed an important strategic position throughout the World War. It was heavily bombarded by the Germans on Oct. 16, 1914, and the British who were forced to fall back some 1,300 yds., retook it three days later. In 1915 and again in 1918 it was the centre of fierce fighting.

Gizeh, or Giza, a town in Egypt, on the left bank of the Nile, opposite Old Cairo, to which it is joined by a suspension bridge spanning the river, and 3 m. S. of modern Cairo. It has a palace built by the Khedive, while in the neighbourhood are the Pyramids, the Sphinx and the ruins of Memphis. Pop. 27,000.

Glace Bay, a town and seaport of Cape Breton Island, Nova Scotia; on the N.E. coast, it has a large shipping trade, principally in coal and iron, which are extensively mined in the district. Pop. 20,700.

Glacial Period, the geological epoch immediately preceding that in which we now live; it is also known as the Pleistocene period. During this age, which lasted for many thousands of years, the distribution of temperature over the earth's surface was much different from the present, and the greater part of Northern Europe and N. America, including at any rate most of Britain, experienced Arctic conditions and was covered by an ice-bed.

Glacier, a mass of ice and compacted snow, occupying a valley and moving slowly down its bed, being fed by snow at the top and forming streams at the bottom. It has been defined by Prof. J. D.

Forbes as "a viscous body which is urged down slopes of a certain inclination by the mutual pressure of its parts." In the Alps alone there are over 1,000 glaciers. Their influence in moulding the configuration of the earth has been very great.

Gladiator, a professional combatant of Rome with men or beasts for the amusement of the people, originally in connection with funeral games, under the belief, it is said, that the spirits of the dead were appeased by the sight of blood. Exhibitions of the kind were common under the emperors, and were generally held on ceremonial occasions. There were various kinds of gladiators, some, for example, fighting with two swords, others on horseback or from chariots; some were armed from head to foot, while others (retiarli) wore only a tunic and were armed with a net and a trident. They were trained under rigorous conditions, in special schools, the ruins of one of which may be seen at Pompeii.

ROMAN
GLADIATOR

Gladiolus, a genus of plants of the family Iridaceae. They grow from corms, have leaves long and sword-shaped—hence the name (Lat. *gladius*, a sword)—and the flowers are borne on one-sided spikes. They are natives of the Mediterranean regions and tropical S. Africa. The *Frimulius* variety is found in the spray of the Victoria Falls on the Zambesi.

Gladstone, *first Viscount*, English politician; the youngest son of W. E. Gladstone, he was educated at Eton and at University College, Oxford; Liberal M.P. for Leeds, 1880-1886, and for West Leeds, 1885-1910; Junior Lord of the Treasury, 1881-1885; Financial Secretary to War Office, 1886; Under-Secretary, Home Office, 1892-1894; First Commissioner of Works, 1894-1895; Home Secretary, 1905-1910. In 1910 he was created a viscount, and was first Governor-General of S. Africa, 1910-1914. (1854-1930).

Gladstone, *William Ewart*, British scholar, statesman, orator and politician, was born in Liverpool, Dec. 29, 1809; educated at Eton and Oxford; entered Parliament in 1833 as Tory member for Newark; delivered his maiden speech against slavery emancipation; accepted office under Sir Robert Peel in 1834, and again in 1841 and 1845; and as member for Oxford University, separating from the Tory party, took office under Lord Aberdeen; in 1859, under Lord Palmerston, became Chancellor of the Exchequer. Elected for S. Lancashire, 1865, he became leader of the Commons under Lord John Russell; elected for Greenwich, he became Premier (1868-1874). After a brilliant campaign in Midlothian, he was returned for that county in 1880, and was once more Premier, as also in 1886, and again in 1893. He introduced and carried a great number of important measures, but failed from desertion in the Liberal ranks to carry his measure of Home Rule for Ireland, whereupon he retired in 1895; his last days were spent chiefly in literary work. He died at Hawarden, May 19, 1898, and was buried at Westminster Abbey. (1809-1898).

W. E. GLADSTONE

Glaisher, *James*, meteorologist and founder of the Royal Meteorological Society, born in London. In 1836 after service on the Ordnance Survey in Ireland and at the Cambridge Observatory he went to Greenwich, and from 1840 to 1874 superintended the meteorological department of the Royal Observatory. In connection with atmospheric investigations he made a series of 28 balloon ascents, rising on one occasion to a height of 7 m., the greatest elevation that had then been attained (1809-1903).

Glamis, village of Forfar, Scotland, 6 m. SW. of the town of Forfar. About 1 m. to the N. is Glamis Castle, seat of the Earls of Strathmore, originally built in the 11th Century, and once the home of Macbeth. Pop. 1,200.

Glamorgan, a maritime county in S. Wales, fronting the Bristol Channel, between Monmouth and Carmarthen; amid the hilly country of the N. lie rich coal-fields and ironstone quarries; the southern part—the garden of Wales—is a succession of fertile valleys and wooded slopes; dairy-farming is extensively engaged in, and also various branches of agriculture; the large towns are engaged in the coal trade and in the smelting of iron, copper, lead and tin; some interesting Roman remains exist in the county. Area 813 sq. m. Pop. 1,226,000.

Gland, the name given to various structures of epithelial cells, the function of which is the secretion and excretion of substances necessary to the working of the body and the elimination of waste products. There are three classes: the lymph glands, glands with ducts and external secretion (stomach and intestinal glands, salivary glands, sweat and tear glands, liver, pancreas, etc.), and the ductless glands.

Glanders, a contagious disease of horses by the bacillus mallei which enters the blood stream through scratches, by inhalation, or is infected food; and is communicated in discharge from the nostrils. Glanders is compulsorily notifiable and is curable by inoculation with mallein. It is communicable to man. See Farcy.

Glanville, *Ranulf de*, Chief-Justice of England in the reign of Henry II., born at Stratford, in Suffolk; became sheriff of Yorkshire in 1163, and of Lancashire in 1174, in which year he defeated the Scot at Inwick; appointed chief-justice in 1180 but deposed and imprisoned by Richard I. later joined the Crusades and died at Acre; he wrote the earliest treatise on the laws of England, in 14 books. (d. 1196).

Glarus, a mountainous canton of central Switzerland, between St. Gall Schwyz, Uri and Grisons; it is mainly pastoral. Its chief town is Glarus. Area 265 sq. m. Pop. 35,700.

Glasgow, city and seaport of Scotland situated on the Clyde, in the counties of Lanark, Renfrew and Dumbarton 47 m. W. of Edinburgh and 465 m. from London. It is in the heart of a rich coal and iron district; spinning and weaving, ship building, foundries, chemical and iron works and all manner of industries flourish. The city is spacious and handsomely laid out after the cathedral, dedicated in 1197, the municipal buildings and the Royal Exchange are among the chief buildings of historical and architectural interest. There are several fine bridges over the Clyde; there is a university (1450) and a variety of other colleges besides several public libraries and art schools. Glasgow returns fifteen members to Parliament. At Bellahouston Park, a great Empire Exhibition, covering 160 acres, was held in 1938. Pop. 1,133,000.

Glasnevin, village of Ireland (Eire), in Dublin. It has a cemetery where many celebrated Irishmen are buried, also an agricultural college and botanical garden. Pop. 2,000.

Glass was known to the Egyptians in very remote times, and was probably an Egyptian invention; but the art of blowing glass—as opposed to the older method of moulding it—was probably invented by the Phenicians in Sidon about the beginning of the Christian era.

Glass is a homogeneous mixture of two or more silicates, the most common of which are the silicates of sodium, calcium, potassium and lead. It has no definite melting-point or crystalline structure; on heating, it gradually becomes softer and more mobile, but there is no sharp change from solidity to fluidity. Ordinary glass is made by melting together sand (silicon dioxide, SiO_2), soda-ash (sodium carbonate, Na_2CO_3) and lime (calcium oxide, CaO) or limestone (calcium carbonate, CaCO_3); a little charcoal is usually added as well, as this gives a better product, and "cullet" or broken glass is also included, to act as a flux. The product after fusion consists of a mixture of sodium silicate and calcium silicate with an excess of silicon dioxide, and is the common soda-glass, such as is used for glazing windows and for making glass tubing.

A harder type of glass is made by using potassium carbonate instead of sodium carbonate, while "crystal glass," from which cut-glass jugs, tumblers, vases, etc., are made, is prepared by melting together sand, red lead, potassium carbonate and cullet. "Pyrex" glass, which expands but little on heating, and therefore shows little tendency to crack when subjected to sudden fluctuations of temperature, contains boric oxide. Glass used for optical purposes frequently contains lead oxide and zinc oxide, or, in Crookes's glass, compounds of the rare element neodymium, which cut off the ultra-violet rays; while bottle-glass is a mixture of the oxides of silicon, sodium, calcium, magnesium and iron.

In making white glass, the best white sand has to be used, and iron must be absent or must be neutralised, or the glass will be greenish. Coloured glass is made by adding to the main materials, before fusion, small quantities of other substances. "Safety" glass, in its simplest form, has wire-mesh of various kinds embedded in it, the effect of which is to prevent the glass from shattering on being broken. Laminated safety glass such as that known as "Triplex," is composed of a sheet of hardened glass cemented with collodion to either side of a sheet of cellulose acetate, which holds the fragments together on impact, instead of allowing them to scatter; it is used chiefly for motor-car windows and windcreens.

Glasswort, the popular name for

Salicornia, a genus of seashore plants (order Chenopodiaceae) widespread in S. Europe and N. Africa; there are two British species, *S. herbacea* (orab-grass) and *S. radicans*. Soda can be obtained from glasswort by burning, and formerly was often obtained in this way for the manufacture of glass and soap.

Glastonbury,

market town of Somersetshire, England, situated 23 m. S. of Bristol on the R. Brue. It has (*Salicornia herbacea*) several interesting old churches and other buildings, as well as a

GLASSWORT

R.C. missionary college and a museum of local antiquities. Especially notable are the remains of the ancient abbey founded by Henry II. upon the site of an earlier church which had been built, according to legend, by Joseph of Arimathea. Glastonbury is the "Avalon" of the legend of King Arthur, who was supposed to have been interred here. A large Celtic lake-dwelling was uncovered near by in 1928. Pop. 4,500.

Glauber's Salt, a crystalline salt Rudolf Glauber (1604–1668), a German chemist by whom it was first described. It consists of decahydrated sodium sulphate, and occurs in the mineral waters of Carlsbad, Cheltenham and elsewhere. As a safe and gentle aperient, it should be taken before breakfast—1 oz. in a glass of water.

Glaucoma, a disorder of the eye, often resulting in blindness, caused by increased pressure of the fluid within the eye. It is most common in elderly persons, and begins with neuralgic pains in the eye and side of the head, with impairment of vision. It is curable by an operation.

Glazounov, Alexander Constantino-vich, Russian musical composer, born at St. Petersburg (Leningrad); studied under Rimsky-Korsakov, and early began to compose symphonic and chamber music, his first symphony being performed at Weimar in 1884; conducted his own works in London in 1897, and in 1900 was appointed professor at the St. Petersburg conservatoire, of which he became director in 1906. A number of symphonies (especially No. 6), a violin concerto, the ballet *Raymonda*, the orchestral suite *The Seasons* and the symphonic poem *Stenka Razin* are among his best-known works. (1865–1935).

Glebe Land, land belonging to a parish church, forming part of an original endowment of the church. In early times endowments generally took the form of land, and a parson may profit from the glebe land within his parish, either by farming it himself or by renting it to a farmer.

Glenalmond, a picturesque valley of the Almond R. in Perthshire, Scotland. In it stands Trinity College, an Episcopalian school modelled on the English public school system.

Glencoe, a wild and desolate glen in the N. of Argyllshire, Scotland, running 10 m. towards the E. from Ballachulish. It is shut in by two lofty and rugged mountain ranges, while the Coe flows through the valley and enhances its lonely grandeur. There is a motor road through the glen, which is celebrated as the scene of the treacherous slaughter of the Macdonalds in Feb. 1692, in consequence of the belated submission of their chief to William and Mary, after the Revolution. The perpetrators of the deed were soldiers led by Campbell, hereditary enemy of the Macdonalds.

Glencoe, village of Natal S. Africa, 243 m. N. of Durban, the scene of the earliest operations of the S. African War, 1899.

Glendalough, mountain valley of Ireland (Eire) in Co. Wicklow. Through it flows the R. Glencale, forming two lakes. Here are St. Kevin's hermitage, the ancient ruins of the "Seven Churches," a round tower and a cross—remains of a former settlement.

Glendower, Owen, Welsh chief and patriot, claiming descent from the old Welsh princes; in 1400 he stirred up a rebellion against the English under Henry IV. and defeated them repeatedly; leagued with the Percies of Northumberland and with the Earl of Mortimer for an invasion

of England, but Glendower and Percy were separately defeated at Carmarthen and Shrewsbury respectively by Henry in 1403; continued the rebellion with French aid, but with less and less success. (c. 1369-1415).

Gleneagles, a beautiful glen of S. m. S. of Crieff, through which flows the Ruthven. Agricola is thought to have passed along it when marching on Ardoch. There are excellent golf links.

Glenfinnan, hamlet and glen of Inverness-shire, Scotland, on Loch Shiel, 18 m. W. of Fort William. A tower marks the spot where the Young Pretender raised his standard in 1745.

Glengarriff, village and beauty spot of Ireland (Eire) in Co. Cork, 8 m. NW. of Bantry. It stands at the head of Glengarriff Harbour, a beautiful, island-studded arm of Bantry Bay.

Glengarry, valley of the Garry in Inverness-shire, Scotland, a picturesque wooded vale. It was the property of the Macdonells, and gives its name to the Highland bonnet or cap.

Glenlivet, a valley in Banffshire, through which the Livet Water runs, about 20 m. SW. of Huntly; famed for its whisky.

Glenmore, or **Great Glen**, a great valley, 60 m. long, of Inverness-shire, Scotland, which cuts right across the country from Moray Firth to Loch Linne. It contains the Caledonian Canal and Lochs Ness, Lochy and others.

Glenroy, a narrow glen 14 m. long, in the Lochaber district of Inverness-shire, Scotland. The Roy flows through the valley, the steep sides of which are remarkable for three regular and distinctly formed shelves or terraces running parallel almost the entire distance of the glen, the heights on either side exactly corresponding—probably the margins of a former loch which gradually sank as the barrier of glacial ice damming up the waters slowly melted.

Gliding, the art of navigating an aeroplane unprovided with propeller or engine, by means of ascending currents of air. In early days contrivances to imitate the flight of birds played some part in the development of human flight, but the progress of motor aviation eclipsed gliding. In late years, however, gliding by means of sail-planes has become popular both as a sport and for the study of air conditions, while several modifications in motor-aeroplane design are due to the knowledge gained by this means.

Gliding is far more than a slow descent from a high taking-off ground. Soaring flights are possible if the pilot takes advantage of ascending currents of air. These are caused either by deflection of the wind over hills, high buildings, forests, etc., or by the expansion of air warmed by the sun; moreover, it is found that upward currents of air increase in speed and strength as they approach cumulus clouds. Soaring flights are possible even without wind, and return flights without landing have been made. In Great Britain gliding is subsidised by a Government grant.

Glinka, Mikhail Ivanovich, Russian composer, born at Smolensk; entered the civil service in 1824, but in 1830 removed to Italy to study music, completing his studies at Berlin. His celebrated historical opera *A Life for the Tsar* was produced at St. Petersburg, 1836, and was followed by *Ruslan and Lyudmila*, based on Pushkin's poem, in 1843. In these, his principal works, Glinka emancipated Russian music from slavish imitation of Western models and laid the foundation of a truly national opera. (1803-1857).

Globe Fish,

Plectognathi. The teeth are united forming a sharp plate on each side of the jaw which resembles a parrot's beak. When alarmed, the Globe Fish inflates itself with air or water and the spines covering the skin stand erect.

or Puffer, a tropical marine fish of the order

GLOBE FISH
(INFLATED)

Globe Flower, or **Golden Ball**, pop-genus *Trollius*, perennial, erect plants of the order Ranunculaceae, with 9 or 10 species. The commonest British species is *T. europæus* with pale yellow globular flowers.

Globes, spherical maps, representing the heavens of the earth. They are usually made to rotate on an axis, and are often encircled with a graduated meridian. Celestial globes were probably made before those representing the earth. Archimedes is believed to have made a planetarium about 212 B.C., and a celestial globe is said to have been brought from Egypt to Greece in 368 B.C. Metal celestial globes were also made by the Arabs. The oldest existing terrestrial globe is probably one made at Nuremberg in 1492. In the 18th Century globes were made showing the discoveries of Columbus and Magellan's route round the world. The earliest English globes were those made by Molynæux at Lambeth at the end of the 16th Century.

Globe Theatre, a playhouse built side, Southwark, where several of Shakespeare's plays were first produced; it was burnt down during a performance of *Henry VIII.* in 1613.

Globigerina, a marine species of *Foraminifera*. At the bottom of the sea a thick mud formed of the shells of dead globigerina is called the "globigerina-ooze," which eventually contributes to the formation of chalk and other rocks.

Globular Clusters, dense groups of stars at great distances; 63 are known and each contains several thousand stars. These groups are believed to be outside our galaxy and to form isolated stellar systems comparable to ours. The best known cluster is that in the constellation Hercules.

Globularia, a genus (order Solaginæ) of perennial herbs, shrubs, and sub-shrubs; cultivated for rock-gardens; the flowers are blue or white, and globular.

Glogau, a town of Silesia, Prussia, on the Oder, 35 m. NW. of Liegnitz; a place of considerable historic interest, it has an ancient Gothic castle and a cathedral, the latter built upon an island in the river; there are manufactures of machinery, tobacco, starch, sugar and chemicals, and a trade in wine and books. Pop. 28,000.

Glommen, or *Stor-Elv* (i.e., Great River), the largest river in Norway; has its source in Lake Aursund, and, after a southward course of 350 m., broken by many falls, and for the most part unnavigable, discharges into the Skagerrak at Fredrikstad. Timber is floated down the stream.

Gloss, an explanation of an unusual word or expression, inscribed in the margin or between the lines of a text. In the copying of manuscripts glosses were frequently included in the text by mistake, or the text may have been corrupted by the substitution of the gloss word for the less-known word in the text. The Alexandrian period of Greek

literature (4th Century), when the creative impetus was largely spent, was devoted to the work of commentators and "glossatores." Glossaria or collections of glosses, had been produced in preceding ages. The study of the Scriptures also led to the compilation of glosses, the most famous being Walafrid Strabo's *Glossa Ordinaria* (9th Century) and the *Glossa Interlinearis* by Anselm, Dean of Laon (11th Century). Among glossaries of later and modern literature mention should be made of Du Cange's glossary of Middle and Late Latin (1733-1776), Tyrwhitt's glossary to Chaucer (1775) and Nares's to Shakespeare.

Glossitis, inflammation of the tongue being due to various causes, among them being digestive disturbances, alcoholism and excessive tobacco-smoking. Long-standing glossitis may result in the tongue being covered with hard patches separated by fissures. Treatment consists of removal of the irritant cause and the use of bland antiseptic mouth-washes, such as borax and glycerine.

Glossop, municipal borough and market town of Derbyshire, England, in the Peak District, 13 m. SE. of Manchester; it has cotton-mills and coal-mines. Glossop Hall, a castellated mansion, is near by. Pop. 20,000.

Gloucester, county town of Gloucestershire, England, standing on the Severn, 38 m. NE. of Bristol. It is a handsomely laid-out town, the main lines of its ground-plan testifying to its Roman origin. Conspicuous among several interesting old buildings is the cathedral, begun in 1073. The river, here tidal, is spanned by two stone bridges by means of the Berkeley Ship Canal, the town communicates with Sharpness Docks on the Severn estuary. There are manufactures of machinery, flour, ropes, chemicals and matches. Pop. 53,000.

Gloucester, city and seaport of Massachusetts, U.S.A., 30 m. NE. of Boston, with which it has rail and steamer communication. It is a favourite holiday resort, and has a fine harbour and an important fishing industry. Granite is quarried, and there are manufactures of glue and other fish products, and of shoes, cigars and machinery. Pop. 24,000.

Gloucester, Gilbert de Clare, Earl of, Hampshire, England, was born at Christchurch, and threw in his lot with Simon de Montfort and the barons; fought at the Battle of Lewes, 1264, and took the King prisoner, but later joined the royal party and fought against de Montfort at Evesham, 1265; took up the cause of the disinherited barons and captured London from the royalists, 1267; was again reconciled with Henry, joined the Crusades and spent the rest of his life in warfare and contention. (1243-1295).

Gloucester, Henry William Frederick, Albert, Duke of, third son of George V.; born March 31, 1900; educated at Eton; adopted the Army as a career, and entered the King's Royal Rifle Corps, 1919, but later changed to the cavalry; married, Nov. 8, 1923, Lady Alice Scott, daughter of the seventh Duke of Buccleuch; promoted Major-General, 1937, and left the army to assist King George VI.; known as Prince Henry until 1938, when he was created a Duke.

Gloucester, Humphrey, Duke of, fourth son of Henry IV.; fought in the French wars, being wounded at Agincourt; deputed for Bedford as regent, 1420, and again in 1422; claimed the regency upon the death of Henry V., but received only the lesser position of protector; quarrelled with the Council and nearly provoked civil war, 1425; invaded Flanders, 1436; lost his influence over Henry VI. upon the conviction

of his wife, formerly Eleanor Cobham, for witchcraft, 1441, and at the instigation of Suffolk, was arrested, Feb. 1447, and died four days later. He was a munificent patron of literature and the Church. (1391-1447).

Gloucester, Thomas of Woodstock, Duke of, seventh son of Edward III.; married Eleanor de Bohun, daughter of the Earl of Hereford, and in 1376 became Constable of England; fought successfully against the French and Spanish; suppressed a peasant rising, 1381; opposed the royal advisers, especially the Earl of Suffolk, whom he helped to condemn (1386), and became virtual ruler of England; sought to depose Richard II., but was arrested and executed at Calais. (1355-1397).

Gloucestershire, a West Midland England, which extends from the border of Warwickshire, roughly in the centre of the country, SW. to the estuary of the Severn. It presents three natural and well-defined districts: the Hills, formed by the Cotswold Hills in the E.; the Vale, through which the Severn runs, in the centre; and the Forest of Dean in the W., where there are two large coal-fields. Agricultural and dairy-farming are the main industries. The principal rivers are the Wye, Severn, Lower and Upper Avon, and Thames. Bristol is the largest town. Area 1,243 sq. m. Pop. 786,000.

Glow-worm (*Lampyrus noctiluca*), a coleopterous insect, related to the firefly. The female is wingless and emits a greenish-white light from the hinder part of the abdomen. The luminous cells of the winged male are less highly developed.

Gloxinia, a genus of bulbous plants of the order Gesneriaceae, of which there are six species, all natives of tropical America. The plants stand about 1 ft. high, bear rosettes of broad, downy leaves and handsome, trumpet-shaped flowers of a variety of colours. They are very popular in England in warm greenhouses, many cultivated varieties having been derived from the *Gloxinia speciosa*. They can be grown from seeds or from tubers.

Gluck, Christoph Willibald, German of the opera; musical composer and reformer of the opera; born near Neumarkt, in the Palatinate; studied at Prague, removed to Vienna in 1736, and later studied under G. B. San Martini at Milan; first opera *Artaserse*, 1741, followed by several others in the conventional Italian style. Invited to London (1745), he studied Handel, attained a loftier ideal, and returned to the Continent, where, at Vienna in 1762, he produced *Orfeo ed Euridice*, in which first appeared those revolutionary ideas which may be said to have created the modern opera as an art-form. It was followed by *Alceste*, 1766, and *Iphigenie en Aulide*, Paris, 1774. In Paris, Gluck had a rival in Piccini, and the public opinion was for a time divided, but his last opera *Iphigenie en Tauride*, 1779, established his superiority. (1714-1787).

Glucose, otherwise known as dextrose or grape-sugar, is a sugar of the chemical formula $C_6H_{12}O_6$. It occurs in the juice of grapes and other sweet fruits, and can be made artificially from starch and from sucrose (cane or beet sugar). It is less sweet but more easily digestible than sucrose, and is often administered in cases of debility or exhaustion. Glucose is present in normal human arterial blood to the extent of about 0.1 per cent.; in cases of diabetes mellitus this proportion is greatly exceeded and glucose then is excreted heavily.

Glucosides, a group of organic compounds, constituents of many vegetable tissues. By hydrolysis they are resolved into a sugar (glucose) and another

simpler non-saccharine compound. The hydrolysis is effected by the action of enzymes, dilute acids, alkalis or bacteria.

Glue, a preparation of crude gelatin with bones, animal skins, hoofs, fish skins, etc. The skins, cleaned and treated with milk of lime, are washed in running water, slightly acid, and then boiled. The glue liquor thus obtained is heated until concentrated, and then dried in slabs.

Gluten, a protein of wheat, consisting of gliadin and glutenin; obtained by kneading wheat-flour under a flow of water which washes away the starch and other soluble matter. Gluten forms a sticky dough and is used to make starch-free bread for diabetics.

Glutton, a name given to the powerful, heavily-built, bear-like, wolf-like *(Gulo luscus)* of Arctic N. America. It is a burrowing mammal of the family Mustelidae (the Weasel family), related to the badger, has a bushy tail and is prized for its fur.

GLUTTON

Glycerine,

or **Glycerol**, a colourless, syrupy liquid (formula $C_3H_5(OH)_3$) with a sweet taste, miscible with water or alcohol in all proportions; it was discovered by C. Scheele in 1779. It boils, with slight decomposition, at $290^\circ C.$, and can be frozen to a white, crystalline solid which melts at $17^\circ C.$ Glycerine enters into the composition of animal and plant fats and oils, which are the glyceryl esters of organic acids such as stearic acid, palmitic acid and oleic acid. It is obtained as a by-product in the manufacture of soap, being left in the "sweet water" or "spent lye" from which the soap has been removed. The "sweet water" is purified by chemical means, decolorised by filtration through animal charcoal, and evaporated, when the glycerine remains.

Glycerine is used medicinally, as an ingredient of bacteriophage and other inks, and for many other industrial purposes; mixed with water, it is used in motor-car radiators to prevent freezing in cold weather, the solution having a low freezing-point; it plays an important part in the manufacture of nitro-glycerine, which is an oily liquid formed by the action of a mixture of nitric and sulphuric acids upon glycerine. Dynamite is made by absorbing nitro-glycerine in kieselguhr.

Glycogen, the form in which the body stores carbohydrates (starch), principally in the liver, which converts glycogen into glucose (blood-sugar), releasing it as required into the blood. It is also stored in the muscles, and during exercise it is broken down and released into the blood as lactic acid.

Glycosuria, a condition, common in diabetes, but not necessarily an indication of that disease, in which the concentration of blood-sugar in the blood is abnormally high and is passed into the urine.

Glyptodon, a genus of extinct armadillos of the order of mammals known as edentate, and closely related to the living armadillos, but distinguished by the possession of a thick, bony shield or carapace composed of polygonal plates fused together in one piece. The name means "sculptured tooth" and indicates the deep flutes of the teeth. The shield of the back reached a size of 11 ft. 6 in. long and

nearly 8 ft. broad. Its fossil remains, of the Pleistocene age, are found in N. and S. America.

Gnat, the name given to various small species of flies which form the family Culicidae, of the dipterous (two-winged) order of insects. They are characterised by a minute hairy fringe on the wings; the adult females bite and suck blood; the larvae are aquatic. The larger species are known as mosquitoes.

Gneiss, an altered form of igneous or sedimentary rocks in which the minerals are separated into bands or "foliated"; it occurs abundantly amongst all ancient rocks, and in some cases is hardly distinguishable from granite.

Gnomes, a race of imaginary beings, mis-shapen in form, of diminutive size and usually with long beards, who are supposed to guard jealously the precious metals and other hidden treasure within the earth.

Gnostics, followers of a religious movement at the beginning of the 2nd Century. They sought to extract an esoteric meaning out of the letter of Scripture and the facts of the Gospel history. They set a higher value on Knowledge than Faith, and thus their understanding of Christianity was speculative, not spiritual, and their knowledge of it the result of thinking, not of experience. Like the Jews, they denied the possibility of the Word becoming flesh.

Gnu, *(gnu)*, a S. African species of antelope, resembling an ox; black in colour, with tall and neck like those of a horse, it has long horns, curving forwards and upwards. The Blue wildebeest, or brindled gnu (*Gorgon kaurus*), of Bechuanaland, is larger and grey in colour; the neck is striped, the tail black, while the horns spread sideways like those of a buffalo.

GNU
(BLACK WILDEBEEST)

Goa, a Portuguese possession on the W. coast of India, lying between the Western Ghats and the sea-coast, 250 m. S.E. of Bombay; area 1,300 sq. m.; is hilly on the E. and covered with forests. Large quantities of rice are grown, as well as coconuts, betel nuts and fruit. Iron, manganese and salt are among the minerals. The settlement was captured in 1510 by Albuquerque. Pop. 508,000. Old Goa, the former capital, has fallen from a populous and wealthy city into utter decay, its place being taken by Nova Goa, or Panjim (pop. 7,400), on the Mandavi, 3 m. from the coast.

Goat, a ruminant mammal of the Bovidae family, forming with the ibex, markhor and others the genus *Capra*, allied to sheep. The horns are hollow and generally curved backwards; they are ridged in the male, smoother and smaller in the female. The male is bearded and at rutting time emits a characteristic odour.

Various species occur wild in the mountains of S. Europe, N.E. Africa, Asia Minor, Persia, and the Central Asian uplands. The wild-goat or *Pasang* (*C. caprus*), from which the common domesticated goat is descended, is native to Asia Minor and other parts of the East; its horns are scimitar-shaped. The Caucasian ture and the Himalayan and Arabian tairs, and the chamois, are closely allied species. The Angora and the "Shawl,"

or Cashmere, goats are valuable for their fine, silky hair.

Goathland, a picturesque moorland village of Yorkshire, England, in the N. Riding, 8 m. SW. of Whitby. Pop. 700.

Goat-moth (*Cossus ligniperda*), a large moth of Europe and Asia Minor; its fore-wings (span 2-3 ins.) are greyish-brown, marked with black streaks; hind-wings brown. Its eggs are deposited in the bark of oak and willow, and the caterpillar eats into the wood where its chrysalis stage is passed.

Goatsucker, a popular name for the Nightjars (*a.v.*), a family of birds (the Caprimulgidae) of widespread distribution, comprising about 80 species. The name Goatsucker came from the popular belief that the birds suok the milk from goats.

Gobelins, Gillies and Jean, brothers, celebrated dyers, who in the 15th Century introduced into France the art of dyeing in scarlet, subsequently adding tapestry-weaving to their activities. Their works in Paris were taken over by the government in Louis XIV.'s reign, and the beautiful tapestry that was produced became known as Gobelins. The works are still in operation, and a second State establishment for the manufacture of Gobelins exists at Beauvais.

Gobi Desert, a vast desert tract of the Pamirs to the Khyang range and occupying chiefly the regions of Sin-Kiang and Outer Mongolia. From E. to W. it is about 1,500 m. in length, with an average breadth of 400 m. and an area of roughly 30,000 sq. m. Large stretches, especially the Ala-Shan region, are entirely waterless, while the remainder supports thorns and scrub, which suffice to sustain the flocks and herds of Mongolian nomads. The desert is crossed by a number of ancient caravan tracks; Marco Polo traversed it in the 13th Century, while a more recent explorer of this region was Sven Hedin.

Goby, a family of carnivorous fish of the sub-order Gobioidae, allied to the blenny.

The pelvic fins form a cup-shaped sucker, by means of which the goby can attach itself to objects. Gobies are inshore fish, and are found in most tropical and temperate seas, and also in estuaries; in length they vary from 1 in.—in the case of one species inhabiting a lake in the Philippine Is.—and ranking as one of the smallest of all vertebrates—to 3 ft. Several species, including the mud-skipper, are found in British waters.

God, a conception universal among man, a kind of an ideal explanation of the moving force of existence. Among primitive people, God was a deification of natural phenomena, and this tendency towards anthropomorphism resulted in a hierarchy of gods, identified not only with the forces of nature, but also with various human activities. Later philosophic thought tended to simplify and unify these many aspects of God into one self-sufficient, self-explanatory, necessary prime cause and mover, whether regarded in a material or spiritual form. In Christianity there is a further aspect of God as absolute love, revealed in the person of Christ as perfect humanity as well as perfect divinity.

Godalming, municipal borough and Surrey, England, on the R. Wey, 4 m. SW. of Guildford. Here is the Charterhouse School, which until 1873 was in London. Paper, leather and bowery are made, and stone is quarried near by. Pop. 10,400.

GOBY

Godavari, an important river of India, which rises on the E. side of the Western Ghats, traverses the Deccan in a SE. direction, and, forming a large delta falls into the Bay of Bengal by seven mouths after a course of 900 m. Its mighty volume of water supplies irrigating and navigable canals for the whole Deccan. It is one of the 12 sacred rivers of India, and once in 12 years a bathing festival is celebrated on its banks.

Godavari, district of India, on the NE. coast of Madras Presidency. It has an area of 2,500 sq. m., and is watered by the R. Godavari and its affluents. The main products are agricultural and include rice, oil-seeds, tobacco and sugar; timber and graphite are also exported. The capital is Cocanada, on the coast. Pop. 1,470,000.

Godetia, a genus of plants sometimes included with the Evening Primrose, which it resembles, in the genus *Oenothera*, of the order Onagraceae. It comprises some 25 species, native to the west of America, but popular in England as hardy annuals out-of-doors and in cool greenhouses.

Godfrey of Bouillon, a renowned Crusader, son of Eustace II., Count of Boulogne; he served with distinction under the Emperor Henry IV., being present at the storming of Rome in 1084; a leader of the first Crusade, 1096; took a prominent part in the capture of Jerusalem in 1099, and was proclaimed ruler of that city; defeated the Egyptians at Ascalon later in same year; after his death he became the popular ideal of a Christian knight and the hero of many tales and legends. (c. 1060-1100).

Godiva, Lady, wife of Leofric, Earl of Mercia and Lord of Coventry, who, according to a legend first quoted by the monastic chronicler Roger of Wendover (d. 1236), pleaded in vain with her husband to relieve the people of Coventry from heavy taxes, till one day he promised to grant her request if she would ride through Coventry naked. This she did, not one soul of the place peering through a window at her save Peeping Tom, who paid for his curiosity by being smitten with blindness. (1040-1080).

Godmanchester, municipal borough and market town of Huntingdonshire, England, on the Ouse, 1 m. SE. of Huntingdon. An ancient town with agricultural interests, it stands on a Roman site. Pop. 2,000.

Godolphin, Sydney Godolphin, Earl of, English statesman, born near Helston, Cornwall; in 1662 became a royal page in the Court of Charles II., in 1668 entered Parliament and in 1678 was engaged on a political mission in Holland; in the following year he was appointed First Lord of the Treasury, of which five years later, he became First Commissioner, being at the same time made a baron; under James II. was again at the head of the Treasury and at the Revolution supported James until his flight, when he voted in favour of a regency; on the elevation of William to the throne was reinstated at the Treasury, where he continued until 1696, when the Whig ascendancy brought about his dismissal; for six months in 1700 he once more assumed his former post; under Anne was made Lord High Treasurer (1702) and created earl in 1706; on the fall from power of his political allies, the Marlboroughs, he was dismissed (1710). (1645-1712).

Godoy, Manuel de, Spanish statesman, born at Badajoz; while serving in the royal guards he became the favourite of the wife of the future King Charles IV., and after that Prince came to the throne he rapidly attained influence and position; was made Duke of Alcudia and in 1793 Minister of State; played a conspicuous part in the

affairs of Spain during the French Revolution and the Empire; received the title of Prince of the Peace for a treaty he concluded with France in 1796, in opposition to the general wish of the nation; forced to flee from Spain in 1808, and died in exile. (1767-1851).

Godunov, Boris Fedorovich, Czar of Russia (1598-1605), was brother-in-law and one of the guardians of Fedor I.; in 1585 he became sole regent, with absolute power, and in this capacity he strengthened the empire, defeated the Crimean Tartars, re-colonised Siberia, and bound the serfs to the soil by depriving them of the right of transfer; in 1598, on the death of Fedor, he was elected Czar; the young Czarovich Dmitri had died suddenly in 1591, and it has often been supposed that Boris brought about his death in order to remove the lawful heir to the throne. (1552-1605).

Godwin, Earl of the West Saxons, a French, powerful English noble and father of Harold II.; first came into prominence in the reign of Canute; became related to the King by marriage, and was made Earl of Wessex (1036); was instrumental in raising Edward the Confessor to the throne (1043), to whom he gave his daughter Edith in marriage; in 1051 his opposition to the growing Norman influence brought about his banishment and the confiscation of his estates; in 1052 he returned to England and was restored to favour, but shortly afterwards was taken fatally ill at the King's table. (d. 1053).

Godwin, Francis, English ecclesiastic, historian and author of a book, *The Man in the Moon*, the ultimate source of some of Swift's *Gulliver's Travels*. (1562-1633).

Godwin, Mary Wollstonecraft, English authoress, born in Hoxton of Irish parentage. At 19 she began to support herself by teaching, and continued to do so till 1788, when she established herself in London to make her way as a writer, having already published *Thoughts on the Education of Daughters*. In 1791 she replied to Burke's *Reflections*, and in the following year appeared her famous *Vindication of the Rights of Women*, which was of great and enduring assistance to the cause of feminine emancipation. While in Paris in 1793 she formed a liaison with an American, Captain Inlay, whose desertion of her two years later induced her to attempt suicide by drowning. In 1797 she married William Godwin, the writer; their daughter Mary, born the same year, was Shelley's second wife. (1759-1797).

Godwin, William, English political writer and novelist, born at Wisbech, Cambridgeshire; was educated for the Church, and was for five years in the ministry, but by 1782, when he entered upon a literary career, he had become a republican and a freethinker. Various works had come from his pen, including three novels, before his celebrated *Political Justice* appeared in 1793, *Caleb Williams* a novel, being published in the following year. In 1797 he married Mary Wollstonecraft, who died the same year, and four years later he married a widow, Mrs. Clairmont, whose daughter Clara later became the mistress of Byron. His writings are clear and vigorous in expression, if visionary and impracticable in theory. (1756-1836).

Godwin-Austen, second highest world (28,250 ft.), in the Mustang range of the Himalayas; named after H. H. Godwin-Austen (1834-1923), the mountaineer, it was formerly designated K2.

Godwin-Austen, Robert Alfred, British geologist, educated at Oxford; a supporter of the fresh-water theory of the origin of the Old Red Sandstone formations. F.R.S., 1849. Mt. Godwin-Austen (g.v.) was named after him. (1808-1884).

Godwit, a long-beaked wading bird of the curlews, sandpipers, etc. The black-tailed godwit was at one time native to the Fen District, England, but breeds there no longer, though it is known as a bird of passage.

The bar-tailed godwit, which, as its name denotes, has its tail barred with black and white, breeds in Lapland, but flies south in the winter. The godwits are conspicuous for the seasonal differences in their plumage, which turns from grey and white in winter to bright chestnut-red in summer.

BAR-TAILED GODWIT

Goebbels, Paul Josef, German politician; one of the earliest members of the Nazi party; editor of *Der Angriff*, 1927; director of Nazi propaganda from 1929, and from 1933 Reich Minister of Propaganda. (1897-).

Goeben, a battle-cruiser (displacement 22,640 tons, speed 25.5 knots), built for the German navy in 1912. In 1915, the *Goeben*, together with the light-cruiser *Breslau*, eluded the British Mediterranean fleet under Admiral Troubridge and succeeded in reaching Constantinople. The two ships were sold to Turkey, this being an encouragement to Turkey to enter the war against the Allies. The *Goeben* has been renamed the *Yavuz*, mounting ten 11-in. guns and four torpedo tubes.

Goering, Hermann, German statesman, president of the Reichstag under the Nazi régime; one of Hitler's earliest followers and principal colleagues; distinguished himself in the German Air Force during the World War; took part in Hitler's abortive rising in Munich, 1923; President of Reichstag, 1932; in 1933 he became Prime Minister of Prussia and, soon afterwards, Minister for Aviation, and Commander-in-Chief of the Air Force which has been considerably expanded under his direction. In 1934 he assisted Hitler in extinguishing "Left" tendencies in the Nazi movement. In 1935 he married Frau Sonnemann, a leading German actress, who is regarded as typifying the best of German womanhood. (1893-).

Goethe, Johann Wolfgang von, German poet and dramatist, was born at Frankfurt-on-Main, on Aug. 28, 1749; entered the faculty of law at Leipzig in 1765 and five years later that of Strasbourg. Here he entered upon a romantic love affair—by no means the first, as it was far from being the last, in his long life—which inspired some beautiful lyrics, and came under the influence of Herder, who first interested him in old German poetry. This new interest bore fruit in *Goets von Berlichingen* (1771), a romantic drama based on Shakespearean models which set a new fashion for the German stage. The romantic and sentimental *Werther* (1774) established Goethe as a leader of the Romantic movement, and about this time he first became interested in the legend of Faust.

In 1775 he was invited to Weimar by the Prince, and that town thenceforth became his home; he was made Privy Councillor and minister of State, and showed great capacity for political and administrative work. In 1786 he paid his first visit to Italy; this had a deep and refining influence upon his art, which was now directed into the paths of classicism, as was evidenced by the beautiful dramas *Iphigenia in Tauris* (1787), on the Greek model, *Tasso*, breathing the spirit of the Renaissance, and *Egmont*.

There followed the novel *Wilhelm Meister*, which had a profound effect upon European literature, and the village idyll *Hermann and Dorothea* (1796). In 1808 Goethe produced the first part of his masterpiece, *Faust*, the composition of which had occupied him at intervals for 35 years; the second part, elevated to a loftier and more spiritual plane, appeared in 1831. The next year, on March 22, the poet died, and was buried next to Schiller, his close friend since 1794. Goethe was not only the greatest of German poets, but a universal genius. In addition to his vast literary labours, he was constantly engaged in the study of science, making notable discoveries in botany, comparative anatomy and optics. (1749-1832).

Gogol, Nikolai Vasilievich, Russian novelist and dramatist, born in Poltava. In 1829 he started as a writer in St. Petersburg, but met with little success till the appearance of his *Evenings on a Farm near Dikanka* (1831). In 1842 appeared his masterpiece, *Dead Souls*, in which all his powers of pathos, humour and satire are seen at their best. The Cossack epic *Taras Bulba* and other brilliant sketches of Ukrainian life, the pathetic *Cloak*, and the two comic dramas *The Marriage* and the *Inspector General*, a satirical masterpiece of its type, comprise the best of his remaining work; for some time he tried public teaching, being professor of History at St. Petersburg, and from 1836 to 1848 lived chiefly at Rome. (1809-1852).

Goidels, a Celtic tribe which invaded Neolithic Britain, driving the original inhabitants into W. Ireland. Later they were themselves displaced by Brythonic invaders. See *Gaels*.

Goitre, an abnormal swelling of the thyroid gland, which in simple goitre is due to a deficiency of iodine in the diet or its absence in the drinking-water; occurs mostly in countries far from the sea. Goitre is also a characteristic of hyperthyroidism, or over-action of the thyroid, the disorder known as *Grave's Disease*.

Golborne, urban district of Lancashire, England, 5 m. S.E. of Wigan. Cotton-spinning is carried on, and near by are collieries. Pop. 7,300.

Golcar, urban district of Yorkshire, England, in the W. Riding, 3 m. S.W. of Huddersfield; it is a centre for woollen manufacture, and has a mineral spring. Pop. 9,800.

Golconda, a decayed town in Hyderabad, bad, 7 m. W. of the city of Hyderabad, India; famous for its former industry of diamond-cutting; adjoining it are the remains of the ancient city, the former capital of an old kingdom; they include the ruins of huge royal mausoleums; the fort is garrisoned, and is the treasury of the Nizam; it is also a State prison.

Gold, a metallic chemical element belonging to the same group as copper and silver. Symbol, Au; atomic number, 79; atomic weight, 197.2. For the most part, it occurs native as nuggets or grains in rock or alluvial sand, the chief goldfields being in S. Africa (particularly in the Transvaal), Australia, N. America (Klondike, etc.), and Russia; but it is also found in combination with other minerals, while seawater contains about one grain of gold in each 40 tons.

Gold is a heavy metal (its density is 19.3 grammes per c.c., i.e., it is 19.3 times as dense as water), and possesses an attractive yellow colour. It is a good conductor of heat and electricity, and melts at 1,063° C., the liquid metal being of a greenish-blue tint. It is remarkably ductile and malleable, and can be beaten out into leaves less than one one-hundred and fifty-thousandth of an in. in U.S.

thickness; such a leaf is translucent and transmits a greenish light.

Gold is very resistant to the atmosphere and to most chemical reagents; it will, however, dissolve in *aqua regia* (a mixture of nitric and hydrochloric acids), in hot selenic or telluric acid, in an aqueous solution of chlorine, or of potassium or sodium cyanide, and in mercury. Since gold is by itself too soft for most practical uses, it is usually alloyed with silver or other metals, the fineness of the alloy being expressed either in carats or in parts per thousand by weight. Pure gold is of 24 carats fineness, while "standard" gold consists of 22 carats of pure gold to 2 carats of alloy. A "bar" of gold weighs 200 oz. troy.

The attempt to make gold from base metals was the age-long goal of alchemy. Such a transmutation was entirely beyond the powers of the alchemists, however, and although modern work on the structure of the atom indicates that the problem is by no means insoluble, it is unlikely to become a commercial proposition, at any rate in the near future. The world production of gold fluctuates, but is in the neighbourhood of 27 million fine oz. annually.

Gold Coast, a British colony on the Gulf of Guinea, W. Africa, with a coastline of 330 m.; from the low and marshy foreshore the country slopes upward and inward to Ashanti, which, together with the Northern Territories and mandated Togoland (formerly German), is attached to it administratively; the total area is 91,800 sq. m., of which 23,500 sq. m. belong to the Gold Coast proper; the climate is very unhealthy; cocoa, copra, manganese, mahogany, kola nuts, palm-oil, rubber and gold dust are exported; Accra is the capital. A deep-water harbour was completed in 1928 at Takoradi. The Portuguese established themselves on the Gold Coast in 1482, but were supplanted by the Dutch in 1642; meanwhile British traders had exploited the region, and after more than two centuries of close rivalry, the Dutch were bought out in 1871. Pop. 3,500,000 (\$3,000 whites).

Golden Age, the age of happy innocence under the reign of Cronos or Saturn, in which, as fabled, the earth yielded all fulness without toil, and every creature lived at peace with every other; the term is applied to the most flourishing period in the history of a nation.

Golden Bull, by the Emperor Charles IV. in 1356, which determined the law in the matter of the Imperial elections, and provided that only one member of each electoral house should have a vote; so called from the gold case enclosing the Imperial seal (Latin, bulla) attached.

Golden Calf, an idol set up by Aaron in Egypt and worshipped by the children of Israel, when Moses was absent on Mount Sinai (Exod. xxxii.). Jeroboam, King of Israel set up two golden calves, one in Bethel and the other in Dan, at the extremities of his kingdom, possibly in imitation of the worship of the bull Apis by the Egyptians (1 Kings xii.).

Golden Fleece, the fleece of a ram which Phryxos, after he had sacrificed it to Zeus, gave to Aëtes, King of Colchis, who hung it on a sacred oak, and had it guarded by a monstrous dragon. It was the object of the Argonautic expedition under Jason to recover and bring back the fleece to Greece, an object which they achieved. See *Argonauts*.

Golden Fleece, Order of the, an institution by Philip III., Duke of Burgundy and the Netherland ds in 1430, for the protection of the Church.

Golden Gate, channel in California, U.S.A., connecting San Francisco Bay with the Pacific Ocean. It is now crossed by a bridge 6,800 ft. long.

Golden Horn, an opening of the Bosphorus, Turkey, separating the suburbs of Galata and Pera from the rest of Constantinople (Istanbul). It is of great beauty.

Golden Legend, a collection of lives of saints and other tales, such as that of the *Seven Sleepers* and *St. George and the Dragon*, made by Jacques de Voragine (1230-1298), a Dominican and Archbishop of Genoa; Carton printed a version of it.

Golden Number, the number of the year in a cycle of 19 years; based on Meton's discovery (about 432 B.C.) that the moon is new on the same date every 19 years; used to calculate the date of Easter.

Golden Rod (*Solidago Virgaurea*), a hardy perennial plant of the order Compositae, and the only British representative of its genus. It grows in clumps and bears spikes of small golden flowers from July to September. It grows easily in any soil, and is propagated by seeds or by division. This and other species of the same genus are grown in shrubberies for ornamental purposes.

Golden Rose, a perfumed cluster of roses on a thorny stem, made of gold and ornamented with gems; blessed by the Pope on the fourth Sunday in Lent, and sent to that individual or community who is deemed during the year to have shown most zeal for the Church.

Golders Green, residential suburb of London, Middlesex, England, between Hampstead and Hendon. Here is the Crematorium for N. London.

Goldfinch (*Carduelis carduelis*), a bird of the Finch (Fringillidae) family, with red forehead, yellow-barred black wings, black head and white ear-coverts, found in Britain, where it is the most beautiful representative of its family.

Goldfish (*Carassius auratus*), a species of carp of the genus *Cyprinus*,

native to Far-Eastern waters. By careful breeding goldfish lose their natural black and brown colour and take on gold, red-gold or silver colouring. They

GOLDFISH

were introduced into England in 1691.

Gold-leaf, sheet gold beaten to a thickness of one one-hundred and fifty-thousandth part of an in. or less, used for gilding. It is chiefly used in bookbinding and gilt-lettering. The best gold-leaf is manufactured in Germany, the industry having been carried on there since the 12th century. For many years "English-Gold" was the finest finish for gilt picture frames, mirror-mouldings, etc.

Goldoni, Carlo, the founder of modern Italian comedy, born at Venice; in his youth he studied medicine and subsequently law, but in 1734 appeared as a dramatist with his tragedy *Belshazzar*. In 1736, after a wandering life, he returned to Venice, and, finding his true vocation in comedy-writing, turned out a rapid succession of sparkling character plays after the manner of Molière. In 1761 he went to Paris as manager of the Italian theatre, and became Italian master to Louis XV's daughter. His comedies displaced the burlesque and farces till then in vogue on the stage in Italy. (1707-1793).

Goldsborough, a small village of 19 in the W. Riding, on the Nidd, 2½ m. S.E. of Knaresborough. It has a fine Elizabethan mansion, the seat of the Earl of Harewood.

Goldschmidt, Madame. See Lind, Jenny.

Goldsmith, Oliver, English author and poet, born at Pallao or Pallasmore, Co. Longford, Ireland; essayed unsuccessfully the Church, the law, and medicine in turn; after some years of poverty and dissipation, set out to travel on the Continent without a penny, supporting himself by playing the flute; returned in 1766 and became a hack writer in London and a friend of Dr. Johnson and his circle; published a poem, *The Traveller*, 1764, which brought him immediate fame, followed by *The Vicar of Wakefield*, 1766, one of the most famous of all novels, and the poem, *The Deserted Village*, 1770; the comedy *She Stoops to Conquer*, 1773, was a triumph and still holds the stage; died in debt and poverty, owing to his own extravagance. (1728-1774).

Goldsmiths. The art of ornamental working in gold reached a high degree of skill in very early times, especially among the ancient Egyptians, the Minoans and the Greeks, and has continued to develop without interruption to the present day. In England the Goldsmiths' Company was founded in the 14th Century, in the days when goldsmiths acted also as bankers. In early days each goldsmith had a maker's mark; in the 16th Century the crown became a standard hall-mark.

Gold Stick, a colonel of one of the regiments of Life Guards or Horse Guards, who keeps the password and countersign, attends the King on State occasions, and acts as liaison officer between the King and Privy Council. His wand of office is a gold-headed ebony staff. Officers who are eligible hold the office in rotation for a month at a time.

Golf, a game played with long clubs and a small, hard, rubber-cored ball on specially laid-out grass links, in which the player who drives his ball into the greatest number of a succession of "holes" with the fewest strokes is the winner. A "course" consists of 18—or sometimes 9—holes. The game has been played since early times in Scotland, and was introduced into England by James I. The most celebrated golf club in the world is the Royal and Ancient Club at St. Andrews, which was founded in 1754; until 1834 it was known as the St. Andrew's Golf Club, its present title being assumed under the patronage of William IV. Growing rapidly in popularity after about 1850, golf is now played by women as well as men. The open championship was instituted by the Prestwick Golf Club in 1860, and is now played at Prestwick, Muirfield, St. Andrews, Hoylake, Sandwich and Deil.

Golgotha (i.e., place of a skull), the scene of Christ's crucifixion, identified with a small hill to the N. of Jerusalem.

Goliath, a Philistine giant of Gath, slain by David with pebbles from his sling (1 Sam. xvii.). Elsewhere however, we read that he was slain by Elihanan of Bethlehem (2 Sam. xxi.).

Gomersal, village of Yorkshire, England, land, in the W. Riding, now included in the urban district of Spenborough. Woollens are made and there are coal-mines in the vicinity. Pop. 3,800.

Gomorrah, a city on the plain of Jordan, destroyed, together with Sodom, by Jehovah with fire and brimstone rained from Heaven as a punishment for the immorality of the inhabitants. (Genesis xix.).

ceremonial occasions, especially in the German army. The legs are kept stiff and lifted high off the ground at each step. As the "Roman step," it has been adopted officially in Fascist Italy.

Goossens, Eugene, British composer and conductor. Born in London, of Belgian parentage, he studied music at Bruges, Liverpool and London, and later joined the Queen's Hall Orchestra; conducted the Beecham Opera Company in 1916, and was afterwards associated as conductor with many famous orchestras in England and America; his works include interesting chamber and orchestral music, as well as the operas *Judith* and *Don Juan*. (1893-).

Gopher, rodent, native to N. America, where it does much damage to crops. The pocket gopher of the Mississippi valley is so called on account of its pouched cheeks; the northern pocket gopher occurs W. of the Rockies; the gophers, which are members of the squirrel tribe, make burrows branching and intersecting in all directions. The "striped gopher" is another name for the chipmunk.

POCKET GOPHER

Gopher Turtle, a land turtle (*Gopherus polyphemus*) inhabiting the S. states of N. America, where it sometimes constitutes a nuisance owing to its burrowing propensities.

Gorbals, suburb of Glasgow, lying S. of the Clyde; until 1846 a separate municipality; it includes Gorbals Cross, a poor and crowded part of the city.

Gordian Knot, a knot by which the pole of the chariot of Gordius, King of Phrygia, and which no one could untie except the man who was destined to be the conqueror of Asia; Alexander the Great, according to legend, cut it with his sword and marched on to conquest.

Gordianus, the name of three Roman Emperors, father, son and grandson. Marcus Antonius Gordianus, surnamed Africanus rose to be an edile, consul twice, and subsequently became proconsul of Africa; on the deposition of the Emperor Maximinus in 238, he was proclaimed emperor, his son (b. A.D. 192) being associated with him; grief at the death of his son, killed in battle, caused him to commit suicide a month later; he was a man of refined and generous nature. (A.D. 159-238). Marcus Antonius Gordianus, grandson of preceding, was early raised to the dignity of Caesar, and in 238, was proclaimed emperor; his most important achievement was driving back the Persians beyond the Euphrates; he was assassinated in 244 by his own soldiers. (224-244).

Gordius, a boor, the father of Midas King of Phrygia because he happened, in response to the decree of an oracle, to be the first to ride into Gordium during a particular assembly of the people; he rode into the city on a chariot, to which the yoke was attached by the Gordian Knot, and which he dedicated to Zeus.

Gordon, Adam Lindsay, Australian poet, born at Fayal, in the Azores; sent from Oxford in disgrace to Australia, he joined the mounted police, but relinquished the force on inheriting a fortune; published the poems *Sea Spray* and *Ashtaroth*, 1867, and three years later, *Bush Ballads and Galloping Rhymes*; died by his own hand. (1838-1870).

Gordon, General Charles George, British soldier, born at Woolwich; entered the Royal Engineers, served in the Crimean War (1854-1856), and afterwards in the Chinese War of 1860, and was instrumental in suppressing the Taiping Rebellion, his exploits in the East earning him the title of "Chinese" Gordon; he was British representative on the international Danube commission during 1871-1873, and next conducted an anti-slavery expedition into Central Africa; in 1877 he was appointed Governor-General of the Sudan and, after valuable services to Egypt, relinquished this post in 1879; in 1884 the British Government resolved to evacuate the Sudan, overrun by the forces of the Mahdi, and he was commissioned to superintend the operation; in February of that year he arrived at Khartoum, which by May was isolated by the Mahdists; before a relief expedition could arrive, Gordon and his companions had fallen. (1833-1885).

Gordon, Lord George, anti-Papal agitator, born in London, son of the Third Duke of Gordon; after some years in the navy, he entered Parliament in 1774, and soon made himself conspicuous by his indiscriminate attacks on both Whigs and Tories; in 1780, as a protest against the Catholic Relief Act, he fomented the anti-Catholic riots in London, in which 450 people were killed or wounded; was tried for high treason, but acquitted; eventually, after endeavouring to escape prosecution for two treasonable pamphlets, was imprisoned in Newgate, where he died, a convert to Judaism. (1751-1793).

Gordon Highlanders, a famous British regiment, formed in 1881 by uniting the 92nd Regiment with the 75th. The 92nd had been raised in 1794 by the Marquis of Huntly who later became the Fifth Duke of Gordon (1770-1836) and fought in the Peninsular War and at Waterloo. The 75th had been raised in 1787 by General Sir Ralph Abercromby, and served in India, S. Africa and Egypt.

Gore, Charles, English prelate; educated at Oxford; Vice-principal of the Theological College, Cuddesdon (1880-1883); joined the Oxford Movement and wrote several controversial works; edited *Lux Mundi*, 1890, which aroused much discussion by its modern attitude towards religion; Hampton lecturer, 1891; Bishop successively of Worcester (1902), Birmingham (1905) and Oxford (1911-1919); engaged in much humanitarian work. (1853-1932).

Görgei, Arthur, Hungarian soldier and patriot, born at Toporacz; entered the army in 1837, and on the outbreak of the Revolution in 1848 joined the revolutionists; crushed the Croats at Ozora and repeatedly defeated the Austrians under Windischgrätz; Russian assistance accorded to Austria, however, changed the fortune of war; Kossuth resigned, and Görgei became dictator; but hopeless of success, he immediately surrendered his army to the Russians; in 1851 he published a vindication of his action, and in 1885 was exonerated by his compatriots from the charges of treachery brought against him by Kossuth. (1818-1916).

Gorgons, three sisters, Medusa, Euryale and Stheno, with hissing serpents on their heads instead of hair. Medusa, the only one that was mortal, had the power of turning into stone any one who looked on her. See *Pegasus*.

Gorgonzola, town of Italy, in the province of Milan, 12 m. N.E. of the city of Milan. It is famed for its cheese, which is widely exported. Silk also is made. Pop. 5,000.

Gorhambury, seat of the Earls of Ashburnham, Verulam, in Hertfordshire, England, 2 m. W. of St. Albans. In the

grounds are the ruins of Francois Bacon's mansion.

Gorilla, the largest of the anthropoid apes, native to the equatorial forests of W. Africa. It stands 5½ ft. or so in height, with a weight of approximately 30 stone, and is covered with shaggy black hair; its strength is enormous, and it is very ferocious and dangerous when annoyed, being able to charge with amazing speed. Gorillas move about in small family herds, constructing temporary lodgings in the tree-tops or on the ground by trampling the undergrowth; they are mainly vegetable-feeders. The gorilla was first made known by Paul du Chailu in 1861, since when a second type has been discovered, native to high altitudes in the Belgian Congo.

GORILLA

Goring, village of Oxfordshire, England, 9 m. NW. of Reading, an angling and boating centre. It has a Norman church. Here Icknield Street crossed the Thames. Pop. 2,000. Another Goring is in Sussex, in the borough of Worthing.

Gorizia, town of Italy, on the Isonzo, 23 m. NW. of Trieste; its many old buildings include the castle, cathedral and archbishop's palace; until the World War in Austria-Hungary; it was captured by the Italians in 1916, but was lost in 1917 and recovered in 1918. Pop. 47,000.

Gorky, formerly called Nizhni-Novgorod, great city of the U.S.S.R., on the R. Volga at its junction with the Oka; famous for its great trading fairs; produces machinery of all kinds, chemicals, etc.; has a university, founded 1918. Pop. 450,000.

Gorky, Maxim, Russian author, whose real name was Alexei Maximovich Peshkov. He had little schooling, and indulged in various trades, tramping all over Russia; he published his first story in 1892, and soon achieved success by his realistic stories of lower-class life; his powerful drama *In the Depths* caused a sensation in 1903; was imprisoned in 1905 for political activities, and after the revolution acted as propagandist for the Soviet Government. (1868-1936).

Gorleston, seaside resort of Suffolk, England, forming a part of the borough of Great Yarmouth, on the southern side of the Yare.

Görlitz, a town in Prussian Silesia, on the Neisse; it has some fine old churches and other historical buildings, as well as a library, and an interesting museum; the neighbourhood is richly forested, the manufactures include textiles, machinery, rolling-stock, leather, tobacco and chemicals. Pop. 94,000.

Gorse, *Furze*, or *Whin*, a spiny shrub of the genus *Ulex*, order Leguminosae. The common Gorse (*U. europaeus*), a native of heaths and downs, flowers in spring and autumn, bearing bright yellow blossoms.

Gorsedd, a term used in Wales to denote the national assembly and congress of Bards, preliminary to the Eisteddfod. The ceremony is over 1,000 years old.

Gorst, Sir John Eldon, British lawyer and politician, born at Preston; Civil Commissioner, Upper Wai-kato,

GORSE

New Zealand, 1861-1868; barrister, 1865; Conservative M.P. (at intervals), 1865-1906; member of Lord Randolph Churchill's "Fourth Party"; Solicitor-General, 1885; Under-Secretary for India, 1886; Financial Secretary to Treasury, 1891; later became a Free-trader and separated from his party. (1835-1916).

Goschen, George Joachim, Viscount, British statesman, born in London of German extraction; entered Parliament as a Liberal in 1863; served in office under Lord John Russell and Gladstone, and in 1871 became First Lord of the Admiralty; was opposed to Home Rule, joined the Liberal Unionist party, and in 1886 became Chancellor of the Exchequer; in 1906 he retired and was made a peer, but returned in 1906 as a champion of Free Trade. (1831-1907).

Gosforth, urban district of Northumberland, England, 2 m. N. of Newcastle-on-Tyne. In Gosforth Park race-meetings are held. Pop. 18,000. Also a village of Cumberland, 12 m. SE. of Whitehaven, with a notable Viking cross. Pop. 800.

Goshawk, a European hawk formerly used in falconry. Dark greyish-brown on the back, and underneath white, barred with black, it has a blackish beak and a barred tail; feet and legs are yellow; it is a woodland bird, occasionally visiting the E. coast of England and Scotland during winter.

Goshen, a fertile district along a branch of the delta of Lower Egypt; assigned by Pharaoh to the children of Israel when they came to sojourn in the land.

Gospels, the name by which the four accounts in the New Testament of the character, life and teaching of Christ are designated; the first three gospels—those of Matthew, Mark and Luke—are called "Synoptic," because they are summaries of the chief events in the life of Christ and, on the whole, cover very much the same ground, while the author of the fourth gospel, that of John, follows lines of his own; the former aim mainly at mere narrative, while the object of the latter is dogmatic, as well as, probably, to supply deficiencies in the former; moreover, the interest of John's account centres in the personality and divinity of Christ and that of the others in Christ's gospel.

Gosport, seaport and borough of Hampshire, shire, England, on the W. side of Portsmouth Harbour, opposite Portsmouth, with which it is connected by a ferry and floating bridge; its industrial establishments include iron-works, shipyards and the Royal Clarence Victualling Yard; on Hader Creek is the Royal Naval Hospital. Pop. 38,000.

Goss, Sir John, British organist and composer, born at Fareham; a pupil of Thomas Attwood, who in turn had been taught by Mozart, he became organist of St. Paul's in 1838 and was knighted on his retirement in 1872; wrote some excellent anthems and other church music, and glees. (1800-1880).

Gosse, Sir Edmund, English critic, essayist and poet, born in London, entered the British Museum in 1867 and in 1904 became Librarian to the House of Lords; lecturer in English literature at Cambridge (1884-1890); he wrote much lyric verse and also the autobiographical novel *Father and Son* (1907), but was chiefly known for his critical essays on English and Scandinavian literature and his lives of Gray, Swinburne, Congreve and others. (1849-1928).

Gotha, town of Germany, formerly the northern capital of the duchy of

Saxe-Coburg-Gotha, and now a town district of Thuringia; it is situated on the Leine Canal, 17 m. WSW. of Erfurt; the many old buildings include the former ducal palace, with a fine library, and 11th-Century town-hall, a museum of oriental and other antiquities, an observatory and several ancient churches; there are extensive manufactures of machinery, rubber, sausages, pottery, tobacco and other commodities; there is also a large trade in books and maps. Pop. 47,800.

Gotha, the name of a type of aeroplane used by the Germans during the World War. They were equipped with two engines, had a speed up to 80 m.p.h. and were used in air raids on Great Britain.

Gotha, *Almanach de*, an annual publication, first issued by Perthes in 1763, which gives genealogies of royal families and members of the nobility throughout Europe, in addition to much statistical and general information; there are two editions, one in French, one in German.

Gotham, a village of Nottinghamshire, England, associated with the legends and stories of the "Wise Men of Gotham" and the "Mad Men of Gotham." The reputation for folly may have arisen in the time of King John when villagers prevented the passage of the King over their meadows. When he sent to punish them they were found occupied in building a hedge round a cuckoo to encase it, trying to drown an eel; and so escaped punishment on the grounds that they were all mad. The legends were collected in the 16th Century, under the title *Merry Tales of Gotham* by A. B.

Gothenburg (*Göteborg*), seaport of Sweden, near the mouth of the R. Gotha, 284 m. SW. of Stockholm; the seaward terminus of the Göta Canal, it is a clean and modern built town, intersected by several canals; has a splendid harbour, and one of the finest botanical gardens in Europe; its industries include shipbuilding, sugar refining, dyeing, saw-milling and the manufacture of textiles, tobacco, leather, paper and beer. Its licensing system has become famous; the sale of liquor is in the hands of a company licensed by government; profits beyond a 5 per cent. dividend to the shareholders are handed to the municipality. Pop. 258,000.

Gothic Architecture, a style of architecture

which was developed in N. Europe out of the Romanesque style in the latter part of the 12th Century and prevailed until the 15th Century or later. Most of the ancient churches, cathedrals and public buildings of Europe are in this style, which, among other characteristics, is distinguished by the predominance of vertical lines, the use of pointed arches, clustered columns, buttresses and large decorated windows, and by stone-carving of the utmost richness, often in fanciful or grotesque designs.

Goths, a tribe of Teutons who invaded the Roman Empire from the E. and NE. from as early as the 3rd Century, and though they were beaten back by successive emperors eventually broke it up; portions of this great nation, who absorbed lesser tribes, overran France, Spain, Germany and Italy as Ostrogoths (East Goths) and Visigoths (West Goths), establishing powerful kingdoms that lasted until the 6th and 8th Centuries.

Göttingen, town of Germany, in the Prussian province of Hanover, situated in the valley of the Leine, 87 m. E. of the town of Hanover; it is chiefly note-

worthy on account of its university, founded in 1734, with a library of 500,000 vols. and 5,000 MSS.; the town-hall dates from the 14th Century; textiles, chemicals and scientific instruments are manufactured, and there is a big book-trade. Pop. 41,000.

Gottland, an island of Sweden, in the Baltic, 44 m. E. of the mainland; area 1,220 sq. m.; with other islands it forms the province of Gottland; agriculture, fishing and shipping are the main industries; timber, marble, stone and lime are exported; Visby is the chief town. Pop. 58,000.

Gouda, town of the Netherlands, in the province of S. Holland, 11 m. NE. of Rotterdam, with a shipping trade and an important market. It is celebrated for its cheeses. Pop. 31,600.

Gough, Sir Hubert, British soldier. Joining the Lancers in 1889, he served in the Tirah expedition of 1897, and in the Boer War. In 1914 he resigned his commission rather than lead his troops against the Ulster volunteers, but on the outbreak of the World War he went to France in command of the 3rd Cavalry Brigade. In 1916 he commanded the 5th Army in the Battle of the Somme, but was recalled in 1918 owing to the reverses suffered by his troops during the German spring offensive. He was knighted in 1916. In *The Fifth Army*, 1931, he vindicated his conduct of affairs in 1918, and this vindication was subsequently endorsed by Mr. D. Lloyd George, who, as Premier, had been instrumental in Gen. Gough's recall. (1870-).

Gough, Hugh Gough, Viscount, British soldier, born at Woodstown, Co. Limerick; served at the Cape and in the W. Indies, and fought with distinction in the Peninsular Wars; as Major-General, he took part in the Indian campaign of 1827, and in 1840 commanded the forces in China; as Commander-in-Chief of the Indian army (1843-1849) he crushed the Sikhs at Gujrat, which resulted in the annexation of the Punjab. (1779-1869).

Goulburn, city of New South Wales, Australia, 134 m. SW. of Sydney, the see of an Anglican and a Roman Catholic bishop. Tanning, brewing, flour-milling and boat-building are carried on. Pop. 15,000.

Gould, Gerald, British poet and critic, educated at Norwich and Magdalen College, Oxford; from 1915 leader-writer and associate editor of the *Daily Herald*; among his works were *The English Novel of To-day* (1924), *Beauty the Pilgrim* (1927) and *The Future of Laughter* (1929). (1885-1937).

Gould, Jay, American financier, born at Roxbury, New York; was successively a surveyor, a railway manager and owner and a New York broker; as President, 1868-1872, of the Erie Railroad, introduced into the company "Boss" Tweed and other rascals, who unscrupulously enriched themselves; controlled Union Pacific, 1873-1883; made about 25 million dollars. (1836-1892).

Gounod, Charles François, French composer, born in Paris; having won the Prix de Rome at the Paris Conservatoire, he was enabled to continue his studies at Rome, where he devoted himself chiefly to the composition of religious music; on his return to France he composed several indifferent operas and other music; in 1859 his opera *Faust* met with immediate success, and his popularity was sustained by *Romeo and Juliet*, 1867; other operas followed, as well as church music, among which the most notable were the oratorios *The Redemption* 1882 and *Mors et Vita*, 1885. (1818-1893).

Gouraud, Henry Joseph Etienne, French general, born in Paris; commissioned to the infantry in 1890, he

GOTHIC ARCH

in Senegal and assisted Lyautey in conquest of Morocco; in World War he commanded a division at Argonne, and later an army corps in the Dardanelles expedition; afterwards commanded 4th Army in Champagne; High Commissioner in Syria, 1919-1923; appointed military Governor of Paris, 1924. (1867-)

Gourd, a fruit obtained from plants of the family Cucurbitaceae, which includes the pumpkin, squash, cucumber, etc. Some species have puerile qualities. The Common, or Pumpkin, Gourd is egg-shaped and sometimes weighs 70 lb., but the largest species, the Great Gourd, attains as much as 200 lb. in weight. See also Calabash.

Gourock, burgh and seaside resort of the Renfrewshire, Scotland, on the S. shore of the Firth of Clyde, about 3 m. W. of Greenock; it has a shipping trade, and is a yachting centre. Pop. 8,800.

Gout, an inflammatory disease of the joints arising from a morbid condition of the system, and generally preceded by some digestive disorder. It is often hereditary. The symptoms begin in the small joints, especially the great toe, which becomes shiny, red, swollen and very tender. Hot fomentations will relieve the pain, and a strict diet, containing a minimum of nitrogenous foods, should be adopted. The action of the kidneys, often a contributory agent, must be regulated by the drinking of barley water, and alcohol should be avoided. The disease rarely occurs before middle age.

Govan, a former burgh of Lanarkshire, Clyde, since 1912 a suburb of Glasgow, with which it is connected by railway and electric tramways; the chief industries are engineering and shipbuilding. Elder Park is situated here. Its pop. prior to its incorporation in Glasgow was over 90,000.

Government, a term which refers to the business of government; to the persons who govern and to the form of government. Forms of government were classified by Aristotle into monarchical, aristocratic and democratic; the first where government was entirely in the hands of the sovereign, the second where control was vested in a class which by birth and property were considered to be the "ruling class," and the third where the people had a choice of government—according to their wishes as revealed by popular election.

In modern Western politics monarchical government has disappeared. Where public demand has succeeded in limiting the legal powers of a government, the term constitutional government is used. Most countries to-day have this form, though there are various methods of applying it. The British Government, together with that of Belgium, France, the U.S.A. and the British Dominions, are examples of democratic government defined somewhat idealistically by President Lincoln as "government of the people, by the people, for the people." Its machinery is usually that of a cabinet of ministers—answerable to a popular chamber, such as the House of Commons, which is in turn dependent upon the approval of the electorate.

The most recent change in modern forms of government is the emergence of dictatorships in certain European countries. In Russia government is pyramidal, the apex being the Soviet Union Party Congress and the base being the village Soviets, composed of peasants or industrial workers. In theory communism was intended, but the motive force of the government became concentrated in the hands of Stalin, the chief of the Communist Party, whose power is absolute. In Italy and Germany a corporate state (see Fascism) has emerged where individual freedom as implied

in a democracy is subordinated to the will of a dictator, whose grand council or Parliament is merely an acquiescent body. Opposition and criticism are controlled either by force or by the psychological effect of mass suggestion. It is the antithesis of democracy, and depends for its success upon the dynamic personality of its leader. Such States, where the individual is a mere unit in the State machine, are called totalitarian.

The functions of government are legislative, judicial and administrative. The first is concerned with the making and applying of laws, the second with the administration of justice, and the third with the work of conducting the affairs of the country, its finances, supervision of local government, education, etc. Such work is performed by the Civil Service under the direction and control of the various departmental ministers.

Governor, the leading executive officer of a State or colony. In British colonies he is appointed by the King. In Canada, Australia and S. Africa his status is increased to that of Governor-General. There is, however, a great difference between the powers of a Governor and those of a Governor-General: the Governor of a Colony exercises almost autocratic powers both in the executive and legislative spheres; and the Governor of a constituent part of a Dominion, as, e.g., of an Australian State, is also vested with wide constitutional powers; but a Governor-General of a Dominion is merely the representative of the Crown, holding essentially the same position in regard to public administration in the Dominion as is held by the King in Great Britain and he is not in any sense the agent or representative of the British Government. In the U.S.A. each State is administered by a Governor, who is appointed by election and whose term of office ranges from two to four years.

Gow, Neil, a famous Scottish fiddler, born in Inver, near Dunkeld, of lowly origin; during his long life he enjoyed a wide popularity amongst the Scottish nobility; Raeburn painted his portrait on several occasions; he composed over a hundred strathspeys, lamentations, etc., giving a fresh impulse and character to Scottish music. (1727-1807). His son Nathaniel (1768-1831) was the composer of, among other songs, the popular *Callie Herring*.

Gowbarrow Park, an estate of Cumberland, England, N. of Ulswater, on the slopes of Gowbarrow Fell. The property of the National Trust, it contains the beautiful waterfall of Alra Force.

Gower (Welsh, Gwyr), peninsula of Glamorganshire, Wales, between Burry Inlet and Swansea Bay, and containing Swansea and Oystermouth. It was conquered by the Normans, who settled here, and later inhabited by Flemings, whose descendants are still found.

Gower, John, English poet, contemporary of Chaucer; his chief works are *Speculum Medietatis* (the Thinker's Mirror) written in French; *Vox Clamantis* (the Voice of One Crying), in Latin, an allegorical, moralising poem suggested by the Wat Tyler insurrection, 1381; and *Confessio Amantis* (Confession of a Lover), in English, illustrated by a profusion of tales; his tomb is in St. Saviour's, Southwark. (c. 1325-1408).

Gowrie Conspiracy, a mysterious episode in the reign of James VI. of Scotland; according to the account of the King himself, Alexander, Master of Ruthven, and his brother, the Earl of Gowrie, enticed the King to Gowrie House in Perth on Aug. 5, 1600, for the purpose of murdering or kidnapping him; in the scuffle Ruthven and Gowrie perished,

Historians have failed to trace any motive inordinating the brothers, while several good reasons have been brought to light why the King might have wished to get rid of them.

Goya y Lucientes, *Francisco*, Spanish painter and etcher; at 16 entered studio of José Luzán Martínez; as a result of his dissolute life, he had to flee to Madrid; thence wandered to the coast, and travelled to Italy. Returned to Madrid, 1775. His portraits include those of many royal and distinguished sitters including the Duke of Wellington. His realistic etchings, "The Miseries of War," 1808, were inspired by the excesses of the French armies in the Peninsula, while the satirical "Caprices," 1797, and "Proverbs," 1805, were merciless reflections on contemporary society. The "Tauromaquia" series, 1815, have immortalised the bull-fight. (1746-1828).

Gozo, an island in the Mediterranean, which, together with Malta and Comino, forms a British crown colony; it lies 4 m. NW. of Malta, and has an area of 26 sq. m.; there are many Roman and other ancient remains; Victoria, formerly known as Rabato, is the chief town. Pop. 22,000.

Gracchus, *Caelus Sempronius*, Roman tribune and reformer, brother of the following, upon whose death he devoted himself to carrying out his measures; was chosen tribune in 123 B.C., and again in 122; his measures of reform were opposed and undone by the Senate, and he himself was declared a public enemy; upon the defeat of his party in a pitched battle in the Forum, he induced his slave to put him to death. (153-121 B.C.).

Gracchus, *Tiberius Sempronius*, Roman tribune and reformer, after distinguished service in the army, was made tribune in 133 B.C., and proposed a more equal distribution of the public land; the reform met with violent opposition from the aristocratic faction and Gracchus was killed in a riot started by them, his body being thrown into the Tiber. (163-133 B.C.).

Grace, the term in Scripture for that which is the free gift of God, unmerited by man and of eternal benefit to him.

Grace, *Dr. William Gilbert*, English cricketer, born near Bristol; he played first-class cricket for 36 years, principally for Gloucestershire and England; at a time when wickets were in no way comparable with those of to-day he scored 51,000 runs with an average of 45 per innings, and in addition took 2,800 wickets at an average cost of 20 runs. In all he made 121 centuries, which remained a record till beaten by J. B. Hobbs in 1925. (1848-1915).

Graces, The, reckoned at number, but originally they appear to have been regarded as being, what they fundamentally are, *one*; were finally spoken of as *three*, and called Aglaia, Euphrosyne and Thalia; Thalia, the blooming one, or life in full bloom; Euphrosyne, the cheerful one, or life in the exuberance of joy and sympathy; and Aglaia, the shining one, or life in its effluence of sunny splendour and glory. They are three sisters, as such always inseparable, and in their inseparability alone are Graces.

Gradient, a term used to indicate the or railway from the horizontal. It naturally depends upon the character of the country, and is usually expressed as a proportion, thus a gradient of 1 in 70 means a rise or fall of 1 ft. to every 70 ft. horizontal distance.

Grading, the classifying of articles, according to quality, more particularly applied to textile goods, especially silk, in which the quality and weight of the raw material govern the sorting; also to foods of various kinds, such as milk, jams, etc. In some cases definitions of grading standards have been laid down by Act of Parliament.

Graeco-Turkish War (1921-1922). *Dissatis*: faction arising out of the post-war Treaty of Sèvres, which awarded Greece some former Turkish territory in Europe and the province of Aidin in Asia Minor, led to war in 1921 following on a refusal of the Greek Government to attend a conference of the powers to discuss the question. The Greek army under King Constantine was defeated on the Sakaria, and later Smyrna was attacked and sacked by the Turks. Peace was signed at Lausanne in 1923, all the Asiatic territory in dispute being restored to Turkey, and the Turko-Greek boundary being fixed as the R. Maritsa.

Grafting, in gardening, the act of inserting a budding sprig of one tree or plant into another, for the purpose of producing new varieties of the plant or to increase fertility. There are many methods, the most common being tongue-grafting, in which an incision is made in the stock plant and a budding shoot, or scion, inserted into the cut. The scion must be cut in a wedge. The join is then bound up with bast or twine and covered with clay.

Grafton, city and river-port of New South Wales, Australia, 350 m. from Sydney, on the Clarence R., the centre of an agricultural district. Pop. 9,400.

Grafton, *Augustus Henry Fitzroy, Duke*, of English statesman in the reign of George III.; held various offices of State under Rockingham, Chatham and North; was bitterly assailed in the famous *Junius Letters*. (1735-1811).

Graham, *John, Viscount Dundee*. See *Claverhouse*.

Graham, *Stephen*, English writer, especially on Russia, whither, giving up the civil service, he went in early life to tramp. His best-known books are *Undiscovered Russia* and *A Private in the Guards*. He has also written on social conditions in England and the U.S.A. (1894-).

Graham, *William*, Labour politician, born at Peebles and educated at Edinburgh; became a civil servant, and in 1918 M.P. for Central Edinburgh. Financial Secretary to Treasury, 1924; President of Board of Trade, 1928-1931. (1887-1932).

Grahame-White, *Claude*, British aviator and engineer. He was the first British aeronaut to be given a pilot's certificate, won the Gordon-Bennett aeroplane race in 1910, served in the World War in the R.N.A.S., and also worked on the construction of aeroplanes. (1879-).

Graham Land, an icebound tract large and numerous smaller islands, included in the British crown colony of the Falkland Is. An expedition of research under the explorer, Rymill, went out to the area in 1935, and another expedition in 1936-1937.

Graham's Dyke, a Roman wall extending between the Firths of Forth and Clyde.

Grahamstown, town in the eastern Province, S. Africa, 25 m. from the sea and 106 m. NE. of Port Elizabeth; is beautifully situated 1,738 ft. above sea-level at the base of the Zuurberg Mts.; has an exceedingly salubrious climate, some fine buildings, and is the seat both of a Catholic and a Protestant bishop. Pop. 8,200.

Grail, The Holy, the cup or vessel, said stone, that was used by Christ at the Last Supper, and the one in which Joseph of Arimathea caught up the blood that flowed from His wounds on the Cross; it was brought to England by Joseph, it is alleged, but after a term disappeared; to recover it formed an object of quest to the Knights of the Round Table, in which Sir Galahad succeeded.

Grain, the smallest unit of English weight, originally the weight of a grain of wheat. There are 7,000 grains in the avoirdupois, and 5,760 in the troy, pound.

Grain, general name for such cereal foods as wheat, barley, oats, rye, millet and maize. Wheat, the most important food of man, is grown in all temperate climates; it has been cultivated since ancient times, and is largely produced in Canada, Australia, Argentina, the U.S.A., India and all parts of Europe. Oats are grown principally as a cattle food, but are largely eaten by man in northern countries. Barley is employed in the process of beer and spirit manufacture; maize, rye and millet are all used for bread-making in various countries.

Gramineae (*Graminaceae*), grasses; an order of endogenous plants consisting of evergreen herbs, some of which reach a great size and live many years. The rhizome is fibrous or bulbous, and the stem is closed at the joints and cylindrical. The flowers, which are green, are in little spikes, arranged in racemes. The order has a remote affinity to the Palmaceae or Palms. It occurs in most countries, and comprises some 250 genera and 4,500 species, constituting over five per cent. of the world's known plants. All the cereals, the bamboo, and the sugar-cane belong to this order.

Grammar, the science which studies the use of words and their combinations. It comprises a knowledge of words as phonetic symbols of thought, their employment in the expression of ideas, and the principles which regulate their use. It is philosophical when it explains the fact of language, comparative when it considers the grammar of different languages, historical when it examines the origin and growth of human speech, and practical when it arranges and systematises the special peculiarities of the language of any particular country. It is also divided into accidence, which studies the various forms of words, and syntax, which deals with their arrangement into phrases and sentences.

Gramme, the unit of weight in the metric system; a thousand grammes equal a kilogramme. The weight of one cubic centimetre of water at 4° Centigrade is one gramme.

Gramont, or Grammont, Philibert, Comte de, a celebrated French courtier in the age of Louis XIV.; he greatly distinguished himself in the army and at Court by his lively wit and gallant bearing, and soon established himself in the king's favour, but an intrigue with one of the royal mistresses brought about his exile from France; at the profligate Court of Charles II. of England he found a warm welcome and congenial surroundings; left memoirs which were mainly the work of his brother-in-law, Anthony Hamilton, and which give a marvelously witty and brilliant picture of the licentiousness and intrigue of the 17th-Century Court life. (1621-1707).

Gramophone, an instrument for recording and reproducing recorded sound, especially music; the invention of E. Berliner towards the end of the 19th Century, though Edison who made the first talking machine, called the phonograph, in 1877 had made records on flat tin discs before this. In the early gramophone the record was made

on a viscous ~~coated~~ zinc plate. The stylus, or needle, laid bare the zinc, which was then etched with acid, and from this a copper matrix was made from which a number of records were taken on a shellac-compound disc.

In many recent models the sound-box, tone-arm and horn have been replaced by an electro-magnetic system of reproduction with valve amplification as in wireless. The word "gramophone" is a protected trade name, and the industry is a large one, owing its increasing popularity in recent years to the demand for records of dance-music, while electric-recording of music and speech has resulted in a greatly increased purity of reproduction.

Grampians, (1) a name somewhat loosely applied to the central and chief mountain system of Scotland, which stretches E. and W. right across the country, with many important offshoots running N. and S.; the principal heights are Ben Nevis (4,406 ft.), Ben Macduhl (4,296 ft.), Cairntoul (4,200 ft.); (2) A range of mountains in the W. of Victoria, Australia, highest elevation 5,600 ft.

Grampus, a large marine mammal related to the dolphin, and

found in Northern seas. The body is black with large white markings. It travels in shoals, and when fully grown attains a length of 25 ft. It preys upon the porpoise, the whale and its own kind.

GRAMPUS

Granada, the last of the ancient Moorish kingdoms to be conquered (1492) in Spain, in the SE. of Andalusia, fronting the Mediterranean, now divided into Granada, Almeria and Malaga; the modern province has an area of 4,928 sq. m. and a pop. of 674,000. Granada, the capital, is beautifully situated at the foot of the Sierra Nevada, on an eminence 2,245 ft. above sea-level, 140 m. SE. of Seville; the Jenil flows past it; has a large university, a cathedral and monastery; was founded by the Moors in the 8th Century, but has been largely rebuilt on modern principles. Pop. 125,000.

Granada, a commercial town in Nicaragua, Central America, on the NW. shore of Lake Nicaragua; the seat of a bishop. Pop. 20,000.

Granby, John Manners, Marquis of, an English general, eldest son of the Third Duke of Rutland; rose to be commander-in-chief of the British army in Germany during the Seven Years' War; distinguished himself at Warburg; in 1783, he was master-general of the ordnance, and in 1766 commander-in-chief of the army; was the victim of some of Junius's most scathing invectives. (1721-1770).

Grand, Sarah (real name, Frances Elizabeth McFall), English novelist; Mayoress of Bath, 1923 and 1925-1929. Wrote: *The Heavenly Twins* (1893); *The Beth Book* (1897). (1862-).

Grand Alliance, an alliance signed by England, Germany and the States-General to prevent the union of France and Spain.

Grand Bank, a great submarine elevation in the N. Atlantic, SE. of Newfoundland, a free fishing-ground (area 500,000 sq. m.) teeming with cod and other fish.

Grand Canal, (1) main waterway of Venice, from which branch the lesser canals; (2) Chinese canal between Hangchow and Tientsin (850 m.)

dating in part from about 500 B.C.; (3) Irish canal which connects Dublin with Ballinasloe.

Grand Canyon, spectacular gorge of the Colorado R. in Arizona, U.S.A. The greatest of a series of such canyons, it is 217 m. long, 3,000-6,000 ft. deep and 2-15 m. wide.

Grand Duke, title of the sovereign of Germany before the revolution of 1918 at the close of the World War. The title was also held by many members of the Russian Imperial family.

Grand Falls, a city of Newfoundland, on Exploits R., the falls of which provide power for large pulp and paper mills. Pop. 4,200.

Grand Fleet, a comprehensive term for Navy of the Home Fleet, Mediterranean Fleet and Reserve Fleet.

Grandi, Dino, Count, Italian statesman, trained for the law and after serving with distinction in the World War, took part in the Fascist march on Rome; has since been a member of the Chamber of Deputies, has held various offices and been Italian delegate on a number of occasions and became Italian ambassador to London in 1932. (1895-).

Grand Jury, a jury formerly appointed to decide whether there were grounds for an accusation to warrant a trial. The system was abolished in 1933.

Grand National, the most famous chase races, run at Aintree near Liverpool during March or April and initiated in 1839. The course is 4½ m. long, containing 30 jumps.

Grand Prix, race run annually in June at Longchamps, France. The stakes, the largest in Europe, are 250,000 francs. The course is of 1 m. 7 furlongs.

Grand Rapids, city of Michigan, U.S.A., with both Catholic and Protestant cathedrals. Its chief interests are the lumber industry, furniture and aircraft making and gypsum quarries. Pop. 169,000.

Grand Union Canal, part of the eastern portion of the canal system of Great Britain, connecting London via Northampton and Leicester to Nottingham and the R. Trent.

Grangemouth, a busy port in Stirlingshire, Scotland on the Forth, 3 m. NE. of Falkirk; exports ironware and coal; has excellent docks and does some shipbuilding. Pop. 11,800.

Grange-over-Sands, seaside resort of Lancashire, England, 9 m. E. of Ulverston. It has a wide, sandy beach and is within reach of the Lake District. Pop. 2,700.

Granicus, a river in Asia Minor, flowing from the slopes of Mount Ida and falling into the Sea of Marmora, where Alexander gained, 334 B.C., the first of the three victories which ended in the overthrow of the Persian Empire.

Granite, a common igneous rock, used for building and roadmaking. It solidified at great depths below the surface and is of coarse texture, consisting largely of quartz, feldspar and mica, the individual crystals of which can be distinguished. Granites are known as "acid rocks," i.e., they contain a relatively high percentage of silica; similar rocks with a smaller proportion are known as diorites, syenites and gabbros.

Grant, James, novelist, born in Edinburgh, joined the army as an ensign at 17, but after a few years resigned and adopted literature as his profession; *The Romance of War* (1848), his first book, was followed by over 60 others. (1822-1887).

Grant, Ulysses Simpson, American general and 18th President, born

at Mount Pleasant, Ohio; served in the Mexican War, and held several appointments in the army; retired to civil life in 1854, but on the outbreak of the Civil War he re-entered the army and fought on the side of the North with such success that in 1864 he was appointed General-in-Chief; he was eventually raised to the Presidency in 1868, and re-elected in 1872; on the expiry of this second term he made a tour round the world. He became sleeping partner in a business, was robbed, and restored by the U.S.A. to his rank of General. (1822-1885).

GENERAL GRANT

Grantchester, shire, England, on the Cam, 2½ m. SW. of Cambridge. Its mill was referred to by Chaucer, and in later days Rupert Brooke idealised it in his poems. Pop. 500.

Grantham, a market town in Lincolnshire, England, on the Witham, 25 m. SW. of Lincoln, with a fine 13th-Century church; in the grammar school Newton was educated, and in 1643 Cromwell won his first victory here; its industries embrace agricultural-implement making and malting. Pop. 19,700.

Grant Land, mere is., in the Arctic, NW. of Greenland. It is icebound and rises, in Mount Grant, to an altitude of 5,000 ft.

Granton, seaport of Midlothian, on the Edinburgh, 2½ m. NW. of Edinburgh. Pop. 2,000.

Grantown, market town and health resort of Moray, Scotland, on the R. Spey, amid fine pine and birch forests. Distilling is carried on. Pop. 1,600.

Granville, George, Leveson-Gower, second Earl, politician; entered Parliament as a Liberal in 1836, and became a supporter of Free Trade; in 1846 succeeded to the peerage, and in 1851 became Foreign Minister; four years later became leader of the Lords; figured in every Liberal cabinet till 1886, usually as Colonial or Foreign Secretary; in 1859 he failed to form a ministry of his own and in 1886 he retired from politics altogether after a few months as Colonial Secretary. (1815-1891).

Granville-Barker, Harley, actor and dramatist; born in London. First appeared in 1891 at Harrogate; at the Comedy Theatre in 1892, in *The Poet and the Puppets*. Appeared in Shaw plays from 1900. Wrote *The Marrying of Anne Leete*, 1902; *Waste*, 1907; *The Madras House*, 1910. (1877-).

Grape, the fruit of the vine, consisting of an oval berry varying in size. The outer skin is astringent and indigestible, and is green, yellow, reddish or purple. In its fresh state it is largely eaten as fruit. Dried grapes are eaten under the name of raisins or currents. The grape is chiefly grown for its juice, from which wine is produced by its process of distillation and fermentation. It is grown in Mediterranean lands, California, Australia, Bulgaria and S. Africa.

Grape Fruit, or Shaddoc, the fruit of the orange and lemon, and a product of Mediterranean climates. It grows in clusters, and at a height resembles bunches of grapes.

Grape Sugar. See Glucose.

Graphite, or **Black Lead**, a form of carbon found in Central Europe and Ceylon; used for "lead" pencils and as a polishing material.

Graptolites, fossils abundant in and restricted to paleozoic rocks; they were simple animals somewhat like a quill pen in shape, composed of a horny substance; in some forms the stems are branched; they are the type fossils of the Silurian strata.

Grasmere, a picturesque lake in Westmorland, England, near Windermere; about 1 m. long; the village of the same name close by is associated with Wordsworth and Hartley Coleridge.

as wheat, barley, maize and sugar-cane. Their structure is simple: a stem clothed with alternate leaves, with thin stalks. Farmers divide them into artificial grasses and natural grasses, the former being such as are cultivated for fodder—e.g., clover, and the latter true grasses. Pasture grasses vary in value. Certain kinds suit meadows and marshes, others upland fields and others bleak and sterile hills, where they furnish valuable food for sheep. The more important grass-lands of the world are the great wheat and pasture-lands of Canada, U.S.A., S. Africa, Australia, the Great European Plain and Manchuria.

Grasshopper, a winged insect of the order Orthoptera, of several species.

They are widely distributed, and feed on plants; insects and larvae. A chirping sound is made by the male by rubbing the wing-cases together, or against the legs.

GRASSHOPPER

Grass Snake, a non-venomous reptile common in parts of England and widely distributed throughout Europe; grey-brown in colour, with black spots, it is often mistaken for the viper (q.v.); it feeds mainly on frogs and fish.

Gratian, a celebrated canonist of the 12th Century, born in Chiusi, Tuscany; was a Benedictine monk at Bologna, and compiled the *Decretum Gratiani* between 1139 and 1143.

Gratianus, Augustus (Gratian), Roman emperor from 375 to 383, eldest son of Valentinian I., born in Pannonia; at 16, in conjunction with his four-year-old brother, Valentinian II., became ruler over the Western Empire, and three years later, by the death of his uncle Valens, also of the Eastern Empire, a year after which he summoned Theodosius to be his colleague. His reign is noted for the stern repression of the remains of the heathen worship. In 383, while endeavouring to combat the usurper Maximus, he was captured at Lyons and there put to death. (359-383).

Grating, an optical device consisting of a flat piece of glass on which are cut thin lines, at the rate of several thousand to the inch, which gives rise to a spectrum as the result of diffraction; used for the determination of the wave-length of light.

Grattan, Henry, Irish patriot and orator, born in Dublin, and by birth a Protestant; studied at Trinity College, called to the Irish Bar in 1772, and entered the Irish Parliament three years after, where he fought for the independence of that body; on the question of Irish Parliamentary reform he quarrelled with his compatriots, and continued his own efforts to Catholic emancipation;

in 1788 he withdrew from public life, but opposed the Union in 1800, devoting the rest of his life to the political emancipation of his Catholic fellow-subjects. (1746-1820).

Gravel, a term denoting rounded, water-worn fragments of stone, usually of quartz crystalline rock. The term is also applied to a complaint marked by the passage of grit in the urine. The disease is brought on by lack of exercise and excess of rich food. The drinking of water, plenty of exercise and a modified diet are the remedies.

Gravelines, a seaport and fishing town of France, in the dept. Nord, 12 m. from Dunkirk, the scene, in 1558, of a French defeat by English and Spaniards. Pop. 5,000.

Gravelotte, a village in Lorraine, 7 m. W. of Metz; was the scene of a German victory over the French in 1870.

Graves, Alfred Percival, Irish author and folk-song expert, born in Dublin; son of a Bishop of Limerick (1812-1899); educated at Trinity College; a civil servant and from 1876 to 1910 inspector of schools. Famous as author of *Father O'Flynn* and *To Return to All That*. Wrote a play, *The Absentee*, 1908. (1846-1931).

Graves, Robert Rankin, English author, son of Alfred Percival Graves (q.v.); educated at Charterhouse and St. John's Oxford; wrote *Goodbye to All That*, 1929, *I, Claudius*, 1934, etc. (1895-).

Gravesend, a thriving river-port and manufacturing town in Kent, England, on the Thames, opposite Tilbury Fort, 24 m. S.E. of London; the new town rises amid picturesque surroundings above the old town; it is the chief pilot station for the river; there is a busy trade in shipbuilding, iron-founding and brewing. Pop. 37,000.

Gravitation, the force of attraction between masses of matter; it varies directly as the product of the masses and inversely as the square of their distance apart—a fact which was discovered by Sir Isaac Newton (1642-1727). The gravitational pull upon falling bodies produces in them an acceleration of 981 cm. per sec. per sec., generally represented by the letter *g*. It is roughly equal to 32 ft. per sec. per sec., so that if a body is allowed to fall freely from rest, it has a velocity of 32 ft. per sec. at the end of the first second, 64 ft. per sec. at the end of the second second, 96 ft. per sec. at the end of the third second, and so on, and this is true whatever the weight of the body. Newton's law of gravitation has been somewhat modified in this century by Einstein.

Gray, Thomas, English poet, born in Cornhill, London; gave himself up to study of Greek literature, and produced in 1747 *Ode on a Distant Prospect of Eton College*, and in 1750 his well-known *Elegy written in a Country Churchyard*. These were followed by the *Pindaric Odes*, the *Progress of Poetry* and *The Bard*, which was finished in 1757. In 1760 he was presented by the Duke of Grafton with the professorship of Modern History at Cambridge, a sinecure office with £400 a year. (1716-1771).

Grayling, a fish of the family Salmonidae, found in British streams and ranging over N. and Central Europe. It is about 10 in. long, and feeds on flies and small molluscs.

GRAYLING

Grays, town in Essex, England, now part of Thurrock urban district, on the Thames, 3 m. N.W. of Tilbury, opposite Northfleet. Cement and bricks are made. Pop. (Thurrock urban dist.) c. 60,000.

Gray's Inn, one of the Inns of Court (q.v.) situated in Holborn, London, founded in the 14th Century; the gardens are said to have been laid out by Lord Chancellor Bacon in 1616.

Graz, capital of Styria, in Austria, picturesque situated on the Mur, 141 m. SW. of Vienna; its many old and interesting buildings include a cathedral (1462), four monasteries, and the Landhaus, an ancient ducal residence; there is a university; its industries include iron and steel works, sugar-refining, soap and candle factories. Pop. 153,000.

Great Barrier Reef. See **Barrier Reef**.

Great Bear Lake, the fourth largest lake of Canada, in the NW. Territories, discharging, by the Great Bear R., into the Mackenzie R. It is frozen for much of the year and abounds in fish. Area 11,200 sq. m.

Great Britain, a name used to include England, Wales and Scotland; it was first used to distinguish the island from Brittany or Little Britain, but appears officially for the first time only in the reign of James I., who was styled King of Great Britain. (For the history of the country before 1707 see **England**.)

The history of Great Britain begins properly with the Act of Union, 1707, which made England and Scotland a united nation, but the accession of George I. in 1714 is a convenient point from which to summarise it. During the reign of George I. Parliament increased its power greatly at the expense of the Crown, the King, unable to follow English speech, retiring from Cabinet meetings; Walpole became the country's first Prime Minister, from 1721-1742, a period with little to make it noteworthy.

In 1742 the War of the Austrian Succession began, and at the Battle of Dettingen, 1743, an English sovereign led troops in person for the last time. Eight years later came the Seven Years War, during which the elder Pitt, having become Prime Minister, shaped his policy in the European situation so as eventually to conquer India and America. With the accession of George III. came a struggle for personal rule, and in spite of Whig opposition he obtained it for a time. During his reign an attempt to tax the new American colonies led to the War of American Independence, ending in the victory of the American States.

Meanwhile changes in the economic world, known as the Industrial Revolution, saw the character of the country completely altered. Village crafts passed away with the coming of factories, the rapid development of road, rail and water transport began, and machines, such as Hargreaves's and Crompton's inventions, revolutionised the growing cotton industry. At the end of the French Revolution, 1789-1798, came the Napoleonic wars; Great Britain was involved in the great European struggle, and it was not until 1815 at Waterloo that the French Emperor was finally overthrown by Wellington and Blücher. In 1801 came the Union with Ireland and the birth of the United Kingdom.

In 1832 the great Reform Bill was passed, and the foundations of the modern British parliamentary franchise were laid during the ministry of Lord Grey; later came the reform of Poor Law and the first Factory Act. In 1837 Queen Victoria ascended the throne. Notable statesmen of her reign were Melbourne, Peel, Palmerston, Lord Russell, Gladstone and Disraeli.

During this period Great Britain became a Free Trade country. In 1854 the disastrous Crimean War took place. From 1867 until later in the century politics consisted chiefly of a duel between Gladstone and Disraeli, or, after the latter's death, Salisbury. In 1886

the first Irish Home Rule Bill was rejected; in 1889 the S. African War broke out, and was concluded in 1902. The growth of Imperialism dates from the latter part of the 19th Century. In 1901 Queen Victoria died, and was succeeded by Edward VII. His reign was notable for the establishment of the Anglo-French *entente cordiale*, the Union of S. Africa, the Balfour Education Act and Chamberlain's Tariff Reform campaign.

Old age pensions were inaugurated in 1908, and in 1912 National Health Insurance came into force. The rejection of the budget of 1911 led to the famous Parliament Bill which curtailed the powers of the House of Lords. In 1914 Great Britain became involved in the World War (see separate article). In 1918 the vote was for the first time given to women. Since the World War the history of Great Britain has been concerned with the economic problems arising out of the abnormal conditions resulting from it and the difficult question of foreign relations, while the great domestic problem of unemployment led to a campaign of reconstruction of economic life.

Free Trade was discontinued, and Protection brought into force to secure the economic unity of the British Empire. The death in 1936 of George V., who had succeeded Edward VII. in 1910, was followed by the accession of his son, Edward VIII., who at the end of the year abdicated in favour of his brother, the present King George VI.

Great Dane, a large dog of German origin, formerly known

as the boar-hound or German mastiff. The dog is courageous, easily trained and highly intelligent, being often employed in performing troupes. The colours are black, fawn, brindled and blue-grey. The breed is common in England, and was introduced into this country in 1870. Its height is on the average 34 in. and its weight varies from 120 to 180 lb.

GREAT DANE

Great Eastern, the name of the largest steamship of the day; was designed by Brunel and Scott Russell; laid down at Millwall in 1854, and launched in 1858, having cost £732,000; it did not prove a successful venture; was used for laying the Atlantic cables of 1862 and 1863 and others; and in the end was sold in 1888 for old iron.

Great Gable, a mountain peak of Cumberland, England, near Scafell, with an altitude of 2,950 ft.

Great Harry, a man-of-war built by Henry VII., the first of any size built in England.

Greathead, James Henry, British engineer, inventor of the Greathead shield used in the construction of the London tube railways and other tunnels. (1844-1896).

Great Lakes, a chain of five lakes in N. America, drained by the St. Lawrence R. In order of size and from W. to E. they are Lakes Superior, Michigan, Huron, Erie and Ontario. With a combined area of 98,500 sq. m., they are thought to contain about half the earth's fresh water. Lake Michigan lies wholly in U.S.A., the others between U.S.A. and Canada. Between Erie and Ontario are the famous Niagara Falls. Canals having been made to circumvent falls and rapids between the lakes, the whole chain is navigable except for the 5 months they are ice-bound. All are rich in fish. Fort William, Hamilton, Toronto and Kingston are the chief Canadian lake-ports;

in the U.S. are Duluth, Chicago, Milwaukee, Detroit, Cleveland, Erie and Buffalo. Around their shores are rich grainlands (S. of Superior and Huron); and dairy and mixed farming lands (Erie and Ontario).

Great Salt Lake, in N. of Utah, U.S.A., stretches upwards of 80 m. along the western base of the Wahsatch Mountains, about 4,200 ft. above the sea-level; it is from 20 to 32 m. broad, and very shallow; Antelope Island, 18 m. long, is the largest island; the coast is rugged and desolate; its clear waters, being many times as saline as the sea, hold no fish, and the surplus inflow is carried off by evaporation only.

Great Schism, the period in the history of the Papacy from 1378 to 1418, when two rival popes contended for the Papal chair, one reigning at Rome and one at Avignon in France.

Great Seal. Since the Union of England and Scotland all public acts of State have been sealed with one great seal of Great Britain, of which the Lord Chancellor is the Keeper. Acts relating to Northern Ireland only are sealed with the Great Seal of Northern Ireland.

Great Slave Lake, 300 m. long and 50 m. at its greatest breadth; lies within the Canadian NW Territory. The Great Slave R. enters it from the S., and the Mackenzie R. carries its overflow to the Arctic Ocean.

Great Western Railway,

English railway system covering the Western and South-Western Counties and S. Wales; the original line, from London to Bristol, opened 1841, was planned by Brunel; until 1892 it was a broad-gauge line. The extreme northerly point of the system is Birkenhead; it has extensive works at Swindon and Gloucester, and its London terminal station is Paddington.

Grebe, a genus of diving birds of the lakes and the sea. They swim and dive readily and feed on frogs, insects and fish. The two principal species found in Great Britain are the Crested and the Little Grebe. Others include the Eared Grebe, and the Horned Grebe.

Greece, a kingdom of Europe occupying the southern part of the peninsula which projects into the Mediterranean between the peninsula of Italy and Asia Minor, with numerous adjacent islands; it is made up of northern and southern sections connected by the narrow and canalised isthmus of Corinth, the Ionian Is. in the W. and the Cyclades and Sporades in the E., with Crete to the S.E.; it is a mountainous region, and many of the peaks, e.g., Olympus, Parnassus and Helicon—are rich in classical associations; the rivers are of no great size, and the lakes, though numerous, are inconsiderable.

In the valleys the soil is fertile, and agriculture is actively engaged in; and, favoured by a delightful climate, the vine, olive and other fruit-trees flourish; currants are the chief article of export, and textiles and cereals the principal imports; milling, dyeing, distilling and tanning are important industries; various minerals are found, and the marble from Paros is famed as the finest for statue carving. There is a considerable mercantile marine, and a busy shipping trade among the islands and along the deeply in-

dented coast, and also valuable coral and sponge fisheries. The bulk of the people belong to the Orthodox Eastern Church, but in Thessaly and Epirus there are about 125,000 Mohammedans; education is free and compulsory, but is badly administered, and a good deal of illiteracy exists. The glory of Greece lies in her past, in the imperishable monuments of her ancient literature and art.

Ancient Greece was divided into a number of independent states or territories, including, in northern Greece, Thessaly, Epirus, Bœotia, Ætolia, Acarnania, Attica; in the Peloponnesus Corinth, Argolis, Achæa, Elis, Messenia, Laconia (Sparta) and Arcadia. They were divided into three families, Ionian, Æolian and Dorian. The Ionians first developed science, literature and art. By 700 B.C. trade was flourishing, and colonies were founded by the Black Sea and in Italy, Thrace and Sicily. In the 6th Century B.C. Athens became a great city under Solon. In the 4th Century B.C. Darius, the Persian King, secured Thrace and Macedonia, but his expedition to conquer Greece was defeated at Marathon. A later venture by Xerxes, Darius's successor, failed in spite of the fall of Thermopylae.

The strength of Athens grew under Pericles into a powerful confederacy, but finally fell in 405 B.C. after a long war with Sparta, the Peloponnesian War. Sparta now took over the Athenian Empire, but her power ended in 362 B.C. at the Battle of Mantinea, in which the Thebans were victorious. Absorption into the Macedonian Empire under Alexander the Great followed. His empire extended to the Hindu-Kush and the Indus, and he attempted to bring the entire East under Greek power, but his early death left the work incomplete, and on his death the empire was divided among his generals. In 193 B.C. began the Roman subjugation of the Greek Empire and by 146 B.C. Corinth was destroyed and Greek independence disappeared, with the defeat of the Achæan league, Achæa becoming a Roman province.

In the 3rd Century A.D. the country was overrun by the Vandals and Goths, but afterwards became part of the Byzantine Empire (q.v.) till A.D. 1204. By 1460 the greater part of Greece was conquered by the Turks. Turkish domination lasted until 1821, when the Greek War of Independence was successfully fought, after the aid of England, Russia and France had been sought. The Balkan War of 1912 gave Greece Macedonia, Epirus and some islands, and after the World War she was ceded nearly all Turkey in Europe.

The government was a limited monarchy, but in 1924 a Republic was established after further fighting with Turkey, in which Greece lost part of the territory originally awarded to her after the World War. In 1935 the monarchy was restored. The Greek language has its own alphabet, and in classical times was represented by several varying dialects, including Ionian, Doric, Æolic and Attic. The literature of ancient Greece is one of the most valued legacies of the classical world; among its most famous names are Homer, Hesiod, Herodotus, Thucydides, Plato, Xenophon, Demosthenes, Æschylus, Sophocles, Euripides, Pindar, Aristophanes and Sappho. The modern language (sometimes called Romaic) is a development of the ancient tongue.

Greek, Eastern, or Orthodox Church, that section of the Church which separated from the Roman or Western in 1054, after disputes as to the Roman primacy,

GREAT CRESTED GREBE

GREEK SOLDIER

the Procession of the Holy Ghost, and other points of doctrine; it acknowledges the authority of only the first seven general councils; it dissents from the *Allogue* doctrine (q.v.), administers the Eucharist in both kinds to the laity, and is zealously conservative of the orthodoxy of the Church.

Greek Fire, a combustible of highly inflammable quality, but of uncertain composition, used by the Greeks of the Byzantine Empire against the Saracens; a source of great terror to those who were assailed by it, as it was difficult to extinguish, so difficult that it was said to burn under water.

Greeley, Horace, American journalist and politician, born in Amherst, New Hampshire, U.S.A., the son of a poor farmer; trained as a printer; in 1833 started the *Morning Post*, and shortly afterwards the *Log Cabin*, a political paper; founded the *New York Tribune* in 1841, merging his former papers in the *Weekly Tribune*. Till his death he advocated temperance, anti-slavery and socialist and protectionist principles in these journals. In 1848 he entered Congress and became a prominent member of the Republican party; in 1872 he unsuccessfully opposed Grant for the Presidency. His works include *The American Conflict*, *Recollections*, *Essays*, etc. (1811-1872).

Green, John Richard, historian, born in Oxford; took orders, and was for a time a beneficed clergyman, but wrote meanwhile articles on historical subjects, and in 1874 published his *Short History of the English People*, which was accepted as one of the ablest summaries of the history of the country; later published a larger history in 4 volumes; this was followed by *The Making of England* and *The Conquest of England*, the latter being published after his decease. (1837-1883).

Green, Thomas Hill, philosopher, born in Yorkshire, studied at Balliol College, Oxford; was elected a Fellow and became eventually Whyte professor of Moral Philosophy; his philosophy had a Kantian root, developed to a certain extent on the lines of Hegel, which, however, he applied less in a speculative than in a spiritual interest, though he was not slow, on the ground of it, to assail the evolution theory of Herbert Spencer and G. H. Lewes. (1836-1882).

Greenaway, Kate, artist and designer, famous for her books for children, distinguished by quaintness and charm. *A Birthday Book for Children* (1880) was followed by several others, the originality of which won them immediate popularity; she became a member of the Institute of Painters in Water-colours. (1846-1901).

Greenbacks, a name given to the inconspicuous, veritable paper currency issued in the United States during the Civil War, so called from the colour of the ink on the back of the notes, bonds, etc. The name has since been popularly applied to the paper money of the States. The notes were made convertible in 1879.

Green Cloth, a board of, a body which of the British Royal Household; it takes its name from the covering of a table at which it sits. It was formerly charged with the duty, of punishing offences committed within the precincts of the Court.

Greene, Harry Plunket, British singer, born in Dublin, studied at Dublin, Stuttgart, Florence and London and appeared with success in Europe and America. (1865-1936).

Greene, Robert, dramatist and contemporary of Shakespeare; born in Norwich, came to London at 20 to begin writing plays and pamphlets; among the former were *Orlando Furioso* and *George a' Green*. (c. 1560-1592).

Greenfinch, one of the commonest (Fringillidae) family, yellowish-green in colour and frequenting gardens, orchards and hedges. It feeds on seeds.

Greenfly, Aphidae.

Greengage,

a small, green-coloured plum, cultivated as a desert fruit and for preserve-making.

Greenheart,

a S. American tree of the family Lauraceae, grown in British Guiana for its timber, which is dense and heavy, and was much used at one time in shipbuilding. Its strength makes it valuable for fishing-rods. The seeds contain an alkaloid resembling quinine.

Greenland, an enormous island, a possession of Denmark, lying mostly within the Arctic circle to the N.E. of N. America, from which it is separated by Davis Strait and Baffin Bay; the area is about 735,000 sq. m.; the land mainly lies submerged beneath a vast plain of ice, pierced here and there by mountain tops; only on the S. coast, during the short summer, is there any appearance of vegetation. There is a great variety of birds, and the animals include the wolf, fox, bear, reindeer, musk ox, and Arctic hare, while whales, seals and many kinds of fish are found. The inhabitants are chiefly Esquimaux, but there are some Danish settlements, begun in 1721, and the trade is a Danish monopoly. The country was known in early times to the Scandinavians, and was rediscovered by John Davis in 1585.

Greenock, a flourishing seaport of Renfrewshire, Scotland, on the Firth of Clyde, 22 m. W. of Glasgow; from the hill slopes behind the shore it commands a splendid view of the river and Highlands beyond; the west end is handsomely laid out, and contains some fine buildings, including the Watt Institute, with a large public library; the harbourage is excellent and favours a large foreign shipping trade; the staple industries are shipbuilding, engineering, spinning, and sugar-refining; coal and iron are the chief exports, and sugar and timber the largest imports. The churchyard of the North parish church is the resting place of Burns' Highland Mary. Pop. 79,000.

Greensand, a term in geology for a cretaceous rock series whose green colour is due to the presence of glauconite. There are two main divisions separated by the gault, a series of beds of clay and marl—the upper or Solerian, and the lower or Vectian.

Greenshank, a wading bird of northern latitudes resembling the

Sandpiper and found in Scotland in summer on its migratory passages, ashy-brown in colour with white edges to the feathers. The legs are green.

Greenstone,

a term in geology relating to a series of basic igneous rocks, of variable composition, green in colour and including basalt, gabbro, diabase, diorite, etc. They occur among intrusive and eruptive rocks and have a granite-like structure.

GREENFINCH

GREENSHANK

Greenwich, a metropolitan borough of London, on the Thames, 1 m. SE. of London Bridge; its active industries embrace engineering, telegraph works, chemical works, etc.; the National Maritime Museum and Royal Naval College are here; the Royal Observatory, founded by Charles II. in 1675, occupies a commanding site within the Park; it is from this point that degrees of longitude with us are reckoned. Pop. 97,000.

Greenwich Hospital, founded by Queen Mary II. after designs by Christopher Wren, was from 1705 till 1869 an asylum for disabled sailors; since then the funds have been distributed in pensions and used for the upkeep of a school for seamen's children; the building is now the Royal Naval College.

Greenwood, Frederick, publicist and journalist; editor of now defunct London evening papers, the *Pall Mall Gazette* and *St. James's Gazette*, author of *Life of Napoleon III.*, *Lower's Lesson* and *Dreams*; was instrumental in the purchase by the British Government of the Khedive's shares in the Suez Canal in 1875. (1836-1909).

Greenwood, Hamar, first Baron, British politician. Born in Canada, he entered the British House of Commons in 1906 as a Liberal. In the World War he served in France, and in 1919 became Under-Secretary at the Home Office; in 1920 he became Irish Secretary, and was in that post during the most troubled period of Irish history; he was raised to the peerage in 1929. (1870-).

Gregorian Calendar, the calendar introduced by Pope Gregory XIII. in 1582; it corrected the Julian calendar, which allowed the year 11 minutes 10 seconds too much; it was gradually adopted in all European countries, in England in 1752, eleven days being omitted from that year to regularise the Calendar.

Gregorian Chant, a form of plain-song, the traditional unaccented and unmeasured liturgical music of the Catholic Church, so called from Pope St. Gregory I., who is said to have composed many of its melodies. It is now often also used in the Church of England for psalms, hymns, canticles, and the music of the Eucharist. At the end of the 19th Century it was restored and purified, largely by the efforts of the Benedictines of Solesmes Abbey, France.

Gregory, the name of 16 Popes: G. I., 604; G. II., St., Pope from 715 to 731; G. III., Pope from 731 to 741; G. IV., Pope from 827 to 844; G. V., Pope from 996 to 997; G. VI., Pope from 1045 to 1049; G. VII., St., Pope from 1073 to 1085; G. VIII., Pope in 1187; G. IX., Pope from 1227 to 1241; G. X., Pope from 1271 to 1276; G. XI., Pope from 1370 to 1378; G. XII., Pope from 1406 to 1415; G. XIII., Pope from 1572 to 1585; G. XIV., Pope from 1590 to 1591; G. XV., Pope from 1621 to 1623; G. XVI., Pope from 1831 to 1846. Of these the following are worthy of note:—

Gregory I., the Great, St., born in Rome, son of a senator; made praetor of Rome; relinquished the office and became a monk; devoted himself to the regulation of church worship (revising, among other things, the liturgy of the Mass), to the reformation of the monks and clergy, and to the propagation of the faith; saw some fair-haired British youths in the slave-market at Rome one day; on being told they were Angles, he said they should be Angels, and resolved from that day on the conversion of the nation to which they belonged, sending overseas for that purpose a body of monks under Augustine. (540-604).

Gregory II., St., born at Rome, became a Benedictine; is celebrated for his zeal in promoting the independence of the Church and the supremacy of the See of Rome, and for his defence of the use of images in worship. (d. 731).

Gregory III., born in Syria; was successor of Gregory II., and carried out the same policy to the territorial aggrandisement of the Holy See at a time when it might have been overborne by secular invasions. (d. 741).

Gregory VII., St., or Hildebrand, born in Tuscany, a most austere monk, he became sensible of the formidable evils tending to the corruption of the clergy, due to their dependence on the Emperor for investiture into their benefice, and he set himself to denounce the practice, to the extent of one day excommunicating certain bishops who had submitted to the royal claim and those who had invested them; his conduct roused the Emperor, Henry IV., who went the length of deposing him, upon which the Pope retaliated with a threat of excommunication; it ended in the final submission of Henry at Canossa (q.v.); the terms of submission imposed were intolerable, and Henry broke them, elected a Pope of his own, entered Rome, was crowned by him, and besieged Gregory in St. Angelo, from which the latter was delivered by Guiscard and enabled to retire to Salerno, where he died. 1085.

Gregory IX., Ugolino, born in Cambrania; had during his pontificate contests with the Emperor Barbarossa, whom he twice over excommunicated; was the personal friend of St. Francis of Assisi, whom he canonised; died (1241) at a very advanced age.

Gregory XIII., born in Bologna; was distinguished himself in the Council of Trent, and by his zeal against the Protestants; celebrated the St. Bartholomew Massacre by public thanksgivings in Rome, and reformed the calendar. (1502-1585).

Gregory XVI., born in Belluno; occupied the Papal chair at a time of great civil commotion, and had much to do to stem the revolutionary movements of the time; developed ultramontane notions, and paved the way for the hierarchical policy of his successor Pius IX. (1765-1846).

Gregory, Isabella Augusta, Lady, Irish playwright; married, 1881, Sir William Henry Gregory (d. 1892); in 1904 opened the Abbey Theatre, Dublin; established a national drama there. Rendered Irish sagas, also Molière, into the Irish dialect of English. Wrote many one-act plays, among them *The Workhouse Ward*, *The Gaol Gate*, *The White Cockade*, *Dave*. (1852-1932).

Gregory, James, inventor of the reflecting telescope, born in Aberdeen; after a three years' residence in Padua became professor of Mathematics at St. Andrews, from 1669 to 1674, when he was elected to the corresponding chair in Edinburgh; author of various mathematical treatises which display fine originality; he was struck blind whilst working at his telescope. (1638-1675).

Gregory, Nazianzen, St., Bishop of Constantinople, born in Cappadocia; studied in Athens, where he became the friend of St. Basil, and disputed with Julian, afterwards emperor; had been bishop of Nazianzus before he was raised by Theodosius to the bishopric of Constantinople; he was the champion of orthodoxy, a defender of the doctrine of the Trinity, and famed for his invectives against Julian; he has left writings that have made his name famous, besides letters, sermons and poems. Festival, May 9. (328-359).

Gregory of Nyssa, *St.*, one of the Greek Church, brother of *St. Basil*, and Bishop of Nyssa, in Cappadocia; he was distinguished for his zeal against the Arians, and was banished from his diocese at the instance of the Emperor Valens, who belonged to that sect, but returned to it after his death; he was an eminent theologian and a valiant defender of orthodoxy. Festival, March 9. (332-400).

Gregory of Tours, Bishop of Tours, French theologian and historian, born in Clermont; was the author of a *History of the Franks*, the earliest of French chronicles; his work contains a great number of valuable documents, though it is written in a barbarous style. (540-594).

Gregory Thaumaturgus, *St.*, a theologian of the Greek Church and a convert and disciple of Origen; became Bishop of Neo-Cæsarea in Pontus; was present at the Council of Antioch; numerous conversions from paganism are ascribed to him, as well as many miracles. Festival, November 17. (210-270).

Grenada, one of the most picturesque of the Windward Is., in the British West Indies, of volcanic origin; lies about 60 m. N. of Venezuela; the harbour of *St. George*, the capital, is the most sheltered anchorage in the island group; cocoa and spices are cultivated; it was ceded by France in 1783. Area 130 sq. m. Pop. 66,000.

Grenade, frequently called hand-bomb, a shell or hollow ball of iron charged with explosive and provided with a fuse, thrown from the parapet of a trench and effective at a distance of up to 30 yds. As soon as the fuse is consumed, generally about four seconds, the charge explodes and the metal ball bursts into fragments. Trench warfare during the World War saw a revival of grenade fighting, called "bombing," and the adoption of the Mills Hand-grenade. "Grenadier" formerly meant a soldier trained to throw hand-grenades.

MILLS BOMB

Grenadier Guards, the senior of the British army, formed in 1685, when Lord Wentworth's regiment was united with the Royal Guards raised by Colonel Russell for Charles II., and called the 1st Grenadier Guards. The regiment achieved distinction at Gibraltar, Blenheim, Waterloo and Sebastopol, and during the World War especially at the Battles of the Marne, Ypres, Hill 60, Neuve-Chapelle, Loos, Arras, Delville-Wood, Cambrai, etc.

Grenadines, a number of islands and islets of the Windward Is., British West Indies, some attached for administrative purposes to *St. Vincent*, others, including Carriacou, the largest and most populous, to *Grenada*.

Grenfell, Francis Wallace, Baron, Field-Marshal and Sirdar of the Egyptian army, born in London; distinguished himself in Zululand, Transvaal, Egyptian, and Nile expeditions (1885-1892), and commanded forces in Egypt (1897-1898). (1841-1925).

Grenfell, Sir Wilfrid Thomson, British missionary. He studied medicine at the London Hospital, and in 1892 went to Labrador, where he built hospitals and acted as medical missionary. During the World War he served in an American unit. (1865-).

Grenoble, a city of France, capital of the river Isère, 58 m. S.E. of Lyons; there are several fine old churches, and a university with a splendid library; the manufacture of kid gloves is the staple industry. Pop. 98,000.

Grenville, George, statesman, younger brother of Earl Temple; was called to the Bar in 1735, and six years later entered Parliament; held various offices of State, and in 1763 succeeded Bute as Prime Minister; his administration is noted for the prosecution of Wilkes (*q.v.*), and the passing of the American Stamp Act, a measure which precipitated the American Revolution. (1712-1770).

Grenville, Sir Richard, British seaman; already a knight, commanded the first expedition sent by Raleigh to colonise Virginia; took part in the defeat of the Armada, and in 1591, while commanding the *Revenge*, in Lord Howard's squadron, engaged single-handed the entire Spanish fleet off the Azores; after a desperate fight of about 18 hours, during which time four of the Spanish vessels were sunk, and upwards of 2,000 of their men slain or drowned, he surrendered, was carried wounded on board a Spanish ship in which he died; the fight is celebrated in Tennyson's ballad *The Revenge*. (1541-1591).

Grenville, William Wyndham, Lord, statesman; entered Parliament in 1782; in 1789 he was Speaker of the House of Commons, and a year later was raised to the peerage and made Home Secretary under Pitt; in 1791 he was Foreign Secretary; supported Catholic Emancipation, and the Abolition of the Slave-trade; he was Premier from 1806 to 1807; later, he supported Canning and Earl Grey. (1759-1834).

Gresham, Sir Thomas, founder of the Royal Exchange, born in London; son of Sir Richard Gresham, wealthy mercer, who was knighted and made Lord Mayor in Henry VIII.'s reign; after studying at Cambridge entered the Mercers' Company, and in 1552, as "King's agent" in Antwerp, negotiated loans with the Flemish merchants; in 1559 appointed ambassador in Antwerp; between 1566 and 1571 he carried through his project of erecting an Exchange, and his munificence was further displayed in the founding of a college and almshouses. (1519-1579).

Gresham College, college founded by Sir Thomas Gresham in 1575, and managed by the Mercers' Company, London, where lectures are delivered, twelve each year, by successive lecturers on physics, rhetoric, astronomy, law, geometry, music and divinity, to form part of the teaching of University College.

Gretna Green, a village in Dumfriesshire, Scotland, just over the border from England, famous for its blacksmith's shop at which marriages are celebrated according to Scottish law.

Greuze, Jean Baptiste, a French painter, much esteemed for his portraits and exquisite *genre* pieces; he died in poverty. (1725-1805).

Greville, Charles Cavendish Fulke, celebrated for his *Memoirs*. After quitting Oxford he acted as private secretary to Earl Bathurst, and from 1821 to 1860 was Clerk of the Council in Ordinary; during his tenure of this office he enjoyed exceptional opportunities of meeting the public men of his time, and of studying the changing phases of political and Court life, of which he gives so lively a picture in his *Memoirs*. (1794-1865).

Grévy, François Paul Jules, third French President, born in Mont-sous-Vaudrey, Jura; after the '48 Revolution entered the Constituent Assembly, of which he

became Vice-President; his opposition to Louis Napoleon, and disapproval of his *coup d'état*, obliged him to retire; but in 1869 he again entered the political arena, and was four times chosen President of the National Assembly; in 1879 he was elected President of the Republic for seven years, and in 1886 was confirmed in his position for a similar period, but he resigned two years later. (1807-1891).

Grey, Charles, first Earl, soldier; as Sir Charles Grey of Howick he distinguished himself in the wars with the American Colonies and the French Republic, in 1804 was rewarded with a Barony, and two years later was made Earl Grey. (1728-1807).

Grey, Charles, second Earl, denounced union with Ireland; became leader of the House of Commons in 1806; carried Wilberforce's Act for the Abolition of the African Slave-trade; succeeded to the earldom in 1807, and denounced the Bill against Queen Caroline; becoming Prime Minister in 1830, he was defeated, and resigned twice over the Reform Bill; returning to power in 1832, with permission to make as many peers as might be needed, he succeeded at last in passing the Bill; was head of a powerful party in the reformed Parliament; resigned, 1834, over Irish troubles. (1764-1845).

Grey, Sir George, colonial governor and statesman, born in Lisburn, Ireland; while a captain in the army he explored Central Australia and the Swan R. district in 1837 and 1838; in 1841, having retired from the army, he became Governor of South Australia; in 1846 was Governor of New Zealand, and in 1854 Governor and Commander-in-Chief of the Cape of Good Hope, where he conciliated the Kaffirs; from 1861 to 1867 he was at his former post in New Zealand, where he pacified the Maoris; in 1877-1884 was Premier of New Zealand; he wrote *Journals of Discovery in Australia, Polynesian Mythology*, and made a valuable collection of Polynesian proverbs. (1812-1898).

Grey, Lady Jane, the ill-fated "nine days' queen," born at Bradgate,

Leicestershire; was the daughter of the Duke of Suffolk and the great-granddaughter of Henry VII.; she was highly proficient in Greek, Latin, and modern languages; a plot entered into by Suffolk and the Duke of Northumberland, whose son Lady Jane had been forced to espouse at 15, brought about her proclamation as Queen in 1553; the attempted usurpation was crushed in ten days, and four months later Lady Jane and her husband were executed. (1537-1554).

LADY JANE GREY

the Franciscans (q.v.), from their grey habit.

Greyhound, a variety of dog remarkable for keenness of sight, and great speed, comprising many breeds, including the smooth-haired, the Irish greyhound, a powerful animal, formerly used in wolf-hunting, the borzoi, the Italian greyhound and a Highland breed, the only kind possessing any powers of scent. Greyhounds are bred mainly for racing and coursing.

Greyhound Racing, a sport similar to coursing, the dogs chasing an electric hare instead of a real one. It was introduced into England from America in 1926, and at once leapt into popularity; there are now race-tracks in nearly all the large British cities, the best known in London being at the White City, Harringay, Wembley and Wimbledon.

Grey of Fallodon, Edward, first politician. Entering Parliament in 1885 as a Liberal, he first took office in 1892, and in 1905 became Foreign Secretary, a position he held in 1914, when he strove hard to avert the World War. He resigned from the government with Asquith in 1916, when he received a peerage, and followed that leader politically throughout his career. Failing sight handicapped his later years. (1862-1933).

Greywethers, large blocks of sandstone, locally called sarsen stone, found in Wiltshire and other southern counties, as at Stonehenge; so called from their resemblance to sheep.

Grid, name given to one of the electrodes of the triode valve, used in wireless apparatus. See Valve.

Grid System, name for the network of conductors of electrical power established over the whole country to connect the electrical generating stations and enable the transfer of power at high voltages from one district to another. The power from generating-stations is sold at pre-arranged prices to a central board, by whom it is re-sold to the various distributing companies. Power is transmitted at 132,000, 66,000 or 33,000 volts, and is reduced to lower voltages in the areas where it is to be used. Overhead transmission lines supported by pylons are used in open country, but in towns the insulated conductors are carried underground.

Grieg, Edvard, Norwegian composer, born in Bergen, of Scottish descent; received his first musical lessons from his mother, and at 15 went to Leipzig; in 1863 was at Copenhagen and then established himself as a teacher at Christiania, where he continued eight years and became intimate with Ibsen; subsequently received a government pension, and devoted himself to musical composition; his music, chiefly pianoforte pieces and songs, and the well-known orchestral suite *Peer Gynt*, achieved a wide popularity. (1843-1907).

Griffin, or **Griffon**, a chimerical fabulous animal, first depicted in the art of the ancient East and in Greece, generally as a cross between eagle and lion, with sometimes minor features from other animals, such as the cock, horse or fish; it is used as a charge in heraldry.

GRIFFIN

Griffith, Arthur, Irish

statesman, journalist, and one of the founders of Sinn Féin; was arrested in 1918 and chosen Vice-president of the Irish Republic while in prison; in 1921 replaced De Valera as President, being the chief Irish signatory of the treaty establishing the Irish Free State, after which he parted company with De Valera and the anti-treaty party, and became first President of the Dáil when that body was given legal status. (1867-1923).

Grimaldi, Joseph, a famous English dancing-master, born in London; was trained for the stage from his infancy, appearing on the boards when not yet two years old; his Memoirs were edited by Dickens, who describes him as "the genuine droll, the grimacing, sloping, irresistible clown." (1778-1837).

Grimm, Friedrich Melchior, Baron, a born in Ratibon; settled in Paris and became acquainted with Rousseau and the leading Encyclopédistes; on the breaking out of the Revolution he retired to the Court of Gotha and afterwards to that of Catherine II.

of Russia, who made him her minister at Hamburg; his correspondence abounds in piquant literary criticism. (1723-1807).

Grimm, Jacob Ludwig, German philologist, born in Hanau; librarian to Jerome Bonaparte, King of Westphalia, and afterwards to Göttingen University, where he was also a professor, devoting himself the while chiefly to studies in early German lore; afterwards with his brother Wilhelm settled in Berlin, and with him in 1812 produced the celebrated *Grimm's Fairy Tales*; also wrote on German grammar and mythology. (1785-1863).

Grimm, Wilhelm Karl, philologist, younger brother of the preceding, born in Hanau; was associated both in his appointments and work with his brother, the two being known as the Brothers Grimm; edited several old German poems, his principal work *Die Deutsche Heldensage*. (1786-1859).

Grimm's Law, J. L. Grimm, is a statement of certain consonant changes that are assumed to have taken place in the old Germanic language either at the time of the branching off of Germanic from the parent Indo-Germanic stock or subsequently. The changes took place in the remote past, and there are no literary records of it except in the comparative differences between languages (modern and classical) which otherwise have such similarity as to justify the assumption of a common origin. According to Grimm's law p in the hypothetical parent Indo-Germanic language becomes f in Germanic (cf. Latin *piscis* - a fish with Germanic *fisc*, English *fish*). Other consonant changes are also enunciated.

Grimsby, or Great Grimsby, a seaport of the S. shore of the Humber, opposite Spurn Head, 20 m. S.E. of Hull; was a port of importance in Edward III.'s time; is now the largest fishing-port in the kingdom; has extensive docks, shipbuilding, tanning, brewing and other industries. Pop. 94,000.

Grimspound, a relic of an ancient moor, Devonshire, near the village of Hamilton Down. It consists of some twenty stone huts within a stone wall about 5 ft. high. It is said to be an example of an early Bronze-Age Village camp-dwelling, and is a unique specimen.

Grindal, Edmund, English divine; Archbishop of Canterbury in 1575; suspended as a puritan in 1577. (1519-1583).

Grindelwald, a resort in Bernese Oberland, in a beautiful valley 12½ m. long and 4 m. broad, and nearly 3,500 ft. above sea-level; popular with tourists in the summer and for its winter sports. Pop. 3,500.

Grinnell Land, east central part of Ellesmere I. in Arctic America, a mountainous, mainly ice-covered tract, where foxes and reindeer are found. Kennedy Channel and Kane Basin separate it from Greenland.

Grinstead, east urban district and market town of E. Sussex, England, 14 m. N.E. of Horsham. It has some picturesque old buildings. Pop. 8,700.

Griqualand, West and East, British territories in S. Africa, incorporated in Cape Colony (later Cape Province) in 1880. Griqua is a name given to half-breeds of Dutch fathers and Hottentot mothers.

Griselda, or Griseldis ("Patient Griseldis"), heroine of medieval tradition; figures in Boccaccio, Petrarch and Chaucer; the beautiful daughter of a Piedmontese peasant, she was loved and married by the Marquis Walter of Saluzzo; his jealous

affection subjected her to several cruel tests of love, which she bore with "wyfly patience," and in the end "love was aye between them twa."

Grisnez, Cape, a headland with a light-house, on the French coast opposite Dover.

Grisons (*Graubünden*), the largest of the Swiss cantons, lies in the S.E. between Tyrol and Lombardy; consists of high mountains and valleys, amongst which are some of the most noted Alpine glaciers; the Engadine Valley, through which flows the Inn, is a celebrated health resort, as also the Davos Valley in the E.; some cereals are raised, but pasture and forest land occupy a large part of the canton, and supply the cattle and timber export trade; the population is mainly German-speaking. Area 2,750 sq. m. Pop. 126,000.

Grizzly, a species of bear found in western N. America, the largest of which attain a length of 10 ft. It varies in colour from light yellow to black, and is fierce and powerful, possessing great intelligence. Its food is roots, grubs and small animals.

Groat, a name formerly to any thick coin, the value varying in different countries; in England it was of silver and valued at fourpence; but in Germany, Poland, Holland, etc., of different values under the names of groschen, groots, grots, etc.

Grodno (*Gardinas*), town of Lithuania, on the Niemen, 148 m. N.E. of Warsaw; with a medieval castle; manufactures soap, machinery, etc.; gives its name to a province, of which a small part is occupied, and all is claimed, by Lithuania, but the greater part is actually occupied by Poland. Pop. (town) 62,000.

Groin, an architectural term for the intersection of two semi-cylinders or arches. Groins in Gothic architecture are ribbed. In anatomy, the hollow in the human body where the thigh and trunk unite.

Grolier, Jean, a French bibliophile, whose library was dispersed in 1675; the bindings of the books being ornamented with geometric patterns, have given name to bindings in this style; they bore the inscription, "Jo. Grolier et Amicorum" (the property of Jean Grolier and his friends). (1479-1565).

Groningen, a low-lying province in the N.E. of the Netherlands, fronting the North Sea on the N. and having Hanover on its eastern border; its fertile soil favours extensive farming and grazing; shipbuilding is an important industry. The capital of the same name is situated on the Hunse, 94 m. N.E. of Amsterdam; has several handsome buildings, a university (1614), botanic gardens, shipbuilding yards, and tobacco and linen factories. Area of province 890 sq. m. Pop. (town) 117,000; (province) 117,000.

Groote Schuur, official residence of the S. African premier. It is about 3½ m. from Cape Town, near Rondebosch, was formerly the home of Cecil Rhodes, to whom there is a memorial.

Gros, Antoine Jean, Baron, a French historical painter, born in Paris; his subjects were taken from events in the history of France, and especially in the career of Napoleon; his first work was "Pestiférés de Jaffa," and his latest, a picture in the cupola of the Church of St. Geneviève, in Paris. (1771-1835).

Grosbeak, name for several birds of the Fringillidae family, including the hawfinch, the name referring to the large beak; there are numerous American species, among them the cardinal bird.

Grosseteste,

Robert, an English cleric and philosopher, born at Stradbroke, Suffolk, of peasant parents; a man of rare learning, he became a lecturer in the Franciscan school at Oxford, and rose to be Bishop of Lincoln in 1235; he was an active Parliamentarian, and gave effective assistance to his friend Simon de Montfort in the struggle with Henry III., and headed the Church reform party against the nepotism of Innocent IV. (1175-1253).

Grossmith, **George**, actor, famous for Sullivan's operas, and for single-handed dramatic sketches and songs, written by himself and set to his own music. (1847-1912).

Grote, **George**, historian and politician, born at Clay Hill, Kent, of German descent; was a banker; spent his leisure time in the study of philosophy and history; represented the City of London as a Radical from 1833 to 1841, when he retired to devote all his time to his *History of Greece*, of which the first volumes appeared in 1846 and the last in 1856; wrote on Plato and Aristotle, but his philosophical creed made it impossible for him to do justice to the Greek metaphysics. (1794-1871).

Grotius, **Hugo**, or **Huig van Groot**, Dutch jurist and theologian, born in Delft; studied at Leyden under Scaliger, and displayed an extraordinary precocity in learning; won the patronage of Henri IV. while on an embassy to France; practised at the Bar in Leyden, and in 1613 was appointed pensionary of Rotterdam; he became embroiled in a religious dispute, and for supporting the Arminians was sentenced to imprisonment for life; escaped, fled to Paris, and was pensioned by Louis XIII.; in 1625 he published his famous work on international law, *De Jure Belli et Pacis*; from 1634 to 1645 he acted as Swedish ambassador at Paris; his work *De Veritate Religionis Christianae* is well known. (1583-1645).

Grouchy, **Emmanuel, Marquis de**, a French marshal, born in Paris; entered the army in 1780, and later gave enthusiastic support to the Revolution; took part in the Vendean campaign, the abortive attempt on Ireland; the conquest of Italy, the Piedmontese, Austrian and Russian campaigns of Napoleon, and by skilful generalship covered the retreat of the French at Leipzig; he was among the first to welcome Napoleon back from Elba, defeated Blücher at Ligny, and led the remnants of the French army back to Paris after Waterloo, and then retired to the U.S.A.; in 1819 he returned and in 1831 was reinstated as marshal. (1766-1847).

Ground Nut, general name for the edible root of various plants found in tropical areas; the most common species is the earth nut. The oil thence obtained is a constituent of margarine. It is an important product of British W. and E. Africa, particularly Nigeria, the commercial resultant being called palm oil.

Ground Rent, a sum paid annually for the right to build on another's ground. Land for building is usually let for ninety-nine years. There are

therefore two landlords, the leaseholder and the freeholder. At the termination of the lease the building becomes the property of the freeholder or his heirs.

Groundsel (*Senecio vulgaris*), a herb of the Compositae order. It ranks as a weed and bears yellow flowers. It is sometimes given to cage birds, especially canaries, which like the green leaves.

Group Captain, the rank of an officer commanding a number of squadrons in the Royal Air Force, equivalent to that of an Army colonel or naval captain.

Grouse, a game-bird of the family Gallinaceae with feathered legs and feather-concealed nostrils. They are found in northern regions of both hemispheres, generally in forests and moors, and feed on seeds, fruit and young plants. Species include the capercaillie, black grouse, red grouse, ruffed grouse and ptarmigan. The bird is a popular table dish. The grouse-shooting season begins on Aug. 12.

Grove, **Sir George**, born in Clapham; trained as a civil engineer, and assisted Robert Stephenson in constructing the Britannia tubular bridge; from 1849 to 1859 was secretary to the Society of Arts, and later secretary and director of the Crystal Palace Company; subsequently he was editor of *Macmillan's Magazine*, a contributor to *Smith's Dictionary of the Bible*, and is best known for the *Dictionary of Music and Musicians* which he edited and partly wrote. (1820-1900).

Groyne, a framework of timber, or low, broad wall of concrete or masonry run out into the sea for the purpose of arresting the washing up of shingle, and thus raising a barrier against encroachment. Timber groynes are common at sea-side resorts, where they lessen the force of the waves and thus provide easier bathing facilities. See also *Coast and Coast Protection*.

Grub Street, a street in London near Moorfields, formerly inhabited (according to Dr. Johnson) by a needy class of jobbing literary men, and the birthplace of inferior literary productions.

Grün, **Hans**. See *Baldung, Hans*.

Grundy, **Mrs.**, an old lady referred to in Thomas Morton's comedy *Speed the Plough* (1798), personifying the often affected extreme offence taken by people of the old school at what they consider to be violations of propriety.

Gruyère, a small town in Freiburg (q.v.), where whole-milk cheese is made. Pop. c. 1,500.

Guadalajara, second largest city of Mexico, capital of Jalisco state, the seat of an archbishop. It has a university, a large library, a mint and a fine cathedral. Pop. 185,000. Also the name of a province of Spain, in Castile, E. of Madrid, in which are silver-mines. It was in this region that the Italian mercenaries, fighting for Franco, suffered a very heavy defeat in the Spanish Civil War, in 1937. Area 4,689 sq. m. Pop. 205,000.

Guadalquivir, the most important river of Spain, rises in the Sierra de Cazorla, in the southern province of Jaen, and flows in a SW. direction through Andalusia, passing Cordova and Seville, being navigable for steamers up to the latter city; after a course of 374 m. it discharges into the Gulf of Cadiz at San Lucar de Barrameda.

Guadeloupe, a French colony in the Lesser Antilles (W. Indies), consisting of two islands and five small dependent islets. The larger islands are Guadeloupe proper (Capital, Basse-Terre) and Grande-Terre. Area of the two 690 sq. m.

GROSBEAK (HAWFINCH)

They are subject to earthquakes; produce sugar, bananas, rum and coffee. Pop. of the whole group 268,000.

Guadiana, an important river of Spain, has its source in the E. of the plateau of Mancha, and for a short distance is known as the Zancara, flows in a westerly direction as far as Badajoz, where it bends to the S., then forms the border between Portugal and Spain for a short distance, bends into Alentejo, and again, before reaching the Gulf of Cadiz, divides the two countries; it is 510 m. long, of which only 42 are navigable.

Guanaco, a S. American ungulate mammal (*Lama guanacus*), from which the llama and alpaca have been developed by domestication. It is allied to the old World camel.

Guanajuato, a central province of Mexico; is rich in minerals, especially silver, and mining is the chief occupation; but stock-raising is of some importance, and large cotton and woollen factories have of recent years been introduced. Area 11,800 sq. m. Pop. 988,000. The capital, Guanajuato, is the centre of the mining industry, and has pottery manufactures. Pop. c. 25,000.

Guano, deposits found in islands off the coast of S. America and elsewhere, rich in phosphates and ammonium compounds, which are of great value as fertilisers; they are formed from the dung of cormorants, who consume large quantities of fish, obtaining more phosphate than they require.

Guarantee, a pledge of collateral responsibility for the debt of another person, in the event of the latter's default. To be legally enforceable it must be in writing. The person giving the guarantee is known as a guarantor or surety, and suretyship may be effected jointly by several persons. A guarantor who has paid a debt is entitled to claim full repayment from the original debtor. It has become a common practice for insurance companies or other bodies or persons to give "fidelity guarantees" for the honesty of persons in positions of trust.

Guardian, the name in English law for a person who has the legal control or management of the person or property or both of an infant—i.e., one under the age of 21. A guardian may be such by nature—i.e., the father or other ancestor—by statute, or a judicial guardian, appointed by the Chancery Division of the High Court. In Scotland a guardian is termed a tutor. The consent of the guardian is necessary for the marriage of an infant, unless the court dispenses with it.

Guardians, elected bodies formerly charged with looking after the relief of the poor, both in workhouses and with out-relief. They were set up under the Poor Law Act in 1834, and were abolished in 1930, when their work was transferred to county councils and the councils of larger boroughs.

Guards, in the British Army the special term for the Royal Household Troops constituting the Brigade of Guards. Their special duty is the protection of the Sovereign. The term also includes the Foot Guards, of which there are five regiments, Grenadier Guards, Coldstream Guards, Scots Guards, Irish Guards and Welsh Guards.

The Mounted Brigade of Guards comprises the 1st and 2nd Life Guards, and the Royal Horse Guards. In peace time they form part of the garrison of London and the guard of the Sovereign at Windsor, and they do not

leave the country except in special circumstances, the last occasion being service in France during the World War. They are the "crack" regiments of the British Army, are enlisted from men of exceptional stature and physique, and are famous for their discipline and proficiency of training.

Guatemala, a Republic of Central America, fronting the Pacific on the W. between Mexico on the N. and San Salvador and Honduras on the S.; is for the most part mountainous, with intervening valleys of rich fertility; minerals are abundant, and gold and silver are worked, but the wealth of the country lies in its fertile soil, which produces abundance of coffee, sugar, bananas, wheat and fruit of all kinds; Roman Catholicism prevails, and the government is vested in a President and single-chamber legislature. Its independence was proclaimed in 1839. Area 45,450 sq. m. Pop. 2,245,000. The capital, Guatemala, stands on a plateau 72 m. N.E. of its port, San José; there is a cathedral and an archbishop's palace. Pop. 134,000.

Guava, a shrub found in tropical America yielding a succulent fruit used for preserve-making. Varieties are the lemon, red and strawberry guava.

Guayaquil, the largest city and principal port of Ecuador stands at the entrance of the R. Guayaquil on the Gulf of the same name; the foreign trade is centred here; there are shipyards and a good harbour; coffee, quinine and cocoa are exported; there is a university. Pop. 140,000.

Gudgeon (*Gobio fluviatilis*), an edible fresh-water fish, allied to the carp, and found in streams in European countries, including Great Britain.

Gudrun, a heroine in an old German epic (of unknown authorship) so called; daughter of Hettel, King of Frisia; she was betrothed to Herwig, King of Zealand (Heligoland) and carried off by Harnuth, King of Norway, a rejected suitor; preferred out of respect to her vow to serve as a menial in his mother's kitchen rather than be his wife; was rescued from duress by her brother and her betrothed, and being married to Herwig, pardoned the suitor that had stolen her from his embrace. The epic is concerned chiefly with legends of the North Sea coasts and Normandy, and holds a place in German literature only second to that of the *Nibelungenlied*.

Guelderland, or **Guelders**, a province of the Netherlands, stretching from the Zuider Zee on the NW. to Prussia on the SE.; agriculture is the staple industry; the Rhine crosses it in the S. Area 1,940 sq. m. Pop. 900,000.

Guelder Rose (*Viburnum Opulus*), an ornamental plant of the natural order Caprifoliaceae, native of the British Isles, Europe and temperate Asia, with small white clustered flowers which have given it the name "Snowball tree."

Guelph, city of Ontario, Canada, 45 m. SW. of Toronto, in an agricultural district. Here is the Ontario Agricultural College and Experimental Farm. Pop. 22,000.

Guelphs, or **Welfs**, a political party in Italy, who from the 11th to the 14th Centuries maintained, against the claims of the Emperors, the independence of Italy, and the supremacy of the Pope, in opposition to the Ghibellines (q.v.). Guelph was the surname of the British Royal family until it was superseded in 1917 during the World War by "Windsor."

GUANACO

GUELDER ROSE

Guerillas, bands of armed irregular troops who take part in a war independently of the principal combatants. Guerilla bands took part in the Spanish-American, Boer and Franco-German wars. They are, if captured, not entitled to the privileges of combatants.

Guernsey, the second in size of the Channel Is. (q.v.); fruit and vegetables are largely exported and it is noted for a fine breed of cows; St. Peter's Port is the only town, and has an excellent harbour. Alderney, Sark and the smaller islands are dependencies of Guernsey. Area 15,650 acres. Pop. 40,500.

Gueux, "the Beggars," the name assumed by the nobles and others of the patriotic party in the Low Countries in the War of Independence against Philip II. of Spain; being called beggars, in reproach by the Court party, they adopted the name as well as the dress, wore a fox's tail for a plume and a platter for a brooch.

Guiana, an extensive tract of country the Atlantic, bordering on Venezuela on the W., and for the rest hemmed in by Brazil; it is divided into British, Dutch and French Guiana, all fronting the sea; the physical characteristics of all three are practically the same: a fertile alluvial foreshore, with upward-sloping savannas and forests to the unexplored highlands, dense with luxuriant primeval forest; rivers numerous, climate humid and hot, with a plentiful rainfall; vegetation, fauna, etc., of the richest tropical nature; timber, balsams, medicinal barks, fruits, cane-sugar, rice, cereals, etc., are the chief products; also some gold. **British Guiana**, ceded by the Dutch in 1814, is the most westerly, and borders on Venezuela. Area, 89,500 sq. m.; Georgetown (q.v.) is the capital. Pop. 333,000. **Dutch Guiana**, or Surinam, occupies the central position; area 54,300 sq. m.; pop. 170,000; capital Paramaribo (q.v.). **French Guiana**, or Cayenne, lies to the E.; area 34,750 sq. m.; capital Cayenne (q.v.). Pop. 31,000.

Guides, a regiment of the Indian Army recruited principally from Sikhs and Pathans with British officers. They are trained for mountain warfare on the NW. Frontier of India and have a distinguished record.

Guido Aretinus (Guy of Arezzo), a Benedictine monk who flourished at Arezzo, in Italy, during the 11th Century, the first to promote the theoretical study of music; he is credited, amongst other things, with the invention of counterpoint, and was the first to designate notes by means of alphabetical letters, and to establish the construction of the staff. He is said to have been prior of a monastery at his death.

Guienne (a corruption of Aquitania), an ancient province of SW. France now subdivided into the departments of Gironde, Dordogne, Lot, Aveyron and embracing parts of Lot-et-Garonne and Tarn-et-Garonne. It was in English hands through a large part of the Middle Ages.

Guildford, a town of Surrey, on the Wey, 30 m. SW. of London, a quaint old town with interesting buildings and the ruins of a Norman castle; a cathedral is in process of building; there are corn mills, printing and railway works. It was at one time the county town of Surrey. Pop. 34,000.

Guildhall, a hall for the meetings of the trading guilds or governing bodies of a town; medieval examples still exist at Poole, King's Lynn, Wenlock, etc.; most famous is the London Guildhall, the meeting-place of the City Corporation, with library, museum, art-gallery and banqueting hall; it dates from the 16th Century.

Guilds, associations of craftsmen or tradesmen in the Middle Ages to watch over and protect the interests of the crafts or trades, to see that they were honourably as well as economically conducted and to afford help to needy members, each with a body of officials to superintend its affairs.

Guild Socialism, a form of Socialism advocating the communal ownership of the means of production and wealth as represented by the earth's natural resources, the direction being in the hands of trade-unions composed of representatives of the various workers of the entire industry.

The movement began as a reaction against statism and because of the fear that syndicalism (q.v.) would give rise to inequalities between the workers in different industries. The nature of the central administrative authority and the relation between the bodies representing consumers and producers respectively were matters of some controversy. After the World War some "Building Guilds" were formed in England and operated with considerable success, but on the whole little has been heard since the War of this particular form of Socialism.

Guillemot, a genus (*Uria*) of coastal diving birds of the Auk family, inhabiting the Arctic and North Temperate Zones, the Common Guillemot, Marrot, or Murres (*U. troila*) and the Black Guillemot (*U. grylle*) breeding on British shores. There are eight species. The colour is brownish-black on the back with white beneath though subject to seasonal changes.

Guillotine, a beheading machine, introduced into France at the time of the Revolution by a Dr. Guillotin, who, believing that it would obviate unnecessary pain, successfully recommended its adoption by the National Convention; it was anticipated by the *Maiden* in Scotland, which the Regent Morton employed in 1566 and, long before that, by the Italian *Mannaia*. It was sometimes called the *Louissette* from the fact that one Antoine Louis introduced further improvements in the machine.

Guinea, a gold coin formerly current in Britain until 1817, when it was replaced by the sovereign. Its value was variable, but finally fixed at 21s. Professional fees are still generally estimated in guineas. "Spade guineas" bore a spade-shaped shield on the reverse side.

Guinea, a name somewhat loosely applied to an extensive tract of territory on the W. coast of Africa, generally recognised as extending from the mouth of the Senegal in the N. to Cape Negro in the S.; the territory is occupied by various colonies of Britain, France, Portugal, Belgium, Spain and the Republic of Liberia. It is specially to French Guinea (q.v.), the Senegal, and between Gambia and Sierra Leone, and Spanish Guinea, between the French Congo and the Cameroons.

Guinea Fowl, a bird of the pheasant family, native to Africa, between Abyssinia and Natal, and now domesticated in Europe and America for their eggs and for table use. There are nine species.

Guinea Pig, *Cavia*, a rodent of S. America. The domesticated species is short-limbed and about 6 ins. long, the fore-feet having four toes and the hind-feet three; there is no tail. They are very prolific, and are used to a considerable extent for bacteriological and biological experiments.

Guinea Worm, a small, hair-like parasite under the human skin. The eggs enter the stomach in drinking-water.

Guinegate, a village in Hainault, SW. of Belgium, where Henry VIII. defeated the French in 1513 in the Battle of the Spurs (q.v.).

Guinevere, the beautiful wife of King Arthur; conceived a guilty passion for Lancelot, one of Arthur's knights; which continued until Arthur's death, after which she became a nun; there are several versions of her story, one of which is told in Tennyson's *Idylls of the King*.

Guiseborough, urban district and market town of Yorkshire, England, in the N. Riding, 9 m. SE. of Middlesbrough. Iron is obtained near by and it has ruins of an ancient abbey. Pop. 8,200.

Guiscard, Robert, Duke of Apulia and Calabria, born in Coutances, Normandy; along with his brothers, sons of Tancred de Hauteville, invaded S. Italy and won the dukedom of Apulia; when Pope Gregory VII. was besieged in San Angelo by Henry IV. of Germany he came to the rescue and the emperor fled. (1015-1085).

Guise, town of France, in the dept. of Aisne, on the R. Oise, 30 m. N. of Laon. It has ironworks and textile factories, and suffered damage during the World War. Pop. 7,000.

Guise, a celebrated French ducal family, deriving its title from the town of Guise in Aisne.

Guise, Charles, Cardinal of Lorraine, son of the succeeding, and considered the ablest of the Guise family; was Archbishop of Reims in 1538, and Cardinal of Lorraine in 1547; was prominent at the Council of Trent, and in conjunction with his brother fiercely opposed Protestantism. (1524-1574).

Guise, Claude, of Lorraine, first Duke of, fifth son of René II., Duke of Lorraine; distinguished himself in the service of Francis I., who conferred on him the dukedom of Guise; was the grandfather of Mary Queen of Scots, through his daughter Marie, wife of James V. of Scotland. (1496-1550).

Guise, Francis, second Duke of, and son of preceding; rose to high eminence as a soldier, winning, besides many others, the great victory of Metz (1552) over the Germans, and capturing Calais from the English in 1558; along with his brother Charles (q.v.) he was virtual ruler of France during the feeble rule of Francis II., and these two set themselves to crush the rise of Protestantism; he was murdered by a Huguenot at the siege of Orleans. (1519-1563).

Guise, Henry I., third Duke of, son of Francis; the murder of his father added fresh zeal to his inborn hatred of the Protestants, and throughout his life he persecuted them with merciless rigour; he was a party to the massacre of St. Bartholomew (1572); his ambitious designs on the crown of France brought about his assassination. (1550-1588).

Guise, Henry II., fifth Duke of, grand-son of preceding; at 15 he became Archbishop of Reims, but the death of his brother placed him in the dukedom (1640); he opposed Richelieu, was condemned to death, but fled to Flanders; with Mazarino he made a fruitless attempt to seize the kingdom of Naples and eventually settled in Paris, becoming grand-chamberlain to Louis XIV. (1614-1664).

Guiseley, village of Yorkshire, England, in W. Riding, 2 m. SW. of Otley. Woollens are made. Pop. 5,800.

Guitar, a musical instrument consisting of strings mounted on a pine sound-board with a large sound cavity. The

strings are six in number, three of gut and three of wire, tuned to the notes E, A, D, G, B, E. The strings are plucked with the thumb and fingers while the tone intervals are regulated on the finger board by the left hand.

Guitry, Sacha, famous French actor and dramatist, son of Lucien Guitry, born in Petrograd; has played in America and England. Among his many works are *L'amour masqué*, *Le Miracle* and *Deburau*. (1885-).

Guizot, François Pierre Guillaume, French historian and statesman, born at Nîmes; his boyhood was spent at Geneva, and in 1805 he came to Paris to study law, but soon took to writing, and in his twenty-fourth year had published several works and translated Gibbon's great history; in 1812 he was appointed to the chair of History in the Sorbonne; after Napoleon's downfall became Secretary to the Ministry of Justice; in 1830 became Minister of Public Instruction, Foreign Minister and Prime Minister; his historical works, executed between his terms of office and in his closing years, display wide learning; the best known are *The History of the English Revolution* and *The History of Civilization*. (1787-1874).

Gujarat, a northern maritime province of India lying between the Gulfs of Cutch and Cambay; it is a rich alluvial country, and comprises several native States; including Kathiawar and Baroda. Since 1933 a Gujarat States Agency, with headquarters at Baroda, has been formed which includes most of these States.

Gules, in heraldry the colour red, represented by vertical hatching.

Gulf Stream, the most important of the great ocean currents; it issues by the Strait of Florida from the Gulf of Mexico (whence its name), a vast body of water 50 m. wide, with a temperature of 84° and a speed of 5 m. an hour; flows along the coast of the U.S. as far as Newfoundland, whence it merges into the equatorial drift current, or Gulf Stream drift, which spreads itself in a N.E. direction across the Atlantic, throwing out a branch which skirts the coasts of Spain and Africa, while the main body sweeps N. between the British Isles and Iceland, its influence being perceptible as far as Spitzbergen; it is the genial influence of this great current which gives to Great Britain its warm and humid atmosphere.

Gulfweed, a floating seaweed, *Sargassum baccifrum*, found in large quantities in the Sargasso Sea. The Gulf Stream carries it northwards from the Gulf of Mexico. It has small, bladder-like berries.

Gull, a genus of sea-birds of the Lariæ family, long-winged and web-footed.

There are over 50 species. They are mostly marine, and live upon fish, though some live inland and eat worms and insects. The different varieties include the tern, skimmer, kitty-wake and skua.

BLACK-BACKED GULL.

Gum, general name for viscous liquids of trees and plants. They contain glucose, and are valuable in the manufacture of emulsions and in calico-printing. They include gum arabic from the Acacia plant, gum tragacanth and the various resins soluble in alcohol.

Gumbinnen, town of E. Prussia, Königsberg, with manufactures of machinery, textiles, beer, brandy, etc. There was fighting here in 1914 between Russians and Germans. Pop. 17,500.

Gun, a generic term applied to firearms of all kinds and sizes, from the howling-piece to the heavy howitzer; but in ordinary language it especially denotes the former, while in the military sense it is exclusively applied to ordnance. The earliest form of gun, in the ordinary sense, was a hand-gun with a match applied to the powder at a touch-hole.

Improved gunpowder led to the matchlock gun, where the match was fixed to a hammer operated by a trigger-action. This was followed in the 17th Century by the wheel-lock, a spark-producing contrivance which replaced the match. The flintlock was a further improvement, a more reliable spark being obtained from the impact of a piece of flint upon the priming pan.

All these guns were loaded at the muzzle, but in the 19th Century the breech-loader appeared, the barrel and stock being separate pieces. They were called pin-fire guns, a firing-pin being released by a spring in the bolt which, when released, struck the percussion-cap of the cartridge, the ignition of which exploded the charge. See also *Rifle*.

Cannon were first introduced into Europe in the 14th Century; the Germans certainly used guns at the siege of Cividade, Italy, in 1331. Early cannon were made of longitudinal iron bars hooped with rings; the charge was contained in a separate chamber placed in a socket in the breech, and the shot was of lead, iron or stone. They were used at Calais and at Crécy in 1346, at Bruges in 1382 and at Constantinople in 1394. The great bombard of Ghent (1382) weighed 13 tons, was 16 ft. long and fired a granite shot. The wrought-iron cannon in Edinburgh Castle, known as "Mons Meg," was a similar weapon.

Brass guns were first made in the 15th Century. Hollow bronze and iron guns were first cast in England in the 16th Century. Siege guns were made capable of firing an 80-lb. shot. Lighter field-guns and cartridges were invented in the 17th Century. In the 18th Century guns were cast solid and then bored; smooth-bore guns were made at Carron foundry. Rifled field-guns were first used in 1859.

The only metal used in modern gun construction is steel, the chief physical properties required being elasticity, ductility, tenacity, malleability and hardness; but improvements in gun steel are obtained by adding a little chromium, nickel and molybdenum.

Gunboat, a small type of war-craft armed with quick-firing and machine-guns and employed in the British Navy mainly on rivers such as the Yangtze-kiang, where British interests and British nationals in the International Settlement require protection. During the World War they played a considerable part on the Tigris and Euphrates in the Mesopotamian campaign.

Gun-cotton, a powerful explosive formed by the action of nitric and sulphuric acid on cellulose. It enters into the composition of cordite and blasting gelatine.

Gun-metal, a tough, close-grained alloy of copper and tin, in the proportion of nine parts of copper to one of tin, used for making castings.

Gunpowder, an explosive mixture of carbon, salt-petre, sulphur and iron; it is said to have been invented by the Chinese, and was first used in Europe at the Battle of Crécy (1346); it has been largely superseded by more powerful explosives, but is still in use for manufacturing fireworks, etc.

Gunpowder Plot, a conspiracy to blow up the Parliament of England on Nov. 5, 1605, the day of its opening, when it was expected the King, Lords and Commons would be all

assembled; the conspirators were a small section of Roman Catholics dissatisfied with King James's government and were headed by Robert Catesby, the contriver of the plot; the plot was discovered, and Guy Fawkes was arrested as he was proceeding to carry it into execution, while the rest, who fled, were pursued, taken prisoners, and the chief of them put to death. November 5 has since become a day for fireworks and "guy" burning.

Gunter, Edmund, mathematician, born in Hertfordshire, England; educated for the Church, but his natural bent was towards mathematical science, and in 1619 he became professor of Astronomy in Gresham College, London; his *Canon Triangulorum* (1620) was the first table of logarithmic sines and tangents drawn up on Briggs' system. Amongst other of his inventions was the surveying chain, known as "Gunter's chain," a quadrant, Gunter's scale, and he was the first to observe the variations of the compass. (1581-1626).

Gunther, King of Burgundy and brother of Chriemhilda; his ambition was to wed Brunhilda (q.v.), who could only be won by one who surpassed her in three trials of skill and strength; by the help of Siegfried, who veiled himself in a cloak of darkness, he succeeded not only in winning her hand, but in reducing her to wifely subjection after she was wed.

Gurkha (Ghurka), a native race of Nepal, an independent State adjoining India to the N. They enlist in large numbers as infantry in the British Army of India, and have a distinguished record of service on the Frontier and during the World War in France, Mesopotamia and Gallipoli. Their characteristic weapon is the Kukri, a heavy curved knife used with grim efficiency in hand-to-hand fighting.

Gurnard, a species of fish of the order Triglidae, frequenting the sea-

bottom near the coasts. The grey and red varieties are caught off British coasts. The head is bony and the body is furnished with finger-like rays.

GURNARD

Gurney, Joseph John, a Quaker philanthropist and writer, born at Earham Hall, near Norwich; he co-operated with his sister, Mrs. Elizabeth Fry, in bringing about a reform of the prison system; his works include *Prison Discipline*, 1819, *Religious Peculiarities of the Society of Friends*, 1824. (1788-1847).

Gustav V., King of Sweden. He was married in 1881 Princess Victoria of Baden, and succeeded to the throne in 1907. (1858-).

Gustavus (I.) Vasa, or Gu Ericsson, I., of Sweden from 1523 to 1560; having conceived the idea of freeing his country from the yoke of Denmark under which it had fallen in 1519, he was captured by the Danes; escaping he became a wanderer in his own land, working in mines and enduring great privations, but at last, in 1520, the Swedes were goaded to rebellion, and under him eventually drove the Danes from their land in 1523; during his long reign Gustavus brought peace and unity to his empire. (1496-1560).

Gustavus (II.) Adolphus, King of Sweden from 1611 to 1632, born in Stockholm, grandson of preceding and son of Charles IX.; wars with Denmark and Russia occupied him during the early years of his reign; he espoused the Protestant cause in Germany against the Catholic League; victory crowned his efforts, but in the great Battle of Lützen (near Leipzig)

whilst facing Wallenstein (q.v.), his most powerful opponent, he fell in the act of rallying his forces, and in the hour of success. (1594-1632).

Gustavus III., King of Sweden from 1771 to 1792; succeeded his father Adolphus Frederick; in 1772, imposed a new constitution on the country greatly diminishing the power of the nobles; Gustavus was an enlightened ruler, but extravagant; in 1788 he became embroiled in a war with Russia; he was assassinated when about to take up arms against the French Republicans. (1746-1792).

Gustavus IV., King of Sweden from 1792 to 1809, son of preceding; lost territory to the French, and Finland to Russia, while an attack on Norway proved a failure; he was deposed in 1809 and the crown given to his uncle, Charles XIII. (1778-1837).

Gut, the alimentary canal of the body, animal or human, comprises three parts, the fore-gut, the mid-gut and the hind-gut. The mid-gut or mesenteron is the most important, and is a vital part of the digestive organs, in higher animals developing into the liver, etc. The mid-gut of the human being is about 24 ft. in length.

Gutenberg, Johannes, or Henna, also called *Gensfleisch*, claimed to have been the inventor of the art of printing with movable types, born in Mainz; for some time lived in Strasbourg as a polisher of precious stones, mirrors, etc.; he set up his first printing-press at Mainz about 1450. (1400-1468).

Guthrie, Sir James, Scottish genre and portrait painter, born at Greenock; educated at Glasgow High School, studied in London and Paris. His later work was almost all portraiture. President, Royal Scottish Academy, 1902-1919; knighted, 1903. Painted: "Funeral in the Highlands," Glasgow Gallery; "Group of British Statesmen of the War," National Portrait Gallery. (1859-1930).

Guthrie, Thomas Anstey, author and barrister; under the pen-name of F. Anstey, wrote *Vice Versa*, *The Giant's Robe*, *The Brass Bottle* and *Baboo Jafferjee*, B.A., an admirable satire on the Indian law student; a contributor to *Punch*. (1856-1934).

Gutta-percha, the juice of a tree found in the Malay Archipelago, closely related to rubber and used for similar purposes, especially for electrical insulation.

Guy, Thomas, founder of Guy's Hospital, London, born in Southwark; he started in business as a bookseller in 1668, and obtained the privilege of printing Bibles for Oxford University; lucky speculation in South Sea stock, combined with his printing business, enabled him to amass an immense fortune, which he devoted largely to charitable purposes; from 1695 to 1707 he sat in Parliament. (1645-1724).

Guy of Warwick, a hero of English romance of the 13th Century, who won the hand of the daughter of the Earl of Warwick by a succession of astonishing feats of valour, but repented of the slaughter he had made, and went on a pilgrimage to the Holy Land; returned to his wife disguised as a palmer; retired into a hermitage; when about to die sent a ring to her, upon which she came and interred him; she died 15 days after him, and was buried by his side.

Guyon, Mme. Jeanne Marie Bouvier de la Motte, French quietist and mystical writer, born at Montargis; was frequently imprisoned in convents for alleged heretical teaching; released last from Bastille in 1793. Died at Blois. (1648-1717).

Gwalior, important native State of Central India, under British protection since 1803; governed by a Maharajah (whose dynasty was founded by Ramaji Sindhia early in the 18th Century); consists of scattered districts in the basins of the Jumna and Narbada; opium is the chief export. Area 26,370 sq. m. Pop. 3,525,000. Gwalior, the capital, is situated 65 m. S. of Agra; the citadel is very strongly posted on a steep rocky base 340 ft. high.

Gwynn, Nell, a "pretty, witty" actress mistress of Charles II., whose son by her was created Duke of St. Albans; the King was very fond of her and took special thought of her when he was dying. (1650-1687).

Gyges, a young shepherd of Lydia, who, according to classic legend, possessed a magic ring of gold by which he could render himself invisible; he repaired to the Court of Candaules, whose first minister he became, whose chamber he entered invisibly, and whom he put to death to reign in his stead.

Gymnastics, the cult of physical fitness, is inherited principally from the Greeks, among whom it was an important branch of the regular education of boys. Greek youths were taught to wrestle, run, leap and to throw the javelin and quoit. The usual practice was to wrestle naked; hence the name *gymnastiké*, from the word *gymnos*, meaning "naked." Among the Greeks athletic festivals were an important manifestation of national life, and the chief of these, the quadrennial Olympic Games, were sufficiently important to serve as the basis of Greek chronology.

The connection between health and gymnastics was early recognised, and for this reason gymnastics has been encouraged in modern times by all European countries, particularly by Germany and France, and in many cases is now supervised by Governments. Recent educational reforms such as Pestalozzi and Froebel have made it an integral part of their systems.

In Sweden, Professor Ling (1776-1838) was the originator of the celebrated Swedish drill. By this system static exercises are performed, the body being moved into various positions at a word of command. The German system advocates the use of apparatus—parallel bars, vaulting-horse, trapeze, etc. Mass drill can be carried out under either system. In Great Britain gymnastics and drill have never been highly popular, preference being given to athletic sports and games, but the "keep-fit" campaign, sponsored by the Government in 1937, is a recognition of the importance of national fitness which can be most readily attained by gymnastics.

Gymnosophists, a set of antem-plative philosophers among the Hindus who practised an extreme asceticism and went about almost naked.

Gymnosperms, name given to a class of plants whose seeds are naked; the best-known group are the conifers, including the fir and pine.

Gynæcology, the study of the female, of women, including especially those of the uterus, ovary, urethra and bladder, vagina and vulva. These of the uterus include menstrual irregularity; of the ovary, ovaritis, or inflammation, and ovarian tumours; of the urethra, complication in the urinary system; and of the vulva inflammation and cancer. Obstetrics usually considered outside its orbit.

Gypsies, a dwindling nomadic people called *Romany*. They came to Europe 1400, and spread to various parts of the Continent, especially Hungary, Italy, Spain. There are still a number in

where they are usually caravan-dwelling pedlars, fortune-tellers, etc.

Gypsophila, a small-flowered herbaceous plant of the order Caryophyllaceae, common in Europe and Asia.

Gypsum, a soft mineral composed of sulphate of lime; it is often deposited from solution in the drying up of salt lakes, since sulphate of lime is more soluble in salt than in pure water; when heated, the water of crystallisation is driven off, leaving a white powder known as plaster of Paris, which sets to a hard mass when mixed with water. It is used as a fertilizer and for various purposes connected with the building trades.

Gypsy Moth, a yellowish-brown moth common throughout Europe, whose caterpillars are particularly harmful to trees of all kinds.

Gyrocompass. See **Gyroscope**.

Gyroscope, a heavy disc or wheel mounted in such a way that it is able to rotate in any plane. Its striking feature is that, when set rotating and left undisturbed, it always maintains the same direction in space, independently of its relation to the earth. Thus, if a gyroscope at the equator is set rotating round a horizontal axis pointing east and west, this axis will appear gradually

to tilt, so that at the end of six hours it is vertical, at the end of 12 hours horizontal again, but with the ends reversed, at the end of 18 hours vertical, but with the end formerly uppermost now below, and at the end of 24 hours once more horizontal in its original direction.

A further property of the gyroscope is known as precession; this is exhibited when a force is applied to it tending to alter the plane in which it is rotating—i.e., tending to change the direction in space of its spinning axis. The gyroscope resists this force and turns in such a way that the plane and direction of the spinning disc become the same as those of the applied force.

The properties of the gyroscope have been applied to navigation, the gyrocompass being essentially a gyroscope in which the precession due to the force of gravity is controlled and the axis of the gyroscope automatically maintains itself in a true geographical north-south direction, thus obviating the difficulties attaching to the use of a magnetic compass in steel ships, and securing greater accuracy in steering and in gunfire.

GYROSCOPE

H

Haakon VII., King of Norway, originally Prince Charles, son of Frederick VIII. of Denmark. He married Princess Maud, a daughter of King Edward VII. of England, in 1896, and succeeded to the throne of Norway on the dissolution of the union with Sweden in 1905. (1872-).

Haarlem, town in the province of N. Holland, on the Spaarne, 4 m. from the sea, and 12 m. W. of Amsterdam; has a fine 15th-Century church with a famous organ (8,000 pipes), linen and other factories, etc., and is noted for its tulip-gardens and trade in flower-bulbs. It is intersected by several canals as well as the river. A lagoon of the Zuider Zee called Haarlem Lake, which formerly stretched southward as far as Leyden, between Amsterdam and Haarlem, was drained by an English company during 1839-1852. Pop. 129,000.

Habakkuk, a book of the Old Testament, ment by a Levite who appears to have flourished in the 7th Century B.C., containing a prophecy which belongs, both in substance and form, to the classic period of Hebrew literature. It denounces the judgment of God on the land for the violence and wrong that prevailed in it, as about to be executed on it by a power still more violent and unjust in its ways; and comforts the generation of the righteous with the assurance of a time when this very rod of God's wrath shall in the pride of its power be broken in pieces, and the Lord be revealed as seated in his Holy Temple.

Habeas Corpus, a writ requiring the production of a person accused of a crime and detained by the executive before conviction; the Habeas Corpus Act dates from the reign of Charles II. Under it even aliens resident in the United Kingdom are protected and the writ will enquire into the legality of the detention.

Habit, the term in psychology for an action, or series of voluntary actions performed without effort of will, or volition, and different, therefore, from reflex actions, which are involuntary. It is acquired, according to psychologists, by first gaining ease and perfection in the action itself, then by constant repetition until the action becomes automatic and spontaneous.

A child acquires a habit more readily than an adult because its mind is more plastic and there is less distracting thought. The significance of habit in education is recognised by psychologists, and the encouragement of good and the eradication of bad habits is an important part of moral training.

Habit and Repute, a term in Scots law to denote an inference of legal relationship, especially where there is general belief that such a relationship exists. If a person is a thief by habit and repute—i.e., notorious—the penalty he incurs is heavier. When a man and woman cohabit and are regarded by neighbours as man and wife, a condition of marriage by habit and repute is established. The reputation must have existed for at least a year without break and up to the date of conviction.

Hackenschmidt, **Georges**, Russian wrestler; born at Jurjev (Dorpat); became an engineer in St. Petersburg and in Germany; trained by Krajevsky; won many victories on Continent; came to England 1891 and became famous as a wrestler on the music-hall stage. In 1908, at Chicago he failed to conclude a match with Gotch, thus forfeiting world's championship. Has since taken to authorship of a mystical turn. (1878-).

Hackney, metropolitan borough in N.E. London, England, on the R. Lee; a mainly residential district, with some small industries. Pop. 208,000.

Hackney Carriages and Coaches.

Hackney coaches originated in London in 1695, the first stand appearing in 1834 near the old May pole in the Strand. A smaller carriage, called a cabriolet (whence cab), was introduced in 1823. Drivers were required to purchase a licence, and any cab or carriage plying for hire to-day must hold a licence, the cost for a four-passenger taxicab, for example, being £10 per annum. Horse-cabs have almost disappeared from London streets, though a very few still ply for hire.

HACKNEY COACH

Haco, or *Hakon V.*, King of Norway from 1223 to 1263; defeated by Alexander III. of Scotland at Largs, and died in the Orkneys on his way home.

Haddington, county town of East Lothian, Scotland, on the Tyne, 17 m. E. of Edinburgh; has interesting ruins of an abbey church, called the "Lamp of Lothian"; was the birthplace of John Knox, Samuel Smiles, and Jane Welsh Carlyle. Pop. 5,700.

Haddingtonshire. See East Lothian.

Haddock (*Gadus aeglefinus*), a marine carnivorous fish of the Gadidae (Cod) family, found on N. Atlantic coasts. Its colour is brown with silver underneath, and there are two spots on the pectorals. It feeds on molluscs, and the bait employed for catching it is usually mussels. It travels in shoals from deep water to the coasts for spawning during March and April. Finnan haddocks take their name from Findon, Scotland.

Haddon Hall, a famous house situated on the R. Wye, at Bakewell, Derbyshire, owned by the Duke of Rutland; an outstanding example of an old English baronial mansion. It consists of two courts of irregular form, almost square, surrounded by suites of apartments, and was designed more for domestic than military purposes.

Hades (*Hu.* the Unseen), the dark abode of the nether world; originally a synonym of Pluto, the god of the nether world. This nether world was bounded by the River Styx.

Hadhramaut, a dry and healthy plateau in Arabia, extending along the coast from Aden to Cape Ras-al-Hadd; formerly a dependency of Turkey, but now independent, though protected by Great Britain. In 1934-35, W. H. Ingrams, first political officer of the Aden Protectorate, toured the country with his wife, collecting a great deal of profoundly interesting information. In 1938 Miss Freyr Stark also made a journey among the Hadhramis.

Hadjji, a Mohammedan who has made his Hajj, Hadj, or pilgrimage to Mecca, and kissed the Black Stone of the Kaaba (*q.a.*), thereby becoming entitled to wear a green turban.

Hadleigh, an old market town of Suffolk, England, on the Bret, 9½ m. W. of Ipswich; its cloth trade dates back to 1331; Guthrum, the Danish king, died here in 889, and Dr. Rowland Taylor suffered martyrdom in 1556. Pop. 5,000. Also a small parish of Essex, near the N. shore of the Thames estuary, 37 m. E. of London, where in 1892 the Salvation Army planted a farm-colony. There are ruins of a castle here.

Hadrian (Publius *Ælius* Hadrianus), Roman emperor, born in Rome; distinguished himself under Trajan, his kinsman; was Governor of Syria, and was proclaimed emperor by the army on Trajan's death in A.D. 117; had troubles both at home and abroad on his accession, but, these settled, he devoted the last 18 years of his reign chiefly to the administration of affairs throughout the empire; visited Gaul in 120, whence he passed over to Britain, where he built the great wall from the Tyne to the Solway; he was a Greek scholar, had a knowledge of Greek literature, encouraged industry, literature, and the arts, and reformed the laws. (76-138).

HADRIAN

Hadrian's Wall,

the remains of a line of Roman fortifications built by command of the Roman Emperor Hadrian in 122. Originally of turf, it was rebuilt of stone in 209, and extends from Vindolanda on the R. Tyne to the Solway Firth. It was intended to act as a barrier against marauding bands of Picts and Scots. Portions near Chesters and Housesteads were acquired for the nation in 1930.

Haeckel, Ernst Heinrich, a German studied medicine at Berlin and Vienna; in 1865 became professor of Zoology at Jena; visited Arabia, India, Ceylon and different parts of Europe in the prosecution of his scientific theories; he was the first among German scientists to embrace and apply the evolutionary theories of Darwin. He made important contributions to the *Challenger* reports, and was among the first to trace the genealogical tree of animal life. His name is associated with far-reaching speculations on heredity, sexual selection and various problems of embryology. *The Natural History of Creation, Treatise on Morphology, The Evolution of Man*, are among his more popular works. (1834-1919).

Hematite, a form of iron-ore used factually, as it is free from phosphorus. Its chemical name is ferric trioxide and it has a blood colour. A variety found in Spain is used by goldsmiths as a burnisher. The Assyrians used it as an ornamental stone.

Hæmaturia, urine reveals the presence of blood; it may result from an injury, ulceration, tumours or stones in the bladder. The bleeding occurs as trickling or as clots preceding the passage of urine. Kidney disorders may give rise to the condition. The pain which sometimes accompanies the disease may be relieved by the application of heat.

Hæmoglobin, the substance giving blood of vertebrates, the red colour to the blood of vertebrates, consisting of proteins and iron compounds; its function in the blood is the carrying of oxygen from the lungs to the tissues of the body.

Hæmophilia, or *Bleeder's Disease*, a peculiar condition of the blood found in certain families and resulting in abnormal slowness in coagulating or clotting. As a consequence a slight injury may be accompanied by dangerous or even fatal hæmorrhage. The condition is hereditary, and is transmitted through the female side of the family, though confined almost entirely to the male members. Certain royal families of Europe have suffered from this complaint. Persistent bleeding is the only sign of the disease.

Hæmorrhage, a term in medicine for bleeding. When the blood proceeds from an artery it issues in jets with the same frequency as the pulse. If the blood flows from a vein its colour is scarlet, and the stream is continuous and steady. Another form of bleeding, capillary or oozing, often occurs in the nose, and is difficult to stop owing to inaccessibility of the source.

Hæmorrhage from different parts of the body is known under such names as hæmoptysis (spitting of blood, as in consumption), hæmatemesis (vomiting of blood, as in acute gastritis), hæmaturia (q.v.), epistaxis (bleeding from the nose), etc. Bleeding during pregnancy and parturition is known as accidental post-parturient hæmorrhage.

Treatment varies with the kind of hæmorrhage, but generally bleeding from a severed artery needs pressure on the bleeding artery between the wound and the heart. A tight bandage applied by turning it with a stick, called a tourniquet, is usually successful. In venous bleeding the bleeding part should be raised and pressure applied to it. The application of cold bandages often assists coagulation, and perchloride of iron and suprarenal extract are sometimes employed.

Hafiz (real name Mohammed Shams-ed-Din), the great lyric poet of Persia, born in Shiraz, where he spent his life. His poetry is of a sensuous character, though his images are often interpreted in a super-sensuous or mystical sense; Goethe composed a series of lyrics in imitation. (1320-1391).

Hafnium, a metallic chemical element named in honour of Copenhagen (Latin *Hafnia*). It belongs to the same group as titanium, zirconium and thorium. Symbol Hf. Atomic number 72, atomic weight 178.6. Alloyed with tungsten, it finds some application in filaments for electric lamps.

Hagar, Sarah's maid, of Egyptian birth, the mother of Ishmael and of the Ishmaelites.

Hagen, town in Prussian Westphalia, Germany, 30 m. E. of Düsseldorf; engaged in textile and metal industries, brewing, etc. Pop. 148,000.

Hagen, Walter, American golfer; born at Rochester, New York. Won: U.S.A. open championships, 1914, 1919, 1921 and 1924-1927; U.S.A. professional championship, 1924; British open championship, 1922, 1924, 1928, 1929; Belgian open championship, 1924; Canadian open championship, 1931. (1893-).

Hag-fish, general name for a family of eel-shaped, bottom-

dwelling sea fishes of the family Myxiniidae. The Common Hag-fish (*Myxine glutinosa*, so named because of the way the skin secretes glutinous slime) is found off the N. Atlantic and British coasts. They attack eel, haddock and other fish by boring into them and devouring the flesh.

Haggai, one of the Hebrew prophets of the Restoration (of Jerusalem and the Temple) after the Captivity. His book is a record of the prophecies he delivered in connection with the rebuilding of the Temple and its dedication in 516 B.C.

Haggard, Sir Henry Rider, born in Norfolk; after civil and military service in Natal and the Transvaal, adopted the profession of literature; first rose into popularity in 1885 by the publication of *King Solomon's Mines*, the promise of which was sustained in a measure by a series of subsequent novels beginning with *She* in 1887. (1856-1925).

Haggis, a Scottish dish, composed of the organs of a sheep, chopped lungs, heart and liver of a sheep, mixed with suet and oatmeal, seasoned with onions, pepper, salt, etc., and boiled in a sheep's stomach.

Hagiographa, the third division of scripture, including the books of Job, Psalms, Proverbs, Ecclesiastes, Canticles, Ruth, Lamentations, Esther, Daniel, Chronicles, Ezra and Nehemiah.

Hagiology, the branch of literature of saints and martyrs. The most famous ancient hagiology of the Western Church is the *Legenda Aurea*, or *Golden Legend*. In the Greek Church such collections are called menologies.

Hague, The, the capital of the Netherlands, lands, 15 m. NW. of Rotterdam and 2 m. from the North Sea; is handsomely laid out with stately buildings, statues, and winding canals beautifully fringed with lindens and spanned by many bridges; has a fine picture-gallery, a royal library (300,000 vols.), an ancient castle, palace and a Gothic church of the 14th Century; industries embrace cannon-foundries, copper and lead smelting, printing, etc. It is connected by tramway with Scheveningen, a fashionable watering-place on the coast. It became famous for its conventions and peace conferences in the early years of this century; in 1899 the International Court of Arbitration was established there, and the town has also a magnificent Palace of Peace. Pop. 477,000.

Hague Tribunal, the outcome of conferences held at the Hague in 1899 and 1907 which met to find some basis upon which the 26 member countries might reduce armaments and to consider an agreement for settling international disputes by arbitration. The Tribunal takes the form of a permanent panel of judges before whom cases for arbitration are heard.

Hahnemann, Samuel, a German of Homeopathy (q.v.), born in Meissen; established himself in practice in Dresden on orthodox lines and enjoyed a high reputation, but retired to revise the whole system of medicine in vogue, of which he had begun to entertain misgivings, and by various researches and experiments came to the conclusion that the true principle of the healing art was *similia similibus curantur*, "like things are cured by like," which he announced to the medical world in 1796, and on which he proceeded to practise first in Leipzig and finally in Paris, where he died. (1755-1843).

Haifa, or Khalfa, seaport of Palestine, 9 m. SW. of Acre, under Mount Carmel, with a good harbour, recently enlarged. It is served by railways, has a daily air service to Egypt, and is the terminus of a pipe-line from the Mosul oil-fields. Under Jewish leadership, industries are increasing rapidly; Egyptian cotton is grown nearby, and there are soap and cement works. Pop. 80,000.

Haig (Sir Douglas Haig), first Earl of Bessersay, British general. Taking a commission in the 7th Hussars in 1885, he served in the Sudan and in the Boer War, where he was chief-of-staff to French. In 1914 he went to France with the British Expeditionary Force in command of the 1st Army Corps, and in Jan. 1915, was given command of the 1st Army. He succeeded French in command of the British forces on the Western front in Dec. 1915, working first with Joffre, then with Nivelle, and in 1918, when the German offensive was launched, he was nearly retired owing to differences with the Government. Foch was made supreme general of the Allied forces, and with Haig giving him loyal support the war was ended in

HAG-FISH
(with detail of head)

the autumn with an attack on the Hindenburg line. He was raised to the peerage in 1919, founded the British Legion, and devoted the rest of his life to the welfare of ex-servicemen. (1861-1928).

Haile Selassie (originally *Ras Tafari Makonnen*), extruded Emperor of Abyssinia, great-nephew of Menelik, was regent for the Empress Zauditu from 1917, and on her death in 1930 was crowned Emperor with costly splendour, after quelling a serious reactionary revolt. In 1935 Italy overran his country and annexed it, and the Emperor fled, henceforth residing in Europe. (1891-).

Haileybury College, 2 m. SE. England; founded in 1806 by the East India Company as a training institution for their cadets, and was so used till 1858, when the company ceased to exist; in 1862 it was converted into a public school.

Hailsham (Sir Douglas Hogg), first Viscount, British politician, diplomat and lawyer. Son of Quintin Hogg, founder of Regent Street Polytechnic; educated at Eton; trained for the Bar and became a K.C. in 1917. Entered Parliament as a Conservative M.P. in 1922 and was Attorney-General, 1922-1924 and 1924-1928; knighted 1922; created a Baron 1928 and appointed Lord Chancellor 1928-1929 and 1935-1938; made a Viscount in 1929. Secretary of State for War and Leader of the House of Lords, 1931-1935. Lord High Chancellor, 1935-1938. Editor of a new edition of *Halsbury's Laws of England*. (1872-).

Hainan, an island of China, in the Gulf of Tonking and the China Sea, 15 m. S. of the mainland; agriculture is the staple industry. Area 16,000 sq. m. Pop. 3,000,000.

Hainaut, or *Hainault*, a southern province of Belgium, bordering on France, between W. Flanders and Namur; the N. and W. is occupied by fertile plains; the Forest of Ardennes extends into the S., where also are the richest coalfields of Belgium; iron and lead are worked also; the chief rivers are the Scheldt and Sambre; textiles, porcelain and iron goods are manufactured; Mons is the capital. Area 1,436 sq. m. Pop. 1,260,000.

Hair and Hair-dressing.

Hair is the fine, thread-like substance which forms the covering of the skin in animals of the order Mammalia, corresponding to feathers in birds and scales in fish. It varies from the wool of the sheep to the bristles of the hog and the quills of the porcupine.

Each hair consists of a shaft and a root, and the colour is due to pigment granules in the hair-cells. Connected with the hair are glands which produce an oil which lubricates the skin in addition to the hair. Baldness is caused by atrophy or exhaustion of the papilla. Diseases of the hair include plica, polonica, ringworm and alopecia.

The hair of horses, goats, hogs, etc., is used in manufacturing upholstery, clothing, brushes, etc., while human hair, most of which comes from France, Germany and Italy, has some commercial value for wig-making. Differences in structure and appearance are racial. N. Europeans have fair, curly or smooth hair; negroes crisp, short, woolly and very black; Mongols and Indians crinkly black.

Hair-dressing has been an art since ancient times, and striking fashions are observed even among savage and primitive races. Feathers and plumes are often employed by them for hair adornment. In the 18th Century in European countries hair-dressing reached the height of extravagance, especially with ladies. Elaborate erections were built on frames, while pearls, beads and other jewels were lavishly used.

The absurdities of the Georgian fashions disappeared with the Victorian age, and modern hair-dressing is confined most often to waving and cutting, according to the type of coiffure desired, a phenomenon of the present day being the rarity of long hair among women, while establishments for "permanent-waving" and hair-treatment by experts have sprung up everywhere.

Men's hair-dressing has varied little in fashion during the past fifty years, except that the "quiff" once popular among soldiers and the working classes, a sort of forelock plastered upon the forehead, has now almost disappeared. In Cavalier days the hair was worn upon the shoulders, until the Restoration, when the powdered perukes of France were copied. In Georgian times men's hair was tied in a knot at the nape of the neck and powdered.

Haiti (*Hispaniola* or *Santo Domingo*), next to Cuba the largest of the W. Indian Is., in the group of the Greater Antilles, lying midway between Cuba on the W. and Puerto Rico on the E.; its area, somewhat larger than Scotland, is apportioned between the negro Republic of Haiti in the E., over which the United States held a protectorate from 1816 to 1934, and the mulatto Dominican Republic (q.v.) in the W.; the island is mountainous, and forests of valuable timber abound; a warm, moist climate favours rice, cotton, etc., and minerals are plentiful; the language spoken is a corrupt French; Port-au-Prince and San Domingo are the chief towns. Discovered in 1492 by Columbus, the island was soon denuded of its aboriginals, then peopled by imported negroes, joined latterly by French buccaneers; in 1697 the island was ceded to France, but in 1791, under Toussaint l'Ouverture (q.v.), the blacks, after a bloody revolution, swept the island clear of Europeans; both Republics are governed under highly centralised constitutions of the usual S. American type. Area 29,500 sq. m. Pop. (Haiti) 2,500,000; (Santo Domingo) 1,480,000.

Hake (*Merluccius vulgaris*), a carnivorous fish of the cod (*Gadidae*) family,

which feeds on herrings, pilchards, etc. It has a flattened head, deeply cleft mouth with long, sharp teeth, two dorsal fins (one short and one long) and one long anal fin. It is found in the Mediterranean and Northern seas. The flesh is white and flaky, and, though somewhat coarse, is one of our chief edible fish foods.

HAKE

Hakluyt, Richard, English author; became chaplain to the English embassy in Paris. His principal work, published in 1589, *Principal Navigations, Voyages, and Discoveries of the English Nation by Land and Sea*, a most important collection of contemporary travel narratives. (1552-1616).

Hakodate, port in Yezo, Japan, with a large harbour and considerable export trade. Pop. 207,500.

Halberd, or *Halbert*, a weapon much used in the 16th Century, consisting of a pole surmounted with a double-edged steel point, near the head of which was a cross-piece of steel shaped like an axe with a spike or hook at the other side.

Halberstadt, a town in Prussian Saxony, 30 m. SW. of Magdeburg; the 13th-Century cathedral is a fine specimen of Pointed Gothic, and the Church of Our Lady, a 13th-Century structure, is in the Byzantine style; its industries embrace gloves, cigars, machines and sugar. Pop. 50,000.

Halcyon Days, days of peace, happiness and prosperity, properly the seven days before and the seven after the winter Solstice, during which the halcyon, or kingfisher, is fabled to be breeding.

Haldane, John Burdon Sanderson, biologist, son of John Scott Haldane, Professor of Mining Research at Birmingham University (1880-1936), and nephew of Viscount Haldane. Educated at Oxford Preparatory School, at Eton, and at New College, Oxford, of which he was Fellow, 1919-1922. Served in Black Watch, 1913-1919, wounded twice, became captain. Reader in Biochemistry, Cambridge University, 1922-1932; Fullerian Professor of Physiology, Royal Institution, 1930-1932; President, (Genetical Society, 1932-1936. Wrote *Callivivus, a Defence of Chemical Warfare*, 1925; *Animal Biology* (with Julian Huxley), 1927; *Fact and Faith*, 1934. (1892-).

Haldane, Richard Burdon Haldane, first Viscount, British statesman. The son of a Scottish lawyer, he was called to the Bar in 1879, became a Q.C. in 1890 and entered Parliament in 1888 as a Liberal. On Tariff Reform and Home Rule questions he took an independent line; but it was as a Liberal that he became Secretary for War in 1905. His work there was the creation of an Expeditionary Force, the substitution of the Territorial Force (re-modelled after the War as the Territorial Army) for the old Volunteers and militia, and the formation of a General Staff on the lines recommended by the Esher Committee. In 1912 he became Lord Chancellor, but retired on the formation of the Liberal-Unionist Coalition of 1915. His ill-starred allusion to Germany as his "spiritual home" brought unmerited obloquy upon him, and after the war he transferred his political allegiance to the Labour Party. He had a reputation as a philosopher, but was not, in this sphere, a constructive thinker so much as a notable interpreter of Hegelian metaphysics. (1856-1928).

Hale, George Ellery, American astronomer, director of the Mount Wilson observatory; carried out much research in all branches of astronomy and astrophysics. (1868-).

Halesowen, market town of Worcestershire, England, on the R. Stour, 6½ m. from Birmingham. There are iron and steel works, and metal goods are made. Pop. 32,000.

Halévy, Jacques François Fromental, a French operatic composer, born in Paris; became a professor at the Conservatoire; wrote a large number of operas, of which *La Juive* and *L'Éclair* were the best, and enjoyed a European reputation. (1799-1862).

Halévy, Ludovic, French playwright and novelist, born in Paris; author mainly of light plays and comedies, among the former *Orphée aux Enfers*, produced successfully in London in 1811; the best known of his novels is *L'Abbé Constantin*. (1834-1908).

Halibut, or Holibut (*Hippoglossus vul-*

flat-fish (Pleuronectidae family). It is found in Northern waters (Iceland, Greenland, Norway, Scotland and the North Sea) on both coasts of the Atlantic, and has a very high food value, the oil from its liver having twenty times the

HALIBUT

vitamin value of cod-liver

oil. The fish may reach 10 ft. in length and 300 lb. in weight. Both eyes are on the right side of the head.

Halicarnassus, chief city of Caria, on the sea-coast opposite the island of Cos, the birthplace of Herodotus; celebrated for the tomb of Mausolus, called the Mausoleum.

Halidon Hill, an eminence in North-Tweed, 2 m. from Berwick, the scene of a bloody battle in 1333 between the English and Scots, the latter being defeated.

Halifax, (1) a manufacturing town, in the W. Riding of Yorkshire, England, situated amid hills on the Hebble, 43 m. SW. of York; the staple industries are carpet and worsted manufacturing, the carpet works being the largest in the world; cotton, merinos and damasks are also woven and dyed. Pop. 98,000. (2) Capital of Nova Scotia, and the chief port in E. Canada; is situated near the head of Chebucto Bay, which forms a magnificent harbour; a citadel and masked batteries defend the town; it is an important railway and shipping terminus and coaling station; it is the seat of Dalhousie University. Pop. 58,000.

Halifax, Charles Lindley Wood, second Viscount, the British peer who for fifty years led the High Church party and was a prime mover in the Malines conversations (q.v.) for restoring unity with Rome. (1839-1934).

Halifax, Charles Montague, Earl of, a celebrated Whig statesman, born in Horton, Northamptonshire. In 1688 he entered the Convention Parliament, and his financial ability soon brought him to the front. In 1692 he brought forward a scheme for a National Debt, and two years later founded the Bank of England in accordance with the scheme of William Paterson. In the same year he became Chancellor of the Exchequer, and in 1697 Prime Minister. In conjunction with Sir Isaac Newton, Master of the Mint, he carried through a re-coinage, and introduced Exchequer Bills. In 1699 he was created a Baron, but subsequently was made the victim of an unsuccessful impeachment. With the accession of George I. he became again Prime Minister, and received an earldom. (1661-1715).

Halifax, Edward Frederick Lindley, politician, son of the second Viscount Halifax, he was Minister of Agriculture in the Conservative Government of 1924, and succeeded Lord Reading as Viceroy of India in 1926, being raised to the peerage as Baron Irwin; on his return in 1931 was made K.G., and in 1932 President of the Board of Education; succeeded to the earldom in 1934, and was later Secretary for War, 1935; Lord President of the Council, 1937; and Foreign Secretary, 1938. (1881-).

Halifax, George Savile, Marquis of, a changing politics of Charles II.'s and James II.'s reigns, whose apparently vacillating conduct won him the epithet of "Trimmer." An orator of brilliant powers imbued with patriotic motives, he was never a reliable party man. On the abdication of James II. he, as President of the Convention Parliament, proffered the crown to William of Orange. He rose to be a marquis in 1682. His writings, chief of which is *Character of a Trimmer* (practically a defence of his own life), are marked by a pungent wit and graceful persuasiveness. (c. 1630-1695).

Hall, Sir Edward Marshall, English criminal lawyer, called to the Bar in 1883; from 1900 till his death took part in nearly every murder trial of importance. For some years he sat in the House of Commons, and was knighted in 1917. (1856-1927).

Hallam, Henry, English historian, born Bar; was the author of three great works, *The State of Europe during the Middle Ages*, published in 1818; *The Constitutional History of England from the Accession of Henry VII. to the Death of George II.*, published in 1827; and the *Introduction to the Literature of Europe in the Fifteenth, Sixteenth and Seventeenth Centuries*, published in 1838. The death of his son, Arthur Henry Hallam, is the subject of Tennyson's *In Memoriam*. (1777-1859).

Halle, city in Prussian Saxony, on the city in Prussian Saxony, on the Pop. 209,000.

Hallé, Sir Charles, an eminent pianist, born in Hagen, in Westphalia. In 1848 he came to England, with a reputation already gained at Paris, and settled down in Manchester. His orchestra did a great work in popularising classical music and educating public taste. In 1888 he was knighted. (1819-1895). His wife, née Wilhelmine Néruda, a violinist of rare talent, born in Brünn, appeared first in Vienna when only seven years old. In 1864 she married Normann, a Swedish composer, and in 1885 became the wife of Hallé. (1839-1911).

Hallelujah ("Praise Jehovah"), an ascription of praise to God, occurring at the commencement of many psalms. In Jewish synagogues Psalms 113-118, in which it frequently occurs, are sung on the night of the Passover, and are called the "Hallel of Egypt." It is sometimes spelt Alleluia.

Halley, Edmund, astronomer and mathematician, born near London; determined the rotation of the sun from the spots on its surface, and the position of 350 stars; discovered in 1680 the great comet called after his name; was entrusted by Sir Isaac Newton with the publication of his *Principia*; made researches on the orbits of comets, and in 1719 was appointed astronomer-royal. (1656-1742).

Hall-mark, an official mark or attestation of the genuineness of gold and silver articles by means of which the quality (standard of precious metal contained), country of origin, maker and date of manufacture may be recognised. Hall-marks include the King's mark, the lion; the maker's mark, the initial letter of the maker's name; the date mark, in the form of a shield; and the standard mark, denoting the proportions of true metal and alloy.

Hallowe'en, Oct. 31, the eve of All Saints' Day, on which occasion in rural Britain and many other countries, various superstitious ceremonies were, and sometimes still are, performed, to gain information about future events, matrimonial chances, and so on.

Hallucination, belief in the existence of things which have no real existence. It differs from illusion, which consists in wrong interpretation of the sensory object. The sense most subject to hallucination is hearing, followed by sight, smell, touch and taste, in that order. It may be caused by some experience which intensifies the emotions, or at times when the repressive faculties are relaxed. The simplest forms are tingling of the ears and the sounds of musical instruments.

Halo, a luminous ring such as is sometimes seen round the sun or moon, formed by the refraction of light by ice crystals in the atmosphere; also the ring of light painted around the heads of saints, etc., in religious works of art.

Halogens, a well-defined group of non-metallic chemical elements, comprising fluorine, chlorine, bromine and iodine. The discovery of a fifth member of the group, astatine, was reported from America in 1931, but has not been confirmed. The halogens (salt producers) are so called because they combine readily with metals to form salts, the halides. The group is characterised by considerable chemical activity, and by the fact that its gaseous members (fluorine and chlorine) are coloured; bromine is a dark red liquid and iodine a lustrous-black, crystalline solid.

Hals, Franz, Dutch portrait painter, born in Antwerp; is considered to be the founder of the Dutch school of genre painting. His portraits, of which the "Laughing Cavalier" is the most famous, are full of life and vigour. Vandyck alone among his contemporaries was considered his superior. (1580-1666).

Halsbury, Hardinge Stanley Gifford, Earl, Lord Chancellor of England, born in London, called to the Bar in 1850, he was Solicitor-General in the last Disraeli Government; entered Parliament in 1877, and in 1885 was raised to the peerage and made Lord Chancellor, a position he held in successive Conservative Governments. (1825-1921).

Ham, a son of Noah, the traditional ancestor of the African and other black races.

Ham, the thigh of a hog cured by smoking and salting and prepared for human consumption. Local processes of curing are many, and such well-known varieties as York, Wiltshire and Bradenham hams are differentiated by method of preparation, which in some cases is a process occupying several months.

Hamadan, town in Iran, at the foot of Mount Elwend, 160 m. SW. of Teheran, believed to be on the site of the ancient Ecbatana; carpets are made. Pop. 99,000.

Hamadryad, in classical mythology a wood-nymph identified with a particular tree, with which she was born and died.

Hamadryad, the giant cobra of India, also found in southern

China and the Philippines; sometimes attains a length of 12 ft., is highly venomous, and eats other reptiles; yellowish in colour, with black banded markings.

HAMADRYAD

Hamburg, German city-state which includes, besides the town of that name and its suburbs, Bergedorf and Cuxhaven. The city, the chief emporium of German commerce, is on the Elbe, 75 m. from the North Sea, and 177 m. NW. of Berlin. It was founded by Charlemagne in 808, and has grown to be the third largest seaport in the world, its harbour having an area of 1,260 acres. The war diminished its trade and commercial importance, but they are now returning to the pre-war level. The old town is intersected by canals and is separated by the ancient ramparts from the modern portion, built since 1843, when a serious fire destroyed many old buildings, and spaciouly laid out. There are many fine buildings, including the Rathaus (town hall), and the town library, containing 400,000 volumes. A University was formed in 1919. The many industries include shipbuilding, flour-milling, sugar-refining, brewing and the making of chemicals, cigars, furniture, musical and optical instru-

ments, and machinery. Pop. (state) 1,218,000; (city) 1,139,000.

Hameln, old Prussian town and fortress situated at the junction of the Hamel with the Weser, 25 m. SW. of Hanover city; associated with the legend of the Pied Piper; a fine chain bridge spans the Weser; there are prosperous iron, paper, and leather works, breweries, etc. Pop. 26,000.

Hamann, *Barth*, general, held Sicily against the Romans for six years; concluded a peace with them and ended the First Punic War; killed while seeking to invade Italy via Spain and the Alps; before he died made his son Hannibal (q.v.) swear upon the altar eternal enmity to Rome. (d. 229 B.C.).

Hamilton, a town of Lanarkshire, Scotland, on the Clyde, 10 m. SE. of Glasgow; mining is the chief industry. Pop. 38,000. Also a city of Canada, on Burlington Bay, at the W. end of Lake Ontario, 40 m. SW. of Toronto; seat of McMaster University, and has manufactures of iron, cotton and woollen goods. Pop. 156,000. Also the chief town of Bermuda, British W. Indies; on Great Bermuda or Main I. Pop. 4,000. Also a town of New Zealand, in North I., 85 m. SE. of Auckland, in a dairy-farming district. Pop. 20,000.

Hamilton, Alexander, American soldier and statesman, born in West Indies; entered the American army, fought in the War of Independence, became commander-in-chief, represented New York State in Congress, contributed by his essays to the favourable reception of the federal constitution, and under it did good service on behalf of his country; was mortally wounded in a duel. (1767-1804).

Hamilton, Emma, Lady, née Amy Ness, Cheshire, a labourer's daughter; appeared in London as an actress; became the wife of Sir Wm. Hamilton in 1791; her intimacy with Lord Nelson became famous.

Hamilton, General. He entered the Gordon Highlanders in 1875, served in the Afghan War of 1878, the Boer War of 1881 in the Nile, Burma, Chitral and Tirah campaigns, and the South African War, in which he was chief-of-staff to Kitchener. In 1915 he was in command at Gallipoli and was censured for the failure of the campaign; he retired in 1920; author of *A Gallipoli Diary* and other books. (1853-).

Hamilton, Patrick, a Scottish martyr, born in Kinross, Linlithgowshire. Returning from his studies at Paris and Louvain he came to St. Andrews University, where his Lutheran sympathies involved him in trouble. He escaped to Wittenberg, the home of Luther, and then settled in Marburg, but returned to Scotland and in 1598 was burned at the stake in St. Andrews for heresy. (c. 1504-1598).

Hamilton, Sir William, distinguished Scottish philosopher, born in Glasgow; studied there and in Oxford; in 1836 became professor of Logic and Metaphysics in Edinburgh University, exercising a great influence in the domain of philosophic speculation; his lectures were published after his death; his system was attacked by John Stuart Mill. (1788-1856).

Hamites, the supposed descendants of Ham, a general name for many races living in N. Africa, including the ancient Egyptians and their modern descendants, the Copts, Berbers, Tuaregs, Kabyles, Bejas, Gallas, Somalis, Danakil, etc. The race is related to the early Mediterraneans and the Arabs.

Hammer, any instrument with a heavy head of iron or other material intended for striking. Hammers of various forms are used in many trades.

Hammer, the modern steam-hammer, first invented by James Nasmyth (q.v.), is but the logical development of the stone tied to a stick which was doubtless the first hammer. In the Middle Ages hammers were used as weapons in war. By analogy the name is applied to many other striking instruments, such as the element in a firearm which by percussion causes the explosion, the striker of a clock or bell, and the apparatus which strikes the keys in such musical instruments as the piano.

Hammer, Throwing the, an athletic exercise popular in England, and especially Scotland and Ireland, for many centuries. The implement, formerly a hammer, consists nowadays of an iron ball attached to a chain. The ball weighs about 16 lb., the distance it is hurled depending largely upon the speed and strength with which it is swung in a circle round the thrower's head. World's record, (16 lb.): 189 feet 6½ ins., P. Ryan, U.S.A. in 1934.

Hammerfest, the most northerly town in Europe, situated on the barren island of Kvaløya, is the port of the Norwegian province of Finnmark; fishing is the staple industry. During two months in summer the sun never sets.

Hammer-head, a shark (*Sphyrna zygaena*), found in nearly all seas, including occasionally British waters (growing to 15 ft. in length), whose flat, square-sided head resembles a hammer in shape. The other species in the same genus are sometimes referred to generically as Hammer-heads, though the actual shape of the head varies.

Hammerhead, formerly an exhibition and athletic ground and now a dog-racing track, and the large prison at Wormwood Scrubbs. William Morris was a resident here for some years. Pop. 127,700.

Hammond, Walter Ragsdale, cricketer, for Gloucester from 1920. Scored 12 centuries in county matches, 1927. First played in Tests in Australia 1928. In 1932, in New Zealand Test, made 336 not out. Has played in S. African Test Matches. An outstanding batsman and fielder and a first-rate change bowler; captain of English Test team against Australia in England, 1938. (1905-).

Hammurabi, a Babylonian king, author of a famous code of laws, and unifier of the Babylonian Empire; identified with the Anuraph, King of Shinar, of Genesis. (c. 2350 B.C.).

Hampden, John, English statesman, patriot, and poet, cousin of Oliver Cromwell, born in London; passed through Oxford and studied law at the Inner Temple; in 1621 entered Parliament, joining the Opposition. He came first into conflict with the king by refusing to contribute to a general loan levied by Charles, and subsequently became famous by his resistance to the ship-money tax. He played a prominent part in the transactions of the Long Parliament; an attempt on Charles's part to seize Hampden

HAMPSHIRE

and four other members precipitated the Civil War. He took an active part in organising the Parliamentary forces, and proved himself a brave and skilful general in the field. He fell mortally wounded while opposing Prince Rupert in a skirmish at Chalgrove Field. (1594-1643).

Hampshire, or abbreviated, **Hants.**, a county of S. England, fronting the English Channel between Dorset on the W. and Sussex on the E. The Isle of Wight, on the S., is separated from the mainland by the Solent and Spithead.

In the N.E. are the "rolling Downs," affording excellent sheep pasturage, while the SW. is largely occupied by the New Forest. The Test, Itchen and Avon are the principal rivers, flowing to the S. Besides the usual cereals, hops are raised, while Hampshire bacon and honey are celebrated. Winchester is the county town, while Southampton, Portsmouth and Gosport are the chief trading and manufacturing centres. Area (including the Isle of Wight) 1,650 sq. m. Pop. 1,102,800.

Hampshire, *The*, a British cruiser, Kitchener (g.v.) was travelling on a military mission to Russia when, on June 6, 1916, it was sunk off the Scottish coast with the loss of all on board.

Hampstead, a municipal and parliamentary London borough, 4 m. NW. of the City; is a popular place of resort with Londoners, and contains many fine suburban residences. Beyond the old village is the celebrated Heath. Many literary associations are connected with the place. The Kit-Cat Club of Steele and Addison's time is now a private house on the Heath; here lived Keats, Leigh Hunt, Hazlitt, Romney and Constable. Pop. 89,000.

Hampton, a village of Middlesex, 15 m. SW. of London, now included in Twickenham. In the vicinity is Hampton Court Palace, a royal residence down to George II.'s time, built originally by Wolsey, who presented it to Henry VIII. In William III.'s time considerable alterations were made under the guidance of Wren. It has a fine picture-gallery and gardens, and is now occupied by persons of good family in reduced circumstances. The Hampton Court Conference to settle ecclesiastical differences took place here in 1604 under the presidency of James I., the decisions proving unsatisfactory to its Puritan members. It was here, too, at the suggestion of Dr. Reynolds, that the authorised version of the Bible was undertaken. Pop. 13,000.

Hamster, a genus of rodents of the Muridae family, of which there are nine species. The common hamster is found in Europe and Asia. The body is stout, with glossy fur, and the legs are short. It lives on roots, grain and fruit, and is a pest to farmers.

COMMON HAMSTER

Hamsun, *Knut*, Norwegian writer and farmer, winner of the Nobel Prize for Literature in 1920. *Hunger, Pain and The Growth of the Soil*, are his best-known works. (1859-).

Han, river of China, tributary of the Yangtze, which it joins at Hankow. It crosses the provinces of Shensi and Hupeh. Length 1,300 m.

Han, a Chinese dynasty which was founded by Liu Pang in 202 B.C., and endured until 220 A.D. It reigned during a period when China extended her possessions at the expense of the Hsiung-nu or Huns and other western

HANGAR

tribes, and was fruitful in literary work, especially history. The introduction of Buddhism into China dates from this era.

Hanau, a Prussian town in Hesse-Nassau, at the junction of the Kinzig and the Main, 11 m. N.E. of Frankfurt; celebrated for its jewellery and gold and silver work, and otherwise a busy manufacturing town. It was the birthplace of the brothers Grimm. Pop. 38,000.

Hand, the principal human organ of touch and prehension, situated at the extremity of the arm. It consists of four fingers and a thumb, with fourteen bones called phalanges, the fingers having three each and the thumb two. These bones connect with those of the palm. The chief muscles which control the hand movements are the flexors and the extensors. The functions of touch depend upon the anterior or palmar face and the nervous papillae at the ends of the fingers. Man has acquired extraordinary dexterity with this organ, especially in the manipulation of delicate tools and instruments. In the ape the hand is an organ of locomotion.

Hand, unit of length (equal to horse).

Handcuffs, a device consisting of two metal rings, connected by a short chain and capable of being fastened by a lock and key, with which suspects and criminals are secured. Until recently, in removing prisoners from one prison to another, it was the practice to handcuff each man and connect the various pairs of handcuffs to a long chain, thus making the escape of any single prisoner impossible.

Händel, *George Frederick*, musical composer, born in Halle; distinguished for his musical ability from his earliest years; was sent to Berlin to study when he was 14; began his musical career as a violinist at Hamburg in 1703; produced his first opera in 1704; spent six years in Italy, devoting himself to his profession the while; came, on invitation, to England in 1710, where, being well received, he resolved to remain, and where, for nearly fifty years, he added to his fame by his diligence as a composer. He produced a number of operas and oratorios. Among the latter may be noted *Saul*, *Samson* and *Judas Maccabeus*, and pre-eminently the *Messiah*, his masterpiece. (1685-1759).

GEORGE HÄNDEL

Handfasting, a former Scottish marriage, by which a man and woman pledged themselves to each other for a year by joining hands, the relation being dissoluble at the end of that time if no offspring had been born or was anticipated.

Handicap, a system of rendering the chances of victory in a contest more or less equal by giving the less well equipped contestant certain advantages. Most games and sports allow for its use; in horse-racing, for example, the best horses have to carry extra weight in proportion to their abilities; in running sports handicapping is based on the giving of a "start" a few yards in front of the best competitor, who starts at "scratch." In golf the handicap depends upon the number of strokes which a player generally requires to complete a course, and the handicap number is subtracted from his actual score.

Hangar, a large shed erected for the purpose of housing airships, usually constructed of steel framing and

covered with sheets of galvanised iron. That at Howden, Yorkshire, covers over seven acres.

Hangchow, a Chinese town, a treaty-port since the 1894 war with Japan; is at the mouth of the Tsientang at the entrance of the Imperial Canal, 110 m. SW. of Shanghai; it is an important literary, religious and commercial centre; has flourishing silk factories, and is noted for its gold and silver ware. Pop. 507,000.

Hanging Gardens (of Babylon), one of the seven wonders of the world, had an area of four acres, formed a square, and were a series of terraces supported by pillars sloping upwards like a pyramid and seeming to hang in air. They are ascribed to Semiramis or, by others, to Nebuchadnezzar.

Hang-nest, a large family of birds they correspond to the Old-World starlings and weavers. They vary considerably in habits, some being polygamous and parasitic, like Cuckoos, and some breeding in colonies, while others build elaborate nests hanging from the branch of a tree, and accessible by an entrance near the bottom. There are some fine song birds in the family, including the Bobolink and the Baltimore Oriole.

Hankey, Sir Maurice Paschal Aiers, G.C.B.; Secretary to Committee of Imperial Defence from 1912, to Cabinet from 1920; Clerk to Privy Council from 1923; son of Robert Aiers Hankey of Australia and Brighton. Educated at Rugby; served in marine artillery, 1895-1901; then entered naval intelligence department. Knighted 1916. Secretary to War Cabinet. British Secretary to Peace Conference and other conferences. In 1938 retired from his Secretaryship to become a Director of the Suez Canal. (1877-).

Hankow, a Chinese river-port, at the confluence of the Han and Yangtze Rs.; there is a considerable amount of shipping; tea is the principal article of export, and a large trade is carried on with the inland provinces. The foreign settlement was surrendered in 1927, and the town was one of the Japanese objectives in 1938, and suffered severely. Pop. 778,000.

Hanley, town, in the "Potteries," 18 m. N. of Stafford; now part of Stoke-on-Trent; with collieries and ironworks in the neighbourhood. Pop. (parliamentary division) 78,000.

Hannay, Rev. James Owen, British novelist who writes under the pen name of George A. Birmingham. Made a canon of Dublin in 1912, he has written several novels, largely about Ireland, in a humorous vein, and also plays. (1865-).

Hannibal, great Carthaginian general, son of Hamilcar (q.v.); subjugated all Spain south of the Ebro by the capture of the city of Saguntum, which led to the outbreak of the Second Punic War and his leading his army through hostile territory over the Pyrenees and the Alps into Italy; defeated the Romans in succession at the Trebia, the Trebia and Lake Trasimene, extirpating the army sent against him; passed the Apennines and descended into Apulia, where, after being harassed by the tantalising policy of Fabius Maximus, he met the Romans at Cannae in 216 B.C. and inflicted on them a crushing defeat; later reverses ended in the evacuation of Italy and the transfer of the seat of war to Africa, where Hannibal was defeated by Scipio at Zama in 201 B.C. He afterwards joined Antiochus, King of Syria, who was at war with Rome, but on that monarch's defeat he fled to Prusias, King of Bithynia, where, when his surrender was demanded, he ended his life by taking poison. (247-183 B.C.).

U.E.

Hanoi, capital of French Indo-China, in Tonking, on the Red River, a fine modern town, with a European College and University. Brewing, distilling and cotton spinning are carried on. Pop. 129,000.

Hanover, province, formerly an independent kingdom; stretches N. from Westphalia to the North Sea, between Holland on the W. and Saxony on the E.; well watered by the Elbe, Weser and Ems. In the S. are the Harz Mts. For the rest the land is flat, and much of it is occupied by uncultivated moors. Agriculture and cattle-rearing are the chief industries, while the minerals of the Harz are extensively wrought. In 1714 George Ludwig, second Elector of Hanover, succeeded Anne on the English throne as her nearest Protestant kinsman, and till 1837 the dual rule was maintained, Hanover meanwhile in 1814 having been made a kingdom. In 1837 the Hanoverian crown passed to the Duke of Cumberland, Queen Victoria, as a woman, being ineligible. In 1866 the kingdom was conquered and annexed by Prussia. Area 14,975 sq. m. Pop. 3,368,000.

Hanover, the capital of the above province, is situated on the Leine, 78 m. SE. of Bremen. It consists of an old and a new portion. Its many fine buildings include the royal library (170,000 vols.), the Kestner Museum, several palaces and art-galleries, etc. It is the centre of the N. German railway system, and its many industries embrace iron-works, the manufacture of pianos, tobacco and linen. Pop. 444,000.

Hansard, record of the proceedings and debates in the British Parliament, taking its name from its former printer, Luke Hansard (d. 1828); now a Government publication.

Hanseatic League, a combination of towns in NW. Germany for mutual protection against the pirates of the Baltic and mutual defence of their liberties against the encroachments of neighbouring princes. It dates from 1241, and flourished for several centuries, its commerce being extended far and wide; numbered at one time 64 towns, and possessed fleets and armies, an exchequer and a government of its own. The League dwindled down during the Thirty Years' War to six cities, and finally to three, Hamburg, Lübeck and Bremen.

Hansom Cab, a two-wheeled horse vehicle in which the driver sits behind and over the passengers, the invention of Joseph Hansom about 1840.

HANSOM CAB

Hapsburg, or Habsburg, House of, a famous royal house which has played a leading part in the history of Continental Europe from its foundation in the 12th Century by Albert, Count of Hapsburg; was represented until the conclusion of the World War by the Imperial family of Austria. Representatives of this family wore the Imperial crown of the Holy Roman Empire for centuries. It takes its name from the castle of Hapsburg or Habichtsburg (Hawk's Tower), on the Aar, built by Werner, Bishop of Straßburg, in the 11th Century.

Hara-Kiri, called also the "happy once practised in Japan, but now almost obsolete, permitted to offenders of high rank to escape the indignity of a public execution; the nature of it may be gathered from the name, "a gash in the belly."

S

Harar, or **Harar**, town of Abyssinia (Italian East Africa), in the Galla country. The town is connected by railway with Djibouti, and is a trading centre. Coffee is grown. Pop. 40,000.

Harbin, town and treaty port of Manchuria (Manchukuo), on the Sungari R., an important junction on the Trans-Siberian Railway. Beet and flax are grown locally. Pop. 330,500.

Harbour, a sheet of water, protected from the wind and affording shelter for ships. Harbours may be artificial or natural. Natural harbours owe their status to the configuration of the shore, the movement of tides and currents and the depth of water available. Famous natural harbours are those of Rio de Janeiro, one of the largest in the world, New York, Southampton and Milford Haven. The mouths of rivers often afford harbours, but entrance is often confined to the deep central channel, and sometimes a "bar" is formed by the deposition of silt, needing constant deepening by dredgers. In artificial harbours—e.g., Dover, Takoradi—the natural advantages of the site are increased by breakwaters.

Naval harbours are mostly artificial, since few natural harbours can afford shelter for ships as well as dockyards for construction and repair. Harbours of refuge are those constructed only for the purpose of protection to shipping, especially on rocky or stormy coasts near shipping routes, and in some cases breakwaters are needed projecting to a great distance from the shore, and approaching each other to provide a suitable entrance. Commercial harbours require, as a rule, more comprehensive facilities. In addition to protection, docks are needed to maintain a uniform water level, and accommodation must be provided for the machinery required for loading and unloading cargo. Good warehousing room and plenty of quay acreage are also of importance. Small harbours are often equipped with "booms" of logs which serve to break the force of waves.

Harbour Grace, a seaport and the second town of Newfoundland, lies on the W. side of Conception Bay, 24 m. NW. of St. John's. Its commodious harbour is somewhat exposed. It is the seat of a Roman Catholic bishop, and has a cathedral and convent. Pop. 3,800.

Harburg, a prosperous Prussian seaport in Lüneburg, on the Elbe, 5 m. S. of Hamburg; its industries embrace rubber goods, oil, chemicals, etc.; is a favourite watering-place. Pop. (with Wilhelmsburg) 113,000.

Harcourt, Sir William Vernon, statesman, born, a clergyman's son, at Nuneham Park, Oxfordshire; educated at Cambridge, and in 1854 called to the Bar; Q.C. in 1866, and professor of International Law at Cambridge (1869-1887). He won considerable repute by his articles in the *Saturday Review* and his "Historious" letters to the *Times*, and in 1868 entered Parliament for Oxford as a Liberal. In 1873 he became Solicitor-General, and received a knighthood. He was a vigorous opponent of the Disraeli Government, and on the return of the Liberals to power in 1880 became Home Secretary. Under Gladstone in 1886 and 1892, he was Chancellor of the Exchequer. He staunchly supported Gladstone in his Home Rule policy; became leader of the Opposition in the House of Commons on Gladstone's retirement, ending in 1899 owing to a party split. 67-1904).

Hardanger Fiord, long, beautiful inlet, with many affluents, on the SW. coast of Norway. Length is 68 m. It is a popular tourist resort and is visited by cruising liners during the summer. Vik is at its head.

Hardicanute, King of England and Canute and his successor on the Danish throne; was King of England only in part till the death of his brother Harold, whom he survived only two years, but long enough to alienate his subjects by the re-imposition of the Danegeld. (c. 1019-1042).

Hardie, James Kair, British politician. He started as a Scottish miner, took to writing, and entered Parliament as Labour member for West Ham in 1892. He founded the Independent Labour Party, of which he was chairman for many years, in 1893, and for several years edited *The Labour Leader*. (1856-1915).

Harding, Warren Gamaliel, American politician. Elected to the Senate in 1915, he became President in 1921, at once embarking on a peace policy. He convened the Washington Conference (q.v.) in 1921. He died suddenly while on a speech-making tour of the States. (1865-1923).

Hardinge, Henry, Viscount, a distinguished soldier and Governor-General of India, born in Wrotham, Kent; joined the army in 1798, and served through the Peninsular and Waterloo campaigns, but, wounded at Liézy, he turned his attention to politics; was Secretary for War under Wellington, and twice Chief Secretary for Ireland. In 1844 he was appointed Governor-General of India, and later distinguished himself under Gough in the first Sikh War. A viscountcy and pension followed in 1845, and in 1852 he succeeded Wellington as Commander-in-Chief of the British army. (1785-1856).

Hardinge of Penshurst, Charles, first Baron, British diplomat and administrator: after diplomatic service in Persia and Russia served in the Foreign Office from 1903; was ambassador to Russia, 1904-1906; Permanent Foreign Under-Secretary, 1906-1910, when he became Viceroy of India, returning in 1916 to the Foreign Office, and being ambassador in Paris from 1920 to 1922. (1858-).

Hard Labour, a certain class of imprisonment, involving separate confinement and employment at some heavy task such as sack-making. After 28 days the severity of the condition is progressively lessened according to the behaviour of the prisoner. Sentences including hard labour may be inflicted either summarily or for indictable offences. Two years is the maximum hard labour sentence.

Hardness of Water. Water is said to be hard when it will not easily lather with soap. The hardness is due to the presence in the water of salts of calcium and/or magnesium, principally the bicarbonates and the sulphates; the calcium salts almost always predominate. When soap is added to hard water, a curdy precipitate of calcium (and/or magnesium) stearate is formed, the soap being destroyed and thus unable to effect its detergent action.

Hardness due to bicarbonates is "temporary," since it can be removed by bringing the water to the boil, the bicarbonates being decomposed and yielding an insoluble precipitate of the corresponding carbonate; such hardness is the cause of the "rocking" of hot-water pipes and the "furring" of kettles. The sulphates of calcium and magnesium cannot be removed by merely heating the water, and the hardness they cause is therefore known as "permanent."

Either kind of hardness may be removed by the addition of washing-soda or borax, or by means of the "base exchange" or zeolite process (as e.g., in the Permutit system), where the water is allowed to flow through a tube packed with artificial zeolite—i.e., sodium aluminium silicate. The calcium and

magnesium salts react with this substance to form insoluble silicates, which remain in the tube, and the water is thus softened. When the zeolite is exhausted it may be regenerated by soaking it in a strong solution of common salt. A moderate degree of hardness in drinking-water is beneficial.

Hardwár, a town of India, on the Ganges, 39 m. N.E. of Saharanpur, North-West Provinces; famous for its large annual influx of pilgrims seeking ablution in the holy river; a sacred festival held every twelfth year attracts some 300,000 persons. Pop. 31,000.

Hardwicke, Sir Cadric Webster, actor; born at Lye, Worcestershire; educated at Bridgnorth and Academy of Dramatic Art. First appearance, Lyceum, 1912. In Benson's company, 1913. In Shakespeare at Old Vic, 1914. Served in France, 1914-1921. In Birmingham Repertory Company, 1922. Has played parts at Malvern Festivals, including notable roles in Shaw plays, and in *The Barretts of Wimpole Street*. Knighted 1934. (1893-).

Hardwicke, Philip Yorke, first Earl of, Lord Chancellor, 1737-1756 (during which period he was crime mover in the Government, abolishing heritable jurisdictions and prohibiting the tarta in Scotland after 1745); was native of Dover, son of an attorney; Solicitor-General, 1720-1724; Attorney-General, 1724-1733; Lord Chief Justice of King's Bench, 1733-1737; Baron Hardwicke, 1733; Earl, 1754; systematised equity. (1690-1744).

Hardwood Trees, a name given to especially the oak, ash and the like. Ebony, walnut, maple, sycamore and beech are also hardwood trees and their timber is much used in the making of furniture. In Australia such woods as teak are termed hardwood. The name is also given in particular to the *Izora ferrea*, of the order Rubiaceae, found in the West Indies.

Hardy, Thomas, novelist and poet, born in Dorsetshire, with whose scenery he has made his readers familiar; trained as an architect, and followed that calling with distinction; first earned popularity in 1874 by his *Far from the Madding Crowd*, which was followed by, among others, *The Return of the Native*, *The Woodlanders* and *Tess of the D'Urbervilles*, the last in 1892. His best-known poem is *The Dynasts*. His ashes are buried in Westminster Abbey. His writing is pessimistic, exhibiting mankind as the plaything of fate. (1840-1928).

Hardy, Sir Thomas Masterman, a brave naval officer, whose name is associated with the closing scene of Nelson's life, born at Portsmouth, Dorsetshire. As a commander in the Battle of the Nile he greatly distinguished himself, and gained his post-commission to Nelson's flagship, the *Vanguard*. At Trafalgar he commanded the *Victory*, and subsequently brought Nelson's body to England. He received a baronetcy, and saw further service, eventually attaining to the rank of vice-admiral. (1769-1839).

Hare, a rodent quadruped of the family Leporidae. It has long ears and hind-legs, and is thus distinguishable from the rabbit. The upper lip is divided hence "hare-lip." They

occupy "forms" and do not burrow, exhibit great speed, and feed on grain, roots and the bark of young trees. They produce young several times a year. In habit they are nocturnal and solitary. The common hare is found through-

out Europe and parts of Asia. It is tawny red in colour, with a white belly, and is about 2 feet long.

Hare, Sir John (originally John Fairs), actor; born in Giggleswick, Yorkshire. In London studied acting under Henry Leigh Murray. First appeared in Liverpool, 1864, in *The Lyons Mail*. First London appearance, 1865, at the old Prince of Wales's, where, till 1874, he made a reputation in Robertson's comedies. Ran Court Theatre, 1875-1879. With Kendal at the St. James's 1879-1888. Rau the Garrick, 1889-1895. Knighted, 1907. (1844-1921).

Harebell, the popular name of the *Campanula rotundifolia*, a native of the British Isles, bearing small, bell-shaped flowers, usually blue, but occasionally white, growing among bracken and heather on open spaces and downland.

Harefield, village of Middlesex, England, 3 m. N. of Uxbridge. At a former Harefield Hall, Queen Elizabeth was entertained and Milton's *Arcades* was acted. Pop. 3,000.

Hare Lip, a malformation of the lip whereby a cleft, generally to one side of the median line of the upper lip, is formed. It can be cured by a slight operation during childhood. It is often accompanied by a cleft palate.

Harem, the apartment or suite of apartments in a Mohammedan house for the female inmates and their attendants, and the name given to the collective body of them.

Harewood, Henry George Charles Lascelles, sixth Earl of, eldest son of fifth Earl; educated at Eton and Sandhurst. A.D.C. to Governor-General of Canada, 1907-1911. Served in World War; wounded three times and awarded the D.S.O. Married Feb. 28, 1922, the Princess Royal, Victoria Alexandra Alice Mary, daughter of George V. Succeeded his father, 1929. (1852-).

Harfleur, a village in France with a strong fortress, 4 m. S. of Havre, taken by Henry V. in 1415, and retaken afterwards by both French and English, becoming finally French in 1450; was for a long time the principal French harbour on the Channel. Pop. 4,300.

Hargreaves, James, inventor of the spinning-jenny, probably born in Standhill, near Blackburn; was a poor and illiterate weaver when in 1760 he, in conjunction with Robert Peel, brought out a carding-machine. In 1766 he invented the spinning-jenny, a machine which has since revolutionised the cotton-weaving industry, but which at the time evoked the angry resentment of the hand-weaver. He was driven from his native town and settled in Nottingham, where he started a spinning-mill. He failed to get his machine patented, and died in comparative poverty. (d. 1778).

Haricot, a leguminous plant of the genus *Phaseolus*, being a type of Dwarf French bean bearing a seed which is allowed to ripen on the plant and is widely used as a food when dried.

Harlech, an old Welsh town in Merionethshire, facing the sea, 10 m. N. of Porthmadog. Its grim old castle by the shore was a Lancastrian fortress during the Wars of the Roses, and its capture by the Yorkists in 1468 is the subject of the well-known song, *The March of the Men of Harlech*. Pop. 2,000.

Harlem, a district of New York City, U.S.A., SW. of the Harlem R.; the centre of the City's negro quarter.

Harlequin, a character in a Christmas Columbine, presumed to be invisible, and dett at tricks to frustrate those of the clown, who is his rival lover.

Harley, Robert, Earl of Oxford, celebrated English politician; entered Parliament shortly after the Revolution (1688) as a Whig, but after a period of vacillation threw in his lot with the Tories and in 1701 became Speaker of the House. In 1704 he was associated with St. John (Bolingbroke) in the Cabinet as Secretary of State, and set about undermining the influence of Godolphin and Marlborough. He became Chancellor of the Exchequer and head of the Government; was created Earl of Oxford and Lord High Treasurer; was displaced by Bolingbroke in 1715; was impeached for intriguing with the Jacobites and sent to the Tower. Two years later he was released, and the remainder of his life was spent in the pursuit of letters and in the building up of his famous collection of MSS., now deposited in the British Museum. (1661-1724).

Harlington, village of Middlesex, England, 1 m. S. of Hayes. It gave its name to the Earl of Arlington, a mistake in the patent accounting for the lost letter. Pop. (with Hayes) 23,000.

Harlow, market town of Essex, England, 6 m. SW. of Bishop's Stortford. It has a racecourse. Pop. 3,000.

Harmattan, a hot, withering wind, laden with dust from the desert, blowing over the coast of Guinea to the Atlantic from the interior of Africa, more or less from December to February.

Harmonica, a musical instrument from produced by the friction of moistened fingers on glass or metal tubes, used in the 17th Century, but nowadays a toy. Beethoven and Mozart composed music for it.

Harmonic Motion. If a tuning-fork is set in vibration, it emits a certain note which remains constant in pitch, though, as the vibrations die away, it gradually becomes less and less loud. We may deduce that, since the pitch remains unaltered, the time of the vibrations is also unaltered; and that, since the loudness decreases, the extent of the vibrations also decreases.

The motion executed by the prongs of the fork is said to be *harmonic* (and isochronous, since the period of the vibrations is constant). A body is said to move in simple harmonic motion when its acceleration along its path is proportional to its distance from a fixed point in the path, as measured along the path; it may be shown mathematically that such motion is isochronous. A common example of a body moving in (nearly) simple harmonic motion is the bob of a pendulum, where the period of swing is independent of the amplitude (or "size" of the swing).

Harmonic Progression, a series of quantities in which any three consecutive terms are so related that the difference between the first and second divided by the difference between the second and third is equal to the quotient of the first by the third, the middle term of such a group of three being the harmonic mean of the first and third; thus, $\frac{1}{2}, 1, \frac{2}{3}$ are in harmonic progression and $\frac{1}{2}$ is the harmonic mean of $\frac{1}{3}$ and $\frac{2}{3}$.

Harmonium, a musical instrument in which a number of "reeds" are vibrated by the passage of air against them through the action of bellows operated by the foot. Invented in 1840, it has a compass of five octaves, and the currents of air are controlled by keys on a keyboard. The reeds are "free"—i.e., the pitch is not affected

by the varying strength of the air current. Once popular in small chapels and Sunday Schools, it has been replaced by the American organ, which is an improved harmonium in which the force bellows give place to suction by air-exhaustion. Stops are fitted to secure a variety of expression and tonal values and many are equipped with a knee lever which increases volume.

Harmony, the combination of musical notes according to certain laws of relation so as to form chords. Close harmony is that seen in four-part music, where the notes are so close together that no other can be inserted between them. When the notes are spread so widely that there is room between them for other notes without destroying the resulting chord the term extended harmony is used.

Harold I., King of England from 1035 to 1040, younger son of Canute. The kingdom was practically divided between him and his brother Hardkanute (q.v.); but the latter remaining in Denmark to protect his possessions there, England passed into Harold's hands.

Harold II., last of the Saxon Kings of England, held the crown for a few months in 1066, was the second son of the great Earl Godwin (q.v.). In 1053 he succeeded his father in the earldom of the West Saxons, and during the later years of Edward's feeble rule was virtual administrator of the kingdom. On his accession to the throne his title was immediately challenged by his brother Tostig and William, Duke of Normandy. Having crushed his brother's invasion at Stamford Bridge, he immediately hurried S. to meet the forces of William at Hastings. Norman strategy won the day, and Harold fell in the battle pierced through the eye by an arrow. Historians unite in ascribing to him every kingly quality—a noble presence, sagacity and a brave yet gentle nature. (1022-1066).

Harold I. of Norway, surnamed *Haarfagr* (fair-haired); by him the petty kingdoms of Norway were all conquered and knit into one compact realm; it is said that he undertook this work to win the hand of his lady-love, and that he swore an oath neither to cut nor comb his hair till his task was done. (d. 933).

Harold III. of Norway, surnamed *Hardraade* (hard in counsel); chief of the Varangian guards at Byzantium; succeeded to crown of Norway on death of Magnus; fell at Stamford Bridge, 1066.

Haroun-Al-Raschid ("Aaron the Orthodox or Just"), the most renowned of the Abbaside caliphs; succeeded to the caliphate in 786 on the death of his elder brother, Al Hadi, and had for grand vizier the Barmecide Yahya, to whom with his four sons he committed the administration of affairs, he the while making his Court a centre of attraction to wise men, scholars and artists, so that under him Baghdad became the capital of the civilised world. His glory was tarnished towards the end of his reign by the massacre of the Barmecide family out of jealousy, an act which was followed by an insurrection which cost him his life. The halo that invests his memory otherwise was, however, more fabulous than real, largely owing to the picture of him presented by the "Arabian Nights." (c. 764-809).

Harp, a musical stringed instrument of ancient origin known in Egyptian times. It is played by plucking the strings with the fingers or a plectrum. Its triangular form has altered little from the ancient type. Its modern development is due to Erard and Hochbrucker, who introduced pedal action for the purpose of re-tuning and the double action whereby the strings are raised one or

HARMONIUM

two semitones. The present-day harp has 43 strings tuned according to the diatonic scale, every eighth string being an octave apart. It is nowadays an orchestral rather than a solo instrument.

Harpenden, residential urban district of Hertfordshire, England, 5 m. S. of Luton. Near by, at Rothamsted, is an experimental agricultural school. Pop. 9,500.

Harper's Ferry, town of W. Virginia U.S.A., on the Chesapeake and Potomac Rrs. In the Civil War it was raided by John Brown, the abolitionist, and later surrendered by the Federals, after great loss, to Stonewall Jackson.

Harpies, ravenous mythological creatures living in filth and defiling everything they touched, having the head and breast of a woman, the wings and claws of a bird, and a face pale with hunger; the personification of whirlwinds and storms.

Harpies, the general name of six large birds of prey of the Falconidae family, most of them found only in S. America. They are mainly long-crested birds, the true Harpy (*Thraschus harpyia*) being one of the finest of all birds of prey. It preys on all sorts of mammals, including monkeys, foxes and pigs.

Harpoon, a weapon employed in hunting whales and other large fish. It is thrown by hand or discharged from a gun, and consists of a heavy piece of iron with barbs on the outer edge attached to a long rope.

Harpisichord, a musical instrument of the 16th Century, and a forerunner of the modern pianoforte (*q.v.*), but differing in the action. The tones were produced by quills fixed to wooden up-rights which struck the strings. A development of the harpsichord is the spinet. In early orchestral music the harpsichord was played by the conductor. Its music is metallic, and before the pedal action improvement by later makers, its expression was limited.

Harrier, a type of dog which hunts by scent, the quarry being usually a hare. It resembles a foxhound, but is smaller, and, though keener scented, is less speedy. They are much used in Ireland in packs. There are some 150 packs in England.

Harrier, a genus (*Circus*) of birds of the Falconidae (Eagle and Hawk)

family, having a ruff on the head which gives them an appearance something like that of an owl. They are slim birds with long legs and wings, prey largely on poultry and lay their white eggs in nests on the ground. The British species are the Hen-Harrier (*Circus cyaneus*), the Marsh-Harrier (*C. aeruginosus*), and Montagu's Harrier (*C. pygargus*), a summer visitor only.

HEN-HARRIER

Harrington, seaport of Cumberland, England, 2 m. S. of Workington, with coal-mines, blast-furnaces and shipyards. Pop. 4,000.

Harris, name of the southern portion of the Island of Lewis, Outer Hebrides, including St. Kilda and other islands; produces wool woven into the familiar "tweeds"; Islanders are crofters and fishermen. Pop. 5,000.

Harris, George Robert Canning Harris, fourth Baron, administrator and cricketer, was born in Trinidad, where his father, the third Baron, was Governor.

Under-Secretary for India, 1885-1886; for War, 1886-1890. Governor of Bombay, 1890-1895. With Imperial Yeomanry in S. African War, 1900-1901. In cricket he played for Gentlemen; for his University, 1874; captained Kent, 1875-1889; played for Kent till 1906; captained England in Test Matches, 1889-1884. President, M.C.C., 1896. (1851-1932).

Harrisburg, capital of Pennsylvania, U.S.A., on the Susquehanna, 106 m. NW. of Philadelphia; the industries include extensive iron and steel works and a flourishing lumber trade. Pop. 80,500.

Harrismith, town and health resort of Orange Free State, South Africa, situated over 6,000 ft. high, among the mountains, 170 m. SE. of Durban. Pop. 6,000.

Harrison, Benjamin, twenty-third President of the U.S.A. and grandson of William Henry Harrison, a former President, born in North Bend, Ohio; starting as a lawyer in Indianapolis, was efficient commander during the Civil War. In 1880, became a United States Senator; as the nominee of the Protectionist and Republican party he won the Presidency against Cleveland, but at the election of 1892 the positions were reversed. (1833-1901).

Harrison, Frederic, barrister, born in London; professor of Jurisprudence in the Inns of Court; author of articles contributed to reviews of essays, and of lectures on a variety of current questions, from the standpoint of the positivism of Auguste Comte; author of *Order and Progress*, *The Meaning of History* and *A Life of Ruskin*. (1831-1923).

Harrison, John, a celebrated mechanician, born in Foulby, Yorkshire; inventor of a chronometer which, by its apparatus for compensating the disturbing effects caused by variations of climate, enabled mariners to determine longitude to within a distance of 18 m., thus winning a prize of £20,000 offered by Government. He also invented the compensating *gridiron pendulum*, still in use. (1693-1776).

Harrison, William Henry, ninth President of U.S.A., son of a signatory to the Declaration of Independence; elected president in 1840 but died a month after inauguration. (1773-1841).

Harrogate, a popular watering-place, prettily situated amid forest and moorland, in the W. Riding of Yorkshire, England, 20 m. NW. of York; it enjoys a wide reputation for its sulphurous, saline and chalybeate springs. Pop. 40,000.

Harrow, an implement employed in agriculture, consisting of pieces of iron or timber crossing each other and equipped with metal teeth. It is usually drawn corner-wise over the ground after plunging to break the larger pieces of earth, rendering the soil level, and later to cover seeds after sowing.

Harrow (Harrow-on-the-Hill), a rapidly growing town of Middlesex, England, built around an eminence 200 ft. high, 12 m. from London; its Gothic Church, St. Mary's, founded by Lanfranc, has architectural interest. Harrow School, a celebrated public school, was founded in 1571 for the free education of 30 poor boys of the parish, but subsequently opened its doors to others. Pop. 132,000.

Hart, Solomon Alexander, born in Plymouth; mouth; in early years an engraver's apprentice and miniature painter. He became celebrated as a painter of historical scenes and characters; elected R.A. in 1840, he was appointed professor of Painting in the Royal Academy in 1854, and subsequently librarian. His works include "Henry I.

rooking intelligence of the Death of his Son," "Milton visiting Galileo in Prison," "Wolsey and Buckingham" and "Lady Jane Grey in the Tower." (1806-1881).

Hartal, a form of political boycott in India, including the shutting of all shops as a sign of national mourning. Mohandas Gandhi has organised hartals in recent years, as at Bombay in 1923, as protests against alleged British oppression.

Harte, Francis Bret, American humorist and novelist, born in Albany, New York; went to California at 15; tried various occupations, mining, teaching, printing and literary sketching, then joined the staff of a newspaper, and became eventually chief editor of the *Overland Monthly*, in the columns of which he established his reputation as a humorist by the publication of his verses, *The Heathen Chinese* and other productions, such as *The Luck of Roaring Camp*. After a short term as professor of Literature at California University, he was appointed Consul at Krefeld and, subsequently, Glasgow; latter years spent in England; author of *Gabriel Conroy*, *In the Carquinez Woods*, *A Week of the Plains* and other novels, as well as notable short stories. (1839-1902).

Hartebeeste, the name of several species of large antelope

of S. Africa, red in colour with black markings. They have long horns, and are very swift. They belong to the genus *Bubalis*.

Hartford, capital of Connecticut, U.S.A., on the Connecticut, 50 m. from its mouth and 112 m. N.E. of New York; is handsomely laid out, and contains an imposing white marble capitol, Episcopal and Congregational colleges, hospitals, libraries etc.; is an important depot for the manufacture of firearms, ironware and tobacco, and is a busy banking and insurance centre. Pop. 164,000.

Hartland, village of N. Devon, England, 13 m. SW. of Bideford. Near by is Hartland Point, at the S. end of Barnstaple Bay. It has a lighthouse.

Hartlepool, a seaport of Durham, England, situated on a tongue of land which forms the Bay of Hartlepool, 4 m. N. of the Tees estuary; the chief industries are shipbuilding, cement works and a shipping trade, chiefly in coal and iron. Pop. 20,000. **West Hartlepool** on the opposite and south side of the bay, 1 m. distant, has outgrown its mother-town, Hartlepool, and carries on a similar trade, but on a larger scale; the extensive docks, stretching between the two towns, cover an area of 300 acres. Pop. 69,000.

Hartshorn, name formerly given to the solution of ammonia, which was prepared from the horn of the stag.

Harty, Sir Herbert Hamilton, British composer and conductor who became famous as the conductor of the Hallé orchestra at Manchester in 1920, and who has also composed a number of orchestral pieces and songs; knighted in 1925. (1880-).

Haruspices, among the Romans, soothsayers who affected to foretell future events by the inspection of the entrails of animals offered in sacrifice.

Harvard University, the oldest of higher education in the U.S.A., is located at Cambridge, Massachusetts, 3 m. W. of Boston. It is named after the Rev. John

Harvard, son of a Southwark butcher, who by the bequest of his library and small fortune helped to launch the institution in 1638. Originally intended for the training of youths for the Puritan ministry, it has grown into a university of the first rank, free from all sectarian control. It has some 5,000 students, is splendidly equipped and richly endowed. In 1936 the Mayor of Southwark took part in the Tercentenary Celebrations.

Harvest Mite, a name for several members of the small insect order Arad, which infest fruit bushes, grasses, etc., in late summer. They will attack man and animals, burrowing under the soft skin of sensitive parts, causing great irritation.

Harvest Moon, the full moon which at the autumnal equinox, rises about the same time on several successive evenings.

Harvey, Sir George, a Scottish artist, born at St. Ninians, Stirling, one of the original associates of the Royal Scottish Academy, of which he at length became president. Among his paintings are the "Covenanters' Preaching," "The Curriers" and "John Bunyan in Jail." (1806-1876).

Harvey, Sir John Martin, British actor. For a number of years he acted under Irving. His performances as Sydney Carton in *The Only Way* is one of his most famous. He has played many other famous parts. Knighted in 1921. (1863-).

Harvey, William, a celebrated English physician, born in Folkstone; graduated at Cambridge, and in 1602 received his medical diploma at Padua. Settling in London, in a few years he became physician to St. Bartholomew's Hospital, and subsequently lecturer at the College of Physicians. In 1628 he announced in a published treatise his discovery of the circulation of the blood. For many years he was Court physician, attending Charles I. at the battle of Edgehill. (1578-1657).

Harwich, a seaport and market town of Essex, England; is situated on a headland on the S. side of the conjoined estuaries of the Stour and the Orwell, 5 m. N. of the Naze and 65 m. N.E. of London; it is an important packet station for the Continent, has a good harbour and docks, with an increasing commerce. Pop. 13,000.

Harwood, Great, a market town of Lancashire, England, 6 m. N.E. of Blackburn. Cotton is manufactured, and there are coal-mines. Pop. 13,000.

Harz Mountains, a mountain range stretching for 57 m. between the Weser and the Elbe to the S. of Brunswick. It forms a picturesque and diversified highland, is a favourite resort of tourists, and rises to its greatest elevation in the far-famed *Brocken* (q.v.), the scene of the Walpurgisnacht in *Faust*. Silver, iron, and other metals are found in considerable quantities, and, with the extensive forests, give rise to a prosperous mining and timber industry.

Hasdrubal, the name of several dis- generals, of whom the most noted were (1) the son of Hamilcar Barca (q.v.) and brother of Hannibal (q.v.); he played a prominent part in the Second Punic War, conquered Cn. Scipio in Spain (212 B.C.), and subsequently commanded the Carthaginian army in Italy; he fell at the Battle of the Metaurus in 207 B.C. (2) The son-in-law of Hamilcar Barca, whom he succeeded in 228 B.C. as administrator of the new empire in the Iberian peninsula; he pushed the western frontiers back to the Tagus, and by his strong yet conciliatory government firmly established the Carthaginian power; he was assassinated in 221 B.C.

HARTEBEESTE

Hashish, an intoxicant made from the Indian hemp, largely used in the Near East as a narcotic and sedative drug.

Haslar Hospital, Royal Naval hospital at Gosport, Hampshire, the chief naval hospital in Britain.

Haslemere, market town of Surrey, England, 13 m. S. of Guildford, between Hindhead and Blackdown; famous as the home of the Dolmetsch family of musicians. Pop. 9,000.

Haslingden, a town of Lancashire, England, 19 m. NW. of Manchester; has cotton, silk and woollen factories, and in the vicinity are coal-mines, iron-works, etc. Pop. 17,000.

Hastings, (1) popular holiday and health resort in Sussex, England; occupies a fine situation on the coast, with lofty cliffs behind, 33 m. E. of Brighton; has a splendid esplanade 3 m. long, parks, public gardens, etc., and ruins of a Norman castle. Pop. 65,000. (2) Town of North I., New Zealand, in an agricultural district. Pop. 15,000.

Hastings, Battle of, fought on Oct. 14, 1066, on Senlac Hill, 6 m. NW. of Hastings (where now stands the little town of Battle), between William, Duke of Normandy, and Harold II., King of England. Victory rested with the Normans, and Harold was slain on the field.

Hastings, Francis Rawdon-Hastings, Marquis of, Governor-General of India; entering the army in 1771, he saw active service in the American War and in Holland; succeeded his father in the earldom of Moira; was in 1813 appointed to the Governor-Generalship of India. He was instrumental in extending the East India Company's territories, and pacifying the warlike Gurkhas, for which, in 1816, he was created Marquis of Hastings; in later years he held the Governorship of Malta. (1754-1826).

Hastings, Sir Patrick Gardiner, English lawyer, educated at the Charterhouse. Mining engineer, 1898-1899; served in S. African War, 1900-1901. Trained for the Bar and became a barrister, Middle Temple, 1904; K.C., 1919. Sat in Parliament as M.P., Walsend, 1922-1926 and was the first Labour Attorney-General, 1924, in which year he was knighted. He is one of our leading counsel. He has written two plays, *The River and Scotch Mist*. (1880-).

Hastings, Warren, first Governor-General of India, born in Oubouhili, Oxfordshire; early left an orphan, he was maintained at Westminster School by his uncle, and at 17 received a clerkship in the East India Company. In 1769 he became a member of the Madras Council; married the divorced wife of Baron Imhoff, and in 1772 was appointed President of the Council in Bengal. He was raised to the position of Governor-General in 1773. Despite jealousies and misrepresentations both in India and at home, he extended and brought into orderly government the British dominions in India.

Impeached upon the issue of Lords for oppression of the natives, and for conniving at the plunder of the Begums or dowager-princesses of Gudd. The trial brought forth the greatest orators of the day, Burke, Fox, and Sheridan leading the impeachment, which, after dragging on for nearly eight years, resulted in the acquittal of Hastings on all the charges. His fortune having been consumed by the enormous expenses of the trial, he was awarded a handsome pension by the Company. (1729-1818).

Hatchment, the name of the armerial shield hung against the wall of the residence of a deceased person.

Formerly it was customary at Oxford and Cambridge Universities to hang the hatchment of a deceased college official over his residence.

Hatfield, or Bishop's Hatfield, a market town of Hertfordshire, England, 18 m. NW. of London; its parish church dates from the 13th Century, and in the vicinity stands Hatfield House, a noble architectural pile of James I.'s time, the seat of the Marquis of Salisbury. Pop. 5,000.

Hathaway, Anne, wife of William Agnes, daughter of Richard Hathaway, of Shutter, near Stratford-on-Avon, where the Hathaways's cottage still stands. She was married in 1582, about six months before the birth of her daughter Susannah, May 1583. Her only other children, Judith and Hamnet (twins), were born 1585. Hamnet died 1596. Under her husband's will, Anne took only his second-best bedstead. (c. 1554-1623).

Hathor, an Egyptian goddess, sometimes called Athor, Queen of Heaven, daughter of Ra. She was symbolised by a cow.

Hatteras, Cape, a low sandy headland of a small island separated from the mainland of N. Carolina, U.S.A., by Pamlico Sound. It is a storm-swept and treacherous point, and is marked by a powerful light, 190 ft. high.

Hatteria, a genus of rhynchocephalous reptiles, the only living representative of which is the peculiar lizard-like spooles of New Zealand, of which the best known is the Tuatera, or Hatteria (*Sphenodon punctatus*).

HATTERIA (TUATERA)

found burrowing near the shore on a few small islands only, having been exterminated on the mainland. It is regarded as the most primitive of living reptiles and goes back to the Triassic period. It exhibits certain differences from the true lizard.

Hatton, Sir Christopher, Lord Chancellor of England, 1587, son of William Hatton, of Holdenby, Northants; entered St. Mary's Hall, Oxford, c. 1555; Inner Temple, 1559. At Court his dancing pleased Queen Elizabeth, who gave him various offices and grants of land. He was given Ely Place, Holborn, taken from the Bishop of Ely, 1576, and Hatton Garden was named after him.

Hauberk, a coat or tunic of mail made of interwoven steel rings and extending below the knees.

Hauptmann, Gerhardt, German dramatist, born in Salzbrunn; wrote many successful tragedies, comedies and novels, including *Pippa Passes*, *Atlantis*, etc.; won the Nobel Prize for literature in 1912. (1862-).

Haus(s)a, Sudan, whose language has become the common speech of some 15 million people between the Mediterranean and the Indian Ocean. It is allied to the Arabic languages, and is written in modified Arabic characters. The people themselves, of negro race, are warlike and brave, though they were conquered by the Fulani, with whom they have largely intermarried. Since 1874 they have supplied to the British forces native regiments of soldiers and police.

Haussmann, George Eugène, Baron, a celebrated Prefect of the Seine, who, while holding that position (1853-1870), carried through extensive architectural and road-making improvements in Paris, transforming it into one of the handsomest cities of Europe. Their enormous cost brought about his dismissal, but he

received many distinctions, and was ennobled by Napoleon III.; in 1881 he was elected to the Chamber of Deputies. (1809-1891).

Hautboy, the old name of the oboe, a musical treble wind instrument with a double reed, fitted usually with fifteen keys.

Haute-Garonne, dept. of S. Central France, N. of the Pyrenees; the R. Garonne runs through it; grain, fruit, wine and marble are produced; chief town, Toulouse. Area 2,460 sq. m. Pop. 458,600.

Haute-Loire, dept. of S. Central France; watered by R. Loire and Allier; timber, grain, lace and coal are produced; chief town, Le-Puy-en-Velay. Area 1,930 sq. m. Pop. 245,000.

Haute-Marne, dept. of NE. France, traversed by the Marne; has large forests, and produces grain, vegetables and wine; chief town, Chaumont. Area 2,420 sq. m. Pop. 188,500.

Hautes-Alpes, dept. of SE. France, on the Italian border; W. of the Cottian Alps; mainly pastoral; chief river, the Durance; chief town, Gap. Area 2,180 sq. m. Pop. 88,200.

Haute-Saône, dept. of E. France, W. of the Belfort territory; both agricultural and manufacturing; fruit, coal, cotton and iron goods produced; chief town, Vesoul. Area 2,075 sq. m. Pop. 212,900.

Haute-Savoie, dept. of SE. France, S. of the Lake of Geneva; contains Mont Blanc; wine and dairy produce are exported; chief town, Annecy. Area 1,775 sq. m. Pop. 260,000.

Hautes-Pyrénées, dept. of S. Central France, on the Spanish border; produces minerals; cattle and sheep are grazed and fruit and wine produced; chief town, Tarbes. Area 1,750 sq. m. Pop. 189,000.

Haute-Vienne, dept. of Central France, N. of the Limousin Mts.; produces cereals, chestnuts, fruit and cattle. Chief town, Limoges. Area 2,120 sq. m. Pop. 334,000.

Haut-Rhin, dept. of E. France, until 1918 part of the Prussian province of Alsace; has textile and chemical industries; chief towns, Mulhouse and Colmar. Area 1,350 sq. m. Pop. 507,500.

Havana, fortified capital of the island of Cuba, in the W. Indies; has a spacious and securely sheltered harbour, an old Spanish cathedral, a university, botanical garden and several fine theatres. The town is ill laid out, badly drained, and subject to yellow fever, though under U.S.A. military ascendancy much improvement was made in every respect; the staple industries are the raising of tobacco and sugar, and the manufacture of cigars. Pop. 546,800.

Havelock, Sir Henry, British general, born in Bishop Wearmouth; entered the Indian service in 1823; served in the Afghan and Sikh Wars, and in Persia. On the outbreak of the Mutiny he was in 1857 sent to the relief of Cawnpore and Lucknow, the latter of which places he entered on Sept. 25, where, being beleaguered, he entrenched himself in the Residency, and held out until Sir Colin Campbell came to his relief; but his health had been undermined, and he died on November 22nd. For his services a baronetcy and a pension of £1,000 was conferred on him, the latter after his death being transferred to his son. (1795-1857).

SIR HENRY
HAVELOCK

Haverfordwest, seaport and capital of Pembrokeshire, Wales, prettily situated on the Cleddan, 10 m. NE. of Milford; has a 14th-Century castle and a ruined priory; the chief industry is paper-making. Pop. 6,300.

Haversian Canals, canals in the bones to convey the vessels that nourish them, so named after Clopton Havers, an eminent physician and anatomist. (1655-1702).

Havre, the second commercial port in France, on the N. side of the Seine estuary, 143 m. NW. of Paris, in the dept. of Seine-Inférieure; has a fine harbour, docks, etc., but shipping is incommoded by the shifting sandbanks of the estuary, and railway facilities are poor; its industries embrace shipbuilding, iron-works and flour-mills. Pop. 165,000.

Hawaiian Islands (named by Cook the Sandwich Is.), a group of volcanic islands, 20 in number, situated in the N. Pacific; total area somewhat larger than Yorkshire. Of the five inhabited islands Hawaii is the largest; it contains the famous volcano, Kilauea, whose crater is 9 m. in circumference, and filled with a glowing lake of molten lava which ebbs and flows like an ocean tide. The island of Maui has the largest crater on earth. The climate of the group is excellent, and vegetation (including forests) is abundant; sugar and rice are the chief crops. Honolulu (on Oahu), with a splendid harbour, is the capital. The islands are a territory of the U.S.A.; English is spoken and the people are Christians. They were discovered in 1778 by Captain Cook. Area 6,440 sq. m. Pop. 385,000.

Hawarden, a town of Flintshire, Wales, 7 m. W. of Chester, near which is Hawarden Castle, where Gladstone resided and died.

Hawfinch, a bird of the finch family, a variety of the grosbeak (q.v.). The male is larger than the chaffinch, and has black and brown markings with a white tip to the tail. It is found in Europe (including England) and Asia.

Hawick, a prosperous and ancient town of Roxburghshire, Scotland, at the confluence of the Teviot and Slitrig, 62 m. SE. of Edinburgh; is a flourishing centre of the tweed, yarn and hosiery trade, and has besides dyeworks, tanneries, etc. Pop. 17,500.

Hawk, a general name for European birds of prey other than owls, eagles and vultures, particularly the sparrowhawk and goshawk. The hawk was in the Middle Ages largely bred for hunting (see Falconry).

Hawkbit, a genus (botanical name *Leontodon*) of plants of the order Compositae, allied to the dandelion. Three species are found in Britain, while others are distributed throughout Europe and Asia. It has large yellow flowers and long leaves.

Hawke, Lord, an English admiral, born in London; entered the navy at an early age, and won distinction in the naval fight off Toulon in 1744; defeated a French fleet off Finisterre and captured six ships of the line in 1757, and two years later defeated Admiral Conflans and a French squadron in Quiberon Bay; was made a peer in 1776. (1705-1781).

Hawker, travelling trader who carries place to place for retail sale. Legally a hawk is distinguished from a pedlar by the fact that he uses a horse or beast of burden, while the pedlar goes on foot. In Great Britain both hawkers and pedlars are required to be licensed, at a fee of £3 annually for the former and 6s. for the latter.

Hawker, Robert Stephen, a Cornish clergyman and poet; vicar for 40 years of Morwenstow, a parish on the N. Cornwall coast; author of *Cornish Ballads*; was the author of several works besides his ballads, in particular *Echoes from Old Cornwall* and *Footprints of Former Men in Far Cornwall*. (1803-1875).

Hawkes Bay, or Wairoa, bay of North Island, New Zealand, on the E. coast, extending about 60 m. from Wellington to Auckland. It gives its name to a mainly forested provincial district with an area of 4,260 sq. m., and pop. of 72,000.

Hawkins, Sir Anthony Hope. See Hope, Anthony.

Hawkins, Sir John, an English navigator and admiral, born in Plymouth; was Rear-Admiral of the fleet sent against the Armada and contributed to its defeat; was the first Englishman to traffic in slaves, which he carried off from Africa and imported into the W. Indies. (1532-1595).

Hawkweed, a genus of hardy perennial plants of the order Compositae with yellow, orange or red flowers (botanical name of genus, *Hieracium*). They are hairy and have a tuft of oblong leaves at the base. There are some 450 species found in Europe and America, several being native to the British Isles. The orange Hawkweed (*H. aurantiacum*) is cultivated in England for the sake of its flowers.

Hawkwood, Sir John de, an English captain, born in Essex; served with distinction at Crecy and Poitiers, and was knighted by Edward III.; afterwards fought as free-lance with his White Company in the wars of Italy, and finally in the service of Florence, where he spent his last days. (d. 1394).

Haworth, a village of Yorkshire, England, situated on a rising moorland in the W. Riding, 2 m. SW. of Kettleigh, memorable as the lifelong home of the Brontës and their final resting-place. Pop. 6,000.

Hawthorn, a genus of small European and American trees of the order Rosaceae, with white (sometimes pink), scented, clustering flowers and spiked stems (botanical name *Crataegus*). There are some hundred species, including the familiar English May (also commonly called hawthorn or whitethorn—botanical name *Crataegus Oxyacantha*). The fruit is a red edible drupe called haws and serving as winter food for many birds.

Hawthornden, an old mansion of Midlothian, Scotland, 8 m. SE. of Edinburgh, situated in the beautiful wooded glen of the same name. It was formerly the seat of the Drummonds.

Hawthornden Prize, an award for literary imaginative work, usually a novel by a writer under 41 years old. Its value is £100, and it is awarded annually, the founder being Miss Alice Warrender. The prize commemorates William Drummond.

Hawthorne, Nathaniel, American novelist, born in Salem, Massachusetts. His *Twice-told Tales* was the first production by which he won distinction. After its publication he spent some months at Brook Farm, leaving which he married and set up house at Concord. From 1848 to 1850 he held a State appointment, and in his leisure hours wrote his *Scarlet Letter*, (1850) which established his fame as a master of literature. This was followed by *The House of the Seven Gables*, *The Snow Image*, *The*

Blithedale Romance, *The Marble Faun* and *Our Old Home*. (1804-1864).

Hay, grasses dried in the sun and stored food, usually in stacks for use as cattle food. The grass should be in flower when cut, as it then contains most saccharine. The stacking serves to preserve freshness with a slight fermentation. Mowing and stacking are best done in dry weather.

Hay, Ian (real name John Hay Belth), novelist and playwright; educated at Fettes College, Edinburgh, and St. John's College, Cambridge. For some time schoolmaster at Fettes. First novel *Pip*, 1907. In the World War served with the Argyll and Sutherland Highlanders; became major. Famous for his war book *The First Hundred Thousand*. He is the author also of a number of plays, including *Tilly of Bloomsbury*, *The Sport of Kings* and *A Safety Match*, and has collaborated in others. (1878-).

Haydn, Joseph, Austrian composer, born in Rohrau, Austria, of poor parents; early evinced a musical talent and became at the age of eight a cathedral chorister; came into notice first as a street musician; soon became a popular music-master in Vienna, and, under the patronage of the Esterhazys, kapellmeister to Prince Nicolaus, a passionate lover of music. He produced opera symphonies and oratorios, etc. He is at his best in quartettes and symphonies, and in *The Creation* and *The Seasons*. (1732-1809).

Haydock, urban district and colliery town of Lancashire, England, 3 m. NE. of St. Helens. There are iron foundries. There is a race-course at Haydock Park. Pop. 10,500.

Haydon, Benjamin Robert, English historical painter, born in Plymouth; studied at the Royal Academy, and in 1807 exhibited "Joseph and Mary resting on the Road to Egypt"; two years later quarrelled with the Royal Academy over a supposed slight to his picture, "Descent from the Cross," and he "brought him £1,700 by exhibition, and his 'Judgment of Solomon' considered his finest work, sold for 700 guineas. He was continually in debt, and his sensitive temperament, smarting under imaginary slights, led him to commit suicide by shooting himself in his studio. (1793-1846).

Hayes, (1) urban district of Middlesex, England, 13 m. W. of London. Here are many factories, turning out aeroplanes, gramophones, printing-presses, etc. Pop. (with Harlington) 23,000. (2) Village in Kent, England, 2 m. S. of Bromley, with a large common. Here the great Earl of Chatham died and William Pitt, his son, was born. Pop. 5,000.

Hayes, Rutherford Burchard, nineteenth President of the U.S.A., born in Delaware, Ohio; studied law at Harvard, and started practice at Cincinnati. He served through the Civil War, entered Congress in 1865, and was twice Governor of Ohio. In 1876 he was elected President in the Republican interest after a protracted and bitterly disputed election. He did much to pacify the South, reform the civil service, advance education and to bring about redemption of specie payments. (1822-1893).

Hay-fever, a sort of catarrh, accompanied with paroxysms of sneezing, irritation in the eyes, pains in the head, etc., most frequent in early summer.

Haymarket, a market for the buying and selling of hay. The London street so called takes its name from a famous haymarket held opposite Charles Street, whose site is now occupied by the Haymarket Theatre, built in 1720, with which are associated such famous names as Fielding, Charles Macklin, Benjamin Webster, Sir W. S. Gilbert, the Bancrofts, Sir H. Beerbohm Tree and Norman McKinnel.

Hayward, Thomas W., English cricketer, born at Cambridge; nephew of Thomas Hayward, Cambridge cricketer (1835-1876). Qualified for Surrey, 1891, for which county he played for a number of years, scoring 3,518 runs in one season (1906). He also played against Australia and trained Hobbs. (1871-).

Haywards Heath, market town of E. Sussex, England, 12 m. N. of Brighton, now part of Cuckfield urban district. It has an important cattle market. Pop. 5,400.

Hazebrouck, town in France, in the dept. of Nord, 25 m. S. of Dunkirk. It has a fine 16th Century church with an open spire 260 ft. high. Its manufactures include linen and beer; dye works and tanneries also exist. During the World War it was frequently bombed by German aircraft, and in 1917 and 1918 was shelled by the German long-range gun. At one time seriously threatened by the German advance, it was never captured. Pop. 13,500.

Hazel (*Corylus avellana*), a small tree of the order Betulaceae, native of

Britain and temperate Europe, and also found in Asia and N. America. It yields a small, edible nut (known as hazel-nut, cob-nut or filbert) as fruit. Male and female flowers are borne on separate plants, the male flowers being pendulous catkins.

HAZEL

Hazel Grove,

urban district (Hazel Grove and Bramhall) of Cheshire, England, 2 m. SE. of Stockport, with cotton and silk industries. Pop. 12,500.

Hazlitt, William, critic and essayist, born in Maidstone, of Irish descent; began life as an artist, but abandoned art for letters, and contributed to the reviews; wrote on the English poets and dramatists, the *Characters of Shakespeare's Plays*, *The Spirit of the Age*, a *Life of Napoleon*, etc. Criticism was his forte, and he ranks among the foremost devoted to that art. He died in poverty. (1778-1830).

Headache, a term which includes neuralgia and the nerve-pains of all kinds in the head and arising from a variety of causes often easily remedied, though a persistent headache may be due to the presence of a tumour or some other brain affection, while diseases of the kidney and heart are other possible contributory causes.

Ordinary headache is frequently due to some disturbance in the alimentary canal, and is often accompanied by sickness, in which case modification of the diet will prevent a recurrence. Worry, anxiety and hasty eating are apt to interfere with the digestion of food, and headaches frequently result from this cause. The strain caused by defective vision can also cause headache. Prevention should be sought by removal of the underlying cause, by the application of cold, wet cloths placed on the forehead or by vinegar. Aspirin (q.v.) frequently gives relief.

Head-hunters, name given to the Dyaks of Borneo, from their habit of preserving as trophies the heads of those whom they slew in battle, as the Red Indians did with scalps.

Headmasters' Conference, an association of headmasters incorporated in 1909 to discuss educational questions affecting the more important public schools. Annual conferences are held, and "Head-

masters' Conference Schools," which include Eton and Harrow, are those whose headmasters are members of the Conference.

Health, the condition in which all the bodily functions are performed normally; as applied to a district, a condition when the number of cases of disease is below the average. In the individual, health depends on cleanliness of the body and surroundings, exercise and suitable food and occupation.

Public Health, now one of the most important occupations of all national and local governments, requires the maintenance of a satisfactory standard of drainage, housing, the efficient disposal of refuse, prevention of nuisances and food adulteration, etc. (see Public Health). There is in London an Institute of Public Health (37, Russell Square, W.C.) which carries on educational work and hygienic research.

Health, Board of, established by an Act of 1848 as a Committee of the Privy Council to regulate sanitary conditions of life, prevention of infection, disease, etc. It was replaced by the Local Government Board in 1871, which in turn was superseded in 1919 by the Ministry of Health.

Health, Ministry of, a Government department set up under the Ministry of Health Act, 1919, to exercise the powers of the former Local Government Board and Insurance Commission. It has also assumed the powers of the Privy Council under the Midwives Acts, 1902 and 1918, control of State-subsidised housing, and the supervision of the health of expectant mothers and feeding of necessitous children and their medical examination. See also Public Health.

Health Insurance, National, in 1912 the first National Health Insurance Act of 1911 became operative. It was sponsored by Mr. Lloyd George. The scheme is on a compulsory and contributory basis, applying to almost the whole industrial population. The cost is shared between insured persons, their employers and the State. Medical, sickness, disablement and maternity benefits are provided, together with other additional benefits under certain conditions.

Insured persons are enrolled in Societies of their own choice, known as Approved Societies, including Friendly societies, trades unions, employers' provident funds and societies formed by industrial insurance companies. Specially appointed bodies known as Insurance Committees supervise the administration of medical benefit and comprise representatives of various interests—insured persons, medical practitioners, municipalities and the central government.

Persons between 16 and 65 years of age engaged in any employment under a contract of service whose wages or salary do not exceed £250 annually, and manual workers of whatever remuneration, are insurable, with a few exceptions. Under certain conditions a certificate of exemption may be obtained. Certain classes may become voluntary contributors. Contributions payable are for the combined Health and Pensions Scheme, one card is used and the stamps represent combined payment. The ordinary rates of combined contributions are men 1s. 8d. a week, women 1s. 2d. (shared equally between employee and employee).

Every employed person is required to obtain a contribution card for his employer to stamp. The penalty for non-production is a fine not exceeding £10. Medical benefit includes medical attendance and treatment, including treatment and attendance for tuberculosis and the provision of medicines and such medical and surgical appliances as are defined in the Regulations. Hospital or specialist treatment is not included.

Sickness benefit is normally 15s. weekly for a man, and 12s. for a woman for a period not exceeding 26 weeks after 104 weeks' contributions have been paid. Disablement benefit is a continuation of sickness benefit at a lower rate, and continues so long as the member remains incapable of work until the age of 65 is reached. The normal rate for men and women is 7s. 6d. weekly.

Maternity benefit is the payment of 40s. on the confinement of the wife of an insured man, or of £4 for a woman, married or unmarried, who is herself insured. There must have been 42 weeks' contributions. Additional benefits include dental treatment, hospital treatment, the cost of ophthalmic treatment, nursing and convalescent homes. By the Act of 1928 persons who were unable to continue their insurance payments through unemployment were granted an extended free period of 2½ years. Further Prolongation Acts were passed in 1930 and 1931.

The National Health Insurance Scheme is under the general control of the Ministry of Health (q.v.) in England, the Welsh Board of Health in Wales and the Department of Health for Scotland. Moneys received from the sale of health insurance stamps at post offices accumulate in the National Health Insurance Fund. A full summary of the provisions of the National Health Insurance Acts can be obtained from H.M. Stationery Office for 1d.

Healy, Timothy Michael, Irish Nationalist, born in Bantry, Cork; came into prominence during the Land League agitation in 1880, and in the same year was returned to Parliament; called to the Irish Bar in 1884; a forensic orator, with a great gift of humour; was active in promoting the interests of the Home Rule movement; in 1890 was one of the leaders in the revolt against Parnell. In 1922 on the formation of the Irish Free State he became its first Governor-General, a position he held for six years. (1855-1931).

Hearing, the appreciation of sound by the auditory nerves of the ear, which, when stimulated by noise, are vibrated by "sound-waves" in the air collected by the pinna of the ear and led to the tympanic membrane. The internal ear contains vibrators which pass on a stimulus to the hair-cells, whence a nervous impulse passes along the auditory nerves to the brain.

Hearn, Lafcadio, writer. Born in Lafcadio, Greece, after which he was named; a son of Irish and Greek parents, he was educated in Ireland and at Durham; emigrated to America, where he engaged in journalism, and later proceeded to Japan, to settle there as professor at Tokio; married a Japanese wife and became a naturalised Japanese subject. His works, such as *Glimpses of Unfamiliar Japan* and *Kokoro*, reveal the life of the east to Western minds. (1850-1905).

Hearst, William Randolph, American newspaper proprietor; controls a powerful group of papers, including the *Cosmopolitan Magazine* and *New York American*, with a total circulation of some ten millions; a Democrat and at one time anti-British in his propaganda. He failed in attempts to become governor of New York State, and mayor of New York City. (1863-).

Heart, the organ in the animal body which propels the blood and governs its circulation. In different orders of animals it varies from a rudimentary organ to the complicated structure of the human heart, which is a hollow muscular organ, conical in shape, situated between the lungs, and about 5 in. long, 3½ in. wide and 2½ in. thick. It is surrounded by a strong membrane called the pericardium, and is composed of four cavities, two auricles and two ventricles. The right auricle receives the blood returned

from the body by the vena cava superior (from the head, arms and chest), the vena cava inferior (from the legs and abdomen) and from the heart itself by the coronary vein. The blood then passes into the left ventricle, and communication is closed by a valve when the ventricle contracts. The opening into the artery is guarded by a valve formed of three flaps. The pulmonary veins bring the blood from the lungs and pour it into the left ventricle, which distributes the oxygenated blood to the body via the aorta, which also has a three-flapped valve, whence it passes to the arteries. The auricle and ventricle of one side are separated from those of the other by a muscular partition, the septum cordis.

Various diseases may affect the heart. One is pericarditis, or inflammation of the lining membrane, caused either by cold or injury, or a concomitant of other diseases. Inflammation of the inner lining is called endocarditis, and may be simple or ulcerative. Valvular disease often results as the after-effect of such diseases as rheumatic fever. The heart then becomes hypertrophied or overgrown, leading to dilation, though, in the case of children, the principle of "compensation" enables the heart to accommodate itself to the change. Fatty degeneration occurs when the muscular fibres are replaced by oleaginous particles, while angina pectoris, a very painful malady, is accompanied by a sense of strangling in the chest. Sudden excitement or shock sometimes causes syncope or fainting.

Heartburn, a term for a burning sensation in the chest due to some digestive disturbance. A feeling of discomfort in the throat and the region of the heart is a usual accompaniment. Bicarbonate of soda will afford speedy relief, while charcoal and bismuth may be taken with advantage. A simple diet, regular exercise and regular action of the bowels will prevent recurrence, while moderate meals will avoid the risk which arises from an overloaded stomach.

Heart of Midlothian, the old or jail (pulled down in 1817) of Edinburgh, the capital of Midlothian, which gives name to one of Scott's novels.

Heartsease, or Pansy (*Viola tricolor*), of the Violet (*Violaceae*) order, native to Britain and temperate countries. The variously coloured flowers have five broad petals, and the leaves are long and sharply pointed, the stem being 6 in. to 1 ft. in height, with a single flower in each axil.

Heat was formerly believed to be an invisible material substance, to which scientists gave the name *caloric*. It was, however, shown by Count Benjamin Rumford (a British physicist and soldier), about the year 1800, that the enormous quantities of heat generated during the boring of cannon were more probably to be regarded as a transformation of part of the energy of the boring-tool. This view was supported by the work of Sir Humphry Davy, who found that when two pieces of ice were rubbed together they partly melted; the heat necessary to melt the ice clearly coming from the mechanical energy of the rubbing.

The final proof of the fact that heat is a form of energy was provided in a series of experiments made by J. P. Joule. (1818-1889) between 1840 and 1850, who produced heat in various ways—e.g., by the friction of paddle-wheels in water and in mercury, by

HEARTSEASE

the compression of air, by an electric current, and by rubbing two iron rings together—and found that in every case it was necessary to do work equivalent to raising 778 lb. vertically through one foot in order to produce the quantity of heat (one British Thermal Unit) required to raise the temperature of 1 lb. of water through one degree Fahrenheit.

Hence 778 feet-lb. of mechanical energy are equivalent to one British Thermal Unit of heat energy; in conventional scientific language, the mechanical equivalent of heat is 778 feet-lb. per B.Th.U., or, on the metric system, 4.19×10^3 ergs per calorie.

Heat, Latent, the number of calories (see **Heat, Specific**) required to convert 1 gm. of a substance from the solid state to the liquid state at the melting-point (Latent Heat of fusion), or from the liquid state to the gaseous state at the boiling-point under normal atmospheric pressure (Latent Heat of vaporisation). Neither change is accompanied by any rise in temperature, hence the term "latent," meaning hidden. The Latent Heat of fusion of ice is 80; the Latent Heat of vaporisation of water is 537.

Heat, Specific, the number of units of heat (calories) required to raise the temperature of 1 gm. of a substance through one degree Centigrade. The calorie is the amount of heat required to raise the temperature of 1 gm. of water through one degree Centigrade.

Heat, Transmission of, may take place as in water, where the heated portion of the material actually moves; by conduction, when it is transferred from particle to particle of a substance which as a whole remains stationary (cf. the knob of a steel poker which gets hot when the other end is in a fire) and by radiation comparable to the radiation of light. Thus the heat of the sun reaches us by radiation, travelling with the same velocity as light, viz. 300,000 kilometres or 186,000 miles per second. This radiation, however, is not actually heat; it produces heat when it is absorbed by a material substance. Heat-radiation resembles light radiation in many other ways than the speed with which it travels; thus it moves in straight lines, is reflected by a mirror, and may be focussed by means of a lens.

Heath, the name given to the heather-covered but otherwise barren moorlands which occupy extensive tracts in Britain, and in N. Europe.

Heath, the common name of the low-genus *Erica* of the natural order Ericaceae. There are some 500 species found in Europe (especially in the Mediterranean districts), S. Africa and other parts of the world. Five species are native to Britain, including the familiar *Erica cinerea* (five-leaved heath) and *Erica Tetralix* (cross-leaved heath).

Heather, or Ling (*Calluna vulgaris*), a low-growing shrub of the order Ericaceae, found on moorland in Europe, Greenland and N. America. It is an evergreen, with narrow leaves which retain moisture, and bearing flowers in racemes. It is insect- and wind-pollinated and yields good honey (heather honey).

Heathfield, George

Elliott, Lord, British, Augustus, son of Sir Gilbert Elliott, born in Stobs, Roxburghshire, saw service at Dettingen and Fontenoy; fought with English troops in alliance with Frederick the Great against Austria. For his heroic defence of Gibraltar (1779-1783) against the combined forces of

HEATHER

France and Spain he was raised to the peerage. (1717-1790).

Heaven, in Christian theology, the place of the immediate Divine presence, where God manifests Himself without veil, and His saints enjoy that Presence. In Scripture it denotes, (1) the atmosphere, (2) the starry region, (3) a state of bliss, (4) the divine presence and (5) God Himself.

Heaviside, Oliver, physicist, born in London, retired, 1874, from employment with Great Northern Telegraph Company, Newcastle, on account of deafness; published, 1892, *Electrical Papers* bringing theory to bear on practice and pointing the way to long-distance telephony; Published *Electro-Magnetic Theory*, 1893-1912, and suggested the presence of the Heaviside Layer (q.v.). (1850-1925).

Heaviside Layer, the upper part of the atmosphere, some 15 m. above the earth, which is supposed to be ionised, making it opaque to wireless waves which are reflected back to the earth.

Heavy Cavalry, in the British Army hold (Cavalry or Cuirassiers, the 4th and 5th Dragoon Guards, and the 1st and 2nd Dragoons, the men in these regiments being taller and more heavily equipped than those of other cavalry regiments. The full-dress uniform of the Life Guards still comprises the cuirass, but the other regiments are gradually being converted into mechanised units.

Hebburn, urban district of Durham, England, on the Tyne 4 m. N.E. of Gateshead. It has collieries, shipbuilding, engineering and chemical works and other industries. Pop. 24,000.

Hebdomadal Council, the governing body of Oxford University, so called from its meeting weekly. It was founded in 1631, and consists of heads of houses and proctors.

Hebe, Greek goddess of eternal youth, daughter of Zeus and Hera; superseded as cupbearer of the gods by Ganymedes, and became the wife of Hercules after his admission among the immortals.

Heber, Reginald, Bishop of Calcutta, born in Cheshire, author of a prize poem entitled *Palestine*, and a volume of *Hymns*, several of them famous, as *From Greenland's Icy Mountains*; died at his post in Trichinopoly; left a narrative of a *Journey through India*. (1783-1826).

Hebrew, a Semitic language, the ancient language of the Jews, and that in which most of the Old Testament is written. It has been revived in the 19th and 20th Centuries, and is one of the official languages of Palestine. A considerable prose and verse literature in modern Hebrew now exists.

Hebrew Poetry in the old Testament is of two kinds, lyric or gnomic, i.e., subjectively emotional or sentimentally didactic, the former belonging to the active or stirring, and the latter to the reflective or quiet periods of Hebrew history. The lyric expression of the Hebrew temper we find in the Psalms and the Lamentations of Jeremiah, and the gnomic in the books of Proverbs and Ecclesiastes; while the book of Job, which is dramatic in form, is partly lyric and partly dramatic. The extensive Hebrew poetic literature produced in the Middle Ages by Jehuda Halevi, Solomon Ibn Gabirol, etc., largely resembles the Psalms in theme and expression.

Hebrews, Epistle to the, a book of the New Testament of uncertain authorship addressed to Christians of Jewish descent, who were strongly tempted, by the persecution they were subjected to at

the hands of their Jewish brethren, to renounce Christ. Its attribution to St. Paul is now universally discredited.

Hebrides, or **Western Islands**, a general name for the islands on the W. coast of Scotland (save those in the Firth of Clyde), about 500 in number, of which 100 are inhabited. They belong to the counties of Ross, Inverness and Argyll, and are divided by the Little Minch and the Minch into the Outer Hebrides, of which the chief are Lewis-Harris, North and South Uist, Benbecula and Barra; and the Inner Hebrides, including Skye, Rum, Mull, Iona, Staffa and Colonsay. They have wild and rocky coasts, but are picturesque and verdurous, and are much frequented by tourists. The climate is mild and moist. Cattle and sheep-rearing, fishing and weaving are the chief industries; chief town, Stornoway, in Lewis. Ruled by Norway until the 13th century, they then fell to the Scots race of Somerled until John Macdonald in the 14th Century made himself "Lord of the Isles." Pop. c. 80,000.

Hebron, an ancient town and city of Judea, in Palestine, originally called Kirjath-arba, i.e., four cities, 20 m. S. of Jerusalem; it is now a growing manufacturing town, with pop. c. 20,000. Many Jews were massacred here in 1929 by Arabs in a rising due to incidents at the Walling Wall, Jerusalem.

Hecate, in Greek mythology, a mysterious goddess, divinity invested with authority in heaven, earth and hell, and thus figured with three bodies or heads; came to be regarded exclusively as an infernal deity, having under her command all manner of phantom spirits.

Hecatomb, a term denoting in ancient Greece the offering of 100 oxen in perfect condition. Only the thighs, legs and hide were burnt, the remainder providing meat for a feast.

Heckmondwike, a market town in Yorkshire, England, 8 m. N.E. of Huddersfield; is the principal seat of the carpet and blanket manufactures in the W. Riding. Pop. 9,000.

Hecia, or **Hekia**, the loftiest of 20 active volcanoes in Iceland (5,102 ft.); is an isolated peak with five craters, 68 m. E. of Reykjavik; its most violent outbreak in recent times continued from 1845 to 1846.

Hectare, a unit of square measure in the metric system equal to a square on a hundred metres, just under two and a half English acres.

Hectic Fever, a fever often accompanying consumption, and showing itself by a bright pink flush on the cheeks.

Hectograph, an apparatus for the duplication of written matter, consisting of a gelatine pad upon which a first copy of the matter is placed, copying ink being employed. One impression produces about 100 copies.

Hector, the chief hero of Troy in the war with the Greeks, the son of Priam and Hecuba; fought against the bravest of the enemy and finally slew Patroclus, the friend of Achilles (q.v.), which roused the latter from his long lethargy to challenge him to fight. Achilles chased him three times round the city, pierced him with his spear, and dragged his dead body after his chariot round Ilion. His body was at the command of Zeus delivered up to Priam and buried with great pomp within the city walls.

Hecuba, the wife of Priam, King of Troy. On the fall of the city she fell into the hands of the Greeks, and, according to one tradition, was made a slave; according to another, threw herself in despair into the sea.

Hedgehog, a genus of insectivorous mammals (*Erinaceus*) of which

there are many

species found in

Europe, Asia and

Africa, and all similar

in general characteristics.

The English Hedgehog

is about 9 ins. long,

furnished on the

back and sides

with spines which afford protection when the

creature rolls itself into a ball. It feeds on

snails, insects, mice, frogs, etc., and is some-

times kept in gardens to reduce pests. It

hibernates in winter.

ENGLISH HEDGEHOG

Hedgeley Moor, a moor of Northumberland, England, 9 m. N.W. of Alnwick, the scene of a defeat of the Lancastrians by the Yorkists during the Wars of the Roses in 1463.

Hedge Mustard (*Sisymbrium officinalis*), a plant of the order Cruciferae, common in Britain, where it grows to a height of 1½ ft., bears yellow blossoms and has a pungent odour.

Hedge Nettle, the common name of the genus *Stachys*, found throughout the Northern Hemisphere.

Hedge Sparrow (*Accentor modularis*), a brown bird of the Turridae (Thrush) family, common in England, and very like the house sparrow, but bearing black markings.

Hedin, **Sven Anders von**, explorer, born in Stockholm, Sweden; travelled first through Persia and Mesopotamia; later explored the Pamirs and mountain ranges of the Yark and Daria; visited Mongolia and Tibet in 1896 and succeeding years, making important discoveries. His travels are described in *The Riddle of the Gobi*. (1865-).

Hedonism, the doctrine that pleasure is the end of life and the measure of virtue, or greatest good.

Heem, **Jan Davidz van**, a famous Dutch painter, born in Utrecht; had a prosperous career in Antwerp, where in 1635 he became a member of the Guild of Painters. He is considered the greatest of the "still life" painters. His pictures, masterpieces of colouring and chiaroscuro, are to be found in many European galleries. (1606-1684).

Hegel, **George Wilhelm Friedrich**, German philosopher, born in Stuttgart; studied first at Tübingen, with a view to theology; qualified at Jena for an academic career; adhered to and collaborated with Schelling in philosophy; first announced himself in 1800 by his work, *Phenomenology of the Spirit*; became rector of the Academy at Nürnberg, where in 1812-1816 he composed his *Logic*; was in 1816 appointed professor of Philosophy at Heidelberg, whence he was removed to Berlin in 1818, where, his philosophy being now matured, he began to apply it with intense earnestness to every subject of human interest. In his idealism philosophy first reached the goal to which it was till then with hesitating steps only stretching forward. His works fill 22 goodly-sized volumes, and his system may be grouped under three heads: (1) the Science of Logic, (2) the Philosophy of Nature and (3) the Philosophy of Spirit. His philosophy was the basis of the metaphysical speculations of Karl Marx, while his idealisation of the State is at the basis of the ideology of Fascism. (1770-1831).

Hegelianism, the philosophical system of Hegel, which resolves being into thought, and thought into the unity of the logical moments of simple apprehension, judgment and reason, all

purely spiritual acts, whereby being in itself, or *sein*, becomes other than itself, or *dasein*, and returns into itself, or *für sich sein*, the universal being first by separating from itself particularised, and then by return into itself individualised, the whole being what Hegel characterises as *Der Prozess des Geistes*, "The process of the Spirit." Hegelianism is important as the fountain-head of such widely differing political philosophies as Marxism and Fascism.

Heidelberg, a celebrated German city in Baden, amid beautiful surroundings, on the Neckar, 13 m. SE. of Mannheim; has many interesting buildings, including ruins of a splendid 13th-Century castle, but is chiefly celebrated for its flourishing university, whose professoriate has included many of the most distinguished German scholars; it was long the centre of Calvinism; its chief trade is in books, tobacco, wine and beer. Pop. 85,000. Another Heidelberg is in the Transvaal, S. Africa, 58 m. SE. of Pretoria, and is a health resort and a centre for the Witwatersrand goldfields. Pop. (white) 1,900.

Heidelberg Man, an early sub-man remains of which were found in a sandpit at Mauer on a tributary of the Rhine in 1907. The remains included the lower jaw and teeth and were found among the bones of animals living in the early Pleistocene Age. It is now considered to be of later date than the Piltdown man (q.v.), though earlier than the Neanderthal.

JAWS OF
HEIDELBERG
MAN (A) AND
MODERN
MAN (B)

Heifetz, Jascha, violinist, made his first public appearance at 4½ years of age at Vilna, in Petrograd Conservatoire at 10; soon afterwards giving concerts, with phenomenal success, in Germany, Austria, U.S.A. (1901-).

Heilbronn, a quaint old town of Neckar, 23 m. N. of Stuttgart; has a fine 11th-Century Gothic church, and the Thief's Tower (Diebsturm). It is a busy commercial centre, and manufactures silver-ware, paper, beet-sugar and chemicals. Pop. 60,000.

Heimdallr, in Norse mythology, god of light, similar to the classical Apollo. He guarded the frontiers of Himinbjorg (heaven) and the rainbow bridge (Bifrost) against the attack of the giants—like blind Höder of Teutonic myth. His hearing was so acute that he could hear the grass grow. He was always in deadly feud with Loki for the recovery of Freyja's stolen necklace, and ultimately they slew each other.

Heine, Heinrich, German lyric poet, born in Düsseldorf, of Jewish parents; trained for the law, but devoted himself to literature; first became known by the publication of his *Reisebilder* and his *Buch der Lieder*, the appearance of which created widespread enthusiasm in Germany. In 1825 he abandoned the Jewish faith and professed Christianity, though of a lax variety. In 1830 he settled in Paris, and married a rich lady, who alleviated the sufferings of his last years. An attack of paralysis left him blind, but under these privations and much bodily pain he continued his literary labours to the last. He is chiefly remembered for his songs, many of which have been set to music. (1797-1856).

Heir, one who becomes entitled to the deceased person. Strictly an heir becomes such only after the death of the person whose heir he is; until that occurs he is an heir apparent (q.v.) or heir presumptive (q.v.).

Heir Apparent, one whose right of succession if he survive the present holder cannot be questioned.

Heirloom, personal belongings or chattels, which go with freehold land or inheritance to the executor for division amongst next of kin. They may not be devised away from the heir by a will, and may be sold only by permission of a court under the Settled Land Act. The name may cover a large variety of articles, such as deer, tombstones, jewels, deeds, chests, armour, etc.

Heir Presumptive, one whose right of succession may be affected by the birth at a later date of a more direct heir.

Hejaz, with Nejd, a kingdom of Central Arabian Gulf to the Red Sea. For the most part the inhabitants are nomadic Arabs, and the country is of vital importance to the Eastern world, as it contains the Holy City of Mecca. A stronghold of the Wahabis in the 18th Century, it was ruled by Turkey till 1913, when it gained some measure of independence. In 1925 the kingdom greatly extended its borders, but these are still not strictly defined. Area (Hejaz) about 150,000 sq. m.; (Nejd) about 800,000 sq. m. Both countries are now parts of the single kingdom of Saudi Arabia, unified in 1932 under King Ibn Saud.

Hejira, *Hejra* or *Hegira* (Arabic, "going away"), a word applied to Mohammed's flight from Mecca to Medina in A.D. 622; the starting-point of the Mohammedan calendar. 1938 A.D. is roughly equivalent to A.H. (Year of the Hejira) 1357.

Hel, or *Hela*, in Scandinavian mythology, the daughter of Loki, and the death-goddess who presides over the icy realm of the dead. Hence arose the English word Hell.

Helder, The, a strongly fortified and flourishing seaport in North Holland, on the Marsdiep, at the N. end of the North Holland Canal, 51 m. NW. of Amsterdam; is an important naval centre, and has an excellent harbour. Pop. 34,000.

Helen, daughter of Zeus and Leda, and wife of Menelaus, King of Sparta; the most beautiful of women, she was carried off to Troy by Paris, and to revenge her abduction the Greeks who had pledged themselves to protect her, made war on Troy.

Helianthus, a genus of plants of the natural order Compositae, of which there are some 60 species, natives of America. Included in the genus are the Sunflower (*Helianthus annuus*) and the Jerusalem Artichoke (*Helianthus tuberosus*).

Helicon, a mountain in Boeotia, Greece, Muses; sacred to Apollo and the Muses; famous for the fountains on its slopes dedicated to the latter.

Helicopter, a type of aeroplane in which the machine is equipped with one or more lifting propellers which rotate horizontally. The first appeared in 1872. In 1923 Raoul de Pécara, who was killed while an air passenger in 1937, successfully flew one of his own invention. The helicopter has the advantage of being able to rise almost vertically.

Heligoland, an islet of the North Sea, 35 m. from the mouths of the Elbe and the Weser, given by Britain to Germany in 1890 in exchange for recognition of the former's rule in Zanzibar; consists of the *Oberland*, a plateau, with some

400 houses, and the *Underland* on the shore, 206 ft. beneath, with a group of 70 dwellings. In the summer it is crowded with visitors, bathing being the chief attraction; fishing is the staple industry of the native Frisians. Off here Germany suffered naval reverses at the hands of Great Britain in Aug. 1914, and Nov. 1917. The fortifications erected by Germany were demolished under the Treaty of Versailles, but the island is believed to have been re-fortified under the Nazi régime.

Heliography, a method of signalling by means of the sun's rays flashed from mirrors. Messages can in this manner be transmitted a distance of 190 m. It was at one time of extensive use in military operations.

Heliometer, an astronomical instrument for measuring the diameter of celestial bodies and their distance from each other. It was invented in 1814 by Fraunhofer. It consists of an equatorially-mounted telescope with a divided object glass.

Heliopolis (i.e., City of the Sun), in ancient Egypt, one of the oldest and most sacred cities of Egypt; situated 10 m. N. of Cairo, on the easternmost branch of the Nile; was a centre of Egyptian learning; Potiphar was one of its chief priests; Cleopatra's Needle, now on the Thames Embankment, came from here. Also a name of Baalbec.

Helios, the Greek God of the sun, identified with Apollo, was the brother of Selene and Eos; a god of the brood of the Titans, and the source of light to both gods and men.

Heliotherapy, the treatment of certain diseases by the application of the sun's rays. The most useful radiations are the infra-red and the ultra-violet. The former dilate the capillaries of the skin and stimulate circulation, while the latter check metabolism and replace dietetic deficiency, and are especially valuable in curing rickets.

Heliotrope, or **Bloodstone**, a variety of quartz (chalcedony or jasper) of a deep green colour, with bright red spots. The finest specimens, which come from S. Asia, are of fairly translucent chalcedony; those of jasper are opaque. They are used as seal ring-stones, etc.

Heliotrope (*Heliotropium*), a genus of some 220 plants of the order Boraginaceae found in tropical and temperate regions, some species of which are cultivated as greenhouse plants in England for the sake of their ornate flowers, the chief species grown for this purpose being the *H. peruvianum* (also called Cherry Pie).

Heliozoa, a group of protozoa, the sun-animalcules. Some have no skeleton, and in some cases they possess a gelatinous membrane. They are widely distributed, and are found both in fresh- and marine-water.

Helium, a non-metallic chemical element belonging to the group of inert or rare gases. It was discovered by Sir Norman Lockyer (1868) upon the sun (hence its name, from the Greek *helios*, the sun) by means of the spectroscope. In 1894, however, Sir William Ramsay detected it in the gases evolved from the mineral cleveite on heating. Symbol He, atomic number 2, atomic weight 4.002. Helium occurs in minute traces in the atmosphere, but in much higher proportion (up to 5 per cent.) in the gases given off from certain hot springs, particularly where the water is radioactive;

HELIOTROPE (*H. Europaeum*)

this is because helium is a product of the disintegration of many radioactive elements, the α -particles expelled from radium, for example, consisting of charged helium atoms.

The "natural gas" obtained in vast quantities in the N. American oilfields (Medicine Hat, etc.) often contain nearly 1 per cent. of helium, and is the chief source of the element, which, owing to its lightness and non-inflammability, is used, where possible, to fill dirigibles, etc., instead of the dangerous inflammable hydrogen, of which it has about 92 per cent. of the lifting-power. In a discharge lamp, helium gives a greenish-white light.

Helix, a term indicating a spiral line shaped like a spiral spring with a straight axis. In architecture, a small twist under the abacus of a Corinthian capital.

Hell, the place popularly conceived as that eternal torment, corresponding to the Greek Hades and the Biblical Gehenna. The pains of hell are held to be both physical and spiritual, the latter consisting chiefly of remorse and despair. Modernists are inclined to modify the earlier interpretation of the term hell, and to relegate the idea to legendary folk-lore.

Hellas, the Greek name for Greece, both in ancient and modern times.

Helle, a maiden who, with her brother Phrixus, fled on the golden-fleece ram to escape from the cruelty of her step-dame Ino, and fell into the strait called after her the Hellespont in which she was drowned. See *Golden Fleece*.

Hellebore, the name of a genus of the order Ranunculaceae, found in Britain, Europe and Mediterranean districts and possessing medicinal value. Varieties include the Green Hellebore (*Helleborus viridis*) bearing green flowers and the Christmas rose (*H. niger*), the white flowers of which turn green after fertilisation.

Hellenism, the adoption of Greek manners, culture and language by the peoples of the Near East—Asiatics, Egyptians, Jews, etc.—which followed upon the conquests of Alexander the Great and lasted until the rise of Mohammedanism.

Helles, **Cape**, at the S. end of Gallipoli, near the entrance to the Dardanelles, where troops were first landed at the start of the Gallipoli campaign of 1915.

Hellespont, the ancient name for the entrance to the Bosphorus.

Helm, the handle or tiller by which the rudder of a boat or ship is moved during steering operations. In large ships the tiller is in the form of a wheel. The tiller must be moved in the opposite direction to which it is desired to turn the boat.

Helmet, a protective covering for the head, especially in war. In Norman times it was made of hide with iron safeguards for the ears and neck. Knights of the 14th Century wore movable visors to protect the face. The advent of gun-fire rendered them useless in modern warfare until the World War, when helmets were used with great effect to protect troops from shrapnel, much of which strikes downwards. Helmets are also worn by firemen, divers, policemen, etc.

Helmet Shell, a gastropod mollusc resembling the whelk; its shell is used in the manufacture of cameos and brooches. They belong to the family Cassididae.

Helmholtz, Hermann von, eminent German scientist, born in Potsdam, Brandenburg; first an army doctor, and in 1849 became professor of Physiology in Königsberg, and subsequently in Bonn and

Heidelberg. In 1871 he became professor of physics in Berlin, and in 1887 nominated 1 of the Charlottenburg Institute. To ology he made contributions of great due on the various sense-organs, and to physics on the conservation of energy. His published works include *Theory of Sound*, *Sensations and Sensations of Tone as a Physico-Basis for the Theory of Music*. (1821-184).

ise, niece of Fulbert, canon of Amour with Abelard (*q.v.*); became prioress of the convent of Argentoulli; later founded a new convent of the Paraclete, where she was abbess. (1101-1154).

Helots, slaves who formed the lowest grade of the population of Sparta, were descendants of the original inhabitants of Laconia, or prisoners of war. They belonged to the State, from which alone they could receive manumission. They were employed as tillers of the ground, waited at meals, filled various menial offices for private individuals; were whipped annually to remind them of their position, slaughtered when their numbers increased too much, and forced to exhibit themselves under intoxication as a warning to the Spartan youth.

Helsingborg, city and seaport of Malmö, facing Elsinore across the Sound. It has a large trade, especially with Denmark, and many manufactures. Pop. 55,500.

Helsinki, fortified seaport and capital of Finland, in a commanding position on a rocky peninsula in the Gulf of Finland, 191 m. W. of Leningrad. The numerous islands and islets at the entrance of the harbour are strongly fortified. The town is handsomely laid out, and has a flourishing university (student roll, 6,600), and does a good Baltic trade. Pop. 272,500.

Helvellyn, one of the Cumberland mountains, 3,118 ft. high, rises at the side of Ullswater, midway between Keswick and Ambleside.

Helvetii, a Celtic people mentioned by Caesar as occupying territory in Central Europe now embraced in Switzerland. They suffered tremendous slaughter at the hands of Caesar when endeavouring to make their way to a wider territory in Southern Gaul.

Hemans, Felicia Dorothea, *née* Browne, poetess, born in Liverpool. Her marriage was an unhappy one, and after the birth of five children ended in permanent separation. She was the authoress of a number of works, and enjoyed the friendship of Wordsworth, Scott and other literary celebrities of the time. (1793-1835).

Hematin, or *Hæmatin*, a constituent of the blood, which combines with globin to give it its distinctive colour.

Hemel Hempstead, a busy town in Herts, 23 m. NW. of London; noted for its straw-plaiting, and has paper-mills, foundries, etc. Pop. 16,000.

Heming, or *Hemmings*, John, editor, with Henry Condell (d. 1627), of the First Folio Shakespeare; an actor, probably from Shakespeare's part of the country; treasurer of the Lord Chamberlain's (afterwards the King's) company of actors; said to have been the original Falstaff. Latterly principal proprietor of the Globe Theatre. (1586?-1630).

Hemingway, Ernest, American author; born at Oak Park, Illinois; at first a reporter; published stories and poems from 1823 onward; *The Sun Also Rises*, 1926; *A Farewell to Arms*, written in an original flowing style, attracted much attention in 1929. (1898-).

Hemiplegia, a common form of paralysis affecting one side only of the body, and from which complete recovery is rare. If the right side be affected, the seizure is often accompanied by aphasia (loss of the power to express ideas in speech or to understand the spoken or written word).

Hemisphere, the half of a sphere, especially the earth, which is usually divided on maps into an Eastern and a Western Hemisphere, the former called the old and the latter the new world. The equator also forms a boundary between the North and South Hemispheres.

Hemlock, a poisonous umbelliferous plant (*Conium maculatum*)

found in Britain, Europe and temperate Asia. It is used medicinally as a sedative and a substitute for opium. It bears white flowers on a smooth, hollow stem with purple markings. Socrates's death was caused by a draught of hemlock. Its effect on human beings is to produce paralysis, convulsions and death, but the medical preparation relieves rheumatism, whooping-cough and pain.

Hemp (*Cannabis sativa*), a plant of the order Moraceae, an annual herb, and a native of Western and Central Asia, but naturalized in Africa, S. America, Italy, Russia, etc. Indian hemp produces the narcotic drug called hashish. The fibre is strong, and is used in the manufacture of sail-cloth ropes and cables. Hemp seed is used as food for birds and yields a valuable oil. It is cultivated extensively in the U.S.A. The flowers resemble hemp, and the leaves are divided into five leaflets.

Hems, or *Heme*, a city in Syria, known to the Romans as Emesa, on the Orontes, 63 m. NE. of Tripoli. Here stood in ancient times a famous temple of the Sun, one of whose priests, Heliogabalus, became Roman emperor (218). The Crusaders captured it from the Saracens in 1098. It does a good trade in oil, cotton, silk, etc. Pop. 53,000.

Hemsworth, town of Yorkshire, in the W. Riding, 8 m. SE. of Wakefield. Coal-mining and stone-quarrying are carried on. Pop. 13,000.

Henbane, a plant of the order Solana- ceae with soft, hairy foliage, and pale-yellow flowers streaked with purple, found in waste ground. The juice contains several alkaloids with a medicinal value. It is a fatal poison, especially to fowls. The only British species is *Hyoscyamus niger*. The extract is superior to laudanum as a narcotic, as it does not result in constipation.

Henderson, Arthur, British politician. He entered Parliament as Labour member in 1903, became chairman of the Labour Party in 1908, and in 1915 was President of the Board of Education. From 1916 to 1917 he was Labour representative in the War Cabinet. In 1924 he was Home Secretary in the Labour Government and in 1929 became Foreign Secretary. In 1932 he presided over the Geneva disarmament conference, and received the Nobel Peace Prize in 1934. (1863-1935).

Hendon, borough of Middlesex, England, London. Here are aeroplanes works and

HEMLOCK

HENBANE

flying-schools. A large reservoir, the Welsh Harp, is used for boating and skating. Pop. 130,000.

Hengist and Horsa, two Saxon came over to assist Vortigern against the Picts in the 5th Century, and were rewarded by a gift of Thanet, though they were afterwards defeated by Vortigern and Horsa slain.

Hengistbury Head, promontory of Hampshire, England, on the W. side of Christchurch Bay. It has remains of ancient fortifications.

Henley, William Ernest, poet and critic, author of a *Book of Verses* and *Song of the Sword*, and of a volume entitled *Viciss and Reversus*, in which he convicts discriminative criticism; edited, with T. F. Henderson, an edition of Burns's poetry, with a *Life of the poet*; wrote several plays in collaboration with Robert Louis Stevenson. (1849-1903).

Henley-on-Thames, a borough of Oxfordshire, England, on the Thames, near the Chiltern Hills, 36 m. W. of London. The river is spanned here by a fine five-arch bridge, and the annual amateur regatta is a noted social event. Malting and brewing are the chief industries. Pop. 14,500.

Henna (*Lawsonia inermis*) a shrub of N. Africa and Eastern Asia, producing yellow and brown dyes, extensively used as cosmetics both in Europe and the East.

HENNA

Henrietta Maria, wife of Charles I., born at the Louvre; daughter of Henry IV. of France and of Marie de' Medici; a beautiful and able woman, much beloved by her husband, but as a Roman Catholic disliked and distrusted by the nation; menaced with impeachment by the Commons, she had to flee the country; returned with a supply of money and ammunition, but in 1644 was obliged to seek refuge again in France; revisited the country for a short time after the Restoration, and died near Paris at her retreat there. (1609-1669).

Henrietta Maria, daughter of Charles I., and wife of the Duke of Orleans, brother of Louis XIV., born in Exeter. She was successful in persuading her brother, Charles II., into league with France by signing the Treaty of Dover. On her return to France she died suddenly, it is believed by poison. (1644-1670).

Henry, the unit of inductance of an electric circuit; named after Joseph Henry (q.v.). A coil has an inductance of one henry if a current changing at the rate of one ampere per second produces an electromotive force of one volt. The microhenry is the millionth part of a henry.

Henry I., King of England from 1100 to 1135, youngest son of William the Conqueror, born at Selby, Yorkshire; usurped the crown from his elder brother Robert, an act which was confirmed by the Church and the mass of the people. Robert, after a weak resistance, being pensioned off. The epithets *Beauclerc* and the *Lion of Justice*, which were bestowed on him, accurately describe him as he appeared to his people. His attainments were scholarly for his times, and his reign was distinguished by the strong and organised administration of justice, although morally his life was a depraved one. Meanwhile, his brother Robert had again taken up arms but was routed at Tenchebrai, thus losing Normandy,

and remained a prisoner in Henry's hands till his death in 1135. Henry now governed his kingdom with a firm hand. The turbulent Norman nobles were subdued, while the administration of the law was greatly improved by the institution of the *Curia Regis* (the King's Court) and of itinerant judges. Trade improved, and the religious life of the nation was deepened through the advent of the Cistercian monks and the influence of Anselm. His wife was Matilda (who changed her name to Matilda), daughter of Malcolm of Scotland. (1068-1135).

Henry II., King of England from 1134 to 1189, first of the Plantagenet line; son of Matilda, daughter of Henry I., and her second husband Geoffrey Plantagenet, Count of Anjou, born in Le Mans. When he came to the throne as Stephen's successor he was already in possession, mainly through his marriage with Eleanor, the divorced wife of Louis VII., of more than half of France. He set himself with all the vigour of his energetic nature to reform the abuses which had become rampant under Stephen, with Thomas à Becket as his zealous Chancellor. The Great Council was frequently summoned to deliberate on national affairs. The *Curia Regis* was strengthened, the itinerant judgeships revived while the oppression and immorality of the nobles was sternly suppressed by the demolition of the "adulterine castles." A blow was aimed at the privileges and licentiousness of the clergy by the Constitutions of Clarendon, but their enactment brought about a rupture between the King and Becket, now Archbishop of Canterbury, which subsequently ended in the murder of Becket. In 1171 Ireland was invaded and annexed, and three years later William the Lion of Scotland was forced to declare his kingdom a fief to the English throne. Some time previously the Welsh princes had done him homage. The last years of his reign were embittered by quarrels and strife with his ungrateful sons. He was a man of many kingly qualities, and his reign marks an epoch in the development of constitutional law and liberty. (1133-1189).

Henry III., King of England from 1216 to 1272, oldest son of King John; succeeded to the throne at the age of nine. During his minority the kingdom was wisely and faithfully ruled by the Earl of Pembroke and Hubert de Burgh. When he came of age he proved himself a weak ruler, and his administration has been called "one long series of impolitic and unprincipled acts." With the elevation of Peter des Roches, a native of Anjou, to the post of chief adviser, French interlopers soon became predominant at the Court, and the recipients of large estates and pensions, an injustice further stimulated by the King's marriage with Eleanor of Provence. Justice was prostituted, England humiliated under a feeble foreign policy, and the country finally roused by infamous exactions. Simon de Montfort, the King's own brother-in-law, became the leader of the people and the champion of constitutional rights. By the Provisions of Oxford, forced upon the King by Parliament assembled at Oxford (1258), a wider and more frequent Parliamentary representation was given to the people, and the King's power limited by a permanent council of 15. As an issue of the Barons' War, which resulted in the defeat and capture of the King at Lewes (1264), these provisions were still further strengthened by the Mise of Lewes, and from this time may be dated the birth of representative government in England as it now exists. In 1265 was summoned the first Parliament as at present constituted, of peers temporal and spiritual, and representatives from counties, cities and boroughs. Internal dissensions ceased with the victory of Prince Edward

over the barons at Evesham (1265), when the popular leader De Montfort perished on the field. (1207-1272).

Henry IV., King of England from 1399 to 1413, first of the Lancastrian kings, son of John of Gaunt, and grandson of Edward III., born at Bellingbroke, in Lincolnshire. Richard II.'s jealousy and despotism had damped the loyalty of his people, and when Henry came to England to maintain his ducal rights he had little difficulty in deposing Richard, and, with the consent of Parliament, in assuming the crown. This act of usurpation—for Richard's true heir was Roger Mortimer, a descendant of an older branch of the family—made Henry more obsequious to the Parliament which had placed him on the throne, and was the occasion of the bloody Wars of the Roses that were to devastate the kingdom during the reigns of Henry VI. and Edward IV. Henry's own reign was a troubled one. Wars were successfully undertaken against the Welsh under Owen Glendower and against the Scots; while rebellion was raised by the Percies in unsuccessful attempts to win the crown for Mortimer. The only important law passed enacted the burning of heretics, the first passed in England for the suppression of religious opinion. (1366-1413).

Henry V., King of England from 1413 to 1422, son of preceding, born in Monmouth. During the wars of his father's reign he gave evidence of his abilities as a soldier, distinguishing himself especially by his conquest of Wales. On his accession to the throne he renewed the claims put forward by Edward III. to the French crown, and with the support of his people embarked on his great struggle to win the kingdom of France. In 1415 he gained the glorious victory of Agincourt, strengthened his position by confirmed military successes, and by marrying Catherine, daughter of the French King, and by the Treaty of Troyes, got himself appointed regent of France and successor to the throne. He was idolized by his people as the perfect pattern of a warrior king, but he had neither the gifts of statesmanship nor the foresight of Edward I., to whom he had been compared, and the English dominion which he established in France was too insubstantial to endure. (1387-1422).

Henry VI., King of England from 1422 to 1461, son of preceding, born in Windsor; was a child of nine months when his father died, and in the same year was acknowledged king over the N. and E. of France. The Dukes of Bedford and Gloucester became respectively regents over the English and French kingdoms. War with France was resumed and for thirty years the weary struggle continued, until England, despite some early successes, had been stripped of her French possessions, mainly owing to the enthusiasm awakened by the heroic and ill-fated Joan of Arc (q.v.). The growing discontent of the people is indicated by Jack Cade's rebellion (1449), and five years later began the famous Wars of the Roses. Six battles were fought between the rival houses, and four times victory rested with the Yorkists. After the final victory of the Yorkists at Towton (1461), Henry fled to Scotland and Edward IV. was proclaimed King. Henry was a man of weak intellect, gentle, and of studious nature, and was ill-mated with his ambitious and warlike queen, Margaret of Anjou. A futile struggle was made to win his kingdom back, but the hopes of the Lancastrians perished at Tewkesbury. The

King was captured and confined in the Tower, where, there is little doubt, he was murdered. (1421-1471).

Henry VII., King of England from 1485 to 1509, son of Edmund Tudor, Earl of Richmond, first of the Tudor monarchs, born at Pembroke Castle. After defeating and slaying Richard III. on Bosworth Field he assumed the crown, and by his marriage with Elizabeth of York, daughter of Edward IV., united the claims of the rival roses. His firm and prudent rule established quiet and order in the country. The pretensions of the adventurers Lambert Simnel and Perkin Warbeck were promptly crushed. A peaceful relationship was established with France, and the Scots were conciliated by the marriage of his daughter Margaret to their King, James IV. Increased prosperity followed, maritime enterprise was encouraged, but the kingly power grew at the expense of the constitutional authority of Parliament. Resort was had to benevolences and other unconstitutional methods of raising funds, and in his later years the King's exactions became tyrannical. Though not a man of kingly qualities, he did much for his country. (1456-1509).

Henry VIII., King of England from 1509 to 1547, son of preceding, born in Greenwich; was welcomed to the throne with great enthusiasm, and still further established himself in public favour by his gallant exploits at the Battle of Spurs and at the sieges of Tournai and Terouanne in the war of the Holy Alliance against France. In his absence an invasion of James IV. of Scotland was repulsed and the Scottish army crushed at Flodden (1513). During the first half of the reign public affairs were mainly conducted by the King's favourite minister, Wolsey, whose policy it was to hold the balance of power between Spain and France; but he fell into public disfavour by the heavy burden of taxation which he laid upon the people. Henry, who in 1521 had been named "Defender of the Faith" by the Pope for his published defence of the sacraments against the attacks of Luther, was now seeking a divorce from his first wife Catherine of Aragon. A breach with the Pope ensued, Wolsey was deposed for his double-dealing in the matter, and Henry, having defiantly married Anne Boleyn, put an end to the papal jurisdiction in England to secure himself against appeals to the Papal Court, and had himself acknowledged Supreme Head of the Church of England. The suppression of the monasteries soon followed, and their estates were confiscated (1536-1540). In 1536 the Reforming movement was continued by the drawing up of the *Ten Articles* and by an authorised translation of the Bible; but the passing of the *Six Articles* three years later, declaring in favour of the real presence of Christ in the Eucharist, clerical celibacy, private masses, auricular confession, etc., was an attempt to stay the rapid spread of Protestant doctrines. In 1541 Henry was declared King of Ireland, and in the two following years successful wars were waged with Scotland and France. The importance of the reign lies in the coincidence of it with the rise and culmination of the English Reformation. Historians for the greater part agree in representing Henry as a man of versatile powers, considerable intellectual force, but headstrong, selfish, and cruel in the gratification of his desires. He was six times married; Catherine and Anne of Cleves were divorced, Anne Boleyn and Catherine Howard executed, Jane Seymour died in childbirth, and Catherine Parr survived him. He left behind to succeed him on the throne Mary, daughter of Catherine, Elizabeth, daughter of Anne Boleyn, and Edward, son of Jane Seymour. (1491-1547).

Henry IV., King of France from 1594 till 1610, surnamed "The Great" and "The Good." During his reign the great struggle between the Huguenots and the Catholics continued with unabated fury. Henry saved his life in the massacre of St. Bartholomew's Day by renouncing his early Calvinism, but was imprisoned. Four years later he was again at the head of the Huguenot army and, defeating the Bourbon claimant for the throne, was crowned king, after waiving his Protestant principles to conciliate the people. In 1598 he issued the famous Edict of Nantes, giving freedom of worship to the Huguenots. During his administration the nation was consolidated, new roads and a growing trade knit the towns together. Financial reforms of great importance were carried out by his celebrated minister, Duc de Sully. Henry was assassinated, it is said, by instigation of the Jesuits. (1553-1610).

Henry III., an illustrious Emperor of the Holy Roman Empire, son of Conrad II. In 1026 he became King of the Germans, succeeded to the dukedoms of Bavaria and Swabia, and in 1039 assumed the imperial crown. Under his strong and wise government, dissensions, papal and otherwise, were put down, the territory of the empire extended, and many churches and monastic schools established. (1017-1056).

Henry IV., Emperor of the Holy Roman Empire, son of preceding. His reign is memorable as witnessing the first open claim on the part of the Papal power to dominion over the crowned heads of Europe. Henry's attempt to depose Gregory VII. was boldly met by a declaration of excommunication; Henry was forced to do penance and to receive his crown afresh from the Pope; but the struggle broke out anew. Clement III. continued the opposition, and the contest raged with varying success till the deposition of Henry by his ungrateful son. (1050-1106).

Henry the Navigator, son of

King of Portugal, born in Oporto; an able, enterprising man, animated with a zeal for maritime discovery, who at his own expense sent out voyagers who discovered the Madeira Islands and explored the coast of Africa as far as Cape Blanco; is said to have been the first to employ the compass for purposes of navigation; his mother was daughter of John of Gaunt. (1394-1460).

HENRY THE
NAVIGATOR

Henry, Joseph, American scientist; carried out much research in connection with electromagnetism and induction. The unit of inductance, the "henry" (q.v.), was named after him. (1799-1878).

Henry, O., pen name of William Sydney Porter, American writer. After successively working in an army store, ranching in Texas, and working there in a bank and land office, he served three years in prison for embezzlement. He edited several periodicals and produced a number of short stories of an original and humorous character, largely based on the experiences undergone during his varied career. (1862-1910).

Henry, Patrick, American statesman and orator, born in Virginia; leaving a business career, he took to law, and rose into fame by his eloquent pleadings in the cause of the people; played a conspicuous part in the agitation for independence, especially by his oratory; he was a member of the first Congress in 1774. (1736-1799).

Henson, Herbert Hensley, Bishop of Durham since 1920; previously from 1918, of Hereford; born in London; educated at Oxford; Head of Oxford House, Bethnal Green, 1887-1888; Canon of Westminster and rector of St. Margaret's 1900-1912; Dean of Durham, 1912-1918. A leader of liberal thought in the Church of England. (1863-).

Henson, Leslie Lincoln, comic actor formerly in the City; first appearance in concert party at Bath, 1910; appeared later in the same year in London in pantomime; toured with various companies in England and America; appeared at the Gaiety, 1915, in *To-Night's the Night*, with instant success. After war service, reappeared 1919 and has scored many successes since. (1891-).

Henty, George Alfred, writer of boys' stories; born at Trumpington, Cambridge; educated at Westminster; volunteered for Crimean War in hospital commissariat; witnessed many European campaigns, besides those in Ashanti and Kibi. From 1876 wrote stories, about 80 in all. *The Young Franc-Tireurs* (1872) is his best-known book. (1832-1902).

Henzada, town and district of Burma. The town stands at the head of the Irawadi delta, 65 m. NW. of Pegu, and is an important trading centre. Pop. (dist.) 551,000; (town) 24,000.

Hepatica, a term in homeopathic medicine for a product of sulphur, consisting of polysulphides of potassium with sulphate or thiosulphate of potash. It is sometimes called bryophyta.

Hephæstos, Greek god equivalent to the Roman Vulcan, the god of fire, or of labour in the element of fire, son of Zeus and Hera, represented as ill-shapen, lame and ungainly. He had his smithy in Olympus, and the marvellous creations of his art were shaped on an anvil, the hammer of which was plied by 20 bellows. In later traditions he had the Cyclops for his servants, employed in manufacturing thunderbolts for Zeus. He was wedded to Aphrodite, whom he caught playing false with Ares, both of whom he trapped in a net, a spectacle to all the upper deities.

Hepplewhite, George, English furniture-maker; has given his name to a style of Georgian furniture marked by the use of curved lines, and less solid than the Chippendale furniture which preceded it. (d. 1766).

HEPPLE-
WHITE
CHAIR

Heptarchy, Anglo-Saxon, the seven kingdoms of Kent, Sussex, Wessex, Essex, Northumberland, East Anglia and Mercia, the chief of those established by the Saxons during the 6th Century in Great Britain.

Heptateuch, a name given to the Bible, first seven books of the Bible.

Hera, chief goddess of the Greek mythology, sister and wife of Zeus, daughter of Kronos and Rhea, and queen of heaven; equivalent to the Roman Juno. She was jealous of Zeus in his amours with mortals, and persecuted all his children by mortal mothers, Hercules among the chief.

Heraclitus, a Greek philosopher, born about the year 480 B.C.; taught that everything throughout the universe is in constant flux, all things being in transition from being to nothing and from nothing to being, from life to death and from death to life, that nothing is, that everything becomes, that the truth of being is becoming.

Heraclius, Emperor of the East from 610 to 642, born in Cappadocia; raised to the throne of the East on account of services rendered to the citizens of Constantinople in ridding them of a tyrant; waged war against the Persians, defeated Chosroës and compelled a peace, but was unable to withstand the arms of the Moslem invaders.

Herald, formerly an officer who acted as messenger between sovereigns, now a State official of the Herald's College (q.v.). The heralds are assistants to the Kings of Arms. There are now six, known as Lancaster, Somerset, Chester, Richmond, Windsor and York.

Heraldry, the science of armorial on shields and armour. It has developed since the 13th Century, and arose partly from the custom of wearing closed helmets, making armorial bearings necessary for identification. Heraldry was a prerogative of the ruling class, being a sign of noble rank.

Marshalling arms is the placing of several coats of arms on one shield to show descent, marriage, etc. A wife's arms are usually shown on a small escutcheon on the husband's coat. Complete armorial bearings consist of a motto, crest, wreath, helmet, lambrequin (a cloth covering for the helmet), coronet, shield (usually quartered) and mantle.

Shield devices frequently bear the resemblance of an animal, often a lion posed as rampant, statant, couchant, dormant, etc., while mythical creatures such as the wyvern, griffin, dragon, unicorn, etc., are often adopted as symbols. Flowers include the rose, fleur-de-lis, while birds are represented by the eagle, peacock and pelican.

Heralds' College, a body existing to trace genealogies and to grant coats-of-arms. It was founded in 1483, and is presided over by the Earl Marshal, an hereditary post held by the Dukes of Norfolk.

Herat, the chief town of the province of Herat, in W. Afghanistan, on the Hari-Rud, 200 m. W. of Kabul. Its central position has given it a great commercial and military importance. It has manufactures of leather and wool; oil has been found in the neighbourhood. Pop. 30,000.

Hérault, a maritime dept. of S. France on the N. are the Cevennes Mts., but wide plains fringed on the sea border with large lagoons occupy the S. The climate, except on the marshy coast, is dry and healthy. Its former importance as a wine-growing district has greatly diminished, but olives and almonds are cultivated, sheep and silkworms bred. Coal is the most important mineral. Salt is obtained in large quantities from the salt marshes, and fishing is an important industry. Area 2,402 sq. m. Pop. 515,000.

Herb, or herbaceous plant, is one in which the stem does not become woody and die down to the ground in winter. Such plants may be annual, biennial or perennial. Annuals spring from seed and die in one season, biennials produce leaves the first year and flowers and fruit the second year. Perennials blossom and form fruit year after year.

Herbarium, a collection of dried pressed in order. When the plants are dry they are fixed to paper by gum and placed in a cabinet. Stiff paper should be used. Pressing should be done upon absorbent paper between boards.

Herbart, Johann Friedrich, German philosopher, born in Oldenburg; succeeded Kant at Königsberg, professor also at Göttingen twice; founded his philosophy like Kant on the criticism of

subjective experience, but reached different results, and arrayed himself against the whole of the post-Kantian German philosophy. (1776-1841).

Herbert, Alan Patrick, satirist and an India Office official; educated at Winchester and New College, Oxford; served in France and Gallipoli in the World War, and was wounded. Has written effective satires of the law in *Misleading Cases* (1927) and other works; has also produced several plays; in 1935 became M.P. for Oxford University as an independent, and in 1937 scored a great success as a private member by securing the passage of an act amending the Divorce Law, which he sponsored. (1890-).

Herbert, Edward, Lord, of Cherbury, diplomatist, soldier and scholar, born in Montgomery Castle, in Wales; served as a soldier under Maurice of Orange; was twice ambassador in France, but chiefly devoted to philosophical speculation; was the first of the deistical writers of England, though his deism was dogmatic not critical, positive not sceptical, as is that of the subsequent English deists. (1583-1648).

Herbert, George, poet, brother of the preceding, born in Montgomery Castle; failing in preferment at Court, took holy orders and became rector of Bemerton, Wiltshire, a post he lived only two years to hold; was the author of a series of poems entitled *The Temple*; his life was written by Isaac Walton. (1593-1633).

Herbert, Sidney (Lord Herbert of Lea), politician, born at Richmond; entered the House of Commons in 1832 as a Tory, and was in turn Secretary to the Admiralty and War Secretary under Peel. During the Aberdeen ministry he, as War Secretary, incurred much popular disfavour for the mismanagement of the Crimean War, but under Palmerston he effected many beneficial reforms while at the head of the War Office; greatly aided Florence Nightingale (q.v.) at Scutari. He was raised to the peerage in 1860. (1810-1861).

Herculanæum, a city of ancient Italy, overwhelmed in A.D. 63 and 79, with Pompeii and Stabiae by eruptions of Vesuvius, at the north-western base of which it was situated, 6 m. E. of Naples. So completely was it buried by the ashes and lava that its site was practically obliterated, and in time two villages sprang up on the new surface, 40 to 100 ft. below which lay a great part of the buried city. Relics were discovered while deepening a well in 1706, and since then a considerable portion of the town has been excavated, pictures, statues, etc., of the greatest value having been brought to light.

Hercules, the typical hero of the Greeks, son of Zeus and Alcmene, and persecuted from his cradle by Hera, who sent two serpents to devour him, which he strangled with his arms; grown into manhood, and distinguished for his strength, was doomed by Hera before he could claim his rights as his father's son to a series of dangerous adventures, the "Twelve Labours of Hercules": the first, the throttling of the Nemean lion; the second, the killing of the Lernean hydra; the third, the capture of the hind of Diana, with its hoofs of brass; the fourth, the taking alive of the boar of Erymanthus; the fifth, the cleansing of the stables of Augeas; the sixth, the destruction of the Stymphalian birds; the seventh, the capture of the Cretan bull; the eighth, the capture of the mares of Diomedes of Thrace; the ninth, the seizure

of the girdle of the queen of the Amazons; the tenth, the killing of Geryon and capture of his oxen; the eleventh, fetching the golden apples from the garden of the Hesperides; the twelfth, dragging Cerberus to the light of day. In addition, he strangled the giant Antæus, slew the robber Cacus, delivered Hesione, unchained Prometheus from the rocks of Caucasus, and smote the centaur Nessus, the last proving the cause of his death.

Hercules, *The Pillars of*, two mountains on the opposite sides of the Strait of Gibraltar, fabled to have been originally one, but separated by Hercules; Calpe on the Spanish coast and Abyla on the African.

Hercynian Forest, a forest in Germany, extending at one time from the Rhine to the Carpathian Mts., described by Cæsar as nine days' journey in breadth and sixty in length; now the district of the Harz Mountains.

Hereditaments, in English law, an obsolescent term meaning property which, unless devised by will or disposed of by the owner in his lifetime, must descend to the heir-at-law. They are almost always concerned with land, and are either *corporeal*—i.e., interests in land in possession—or *incorporeal*—i.e., rights in or over lands in the possession of another, such as contingent remainders. The term also includes heirlooms (q.v.).

Hereford, the county town of Herefordshire, England, on the Wye, 144 m. NW. of London; has some fine old buildings including a cathedral begun in 1079, ruins of a castle, etc.; seat of a bishopric since 876; it is noted for its roses and agricultural produce. Pop. 24,000.

Herefords, a famous breed of English longhorn cattle of heavy build, with red coat, white chest, often with a white line along the back, long, curly, soft hair, and thick, short neck, with yellowish horns which bend upwards. They are very hardy, and good meat-producers, but are not so valuable as dairy animals.

Herefordshire, an inland county of W. England, lying on the Welsh border between Shropshire and Monmouthshire. It is a pretty agricultural county, through the centre of which runs the Wye. In the E. are the Malvern Hills, and in the SW. the Black Mts. (2,631 ft.). The rich red soil produces fine wheat, hops, and apples. There is some trade in timber, some stone and marble quarrying, and the cattle are noted. Area 842 sq. m. Pop. 112,000.

Heresy, a belief opposed in some essential article to that authorised by the body—usually a religious organisation—to which the heretic claims to belong. The early Christian Church was subject in the first centuries of its existence to numerous heresies, the most important being Arianism, Nestorianism and Monophysism. In the view of Roman Catholics, Protestantism is a heresy. Heresy is distinguished from schism inasmuch as the latter may concern only discipline, and not doctrine, its essential characteristic being defection from the body of the Church. In the Middle Ages heresy was generally considered an offence liable to punishment both by the Church and the State, a frequent penalty for unrepentant heretics being burning at the stake. See also *Inquisition*.

Hereward the Wake, a Saxon yeoman, born near Bourne, Lincolnshire, who made a gallant effort to rally his countrymen against the Norman Conqueror. He made his final stand on the Isle of Ely, Cambridge-

shire (1070-1071), cut his way through the besieging army, and escaped to the Fens. Subsequently it is supposed he became reconciled to William and held estates. His story is told in Charles Kingsley's *Hereward the Wake*.

Hergesheimer, Joseph, American novelist; author of *Three Black Pennys* and *Jawa Head*, among other books, all written in an elaborate style. (1880-).

Hergest, *The Red Book of*, an important volume of Welsh writings in MS., preserved at Oxford. It dates from the 14th Century, and the legends related—mostly Arthurian—are styled the *Mabinogion*; was compiled at Hergest Court, a family seat of the Vaughans, and is the most valuable Welsh MS. extant.

Heriot, a right of the landlord, under copyhold tenure, to the best live beast or property on a tenant's death, abolished in 1835.

Heriot, George, founder of Heriot's Hospital, a splendid educational establishment in his native city, Edinburgh; was a prosperous goldsmith there; did work for Anne of Denmark, consort of James VI. of Scotland; in 1603 removed with the Court to London, and, combining banking with his other business, he amassed a great fortune, which he left to endow the Hospital named after him. In 1837 the accumulated surplus funds were utilised in establishing 18 free schools in Edinburgh, which were closed in 1885, and the original Hospital reconstructed as a secondary and technical school, while a portion of the funds was used in subsidising the Heriot-Watt College and in founding bursaries. (1563-1624).

Heri Rud, or *Hari Rud*, river of NW. Afghanistan, anciently Arjui. Rising in the Hindu Kush, and for part of its course pursuing the Afghan-Iran frontier, it loses itself in the Kara Kum desert, Turkmenistan. Length 650 m.

Herkomer, Sir Hubert von, born in Waal, Bavaria; came to England in 1857, and studied at the Southampton School of Art; he was a prolific artist, and many of his portraits have become celebrated; the "Last Muster" (1875) is reckoned his finest work; was twice Blade professor at Oxford, and in 1890 was elected R.A.; the School of Art at Bushey was founded by him. (1849-1914).

Hermann. See *Arminius*.

Hermaphrodite, a living organism capable of performing both male and female functions. The state is common in many of the lower orders of animals, such as the leech and snail. Some flowering plants—e.g., the orchid—are hermaphroditic; self-fertilisation is prevented by a space of time intervening between the arrival at maturity of the male and female parts.

Hermes, in Greek mythology the herald of the gods and the god of eloquence and of all kinds of cunning and dexterity in word and action; was the son of Zeus and Maia; wore on embassy a winged cap, winged sandals, and carried a herald's wand as symbol of his office. His Roman equivalent was Mercury.

Hermitage, a red wine obtained from the Rhône valley vineyards near Valence in Drome, with a character like fine claret. The word is also used of the dwelling of a hermit, especially of a cell made for the purpose, either in a remote solitude or built against, but without communication with, a monastery or church. Hermits differed from Anchorites, who, though also solitary, had no fixed abode but wandered about; and from the Coenobites, who, though also ascetics, lived in communities.

Hermit Crab, a family of marine Crustaceans (the

Paguridae), having a soft and spirally-twisted abdomen, which is usually protected by the empty portable shells which they select to live in. The common Hermit Crab (*Eupagurus bernhardus*) is found on English shores, and usually selects a whelk shell.

HERMIT CRAB

Hermon, Mount, the second highest mountain of Syria, the culminating point of the anti-Lebanon range, estimated at 10,000 ft. It rises to a truncated cone, some 2,500 ft. above the radiating ridges, and has a most imposing aspect. It has three summits situated like the angles of a triangle, about a quarter of a mile from each other.

Herne, colliery town of Prussia, in Westphalia, 15 m. NW. of Dortmund. It has powder-mills and manufactures machinery. Pop. 99,000.

Herne Bay, town in Kent, England, on the N. coast of the Isle of Thanet; a popular and growing summer holiday resort. Pop. 17,500.

Herne Hill, residential district of SE. London, in the Boroughs of Camberwell and Lambeth, once the residence of Ruskin, and home of a well-known athletic track.

Herne the Hunter, a figure in legendary history, who was reputed to wander at night near "Herne's Oak" in Windsor Forest. The tree was blown down in 1863, an act attributed to the hunter's evil spirit.

Hernia, or Rupture, a protrusion of an internal organ, especially a part of the intestines. It is a condition more common amongst men than amongst women, the most usual form being inguinal hernia. Treatment consists of replacing the intestines in position and wearing a support, or truss, to maintain it. It is not as a rule dangerous or a source of great inconvenience, except in the case of "strangulated" hernia of the abdomen, when the blood-supply of the part is cut off.

Hero, a priestess of Aphrodite at Sestos, in Thrace, beloved by Leander of Abydos, who swam the Hellespont every night to visit her, but was drowned one stormy evening, whereupon at sight of his dead body on the beach she threw herself into the sea.

Hero, a mathematician, born in Alexandria in the first half of the 2nd Century; celebrated for his experiments on condensed air, and his anticipation of the pressure of steam; invented a water-clock and hydraulic organ.

Hero, a name given by the Greeks to human beings of such superhuman faculties as to be regarded as the offspring of some god; applied in modern times to men whose intellect, force of character or physical courage inspires ordinary mortals with something like religious regard.

Herod, the name of a family of Idumaean origin but Jewish faith, who rose into power in Judea shortly prior to the dissolution of the Jewish nationality; the chief members of which were Herod the Great, King of the Jews by favour of the Romans, who made away with all his rivals, caused his own children to be strangled on suspicion of their conspiring against him, and died a painful death in 4 B.C. the true date of the Nativity of Christ; and Herod Antipas, his son, tetrarch of Galilee, who beheaded John the Baptist, and to whom Christ was remitted by Pilate for examination; he died in exile at Lyons.

Herodians, a sect referred to in the New Testament as adversaries of Jesus. They were a political party who strongly supported the dynasty of Herod.

Herodotus, Greek historian, the "Father of History," born at Halicarnassus, in Caria; travelled over Asia Minor, Egypt and Syria, and in his old age recorded the fruits of his observations and inquiries, the main object of his work being to relate the successive stages of the strife between the free civilisation of Greece and the despotism of Persia for the sovereignty of the world. (484-408 B.C.).

Heroic Verse, a term applied in English poetry to rhymed iambic couplets, called heroic couplets. Chaucer was the first English writer to employ it. Dryden and Pope used it with skill, and this verse form is a feature of the work of Pope, Byron and Swinburne.

Heroin, a drug obtained from morphine and administered by injection. It acts in much the same way as morphine, but on account of its special influence on the nervous system of the breathing apparatus is used to relieve paroxysms of coughing. The drug habit is sometimes so acquired.

Heron, the name given to a number of birds of the Ardeidae (Ileron)

family, which also includes the Bliterns. They are widely distributed. The Common Heron (*Ardea cinerea*) which nests (in "Ileronries") in Great Britain and Ireland, has a long neck and legs, slender body and striking plumage, and is found frequenting lakes and marshes, where it wades searching for molluscs, fish, frogs, worms, etc., which it spears with its long bill. They nest in trees. "Ospreys" are secured from the herons as well as from the Egrets in the mating season.

COMMON HERON

Herpes, the lips, nostrils and other parts of the face, causing irritation, swollen red patches and blistering. It may also affect the genital organs and buttocks, as well as the mucous surfaces. Herpes Zoster is more commonly known as Shingles (q.v.).

Herrick, Robert, a Caroline poet, born in London, of good family; was incumbent of Dean Prior in Devonshire; author of the *Hesperides*, published in 1648, and of *Noble Numbers*, both collections of lyrics of great beauty and merit. (1591-1674).

Herring (*Clupea harengus*), a fish of the *Clupea* genus, widely distributed over the N. Atlantic above Lat. 45° N. It is about 10 ins. long, with bluish-green back and silver underneath. It lives in shoals and migrates from deeper to shallower parts of the ocean for spawning. It is preyed upon by hake, dog-fish, gulls, etc.; is caught throughout the year, and is a most nutritious article of food. Herrings are cured and smoked as bloaters, or split and smoked as kippers. Other fish of the same family are the pilchard, anchovy and whitebait. The herring industry is of great importance on the British coast, especially in Scotland and in E. Anglia.

Herriot, Edouard, French politician, and a Socialist leader. He became Food Minister for a short time during the World War, and later Foreign Minister; in 1924 became Premier for a year, and visited London to confer with Ramsay MacDonald

on international co-operation. From 1934 to 1936 he was Minister without Portfolio; in 1935 he left the Radical-Socialist party. (1872-)

Herschel, Sir John, astronomer; only son of Sir William Herschel; followed with great diligence and success the same researches as his father; spent four years at the Cape carrying out a survey of the stars of the southern hemisphere; added much to our knowledge of the stars and carried out experiments in connection with the wave theory of light. (1792-1871).

Herschel, Sir William, a distinguished over; son of a musician, and intended for that profession; came to England at the end of the Seven Years' War, and obtained sundry appointments as an organist; gave his leisure time to the study of astronomy and survey of the heavens; discovered the planet Uranus in 1781, which he called *Georgium sidus* in honour of George III.; discovered also the two innermost belts of Saturn, and drew up a catalogue of 5,000 heavenly bodies or clusters of them. (1738-1822).

Hertford, the county town of Hertfordshire, England, on the Lea, 26 m. N. of London. Some few remains of its 10th-Century castle still exist, and there are several charity schools, a castle built in James I.'s time, and Christ's Hospital for girls. The chief trade is in corn, malt and flour. In the vicinity is Halleybury College. Pop. 12,000.

Hertfordshire, or **Herts**, an inland occupying a central position between Buckingham and Bedford on the W. and Essex on the E. The surface is undulating and much covered with wood. The Lea and the Colne are the chief rivers. Large crops of barley, wheat and hay are raised; straw-plaiting and the manufacture of paper, silk and chemicals are carried on extensively, while Ware is a centre of the English maling trade. Watford is the largest town. Pop. 401,000.

Hertz, Heinrich Rudolf, German physicist, born in Hamburg; after studying civil engineering, became Helmholtz's assistant at Berlin university in 1880; professor of Physics at Karlsruhe in 1885, and in 1889 at Bonn, where he died; published (1887) his discovery that the ether-waves produced by electrical discharges could be received for examination by an appropriate instrument—thus laying the foundation for radio. (1857-1894).

Hertz, Joseph Herman, Jewish ecclesiastic, born in Czechoslovakia; educated in the U.S.A.; rabbi at Johannesburg from 1898, but expelled as pro-British during the Boer War; in 1913 was elected Chief Rabbi of the British Empire, thereafter residing in London. Has written numerous works on Jewish subjects. (1872-)

Hertzog, James Barry Munnik, South African politician. He served as a Boer general in the South African War, and subsequently became an ardent nationalist. He took office in 1910 as Minister of Education, and in 1914 showed tolerance to De Wet's rebellion. Elected leader of his party in 1915, he succeeded Smuts as Prime Minister in 1924, and was largely responsible for the institution of the separate South African flag. In 1933 his Nationalist party fused with Smuts's South African party, and he remained in office as premier of a coalition of the united parties. From 1936 onwards he pressed strongly for the transfer to the Union Government of the native protectorates. (1866-)

GENERAL
HERTZOG

Herzegovina, mountainous district of S.E. Europe, in the NW. of the Balkan peninsula. In 1908 it was with Bosnia annexed by Austria-Hungary. After the World War it became part of Yugoslavia.

Herzl, Theodor, founder of Zionism, born of Jewish parents in Budapest, studied for law; lived chiefly in Vienna, as journalist and playwright; Published, 1896, a pamphlet, *Der Judenstaat*, which launched the movement; arranged first Zionist Congress, which took place at Basle, 1897. (1860-1904).

Hesiod, one of the earliest Greek poets, born in Boeotia, lived in the 8th Century B.C., chiefly at Orchomenos; probably of humble birth; of the works ascribed to him the principal are the *Works and Days*, and the *Theogony*. His poems treat of the quiet pursuits of ordinary life, the origin of the world, the gods and heroes.

Hesperides, in Greek mythology, maidens appointed to guard the golden apples presented to Hera by Gaia on her marriage with Zeus, assisted in their office by the dragon Ladon. The apples were stolen by Hercules, but restored by Athena.

Hesperus, the personification of the evening star and an object of worship to the Greeks.

Hesse, a state of Germany, lies partly in, and partly on the border of, SW. Prussia; consists of two large portions, divided by a strip of Hesse-Nassau, and 11 enclaves. Area 2,980 sq. m. Half the land is under cultivation, and the greater part of what remains is covered with forest. Its many rivers belong mostly to the Rhine system. Corn is raised in large quantities, iron and manganese are found, and there are flourishing manufactures of leather, upholstery, tobacco, etc. Mainz is the largest town, and Darmstadt the capital. Pop. 1,430,000.

Hesse-Cassel, a government district As an electorate sided with Austria in 1866, which brought about its incorporation with Prussia.

Hesse-Nassau, a Prussian province in the SW. of Germany, between the Rhine on the W. and Bavaria and Saxony on the E.; formed in 1868 out of the electorate of Hesse-Cassel, Duchy of Nassau, etc. Area 6,500 sq. m. The country is hilly, abounds in minerals, which are extensively worked, but agriculture and cattle-rearing are the chief industries. The medicinal springs of Homburg, Wiesbaden, etc., are celebrated. Cassel is noted for its gold and silver ware. Damasks and other textiles are produced at Fulda, and at Hannau are flourishing ironworks; Marburg has a university. Pop. 2,585,000.

Heston-Isleworth, a borough of England, a residential suburb of London; includes Hounslow, a civil aviation centre. Pop. 88,000.

Hesychasts, a religious sect of the 14th Century belonging to the Greek Church and professing a kind of Quietism.

Hetaira, a term applied in ancient Greece to a courtesan of the cultured class.

Heterodyne, a method used in wireless telegraphy for the reception of continuous wave signals, by the production of beats between the incoming waves and the oscillations of the receiving set itself.

Hetman, Polish title for a commander-in-chief in the absence of a King. It was held by the head of the Cossacks.

Hetton, or **Hetton-le-Hole**, urban district of Durham, England, 5 m. N.E. of Durham. Coal is mined in the vicinity. Pop. 17,700.

Hever Castle, 15th-Century castle near Edenbridge, Kent, formerly occupied by the Boleyn family, including Anne Boleyn; now restored as a residence of Viscount Astor.

Hewart, Rt. Hon. Gordon, Lord, British politician and Judge. He entered Parliament in 1913; was Solicitor-General from 1916 to 1919; he became Attorney-General that year, and held the post till he was made Lord Chief Justice in 1922. (1870-).

Hewlett, Maurice Henry, novelist, born at Addington, Kent; held appointment in Civil Service; began literary career with *Earthwork out of Tuscany* in 1895, and followed with *The Forest Lovers*, *Little Novels of Italy*, *The Queen's Quair*, *The Fool Errand* and other romantic historical novels. (1861-1923).

Hexachord, a term in music for a diatonic series of six tones or for a major sixth; also for an ancient six-stringed musical instrument.

Hexameter, a form of verse used by the Greeks and Latins for epic and heroic poetry, having six accented feet in each line. *The Odyssey* and *Iliad* of Homer and *Aeneid* of Virgil illustrate this form.

Hexateuch, the name given to the first six books of the Bible.

Hexham, an old town in Northumberland, land, England, prettily situated on the Tyne, 24 m. W. of Newcastle; has a fine cruciform abbey church, portions of which belong to the 12th Century, and beautiful remains of a 7th-Century monastery; the staple industries are glove and hat making; the river is spanned by a stone bridge of nine arches. Pop. 9,000.

Heysham, a seaport and seaside resort of Lancashire, Lancashire, England, 4 m. SW. of Lancaster, the terminus of regular steamboat services to the Isle of Man and Ireland. Pop. 5,000.

Heywood, a town of Lancashire, England, 9 m. N. of Manchester; owes its rapid growth to the neighbouring coalfields and the development of the cotton industry; has also flourishing iron and brass foundries and woollen factories. Pop. 26,700.

Heywood, Thomas, English dramatist; prolific writer of plays and pageants, among them *The English Traveller*, *Edward IV.* and *The Fair Maid of the West*. (c. 1574-1650).

Hezekiah, a King of Judah; reigned distinguished for his zeal in the worship of Jehovah and for making a parade of his wealth; reigned in the golden age of Hebrew prophecy, Isaiah and Micah being his contemporaries.

Hibbert Lectures, unsectarian lectures instituted by the trustees of Robert Hibbert, a West India merchant, and devoted to the discussion of unsolved problems in theology.

Hibernation, term denoting the dormant condition which certain animals assume during cold weather, owing usually to the failure of the food supply. Such animals include the bear, bat, badger, dormouse and hedgehog as well as many reptiles. An accumulation of fat during summer enables the animal to survive during this period of its life. There is little respiration, a slight lowering of the body temperature, and alimentation and excretion cease. Hibernation usually takes place in caves, hollow trees and under leaves, etc.

Hibernia, the classical name for Ireland, which to the ancient world was in the main a *terra incognita*.

Hibiscus, a genus of plants of the order Malvaceae, mostly herbaceous, including some 160 species, found in tropical and sub-tropical climates. Some species are cultivated for their bark, their showy flowers (especially *Hibiscus Rosa-sinensis*, the shoe-flower), and for mucilage, the young fruit being used in soups (especially of *H. esculentus*). A few occur in Europe.

HIBISCUS
(*Rosa-sinensis*)

Hiccough, sometimes called Hiccup, an interruption of respiration due to a sudden contraction of the diaphragm, caused usually by irritation of the stomach membrane. Temporary attacks are relieved by drinking cold water, or a dose of bismuth.

Hichens, Robert Smythe, novelist; born at Speldhurst, Kent. His first novel, *The Green Carnation*, 1894, was a brilliant skit on Oscar Wilde before his fall. Many of his later works deal with the Orient. *The Garden of Allah*, 1905, and *Bella Donna*, 1909, have been dramatised by himself—the latter in 1911, the former in 1920. (1864-).

Hickory, a genus of 12 trees of the order Juglandaceae, native to the eastern parts of N. America, and cultivated for the sake of the wood which is valuable as fuel and for other purposes. One species bears the edible pecan nut, somewhat resembling the walnut.

Hicks, Sir (Edward) Seymour, actor-Jersey; son of an army officer; first appeared at the Grand Theatre, Islington, in 1887, in *In the Ranks*; was principal light comedian from 1894 at the old Gaiety Theatre. His wife is Ellaline Terriss. He has written and produced more than 60 plays, including *Bluebell in Fairyland*, *The Catch of the Season* and *The Earl and the Girl*. Knighted, 1935. (1871-).

Hicks-Beach, Sir Michael Edward, British politician, entered Parliament in 1864 and in 1874 became Secretary for Ireland. Four years later he was Colonial Minister, Chancellor of the Exchequer and Leader of the House of Commons in 1885, Secretary for Ireland in 1886, President of the Board of Trade in 1888, and in 1895 again Chancellor of the Exchequer. (1837-1916).

Hidalgo, a Spanish title of the lesser nobility, literally meaning "Somebody's Son"; roughly equivalent to our "gentleman" in the narrow sense.

Hierapolis, (1) an ancient city of situated between Antioch and Mesopotamia, 14 m. W. of the Euphrates; was famous for its great temple of Astarte. (2) A city of ancient Phrygia, 5 m. N. of Laodicea; the birthplace of Epictetus, and where Paul founded a church.

Hierarchy, the governing body of the church, consisting of bishops, priests and deacons.

Hiero I., tyrant of Syracuse; broke the naval power of Etruria by victory over the Etruscan fleet near Cannae, 474 B.C.; was an enlightened patron of men of letters, many of whom he entertained at his Court, Aeschylus, Pindar, and Simonides among the number. (d. 467 B.C.).

Hiero II., King of Syracuse, for nearly friend and ally of the Romans; disliked display, and was accustomed to appear in public in the garb of a common citizen. He ruled his country well. (308-216 B.C.).

Hieroglyphics

(sacred writing), the name by which the picture-writing of the ancient Egyptians was known to the Greeks and Romans. Two forms of this ideographic written language are known, the *hieratic* or cursive (employed by the priestly class), and the *demotic*, or popular, style. The discovery of the Rosetta (q.v.) stone, with its trilingual inscription, gave the key to the decipherment of hieroglyphics and to their relation to the Greek alphabet.

HIEROGLYPHICS

Hierro, or **Ferro**, smallest and most westerly of the Canary Is. Valverde is the chief town. Area 106 sq. m. Pop. 6,000. From the "Longitude of Ferro"—which does not, however, actually pass through the island—as the most westerly land then known, all longitudes were formerly measured.

Higham Ferrers, municipal borough of Northamptonshire, England, 15 m. NE. of Northampton. The making of boots and shoes is the chief industry. Pop. 3,000.

Highbridge, market town of Somerset, set, England, 6 m. NE. of Bridgwater, with locomotive works, saw-mills and brick and tile works. Pop. 2,500.

Highbury, residential district of N. London in the Borough of Islington. Here is the ground of the Arsenal Football Club.

High Church, that section of the Anglican Church which attaches supreme importance to the administration of word and sacrament by clergy duly ordained, whose ministrations it considers necessary as the divinely appointed instruments of grace.

High Commission, Court of, a judicial tribunal set up in 1559 to try ecclesiastical cases. It consisted of clerical and lay Crown nominees, and later encroached on the province of the common law courts, with the result that it was abolished by the Bill of Rights, 1689.

High Commissioner, a term of varying import, generally used to signify a high administrative officer in a dependency or protectorate, or a Dominion's chief representative in London. Thus, there are six High Commissioners in London representing respectively, India, Canada, Australia, New Zealand, the Union of South Africa and the Irish Free State. In the last few years, High Commissioners representing the United Kingdom Government have been appointed in Canada, Australia and South Africa; and, in 1938, one was appointed in New Zealand; they act as confidential channels of communication between the United Kingdom and Dominion Ministers.

High Court of Justice.

See Justice, Royal Courts of.

Highgate, a suburb of London, 5 m. N. of the City; the burial-place of Coleridge, George Eliot, Faraday and Karl Marx; has an important grammar school founded by Sir Roger Cholmeley in 1565. Dick Whittington's Stone is near the foot of Highgate Hill.

Highland Dress, the former national costume of the Scottish people, now seen only on ceremonial occasions. It consisted of a plaid, a long piece of tartan cloth, called a kilt, secured at the waist by a belt. The upper portion was fastened with a brooch on the left shoulder,

leaving the right arm free. The tartan was of a chequered pattern of stripes against a background of another colour, and indicated the wearer's clan or district. It was generally red or green.

Later the lower part of the kilt became the kilt, which stopped short at the knees, while in front was worn a sporran, or goatskin-purse. The Highland bonnet was a cloth cap adorned with leather, or eagle's plumes in the case of a chief. Highland regiments to-day are known by their plumed bonnets. The shoulder cloth has now become a mere ornament. The knife, or other weapon, was carried thrust through the belt. When riding on horseback, the kilt gave way to "trews," which served as breeches and stockings combined, and were made from one piece of tartan cloth.

Highland Regiments, those originated in the Scottish Highlands. They include, in order of precedence, the Black Watch, Seaforth Highlanders, Gordon Highlanders, Queen's Own Cameron Highlanders, Princess Louise's Argyle and Sutherland Highlanders. These regiments wear the kilt and the tartan; most of them were raised in the latter part of the 18th Century after the pacification of the Highlands.

Highlands, extensive areas of land where the average height is over 5,000 ft. They occur principally in the E. of Europe, E. Australia and Eastern N. America. They include branching valleys, formed either by denudation, the washing out of valleys (as in the case of those of Scotland), or by volcanic action. Parallel valleys are rarely found in highlands, though they are well marked in the Appalachian Mts. of N. America. Highlands occur in broad expansive masses and, unlike mountainous districts, have few outstanding peaks. They are often covered with forest or heather, and provide homes for deer. Those of Scotland are largely visited for deer and grouse-shooting.

High Places, elevated spots on which the ancient Semitic peoples for worship, in the belief that, as they were nearer heaven than the plains and valleys, they were more favourable places for prayer. The practice of worship on these spots became frequent among the Jews, and was with difficulty abolished in spite of the warnings of the Biblical prophets.

High Priest, in Biblical times the head of the Jewish priesthood. From 153 B.C. until the time of Herod the royal and priestly authority was united in members of the Asmonian (Maccabee) family. The Biblical book of Leviticus contains an elaborate code of conduct for the High Priest.

High School, a term often applied to a State-aided secondary school, but in the U.S.A. officially used to denote those schools which prepare pupils, both boys and girls, for the technical schools and universities.

High Seas, as understood in international law, means the entire sea or ocean area which lies beyond a three-mile belt of coast water. This coastal strip is called the *mare clausum*, and the rights of fishing, etc., in it are reserved to the country upon which it borders.

High Sheriff, a county or city officer and executive authority, enjoying wide judicial and executive authority. Their duties are defined by the Sheriffs Act of 1887. Among them are attendance upon judges during assizes, the acting as returning officers during parliamentary elections and the preparation of lists of jurors. City Sheriffs are appointed annually on Nov. 9.

High Steward of England.

See *Steward, Lord High*.

High Tor, precipitous rocky hill of Derbyshire, England, just S. of Matlock on the left bank of the Derwent. A grotto beneath it is remarkable for its crystals.

Highwaymen, mounted robbers who frequented the high-roads during the coaching days of the 17th and 18th Centuries. The most famous in history are Dick Turpin (1705-1739), Claude Duval (1643-1770) and Jack Sheppard. They were the "heroes" of many romantic or picaresque novels, and their profession thus acquired a meretricious glamour. Lord Lytton's *Paul Clifford* and Harrison Ainsworth's *Rookwood* both deal with highwaymen. Those roadside robbers who were unmounted were called "footpads." With the disappearance of coaches from the highways these "gentlemen of the road" gradually disappeared.

Highways, a term embracing in common or bridle-paths, footpaths, or any other public ways, and in general any way through or over lands of any ownership open to the public by an Act of Parliament, prescriptive right or by express or implied dedication. The Highways Act also includes under the term bridges (not being county bridges, or those repairable by the inhabitants of a "hundred"), towing-paths and navigable rivers, but not railways.

The public right of use in a highway is that of merely passing along it. There is no right to use it as a place for public meetings. A public right of way is restricted to the surface of the land over which it goes. Under the Highways Acts of 1835 and 1894, two justices have power to grant a certificate to stop or divert a highway with the approval of the district or parish council. The growth of modern traffic has caused a great increase in regulations concerning highway traffic, and general directions are summarised in the Highway Code.

High Willhays, hill of Devon, England, the highest point on Dartmoor (2,039 ft.). It lies 4 m. SW. of Okehampton.

High Wycombe, or Chipping Wycombe, municipal borough and market town of Buckinghamshire, England, 30 m. W. of London. Furniture is made. Pop. 30,000.

Hilary, St., Bishop of Poitiers, of which himself by his zeal against the Arians; wrote hymns and polemical treatises. (d. 367). Festival, Jan. 13.

Hildebrand. See *Gregory VII.*

Hildesheim, a quaint old town in Hanover, Prussia, on the Innerste, 24 m. SE. of Hanover; has several ancient churches, notably a noble cathedral of the 11th Century, with famous bronze gates; trades in corn, linen, etc. Pop. 62,500.

Hill, Octavia, social reformer, was born at Wisbech; about 1852 began work among poor children in London; with Ruskin's money, bought lease of almshouses in Marylebone; managed and improved this property, which was added to by other donors. From 1884, managed South London property of Ecclesiastical Commissioners; served on Royal Commission on Poor Laws, 1905. (1838-1912).

Hill, Rowland, a popular but eccentric under the influence of Whitelock, came Methodist movement. He took orders in 1774, but continued open-air preaching till 1783, when he established himself in London in an unlicensed place of worship. He

originated the first Sunday School in London. His works include a volume of hymns. (1744-1833).

Hill, Sir Rowland, originator of the penny postage, born at Kidderminster; a teacher and educationist; interested himself in the colonisation of South Australia; published in 1837 his pamphlet, *Post-Office Reforms*, and saw his scheme of uniform postal rates adopted three years after, though not till 1854 did he become secretary to the Postmaster-General or have full power and opportunity to carry out his views. He received a sum of £13,000 in 1846 in public recognition of his services. (1795-1879).

SIR ROWLAND HILL

Hill, Viscount, British general, born in fifteen, served under Sir John Moore, and under the Duke of Wellington in the Peninsula and at Waterloo, where he commanded a division; succeeded Wellington in 1828 as commander-in-chief. (1772-1842).

Hill 60, a low ridge 2½ m. SE. of Ypres, captured by British troops in April 1915, recaptured by the Germans in May, held by the British again for a time in June 1917, and finally captured in Sept. 1918.

Hillel, a Jewish Pharisee preacher and rabbi; born in Babylon about 112 B.C.; wrote a summary of the Jewish law, and founded an important school in opposition to his great and stricter rival Shammai; still revered as one of the greatest Jewish religious teachers; died at a great age in the early years of the Christian era.

Hill-forts, the name applied to fortified or mountain-crag. Many are of great age, and were used as the last refuge of an earlier race defending themselves against invaders. Famous ones in Britain include those at White Catcote in Dorsetshire, Arborio Fort in Lanarkshire and Dun Aengus in the Aran Isles.

Hill Tipperah, or Tripura, native of Bengal. It is thickly forested, and produces also rice and cotton. Agartala is the chief town. Area 4,086 sq. m. Pop. 382,500.

Hilversum, market town and summer resort of the Netherlands. In the province of North Holland, 18 m. SE. of Amsterdam. Blankets and carpets are made. Pop. 67,000.

Himalayas ("the abode of snow"), a stupendous mountain chain stretching 1,500 m. along the northern frontier of India, and dividing that country from Tibet. Forty-five of its peaks attain a greater height than those of any other mountain system in the world; Mount Everest, the loftiest, reaches 29,141 ft. The best known pass is the Karakoram Pass (18,550 ft.), leading into Eastern Turkestan. There are few lakes, but amid the snowy heights rise the rivers Ganges, Indus and Brahmaputra.

Hinckley, a town of Leicestershire, 13 m. W. of Leicester; has an interesting old parish church of Edward III.'s time; does trade in hosiery, baskets and boots. Pop. 14,000.

Hindemith, Paul, German violinist and composer, born at Hanau. Studied at Frankfurt; leader, afterwards conductor, of opera there, 1916-1923. In 1923, joined Amar quartet. From 1927, professor of Composition at the State High School of Music, Berlin. Has composed several song-cycles, including *Die Junges Magd*, and one-act operas, among them *Sandra* and *Cardillac*. (1895-)

Hindenburg, Silesia, Prussia, formerly Zabrze, Alt and Klein, and other small industrial centres now combined, about 60 m. S.E. of Oppeln. It has coke-kilns, engineering works, blast-furnaces, beer and other manufactures, and in the district, coal-mines. Pop. 130,500.

Hindenburg, Paul von, German general and statesman.

He joined the Prussian army at the age of 18, served in the Austro-Prussian and Franco-Prussian Wars, retiring in 1911. At the outbreak of the World War in 1914 he was recalled, put in charge of the campaign in East Prussia, and won the battle of Tannenberg. He tried to capture Warsaw, and beat the Russians at Kutno, and from 1916 to the end of the war he was in supreme command of the German forces on all fronts. In 1919 he again retired, but in 1925 and again in 1932 was elected President of the German Republic. (1847-1934).

PAUL VON
HINDENBURG

Hindenburg Line, a highly fortified line constructed by the Germans in France in 1916, running from Arras to Laon. It was to this line that the German army retreated after the battle of the Somme, and it was not until the summer of 1918 that the Allies smashed it.

Hindhead, a beautiful district near including the famous "Devil's Punch Bowl" and Gibbet Hill. Much of the neighbourhood is covered with gorse and heather.

Hindley, a manufacturing town in Lancashire, England, 3 m. S.E. of Wigan; the staple industry is the manufacture of cotton; in the vicinity are large coal-mines. Pop. 21,600.

Hinduism, the religious system of the form a highly philosophical pantheism, but in its more popular manifestations a polytheistic creed of many sects, mostly devoted to the worship of either Vishnu or Shiva under one of many names. Its chief peculiarities are the caste system, the honoured place assigned to the cow, and the high value it places on extreme asceticism. There are some 240 millions of Hindus in India.

Hindu Kush, a lofty mountain range stretching 365 m. from the western extremity of the Himalayas, from which it is cut off by the valley of the Indus, into Afghanistan, which it divides from Turkistan. It attains an elevation of 23,000 ft.; is crossed by several passes, and is rich in minerals, especially iron. The tribes that inhabit it are chiefly Shins and Dards.

Hindustan, a name sometimes loosely applied to the entire Indian peninsula, but, strictly speaking, embracing only the country of the upper valley of the Ganges, divided into NW. Provinces, Oudh and Bihar. The language most widely spoken is Hindi, an Indo-Germanic language, on which Hindustani is based, but with large Persian and Arabic admixtures.

Hindustani, the most widely used language of Hindu India, that spoken by Indian Mohammedans being known as Urdu.

Hinkler, Bert, Australian aviator. Born took to flying, and came to England in 1914. In 1928 he carried out a lone flight to Australia in 15 days, covering 10,000 m. After disappearing on a trans-European flight, his body was found in Italy. (1894-1933).

Hinterland, a term of German origin indicating territory which lies behind coastal colonies, and, as a rule, looked upon by the settlers as an area reserved for their development in due course. Jurisdiction is often claimed over such lands, but has no justification until actual occupation or conquest takes place.

Hip, or (in animals) **haunch,** the joint where the head of the thigh-bone, or femur, meets the ilium at the pelvis socket. Like that of the shoulder, it is a ball-and-socket joint. It is held in place by three main ligaments: the ligament of Bigelow, which maintains the body's erect position and is shaped like an inverted Y; the *ligamentum teres*, which is absent in some animals; and the cotyloid ligament.

The hip joint is subject to several diseases. Pre-pubertal hip disease may result in dislocation or ankylosis. Rheumatoid arthritis sometimes affects the joint, while sciatica, sometimes called "hip-gout," is caused by inflammation of the sciatic nerve at the hip-joint. Scrofula, especially in children, may lead to a breaking-down of the tissues of the hip, and if not checked, result in lateral displacement and shortening of the leg.

Hipparchus, ancient Greek astronomer, born in Nicaea; lived in the 2nd Century B.C.; discovered among other things the precession of the equinoxes, determined the place of the equinox, and catalogued 1,000 fixed stars.

Hipper, Franz von, German naval commander; was in command of a squadron of the German fleet in 1914, and took part in the Battles of the Dogger Bank and of Jutland; in 1918 became Commander-in-Chief of the German navy, in which capacity he negotiated for the fleet's surrender to Great Britain at the end of the World War. (1863-1932).

Hippocrates, Greek physician, the father of medicine, born in Cos, 460 B.C.; a contemporary of Socrates and Plato; settled in Thessaly and died at Larissa; no fewer than 60 writings are ascribed to him, but only a few are genuine.

Hippocrene (*lit.* "the fountain of the horse"), a fountain on Mount Helicon, in Boeotia, sacred to the Muses, and said to have sprung up after Pegasus (*q.v.*) had struck the spot with his hoof.

Hippodrome, a stadium used in horse and chariot races; the word is now frequently applied to any race-track, even for greyhounds; and to theatres and music-halls.

Hippogriff, presented as a winged horse with the head of a griffin. It was used as a symbol by medieval alchemists.

Hippolytē, Queen of the Amazons, slain by Hercules in order to obtain and carry off her magic girdle.

Hippopotamus, literally "river-horse," a family of

even-toed (artiodactylate), ungulate mammals belonging to the pig (*Suina*) sub-order, once very common in Europe (including Britain) and in India, but now represented by only two species found in Africa. The chief of these two, the *Hippopotamus amphibius*, is slightly smaller than the elephant, is covered with thick hide and has very short legs. It lives on river-banks, and may be very destructive to crops in cultivated areas. The Pigny Hippopotamus (*H. (Charopsis) liberiensis*) is no bigger than a

HIPPOPOTAMUS

Wild Boar, is comparatively rare and found in W. Africa only.

Hippo Regius, an ancient ruined city of Algeria, principally famous as the bishop's see of St. Augustine, who died there in A.D. 430.

Hiram, King of Tyre, contemporary with David and Solomon; provided David with artisans and materials for the building of his palace. Solomon paid yearly tribute to him. He conducted a campaign against Cyprus to enforce tribute, and fortified the Island of Tyre.

Hire-purchase, a hire-purchase agreement is one by which a seller agrees to lease goods, such as furniture, motor-cars or wireless sets, to another person for a certain period on hire, in consideration of fixed payments by instalments, the latter person having an option to purchase the goods by paying the whole of the instalments. The goods remain the property of the seller until all instalments are paid. They cannot be taken into execution by the hirer's creditors, but they may be distrained on for rent owing in respect of the premises where they are kept. If the hirer defaults on his instalments, the seller may seize the goods and retain all the money received by him from the hirer, but he may not break open doors or windows to obtain possession.

Most firms or companies who sell goods by hire-purchase have printed forms of agreement for signature by their customers; but an intending hirer should see that he fully understands such a document before signing it. Abuses of the system long excited complaints, and in 1938 an Act, sponsored by Miss Ellen Wilkinson, was passed to check them, providing protection for the hirer from unreasonable demands and conditions, and allowing for the termination of an agreement by return of the goods hired after a specified number of instalments has been paid. A hiring agreement must be stamped with a 6d., or, if under seal, with a 10s. stamp.

Hirohito, Emperor of Japan, bearing the title Dai Nippon Teikoku Tennō, or Imperial Son of Heaven of Great Japan, and descended from a dynasty that claims to go back to 680 B.C.; educated partly in England, he succeeded his father, Yoshihito, on the throne in 1926; married Princess Nagako in 1924, and has six children (four daughters, of whom three are living, and two sons, Akihito being the Crown Prince). Amongst British honours has been awarded the K.G., G.C.B. and G.C.V.O. (1901-).

Hiroshima, a seaport on the south coast of Honshū I., Japan. It is a great commercial centre, and lies opposite Miyajima I., with its famous temple dedicated to the goddess Bentin. Pop. 310,000.

Hispaniola. See **Haiti**.

Hissar, (1) a district in the Punjab, India; for the most part sandy, yet in rainy years produces good crops of rice, barley, etc., and is noted for its white cattle; the capital, bearing the same name, is situated on the Western Jumna Canal, 102 m. W. of Delhi. (2) Also a district in Central Asia, lying N. of the Oxus River, and separated from Bokhara by a branch of the Tian Shan Mts.; has a fertile soil, and exports corn, sheep, etc., to Bokhara.

Histology, the study of the structure and classification of the tissues of animals and plants. The chief animal tissues are epithelial tissue, connective tissue including fat, bone tissue, cartilage tissue, muscular tissue and nervous tissue.

The tissue unit is the cell, which can frequently be preserved for study outside the body. Vegetable or plant histology is pursued as a separate science with methods of its own.

Historiographer, a writer of history; the title has sometimes been given as a mark of honour by European courts to various learned historians. Racine was historiographer to Louis XIV., Voltaire to Louis XV. The post of King's historiographer in Scotland was revived in the 18th Century and still exists.

History, the branch of knowledge which investigates and describes the past of mankind and the natural and physical conditions which have influenced human life, and closely linked with such other subjects as geology and geography. Part of the story of mankind is the record of his triumphs over natural obstacles, while in a narrower sense the word history indicates merely a record in chronological order of those events which have either happened to man or he has himself brought about. Its study is valuable in defining the relation of human action to the changing conditions which beset him; and the philosophical historian seeks to probe the causes of events and to elaborate a general theory of historical evolution. His duties are therefore first to collect facts, and secondly to sift evidence and draw reasonable conclusions. The work necessarily involves much exhaustive research.

History is generally divided into three periods: ancient, medieval and modern. Ancient history covers the period up to the fall of the Roman Empire. It studies the records of the Hebrew, Mesopotamian, Egyptian and other races as well as the history of Greece and Rome. The centuries which are called "medieval" are divided into the "dark ages" and the "middle ages." The former term covers the somewhat obscure history of the 6th to the 9th Centuries, during which barbarian races settled in Western Europe, became Christian, and developed into the great European nations of modern times. The latter period begins with the revival of the Empire about 950, and may be said to end with the Renaissance.

Modern history is usually considered to begin in 1453 with the fall of Constantinople, an event which led to the Renaissance, or Revival of Learning (see *Renaissance*), the discovery of the New World, and the rapid intellectual development of the Western races, and hence to the complex civilisation of to-day.

Modern research has led to a closer specialisation on minor points, such as the history of law, the Church, commerce, etc., while in recent years the study of local history has formed an excellent avenue to the wider study of general history. The history of the great countries of the E., China, Japan, India, etc., is only now beginning to be treated in association with that of Europe and the Near East.

Hitchin, a very old and still prosperous town of Hertfordshire, England, on the Hiz, 14 m. NW. of Hertford; does a flourishing trade in corn, malt and flour; brewing and straw-plaiting are important industries, and it has long been noted for its lavender and lavender water. Pop. 14,300.

Hitler, Adolf, dictator of Germany since 1933, was born at Braunau, Austria, and is nominally a Roman Catholic. After attending schools at Linz and Steyr, he went to Vienna, and later to Munich (1912), where he worked as a painter. Served as corporal in the German Army in the World War; wounded, Oct. 1918. In 1920 helped to found the new National Socialist German Workers' Party, whose main plank was anti-Semitism; was editor of *Völkischer Beobachter*, and leader of party, 1921.

He led an abortive rising in Munich, 1923, was sentenced to five years' imprisonment, but released after a period; set forth his aims in *Mein Kampf*. In 1932, having become a naturalised German, he unsuccessfully stood

for the Presidency of the Reich against Hindenburg, who in 1933 made him Chancellor.

The National-Socialist (or "Nazi") revolution of that year was accomplished by his decree. On Hindenburg's death (Aug. 1934) Hitler abolished the Presidency and proclaimed himself *Führer*. In 1938 he came to an understanding with Mussolini, dictator of Italy, both recognising the Spanish insurgent leader, Franco, as ruler of Spain. Early in 1938 he ordered German troops to enter Austria, and added that country to the German Reich. In Oct. he secured Sudetenland. (1889-).

Hittites, an ancient non-Semitic Eastern people, of whom many monuments have recently been found in Asia Minor and Syria; they are mentioned in the Bible. An important Hittite settlement was Boghaz-Koi in Cappadocia. They fought bitterly with Egypt; appear to have attained a high civilisation; but disappear from history about the beginning of the 7th Century B.C.

Hoang-Ho. See Hwang-Ho.

Hoare, Sir Samuel John Gurney, British politician; entered Parliament in 1910, and became Secretary for Air in 1922, retaining office until 1929 except in the 1924 Labour Government; in 1931 became Secretary for India, and in 1935 Foreign Secretary, resigning later in the year when the Hoare-Laval scheme for a partition of Abyssinia between Italy and Haile Selassie proved unpopular; in 1936 became First Lord of the Admiralty, and Home Secretary the following year. Has effected considerable prison reforms during his period of office. (1880-).

Hoar Frost, frozen dew which deposits itself upon trees and grass in winter, in place of dew, when the temperature is below freezing-point.

Hoatzin (*Opisthocomus hoazin*), a singular bird, the only one

in its family (Opisthocomidae), found near rivers in S. America from the Amazon to Bolivia. In appearance it is not unlike the Guans though probably more closely related to the Cuckoos. The posterior part is flattened out into a naked surface on which it sits when at rest. It feeds on fruit and leaves and is awkward in flight. The young birds have a well-developed claw on the wings and move about the branches by means of foot, bill and claws.

Hobart, capital of Tasmania, is situated on the estuary of the Derwent, at the base of Mount Wellington; is handsomely laid out in the form of a square; is the seat of government, and has many fine public buildings; has a splendid natural harbour; the manufacture of flour, jam and leather, with brewing, shipbuilding and iron-founding, are its chief industries; it has extensive suburbs, and is a favourite health resort. Pop. 62,000.

Hobbema, Meindert, a famous Dutch landscape-painter, born in Amsterdam; lived chiefly in his native town, and died in poverty. His fine, subdued pictures of woodland life and scenery are ranked amongst the masterpieces of Dutch landscape-painting, and may be seen in the National Galleries in London, Berlin, Vienna, etc. (1638-1709).

Hobbes, Thomas, an English philosopher, psychologist and moralist, born in Malmesbury; was educated at Oxford; connected all his days with the Cavendish family, with members of which he

travelled on the Continent; translated Thucydides, wrote a number of works, of which the best-known is the *Leviathan*, in support of his doctrine that absolute sovereign power in all matters of right and wrong is vested in the State. (1588-1679).

Hobbs, John Berry, British cricketer. Making his first appearance for Surrey in 1905, he speedily established his reputation as a batsman, and played for England in Australia and S. Africa as well as in Test matches at home. He was the first man to beat the record number (126) of centuries scored by W. G. Grace, having, when he retired in 1934, made 197 centuries in first-class cricket. In 1925 he aggregated 3,024 runs in 48 innings; and he made 100 centuries for Surrey. (1882-).

Hobby (*Falco subulcus*), one of the smaller birds of the Falcon (Falconidae) family, a familiar British summer visitor. It is grey on the back, mottled underneath, has long wings and a short tail and preys chiefly on small birds (e.g. on larks).

Hobhouse, John Cam, first Baron Broughton, English politician and friend of Byron; educated at Westminster and Cambridge; Liberal M.P. successively for Westminster, Nottingham and Harwich; after holding various offices, succeeded to a baronetcy in 1831 and was raised to the peerage in 1851; author of *A Journey Through Albania with Lord Byron*. (1786-1869).

Hoboken, a city of New Jersey, U.S.A., on the Hudson R., adjoining Jersey City and opposite New York; is an important railway terminus and shipping-port; does a large trade in coal, lead-pencils, iron-casting, etc. Pop. 59,000. Also the name of a suburb of Antwerp, with a ship-building industry and a pop. of 31,000.

Hobson, Thomas, a Cambridge job-master, who let out horses on hire, the choice always limited to the one next the door, the one that had been longest in, hence the saying "Hobson's Choice"; was the subject of two humorous epigrams by Milton.

Hoccleve, or *Occleve*, Thomas, an early English poet; had an appointment in the Exchequer Office in Henry V.'s time; his chief work is the *Government of Princes*, but his poems have more linguistic than poetic interest; has left us an interesting portrait of his contemporary, Chaucer. (1368-1448).

Hock, a sparkling white wine originally made at Hochheimer in Germany. The name is now used for most white Rhenish wines. The alcoholic strength is from 9 to 13 per cent. The well-known *Liebfraumilch* (Virgin's Milk) is a variety of hock.

Hockey, a British winter game derived from Irish hurley. The Wimbledon club drew up rules in 1883, and the game is now played internationally, at the universities, schools and a number of clubs throughout the country. The Hockey Association was formed in 1886, the first Oxford v. Cambridge game played in 1890 and a Women's Association formed in 1895, the year in which England first met Ireland. It occupies in girls' schools much the same position as football does for boys.

Hocking, Joseph, religious novelist; born at St. Stephen's, Cornwall. At first a land surveyor; ordained a Methodist minister, 1834; pastor at Woodford, Essex, till 1810. His first book, *Jabez Esterbrook*, appeared in 1891. *The Scarlet Woman*, 1899, caused some stir in Free Church circles. (1860-1937).

Hocking, Silas Ketto, religious novelist, elder brother of Joseph; born at St. Stephen's, Cornwall. Was a Methodist minister from 1870 until 1896. In 1879 appeared his best-known book, *Her Benny*,

HOATZIN

where it yields a useful timber and its bark is used for tanning. In Britain it occurs as an ornamental evergreen bush 20 to 30 ft. high.

Holofernes, Assyrian general whom Judith, entering his camp as it invested her native place, slew with her own hand, bearing his head as a trophy back to the town.

Holograph, any document, such as a letter, deed or will, entirely in the handwriting of the person whose composition it purports to be. By English law a holograph will must be signed by two witnesses; in Scottish law no witnesses are necessary to such a will.

Holst, **Gustav**, British composer, born and educated in Cheltenham. He produced two operas, *The Perfect Fool* and *At the Boar's Head*, besides a number of hymns and songs. His best-known work is *The Planets* (1915). (1874-1934).

Holstein, formerly, with Schleswig, formed the Prussian province of Schleswig-Holstein (q.v.); it was till 1866 a Duchy of Denmark, but in that year was annexed by Prussia; the northern part was returned to Denmark in 1919 under the Treaty of Versailles.

Holy Alliance, an alliance of the sovereigns of Russia, Austria and Prussia on the fall of Napoleon, professing to maintain the European *status quo*, but really for the suppression of political liberty and the maintenance of absolute power.

Holy Coat of Trèves, a relic in (Trier) cathedral, alleged to be the seamless robe of Christ, deposited there by the Empress St. Helena.

Holycross, a village of Co. Tipperary, Ireland (Elre), 34 m. S.W. of Thurles. It is noted for the beautiful ruins of its ancient riverside Cistercian Abbey.

Holyhead, an important seaport of Anglesey, N. Wales, on the N. side of an island of the same name, 25 m. W. of Bangor; is the chief mail-packet station for Ireland and has excellent harbourage. Pop. 11,000.

Holyhead Island, a rocky islet of Anglesey, from which it is separated by a narrow strait, dry at low water, and crossed by an arched causeway.

Holy Island, or **Lindisfarne**, an islet of Northumberland, 9½ m. S.E. of Berwick; is separated from the mainland by a stretch of sand bare at low water, and some 3 m. broad; has interesting ruins of a Benedictine priory church where St. Cuthbert (q.v.) once ministered; a centre of the diffusion of Christianity among the Anglo-Saxons.

Holyoake, **George Jacob**, publicist and rationalist, born in Birmingham; lived a busy life as an agitator, lecturing and writing. He espoused the cause of Garibaldi, and was the last man to be imprisoned in England on a charge of atheism (1841); was a zealous supporter of co-operation and all movements making for the betterment of the social condition of the working classes. His numerous works include *History of Co-operation in England and Sixty Years of an Agitator's Life*. (1817-1906).

Holy Office, a Roman Catholic congregation of cardinals in charge of the defence of the faith against heresy; also a name for the Inquisition (q.v.).

Holy of Holies, in the ancient Jewish temple, the inner compartment within the outer or holy place. It was a cube of exactly ten cubits. Into it none might enter save the high priest, and he only on specified occasions to offer sacrifice. It was separated from the Holy Place by a veil.

Holyoke, a city of Massachusetts, U.S.A., 8 m. N. of Springfield, on the Connecticut R., whose rapid current supplies the water-power for the many large paper-mills, cotton and woollen factories. Pop. 57,000.

Holy Orders, the superior ranks of the Christian ministry; in the Church of England, the three holy orders are bishops, priests and deacons; in the Roman Catholic Church, where bishops are not considered as a separate order, but as priests with added powers, the subdeacon is also held to be in holy orders. They are also called "major orders," as distinct from the four minor orders of acolyte, reader, exorcist and porter. The name is also applied to the sacrament by which the order is conferred.

Holy Roman Empire, a name applied to the empire founded by Charles the Great (Charlemagne) in 800 and suppressed in 1806. It was a revival of the ancient Roman Empire of the W. At the time of its formation the Papal Church was beset by many enemies, and Charles's support of the Pope was rewarded by the Imperial title. By the end of the 9th Century Barbarian invasions had practically destroyed the Carolingian Empire.

It was revived, however, in 936 under Otto, whose line continued until 983. Germany and Italy being the two principal territories of the Empire. Disputes between the Pope and the Emperor were almost continuous, but towards the end of the 12th Century the imperial power manifested itself more strongly under Frederick I. and II. After the latter's death an interregnum occurred until 1273, when Rudolf, the first Hapsburg Emperor, was elected. Henceforth the Empire was in fact a German institution; in 1648, after the Thirty Years' War, its centre shifted to Austria, and its glory gradually waned until in 1806 the last Emperor, Francis II., abandoned the title after a long and unsuccessful struggle against Napoleonic France. It was not revived on the resettlement of Europe after Waterloo.

Holyrood, an abbey founded at Edinburgh in 1128 by David I.

in honour of the Holy Cross, a casket of gold shaped like a cross brought to the country by St. Margaret in 1070; the palace, afterwards attached, became the chief seat of the Scottish sovereigns of the Stuart dynasty, and in recent years has again been used by royalty on visits to Scotland.

HOLYROOD

the chief seat of the Scottish sovereigns of the Stuart dynasty, and in recent years has again been used by royalty on visits to Scotland.

Holy Sepulchre, Church of, the church in Jerusalem which is built over the supposed site of the tomb of Christ, sometimes called the Church of the Resurrection. Various Christian bodies have rights in different parts of it, and it is visited by pilgrims in large numbers. It was originally built by the Crusaders. A Rockefeller grant made restoration possible in 1936.

Holy Spirit, or **Holy Ghost**, in Christian theology one of the three Persons of the Holy Trinity, equal in Godhead with the Father and the Son. The gift of the Holy Ghost was promised by Christ to His Apostles before His death, and the promise was fulfilled at Pentecost, when He is said by the New Testament to have fallen upon the assembled disciples in the form of fiery tongues. The Anglican, Catholic and Orthodox churches teach that the gift of the Holy Spirit is bestowed on each individual Christian in a special degree by the rite or sacrament of Confirmation. The relation of the Holy Ghost to the Father and the Son has

been the subject of much controversy between the Western and Eastern Churches.

Holytown, a town of Lanarkshire, Scotland, 12 m. from Glasgow. It has extensive iron and steel works and collieries nearby. Pop. 8,800.

Holy Water, a mixture of salt and water blessed by a priest and used in the Roman Catholic Church for devotional purposes, being sprinkled over persons and things as a symbol of spiritual purification. It is generally kept in vessels called stoups, fixed by the doors of churches, for the use of worshippers.

Holy Week, the week before Easter, so called as consecrated to the commemoration of the Passion of Christ and His death on the Cross.

Holywell, a market town of Flintshire, Wales, 15 m. NW. of Chester. The principal industry is the smelting of lead, iron, copper and zinc ores obtained from the surrounding mines. The famous well of St. Winefride is over-built by a fine Perpendicular chapel. Pop. 5,500.

Homage, in feudal law, the formal acknowledgment made by a feudal tenant to his overlord on receiving the investiture of a fief or acquiring it by succession, that he was the latter's vassal; hence, any recognition by an inferior of the position and power of a superior.

Homburg, a fashionable watering-place in Hesse-Nassau, Prussia, beautifully situated at the base of the Taunus Mts., 8 m. NW. of Frankfurt-on-the-Main; has fine chalybeate and saline springs. A type of men's soft felt hat has taken its name from the town. Pop. 11,000.

Home Counties, the counties in the London—namely, Essex, Hertfordshire, Kent, Middlesex and Surrey; Berkshire, Buckinghamshire and Sussex are sometimes included in the term.

Home Office, in England, the department whose political chief, the Home Secretary, is the authorised channel of communication between the King and his subjects. Petitions or addresses to the King pass through his hands. He advises the Crown as to the prerogative of mercy, including commutation or reduction of sentences. He has the general superintendence and control over prisons, criminal lunatic asylums, inebriate reformatories and approved schools. The Metropolitan Police are under him, as the police authority for the Metropolis. He appoints recorders and stipendiary magistrates; administers the Aliens Naturalisation Acts; conducts extradition proceedings; and operates the Factory Acts and Shops Acts. He is also the medium of communication between the King and the Church of England; prepares patents of nobility for peers; and has various ceremonial duties.

Homer, the great epic poet of Greece, traditionally one of the greatest of all time; traditionally author of the *Iliad* and the *Odyssey*, though many modern critics deny that one poet can have written both works; for the honour of being the place of his birth seven Greek cities contended; is said to have been blind, and to have wandered from city to city reciting his verses; the poems attributed to him date c. 1000–800 B.C. At the end of the 19th Century there was a tendency, now discarded, to deny his existence, and attribute the epics to more than one hand.

U.E.

HOMER

Home Rule, a form of local self-government, which in its application to Ireland was for long a bone of contention between Liberals and Conservatives. Gladstone introduced the first Home Rule Bill in 1886, and others followed in 1893, 1912 and 1913, all of which were defeated. In 1914 a Bill was passed, but was to remain inoperative till after the World War, when the Southern Irish refused to accept it, and civil war followed till 1922, when the Irish Free State

Home Rule for themselves.

Homicide, the killing of one human being by another. It may be justifiable, as when it is unavoidably necessary for the "prevention of a forcible and atrocious crime"; excusable, when it occurs from misadventure or in self-defence; or felonious, when committed with malice or without justification. Felonious homicide may be either murder, if "of malice aforethought"; or manslaughter, if due to killing "on a sudden affray," or to culpable negligence.

Homildon Hill, in Northumberland, England, 1 m. NE. of Wooler; the scene of Hotspur's famous victory over the Scots under Earl Douglas, Sept. 14, 1402.

Homœopathy, a method of treating diseases advocated by Hahnemann (q.v.) which professes to cure disease by administering in small quantities drugs that would produce it in a healthy person.

Homology, a term in biology referring to the common origin of organs or parts of various plant or animal organisms. Thus the arm of a man, the fore-leg of a dog and the wing of a bird are homologous.

Honan, an inland province of China. Its northern portion is intersected by the Hwang-ho, but the greater portion of the province is watered by the headstreams of the Hwei-ho and its tributaries, and in the SW. by the affluents of the Han-Kiang, all of which have their sources in the mountainous country in the W. of the province, where the Fu-niu range rises to a considerable height. The E. is flat and low lying. Cotton and cereals are grown. Capital of the province K'ai-fengfu. Area 67,950 sq. m. Pop. 35,500,000.

Honduras, a maritime republic of Central America, whose northern sea-board fronts the Gulf of Honduras in the Caribbean Sea, between Nicaragua on the S. and SE. and Guatemala on the W., less than four-fifths the size of England. Area 44,280 sq. m. The coast lands are low and swampy, but the interior consists chiefly of elevated tableland diversified by broad, rich valleys. The Cordilleras traverse the country in a NW. direction, and form the watershed of many streams. Large numbers of cattle are raised, and fruits, india-rubber, indigo, etc., are exported, but agriculture is backward. Its mineral wealth is very great. Silver ore is abundant, and other minerals, such as gold, iron, copper, are found; Honduras became an independent State in 1821; the Government is vested in a President and six ministers, and the legislative power in a Congress of 43 members. The population (983,000) is mainly composed of Spanish-speaking Indians with some mixture of Spanish blood; Tegucigalpa is the capital.

Honduras, British, a Crown colony in the Caribbean Sea, and bounded on the north by Yucatan and on the west and south by Guatemala; it was originally called Belize, which is now only the name of its capital. The first settlers arrived about 1638. The chief exports are logwood and mahogany. Area 8,600 sq. m. Pop. 55,000.

T

Hone, William, miscellaneous writer and political satirist, born in Bath; threw up his position as a law clerk in London and started a print and book shop; became a busy contributor to newspapers, and involved himself in serious trouble by the freedom of his political parodies and satires. Of his many squibs, satires, etc., mention may be made of *The Political House that Jack Built*, *The Queen's Matrimonial Ladder*, *The Political Showman*, all illustrated by G. Cruikshank. (1780-1842).

Honesty (*Lamaria biennis*) a plant of the order Cruciferae, grown in British gardens. It bears racemes of scentless lilac-coloured flowers.

Honey, a thick syrup made by bees of flowers, in widespread use as an article of human food, bees being kept in all ages and countries for the sole purpose of producing it. The colour is dependent upon the plant on which the bees feed, and ranges through many shades from white to deep yellow or brown. It was in wide use in classical and medieval times as a substitute for sugar.

Honey Dew, a sweet exudation found on leaves in small drops deposited by aphides (q.v.).

Honey-eaters, or **Honey-suckers**, a family of small birds (the Meliphagidae), characteristic of the fauna of Australia and possessing an extensible forked tongue, with which they extract honey from flowers. They are for the most part brightly-coloured birds with curved beaks and long tails, the sub-family Myzomolaine being very like the Sun-birds.

Honeysuckle, or **Woodbine** (*Lonicera Periclymenum*), a

climbing shrub found as a hedge-plant in Great Britain, and frequently cultivated. It bears white flowers, which turn yellow after fertilisation by hawk-moths, which takes place at night. The fruit consists of red berries.

HONEYSUCKLE

Hon fleur,

a seaport of France, situated on the estuary of the Seine, opposite Havre; has a good harbour; exports dairy produce, cattle, etc.; has sugar refineries and tanworks. Pop. 8,700.

Hong-Kong, an island lying off the mouth of the Canton R., S. China; ceded to Britain in 1842; hilly and unproductive, but well watered and tolerably healthy; owes its great importance as a commercial centre to its favourable position, its magnificent harbour, and to its having been made a free port and the headquarters of the European banks; opium is the chief import, silk and tea the principal exports; Victoria, a handsome city on the N. side, is the capital and seat of the British governor. The territory of Kowloon on the mainland adjoining is now part of the colony, which has a total area of 390 sq. m. Pop. 850,000, nearly all Chinese.

Honiton, an ancient market-town of the Otter, 17 m. N.E. of Exeter; is famed for its pillow-lace, an industry introduced by some Flemish refugees in the 16th Century. Pop. 3,000.

Honolulu, capital of the Hawaiian Is. (q.v.), situated on an old strip of land on the S. side of Oahu; is well laid out after the manner of a European town, and has the only good harbour in the archipelago. Pop. 138,000.

Honorius, the name of four Popes; H. I., the most famous, Pope from 626 to 638. H. II., Pope from 1124 to 1130. H. III., Pope from 1216 to 1227. H. IV., Pope from 1286 to 1287.

Honorius, Flavius, Emperor of the West, son of Theodosius the Great, a weak ruler, only able to resist the invasion of the Goths so long as Stilicho, his minister, lived; after the murder of the latter some of his finest provinces were snatched from his grasp. (384-423).

Honour, a distinction or dignity. A heritable or personal title is an honour bestowed by the King, who, constitutionally, is the source of all honours. "Honours lists" are generally issued at the New Year and on the King's Birthday, recommendations for inclusion in them being made by the Prime Minister or by the Governments of the Dominions concerned. "His Honour" as a title of address is now restricted to County Court judges. A Maid of Honour is a lady who attends on the Queen when she appears in public.

Honourable, a title given in the United Kingdom to peers, members of their families and certain public functionaries. Marquesses are "Most Honourable," Earls, Viscounts, Barons, Privy Counsellors, the Chairman of the London County Council, and the Lord Mayor of London are "Right Honourable." "Honourable" is applied by courtesy to the younger sons of earls and all children of viscounts and barons, as well as to Maids of Honour and High Court Judges. In America and some of the Dominions, Governors of States, judges, members of Congress or Parliament, Senators, and others holding offices of dignity and trust are styled "honourable."

Honourable Artillery Com-

pany, the oldest unit of the British volunteer forces, consisting of the archers of Henry VIII., from whom it received a charter of incorporation in 1537. Milton and Sir Christopher Wren were members. The unit achieved distinction during the South African War of 1899-1902 and in the World War. The King is their Colonel. The headquarters have been at Finsbury for almost three centuries.

Honshiu, (Mainland), the largest of the islands which comprise Japan proper. It contains all the most populous centres, all the large cities and the bulk of the population. Chief towns Tokyo, Nagoya, Osaka, Kyoto, Kobe, Yokohama. Area (with adjacent small islands) 88,920 sq. m.

Hooch, Pieter de, Dutch painter, born mainly at Delft, painting chiefly bright domestic interiors, and later in Amsterdam. Specimens of his work outside Holland are rare; but they exist in Leningrad, Paris, London, New York and Philadelphia. (1629-c. 1680).

Hood, Horace Lambert Alexander, British admiral. A member of the famous naval family of Hoods, he entered the service at 13, saw service in the Nile in 1897, took charge of Osborne College, and in 1916 commanded the third battle-cruiser squadron at Jutland, going down on the *Invincible*, his flagship. (1870-1916).

Hood, Robin, a famous traditional out-law of the time of Edward II., assigned, by some writers to Richard I.'s reign; of yeoman descent, though attempts have been made to identify him with the Earl of Huntingdon. He and his followers, all noted archers, roved the extensive forest of Sherwood between Nottingham and Yorkshire, winning popular favour by their attacks on the nobles and ecclesiastics who oppressed the poor.

Hood, Samuel, Viscount, a distinguished admiral, born at Thorncombe; entered the navy in 1740, and rising rapidly in his profession evinced high qualities as a leader. In 1782 he brilliantly outmanoeuvred De Grasse in the West Indies, and under Rodney played a conspicuous part in the destruction of the French fleet at the battle of Dominica, for which he was rewarded with an Irish peerage; defeated Fox in the celebrated Westminster election, became a Lord of the Admiralty, and as commander of the Mediterranean fleet during the revolutionary wars, captured the French fleet at Toulon and reduced Corsica. In 1796 he was created a viscount. (1724-1816).

Hood, Thomas, poet and humorist, born in London; gave up business and engraving, to which he first applied himself, for letters, and beginning as a journalist, immortalised himself by his *Song of the Shirt*, *The Bridge of Sighs* and *Dream of Eugene Aram*; edited the *Comic Annual* and wrote *Whims and Oddities*, in all of which he displayed both wit and pathos. (1798-1845).

Hoof, the horny extremity of the foot corresponding to the toenail in man. In many ungulates the hoof is cloven. The brittle nature of the horse's hoof led from early times to the practice of protecting it with iron "horseshoes," which are known to have been used for several centuries before Christ.

Hooghly, or Hughli, (1) the most important and most westerly of the several branches into which the Ganges divides on approaching the sea, breaks away from the main channel near Santipur, and flowing in a southerly direction past Calcutta, reaches the Bay of Bengal after a course of 145 m.; navigation is rendered hazardous by the accumulating of shifting silt; the "bore" rushes up with great rapidity, and attains a height of 7 ft. (2) A city on the western bank of the river, 25 m. N. of Calcutta, founded in the 16th Century by the Portuguese; is capital of a district, and has a college for English and Asiatic literature. Pop. 32,000.

Hook, **Theodore Edward**, comic dramatist, born in London; wrote a number of farces sparkling with wit and highly popular; appointed Accountant-General of Mauritius, came to grief for peculation by a subordinate under his administration; solaced and supported himself after his acquittal by writing novels. (1788-1841).

Hookah, a water tobacco pipe in common use in the Near East and India. The bowl is connected by a tube with a vessel of water to ensure cool smoking. It is also called a "hubble bubble" or narghileh.

Hooke, Robert, natural philosopher, born in Freshwater, Isle of Wight; was associated with Boyle in the construction of the air-pump, and in 1665 became professor of Geometry in Gresham College, London; in some important points anticipated Newton's theory of gravitation, and foresaw the application of steam to machinery. He discovered amongst other things the balance-spring of watches, the anchor-escapement of clocks, the simplest theory of the arch, and made important improvements in the telescope, microscope and quadrant. (1635-1703).

Hooker, Richard, English Church theologian and ecclesiastical writer, born in Exeter; famous as the author of *Ecclesiastical Polity*, in defence of the Church against the Puritans. His life was written by Isaac Walton. (1554-1600).

Hook of Holland (**Hoek Van Holland**), a village in the Netherlands, standing at the mouth of the Hoek van Holland promontory. It is the landing-place of a steamer service from Harwich to the Continent.

Hookworm, a parasite worm found in warm climates (Egypt, India, Ceylon, the S. States of the U.S.A. and the Far East), which often finds a lodging in the bare foot or in cracks in skin of human beings, producing "ground itch." It then enters the blood-stream, reaching the heart and lungs, and finally the intestines, where its eggs are produced and discharged to recommence the life sequence. The painful disease so caused is called ankylostomiasis or "miner's anemia."

Hooper, John, trained for the Catholic ministry, was converted to Protestantism, and had to leave the country; returned on the accession of Edward VI. and was made Bishop of Gloucester; was committed to prison in the reign of Mary, condemned as a heretic, and burned at the stake in Gloucester. (1495-1555).

Hoopoes (Upupidae), a family of birds comprising the true Hoopoes

(Upupinae) and the Wood-Hoopoes. The true Hoopoes are reddish-coloured with diverse markings, and include the migrant Common Hoopoe (*Upupa epops*), named after its cry, about the size of a thrush with a long, curved bill, and marked crest of feathers on the forehead; found in temperate

COMMON HOPOOE

Europe and Asia, and visiting and occasionally breeding in England. It hunts insects and worms on the ground, and nests in holes in trees. The Wood-Hoopoes are found only in Africa.

Hoover, Herbert Clark, American politician. His early years were spent as a mining engineer in Australia and China. In 1914 he became chairman of the American Relief Committee and later American Food Controller. Under Harding he was Secretary of Commerce, and in 1928 was elected thirty-first President of the U.S.A. as a Republican, but was defeated by F. D. Roosevelt at the election of 1933. (1874-).

Hop (*Humulus Lupulus*), a perennial climbing herb of the order Cannabaceae, extensively cultivated in Europe and America for its cones, which are used in the manufacture of beer. In England hop-cultivation is extensively practised in the South-Eastern and W. Counties, particularly Kent. The plants are grown on poles.

Hope, Anthony, *nom de plume* of Sir Anthony Hope Hawkins, novelist, born in London, educated at Oxford, called to the Bar; author of *Men of Mark*, *Prisoner of Zenda* and other novels. (1863-1933).

Hopetoun, Sir John Hope, fourth Earl, general; second son of second Earl; commanded a division in the Walcheren expedition; served with Sir John Moore in Sweden and Spain; completed the embarkation at Corunna after Moore's death, and was Wellington's chief support in the Peninsula, succeeded his half-brother as Earl, 1816. (1765-1823).

Hopkins, Sir Frederick Gowland, British scientist; professor of biochemistry at Cambridge; carried out analytical work for the Home Office; awarded the Nobel Prize for medicine in 1929 for his researches in connection with vitamins; President of the Royal Society, 1921, and of the British Association, 1933. (1861-).

Hoppner, John, English portrait painter; born in London; being appointed to the suite of the Prince

Regent he became the fashionable painter of beauties of the day and eminent men; examples of his work are in the National Gallery. (1758-1810).

Horace (Quintus Horatius Flaccus), Roman poet, born at Venusium, in Apulia; fought under Marcus Brutus at Philippi, after which he submitted to Octavius and returned to Rome to find his estate forfeited; later attracted the notice of Virgil and was introduced to Maecenas, who bestowed upon him a small farm on which he lived in comfort for the rest of his life. His works, all in verse, consist of odes, satires and epistles, and reveal an easy-going man of the world, of great practical sagacity and genial wisdom; they abound in happy phrases and quotable passages. (65-8 B.C.).

Horatii, three brothers who in Roman legend were chosen to fight against three brothers from Alba Longa, the Curiatii, to decide supremacy between the two towns. Two were slain, but the third emerged victor.

Horder, Sir Thomas Jaeyes Horder, physician-in-ordinary to King George VI; son of Alfred Horder, of Wiltshire; trained for the medical profession at St. Bartholomew's Hospital, of which he became assistant-physician. He was knighted in 1918, made a baronet in 1923; received the K.C.V.O. in 1925 and was ennobled in 1933; has written on *Clinical Pathology in Practice*, *Cerebro-Spinal Fever and Essentials of Medical Diagnosis*. (1871-).

Horeb, a mountain in Arabia belonging to the same ridge as Mount Sinai, where is still pointed out the rock from which water issued at the blow of Moses.

Hore-Belisha, Leslie, English politician; educated at Clifton College and Oxford; entered Parliament (as a Liberal) for Devonport in 1923; became a junior minister in 1931, Financial Secretary to the Treasury in 1932, and Minister of Transport in 1934, attaining fame in that office by drastic measures of traffic control and the institution of "Belisha beacons" to mark road crossings. In 1937 he became Secretary for War, introducing far-reaching changes in Army organisation during his term of office. (1894-).

Horehound, *Marrubium vulgare*, a perennial herb of the order Labiales growing in Europe (including Great Britain, where it is somewhat uncommon, occurring only in chalk or sandy soils), N. Africa and W. Asia. It grows about 1 ft. high, has woody stems and a short root. Foetid Horehound (*Ballica nigra*) is another species of the same natural order occurring in Britain.

Hormones, complex organic compounds secreted by glands or other specialised parts of an organism, and possessing specific functions such as control of the growth or stimulation of certain organs; the name (from the Greek meaning to impel) was introduced by Starling in 1906 to describe a substance, secretin, which stimulates the pancreas. Important hormones are insulin, adrenalin, thyroxin and pituitary extract.

Of these, insulin is produced in the pancreas and regulates the concentration of glucose (g.v.) in the blood. Glucose is produced during the digestion of starchy foods, and unless the pancreas is functioning properly, the concentration of the sugar in the blood may rise considerably above the normal value of 0.1

per cent., and the disease known as *diabetes mellitus* finally results wherein glucose may be detected even in the urine. It was shown in 1922 by F. G. Banting and C. H. Best that the glucose-controlling hormone could be extracted from those tissues of the pancreas known as the islets of Langerhans, and from its location they described it as "insulin."

Insulin occurs also in the pancreas of sheep, cattle, pigs and other animals, and may be extracted by treatment of the finely-chopped material with dilute sulphuric acid and then with alcohol. It is a white, crystalline solid, soluble in water, and probably resembles the proteins in structure, though it contains no phosphorus. Medicinally it is administered subcutaneously in the form of a solution of its compound with hydrochloric acid, and though it does not necessarily cure *diabetes mellitus*, it completely removes the symptoms if regularly applied.

Adrenalin, the hormone which controls the blood pressure, occurs in, and can be extracted from the suprarenal glands (near the kidneys), and is used as a heart-stimulant. Pituitary extract is obtained from the pituitary body, which is situated near the front of the brain; it contains at least two distinct hormones, and is used to stimulate movement of the intestines, to decrease the excretion of urine, and to raise the blood pressure.

Horn, a brass wind instrument of ancient origin, used formerly for military purposes and in hunting, and now, in the more developed form of the French horn, employed as an orchestral instrument. It has several spiral volutes and a wide mouthpiece.

Horn, Cape, the most southerly point of America, is a lofty, precipitous, and barren promontory of Hermit I., in the Fuegian Archipelago.

Hornbeam (*Carpinus Betulus*), a small, bushy, beech-like, catkin-bearing tree of the natural order Betulaceae, common in Great Britain. The timber is tough, and is used in turnery for cogs of wheels, etc. The inner bark yields a yellow dye. It bears a one-seeded nut with a leafy wing with three lobes on one side of it.

Hornbill, a family (Bucerotidae) of birds of Africa and Asia,

allied to the Kingfisher. The bill, from which they take their name, is exceptionally large, giving the bird a top-heavy appearance, though in reality it is only composed of a cellular tissue covered with a horny shell. The flight is heavy and clumsy. Some species are almost omnivorous (including mammals, reptiles, etc.), but in most the food consists chiefly of fruit and berries, the birds, especially the 60 species of the sub-family Bucerotinae, living in thick forest and jungle. During the incubation of eggs the female is walled up in the nest and fed from the outside by the male.

HORNBILL

Hornbook, a sheet of vellum or paper imparting the rudiments of education, on which were inscribed the alphabet in black or Roman letter, some monosyllables, the Lord's Prayer and the Roman numerals; this sheet was covered with a slice of transparent horn, and was still in use in the reign of George II.

Horncastle, a market town and urban district of Lincolnshire, England, 21 m. from Lincoln. There are remains of a Roman fort. The annual horse

PETIT (BLACK) HOREHOUND

fair in August is one of the largest in the kingdom. Pop. 3,500.

Hornchurch, a large urban district in Essex, England, 2 mi. S. of Romford, a rapidly-growing "dormitory" of London. It includes the villages of Upminster and Rainham. Pop. 56,000.

Horne, **Henry Sinclair, Lord**, British Artillery, served in India and the Boer War, and in 1914 went to France in command of the Artillery, 1st Corps. In 1915 he took command of the second division, served in Gallipoli, and returning to France took command of the fifteenth corps at the Battle of the Somme; was knighted that year, and for the rest of the war led that corps. In 1919 he was raised to the peerage. (1861-1929).

Horne, **Robert, first Viscount**, British politician. He entered Parliament in 1918, became Minister of Labour in 1919, President of the Board of Trade in 1920, and Chancellor of the Exchequer in 1921, retiring on the defeat of the Coalition in 1922; raised to the peerage in 1937. (1871-).

Horneblende, a silicate of iron and many igneous rocks; it is a black mineral of the amphibole group.

Hornet, an insect of the Vespidae or Wasp family, common in S. Britain and most of Europe. It is very voracious, and feeds on fruit, honey and insects. The sting is painful and accompanied by considerable swelling.

Horning, in Scottish legal procedure, "letters of horning" denote a writ to compel a debtor to discharge his obligations under penalty of being considered a rebel, the origin of the term being the ancient custom of blowing three blasts on a horn to indicate the defaulting debtor as a rebel.

Hornpipe, a lively dance, a former favourite of sailors, so called from an old wind-instrument on which it was originally accompanied.

Horns, growths on the heads of certain animals which serve as weapons, sometimes, as in the deer, bony outgrowths of the skull, in other cases, at any rate before maturity, quite separate from it. In the giraffe they are covered with hair; that of the rhinoceros is of real horn. They are generally borne by both sexes.

Hornsey, Middlesex, a hilly and populous borough of N. London, including Highgate, Muswell Hill, etc. The Alexandra Palace and Park, with its racecourse and television station, are in the borough, which is otherwise mainly residential. Pop. 95,000.

Horology, the science dealing with the principles and construction of clocks, watches and other time-pieces. Wheel clocks came into use in the 12th Century, portable clocks during the 14th, and watches with a coiled spring in the 15th. The pendulum was introduced by Huygens in the 17th Century. Apparatus designed to record minute divisions of time are called chronometers.

Horse. The evolution of the horse from a smaller ancestor is better known in its details than that of any other mammal. Its ancestry appears from fossilised remains to be traceable to the Pleistocene Age, when it was confined mainly to Europe and Asia; from rough drawings scratched on bone it seems to have differed little in form from the horse of to-day. There is evidence that the horse was domesticated during the Late Stone Age, and the horses used in Britain at the time of the Roman invasion were probably descended from this stock. Wild horses were found as late as the 18th Century in Europe, though in decreasing numbers. Probably

many of these were descended from originally tamed stock; and certainly the mustang of S. America is the wild descendant of the domesticated species. In the open steppe lands of Central Asia, the tarpan or wild horse is still to be found in large numbers. Another breed is found in S. America.

In Egypt the first representations of domestic horses date from the period of the Hyksos, about 1800 B.C. They were probably introduced into Egypt from Mesopotamia. The Persians and Parthians were celebrated for their horsemanship in the first millennium B.C., and they introduced horses into India, where they were not formerly known as a wild breed.

Of domesticated breeds to-day, one of the most important is the Arab. Arabs are similar in type to the African "Barbs," with long legs, grace and endurance, combining muscularity with slightness of build. They were introduced into Arabia from Asia Minor in the early Christian era. The English race-horse is an exclusive breed, the product of carefully selected native stock with an admixture of Arab blood. Characteristics are the wide forehead, delicate muzzle, long body with the forelegs set close together; the colour is generally bay or brown, legs and mane black.

Hunters are bred less exclusively and vary widely, all, however, possessing strength, endurance and speed. The legs of a hunter are shorter and stronger than those of the race-horse. Ponies, bred in the Shetland Isles, Hebrides and Orkneys, are remarkably docile and agile, and are frequently trained for circus. They are stocky, hardy animals, about 11 hands high, and have rough, matted coats. New Forest ponies are very similar, being also sure-footed and enduring.

Of cart-horses, the chief are the English Shire Horse, the Clydesdale and the Suffolk Punch. The first is black, with a white-starred forehead, slow and lacking in mettle, but possessing great strength. It stands 17 hands. The Clydesdale stands 16 hands and is more compact in build. The Suffolk Punch is known for its pertinacity and doggedness, though it is ugly and cumbersome in form.

Horse, **Master of the**, a political officer of the Royal Household, who attends the King on State occasions and in ceremonial processions. His offices are at the Royal Mews, Buckingham Palace, but the administrative duties of the mews are carried out by the Crown Equerry.

Horse Chestnut, or **Buck-eye**, a genus (*Aesculus*) of deciduous trees of the natural order Hippocastanaceae, common in Great Britain and most of Europe. They bear dark green foliage and handsome flowers. The wood is soft, and the nutty fruit, which is enclosed in a prickly shell, is used as food for cows, pigs, etc., after the bitterness has been removed by alkaline treatment. The chief species are the common Horse Chestnut (*Aesculus hippocastanum*), native of N. Greece and Albania and bearing "candles" of white flowers, and *Aesculus carnea*, the Red Horse Chestnut.

Horse Fly, a large fly common in England and causing irritation to horses by blood-sucking.

Horse Guards, The, a regiment of 1550, having its headquarters in Whitehall; also applied to the building in Whitehall, once the headquarters of the commander-in-chief of the British army, and now of the

MONGOLIAN
WILD HORSE

General Staff, to signify the centre of military administration.

Horse Latitudes, a part of the N. Atlantic Ocean noted for long periods of calm, said to be so called from the frequent necessity when horses formed part of a cargo, of throwing them overboard during the times when the ship was becalmed and water was scarce.

Horse Mackerel, or Scad (*Scomber trachurus*), a fish closely related to the common mackerel, being another species of the same genus of Scombridae. It is plentiful on occasions in British waters (especially off the coasts of Cornwall and Devon), is rather smaller than the common mackerel and its flesh is considered coarser.

Horse-power, a unit of measurement work or supplying energy. An engine which is developing 33,000 foot-pounds of energy per minute is said to be working at 1 horse-power. The horse-power is therefore calculated by dividing the number of foot-pounds per minute by 33,000. The term was invented by James Watt to represent the ordinary rate of working of a good horse.

Horse-racing, was among the sports Olympic games, and has been known in England from early times. It was encouraged by Charles II. In late years it has flourished under royal patronage.

Flat-racing begins in the third week of March and ends on Nov. 30. The ruling authority is the Jockey Club, founded in 1750. Though self-constituted, its control is unquestioned. The most important races, though not necessarily the most valuable, are those called "classic" for 3-year-old horses: *i.e.*, the 2,000 Guineas (1 m.) for colts and fillies, the Oaks (1½ m. 5 yd.) and the 1,000 Guineas (1 m.) for fillies, the Derby (1½ m. 5 yd.) and the St. Leger (1 m. 6 furlongs 132 yd.) for either colts or fillies.

The oldest is the St. Leger, founded in 1776; the Oaks followed in 1779, and the Derby in 1780. The Derby and Oaks "double" has been won 3 times; the "triple crown" (2,000 Guineas, Derby and St. Leger), 11 times.

Other important English flat-races are the Lincolnshire Handicap (1 m.), the City and Suburban Handicap (1½ m.) held at Epsom, the Coronation Cup (1½ m. 5 yd.) at Epsom, the Ascot Stakes (2 m.), the Royal Hunt Cup (7 f. 155 yd.), the Gold Cup (2½ m.) and the Alexandra Stakes (2½ m. 74 yd.) at Ascot; the Eclipse Stakes (1½ m.) at Sandown Park, the Steward's Cup (6 f.) and the Goodwood Cup (2 m. 6 f.) at Goodwood; the Ebor Handicap (1½ m.) and Gimcrack Stakes (6 f.) at York; the Cesarewitch Stakes (2½ m.) at Newmarket, and the November Handicap (1½ m.) at Manchester.

The Rules do not allow of any race less than 5 furlongs, and two races of at least 1 m. must be run at each meeting. Besides races for horses of a particular age, there are Weight-for-Age handicaps and Selling Races. In the former allowances are made for age and sex, and vary with each month of the year.

Racing under National Hunt Rules is held principally in the winter. Races are run over hurdles or fences, the latter being known as steeplechases. The two most important meetings are at Liverpool and Cheltenham; at the former (Aintree) the Grand National takes place over a distance of 4 m. 856 yd., the race being run twice round the course. The National Hunt Committee is the governing body. Very few trainers or jockeys engage in both branches of racing. Amateurs may ride under N.H. rules.

Pony-racing, with headquarters at Northolt Park, has recently come into considerable favour. The chief race is the Northolt Derby, run in June, value 21,000. The season is the same as for flat racing.

Horse Radish (*Cochlearia Armoracia*), a cultivated plant of the order Cruciferae. The thick root, which has a strong, pungent taste, is used for sauces, and in medicine as a stimulant.

Horsham, market town and urban district of Sussex, England, 26 m. NW. of Brighton; with a fine Early English church, and a thriving trade in brewing and tanning. Christ's Hospital (popularly called the Blue Coat School) is in the neighbourhood. Horsham stone is the name given to a building material which is much used in Sussex. Pop. 21,000.

HORSE RADISH

Horthy de Nagybánya, Miklós, ruler of Hungary since 1920; born at Kenderes, Eastern Hungary, of noble family; educated at the naval academy at Fiume; entered Austro-Hungarian navy, 1886; in World War captained successively the *Habsburg* and the *Novara*; severely wounded at Otranto, 1917. Became vice-admiral, 1918. On the collapse of the Communist Government in 1919, led counter-revolutionary forces into Budapest. Elected regent by the national assembly, he repulsed the ex-Emperor Karl's attempts in 1921 to become king, and by a bill passed in 1937 he received all the rights and privileges of a king—a bill generally interpreted as diminishing the prospect of a Hapsburg restoration. (1868-).

Horticulture, or gardening, is the vegetables, fruits and ornamental plants in gardens. Success in horticulture depends upon the nature of the sub-soil, the best being a dry bed of clay overlapping sandstone. Seeds are deposited after thorough soil preparation by digging, draining and pulverisation, and if necessary nourishing by artificial matter. The best top-soil is a good loam mixed with humus.

Horus, son of Osiris, in Egyptian mythology, ology the sun-god, equivalent to the Greek Apollo.

Horwich, a town and urban district of Lancashire, England, 15 m. NW. of Manchester. Bleaching and cotton spinning are carried on. There are several collieries in the vicinity of the town, and the L.M.S. have extensive locomotive works there. Pop. 15,700.

Hosea, a Hebrew prophet, a native of the northern kingdom of Israel, and a contemporary of Isaiah. His book in the Bible, the first of the *Twelve Minor Prophets*, denounces Israel's sins against Jehovah, and tells the story of the prophet's own—perhaps symbolical—marriage.

Hosiery, a general name for knitted fabrics worked into underwear, especially socks and stockings. The hosiery trade is a serious rival to weaving, owing to the ease of production. In woollen goods elegant effects are obtained from long-fibred yarns worked in fancy colours. The enormous development of the artificial silk (rayon) industry in recent years has revolutionised the hosiery trade.

Hospital, an institution for the treatment of diseases and injuries, the training of doctors and nurses, and the prosecution of medical research. Hospitals are of ancient origin; there is record of them in India before the Christian era, and one was founded in Baghdad in A.D. 703. In London a leper hospital was erected in 1118, while St. Bartholomew's Hospital dates from 1123 and St. Thomas's from 1200.

There are now many great general hospitals

in London, as well as a large number of smaller institutions, both public and private, for the treatment of special diseases, while in the provinces the hospital system has been greatly developed, largely with the help of local municipal authorities. On the Continent and in the U.S.A. it is usual for hospitals to be subsidised and administered by the State or by municipalities. In England maintenance often depends upon voluntary contributions, and expenditure is in many cases in excess of income.

Originally hospitals were intended for the treatment of the poor, but to-day many patients of moderate means use them on payment of part of the cost of their treatment. King Edward's Hospital Fund, founded in 1897, has been of great financial advantage to the hospital movement. Valuable contributions are also made by the Hospital Saturday Fund, the Hospital Savings Association, and the Hospital Sunday Fund.

The largest hospital in Britain is the Royal Infirmary, Edinburgh, founded in 1730, and there are important hospitals with medical schools in most large provincial centres. The term hospital is also applied to certain schools, endowed or supported by voluntary subscriptions—e.g., Christ's Hospital, Horsham—and to certain institutions for pensioners, such as the Greenwich and Chelsea Hospitals.

Hospitallers, a religious brotherhood of the Middle Ages under vow to provide and care for the sick and wounded, originally in connection with pilgrimages and expeditions to Jerusalem; also called the Order of St. John of Jerusalem. The St. John Ambulance Association is in a sense a modern revival of the Order.

Host, a term for the consecrated bread in the Christian sacrament of the Eucharist or Lord's supper.

Hostage, a person left as a pledge or surety for the performance of the articles or conditions of a treaty. If the terms were observed, the hostages were returned, but in the event of violation they were put to death. The demanding of hostages was common in ancient medieval warfare.

Hotchkiss Gun, an early form of machine gun invented by an American, Benjamin Hotchkiss (1826-1885).

Hotchpot Clause, a clause inserted in marriage settlements to ensure that any sum advanced from the portion to the younger children during the father's lifetime shall be taken into account in estimating the share they are to receive at his death.

Hotel, an inn, generally of the better class, which provides lodging and refreshment for travellers, and may be set up without licence unless excisable liquors are sold. A hotel proprietor is bound to supply the needs of anyone who applies to him unless the applicant is diseased or intoxicated. He may also retain the property of a client who fails to pay his account, and is liable for the loss of his customers' property to the value of £30, unless it can be proved that the customer was in fault.

Hotspur, a name given to Henry Percy, son of the first Earl of Northumberland, killed at the Battle of Shrewsbury in 1403 when fighting against King Henry IV.

Hottentots, a name first applied by the negro inhabitants of the Cape of Good Hope, who, however, comprise two main tribes, the Khoikhoi and the Bushmen, in many respects dissimilar, but speaking languages characterized alike by harsh and clicking sounds, a circumstance which induced the incoming settlers to call them *Hottentots*, which means

in effect "jabberers"; they are still found in diminishing numbers, in the W. of South Africa.

Houdin, Jean Eugène Robert (called "Robert-Houdin"), French conjurer, born at Blois; for seven years from 1845 gave "soirées fantastiques"—first at the Palais-Royal, afterwards at the Passage de l'Opéra; wrote several works on his art. (1805-1871).

Houdini, Harry (real name Ehrich Weiss), American conjurer; son of a Hungarian-Jewish rabbi; was born at Appleton, Wisconsin; named himself after Houdin (q.v.), whom he afterwards came to dispare; did not succeed until removal to England, 1900, when he appeared at the Alhambra, London; exceeded all rivals in ability to escape from confinement; investigated and condemned spiritualism. (1874-1926).

Houdon, Jean-Antoine, an eminent French sculptor, born of humble parentage in Versailles. At 20 he won the *Prix de Rome*, and at Rome produced his great statue of St. Bruno. In 1805 he became professor at the Paris École des Beaux-Arts. He was unrivalled in portraiture, and executed statues of Rousseau, Voltaire, Diderot, Mirabeau, Washington, Napoleon and others. (1741-1828).

Houghton, Lord, poet and patron of letters, born of good family at Fryston Hall, Pontefract; graduated at Cambridge; entered Parliament as a Conservative, but subsequently went over to the other side, and in 1863 was raised to the peerage by Palmerston; was a man of varied interests, a traveller, leader of society, philanthropist, and above all the friend and patron of authors. (1809-1885).

Houghton, (William) Stanley, comic on-Mersey, a Manchester cotton-broker, and dramatic critic to the *Manchester Guardian*. His first play was *The Dear Departed*, 1908. Among his later plays were *Marriages in the Making*, 1909; *The Younger Generation*, 1910; *Kindle Wakes* (the most famous), 1912; *The Perfect Cure*, 1913. (1881-1913).

Houghton-le-Spring, a township district, 6 m. N.E. of Durham, England. It has collieries and iron-works. Pop. 10,500.

Hougomont, a village near Waterloo in Belgium, and the scene of most of the critical fighting during that famous battle. It was Wellington's success at Hougomont which led to the final victory.

Houndsditch, a street in the eastern part of the City of London, and a centre of the wholesale drapery trade; named from the ancient City ditch, a portion of which it covers.

Hounslow, a town of Middlesex, 16 m. S.W. of London; in the vicinity are an airport, barracks and the famous Hounslow Heath, once the resort of highwaymen; now part of Heston-Isleworth.

Hour, the twenty-fourth part of a day. In most countries twelve hours are counted from midnight to midday, and then twelve more to midnight, but in many European countries, and generally for air travel, a twenty-four hour nomenclature from midnight to midnight is employed. The hour is divided into 60 minutes. Before the coming of clocks the hour was measured by an hour-glass. (q.v.).

Hour-glass, a device for measuring time, consisting of two glass bulbs connected by a narrow neck, through which sand is allowed to pass at a fixed rate, the transfer of the sand from one bulb to the other occupying an hour. Hour-glasses are sometimes found fixed to pulpits in

old churches; a similar device, timed for three or four minutes, is in common kitchen use to mark the time required for boiling eggs.

Houri, a beautiful maiden whose embrace the Moslem hopes to enjoy in Paradise.

House, a building erected for human habitation as distinguished from one built for public purposes, religious or civil. It may range from a dwelling of a single room to a palace. The earliest human dwellings were probably caves, or erections built on piles on the border of lakes.

In Greece and Rome, houses were of unburnt brick coated sometimes with stucco, and consisted of several storeys, in Rome sometimes as many as six. In England, in the Dark Ages, houses were mainly of wood, but in the 13th Century stone was used.

In the 15th and 16th Centuries half-timbered houses were built, such as Speke Hall, near Liverpool. The character of the English house has varied with time, and in large towns the single-family house is largely giving way to the "flat," or set of rooms in a large dwelling intended for a number of households.

House, Col. Edward Mandell, American politician. After America's entry into the World War in 1917 he came to Europe to consult with the Allies on the adoption of co-operative measures, and acted as confidential adviser to President Wilson throughout the Peace Conference, completely dominating the President. His *Diaries* are an important source for post-war history. (1858-1938).

House Fly, a very common and widely-distributed dipterous insect, the *Musca domestica*. They have a sucking proboscis and lay their eggs in dung heaps. They infest houses in summer, and are largely responsible, by polluting food, etc., for the spread of various diseases among mankind.

HOUSE FLY

Household, Royal, the corps of court attendance on the King and the other members of the Royal Family. It is headed by the Lord Chamberlain, and includes, besides his special department, those of the Private Secretary, the Keeper of the Privy Purse, the Financial Secretary and the royal medical consultants. Many household offices, such as those of Bargemaster, or in Scotland (which has a separate Royal Household) Botanist and Historiographer, are nowadays merely honorary appointments. The best known of these is that of Poet Laureate.

Household Brigade, a body of troops consisting of the Royal Horse Guards, the 1st and 2nd Life Guards, and the Grenadier, Coldstream, Scots, Irish and Welsh Guards.

Houseleek (*Sempervivum tectorum*), a succulent plant of the natural order Crassulaceae, with purple, star-shaped flowers, found in Europe, Asia and Africa; in England sometimes planted on roofs of cottages to bind the slates. The leaves are fleshy and reproduction is by offsets.

Housing, became a social problem with the industrial revolution, when small villages grew rapidly into towns. The consequent planless erection of houses gave rise to overcrowding, congestion and insanitary conditions. Legislation on housing reform dates from the middle of the 19th Century, and in 1890 a Housing of the Working Classes Act first gave power to local authorities to acquire land for housing by compulsory purchase.

Actual town-planning did not receive attention until 1809, after which places such as Port Sunlight, Bournville and the Garden Cities of Letchworth and Hampstead led the way. One of the results of the World War was that the housing problem became acute, building having practically ceased for five years. Various Acts were passed requiring a certain standard of accommodation, and local housing authorities were required to submit housing schemes to the Ministry of Health. In order to encourage the resumption of private building, the Government offered a subsidy of £150 to £260 for houses built within 12 months. Other Acts and schemes followed, including the Addison Scheme, which produced 150,000 houses, and the Chamberlain Housing Act of 1923, which encouraged private enterprise, while the Wheatley Act of 1924 aimed at the production of working-class houses at an economic rent.

After the Housing Act of 1932, which ended subsidies, the rate of building declined. Meanwhile the core of the problem, new houses for those affected by slum clearance, remains unsolved, though some progress is being made by local authorities. The London County Council has tackled the problem with energy and imagination, and has covered several large suburban estates with houses offered at low rents. In 1933 a suggestion of the Moyne Committee that a National Housing Board, financed by a public loan with a government guarantee, should be set up, was rejected.

Housman, Alfred Edward, British poet. After a time in the civil service he became a professor at London, and later at Cambridge. In 1896 he produced his best-known volume of verse, *The Shropshire Lad*. (1859-1936).

Housman, Laurence, British author and artist, brother of preceding; writer of poetry, imaginative tales and a number of novels and plays, including *An Englishman's Love-Letters* (a novel) and *Little Plays of St. Francis*. (1865-).

Houston, capital city of Harris Co., Texas, U.S.A., head of the Buffalo Bayou navigation. It is an important railway centre, and has many manufacturing and railway workshops. It was named after Samuel Houston, first President of Texas. Pop. 292,000.

Houston, Samuel, President of the Texas Republic, born in Virginia; was adopted by a Cherokee Indian, and rose from the rank of a common soldier to be Governor of Tennessee in 1827; as commander-in-chief in Texas he crushed the Mexicans, won the independence of Texas, and became the first President of the republic in 1836; subsequently represented Texas in the United States Senate; was elected governor and deposed in 1861 for opposing secession. (1793-1863).

Hove, a municipal borough in Sussex, England, immediately W. of Brighton; is, like the latter, a flourishing seaside resort. It includes Aldington, Preston Rural, and parts of Patcham and West Blatchington. There are facilities for golf and tennis, and in the district fine downs and woods; also Hollingsbury Castle, a Roman encampment. Its proposed incorporation with Brighton is strongly opposed by the inhabitants. Pop. 55,000.

Howard (Family), one of the oldest and noblest of England's great families, descended from Sir William Howard, of East Wynch, near King's Lynn, Justice of Common Pleas under Edward I. His great-great-grandson, Sir Robert, married Margaret, daughter of the first "Mowbray" Duke of Norfolk, and since 1483 the ducal title of Norfolk has been held by the family. Other peerages now held by Howards descended from "Howard,"

Dukes of Norfolk, are the earldom of Ealingham; the earldom of Carlisle, bestowed, 1661, on a descendant, through "Bauld Wille" of Naworth (1563-1640), of the fourth Duke; the earldom of Suffolk, separated, 1689, from the barony of Howard de Walden; held since 1745, with earldom of Berkshire, created 1626; the barony of Howard of Glossop, bestowed, 1689, on second son of thirteenth Duke; the viscounty of Fitzalan of Derwent, bestowed, 1921, on third son of fourteenth Duke; the barony of Howard of Penrith, bestowed, 1930, on a descendant of the Earl of Arundel who was father of fifth Duke. William Howard, Viscount Stafford, victim of the Titus Oates "plot," was great-grandson of fourth Duke. The Earl of Wicklow and Baron Strathcona, though bearing the surname Howard, have no traceable connection with the foregoing.

Howard, Catherine, fifth wife of Henry VIII., granddaughter of the Duke of Norfolk; was married to Henry in 1540 after his divorce from Anne of Cleves. Two years later she was found guilty of immoral conduct prior to her marriage, and was executed. (1520-1542).

Howard, John, a noted philanthropist, born at Hackney, London. His experience as a French prisoner of war and as sheriff of Bedfordshire roused him to attempt some reform of the abuses of prison life. He made a tour of the county jails of England, and the mass of information which he laid before the House of Commons in 1774 brought about the first prison reforms. He continued his visitations throughout the United Kingdom and the Continent. During 1785-1787 he made a tour of inspection through the principal lazarettos of Europe, visited plague-smitten cities, and voluntarily underwent the rigours of the quarantine system. He died at Kherson whilst on a journey to the East. He published at various times accounts of his journeys. (1727-1790).

Howe, Richard, Earl, admiral, born in London, son of an Irish viscount; first saw service under Anson against the Spaniards; distinguished himself during the Seven Years' War; in 1783 became First Lord of the Admiralty, and was created an earl. During the French War in 1793 he commanded the Channel Fleet, and gained "the glorious first of June" victory off Ushant. (1726-1799).

Howells, William Dean, a once very popular American novelist, the son of a journalist, born at Martin's Ferry, Ohio; adopted journalism as a profession, produced a popular *Life of Lincoln*, and was editor of the *Atlantic Monthly*, *Harper's Magazine* and the *Cosmopolitan*. His novels include *A Chance Acquaintance*, *A Foregone Conclusion*, *A Modern Instance* and *An Indian Summer*. (1837-1920).

Howitt, William, miscellaneous writer who, with his equally talented wife, Mary Howitt (1799-1888) (née Botham), did much to popularise the rural life of England; born, a Quaker's son, in Heanor, Derbyshire; served his time as a carpenter, but soon drifted into literature, and made many tours for literary purposes; was a voluminous writer of histories, accounts of travel, tales and poems. Amongst these are *Rural Life in England*, *Visits to Remarkable Places*, *Homes and Haunts of the Poets*, etc. (1792-1879). His wife was the first to translate the fairy-tales of Hans Andersen.

CATHERINE HOWARD

Howitzer, a type of gun used in war at a high angle. It is accurate at long range and can be fired from concealed positions owing to the high trajectory of the shells.

Howrah, or *Maura*, a flourishing manufacturing town on the Hooghly, opposite Calcutta, with which it is connected by a floating bridge. Pop. 225,000.

Howth, a town and watering place on the "Hill of Howth," on the N. side of Dublin Bay, 9 m. N.E. of Dublin. There are ruins of an ancient abbey, and a lighthouse. Pop. c. 5,000.

Hoxton, a populous district of E. Shoreditch. Cabinet making is largely carried on. Pop. c. 50,000.

Hoy, a steep, rocky islet in the Orkney group, about 1 m. S.W. of Mainland or Pomona, remarkable for its huge cliffs.

Hoylake, a watering-place in Cheshire, at the seaward end of Wirral Peninsula, 8 m. W. of Birkenhead; noted for its golf-links. Pop. 19,750.

Hradec Králové, a town of Czechoslovakia, formerly known as Könitzgratz (q.v.).

Hubert, St., Bishop of Liège and Maastricht, the patron-saint of hunters; was converted when hunting on Good Friday by a milk-white stag appearing in the forest of Ardoennes with a crucifix between its horns; generally represented in art as a hunter kneeling to a crucifix borne by a stag. (656-728).

Huckleberry (*Gaylussacia*), a genus of 40 species of shrubs of the order Ericaceae, found in America. The name is also sometimes given (the blue Huckleberry) to the *Vaccinium pennsylvanicum*, another N. American species of Ericaceae. See also *Whortleberry*.

Hucknall, formerly called Hucknall Torkard, a town in Nottinghamshire, England, 8 m. from Nottingham. The Torkard family were once the lords of Hucknall. The Church of St. Mary contains the vault of the Byron family, and the poet is buried there. There are extensive collieries in the vicinity, and manufactures of cigars, hosiery, etc. Pop. 17,800.

Huddersfield, a manufacturing town in the W. Riding of Yorkshire, England, in a coal district on the Colne, 36 m. N.E. of Manchester; is substantially built, and is the northern centre of the "fancy trade" and woollen goods; cotton, silk and machine factories and iron-founding are also carried on on a large scale. Pop. 113,500.

Hudson, in New York State, one of the most picturesque of N. American rivers, rises amid the Adirondack Mts., and from Glen's Fall flows S. to New York Bay, having a course of 356 m.; is navigable for steam-boats as far as Albany, 145 m. from its mouth.

Hudson, Henry, English navigator; made three unsuccessful efforts to discover a north-east passage in the Arctic, then went north-westward, and reached the river, strait and bay which bear his name. His sailors in his last expedition in 1611 mutinied, set him and eight others adrift in an open boat, and his exact fate was never ascertained.

Hudson, William Henry, English author, born in Argentina, where he spent his early life, coming to England in 1869; of his many books on Nature and bird-

HUCKLEBERRY
(*Gaylussacia resinosa*)

life, the best known are *Birds and Man*, *Afoot in England* and *A Naturalist in La Plata*; a memorial, by the sculptor Jacob Epstein, erected to him in Hyde Park, London, after his death, was the subject of considerable artistic controversy. "Rima," the bird-woman, the central figure of the memorial, is the sculptor's conception of a character in Hudson's *Green Mansions*. (1841-1922).

Hudson Bay, a great inland sea in Canada, 850 m. long and 600 m. wide, communicating with the Atlantic through the Hudson Strait and with the Arctic through the Foxe Channel, Foxe Basin, Fury and Hecla Strait and the Gulf of Boothia. It is ice-bound for many months in the year, but a few ports, especially Churchill, the terminus of a railway serving the northern parts of Manitoba, are used when the Bay is open.

Hudson's Bay Company, an English trading company chartered in 1670. It had a monopoly of the trade throughout that part of N. America whose rivers flow into Hudson Bay. In 1870 its governing authority was transferred to the Crown. It is now a limited liability company, and still has a large trade in furs. Over a hundred of the company's steamers were sunk by German submarines during the World War. Its headquarters are in London, and it has large depôts at Winnipeg and other Canadian towns.

Hué, capital of the French protectorate above its mouth; is strongly fortified with walls and a citadel. Pop. 34,000.

Huelva, a seaport in Spain, 68 m. SW. of Seville, between the mouths of the Odiel and Tinto; fisheries and the export of copper, manganese, quicksilver and wine are the chief industries. It is capital of a province of the same name in Andalusia. Area (prov.) 3,900 sq. m. Pop. (prov.) 385,000; (town) 50,340.

Huesca, an interesting old Spanish town, 58 m. NE. of Saragossa; has picturesque old churches, a university, and a palace; manufactures linen and leather; capital of a province of the same name in Aragon, bordering on the French frontier. Area (prov.) 5,800 sq. m. Pop. (prov.) 240,000; (town) 15,000.

Hugh Capet, first king of the Capetian dynasty of France, son of Hugh Capet, Count of Paris; proclaimed king in 987. His reign was troubled by the revolt of the party that had raised him to the throne, and who refused to own his supremacy. (946-996).

Hughenden, a parish in Buckinghamshire, England, in the Chiltern district, 2 m. N. of High Wycombe; is interesting as the seat of Hughenden Manor, for many years the residence of Benjamin Disraeli, Earl of Beaconsfield. Pop. c. 2,000.

Hughes, Thomas, English author born at Uffington, Berks; was at Rugby in Dr. Arnold's time, graduated at Oxford, and was called to the Bar in 1848. His famous story of Rugby school life, *Tom Brown's School-days*, was published in 1856, and was followed by *Tom Brown at Oxford* and other stories and biographies. He entered Parliament in 1865, and in 1882 became a Court County Judge. Throughout his life he was interested in social questions. (1822-1898).

Hughes, William Morris, Australian carpenter, he emigrated to Queensland at the age of 20, and organised the Sydney dockers into a union. In 1894 he became a Labour member of the New South Wales legislature, and in 1904 Minister of External Affairs in Australia's first Labour Government. He was again in office in 1908, 1910 and 1914, and in

1915 he became Prime Minister, attended the Peace Conference in 1918, and was defeated by Bruce in 1923. In 1934 he was Minister for Health in the Lyons Government, and since 1936 Minister for Repatriation. (1864-).

Hugo, Victor-Marie, French poet and

novelist, born at Besançon; as a boy accompanied Joseph Bonaparte's army through the campaigns in Italy and Spain. At 14 he produced a tragedy. In 1827 was published *Cromwell*, which placed him at the head of the Romanticists, and in *Hernani* (1830) the departure from the old classic novels was more emphatically asserted. In a quick succession of dramas, novels, essays and poems, he revealed himself one of the most potent masters of the French language. He was admitted to the French Academy, and in 1845 was created a peer. He engaged in politics first as a Royalist and next as a Democrat, but fled to Brussels after the *coup d'état*. Subsequently he established himself in Jersey and then in Guernsey, where he wrote his great novels *Les Misérables*, *Les Travailleurs de la Mer*, etc. He returned to France in 1870, and became a senator. (1802-1885).

Huguenots, a name given to the Protestants of France, presumed to be a corruption of the German word *eingekommen*, i.e., sworn confederates, the history of whom and their struggles and persecutions fill a large chapter in the history of France. Their cause was espoused at first by many of the nobles and the host families in the country, but throughout was in disfavour at Court.

Hull, or Kingston-upon-Hull, a flourishing river-port in the E. Riding of Yorkshire, England, at the junction of the Hull with the Humber, 42 m. SE. of York; is an old town, and has many interesting churches, statues and public buildings; is the third port of the kingdom; has immense docks, is the principal outlet for the woollen and cotton goods of the Midlands, and does a great trade with the Baltic and Germany; has flourishing shipbuilding yards, rope and canvas factories, sugar refineries, oil-mills, etc., and is an important centre of the east coast fisheries. Pop. 313,500.

Hull, a seaport and capital of Ottawa Co., Quebec, Canada. A suspension bridge over the Chaudière Falls connects it with Ottawa. It has an extensive lumber trade. Pop. 30,000.

Hulse, John, founder of the Hulsean Lectures; born at Middlewich, Cheshire; educated at St. John's College, Cambridge; bequeathed his Cheshire properties to his university for purposes of which the Lectures—now four annually—formed part. The trust was reorganised in 1860, a Hulsean professor being appointed. (1708-1790).

Humber, an estuary of the E. coast of England, and part of the boundary of Yorkshire and Lincolnshire. It is formed by the junction of the Ea. Ouse and Trent, 8 m. E. of Goole, and empties into the North Sea S. of Spurn Head. It is navigable to Hull by large ships. The Humber and its tributaries drain Yorkshire, Nottinghamshire, Leicestershire and Lincolnshire.

Humbert I., King of Italy, son of Victor Emmanuel I., whom he succeeded in 1878; took white crown prince an active part in the movement for Italian unity, and distinguished himself by his bravery. (1844-1900).

VICTOR HUGO

Humble Bee, or **Bumble Bee**, a member of the genus *Bombus* of the Bee family, of social, wasp-like habit. They are less prolific than the domesticated bee, and frequently nest in stones or soil.

Humboldt, **Friedrich Heinrich Alex., Baron von**, traveller and naturalist, born in Berlin; devoted his life to the study of nature in all its departments, travelling all over the Continent, and in 1800, with Aimé Bonpland for companion, visiting S. America, traversing the Orinoco, and surveying and mapping out in the course of five years Venezuela, Colombia, Ecuador, Peru and Mexico, the results of which he published in his *Travels*. His chief work is the *Kosmos*, or an account of the visible universe. (1769-1859).

Humboldt, **Karl Wilhelm, Baron von**, philologist, born in Potsdam, elder brother of the preceding; represented Prussia at Rome and Vienna, but devoted himself chiefly to literary and scientific pursuits; wrote on politics and aesthetics also. (1767-1835).

Hume, **David**, philosopher and historian, born in Edinburgh, the younger son of a Berwickshire laird; after trial of law and mercantile life gave himself up to study and speculation; spent much of his life in France, and fraternised with the sceptical philosophers and encyclopedists there; his chief works, *Treatise on Human Nature* (1739), *Essays* (1741-1742), *Principles of Morals* (1751) and *History of England* (1754-1761). His philosophy was sceptical, and Kant's positive philosophy was largely a reaction against it. His principal importance was as a political theorist and ethicist. (1711-1776).

Hume, **Joseph**, a politician, born in Montrose; studied medicine, and served as a surgeon under the East India Company in India, made his fortune, and came home; adopted the political principles of Bentham and entered Parliament, of which he continued a prominent member till his death; he was an ardent reformer, and lived to see many of the measures he advocated crowned with success. (1777-1855).

Humerus, a term in physiology for the bone of the upper arm, or in quadrupeds of the upper fore-leg.

Humidity. See *Hygrometer*.

Humming-

Birds, a family of birds of which there are 500 species, many of them very small. The humming is made by the vibration of their wings. They have long, slender bills, extensible tongues, with which they search flowers for the insects they eat, and bright metallic plumage.

HUMMING-BIRD

Humperdinck, **Engelbert**, German composer; born at Siesburg, near Bonn; studied at Cologne and Munich; was companion of Wagner in Italy during his last two years; while engaged in Hoch Conservatoire, Frankfurt, produced his masterpiece, *Hänsel and Gretel*, founded on folk music; composed five other operas; from 1900 he was director of the Meisterschule, Berlin. (1854-1921).

Humphreys, **Mrs. W. Desmond**, English novelist, born in Inverness-shire, née Gollan; wrote under the pseudonym of "Lita." A most prolific and popular writer, her best-known novels include *Kitty the Beg*, *The Sinner*, *The Sin of*

Jasper Standish, *The Naughty Grandfather*, *Diana of the Ephraims*, etc., most of which had large sales but did not benefit her much financially. Her chosen theme was the sin and scandal of the smart set, and one of her most successful books was that entitled *Souls*, being founded on the supposed extravagances of that circle. Published her autobiography under the title *Recollections of a Literary Life*. (1858-1938).

Hunan, a province of S. China in the Yangtse-Kiang, which forms its northern boundary. The northern portion is a fertile plain, and the southern is rugged. It produces coal, white marble, and among its crops are rice and tea. Area 83,400 sq. m. Pop. 40,500,000.

Hunchback, a condition in man in is deformed. It is generally due to Pott's disease or tuberculous ulceration, though a blow or fall may originate it. The vertebrae of the spine may gradually deteriorate and finally collapse completely. The condition, when it occurs in early childhood, may sometimes be cured or alleviated by the use of a carriage in which the patient can lie full length. Occasionally an operation is successful, and is often necessary when compression of the spinal cord is indicated.

Hundred, an ancient division of a county, possibly in origin the area occupied by a hundred families. It was formerly an administrative unit, but is now of no practical importance. In a few counties other names, such as *raps*, are found for a similar area.

Hundred Days, the name given to Napoleon's return from Elba and his abdication, from March 2 to June 22, 1815, after Waterloo.

Hundred Years' War, a struggle between England and France which began in 1338, when Edward III. claimed the throne of France. After the great English victories at Crécy and Poitiers, peace was made in 1360 at Bretigny, but the war was renewed in 1367, and by 1380 the English had lost most of the ground they had won in France. War was resumed in 1403, and assumed new significance when Henry V. claimed the French throne. He won the Battle of Agincourt, 1415, conquered Normandy, and by the Treaty of Troyes was recognised as Regent and future King of France. The turning point of the war occurred when Joan of Arc arrived to lead the French army. The struggle ended in 1452, England having lost all France except Calais.

Hungary, until 1918 part of the Austro-Hungarian Empire, formerly included Transylvania, Croatia and Slavonia, but after the World War was restricted to the Magyar territory proper, Czechoslovakia, Rumania and Yugoslavia receiving large areas of the old Hungary. In theory it is now a kingdom ruled by a Regent, but has never since 1918 had a King. (See *Morthy de Nagybánya*).

It is very fertile, and 50 per cent. of the population are employed in agriculture, producing wheat, maize, rye, barley, potatoes, oats and sugar beet. Other products include tobacco, saffron, hemp, flax, fruit (especially grapes) and cotton. Tokay wine is produced in the N. and near Lake Balaton.

Other industries are milling, distilling and textile manufactures. Rock-salt and precious metals are found in the Carpathian foothills. The fisheries on the Danube, Theiss and Lake Balaton are important. The chief rivers which water the great plain which comprises the greater part of the country are the Danube, Theiss and Drava. Its area is 35,875 sq. m., while the population is 8,690,000, 92 per cent. speaking Magyar and

over 6 per cent. German, the residue being Slovaks, Croats, etc.

Communications include some 6,000 m. of railways, some electric, several air lines, and some shipping on the Danube. All religions are tolerated, but 65 per cent. of the population are Roman Catholic and 2 per cent. Evangelicals. Education is free; there are four universities, Budapest, Szeged, Pecs, Debrecen. The chief towns are Budapest, the capital, Szeged, Pecs, Debrecen and Kecskemet.

Huns, The, a barbarian people of Mongolian origin who invaded Europe from the shores of the Caspian Sea in two wars, the first in the 4th Century, and the second in the 5th Century, ultimately under Attila, when the main body of them was driven back and dispersed. They have been described as a beardless race with broad shoulders, flat noses, and small black eyes.

Hunstanton, a parish and seaside resort in Norfolk, England, 17 m. N.E. of King's Lynn. St. Edmund the Martyr landed here when coming to receive the crown of East Anglia. It has good sands and safe bathing, sea-fishing, and an 18-hole golf course. Pop. 3,100.

Hunt, Leigh, essayist and poet; educated at Christ's Hospital, he was of the Cockney school, a friend of Keats and Shelley; edited the *Examiner*, a Radical organ; thriftless, and always in financial embarrassment, though finally he had a fair pension; lived near Carlyle, who styled his house a "poetical tinkerdome"; Carlyle soon tired of him, though he was always ready to help him when in need. Dickens's "Skimpole" is said to have been based upon him. (1784-1859).

Hunt, William Holman, painter, born in London; became a pupil of Rossetti, and joined the Pre-Raphaelite movement. He began with "worldly subjects," but soon, under Rossetti's influence, "rose into the spiritual passion which first expressed itself in his 'Light of the World,'" his famous painting now in St. Paul's Cathedral. Other works in this spirit are "The Scape-Goat," "The Finding of Christ in the Temple," "The Shadow of Death," "The Triumph of the Innocents" and "The Strayed Sheep." (1827-1910).

Hunter, John, anatomist and surgeon, born near East Kilbride, Lanarkshire; started practice as a surgeon in London, became surgeon to St. George's Hospital, and at length to the king; was distinguished for his operations in the cure of aneurism. He built a museum, in which he collected an immense number of specimens illustrative of subjects of medical study, which, after his death, was purchased by the Government. (1728-1793).

Hunter's Moon, the full moon next moon, following the Autumn Equinox. It rises an hour after sunset during the middle of October.

Huntingdon, the county town of Huntingdonshire, England, stands on the left bank of the R. Ouse, 59 m. N. of London; has breweries, brick-works and nurseries, and was the birthplace of Oliver Cromwell. Pop. 4,700.

Huntingdon, Countess of, an eccentric peeress who, at first a Methodist, founded a small religious body known as the "Countess of Huntingdon's Connexion," which still exists, but is now closely allied with the Congregationalists. (1707-1791).

Huntingdonshire, a small English of the Fen district, laid out for most part in pasture and dairy land; many Roman remains are to be found scattered about in it. Area 286 sq. m. Pop. 56,200.

Huntingtower, a village in Perthshire, shire, Scotland, whose ancient castle, formerly Ruthven Castle, was the place of confinement of James VI. and other conspirators after the "Raid of Ruthven" 1582. It is now a national monument.

Huntly, Aberdeenshire, Scotland, a modern town, 140 m. N. of Edinburgh at the confluence of the Rs. Bogle and Deveron. The rivers afford good trout-fishing. Has woollen and hosiery factories. Pop. 4,500.

Hupei, a central province of China with an area of 71,500 sq. m. It is largely agricultural; some mining is carried on. Capital, Wuchang. Pop. 28,600,000.

Hurlingham, a district in Fulham, SW. London, famous as the headquarters of the Hurlingham Club, where polo is played.

Huron, a lake in N. America, between (Michigan), 263 m. long and 70 m. broad, the second largest of the five in the St. Lawrence basin, containing numerous islands.

Hurons, The, a tribe of Red Indians of the Iroquois family, now extinct, who were outside the Iroquois confederacy; gave their name to the lake (above).

Hurricane, a storm of wind, in strictness referring to those that are common in the West Indies, but now applied to any similar aerial disturbance, especially in the tropics. In the East the name more commonly used is typhoon.

Hurst Castle, a fortress in Hampshire, shire, England, near Lynton, erected by Henry VIII. to defend the channel between the mainland and the Isle of Wight. Charles I. was confined in it in 1648. Pop. of village 1,600.

Hurstmonceux, a village in Sussex, 15 m. NW. of

Hastings; the only district in Great Britain where trug baskets are made. Hurstmonceux castle, built in reign of Henry VI. by Sir Roger de Fiennes, still stands. Pop. 1,200.

HURSTMONCEUX CASTLE

Husband and Wife. The modern law of husband and wife has been developed piecemeal through a series of changes always tending to the greater freedom of the married woman, while yet protecting her proprietary interests. A husband must maintain his wife, provided she is not guilty of desertion or adultery, for the duration of the marriage, and also after its dissolution if it be at her instance; in the latter event, the wife or former wife, as the case may be, can usually secure an order from the courts for a sum representing one third of the husband's income. The wife is also under a reciprocal obligation to maintain her husband if she has means. In respect of the guardianship and custody of their legitimate children, complete equality of right exists between the mother and father (Guardianship of Infants Act, 1925); and in a divorce case the sole factor in determining to which parent the control shall go is the children's welfare.

A wife is as free to enter into contracts as an unmarried woman. She can now acquire, hold and dispose of any kind of property; render herself and be rendered liable in respect of any contract or tort (actionable wrong); and be subject to the law of bankruptcy and the enforcement of judgment as if she were unmarried; and her separate property—i.e.,

what, before 1935, was said to be held for the wife's "separate use"—as the result of an Act passed in that year now belongs to the wife absolutely and regardless of "restraints on anticipation"—though the court can bind her interest for her benefit and with her consent.

Her property is also liable for her antenuptial debts. Money saved by a wife from a housekeeping allowance made by the husband belongs to the husband. Spouses can contract with each other, but may not sue each other in tort, with the exception that a wife may sue her husband for the protection of her separate property. The spouses can initiate criminal proceedings against each other for the protection of their respective persons, but not for the protection of their property unless they are not living together. Before 1935 the husband was liable for the wife's antenuptial debts to the extent of any property he might have acquired through her; but the Act of that year abolishes his liability for such debts, though he remains liable for his wife's necessities. The presumption that a wife committing a crime in the presence of her husband is acting under his coercion, and therefore is under no criminal liability, no longer holds (Criminal Justice Administration Act, 1925). The profits of the wife who carries on a separate business from her husband while living with him are in income-tax law deemed to be the husband's profits, and he also is liable for tax; and though he can apply for a separate assessment, yet even then in the last resort his property is liable.

Huss, John, a Bohemian church reformer; much to propagate his teaching, in consequence of which he was summoned in 1414 to answer for himself before the Council of Constance; went under safe-conduct from the emperor, but despite this was imprisoned; on his refusal to recant he was condemned to the stake and burnt. (c. 1370-1415).

Hussar, a soldier of the hussar regiments of light cavalry, formerly known in the British army as light dragoons. The first British Hussar regiment was the 7th (now the Queen's Own) Hussars. Hussars were originally light horsemen of the Hungarian army. There are now nine regiments in the British army, most of which are being mechanised as armoured-car or light-tank units. Many of the regiments performed garrison duty in India and elsewhere during the World War as cavalry, while others rendered valuable patrol service in France in addition to the winning of distinctions in trench warfare.

Hussein, Ibn Ali, King of the Hejaz, who in 1916 proclaimed the independence of Arabia and co-operated with the Allies in raising Arab troops to fight the Turks. In 1924 he abdicated after an unsuccessful war against the Sultan of Nejd. Abdullah, Emir of Transjordan, is his son, as was also Faisal, late and first King of Iraq. (1856-1931).

Hussein, Kamil, Sultan of Egypt, who on the death of the Khedive Abbas Hilmi in 1914 was proclaimed Sultan, and remained at the head of affairs till his death. (1853-1917).

Hussites, followers of John Huss (q.v.). After his death his supporters took up arms under the leadership of John Ziska, and captured Prague. Later they split into a moderate party (Calixtines) and an extreme party (Taborites), the former eventually gaining the upper hand. In 1620 the Hussite creed was prohibited in Bohemia.

Hutchinson, Colonel, Puritan leader and a prominent actor in the Puritan revolt; signed the death-warrant of Charles I., but broke partnership with Cromwell when he assumed sovereign power, and refused to be reconciled to the Protector. (1616-1684).

Hutten, Ulrich von, a zealous humanist and reformer, born in the castle of Steckelberg, in Hesse, of an ancient and noble family; allied himself as a scholar with Erasmus, and then with Luther as a man; entered heart and soul into the Reformation of the latter and broke with the former, and by his writings did much, amid many perils, to advance the cause of Protestantism in Germany. (1488-1523).

Hutton, Leonard, English cricketer, playing for Yorkshire and in Test Matches for England against Australia; first played in county cricket in 1934; scored 1,108 runs in 1936 and in August 1938 scored 361 runs against Australia, beating Don Bradman's record. (1917-).

Huxley, Aldous Leonard, poet and novelist; third son of Leonard Huxley, and grandson of Thomas Henry Huxley; educated at Eton and at Balliol College, Oxford. Has produced many very popular novels and essays, especially *Antic Hay* (1923), *Point Counter Point* (1928), *Brave New World* (1932) and *Ends and Means* (1937); his play, *The World of Light*, has been successfully staged. (1894-).

Huxley, Julian, British scientist, grandson of T. H. Huxley; professor of Zoology at King's College, London, 1927-1935; Fullerian Professor of Physiology in the Royal Institution, 1926-1929; Secretary of Zoological Society, 1935. Has written *Essays of a Biologist*, *What Dare I think?* and other scientific and popular works. (1887-).

Huxley, Thomas Henry, eminent natural historian, born at Ealing, Middlesex; professor in the Royal School of Mines, Royal College of Surgeons and Royal Institution; distinguished by his studies and discoveries in different sections of the animal kingdom, in morphology and palaeontology; a zealous advocate of evolution, in particular the views of Darwin, and a champion of science against the orthodoxy of the Church; president of the British Association at Liverpool in 1870; author of *Man's Place in Nature* and many scientific essays. (1825-1895).

Hwang-ho, or **Yellow R.**, a river of about 14,000 ft. above sea-level, traverses the Kansu Province; separates the provinces of Shensi and Shansi; crosses Shantung Province and empties into the Gulf of Pe-chi-li. Its chief tributary is the Wei-ho. It breaks its banks from time to time, floods immense areas, and has changed its course several times. During the Sino-Japanese hostilities in 1938 the banks were broken and immense tracts of land flooded, fighting in the provinces concerned being suspended.

Hyacinth, the name of a genus of plants of the order Liliaceae, comprising some thirty species mostly native to the Mediterranean and Africa. In Britain a number of species are grown as garden plants, the chief varieties being Bedding or Exhibition Hyacinths with flowers in solid candles of colour, Miniature Hyacinths and Roman Hyacinths. The well-known Bluebell or Wild Hyacinth (*Scilla festalis*) of English woodlands is another species of the same order.

Hyæna, a group of three carnivorous mammals found in Africa and Asia. They are carnivores, with powerful teeth and jaws, cat-like and covered with coarse, shaggy fur, and utter a peculiar laugh-like howl. Remains of extinct allied species linking the living hyænas with the civet-cats

STRIPED HYÆNA

have been found in Europe, including Britain. The Striped (*Hyena striata*) and the Brown (*H. brunnea*) are the chief living species.

Hybla, name of three cities in Sicily in classical times, from one of which was obtained a honey (Hyblæan honey) in great repute among the ancients.

Hybrid, the offspring of two organisms belonging to different species. They are usually sterile, as in the mule, a hybrid between the stallion and the donkey or zebra. A hybrid between two varieties of one species—e.g., of dogs—is called a mongrel, and mongrels are often particularly fertile. With the exception of the mule, hybrids are of little economic value. Apparently only closely allied species, or occasionally genera, can produce hybrids.

Hydaspes, Indian river, a tributary of the Indus, now known as the Jhelum; on its banks in 327 B.C. was fought a great battle between Alexander the Great and an Indian ruler, Porus; after his victory Alexander founded beside it a town called Bucephala after his horse, Bucephalus, which died in the neighbourhood.

Hyde, a municipal borough and market town, Cheshire, England, on the R. Tame, 7½ m. from Manchester. The town owes its rise entirely to the cotton trade. It has extensive weaving and spinning factories, important engineering works and coal-fields. Pop. 32,000.

Hyde, Douglas, Irish poet, littérateur and first President of Éire; as founder, and from 1893 till 1915 president, of the Gaelic League, initiated the movement for the revival of Irish as a living language; professor of Irish in the National University, 1909-1932; is affectionately known in his own land as An Craoibhin Aoibhinn; has written and edited many works on ancient Celtic literature; was chosen president by agreement between the Irish political parties in 1938. (1860-).

Hyde Park, a public park in London, famous for its political gatherings. Originally the property of Westminster Abbey, it passed to the Crown in 1535 and was opened to the public in 1670.

Hyderabad (also called the Nizam's native State of India (82,700 sq. m. Pop. 14,500,000), in the Deccan. It produces cotton, oil seeds, sugar cane and rice; the capital is Hyderabad, a large city (Pop. 487,000), 6 m. in circumference, a Moham-medan centre, though the majority of the people of the State are Hindus. Another Indian city of the same name is in Sind (Pop. 82,000), near the apex of the Indus delta, and has manufactures of silks, pottery and lacquer ware.

Hydra, The Lernaean, a fabulous monster with a number of heads, that grew on again as often as they were chopped off, the destruction of which was one of the twelve labours of Hercules.

Hydrangea, a genus of some 25 species of shrubs or herbs of the

natural order Saxi-fragaceæ, native to Asia and America. The common garden hydrangea (*H. hortensis*) comes from China, and was introduced into Great Britain in 1790. It produces brightly-coloured blue or red flowers according to the dressing of the soil (blue in a soil free of lime by watering with a solution of alum).

Hydrate, a term in chemistry denoting the crystalline substances obtained by dissolving certain substances in water and then evaporating the water.

GARDEN HYDRANGEA

Chlorine gas, for example, if dissolved in water and the solution cooled to 0° C., deposits yellow crystals of chlorine hydrate.

Hydraulic Press, a machine used for pressing bales of textiles, bending plates of metal, etc., invented in 1785 by Joseph Bramah; it operates by the use of hydraulic energy originated by a force-pump and transmitted to a ram.

Hydraulics, or **Hydromechanics**, that part of the science of hydrostatics (q.v.) concerned with the principles of machinery worked by utilising the kinetic energy of water.

Hydrocarbons are substances consisting of carbon and hydrogen only. They are of many different types, among the most important being the paraffins, the olefines, the acetylenes, the cycloparaffins, polymethylenes, or cyclanes, the benzene hydrocarbons, and the polycyclic hydrocarbons such as naphthalene and anthracene. Naphthenes are cycloparaffins.

The principal sources of hydrocarbons are: (1) the natural deposits of petroleum, and (2) the tar obtained during the manufacture of coal-gas. Petroleum was probably formed by the decay of microscopic marine life. It varies considerably in composition. Pennsylvanian oil consists mainly of mixtures of paraffins, while the Dutch East Indian oil contains large quantities of benzene and other cyclic hydrocarbons, and the Russian a high proportion of naphthenes. The paraffins (q.v.) are characterised by their comparative lack of chemical activity, and will form derivative compounds only by the replacement of some of their hydrogen atoms by other atoms or groups of atoms; they are said to be "saturated." The olefines and acetylenes, on the other hand, are reactive and "unsaturated," and will form derivatives not merely by replacement or "substitution," but by direct addition; thus the olefine C₂H₄, ethylene, will combine directly with bromine to form an "addition compound," ethylene dibromide C₂H₄Br₂.

The uses of hydrocarbons are both numerous and important. From petroleum by regulated distillation are obtained petrol, paraffin oil, lubricating oil, heavy fuel oil, vaseline, paraffin wax and petroleum pitch. Benzene is used as a motor fuel, but is also the starting-point in the manufacture of many dyes, drugs, perfumes, explosives, etc.; toluene, a compound related to benzene and found like the latter in coal-tar, furnishes the high explosive T.N.T. (trinitrotoluene). Naphthalene is the raw material for the manufacture of indigo; and low-boiling point hydrocarbons, coming off as "natural gas" in the American oil-fields, are a source of heat.

Hydrocephalus, the name of three diseases of the brain: (1) acute hydrocephalus or tubercular meningitis due to tubercular brain inflammation; (2) chronic hydrocephalus, a form of dropsy in the skull; (3) spurious hydrocephalus, a form of debility due to a poor blood supply to the brain.

Hydrochloric Acid, or **Hydrogen Chloride**, a colourless gas formed of hydrogen and chlorine readily soluble in water forming a strongly acid solution, commonly called "spirits of salts." It may be obtained by heating common salt with sulphuric acid. It is largely used as a cleaning agent.

Hydrocyanic Acid, or **Prussic Acid**, is prepared by the action of sulphuric acid on potassium cyanide, among other methods. When pure it is a colourless liquid with the odour of bitter almonds. It is extremely poisonous. Potassium cyanide, a salt of hydrocyanic acid, is used as a gold solvent.

Hydrodynamics is that branch of physics which deals with the flow of fluids (liquids or gases). The flow of a fluid is retarded by virtue of that property of the fluid, which is called its viscosity. At low speeds the flow of a fluid is of the type known as streamline flow, and the fluid moves steadily without the formation of eddies. As the speed of flow is increased, turbulence suddenly sets in at a particular speed, which depends upon the nature of the fluid and upon the shape and size of the channel through which the flow takes place. For streamline flow the viscosity is important in determining the rate of flow, but if the flow is turbulent the viscosity has little influence on the speed. In a wide channel turbulence sets in at a comparatively low speed, and a stream of highly viscous lava flows at a speed comparable with that of water. By streamlining a body moving in a fluid the amount of turbulence produced by it is decreased, and the resistance to the motion of the body is reduced.

Hydrogen, a chemical, non-metallic element, and the lightest of all known substances, 1 litre weighing only 0.0896 gm. at a temperature of 0°C., and a pressure of 760 mm. of mercury. Symbol H; atomic number 1; atomic weight 1.0078. Hydrogen was discovered in 1766 by Henry Cavendish, who called it "inflammable air"; it was named hydrogen—i.e. (Greek), "water-producer"—by Lavoisier, on account of the fact that when it is burned in air or oxygen it yields water.

Free hydrogen occurs in vast quantities in the atmosphere of the sun and other stars, and minute traces have been detected in the air; but on the earth hydrogen occurs mainly as its oxide, water (H_2O), of which it forms one-ninth by weight. Petroleum is for the most part a mixture of hydrocarbons (q.v.), while hydrogen is an essential constituent of all living matter and of most organic remains, such as coal.

In the laboratory, hydrogen is usually prepared by dissolving zinc in dilute sulphuric acid, though a variety of other methods is available and the gas is a cheap commercial product. Pure hydrogen is conveniently obtained by the electrolysis of a pure dilute aqueous solution of barium hydroxide, when hydrogen is evolved at the negative electrode (cathode), since it is an electropositive element; the only impurity is moisture, which can be removed by allowing the gas to stand in contact with an efficient drying-agent such as phosphorus pentoxide.

Hydrogen is a colourless, odourless and tasteless gas, non-poisonous but incapable of supporting life, and practically insoluble in water. It can be liquefied (boiling-point, $-252.5^\circ C.$) and solidified (melting-point, $-237^\circ C.$); liquid hydrogen has a lower density (0.07) than any other liquid or solid. It is comparatively reactive towards non-metals; thus a mixture of hydrogen and oxygen, or hydrogen and chlorine, will explode violently if ignited, forming water in the first case and hydrogen chloride (hydrochloric acid gas) in the second.

Compounds of hydrogen with metals are known, but in general present little importance. Hydrogen is present in all acids, the capability of which to yield a proton (hydrogen ion) to a molecule of water (H_2O) to form the hydroxonium ion, H_3O^+ , is the essence of their acidic nature; those properties which are usually described as "acidic" are actually properties of the hydroxonium ion. Owing to its great affinity for oxygen, hydrogen is a good reducing agent; thus the oxides of many metals are reduced to the metallic state when heated in a current of hydrogen, the hydrogen itself being oxidised to water—e.g., PbO (lead oxide) + $H_2 = Pb + H_2O$.

The chief uses of hydrogen are: (1) in the hydrogenation of coal, (2) in the synthesis of ammonia by the Haber and Claude processes, (3) in the hardening of oils—i.e., the conversion of liquid oils into solid fats, (4) as the lifting gas in lighter-than-air craft—though here it is replaced where possible by the more expensive but completely non-inflammable helium, and (5) in the oxyhydrogen flame. It is transported compressed in steel cylinders, or, when large quantities are required, in the form of liquid ammonia, which can easily be split up into nitrogen and hydrogen.

Hydrogen Peroxide, a colourless liquid (formula H_2O_2), made by acting upon barium peroxide with phosphoric acid, and always marketed in aqueous solution. These solutions are labelled "10 volume," "20 volume," "30 volume," etc., in reference to the volume of oxygen obtained from one volume of the solution when the hydrogen peroxide in it is decomposed; thus 1 litre of 20 vol. hydrogen peroxide solution would yield 20 litres of oxygen. Hydrogen peroxide is a powerful oxidising agent and a useful antiseptic.

Hydrography, a term for the study of the earth, which includes marine survey, a knowledge of the physical properties of the water masses and the analysis of the distribution and movements of marine organisms such as plankton, etc.

Hydrolysis, the splitting-up of water, a term applied to those chemical reactions in which decomposition is brought about by the action of water.

Hydromechanics, that branch of science which deals with the application of hydraulics to the principles of machinery.

Hydrometer, a graduated instrument used to determine the density of a liquid. The hydrometer is allowed to float in the liquid, and the density is read off directly from the graduation, which is on the same level as the surface of the liquid.

Hydropathy, a method of treating diseases with water, including the use of warm baths, hot-air baths, hot compresses and wet packings. The treatment of disease by means of baths was first introduced into England by the Romans. The modern system was begun by Vincent Priessnitz (1801-1881), a farmer of Silesia, who treated his animals with cold-water bandages and then extended the treatment to himself.

Hydrophobia, a disease caused by the bite of an animal suffering from rabies. Rabies is caught by dogs and other animals through the saliva of a rabid animal. Hydrophobia in man may take only a few weeks or much longer to develop. The symptoms are giddiness, chills, general feeling of uneasiness, extreme thirst and lastly fits which become prolonged until exhaustion proves fatal.

Hydrophone, an instrument for listening to sound transmitted through water. There are various forms, one of which receives electric transmissions from the ship on which it is placed after striking the ocean bottom. The principle was used during the World War to locate enemy submarines.

Hydroplane, a form of aeroplane fitted with pontoons and made to alight on, rise from and glide upon water.

Hydrostatics, the study of fluids (liquids or gases) at rest. The force exerted by a fluid on unit area of the containing vessel is called the pressure of the fluid; this may be different at different points. In liquids the pressure at a

given point may be found by multiplying the weight of unit volume of the liquid by the distance of the point below the surface. Water, for example, weighs 63 lb. per cubic foot, so the pressure at a depth of 100 ft. is 6,300 lb. per sq. ft.

The pressure does not depend on other factors, such as the area of the surface of the liquid. As a consequence, the pressure at a given point on a dam is the same, whether the water held back by the dam extends back from it for miles or merely for a few yards, provided the depth of water at the dam is the same in both cases. Similarly, the pressure at the taps of a water supply depends only on the vertical height of the reservoir above the taps, and not on what hills and valleys the supply pipes cross on their way to the taps.

The effective pressure of a water or gas supply is the excess pressure of the water or gas over and above atmospheric pressure. The weight of a given volume of coal gas is smaller than that of a similar volume of air, so the pressure exerted by the gas in a long, vertical pipe is smaller than that of a similar column of air outside it. As a consequence, the effective pressure of a gas supply is greater at high points than at lower ones.

If a body is immersed in a fluid, the pressure is greater at points near the lower side of the body than at points near its upper surface, so the body experiences a resultant force directed vertically upwards. This force is called the upthrust, and is equal to the weight of the fluid displaced by the body. When an object floats, its weight is exactly balanced by the upthrust.

Hydrozoa, a class of coelenterate marine animals, including mainly the polyps, which feed by ingestion of animal matter. Some swim freely, some are attached permanently to other animals or objects.

Hyères, a town of the Riviera, dept. of Var, France. It has vineyards and orchards. The islands of Hyères (ancient Stoechades) include Port Cros, Porquerolles, Titan and Bagaud. Pop. 21,000.

Hygeia, in Greek mythology the Goddess of Health, and daughter of Æsculapius; is represented as a virgin in a long robe, with a cup in her hand and a serpent drinking out of it.

Hygiene, the science which treats of the preservation and promotion of health. It includes all practices which improve physical surroundings, and chiefly takes expression in the form of physical exercises, provision of fresh air and clean living-conditions. The maintenance of hygienic conditions in places of employment and abode is the subject of much legislation.

Hygrometer, contains moisture,

but its amount fluctuates considerably. To express the moistness of the atmosphere at any particular time we determine its relative humidity, which is the weight of water vapour in a given volume of air divided by the weight of water vapour required to saturate the same volume of air at the same temperature. Hygrometers are instruments for measuring the relative humidity.

HYGROMETER

Chemical hygrometers consist of an apparatus in which are placed chemicals that absorb water vapour. The apparatus is weighed, a known volume of air is drawn through it, and it is then weighed again; the increase in weight is the weight of water vapour. From

reference tables, the weight of water vapour required to saturate the same volume of air at the same temperature can be ascertained, and hence the relative humidity can be calculated.

Other hygrometers work on the principle of determining the dew-point, or temperature at which dew begins to form. This can be done by taking a silvered tube (with the silver on the outside), placing in it a thermometer and some ether, and drawing a current of air through the ether. The latter rapidly evaporates, and in doing so becomes cool. Finally the tube is cooled to the point at which dew begins to form, which is immediately apparent owing to the dimming of the silver by the moisture. The temperature of the dew-point is read from the thermometer, and from tables of the vapour pressure of water the relative humidity can now be worked out.

Hyksos, or **Shepherd-Kings**, an Eastern people who invaded Egypt in the XIVth Dynasty. Contemporary inscriptions refer to them as "Asiatics" and "Barbarians." The Hyksos conquerors of Egypt were evidently experienced warriors, but little is known of their period, although it lasted for two centuries. The power of the Hyksos was overthrown by Ahmes I., the founder of the XVIIIth Dynasty.

Hylas, in classical mythology, a youth who was a favourite of Hercules; he was abducted by the Naiads, who fell in love with him while he was drawing water from a fountain in Mysia.

Hymans, Paul, Belgian Liberal Catholic statesman, born at Ixelles. Barrister, 1885; professor of Comparative Parliamentary History, Brussels University, 1898-1914; deputy, Brussels, from 1900; soon thereafter Liberal leader; Ambassador in London, 1915-1917; Foreign Minister: 1918-1920, 1924-1925, 1927-1934, 1934-1936; First president of Assembly of League of Nations, 1920. (1865-).

Hymen, in the Greek mythology, the God of Marriage, son of Apollo, and one of the Muses represented as a boy with wings; also a nuptial song sung at the departure of the bride from her parental home.

Hymenoptera, a large order of insects which includes bees, ants, wasps and many others. The order is characterised by a mobile thorax, large, compound eyes and membranous wings. The antennae are very variable in character, and generally longer in the males than in the females. Mandibles are present throughout the order.

Hymns, songs, especially those sung in religious services. A few Greek Christian hymns survive from the 2nd Century. Syriac hymns first appear about 180 years later; Latin in the 4th Century; German, Italian and Bohemian in the 9th, 13th and 15th Centuries, respectively. The number of Christian hymns in the 200 or more dialects in which they have been written or preserved is not less than 400,000, mostly in Latin, German, English and Greek. Among notable early hymnologists were Gregory of Nazianzus, St. Ambrose and St. Hilary.

Hyndman, Henry Mayers, British writer and economist. Educated at Cambridge, he became a journalist, reported the Austro-Prussian War, spent several years abroad, and returned to England an ardent Socialist. He founded the Social Democratic Federation and wrote several books on economics. (1842-1921).

Hyoscine, an alkaloid, also known as scopolamine, used in medicine as a narcotic, especially, in cases of pregnancy, to induce "twilight sleep." One of its effects when taken as a drug is to produce a marked weakening of will-power.

Hyoscyamine, a poisonous crystalline alkaloid obtained from henbane (*q.v.*). When moist it has a stupefying odour; it is used as a sedative and as a mydriatic.

Hypatia, a woman teacher of Greek philosophy in Alexandria, distinguished for her beauty and purity of life, one day in 415, on her return home from her lecture-room, was massacred in the streets by the Christians, as a propagator of paganism. Her story is the subject of the well-known novel by Charles Kingsley.

Hyperæsthesia, a state in which the nervous system is abnormally sensitive: it is found in connection with many nervous and some muscular complaints, and with hysteria. It may take the form of producing nervous reactions when no stimuli appear to be present.

Hyperbole, a figure of rhetoric, implying exaggeration or the magnifying of an object beyond its natural bounds—*e.g.*, "as swift as the wind," "light as air." Our common forms of compliment are almost all of them hyperbolical.

Hyperboreans, a people blessed with youth and health, fabled by the Greeks to dwell in the extreme northern parts of the world. They lived free from disease and toll.

Hyperion, a Titan, son of Uranus (Heaven) and Ge (Earth) and father of Helios (the Sun), Selene (the Moon) and Eos (the Dawn); and the title of a well-known poem by Keats (*q.v.*).

Hypermetropia, *hypermetropia*, the inability to see near objects, a defect rectified by the use of a convex lens.

Hypermnestra, the only one of the Danaides (*q.v.*) who spared the life of her husband in spite of her father's orders.

Hypertrophy, overgrowth of a bodily tissue, owing to an increase in the size of its individual elements. Hypertrophy of the heart is due to the effort to increase the efficiency of a heart otherwise impaired. Sometimes a diseased condition in one organ induces hypertrophy in another, as in the case of the kidneys. Obesity, goitre (*q.v.*) and elephantiasis are all forms of hypertrophy.

Hypnotic, any drug used to induce sleep or lessen pain. Laudanum, opium and their derivatives such as morphine and chloral, are the commonest of such drugs.

Hypnotism, the process of inducing sleep by wearying out the optic nerve of the eyes, by making the patient fix them upon a certain spot for a time, generally situated where it is a little wearisome for the eyes to find it. The fatigue thus induced spreads from the ocular muscles to the system, causing deep sleep.

Hypo, popular name for the chemical substance used in photography, commonly known as hyposulphite of soda; the correct name is thio sulphate of soda.

Hypocaust, a chamber containing a fire, built beneath a bath, and used by the Romans for heating the bath above. The heat was distributed through earthenware pipes.

Hypochondriasis, a disorder of the nervous system. It may be attended with such conditions as furred tongue, loss of appetite and constipation, and is always accompanied with great anxiety about one's health; often due to digestive disorders. It may develop into melancholia. It is not a real disease, and the best cure is physical exercise and a change of habits and interests.

Hypodermic Syringe, a surgical instru-

ment used to inject drugs beneath the skin, which is pricked by a hollow needle, through which the drug enters the incision. Drugs so injected are generally local anæsthetics or narcotics.

Hypsulphuric Acid, or **Hypo sulphurous Acid**, obtained by dissolving zinc in a solution of acid sodium sulphite. It is a strong bleaching agent.

Hypotenuse, the side of a right-angled triangle opposite the right-angle. The square on the hypotenuse is equal to the sum of the squares on the other two sides.

Hypsometer, an instrument for measuring altitudes by observing differences in barometric pressures at different altitudes. The heights are ascertained by observing the boiling-points of water.

Hypsipyle, in Greek legend, daughter of Thoas, king of Lemnos and subsequently Queen of Lemnos herself, after the massacre of the men including as it was supposed, her father. She bore twin sons to Jason and was driven from the island when the Lemnian women discovered her part in her father's rescue.

Hyrax, a genus of ungulate mammals of the order Hyracoidea, com-

monly known as conys; they are thick-set quadrupeds with short ears, very short tail, short fur, padded and clawed feet and incisors like those of rodents. They are found in the Middle East and South Africa.

HYRAX

Hyssop (*Hyssopus officinalis*), a shrubby plant found in Europe and the Near East, with narrow, pointed leaves, and bluish or white flowers. The bitter leaves are employed in medicine for external application; it is used in the preparation of absinthe.

Hysteria, a functional disorder of the nervous system, not exclusively confined to women, but occurring in persons of morbid impressionability of the nervous centres, or in whom there is a want of equilibrium between the nervous and other parts of the system. Its relation to the sexual functioning is nevertheless close, though rather on the side of the psychological factors in sexual life than the physical. It is remarkable for the wide range and indistinct character of its symptoms, or concomitant diseases, such as loss of voice, a hacking cough, pleurisy, heart disease, difficulty of urinating, neuralgia and some inflammatory diseases.

In the condition called hysterics, the subject screams or resorts to fits of violent weeping or laughter, or the general appearance may resemble fainting, except that there is not usually pallor or a feeble pulse nor does the subject entirely lose voluntary control or consciousness, nor is the face distorted, as in epilepsy. The fit continues for an indefinite period, the subject, provided firmness be shown, may generally be allowed to recover by herself.

Hythe, a borough and Cinque port in Kent, England, 66 m. from London, of some repute as a holiday resort. The crypt of St. Leonard's church contains many skulls and other human remains. Pop. 8,600.

Iambic, in prosody, a foot consisting of one short and one long syllable or one unaccented and one accented. According to Aristotle, the iambic metre was originally applied to satirical poems, whence the term itself came to be used as a synonym for a lampoon. In English, iambics have been most frequently used in blank verse of five feet.

Ibañez, Vicente Blasco, Spanish novelist. He began his career as an extreme Radical journalist, was imprisoned, and later went to the Argentine, where he started novel writing. To the end of his life he remained a foe of the royal family, and was an exile from his country. *Blood and Sand* and *The Four Horsemen of the Apocalypse* are his best-known works. (1867-1928).

Iberia, the ancient name of Spain, or of the whole Spanish peninsula including Portugal, from the R. Ebro, the Latin form of which was Iborus; anciently also a territory inhabited by an agricultural population between the Black Sea and the Caspian, now called Georgia.

Ibex, a group of wild goats of the genus *Capra* of the ungulate order. There are four species found in the Alps, Pyrenees, Himalayas and other mountainous districts of the Old World. The male is brown or grey in colour, with long and curved horns; the female is grey, with shorter horns.

Ibis, a fairly numerous family of stork-like wading birds (the Ibidae), allied to the Spoon-

bills, but possessing a long, curved bill. The species are widely distributed, the Glossy Ibis (*Plegadis falcinellus*) being an occasional visitor to Britain. The Sacred Ibis (*Ibis aethiopicus*), found in Africa and America, was regarded as an incarnation of deity and held sacred by the ancient Egyptians; it did not breed in Egypt, and was supposed to be of mystic origin. It arrives in Egypt when the Nile begins to rise.

SACRED IBIS

Ibn Sa'ud. See Sa'ud, Abdul-Aziz Ibn.

Ibrahim Pasha, Viceroy of Egypt, son of Mehemet Ali; appointed generalissimo of the Egyptian army, remodelled it after the French fashion; was leader of the Turks against the Greeks; gained several victories over them in 1828, but was obliged to retire; overran and conquered Syria from the Sultan, but was forced by the Powers to surrender his conquest and restore it; he was Viceroy of Egypt only for a single year, and died at Cairo. (1789-1848).

Ibsen, Henrik, Norwegian dramatist and poet, born at Skien; trained for medicine; author of a number of plays of international repute, the best-known being *The Doll's House*, *Ghosts*, *Pillars of Society*, *The Master Builder*, *Hedda Gabler*, *Brand*, and *Peer Gynt*; his characters are vividly drawn as if from life; his work deals largely with social problems and the status of women. (1828-1906).

Icarus, son of Daedalus (q.v.) who, flying with his father from Crete on wax-fastened wings, soared so high that the sun melted the wax and he dropped into the sea.

Ice, the solid form assumed by water when subjected to a sufficiently low temperature. It forms on fresh-water when the temperature is zero in the Centigrade and Réaumur systems, or 32° in the Fahrenheit system, and on salt-water at -2° C. Ice expands and suffers loss of density in the action of freezing, and conversely contracts in the action of melting until the point of greatest density (4° C.) is reached.

Ice Ages. See Glacial Periods.

Icebergs, detached portions of glaciers which float into the sea. Found largely in the N. Atlantic in the spring, they are a menace to shipping on account of the large proportion of a berg's mass, about eight-ninths, which is hidden under the surface. One of them caused in 1912 the loss of the *Titanic*. Since then a N. Atlantic patrol has been maintained jointly by England and the U.S.A., and operated by the U.S. Coastguard Patrol for the location and destruction of icebergs.

Ice Blink, the name given to a white light seen on the horizon, due to reflection from a field of ice immediately beyond.

Icebreaker, a boat designed to keep detached portions of glaciers open. They are capable both of ramming their way through ice and sliding on and breaking it by their own weight. They are largely employed in Russian, Scandinavian and N. American ports, and can break up ice of a thickness of 30 ft.

Ice Hockey, a game played widely by two teams each of six players, who propel over a surface of ice, with hockey sticks, a rubber disc called a "puck." The game is extremely strenuous, and is played at a great speed.

Iceland, a volcanic island larger by a third than Scotland, lying just S. of the polar circle, between Greenland and Norway, distant 250 m. from the former and 500 from the latter; consists of a plateau 2,000 ft. high, sometimes sloping to the sea, sometimes ending in sheer precipices, from which rise numerous snow-clad volcanoes, some, like Hecla, still active. The interior comprises lava and sand tracts and ice-fields, but outside these are river valleys and lake districts affording pasture, and arable land capable of producing root crops. The climate is changeable, mild for the latitude, but somewhat colder than Scotland. There are few trees, and those small; cranberries grow among the heather, and Iceland moss is a plentiful article of food. The island exports sheep and ponies; the fisheries are important, including cod, seals and whales; sulphur and coal are found; the hot springs are famous, especially the Great Geyser, near Hecla. Discovered by Irishmen and colonised by Norwegians in the 9th Century, Iceland passed over to the Danes in 1388, who granted it home rule in 1393; since 1918 it has been an independent State, though ruled by the King of Denmark. The religion has been Protestant since 1550; the level of education is high. Reykjavik is the capital; most of the population is scattered in isolated farms;

stock-raising and fishing are the principal industries, with the manufacture of homespun for their own use. Area 39,700 sq. m. Pop. 117,000.

Iceland Moss (*Cetraria islandica*), a lichen abundant in Iceland, and found in parts of Britain; it is used in medicine, and a jelly prepared from it.

Iceland Spar, a transparent, crystalline form of calcium carbonate, showing the property of double refraction, so that print, for example, appears double when viewed through it.

Iceni, an ancient British tribe of whom Boadicea (q.v.) was queen; inhabited Norfolk, Suffolk, Cambridge and Huntingdon.

Ichabod, in the Old Testament, a child, son of Phinehas and grandson of Eli, so named by his mother when she learned of the loss of the Ark and the death of Eli and his sons. The name, explained as "the glory has passed away," is sometimes used as an interjection.

Ichang, a town and since 1876 a treaty port in Hupeh province, China, situated on the left bank of the Yangtze R.; it is an important point of transhipment for inland trade. Pop. 103,000.

Ich Dien (I serve), the motto of the Princes of Wales, first adopted by the Black Prince in the 14th Century with the well-known crest of three ostrich feathers.

Ichneumon (*Herpestes ichneumon*), a species of mongoose, found in Egypt and in Spain, and also known as the Egyptian mongoose; formerly worshipped in Egypt as it destroys the eggs of noxious reptiles, and of the crocodile in particular; it is sometimes domesticated.

Ichneumon Fly, general name for members of a family of hymenopterous insects which, as larvae, are parasitic on caterpillars and spiders; they are remarkable for their long antennae. Several species, including the wingless genus *Pezomachus*, are found in Britain.

Ichthyosaurus, a genus of extinct reptiles including several species,

some attaining to a length of 30 ft., which flourished in the seas in Mesozoic times; it had a fish-like structure but brought forth its young alive.

ICHTHYOSAURUS

Icknield Way, an ancient pre-Roman road across Southern England, following the line of the Berkshire Downs. It is believed to have run from the neighbourhood of Norwich to the sources of the Kennet.

Icon, a representation of Christ, an angel, or a saint, found in Greek and Orthodox Eastern Churches. It is painted on a flat surface, but portions are often covered with gold or silver embossed plates.

Iconoclasts (i.e., breakers of images), the name given to a sect of the Eastern Church who, in the 8th Century, opposed the presence of images in churches and the worship paid to them; serious controversies and riots arose in the Byzantine Empire as a result. They were eventually condemned, but the quarrel over images was one of the causes of the final separation of the Eastern from the Western Church.

Idaho, one of the NW. States of the U.S.A., adjoining Washington and Oregon in the W., Nevada and Utah in the S., Wyoming in the E. and Montana from which it is separated by a branch of the Rocky Mts., in the NE. The short N. boundary touches Canada; the country is traversed by lofty

mountain ranges cut up into deep river valleys and cañons, is extremely rugged in its N. parts, and chiefly useful for cattle-raising. There is a plateau in the centre, some arid prairie land in the S., and lake districts in the N. and in the SE. Grain-farming (chiefly wheat) is restricted to fringes along the river-banks; the Snake R. flows through the whole S. Silver, lead, gold and copper-mines are worked successfully. The State was admitted to the Union in 1890. The leading religion is the Mormon. Boise is the capital. Area 84,000 sq. m. Pop. 437,600.

Idesleight, Earl of (Sir Stafford Northcote), Conservative statesman, born in London; educated at Oxford; became private secretary to Gladstone in 1842, sat in parliament (from 1855) in succession for Dudley, for Stamford and for North Devon. He was Financial Secretary of the Treasury in 1859, and President of the Board of Trade in 1866; at the India Office in 1868, and Chancellor of the Exchequer in 1874. He succeeded Disraeli in the leadership of the Commons, and was raised to the peerage in 1885; was successively First Lord of the Treasury and Foreign Secretary under Lord Salisbury. He died a few days after resigning the last-named office. (1818-1887).

Idealism, that view of the universe as Materialism (q.v.), refers everything to a spiritual root; is Subjective if traced no further back than the *ego*, and Objective if traced back to the *non-ego* likewise, its counterpart, or other, in the objective world. Idealism in art is art more or less at work in the region of the ideal in comparative disregard of the actual.

Ides, the name given in the Roman calendar to a certain day in each month from which other days were counted; in March, May, July and October they fall on the 15th, in the rest on the 13th.

Idiocy, deficiency of mental and physical powers as a result of disease of the central nervous system, or of its failure to develop. Lighter forms of idiocy are referred to as imbecility, feeble-mindedness or mental deficiency. Idiocy may result from the mother receiving a severe shock during pregnancy, or from accident during birth; or it may be induced after birth by epilepsy, head injury, sunstroke, fright, etc., and consequent arrest of development.

More often the tendency to idiocy is inherited, and is due to a phthisical, neurotic or diseased heredity, or to intemperance in parents or grandparents. Idiocy is classified as congenital, developmental or accidental; some types are named from the physical appearance associated with it—e.g., Mongolian, Negro-like, etc.

Ido, an artificial international language, based on the recommendations of a committee set up in 1901. It is a form of Esperanto (q.v.) with fewer grammatical rules and a modified alphabet.

Idolatry, the worship of idols set up as supernatural beings, common but not inevitable as a stage in the development of primitive religion. The making of idols for public and communal worship was probably a development from the making of fetiches for private adoration; and though at first these were simple in type, being frequently posts or pillars, they in time assumed human form. The practice of idolatry is closely allied to an advanced cultural development; thus it was an integral part of the religion of the Egyptians, Babylonians, Assyrians, Greeks, etc., but is absent in that of Hottentots, Bushmen and Eskimos.

Idumæa. See Edom.

Idyll, a poem in celebration of everyday life amid natural, often pastoral, even romantic, and at times tragic surroundings.

If, a French islet in the Gulf of Marseilles, with a castle built by Francis I., and afterwards used as a State prison. It was in this Château d'If that Monte Cristo, the hero of Dumas's great novel, was confined.

Iggdrasil, or Yggdrasil, in Norse mythology, a tree, rooted in the underworld, or kingdom of death, *Hela*, with its boughs spreading over the whole universe and its summit reaching to heaven; its roots were watered by the three Nornas, or Fates, who sat at its foot; it was a symbol of the whole world of living things.

Ignatius, Father, name assumed by the Rev. Joseph Leycester Lyne, an Anglican clergyman, educated at St. Paul's School and Glenalmond, who commenced a movement to introduce monasticism into the Church of England, and built a monastery for monks and nuns at Llanthony Abbey near Abergavenny. (1837-1908).

Ignatius, St., called Theophorus, an Apostle, Father of the Church, Bishop of Antioch; died a martyr at Rome about 115, by exposure to wild beasts in the amphitheatre; said by tradition to have been the little child taken up by Jesus as a model to His disciples; several Letters written by him to the churches of various cities are extant.

Ignatius Loyola. See *Loyola*.

Igneous Rocks, those rocks formed by the solidification of molten magma (a) at a great depth (plutonic rocks), e.g., granite, (b) in intrusions near the surface (hypabyssal rocks), (c) on the surface (lava). They are of variable composition and structure and classified according to the proportion of silica; the acid rocks, granite and obsidians, have a large proportion, the basic rocks, gabbros, dolerites and basalts, a small proportion; syenites, diorites and andesites are intermediate in composition.

Ignis Fatuus (Lat., "foolish fire"), or Will-o'-the-Wisp, a light sometimes seen over marshy places or graveyards, usually after dusk in autumn; its cause is unknown; it may be due to the burning of marsh gas.

Iguana, a family of American lizards, with many genera and species;

the commonest, the *Iguana tuberculata*, is about 5 ft. in length, with long tail, serrated dorsal ridge, head covered with scales, and a large dewlap. Iguanas are mostly arboreal of habit; their predominating colour is green. They are eaten by natives. The family is represented in Fiji and Madagascar.

TUBERCULATED IGUANA

Iguanodon, an extinct dinosaur, which many remains have been found in Belgium and some in England, of a length of about 20 ft., it was herbivorous and somewhat lizard-like in form, with a long and powerful tail.

Iguassu, river of Brazil, a tributary of the Parana, in its lower course forming the boundary between Brazil and Argentina. It is noted for its falls, in which it descends 220 ft. in a series of leaps.

Ile-du-Diable. See *French Guiana*, and *Salot, Isles du*.

Ileum, the right-hand lower portion of the jejunum, small intestine in man, below the jejunum, opening into the large intestine by the ileo-caecal valve.

Ilex, a genus of plants of the order Aquifoliales. The *Ilex Aquifolium*, the common holly of Europe, is a tree or shrub with smooth, stiff, alternate leaves. The leaves may be plain, prickly or toothed. Flowers are unisexual or hermaphrodite, the sexes occurring on different trees; the berries are red or black. From the leaves of an American species, *Ilex paraguayensis*, yerba maté or Paraguay tea is made.

HOLLY

Ilford, residential and manufacturing borough of Essex, England, 7 m. E. of London, on the Roding. Its ancient hospital, formerly for lepers, is now an almshouse. Paper and photographic materials are made. Pop. 146,000.

Ilfracombe, a popular watering-place on the coast of N. Devon, England, in the Bristol Channel; once an important seaport. Pop. 9,200.

Iliad, the great epic poem of Homer, consisting of 24 books, the subject of which is the "wrath of Achilles," and the events which followed during the last year of the ten years' Trojan War, so called from Ilium, one of the names of Troy.

Ilkeston, borough and market town of Derbyshire, England, 9 m. N.E. of Derby. Hosiery and lace are made, and coal and iron mined near by. Pop. 33,000.

Ilkley, urban district and spa of Yorkshire, England, in the W. Riding, 15 m. N.W. of Leeds. Roman remains have been found. Near by are Bolton Abbey and the well-known Ilkley Moor. Pop. 10,000.

Illawarra, coastal district of New South Wales, Australia, S. of Sydney. It has coal-mines and dairy-farming is carried on. The chief town, Illawarra North, has a pop. of 8,300.

Ille-et-Vilaine, a dept. of NW. France, in Brittany. Rennes is the capital, and St. Malo and St. Servan are the chief ports. It is an agricultural region; fishing also is engaged in, and oysters are exported. Area 2,700 sq. m. Pop. 566,000.

Illegitimacy, is, under English law, the state of a child born (a) out of wedlock, or (b) during wedlock if it is proved that through absence or other cause the husband cannot be the father, or (c) so long a time after its dissolution that it is physically impossible for the husband to be the father. The obligation to maintain an illegitimate child rests upon the mother, but if she can establish the paternity, the father may be ordered to contribute to its maintenance to an extent not exceeding £1 per week until it attains the age of 16 years, or such earlier age as the justices may determine, or until the mother marries.

An illegitimate child has no rights of inheritance in real or personal estate; he may, however, take a bequest under a will. The only persons entitled to succeed to his estate on his intestacy are his widow and children. By an Act of 1926 an illegitimate child whose parents marry after his birth becomes thereby legitimate, unless at the time of his birth either of them was married to a third person.

Illinois, one of the States of the U.S.A., as large as England and Wales, has the Mississippi for its western, the Ohio for its southern boundary, with Wisconsin and Lake Michigan in the N. and Indiana on the E.; third in population, seventeenth in area. "The Prairie State" is level, well watered, and extremely fertile; has a climate subject

to extremes, but, except in the swamps, healthy. It produces enormous quantities of wheat, besides other cereals, and temperate fruits. Flour-milling and pork-packing are the chief industries. There are extensive deposits of coal, petroleum and natural gas. With navigable rivers on its borders, and traversing it Lake Michigan, a great canal, and the largest railway system in the Union, it is admirably situated for commercial development. Originally acquired by Britain from the French, who entered it from Canada, it was ceded to the Americans in 1783, and admitted to the Union in 1818. The State contains six universities. Springfield is the capital; but Chicago is the largest city. Area 56,660 sq. m. Pop. 7,631,000.

Illiteracy, inability to read or write, is rapidly diminishing since the spread of universal compulsory education; in Great Britain those signing the marriage register by mark show a percentage of illiteracy of 0.3. Percentages of illiterates over 10 years old in representative countries as computed in different years since 1920 are: India, 84; Portugal, 65; Turkey, 55; Spain, 44; Poland, 33; U.S.S.R., 30; Italy, 27. Since 1920 enormous strides have been made in the reduction of illiteracy, especially in Russia and Turkey.

Illumination, the decoration and illustration in colour, often enriched with gold and silver. The art was brought to a high degree of perfection in the Middle Ages, and was applied especially to Missals and "Books of Hours"; it was generally pursued in monasteries. Among the finest examples are the 7th-Century Celtic *Book of Kells*, now in Dublin, and the Lindisfarne Gospels. The tradition continued unbroken until the 16th Century.

Illustration, a pictorial interpretation designed to accompany a printed or written description. In Europe probably the earliest illustrations were the paintings of initial letters and in the borders of manuscripts (see *Illumination*). With the invention of printing, these were replaced by line engravings in wood and metal. Early illustrations, such as those of Dürer, were taken from the original blocks, but later the making of engravings from line drawings and paintings became a separate art. Colour-printing was used for book illustrations as early as the 16th Century, and in the 18th mezzotinting and stipple were invented. In the 19th Century chromo-lithography led to the modern process work in colour, while photography and the consequent use of half-tone blocks has made illustration a universal feature in books and periodicals.

Illyria, ancient name of a broad stretch of mountainous country of varying extent lying E. of the Adriatic Sea, along the coast of the modern Yugoslavia. The Illyrians were the last Balkan people to be civilised. Becoming a Roman province 35 B.C., Illyria furnished several emperors, among them Diocletian. Constantine extended the province to include all the country E. of the Danube. The name was revived by Napoleon, but has since been dropped.

Image, in optics, the representation of an object formed at the focus of a lens or mirror by rays of light refracted or reflected to it from all parts of the object. The figure of the object is reversed in the real image, but erect when the image is virtual. The image may be made to fall on a screen, photographic plate, or the retina of the eye.

Image Worship in the Christian Church is reverence, as distinct from the supreme adoration reserved to the Deity, paid to the crucifix and

to pictures, images, or statues of saints and martyrs, and offered through these to the personages whom they represent. The practice was prevalent in the 4th Century, provoked by its excesses a severe reaction in the 8th Century, but carefully defined by the second Council of Nice (787), has continued since both in the Greek and Roman communion. There is still controversy as to its propriety in the Anglican Church. The Lutherans use the crucifix freely, but other Protestant Churches have entirely repudiated the practice. See *Iconoclasm*.

Imâm, the title of the officer who leads the devotions in Mohammedan mosques, and in Turkey conducts marriage and funeral services, as well as performs the ceremonies connected with circumcision. The office was filled and the title borne by Mohammed, hence it sometimes signifies head of the faith, and was so applied to the Sultan of Turkey. Certain Mohammedan sects expect the future advent of an Imâm—the hidden Imâm—who shall be greater than the Prophet himself.

Imbros, fertile Turkish island of the Aegean, seat of a Greek bishop. Kastorn is the chief town. Here Sir Ian Hamilton had his headquarters during the Dardanelles campaign. Pop. 9,000.

Immaculate Conception, the doctrine held by the Roman Catholic Church that the Virgin Mary was conceived and born without taint of sin; first distinctly propounded in the 12th Century, at which time a festival was introduced in celebration of it, it became matter of dispute in the 14th Century, and it was only in 1854 that it became an article of the Catholic faith.

Immanence, a theological term implying the nature of God as indwelling in the universe, as opposed to transcendence, the separateness of God from the material world. The dual nature of God, immanent and transcendent, is a tenet of Christianity. The stressing of immanence alone leads to pantheism.

Immanuel ("God is with us"), the name of a child whose birth was predicted by Isaiah, and who was to be a sign from God to Abaz during the Syrian War with Ephraim (Isaiah vii); accepted by Christians as a figure of Christ. The spelling in the New Testament is Emmanuel.

Immigration, the movement into a country of persons from another with an intention of permanent settlement. For the forty years immediately preceding the World War the United Kingdom lost population at an average annual rate of 100,000 by excess of emigration over immigration. After the war the British Government gave free passages within the Empire overseas to those ex-service men and women and their dependants who wished to settle overseas. In 1922 the Empire Settlement Act was passed providing for pecuniary and other assistance to people in the United Kingdom to facilitate their settlement in Empire countries overseas. The total movement after the War, however, did not at any time reach pre-war dimensions. The world-wide economic depression about 1930 caused immigration into the United Kingdom to exceed emigration from it. During the period of twenty years since the War the average balance of emigrants over immigrants has been roughly 60,000. In 1938 the Australian Government reopened assisted passage schemes for certain limited categories of British migrants. An Oversea Settlement Board, set up two years previously in England, has now reported adversely on unrestricted migration from England with its downward trend of population and suggested that the Dominions should increase their man-power by taking more alien immigrants.

Immingham, seaport of Lincolnshire, England, on the Humber, 7 m. NW. of Grimsby, a small village until in 1912 great docks were constructed here by the former Great Central Railway. Pop. 2,500.

Immortality, the doctrine of the continued existence of the soul of each individual after death, a belief common to Christians, Jews and Mohammedans, in a more or less developed form common to most religions except those which teach the eventual absorption of the individual in the deity or world soul.

Impaling, in heraldry, the placing of two coats of arms side-by-side on one shield.

Impeachment, the trial of a minister on charges of maladministration, in which the Lords act as judges and the Commons as accusers. It is begun by motion in the Commons, and on the motion being carried, the accused is impeached by a deputation of the Commons at the Bar of the Upper Chamber. The charges are set forth in "articles of impeachment." Certain Commoners called managers conduct the prosecution. Famous impeachments were those of Lord Bacon and Warren Hastings. The most celebrated case in the U.S.A., where the procedure is similar, was that of President Johnson in 1868.

Imperial Airways, the British national air

transport company, subsidised by the Government and carrying mails as well as passengers; Empire mails are carried at ordinary Empire letter-rates without additional charge; operates regular daily services in Europe from London to various European cities; bi-weekly services via Cairo, Karachi and Singapore to Port Darwin and Sydney in Australia (operated from Port Darwin by Quantas Empire Airways pilots, who there take over the controls of the flying-boats) and a bi-weekly service via Cairo and East Africa to Durban. In each case regular feeder services connect the ports of call with other parts of the country. An Atlantic air route in collaboration with Pan-American Airways is shortly to be inaugurated. Its fleet, which at present (1938) includes 54 machines of obsolete types is being strengthened by the addition of 31 Short Empire flying-boats and 6 specially stressed flying-boats for Atlantic operations, as well as 14 Armstrong Whitworth Ensign type 21-ton 42-seater land-planes capable of a top speed of 200 m.p.h. and a cruising speed of 170 m.p.h. and a number of de Havilland Probus type land-planes. Following some

IMPERIAL AIRWAYS
FLYING-BOAT CALEDONIA

staff troubles a Parliamentary Committee of Inquiry was set up under Sir John Cadman. As a result of the Cadman report and recommendation that a whole-time Chairman should be appointed, the then Chairman resigned and Sir John Reith, former Director-General of the B.B.C., became Chairman.

Imperial College of Science, a college at South Kensington, London, and a School of the University of London (q.v.); it was formed in 1907 by the incorporation of the Royal College of Science, the Royal School of Mines and the City and Guilds Engineering College.

Imperial Conference, a periodical meeting of Prime Ministers of the Dominions under the chairmanship of the Prime Minister of Great Britain, to discuss matters of common

interest, such as inter-imperial relations, foreign policy, defence, communications, shipping and migration. It was constituted by resolution of the Colonial Conference of 1907, the first conference to be officially styled "Imperial" being that of 1911. During the World War, the Imperial Conference was in abeyance, and Dominion representatives became temporary members of the Imperial War Cabinet. Since the War, Conferences have been held in 1926, 1930, 1932 (at Ottawa) and in 1937.

Imperial Defence, co-operation between the United Kingdom and the Dominions in the formulation of a policy of defence of the Empire in time of war, promoted by the existence of the Committee of Imperial Defence set up as the result of the deliberations of the Imperial Conferences (q.v.). The Dominion Governments are not members of the Committee, but their High Commissioners in London often attend its meetings. Uniformity of policy is also assisted by the existence of the College of Imperial Defence, set up in London in 1926 to create a basis for co-operation and co-ordination in training for and in organisation of imperial defence.

Imperial Economic Committee, established in 1925, and composed of representatives of the United Kingdom and Dominion Governments, investigates methods of marketing within the Empire and the production of Empire raw materials; prepares surveys of world trade, and reports on economic questions to the various Governments of the British Commonwealth. In some respects it has replaced the now defunct Empire Marketing Board.

Imperial Institute, South Kensington, London, founded by the exertions of the Prince of Wales (afterwards Edward VII.) in 187 to commemorate Queen Victoria's jubilee, was opened by her in 1893; was intended to include a complete collection of the products of the British Empire, a commercial intelligence bureau, and a school of modern Oriental languages; in 1916 it was placed under the management of the Secretary of State for the Colonies, assisted by an executive council; its principal work is the promotion of inter-imperial trade in raw materials, by investigations, exhibitions, etc.

Imperialism, a system of government by imperial authority. The term "imperial" is, however, applied to variously constituted forms of government, as in the case of the British Empire, where it indicates the authority of Great Britain in relation to that of other parts of the Empire; and in that of Holland as compared with her dependencies, although Holland is not designated an Empire. The term is also applied to a policy which seeks to draw together more closely the separate territories which owe allegiance to one flag.

Imperial Preference, a term used for the practice of giving preferential rates of duty in favour of imports from various countries within an Empire. In the British Empire preferences were first granted to goods from the United Kingdom as long ago as 1897, a preference of 33½ per cent. being allowed off the duties payable by United Kingdom goods. Preference was not extended by the United Kingdom to the Dominions until the passing of the Import Duties Act, 1932, under which the fiscal system reverted from "free trade" to protection. Preferences are also granted to British Colonial goods, and also by many Colonies to United Kingdom goods; and there is now a system of mutual preferences between the United Kingdom Government and all the Dominion Governments.

Imperial Service Order,

a decoration restricted to members of the Civil Services of the British Empire. The Order was founded by King Edward VII. in 1902, and its numbers may not exceed 700 (250 Home, 250 Dominions, Colonies and Protectorates and 200 Indian). It is awarded for long and meritorious service. The Ribbon has vertical stripes, crimson on the outside, blue in the centre.

Imperial War Museum,

opened at the Crystal Palace, 1920; removed thence to S. Kensington in 1924 and again in 1936 to the former Bethlem Royal Hospital at Lambeth. The collection includes naval and military trophies and relics, ship and other models; an Art section of over 4,000 paintings and drawings, a library and a large photographic section.

Imports, goods which enter one country from another. In theory a country's imports are paid for by its exports; their respective values constantly tend to equality, and roughly, the difference between the money value of the imports and the exports represents profit or loss. Taxes on imports serve both as a means of raising revenue and also to reserve home markets for home industries. The first English import duties date from 1304, and were levied on foreign merchants only; but in the reign of Henry III. a levy was made on merchandise from abroad, which was, in effect, equivalent to an import duty.

Impressionism, the technique of a school of painters originating in France before 1870, and introduced into this country some 10 years later. It is a revolt against traditionalism in art, and aims at reproducing on canvas the "impression" which eye and mind gather, rather than representing actual fact. Among the leaders of the school were Pissarro, Degas, Manet and Monet.

Impressment, the former practice of compelling men to serve in the British navy or army, especially the former, for which they were enrolled by "press gangs."

Imprisonment, detention in a gaol or prison as punishment for a criminal offence or for contempt of court. In English criminal law imprisonment may be either penal servitude or imprisonment with or without hard labour (q.v.). The maximum sentence of penal servitude is for life, which, after the usual remissions, means for 20 years; the maximum term of imprisonment with hard labour cannot exceed 2 years.

Inca, an aboriginal tribe of Peru, with a high civilisation, found by Pizarro on his conquest of the country; the name was also applied in particular to their ruler, the Inca.

Incandescent Light, name generally applied to the light produced by covering a non-luminous gas flame with a hollow "mantle" of fibrous material impregnated with a solution of metallic salts, usually the nitrates of thorium and cerium.

Incantation, a formula or set of words, often nonsensical, used with the intention of producing a magical or supernatural effect. Belief in the power of in-

cantations was common throughout the Middle Ages.

Incarnation, the assumption of a human nature by a divine being, in particular by Jesus Christ; appearances of gods in human form are also taught by Eastern religions, particularly Hinduism.

Ince-in-Makerfield, urban district of Lancashire, England, adjoining Wigan. It has coal-mines, iron and wagon-works, and cotton mills. Pop. 22,000.

Incense, a mixture of aromatic gums and spices, which, when burnt, produce a sweet-smelling smoke, used for religious purposes by some Christian bodies, by the ancient Jews and by certain sects of Buddhists. Its use in the Church of England has given rise to much controversy. It is burnt in a vessel called a thurible or censer.

Incest, prohibition between persons prohibited from marrying on grounds of kinship. In England intercourse by a male with his mother, daughter, sister or granddaughter is punishable by penal servitude. Marriage with a deceased wife's sister and with certain other relations by a previous marriage, formerly forbidden, has in recent years been legalised.

Inchcape, or Bell Rock, a dangerous reef in the Firth of Tay, Scotland, submerged at spring tides. A light-house stands on it; formerly a bell rang to warn mariners.

Inclined Plane, a mechanical contrivance for raising weights; the pressure of the plane balances the component of weight perpendicular to the plane, while the component of weight along the plane is overcome by effort applied by means of a continuous rope passing over a pulley.

Income Tax, in Great Britain a tax levied by the Government upon all forms of income. It has been continuously imposed since 1842. The amount has varied from 2d. in the £ in 1874 to 6s. in 1920. In 1909 a super-tax was first levied on incomes over £2,000. The "standard rate" (1938) is now 5s. 6d. in the £. Certain deductions from the taxpayer's gross income are allowed in respect of children, wife, etc., to establish his taxable income. About 3½ million persons in Great Britain now pay income tax. Failure to return a statement of income for tax purposes, when demanded, involves a fine. In 1935 Income tax produced not more than £1,855,000, but to-day the yield from its various ramifications exceeds £325,000,000.

Increment, Unearned, an expression denoting increase in the value of landed property due to increased demand and without any expenditure on the part of the proprietor.

Incubation, the act of sitting on eggs to hatch them; but the term is more commonly used in connection with the application of the necessary warmth by mechanical "incubators." All such machines are based on the principle of regulating the temperature of an apparatus within which the eggs are placed in trays. Artificial incubation is sometimes adopted for the rearing of premature or delicate children.

Incubus, a supposititious demon which caused nightmares; it was a common belief in the Middle Ages that the association of an incubus with a sleeping woman gave rise to deformed children.

Incumbent, a rector or other ecclesiastic who has been legally instituted in his office. The incumbent has charge of the spiritual welfare of his parishioners, and his duties cannot be performed by other clergymen without his or his bishop's licence.

INCA PRINCE

Incunabula, a term applied to books printed before 1500 A.D.

Indecency, in law, the public exhibition of obscene books, pictures, or advertisements of indecent character relating to sexual ailments, or of certain parts of the body, punishable by a fine, or imprisonment, or both.

Indemnity, in law an agreement, express or implied, to render a person immune from a contingent liability. The word is also applied to compensation for property annexed by the State or local authority for public ends.

Indenture, a deed executed between two or more persons, taking its name from the fact that two or more copies of such contracts were formerly written on a single parchment and cut in indented form, so that their genuineness could later be established by fitting together their edges. The word is now generally applied only to contracts of apprenticeship.

Independence, Declaration of, the on July 4, 1776, the N. American States asserted their independence of Great Britain.

Independence, The war of, the N. American colonists maintained against the mother country. It began in 1775, Washington being chosen Commander-in-chief of the colonial troops; on July 4, 1776, the Declaration of Independence was adopted, and after six years of fighting the war ended after the British defeat at Yorktown in 1783, England recognising the independence of the thirteen original United States.

Independence Day, a holiday observed throughout the United States annually on July 4 in celebration of the Declaration of Independence in 1776 that day.

Independent Labour Party, familiarly known as the "I.L.P.," a British Socialist organisation founded at Bradford in 1893. Its early influence under the leadership of Ramsay MacDonald and Philip Snowden was considerable, but after the institution of individual membership in the Labour Party it declined. Its organ is the *New Leader*; and its political views to-day (1938) are considerably more radical than those of the official Labour Party.

Independents, or Congregationalists, which, repudiating both Episcopacy and Presbyterianism, holds that every congregation should manage its own affairs, and elect its own officers independent of all authority save that of Christ; they profess to derive all rules of faith and practice from the Scriptures, and are closely akin to Presbyterians in doctrine. Numerous as early as Queen Elizabeth's time, they suffered persecution then; many fled or were banished to Holland, whence the *Mayflower* conveyed the Pilgrim Fathers to New England in 1620. Regaining ascendancy under Cromwell, their history has since resembled that of other dissenting bodies. Most of their churches are now affiliated to the Congregational Union. They now number over a million in England and Wales. See also Congregationalism.

Index (*Liberum Prohibitorium*), a list first drawn up in 1557 and from time to time revised, of books which members of the Roman Catholic Church are not permitted to read save in special circumstances.

India, Asiatic Empire under British Dominion, consisting of the great peninsula in the S. of Asia between the Bay of Bengal on the E. and the Arabian Sea on the W., separated from the mainland by the Hindu-Kush and Himalaya Mts. Its centre is a great plateau called the Deccan, between

which and the Himalayas stretch the great fertile basin of the Ganges, the Thar Desert and arid wastes of the Indus Valley. Wide varieties of climate are met with, but the general temperature is high, the monsoons of the Indian Ocean determining the regularity of the rainy season, which occurs from June to October.

The country generally is insalubrious; the vegetation is largely tropical; rice, cereal crops, sugar and tobacco are grown, with cotton in Bombay and the Central Provinces, opium in the Ganges Valley, jute in Eastern Bengal and indigo in Bihar; coffee and tea are raised by Europeans in the hill country. The chief mineral deposits are extensive coalfields between the Ganges and the Godavari, salt in the Punjab, and iron in many parts of the country, which are worked only by native methods. European methods of manufacture are being largely introduced, and the young cotton-weaving industry flourishes.

The people belong to many different races, and speak languages representing at least six distinct stocks. The vast bulk of them are Irabmanists or Hindus, but there are many Mohammedans, six millions are Christians, and many other religions are represented. The total area of India is 1,575,000 sq. m., and the population 338,200,000. The British Provinces, as distinct from the native States, comprise 61 per cent. of the area with a population of 257,000,000.

India has been subject to many conquests; the Aryan, Greek and Mussulman invasions swept in from the NW.; the Portuguese obtained a footing on the SW. coast in the 15th Century; the victories of Plassey, 1757, and Seringapatam, 1799, established British rule throughout the whole peninsula, with the principle that native princes where they retained their thrones were vassals.

Sind was won in 1843 and the Punjab in 1849, and the powers of the East India Company transferred in 1858 to Queen Victoria, who was proclaimed Empress in 1877.

Since 1861 political control has been passing steadily into Indian hands. In 1885 the National Congress, now one of the chief forces in the furtherance of nationalist ambitions, first met. A growing realisation of the necessity of co-operation between Britain and India led in 1917 to the drafting of the Montagu-Chelmsford report on which was based the Government of India Act of 1919. This provided for the establishment of a chamber of Princes, presided over by the Viceroy, and single-chamber legislatures throughout the provinces with the principle of special representation for Moslems, Christians, etc. Lack of satisfaction with the reforms brought to the fore Mohandas Gandhi, leader of the National Congress, with his non-co-operation movement. Various outbreaks of violence led to the appointment in 1927 of a commission to inquire into the working of the 1919 constitution. Its report, published in 1930, recommended completely responsible government in the provinces, and the formation of a Federal Government.

In Dec. 1930 the first Round-Table Conference, composed of British and Indian delegates, representing the Princes and all communities, assembled in London. The Princes immediately expressed their willingness to co-operate in federation. After much discussion a White Paper was published in March 1933 embodying the conclusions of experts on finance and franchise, and in April a Parliamentary Committee was appointed to report on their suitability as a basis for legislation.

On this report, published in Oct. 1934, was based the Government of India Act, 1935, which came into force in 1937. Its chief provisions are as follows: (1) Provincial

executive control, except for certain "special responsibilities" and the final word in matters of law and order, to be in the hands of Indian ministers. Provincial legislative assemblies (two-chambered in some provinces—e.g., Bengal, Bombay) to be elected for five years. (2) Central executive, covering military control, foreign affairs and special responsibilities, to be in the hands of the Viceroy; the legislature to consist of two chambers, the Council of State and Legislative Assembly, the former to be elected directly, the latter indirectly through the provincial legislatures and on a communal basis. (3) Finance: a reserve bank free of political bias to be established to deal with the question of financing the provincial governments. (4) Army: to remain almost completely under the control of the Central Government. (5) The powers formerly vested in the Secretary of State to pass into the hands of the Government of India.

Indiana, one of the smaller but most populous States of the U.S.A., lies between Lake Michigan and the Ohio R., with Ohio on the E. and Illinois on the W. The climate is marked by extremes of heat and cold; the country is somewhat hilly in the S., is mostly level, well watered and very fertile. Agriculture is the chief industry, cereals and tobacco forming the chief crops. There is great mineral wealth, with extensive and varied industries, embracing steel products, furniture, motor cars, glass and soap; oil, coal, limestone, pig-iron and natural gas are extensively worked. First occupied by the French, Indiana was acquired by Britain in 1763, ceded to America 1783, and admitted to the Union in 1816; besides Indianapolis, the capital, the largest towns are Fort Wayne, South Bend, Evansville and Gary. Area 36,350 sq. m. Pop. 3,238,500.

Indianapolis, capital of Indiana, U.S.A., on the White Ford R., in the centre of the State; a fine city, with wide, tree-lined streets, large iron, brass and textile manufactures and canned-meat industry; is a great railroad centre. Pop. 364,000.

Indian Army, the combination of native and European troops, which defends British India: since the World War a process of "Indianisation" has largely transformed it, and in many units the former British officers have been in part or wholly replaced by native officers. In the World War nearly 1½ million officers and men served with the Allied forces outside India with over 100,000 casualties. At present the Indian Army consists of about 140,000 native and 60,000 British troops, apart from reserves and the forces of the Native States (numbering about 46,000).

Indian Civil Service, a service, besides embracing the ordinary departments of civil administration, included judicial, medical, territorial and even military staff appointments; the proportion of Indians employed is being rapidly increased.

Indian Ink, or Chinese Ink, a variety of ink first manufactured in China, composed of lamp-black and gum, and moulded into sticks; it is sometimes perfumed. In China it is used with a small brush for ordinary writing, and in Europe for illustrative work.

Indian Millet, a stout cereal grass, a species of *Panicum*, (*P. maximum*) largely grown in the Mediterranean regions and the East. It is produced in drier climates in place of rice, and bread of good quality is made from it. It is believed to have been the first wild grain to be cultivated. It also serves as cattle and poultry food and the plant as green fodder, and is sometimes called guinea corn and kafir corn.

Indian Mutiny, a widespread rebellion, on the part

chiefly of the Sepoys, against British authority in 1857. The Sepoys' esteem for the British had declined owing to the weakness of certain generals in the Afghan and Sikh campaigns. Also, there had never been so many native and so few British soldiers under the East India Company's flag; in that year there were 38,000 British soldiers as against 311,000 Sepoys. Discontent was increased by the fact that Indians in the army were not allowed to rise in rank. Furthermore, with the introduction of the Lee-Enfield rifle a new type of greased cartridge was used, which enabled agitators to report that cow's fat was employed—the cow being sacred to the Hindu. The rebellion broke out on May 10, 1857, at Meerut, with the murder by the mutineers of their officers, but it was eventually suppressed by a strong force under Sir Colin Campbell in the following year.

SEPOY

Indian National Congress,

or All-India National Congress, inaugurated in 1885 as the intended nucleus of a native Parliament, the earliest delegates, numbering 72, being mainly students, teachers and journalists, with a tendency to support Western ideals. In 1916, when they numbered over 400, they joined hands with the Muslim League to launch an Indian Home Rule movement, and from this union sprang the Nationalist agitation led by Gandhi (q.v.) directed to secure a complete measure of responsible government in India. In 1931 Gandhi after a campaign of civil disobedience, patched up a truce with the Viceroy, Lord Irwin (later Lord Halifax), and the All-India National Congress, as it was now called, gave the former a free hand to negotiate on its behalf at the Second Round-Table Conference in 1932-1933. After the passage of the Government of India Act in 1935 the Congress Party refused to work it, but after negotiation with the Viceroy their attitude was changed and in July 1937 they consented to form governments in the six provinces in which they had obtained a majority at the elections of that year. The goal of the Congress is expressed in their phrase "purna swaraj," first interpreted as "complete independence," but later modified as meaning "partnership at will."

Indian Ocean

is that stretch of sea between Africa on the W. and Australia, Java and Sumatra on the E., which separates in the N. into the Arabian Sea and the Bay of Bengal. The monsoons, or trade-winds, blow with great regularity; from April to October they are strong from the SW., from October to April more gentle from the NW. There are many islands and reefs of coral formation, such as the Maldivé group; St. Paul's and Mauritius are volcanic, while Madagascar and Ceylon are typical continental islands.

Indians, American. See American Indians.

Indian Territory, a stretch of the south central U.S.A., in the basin of the Arkansas, Canadian and Red Rivers, formerly set apart for occupation by the Indian tribes of the western prairies, the "five civilised nations" of Cherokees, Choctaws, Chickasaws and Seminoles; in 1907 it was combined with Oklahoma territory to form the state of Oklahoma.

India Office, the British Government department set up in 1858, to administer the affairs of India. Its head, the Secretary of State for India, is

assisted by an Under-Secretary, and there is also a consultative council. The India Office estimates are defrayed from Indian funds.

Indicator, a substance which, by a change in its colour, indicates the completion, or arrival at a definite stage, of a chemical reaction. Vegetable extracts such as tincture of violets and the juice of red cabbage were formerly employed to test whether a given substance was acid or alkaline; thus litmus, a colouring matter extracted from certain *Levantine* lichens, is red in acid solution and blue in alkaline solution. A wide variety of synthetic indicators later became available, and the study and use of these has become almost a science in itself. The most common occasion on which an indicator is required is when the degree of acidity of a solution is to be ascertained.

When a coloured substance is being converted into a colourless one, or *vice versa*, it may itself act as its own indicator. Potassium permanganate, for example, is of a purple colour, and in using it the end-point of the reaction is taken to be the point at which the purple colour is no longer discharged by the solution to which the potassium permanganate is being added.

Indictment, a written accusation of a crime, generally drawn upon the commitment of justices, on which the accused is put upon trial before a jury. Until a few years ago the indictment had to be first laid before a grand jury, which body then took enough evidence to satisfy themselves that there was a *prima facie* case; but the grand jury has now disappeared.

Indies, term vaguely applied to include India, Indla, Indo-China, the Malay Archipelago, etc. (the East Indies), or to the West Indian islands.

Indigestion, or **Dyspepsia**, inability to digest food or difficulty in doing so. It takes the form of perhaps an hour's discomfort following a meal, succeeded by heartburn and, sometimes, vomiting. Indigestion may last beyond the period when the food is in the stomach, and cause constipation or diarrhoea. Relief may be obtained by regulating the hours of and number of meals, by exercise and cold baths and early rising. Food should be well masticated; small meals taken frequently and condiments avoided, particularly salt. A suitable diet is eggs, fish, thick soups, and tapioca, cornflour and rice puddings, etc.; milk and cream should be the staple food.

Indigo, a blue dye used from time immemorial and formerly prepared—chiefly in India—from leguminous plants of the genus *Indigofera* (e.g., *tinctoria* and *Amil*). In 1890 Houtmann found that indigo could be cheaply synthesised from naphthalene (the compound familiar as "moth-balls"). Practically the whole of the indigo on the market is now synthetic, and the Indian indigo trade, at one time worth over three million pounds annually, is almost extinct.

Indigo is insoluble in water, so that before it can be used it has to be converted into a soluble compound, indigo-white, by reduction with hyposulphite or other reducing agent. The fabric is steeped in the solution and then exposed to the air, when indigo is gradually re-formed on the fibres. To dye wool, the indigo is converted into the soluble indigo-carmine or indigo-disulphate, an acid solution of which directly dyes wool the well-known "navy blue."

Indigofera tinctoria

Individualism, a political or economic theory, asserts the rights of the individual as against those of the community; the opposite of socialism. The extreme form of individualism in political and economic theory is that of "laissez-faire" (q.v.).

Indo-China, called also **Farther India**, the name given to the large peninsula which lies between the Bay of Bengal and the China Sea, lying almost wholly within the Torrid Zone, and embracing Burma (under British rule), Annam, Cambodia and Tongking (under French rule) and Siam (an independent kingdom). It is sparsely peopled, owing to its mountainous character and the swampy lands, and the natives are mainly of the Mongolian type.

Indo-China, French, consists of the colony of Cochin-China and the four protected States of Annam, Cambodia, Laos and Tongking. It is administered by a Governor-General: the total area is about 285,000 sq. m., and the pop. 23,250,000, including some 31,000 Europeans. For further particulars see separate articles on the States named.

Indo-European, an epithet applied to a family of languages spoken in Europe and Asia, supposed to be descended from a single original, and including Latin, Greek, Sanskrit, Persian and the various Slavonic, Celtic, Romance and Teutonic tongues, English among them; the term is sometimes, but incorrectly, used of the races speaking these languages.

Indonesia, term sometimes used for the Malay Peninsula, Indo-China and the islands of the Malay Archipelago.

Indore, (1) a native principality, in Central India, somewhat larger than Wales, embraces the Vindhya and Satpura Mts., and is traversed by the Nerbudda R. There are great forests on the mountains; the valley of the river is fertile; wheat, sugar, cotton, tobacco and large quantities of opium are raised; the climate is sultry, and at certain seasons unhealthy. The natives are chiefly Mahratta Hindus; among the hills are Bhils and Gonds, the wildest tribes of India. The State is governed by a Maharajah styled Holkar, under supervision of a British agent; education is progressing. Area 9,900 sq. m. Pop. 1,325,000. (2) Indore, on the Kuthi R., the capital, formerly a poor city, now being rapidly embellished with fine buildings; it is connected by rail with Bombay, distant 400 m. SW., and with Ameer; it was the scene of a massacre of British during the Indian Mutiny. Pop. 127,300.

Indra, Indian god, ruler of heaven and war deity, brought into the country by the Aryans; in later Hinduism has lost much of his importance, and is now often identified with Shiva (q.v.).

Indre, a dept. of Central France, occupying a plateau watered by the R. Indre and Creuse. Châteauroux is the chief town. The interests are mainly agricultural; grain, grapes, chestnuts, sugar beet, etc., being grown and sheep reared. Area 2,586 sq. m. Pop. 246,000.

Indre-et-Loire, dept. of Central France, watered by the R. Loire; produces cereals, wine, pottery and iron. Capital, Tours. Area 2,350 sq. m. Pop. 345,000.

Inductance, the effect of the electric current flowing in a coil caused by the magnetic field set up by the current (self-inductance) or by the current in a neighbouring coil (mutual inductance). The inductance of a coil adds to its resistance to an alternating current, such resistance being called the reactance. The unit of inductance is the *henry* (q.v.).

Induction, in logic, an argument from what is known to what is unknown, or from the particular to the general; the basis of all modern reasoning in natural and applied science. The same name is given to the ceremony by which a clergyman of the Church of England is given possession of a benefice; it involves the symbolic taking possession of the keys of the church, and a promise on the incumbent's part to accept the 39 Articles.

Induction Coil, an electrical apparatus consisting of two coaxial coils. Through one (the primary) flows a continuous current which is interrupted several times per second by a "make-and-break" device, giving rise to an alternating current in the other coil (the secondary) of high voltage.

INDUCTION MOTOR

Indulgence, the remission, granted in return for the performance of some act of piety, of the temporal penalty due for a sin already committed; this, according to Roman Catholic theology, the Church is enabled to dispense out of the inexhaustible treasury of the merits of Christ.

Indulgence, Declaration of, an edict of James II. of Great Britain, issued without parliamentary authority in 1687, stating his intention of suspending the penal laws against Roman Catholics and other dissenters. Its unpopularity was a chief cause of his subsequent downfall and flight.

Indus, a great river of India, 1,300 m. long; rises in Tibet, on the N. of the Himalayas, flows NW. through Cashmere, then SW. through the Punjab and Sind to the sea. Its upper course is through great gorges and very rapid, but after the entrance of the Kabul River its way lies through arid plains, and it is navigable. After receiving the five rivers of the Punjab—the Jhelum, Chenab, Ravi, Beas and Sutlej—its volume decreases through evaporation and the sinking of some of the many streams into which it divides in the sand. On one of the branches of the delta stands the thriving port of Karachi.

Industrial Court, a permanent result of the Whitley Committee of 1918 in which disputes between workmen and employers could be examined and referred for arbitration or other solution upon the failure of mutual agreement.

Industrial Diseases and Accidents, defined by the Workmen's Compensation Acts as those arising out of or during the course of employment. Industrial diseases most often result from the nature of the material handled by the workmen, prominent examples being asbestosis contracted during employment at asbestos manufacturing and lead poisoning at paint works.

Industrial accidents arise in mining from roof falls, explosions, etc.; on railways from collisions, derailments, coupling, loading and unloading, and in other callings from machine mishaps, slipping or unskilful use of tools, explosions, falls, etc.

Industrial Insurance, or financial provision by the poorer classes for future contingencies, began with working-class burial societies, in which small weekly contributions were collected and a sum was paid by the society towards the cost of funerals. The collection of contributions by officials distinguishes this form of insurance from ordinary insurance.

An Act of 1923 defines industrial assurance as covering cases where the sum assured is

not over £1,000 and the contributions must be paid at intervals of less than two months; companies who undertake such business must be registered with the Registrar-General and pay a substantial deposit, as well as furnishing their balance-sheets for audit. The Act was designed to protect the public from insecure companies and to remedy hardships formerly associated with lapsed policies.

Industrial Psychology, the study of the effects, mental and physical, produced by their occupation on workers in the various industries, directed to the elimination of causes which lessen industrial efficiency. It is concerned with such matters as the duration of working periods, the provision of rest periods, environment, monotony and fatigue, lighting, heating and ventilation. There is a National Institute of Industrial Psychology which specialises in the study of vocational fitness.

Industrial Revolution, the period change in the late 18th and early 19th Centuries, beginning in this country with the change from an agricultural and village England to the town and machine age. It was principally marked by the rapid growth of the factory system and of new large towns, and the replacement of the hand-worker by the machinist. Such inventions as Arkwright's spinning-frame, Kay's weaving-loom, Watt's steam-engine and Stephenson's locomotive were great contributory factors, while modern transport was born on Macadam's roads, Brindley's canals and Telford's bridges.

Industrial School, or Reformatory, the reform of children convicted of theft or other crimes, or not under proper guardianship. Their name has now been changed to Approved Schools, and their character has been changed from that of a junior prison to an institution where the reform of the child criminal is achieved by intelligent and sympathetic treatment.

Inebriate, an habitual drunkard; may, under English law, if convicted of crime while under the influence of drink, be committed to a certified inebriate reformatory, while such a person may of his own will enter a licensed inebriates' "retreat" for voluntary treatment.

Inert Gases, a group of chemical elements comprising helium, neon, argon, krypton, xenon and radon. The last is radium emanation; the first four occur in small quantity in the atmosphere. All are characterised by their almost complete lack of chemical reactivity. Helium is used for filling lighter-than-air craft, and helium, neon and argon are used in electric filament and discharge lamps.

Inertia, that property of a body in a state of rest or of motion with constant velocity in a straight line, unless it is compelled to change that state by an external force; the idea of inertia is implicit in Newton's First Law of Motion.

Infallibility, freedom from all error in the past and from all possibility of error in the future, as claimed by the Church of Rome. This claim extends to all matters of faith and morals in the Church, which is held to be incapable of embracing any false doctrine from whatever quarter suggested, and guided by the Divine Spirit in actively opposing heresy, in teaching all necessary truth, and in deciding all relative matters of controversy. Infallibility is a doctrine of connection with matters of fact, or general opinion. The seat of infallibility has been much disputed, and the infallibility of the Pope was only decreed at the Vatican Council in 1870. The bishops agreed that where the Pope is, the Church is.

were unanimous they were infallible, and their unanimity might be expressed either in a general council or in a decree of a local council tacitly accepted by the Pope and the rest of the Church, or even in a decree of the Pope alone if the Bishops either expressly or tacitly affirmed it. But the Vatican Council decided "that when the Roman Pontiff speaks *ex cathedra*—that is, when he, using his office as pastor and doctor of all Christians, in virtue of his apostolic office, defines a doctrine of faith and morals to be held by the whole Church—be by the Divine assistance, promised to him by the blessed Peter, possesses that infallibility with which the Divine Redeemer was pleased to invest His Church in the definition of doctrine in faith or morals, and that therefore such definitions of the Roman Pontiff are irreformable in their own nature and not because of the consent of the Church."

Infant, in law, a person under 21 years of age (also called a minor). Contracts made by infants prejudicial to their own interests are void; beneficial contracts may be affirmed or avoided when the infant comes of age. Certain contracts, however, cannot be nullified and need no ratification—*e.g.*, contracts for public service, articles of apprenticeship, an executed contract of marriage, contracts for necessities, etc. An infant cannot make a will. Under the Guardianship of Infants Act (1925) infants may not be lawfully married without the consent of both parents if living, or of one surviving parent, or of a guardian. The Age of Marriage Act (1929) forbids marriage under 16 years of age. As regards criminal responsibility, an infant under 7 years of age is said to be *doli incapax*—*i.e.*, incapable of crime; between 7 and 14, *prima facie* incapable of crime, but proof of a mischievous discretion may be adduced; above 14 there is no immunity on the ground of mere youth.

Infante, *Infanta*, the titles formerly given respectively to the royal princes and princesses of Spain and Portugal.

Infanticide, until 1922, was not differentiated by English law from other kinds of murder or manslaughter, but since that date a woman who kills her newly-born child while mentally unbalanced may be charged with, or convicted of, infanticide only, and punished by fine or imprisonment for not more than two years.

Infant Mortality, the rate of deaths of life, usually reckoned per 1,000 births; generally as high as in advanced old age. After the first year the rate declines, being at its lowest in the years between 10 and 14. Improved hygiene and state-aided child welfare services have brought about a continual decline in the mortality rate since 1900. The rate of infant mortality in 1936 per 1,000 births was in England and Wales, 59 (birth-rate, 14.8 per 1,000); Scotland, 82 (birth-rate, 17.9); Northern Ireland, 77 (birth-rate, 20).

Infantry, the foot-soldiers of an army. The first infantry were archers, and the bow long remained their principal offensive weapon. Pikes and halberds were used later, but with the invention of gun-powder infantrymen carried firearms as well as swords, and the pike disappeared with the introduction of the bayonet. The arms of modern infantry include rifle (*q.v.*), bayonet, Lewis gun (*q.v.*), grenade (*q.v.*) and light mortar. The term Light Infantry was at one time applied to units who were trained for rapid movement, but such training is now universal.

Except for certain "crack" regiments, the infantry of the British Army is organised on a county basis, formerly known as numbered regiments of foot (these numbers are still used in the Army List), until the system of

territorial or county distribution was adopted. They include Guards regiments and 148 line and rifle battalions. To these are attached territorial and special reserve (militia) units. On a war footing a battalion numbers 1,022 officers and men.

Infection, the communication of disease from one person to another, except when this occurs by actual contact, when it is called contagion. An infectious disease is transmitted by some substance produced in the body of a diseased person, which, when communicated, can produce itself. Such a substance is generally bacterial, but may be chemical or parasitic. Some diseases are infectious before they are clearly recognisable, as with measles. The more serious infectious diseases, such as smallpox, scarlet fever, and diphtheria, must be notified to the local Medical Officer of Health, on pain of a fine.

Inferiority Complex, in psycho-analysis an emotional idea of the self or ego, whose unconscious activity gives the sufferer an affective attitude of inferiority towards himself. It has its origin in a wounded narcissism or self-love, and may lead to a neurosis which causes the person to doubt his capacity.

Inflammation, a morbid state of any internal or external, characterised by heat, redness and pain, owing to some disturbance of function in the elements of the tissues involved, or to changes in the blood-vessels and blood, and exudation of pus, with permeation of white blood-corpuscles into the contiguous parts, or to altered nutrition of the tissue. It is pathologically an extremely complex process, and, in more popular language, is said to be caused by injuries, irritant bodies, burns or scalds, or microbes. There are also varieties of chronic inflammation associated with gout, rheumatism, etc.

Inflation (*and Deflation*). In monetary theory inflation signifies generally an expansion of currency, usually by the printing of paper money to a greater amount than could be "converted" into metallic currency in accordance with the requirements of the Gold Standard system of currency. During the war practically every European country suffered from inflation. Germany and Austria particularly suffered from a currency collapse. Deflation, or a corresponding restriction of paper currency, has been used as a check to the dangers of inflation.

Infection, the name given to the changes made in the end of words to indicate their relations; not so common in English—being usually expressed among us by prepositions—as in Latin, Greek and other languages, but occurring in English in a few cases, as the final "s" in nouns to indicate the plural or the possessive case, and the "d" or "ed" in verbs to mark the past tense; infection in nouns is called declension, and in verbs conjugation.

Inflorescence, the arrangement of flowers on a branch

or stem; indefinite or axillary inflorescence is where the branch can grow indefinitely, producing new flowers on the axis; definite or terminal inflorescence is where the terminal flower stops the further development of the branch. Different kinds of inflorescence are the spike, raceme, corymb, umbel, panicle, thyrus and cyme.

INFLORESCENCE:
(1) umbel; (2) spike;
(3) raceme

Influenza, an epidemic disease, closely resembling, but quite distinct from, cold in the head. It is characterised by early and marked debility and depression. Though usually of short duration, attacks must not be disregarded; fatal results may ensue on carelessness. Convalescence is slow, and complications may ensue. The cause of the malady is obscure; sporadic cases are common, but during and since the World War it has increased considerably, and almost world-wide epidemics have occurred every two or three years, the most serious being that of 1918.

In Forma Pauperis, name applied to the process by which a litigant may sue or defend himself without payment of court or legal fees in certain cases on production of proof that his total property, apart from his wearing apparel, is not worth more than £25. A plaintiff in a civil suit can only sue *in forma pauperis* after counsel has shown that he has reasonable grounds for so doing.

Informer. A common informer is one who brings to the knowledge of a magistrate, for the purpose of pecuniary gain, a violation of the law. Such information must generally be lodged within a year of the commission of the offence. A criminal accomplice who turns king's evidence is a common informer.

Infra-Red Rays, invisible heat rays of longer wavelength than the longest visible rays of the spectrum, the red; first observed by Herschel in the solar spectrum in 1800; glass is opaque to these rays. They are of service in long-distance photography, and their utilisation has increased the power of search-lights, etc., to penetrate fogs.

Inge, William Ralph, English theologian and writer. He had a brilliant career at Cambridge, and from 1911 to 1934 was Dean of St. Paul's, favouring the modernist side in the Church, and gaining among the public the nickname "Gloomy Dean" by reason of the pessimistic views expressed in his books and frequent periodical articles; among his works are *Christian Mysticism* and *Lay Thoughts of a Dean*. (1860-).

Ingleborough, mountain in the W. of England, in the Pennine Chain, 2,370 ft. high. It is surmounted by remains of a hill-fort, and to the S. is Ingleborough Cave, remarkable for its stalagmites and stalactites.

Ingoldsby, Thomas, the pseudonym of Rev. Richard Barham (q.v.), author of *Ingoldsby Legends* a collection of humorous tales in verse.

Ingot, a cast mass of metal from a gold or silver, more or less pure, for assaying; also a cast block of gold, silver or alloy of either, for coinage or for working into other forms. An ingot-mould is a flask in which metal is cast into blocks.

Inhibition, in law a writ to prevent further in a cause; or a sentence forbidding a clergyman to perform his ecclesiastical duties. In psychology the word is used for a subconscious urge to express the personality in some way which the conscious mind forbids.

Initiation, the act of introducing to or instructing in the rudiments, principles, rules or ceremonies of an office or association. It is an important rite in many primitive societies, among which it often includes such practices as circumcision, or other bodily mutilation, tattooing, etc.

Injection, a medical term denoting the introduction of a substance into the body through the skin by a syringe or other means. The substance is usually an aqueous solution. By means of the hypo-

dermic syringe (q.v.) morphia or other narcotics may be so introduced.

Injunction, in law, an equitable remedy whose purpose is to prevent a threatened wrong in regard to the rights of the party seeking the injunction, as, e.g., the erection of some building in contravention of the plaintiff's right to light. An interim or interlocutory, as distinct from a final, injunction, is usually only granted on the plaintiff undertaking to pay damages if he fails at the subsequent trial to substantiate his case.

Ink, a fluid used for writing on paper or the like material, or on any solid substance. The ancient Egyptians wrote with carbon ink on papyrus before the invention of papyrus. Carbon inks are still used in the E., but in Europe, though used for special purposes, they have long been generally superseded by iron-gall inks. The raw materials used for these are tannin, of which the most important source is oak galls, iron salts, gum arabic, colouring matters, acids and preservatives in the form of carbolic acid or phenol. See also Indian Ink.

Inkerman, a small Tartar village E. of Sebastopol harbour; the scene of a battle between the Russians and allied forces in the Crimean war, resulting in the defeat of the former after a prolonged struggle on November 5, 1854.

Inland Revenue, Board of, the body responsible for the collection of taxes, death duties and stamp duties, first established in 1694 on the appointment of the Commissioner for Stamps. The office of the Commissioner of Taxes was merged in it in 1834.

Inlaying, the craft of ornamenting surfaces of material different from that of which they are composed. The material is usually wood, the variety inserted being sharply contrasted or toned with the surface in which it is inserted. Similar work in metals is known as damascening; in marble or other stone, as mosaic.

Inn, in its wider sense, includes a tavern or alehouse, but, strictly, an inn is merely a place which provides lodging accommodation for travellers. Inns existed in England as early as the 13th Century, for in 1284 a Statute was passed for closing them at Curfew. Many old inns were famous, particularly the Marmalade Tavern, from its recollections of Ben Jonson; the Tabard in Southwark, also for its literary associations; the Old George, Salisbury; the Maid's Head, Norwich; and, among those of a later day, the Rainbow in Fleet Street, associated with Dr. Johnson and Dickens, and The Cheshire Cheese, the haunt of journalists.

An innkeeper cannot refuse accommodation and food, at any time of day or night, to a traveller who is ready to pay and is properly conducted, provided there is sufficient accommodation.

Inner Temple. See Inns of Court.

Innisfail (Innis Fodhla, Isle of Destiny), an ancient and poetical name for Ireland.

Inniskillin, small town in Co. Fermanagh, Northern Ireland. The Royal Inniskilling Fusiliers were raised in 1690 from forces which defended the town. The regiment has a proud campaigning record. It is now linked with the Royal Irish Fusiliers. Pop. c. 4,500.

Innocent, the name of 13 Popes: Innocent I., Pope from 401 to 417. Innocent II., Pope from 1130 to 1143. Innocent III., Pope from 1198 to 1216. Innocent IV., Pope from 1243 to 1254. Innocent V., Pope in 1268. Innocent VI., Pope from 1352 to 1362, resided at Avignon.

Innocent VII., Pope from 1404 to 1406.
Innocent VIII., Pope from 1484 to 1492.
Innocent IX., Pope in 1591. **Innocent X.**, Pope from 1644 to 1655, condemned Jansenism. **Innocent XI.**, Pope from 1686 to 1689.
Innocent XII., Pope from 1691 to 1700.
Innocent XIII., Pope from 1721 to 1724.

Innocent III., Pope from 1198 to 1216, succeeded Celestine III.; extended the territorial power of the Church, and made nearly all Christendom subject to its sway; essayed the recovery of Palestine, and promoted a crusade against the Albigenses; excommunicated Otto IV., Emperor of Germany; put England under an interdict, and deposed King John; was zealous for the purity of the Church, and countenanced every movement that contributed to enhance its influence; a man of blameless life, who did much to reform the morals of the clergy. (c. 1180-1216).

Innocents, The Holy, Feast of, a Western Church on Dec. 28 and in the Eastern on the 29th, to commemorate the slaughter by Herod of the children at Bethlehem; in the Middle Ages the occasion of a children's feast, presided over by a "boy bishop" elected for the occasion.

Innsbruck, on the Inn, at the head of the Brenner Pass in the Austrian Tyrol, of which it was formerly the capital; 100 m. S. of Munich; a tourist resort, and an ancient and beautiful town, rich in art treasures, with a university and manufactures of woollen cloth, glass ware, and stained glass. Pop. 61,000.

Inns of Court, the four voluntary societies—Lincoln's Inn, the Inner and the Middle Temple, and Gray's Inn—with whom rests the exclusive right to call candidates to the English Bar. They provide lectures and hold examinations in law, and have discretionary powers to refuse admission to the Bar or to expel and disqualify persons of unsuitable character from it. Each Inn possesses considerable property, a dining-hall, library and chapel, and is subject to the jurisdiction of a self-elective body of Benchers, who are usually judges or senior counsel. These societies originated in the 13th Century, when the practice of law passed out of the hands of the clergy.

Inoculation, the introduction of the body of a human being or other animal, by puncture of the skin or hypodermic action, in order, by giving the subject a small attack of the disease, to prevent his being subsequently liable to a severe one. Inoculation for smallpox, the virus being taken from actual smallpox pustules, was introduced into this country from Turkey in 1717, and extensively practised until superseded by Jenner's discovery of vaccination at the end of the century, and finally prohibited by law in 1840. Inoculation has been found successful in the prevention of other diseases, notably anthrax, hydrophobia, malaria, diphtheria and typhoid.

Inorganic Chemistry, that branch of science which deals with the laws of chemical combination, the atomic theory, the periodic system of classifying elements and the chemical qualities of elements and their compounds; also with Osmotic pressure, the Electrolytic Dissociation Theory, etc. It is largely an experimental science and excludes the treatment of the large class of carbon compounds, the study of which forms another branch of chemistry known as Organic Chemistry (q.v.).

Inquest, an inquiry called and presided over by a Coroner (q.v.), to investigate the death of a person who has died suddenly, by violence, under suspicious

circumstances, in prison, or at the hands of the hangman. A jury is not essential, but if there is one, it must be composed of at least 12, but not more than 23, members. The coroner can compel the attendance of medical and other witnesses, and can order exhumation, though this is usually the subject of an order of the Home Secretary. A coroner's verdict as to the cause of death is not conclusive, but may be the foundation of a criminal prosecution.

Inquisition, an ecclesiastical tribunal established by the Roman Catholic Church in the Middle Ages and set up successively in Italy, Spain, Germany and the S. of France, for the trial and punishment of heretics. The Inquisition in Spain, which was from about 1490 under State control and practically independent of Rome, achieved the greatest notoriety from the number of its victims, and the tortures to which they were subjected, both when under examination and after conviction. The rigour of its action began to abate in the 17th Century, but it was not till 1835 that it was abolished in Spain. Napoleon suppressed it in France in 1808, and after an attempted revival from 1814 to 1820, its operations there came to an end. St. Dominic did much to strengthen the institution, and a member of his order, Torquemada, is notorious for his zeal as Grand Inquisitor of Spain at the end of the 15th Century.

Insanity, a mental condition manifested in the disordered functioning of the mind. It is generally either inherited, or due to some mental strain, such as worry, or some disturbing personal experience, and modern psychologists stress the effect of sexual discord. Many kinds of mental disorder are the result of physical damage to the brain, such as the growth of a tumour, prolonged poisoning or advanced syphilis, which may lead to complete loss of control.

The commonest variety is General Paralysis of the Insane, a form of gradual degeneration. Another common cause of insanity is the habitual use of alcohol and various drugs. In old age a wasting sometimes manifests itself as senile dementia. A mild form of insanity is melancholia, due generally to some emotional disturbance, and often producing borderline insanity.

Insecticide, any chemical mixture used for destroying noxious insects or pests, or for the destruction of vermin in dwellings. Nicotine sprays are general insecticides and almost harmless to plants. Sucking insects are destroyed by a paraffin spray, lime, sulphur washes, etc.; biting insects by arsenic compounds. Root pests are controlled by carbon disulphide; lime sulphur is a useful fungicide. Creosote and paraffin are used against wood-boring beetles in old buildings. Lysol or liver of sulphur solution are effective for household and personal vermin.

Insectivora, an order of mammals, named from their insect-eating habit, including hedgehogs, shrews and moles. They are of primitive type, generally prolific, and found throughout the northern hemisphere and the tropics.

Insectivorous Plants,

those which live on the juices of animals, usually insects, entrapped by their leaves or other parts: British species include the bladderwort (*Utricularia vulgaris*), and sundew (*Drosera rotundifolia*).

Insects, invertebrate animals called the Hexapoda, belonging to the

BLADDERWORT

group *Arthropoda* (q.v.). The various species of insects are estimated at a quarter of a million, but there are probably a great many more yet to be recognised. The insect class is itself divided into several Orders including: (1) Hymenoptera (ants, bees and wasps); (2) Lepidoptera (butterflies and moths); (3) Coleoptera (beetles); (4) *Diptera* (two-winged flies). The bodies of insects are composed of a series of rings or segments joined together, and bearing jointed legs. Insects have a distinct head, thorax and abdomen. The head has one pair of antennae, compound eyes and its mouth parts vary according to food. The thorax has three pairs of legs, and in the adult one or two pairs of wings. Insects are air-breathing, and have air-tubes or tracheae. Many of the higher insects pass through larval and pupal stages.

Inskip, Sir Thomas Walker Hobart, educated at Bristol and King's College, Cambridge; Barrister, Inner Temple, 1899. Head of the Naval Law Branch of the Admiralty, 1918; Unionist M.P. Central Bristol, 1918-1929; Fareham from 1931. Knighted 1924. Solicitor-General, 1929-1928 and 1931-1932; Attorney General, 1928-1929 and 1932-1936. Minister for Co-ordination of Defence since 1936. He was knighted in 1924. (1876-).

Insomnia, or sleeplessness, a condition people as a result of emotional or mental stress, the nerves being further disorganised by the insomnia. It is, however, more often due to digestive disturbances, flatulent dyspepsia being a common cause. It may be a concomitant of fever, or result from poisoning, or even from an excess of tobacco-smoking.

Inspiration, a Christian dogma by which it is held that God is the responsible author of the canonical books of the Scriptures, the actual writers being His conscious instruments. It is held in this form by Roman Catholics. The doctrine in this form was made obligatory by a decree of the Council of Florence (1441), but it had been implicit in Christian and also Jewish belief from the earliest times. Many theologians reject the hypothesis of "verbal inspiration," believing rather that the minds of the sacred writers were illumined by Divine influence, and that inspiration extends only to their general moral and theological teaching.

Instinct, the power by which, independently of instruction or experience, animals are urged to perform spontaneously whatever is necessary for their own preservation or that of the species. Instincts may be classified as: (1) those bestowed by nature; (2) those which are the accumulated results of experience; (3) those complex instincts which arise through the natural selection of variations of simple instincts.

Institute of France, was established by the Directory in 1795, to take the place of the four academies suppressed by the Convention two years previously. In 1816 Louis XVIII. gave back the old names to its four sections, viz. *L'Académie Française*, *L'Académie des Inscriptions et Belles-Lettres*, *L'Académie des Sciences* and *L'Académie des Beaux-Arts*. In 1832 was added *L'Académie des Sciences Morales et Politiques*. Each academy has its own separate organisation and work, and participates besides in the advantages of the common library, archives and funds. Election, which is in every case subject to government confirmation, is by ballot, and every member receives an annual salary of at least 1,500 francs. Government votes a sum of money annually to the Institute. Membership in the *Académie Française* is strictly limited to 40 Frenchmen, often popularly known as the "Immortals."

Insulator, a non-conductor of electricity (e.g., glass, mica, porcelain, etc.) used to prevent a leakage in an electrical circuit.

INSULATOR

Insulin, a hormone extracted from the pancreas of sheep, cattle, pigs, etc., and used in the treatment of diabetes mellitus. See **Hormones**.

Insurance, a form of contract by which, one party agrees, for a consideration, to pay to another party a sum of money, or make good a loss, upon the occurrence of a stipulated contingency. The common basis of the contract is indemnity. The oldest form, marine insurance, grew up amid the commerce that developed between Italian and other Mediterranean ports, and was practised by Lombard merchants in the 13th Century. Among the various departments of insurance are life assurance, fire insurance, marine insurance, accident or casualty insurance, motor insurance, engineering insurance and live-stock insurance. Fire insurance indemnifies against loss by fire or damage by water used by the fire-fighting services. A popular policy is the householder's comprehensive policy, which covers fire, explosion, lightning, storm, tempest, earthquake, burglary, housebreaking, theft, accidents to servants, aircraft damage, etc.

Life insurance is indemnity against loss caused by death, the sum assured being paid to the next-of-kin or deceased's nominee. An endowment policy provides for the payment of a sum of money at a specified date or at prior death. Marine insurance undertakes indemnification against the loss of ship, goods, freight, anticipated profits and any other insurable interest. The development of railways gave rise to accident and casualty insurance, whereby death or injury caused by accident, either to a vehicle or by a vehicle, is compensated. Motor insurance covers claims by the public, loss or damage to cars, accidents to the insured, medical and surgical expenses and expenses incurred in police-court proceedings. Insurance is compulsory for drivers of motor-driven vehicles. Certain newspapers insure regular subscribers against misfortunes. There are State schemes for insurance against ill-health and unemployment which affect about 15,000,000 workers.

Insurance, National, the compulsory system under which weekly payments by employers and employees bring the latter benefits in the event of sickness, disability or unemployment, and pensions on retirement from active work. Lloyd George introduced the system in 1911, and it became law the following year; it has been greatly extended in its scope since its foundation. See also **Health Insurance**; **Unemployment Insurance**.

Intaglio, a hollowed-out or incised en- a semi-precious stone so that when applied to a soft material an impression in relief is produced. This ancient art was much practised by ancient peoples, and reached its zenith among the Greeks.

INTAGLIO

Interdict, a papal procedure in the Roman Catholic Church forbidding a particular person or the inhabitants of a particular place to participate in Sacraments, Church offices or ecclesiastical burial.

An interest was placed on England by Pope Innocent III. in the reign of King John.

Interest, a payment made by a borrower to a creditor for the temporary use of his money. Simple interest is paid at a fixed rate on the sum borrowed; compound interest is paid on the capital plus the accumulations of interest previously unpaid. Interest at a high or unreasonable rate is known as usury; the Moneylenders' Act lays it down that interest at a rate above 4 per cent. per month, or 48 per cent. per annum, may be considered unreasonable. Ordinary interest rates vary from time to time according to the readiness of creditors to lend money, being highest when money is "tight," or not readily to be borrowed.

Interlaken, a small and beautiful town in the canton of Bern, Switzerland, "between the lakes" Thun and Brienz; it is near to some of the finest Swiss scenery, and is a famous health resort, visited annually by tourists.

Interlude, a dramatic or musical part of an independent play. In music the interlude is a passage subordinate to the parts of the principal performance between which it is introduced.

Internal Combustion Engine,

an engine in which a mixture of the fuel with air is ignited within the cylinders themselves, and the thermal efficiency of such engines is higher than that of external combustion engines, where loss of heat inevitably occurs during the raising of the steam and its passage to the cylinders. The principal fuels used in internal combustion engines are petrol, as in the motor-car engine; coal-gas and similar gases, as in the gas engine; and heavy oil, as in the diesel engine. The essential elements of all these fuels are carbon and hydrogen, and the action that takes place when they are burned is the combination of their elements with atmospheric oxygen to form carbon dioxide and water, respectively, with liberation of considerable heat.

At the high temperatures so generated the water remains in the form of steam, and since carbon dioxide also is a gas and expands rapidly when heated, the volume of the products is very many times greater than the volume of the mixed fuel and air before combustion; the piston is thus driven forcibly along the cylinder and made to turn a crankshaft. In petrol engines the fuel is injected into the cylinders through a carburettor, which delivers it in the form of a very fine spray; an appropriate volume of air is automatically admitted at the same time, and the mixture is then fired by means of an electric spark from the sparking-plug.

International, The, an organisation of socialists, first founded in 1864 in London by Karl Marx and Friedrich Engels. After internal disputes it was dissolved in 1876, and in 1889 a Second International was founded, of less revolutionary tendencies. This was re-formed after the World War as the Labour and Socialist International, but meanwhile a Third or Communist International was founded at Moscow in 1919 in close association with the Russian Soviet Government. A Fourth or Trotskyist International has recently (1938) come into existence.

International Justice, Permanent Court of, a body set up by the Treaty of Versailles to give opinions and judgments on questions referred to it relating to disputes on international law and the interpretation of treaties. It is permanently seated at the Hague, and consists of 16 principal and 4 deputy judges. It has up to 1938 given decisions in over 40 of various kinds.

International Labour Office,

an offshoot of the League of Nations for dealing with international labour statistics and similar matters, having its headquarters at Geneva.

International Law,

the body of rules in dealings between States, or governing the relations of a State to all outside it, whether other States or private persons not its own subjects. The chief subjects it deals with include the general principles governing belligerents and neutrals in their relations with each other; the nature of contraband and the right of visit and search; the rules of blockade (q.v.); the amicable settlement of disputes, whether by arbitration (q.v.), pacific blockade or other means; the "laws" of war, or, in other words, the conventions which purport to regularise warfare, as, for instance, by assigning limits to bombardment of open places, the use of gas or other forms of chemical warfare, the treatment of prisoners of war, disposal of prize, etc.; the immunities of a foreign sovereign or his diplomatic agents; foreign jurisdiction (see *Capitulations*); the validity of treaties; the definition of the territorial and non-territorial property of a State, and the status of aliens. These rules constitute what is generally known as Public International Law. By Private International Law is meant merely the "conflict of laws" of different States and the rules for settling such conflicts or differences in the adjudication of any private suit. The only sanction for a breach of international law is international opinion.

Intestacy, the state of affairs which follows upon the death of a person who has left no valid will. In England the rules of intestate succession are now to be found in the Administration of Estates Act, 1925—rules which apply indifferently to both real and personal estate.

The heir-at-law to real estate has now disappeared, and the old principle of primogeniture (q.v.) belongs to the past. Also the widow's first charge, formerly £500, is now £1,000; and further, both widow and widower, as the case may be, succeed to all the "personal chattels." In the first instance the property goes to the personal representatives, who, after settling debts and paying funeral expenses and costs of administration, hold the residue on trust for the beneficiaries in a prescribed order of succession.

If there is no issue alive to take a vested interest, the relict—i.e., widow or widower—gets the income for life. If there is issue, the widow (or widower) has one-half and the other half passes to the issue, a deceased child's share going to his (or her) issue. If there be no widow (or widower) the whole passes to the issue. If there be no issue and no relict, the father or mother or both equally (if alive) succeed to the property; if there be no issue or parents of the deceased, then brothers and sisters and collaterals take the estate in a prescribed order of succession.

Intestine, the portion of the digestive apparatus or alimentary canal below the stomach. It has three coats: an outer called the peritoneum (q.v.), an inner or mucous membrane, and an intermediate muscular coat. There are two intestines: the large extending from the end of the ileum to the anus, and about 6 ft. long; divided into the caecum, with its vermiform appendix the colon and the rectum; and the small, beginning at the pylorus and ending in the large intestine. In man the small intestine is some 20 ft. in length, and comprises the duodenum, jejunum and ileum. The greater part of the digestive and absorptive processes takes place in the intestines, the small intestine being covered with small projections called villi which accomplish this object.

Intuition, knowledge acquired without any intermediary deductive, inductive or analogous reasoning, whereby the mind perceives an immediately evident truth.

Intussusception, a displacement of a higher portion becomes folded or telescoped into a lower; is a frequent cause of obstruction, and a serious, though not always fatal, condition. The term is also applied to the process by which nutriment is absorbed and becomes part of the system.

Invar, an alloy of steel with 35 per cent. of nickel and a little manganese, used for making measuring rods and pendulum bars.

Invercargill, town of South I., New Zealand, capital of the Southland portion of Otago province, 17 m. N. of its port, Bluff Harbour. It is the centre of a farming district and has many industries. Pop. 26,000.

Inveresk, town in Midlothian, Scotland, near which the Battle of Pinkie was fought in 1547; it has paper mills. Pop. c. 21,000.

Invergordon, seaside resort and naval dockyard, with a coasting trade, in Ross-shire, Scotland, on Cromarty Firth; one of the chief British naval bases during the World War. Its castle, destroyed by fire, has been rebuilt. Pop. 1,400.

Inverness, county town of Inverness-shire, Scotland, and capital of the Northern Highlands, is situated on the Ness, near the Moray Firth, amid picturesque surroundings; important tourist and sporting centre. Pop. 22,500.

Inverness-shire, the largest county stretches from the Moray Firth to the Atlantic, and includes many islands, Skye, the Outer Hebrides (except Lewis), and others. It embraces a large part of the Highlands, is very mountainous, has many glens and lochs, but little fertile land. There are large deer forests, grouse moors and sheep runs. Ben Nevis, the highest mountain in the British Isles (4,406 ft.), is in the county. Area 4,156 sq. m. Pop. 82,082.

Invertebrates, a main division of the animal kingdom, covering all those animals having no spinal column, as compared with vertebrates. It includes protozoa, coelentera, echinoderma, worms, arthropods and molluscs.

Inverurie, burgh of Aberdeenshire, Scotland, 16 m. NW. of Aberdeen. It has large railway repair shops, makes paper and mineral waters, and is a centre of the cattle trade. Pop. 4,500.

Investiture, the symbolical ceremony by which a feudal overlord granted land to a vassal. The investiture of bishops, abbots and others by laymen led in the Middle Ages to a prolonged controversy between the Pope and secular rulers. It was settled in the Empire by the Concordat of Worms (1122) and in England and France compromises were finally effected.

Iodine, a non-metallic chemical element belonging to the halogen ("salt-forming") group, the other members of which are fluorine, chlorine, bromine and the still doubtful astatine. Symbol I, atomic number 53, atomic weight 126.92. It does not occur free in nature, but is widely distributed in the form of its compounds, particularly the iodides of sodium, potassium and magnesium (sea-water) and sodium iodate (an impurity in Chile saltpetre or sodium nitrate, large deposits of which are found in South America).

The body of a normal full-grown human being contains approximately 20 milligrammes of iodine, about half of which is present as the compound *thyroxin* in the thyroid gland.

U.E.

While much of this iodine is supplied to the body in certain foodstuffs (butter, milk, spinach, etc.), it seems likely that much is also absorbed in the lungs from the spores of microscopic plants floating in the atmosphere. Iodine is essential to health, its absence leading to such diseases as cretinism and goitre and perhaps favouring development of rheumatism; hence the common practice of adding small quantities of iodine compounds to table salt.

Iodine is a lustrous black solid, generally in the form of crystalline flakes or plates. It is only slightly soluble in water, but dissolves readily in alcohol, benzene, ether, chloroform, etc., and also in an aqueous solution of potassium iodide. Tincture of iodine, widely used as an efficient antiseptic, is a solution of iodine, potassium iodide, alcohol and water.

Iodoform, or tri-iodomethane, is a very characteristic and persistent odour. It was formerly widely used as an antiseptic, but has an irritant action on sensitive skin and is usually replaced nowadays by more powerfully antiseptic but less irritant substances.

Ion, the name given to an atom or molecule which has gained or lost one or more electrons; most salts on solution in water are broken up into ions with opposite charges, a phenomenon utilised in the process of electrolysis and electroplating, and in the electric battery.

Iona, a barren little island $1\frac{1}{2}$ m. W. of Mull, where St. Columba landed from Ireland A.D.

563, and built monastery which was for centuries the centre of ecclesiastical life and missionary enterprise among the Scots of Scotland and Ireland and the Angles of the N. of England. The abbey church, later the cathedral, dating from the 12th Century, has been restored and reopened for service. The island is $3\frac{1}{2}$ m. long and $1\frac{1}{2}$ broad. Pop. c. 250.

IONA CATHEDRAL

Ionian, ancient name of the western districts of Asia Minor between the Hermus and the Maeander, with adjacent islands; was colonised by Greeks about 1100 B.C., and its chief cities, including Miletus, Ephesus, Samos, Chios and later Smyrna, formed the Ionian League. The Ionians were noted for wealth, art and luxury. Coming under Persian yoke in 557 B.C. they deserted to Greece 479 B.C., and became again independent. From 387 B.C. they were again under Persia till Alexander the Great took them and merged their history in that of the surrounding peoples.

Ionian Islands, a chain of forty lying off the W. coast of Greece, the largest being Corfu, Santa Maura, Cephalonia and Zante. The climate is good, and there is much fertile soil in the valleys except in Cephalonia; corn, grapes and currants are grown; sulphur and coal are found in Corfu. Their history has been very chequered. After belonging at different times to Venice, France and Turkey, they were seized by Britain and constituted a dependency in 1815. Never satisfied with British rule, they were a source of constant friction which Gladstone's mission in 1858 was insufficient to allay, and were handed over to Greece in 1863. Total area 742 sq. m. Pop. 213,000.

Ionian Sea, the part of the Mediterranean, named between Greece and the S.E. coast of Italy, so named from the early settlements of Ionian Greeks on its western shores; it contains the Ionian Is. off the W. coast of Greece.

Ionic Order, an order of Grecian architecture, characterised by the volute of its capital in the form of a ram's horn, and with the cornice dentated, the shaft fluted, and the entablature plain or embellished.

Iowa, one of the United States of America, on the right bank of the Mississippi R., with Minnesota to the N. and Missouri to the S., and the Missouri R. on its western border; is well watered, very fertile, and, though liable to extremes of temperature, very healthy. Agriculture flourishes, the country being an undulating plain and most of the soil being arable. Cereals and root crops are raised, cattle bred. There are poultry and dairy farms. Coal, gypsum, stone and antimony are mined. Manufactures include mill products, canned meats and agricultural implements. General education in the State is advanced, State policy in this respect being liberal. Iowa was admitted to the Union, 1846; Des Moines is the capital; Iowa City is the seat of the State University and of some flour-mills and factories. Area 56,150 sq. m. Pop. 2,471,000.

IONIC COLUMN

Ipecacuanha, a drug prepared from the roots of a Brazilian plant (*Uragoga Ipecacuanha*) of the family Rubiacaceae; it is used as an emetic and to aid perspiration. It was for a time not unpopular as a semi-medicinal beverage among the poorer classes of Great Britain, being sold by itinerant vendors in street markets.

IPECACUANHA

Iphigenia, the daughter of Agamemnon and Clytemnestra. Her father having killed a favourite deer belonging to Artemis in Aulis as he was setting out for Troy, the goddess was offended, and Calchas (q.v.), when consulted, told him she could only be appeased by the sacrifice of his daughter. This he proceeded to do, but as he was preparing to offer her up the goddess descended in a cloud, carried her off to Tauris, and made her a priestess in her temple. The story has been dramatised by Euripides, Racine and Goethe.

Ipswich, county town of Suffolk, on the Orwell, 12 m. from the sea; of ancient foundation, and containing several old houses and buildings of interest, but a flourishing modern manufacturing town; was the birthplace of Cardinal Wolsey; manufactures agricultural implements, and exports besides these leather, oil, coke and agricultural produce. Pop. 88,000.

Iquique, important seaport in the N. of Chile, in Tarapaca province; exports nitrates, iodine and silver. Pop. 46,000.

Iran, official name for the country formerly known to Europeans as Persia, occupying the plateau 5,000 ft. high between the Persian Gulf on the S., the Caspian Sea and Turkestan on the N., Armenia on the W., and Afghanistan and Baluchistan on the E.; is three times as large as France. Lofly mountain ranges traverse it from NW. to SE., and gird its northern boundary; the highest peak is Mt. Demavend (18,500 ft.) in the Elburz, overlooking the Caspian. Most of the rivers peter out inland; only one, the Karun in the S., is navigable. The largest lake is Urumiyah, in the NW. The Eastern half of the country is largely desert; there is little rain, the climate being intensely hot in summer and cold in winter.

Wheat and barley are grown on the higher levels, and cotton, sugar and fruit on the lower, all with the help of irrigation. Agriculture is the main industry; cotton goods, carpets, shawls and porcelain are manufactured, and oil, fruits, wool, etc., exported. Roads and railways are now being rapidly and extensively constructed. The capital is Teheran, at the southern foot of the Elburz; other large towns are Tabriz, Shiraz, Meshed, Isfahan and Hamadan. The people are of Aryan stock, and Mohammedans by religion, though there are a number of Christians of several churches, Jews and Bahais.

The first Persian Empire was established by Cyrus in 537 B.C. Decay set in a century later, but a revival under the Parthian and Sassanid dynasties lasted from 138 B.C. until A.D. 639, when the country was conquered by the Mohammedan Arabs. From the 14th Century it was under Mongol, and from the 16th under Turkish, rule, a native dynasty later arising which maintained an absolute monarchy until 1906, when Shah Muzaffer-ud-Din granted a constitution. The years before the World War were marked by rivalry between Great Britain and Russia, both of whom established spheres of influence. During the World War Persia maintained a doubtful neutrality, but there was much activity of Russian and British troops against the Turks.

At the end of the war the British were dominant, but their influence was counterbalanced by a treaty (1920) between Persia and the U.S.S.R. The next few years were a period of successful developments, mainly owing to an American Financial Commission. In 1925 the Shah, Sultan Ahmed, was deposed by the National Assembly, and the Prime Minister, Riza Khan Pahlavi, who had established his authority throughout the country, was elected Shah. Persian foreign policy was divided between friendship with Great Britain and Russia, but in 1928 relations with the former were improved by a treaty abolishing capitulations. The same year Persia was made a member of the League of Nations. In 1931 a trade agreement with the U.S.S.R. was concluded, and renewed in 1935. On March 21st, 1935, the name of the country was changed to Iran. Area 630,000 sq. m. Pop. c. 16,000,000.

Iraq, or Mesopotamia, the area between the Rts. Euphrates and Tigris. Bordered by Kurdistan, Syria and the Persian Gulf. Area 120,000 sq. m. The population is c. 2,858,000 (Sunni Mohammedans, 1,030,000; Shiite Mohammedans, 1,613,000; Christians 111,000; Jews, 73,000; others, 31,000). Freed from Turkish rule during the World War, the country was mandated by the League of Nations to Great Britain; King Feisal (d. 1933) was appointed to rule in 1921; the monarch is assisted by a Senate and a democratically elected Chamber of Deputies. Baghdad is the capital and chief city. The raising of wheat, barley and cereals is the main occupation of the people, hampered until irrigation schemes are developed, and cotton could be extensively grown, while the annual production of oil has increased to nearly 4,000,000 tons. A 12-in. pipe-line runs from the oilfield at Kirkuk to Haditha, and then branches to Haifa (Palestine) and to Tripoli (Syria). El Qurnah, at the junction of the Tigris and Euphrates is the traditional site of the Garden of Eden. In 1930 a new treaty was made between Iraq and Great Britain by which Iraq was recognised as an independent sovereign State; it came into force after the admission of Iraq into the League of Nations in 1932. In April 1936 a treaty of alliance was signed with Saudi Arabia.

Irawadi, or Irrawaddy, a river, navigable throughout its whole course, formed by the union of two streams from the mountains of Tibet; flows S. through Burma

700 miles, passing Mandalay and falling into the Bay of Bengal in a delta, on one branch of which stands Rangoon.

Ireland, an island rather more than half the size of and lying to the west of England and Wales, from which it is divided by the North Channel (13 m. wide), the Irish Sea (140 m.), and the St. George's Channel (50 m.). Politically it is divided into Northern Ireland, set up in 1920, and Eire (q.v.), known until 1937 as the Irish Free State (q.v.), a self-governing State set up in 1922 and associated for certain purposes with the British Commonwealth; the former consists of Belfast, Antrim, Armagh, Down, Fermanagh, Londonderry and Tyrone, with Belfast as its capital. Dublin is the capital of Eire, which comprises the remainder of the island. Geographically Ireland consists of a large undulating plain in the centre, containing extensive bogs, several large loughs—Neagh, Erne, Allen, Derg, drained by the rivers Shannon, Barrow, Liffey and Boyne, and surrounded on almost all sides by maritime highlands, of which those on the SW., NW. and E. are the highest. The N. and W. coasts are rugged and much indented. The climate is milder, more equable, and somewhat more rainy than that of England; but the cereal and green crops are the same.

Flax is grown in the N. The tendency until recently was to revert to pasturage, but agriculture is now reviving, the land having become the property of the farmers. The chief manufacture is linen in Belfast and other Ulster towns. Irish exports consist of dairy produce, cattle and linen, and are chiefly to Great Britain. Primary education is largely supported by government grants; there are many excellent schools and colleges; the chief universities are Dublin and the National University of Ireland. In Ulster the Protestants slightly outnumber the Roman Catholics, in all other parts the Roman Catholics are in a vast majority.

Ireland was occupied by Iberian peoples in prehistoric times; these were conquered and absorbed by Celtic tribes; many kingdoms were set up, and strife and confusion prevailed. There was Christianity in the island before St. Patrick crossed from Strathclyde in the 5th Century. Invasions by Danes, 8th to 10th Centuries, and conquest by Normans under Henry II., 1162-1172, fomented the national disquiet. Under Tudor and Stuart rule the history of the country is a long story of faction and feud among the chiefs and nobles, of rebellions, expeditions, massacres and confiscations. Sympathy with the Stuarts brought on it the scourge of Cromwell (1649) and the invasion by William III.

Thereafter the penal laws excluded Roman Catholics from Parliament. The union of the Irish with the British Parliament took place in 1801. Catholic disabilities were removed 1829. An agitation for the repeal of the Union was begun in 1842 by Daniel O'Connell, and carried on by the Fenian movement of 1867 and the Home Rule movement led by Charles Parnell. A Home Rule Bill was lost in the Commons in 1886, and another in the Lords in 1893; Bills of 1912 and 1913 met a similar fate, but one was passed in 1914, though inoperative till after the World War, when owing to the attitude of the South it was not enforced. Civil war lasted till a treaty was signed establishing the Free State, Northern Ireland remaining part of the United Kingdom with Home Rule. Northern Ireland is governed by a governor, senate and House of Commons, and Eire by a president, a senate, and a lower chamber called the Dail (q.v.). The Church of Ireland (Protestant Episcopal) was disestablished in 1871.

Ireland, John, English musical composer, born in Cheshire; has written many songs, among them settings to A. E.

Housman's *Shropshire Lad*, sonatas, including *Mai-Dun* and a piano concerto. (1870-).

Irene, in Greek mythology, the Goddess of Peace, daughter of Zeus and Themis, corresponding to the Roman Pax.

Ireton, Henry, born at Altonborough, 1629, and studied law; on outbreak of Civil War, he joined the Parliamentarian party, and marrying Cromwell's daughter, Bridget, acquired great influence; took a leading part in the prosecution of the King, was one of his judges, and signed the warrant for his execution; kept by Cromwell in Ireland in 1650, he proved a stern deputy, and died of the plague before Limerick. (1611-1651).

Iridaceae, one of the large natural orders of Monocotyledonous plants recognised by botanists. These plants are classified as belonging to the Crocoidae (including the *Crocus* genus), the Iridoideae (including the *Iris* genus) and the Ixioloideae (including the *Gladiolus* sub-order). There are 67 genera in the order and some 800 species, found in tropical and temperate regions. They are for the most part herbs with underground tubers or rhizomes and with flag-like leaves.

Iridium, a metallic chemical element as osmium and platinum. Symbol Ir, atomic number 77, atomic weight 193.1. It is chiefly used in alloy with platinum to give the latter additional hardness.

Iris, in Greek mythology, goddess of the rainbow, and as such the messenger of the gods, particularly of Zeus and Hera; she is represented as dressed in a long, wide tunic, over which hangs a light upper garment, and with golden wings on her shoulders.

Iris, a genus of flowering plants of the natural order Iridaceae, popularly known as flags. There are some 200 species in the order, all found in Northern temperate regions, including two British species, the *Iris Pseudacorus*, the yellow flag, and *Iris fetidissima*, the gladdon. They are perennials, with broad, grass-shaped leaves, and six-leaved flowers, fertilised by bees, which rub off the pollen on the stigmas as they enter for the honey on the ovaries.

Iris, the contractile, coloured curtain suspended in the aqueous humour of the eye between the cornea and the lens. **PURPLE IRIS** It is acted upon by light, which, when bright, is indicated by the contraction of the pupil. The colour of the iris in man may be blue, brown or grey.

Irish Boundary Dispute, a dispute between Northern Ireland and the Irish Free State which arose after the setting up of the Free State. The treaty provided for a commission of three to fix the frontier between the countries, and as N. Ireland refused to appoint a representative, a special Act was passed appointing one for her. The commission met in 1924, and toured Ireland, but before its report was prepared a compromise was reached whereby the frontier remained unchanged.

Irish Free State (*Saorstát Éireann*), until 1937 the name of the State now called Eire (q.v.), a self-governing British dominion; following the proclamation of a Republic in Jan., 1919, a treaty between Great Britain and Ireland was signed on Dec. 6, 1921, setting up the Irish Free State as a British dominion on the Canadian model. A Provisional Parliament was set up in Jan., 1922, and a constitution was proclaimed on Dec. 6 of that year. By

this Constitution the Legislature (Oireachtas) consisted of the King, a Chamber of Deputies (Dáil Éireann) and a Senate (Seanad Éireann).

The Senate, however, was abolished by a constitutional amendment which became law in May, 1936. By the original Constitution the representative of the Crown was the Governor-General (Donald Buckley was appointed in 1932); but by an Amendment passed on Dec. 12, 1936, this office was abolished. In April 1933 a law abolished the Oath of Allegiance to the Constitution, originally prescribed for all Deputies.

De Valera, from 1933 President of the Executive Council, pursued a policy aiming at independence of Great Britain and economic self-sufficiency. This caused a tariff war, following the Government's refusal to pay the United Kingdom the land annuities, being interest on the land stock created under various Land Purchase Acts. In 1935 a Bill was passed purporting (but probably without effect) to abolish the title of "British Subject" for citizens of the Irish Free State, and in 1937 a new constitution came into force, by which the name of the State was changed to Eire and the British connection was weakened, though, following the London Agreement of 1938, relations greatly improved.

Irish Sea, a sea between Ireland and with the Atlantic on the N. by the North Channel and on the S. by St. George's Channel. It contains the isles of Man, Anglesey and a few smaller islands. It has a mean depth of 210 ft., and its greatest measurements are 150 m. E. to W. and 110 m. N. to S.

Irish Terrier,

a rough-coated terrier, kept as a companion by man, first bred about 1870. The head is somewhat long and narrow, fore-legs straight, chest narrow, long, curved tail, commonly cut, coat brown to reddish-brown, weight from 16 to 24 lb.

IRISH TERRIER

Irish Wolfhound, a large dog in Ireland for hunting wolves before they were exterminated, a breed which is now extinct, but attempts to revive which have been made. The modern breed so called is a dog more massive than the deerhound, with long, pointed muzzle, long neck, back and tail, and standing 31 in. high.

Irkutsk, district in the U.S.S.R., in central Siberia, separated from China by the Sayan Mts.; it has Lake Baikal on the E., Yenisei and Yakutsk on the W. and N.; a rich pastoral country, watered by the navigable rivers Angara and Lena; agriculture and cattle rearing are prosperous industries; there are gold, iron and salt mines; pop. about 850,000. The capital, Irkutsk, has a university; it is the finest city in Siberia. Pop. 160,000.

Iron, a metallic chemical element belonging to the same group as cobalt and nickel; symbol Fe, atomic number 26, atomic weight 55.84. Iron was known to the ancient world, and probably the first samples of it to be examined were of meteoric origin; meteors often consist of iron with smaller quantities of nickel, and the Egyptian, Hebrew and Assyrian names for the metal all signify "the metal of heaven," thus indicating the celestial origin of the earliest known specimens. The working of iron ore appears to have been an Asiatic discovery, but was first practised upon a large scale in ancient Egypt.

Iron, Rusting of. In order to protect iron from rusting it may be painted, or heated in steam: the latter operation results in the formation of a protective film of magnetic oxide of iron over the surface of the metal. Rustless steel is an alloy of steel with about 13 per cent. of chromium; it compares unfavourably with ordinary steel in its capacity for receiving a cutting edge.

Iron, Smelting of. In medieval England iron-smelting was carried out by means of charcoal, and was therefore located near forests—e.g., the Forest of Dean and the Weald—but with the introduction of coal the industry was transferred to the neighbourhood of the coalfields. The amount of native (meteoric) iron is negligible; most of the metal occurs as iron pyrites, and as oxides (magnetic oxide or magnetite; ferric oxide or hematite; hydrated ferric oxide, limonite and the similar bog iron ores) or carbonate (ferrous carbonate or spathic iron; ores—sometimes mixed with clay and then called clay ironstone).

Owing to the difficulty of freeing the resulting metal completely from sulphur, the presence of which seriously detracts from the useful properties of steel, iron pyrites is not normally used as a source of iron, though it is of great importance as the starting material in the manufacture of sulphuric acid, and iron is then extracted from the spent pyrites. All the other minerals mentioned above, however, are employed as sources of iron, the richest ore being magnetite, which contains over 72 per cent. of the metal.

The ores are roasted, to remove moisture (and carbon dioxide, if a carbonate ore is being used), and then reduced by smelting with hard coke or anthracite in a blast furnace. This consists of a steel tower, generally about 70-80 ft. high, and lined with fire-resisting bricks, and is charged through a cup-and-cone hopper at the top. A blast of air, pre-heated to about 800° C., is blown up through the furnace from pipes (twyers or tuyères) at the bottom, and the coke or coal is oxidised to carbon monoxide. This reduces the iron oxide to iron, and is itself converted into carbon dioxide. The limestone at the same time is split up by the heat into quicklime and carbon dioxide, and the lime combines with silica, clay or other impurities in the ore to form a fusible slag; this and the molten iron flow to the bottom of the furnace, where they collect in a deep hearth. The molten slag is lighter than the iron, and therefore floats upon it; it is tapped off from time to time through the "slag-notch," and the fused iron is run out through another hole into sand-moulds.

Iron Age, the last of the three stazas, stone, bronze, iron, which mark the prehistoric development of most now civilised peoples. These occurred at different periods, and were of different duration in different areas. They are named from the material employed in making cutting instruments and weapons; the forms of instruments are freer than in the bronze period, and rectilinear gives place to free curvilinear decoration. This age is marked, too, by the introduction of writing and the beginning of literary and historic records.

Ironclads, were originally wooden plates, the last of the three stazas, which mark the prehistoric development of most now civilised peoples. These occurred at different periods, and were of different duration in different areas. They are named from the material employed in making cutting instruments and weapons; the forms of instruments are freer than in the bronze period, and rectilinear gives place to free curvilinear decoration. This age is marked, too, by the introduction of writing and the beginning of literary and historic records.

Ironclads, were originally wooden plates. They were used at the siege of Gibraltar in 1782; the French had them in the Crimean War, and in 1858 built four iron-plated line-of-battle ships. In 1860 England built the *Warrior*, an iron steam battleship with 4½-inch plates; since then new types have succeeded each other very quickly. The modern ironclad is built of steel and armed with steel plates sometimes 18 in. thick and the term is now loosely applied to all armoured vessels, whether battleships or cruisers.

Iron Cross, a Prussian military and civil decoration instituted in 1813 by Frederick-William III., for service in the War of Liberation. It consists of a Maltese cross of iron edged with silver. The order was revived at the time of the Franco-Prussian War, 1870, and many were awarded in the World War, 1914-1918.

Iron Mask, the, a prisoner who in the reign of Louis XIV. wore, when he was transferred from prison to prison, an iron mask to prevent any one discovering and revealing his identity. While alleged by some to have been of Royal descent (as in Dumas's romance), many investigators place him as one Muthiholl, an Italian diplomatic agent who offended the French king Louis; but the question has never been definitely settled.

Ironside, Sir William Edmund, British general; fought in the S. African War and on the Eastern front in the World War; commanded the Allied troops in Murmansk in 1918; served as commander and quartermaster-general in India from 1928 to 1931 and 1933 to 1936; Commander in Chief of the Eastern Command from 1936. (1880-).

Ironsides, Cromwell's troopers, a thousand strong, raised by him in the Eastern counties of England, so called at first from the invincibility displayed by them at Marston Moor; were selected by Cromwell "as men," he said, "that had the fear of God before them, and made conscience of what they did."

Irony, is a subtle figure of speech in which, while one thing is said, some indication serves to show that quite the opposite is meant. Thus apparent praise becomes severe condemnation or ridicule.

Iroquois, branches of the North American Indians comprised a confederation of five, afterwards six, tribes, among whom the leading place was taken by the Mohawks; their territory lay inland in what is now New York State and the basin of the St. Lawrence. Numbering some 25,000, they maintained their own against the hereditary foes by whom they were surrounded; they took kindly to English and Dutch settlers, but were hostile to the French, and in the wars of the 18th Century were allies of England against the French. Their descendants, in reservations in Canada and New York, are a peaceful people, have accepted European religion and culture, and have proved themselves skilful and industrious agriculturists.

Irrigation, the artificial application of water to the land for the purpose of increasing its fertility. This may be achieved by feeding from a river a reservoir constructed with gates and channels leading to areas of insufficient or irregular rainfall, or by constructing canals leading direct from rivers. Irrigation systems are largely developed in Egypt, India, the United States of America and Australia. The practice of irrigating land is one of great antiquity, and probably took its rise in the Nile region several thousands of years B.C.

Irving, Edward, ecclesiastic, born in Annan, Dumfriesshire; trained for the Scottish Church, became in 1819 assistant to Dr. Chalmers in Glasgow, and removed in 1832 to the Caledonian Church, London, where he attracted fashionable and intelligent audiences; but the views he developed brought him into conflict with the authorities of his Church, and he was deposed

from the ministry, after which he instituted, with Henry Drummond, the sect known as the Catholic Apostolic Church or Irvingites, remarkable for their highly developed ritual and ministry. The body still exists, but is rapidly dwindling. (1792-1834).

Irving, Sir Henry (John Henry Brodribb), English actor, born near Glastonbury; was at first a clerk in London, appeared on the Sunderland stage in 1856, spent three years in Edinburgh, and gradually worked his way at Glasgow and Manchester, till he was invited to London ten years afterwards. His performance of Hamlet at the Lyceum in 1874 established his reputation as a tragedian. He remained at the head of his profession, and both in this country and in America secured many triumphs as Macbeth, Shylock and other Shakespearean characters, and in rôles like those of Matthias in *The Bells*, Monstrophos in *Paula*, etc. He contributed to the literature of acting, and received a knighthood in 1895. (1838-1905).

SIR HENRY
IRVING

Irving, Washington, popular American essayist and historian, born of British parentage in New York; travelled in Europe, 1804-1806; returning to New York he was called to the Bar, but he devoted himself to a literary career. He first won fame by his *History of New York*, by Diedrich Knickerbocker, 1809, a good-natured satire on the Dutch settlers. The years 1815-1832 he spent in Europe studying and writing. His *Sketch-Book*, 1819-1820, was very successful, as were *Bracebridge Hall*, *Tales of a Traveller*, and other volumes which followed it. Going to Spain in 1826 he began his researches in Spanish history which resulted in *The Life of Columbus* and *The Conquest of Granada*. Among his latest works were *Mahomet and his Successors* and a *Life of Washington*. (1783-1859).

Irvingites. See Irving, Edward.

Isaac, a Hebrew patriarch, son of Abraham, born to him when he was old; a mild man with no great force of character, and a contrast to Ishmael, his half-brother; lived to a great age.

Isaacs, Rt. Hon. Sir Isaac Alfred, Australian lawyer and statesman, was born and educated at Melbourne, and became a barrister in 1880 and Q.C. in 1890. He was Solicitor-General of Victoria in 1893 and Attorney-General in 1894; entered the Commonwealth Parliament in 1901, becoming Attorney-General in 1905. In 1906 he was made a Judge of the High Court, and in 1930 Chief Justice of Australia, and from 1931 to 1936 was Governor-General. Knighted, 1928. (1855-).

Isabella, queen of Castile; her marriage to the union under one sceptre of the crowns of Aragon and Castile, which was followed 10 years after by their united occupancy of the throne of all Spain. She was an able woman, and associated with her husband in every affair of State (1461-1504).

Isaiah, one of the great Hebrew prophets, the son of one Amoz; was a citizen of Jerusalem, evidently of some standing, who lived between 750 and 700 B.C.; legend has it that he met his death by being sawn asunder in the reign of King Manasseh. The Biblical book which bears his name is now generally recognised to be a composite work, Chapters i-xxxix dating from before the Exile, and possibly recording the prophecies of the real Isaiah, the remainder, from Chapter xi

onwards, being post-exilic; this part, now usually called "Second Isaiah," or Deutero-Isaiah, is itself probably not the work of a single author or period. An apocryphal book known as the *Ascension of Isaiah* relates the story of his alleged martyrdom and of visions connected with it.

Isandula, or *Isandwana*, a hilly place a force of British troops, belonging to Lord Chelmsford's column, was encamped on January 22, 1879, and was set upon and almost annihilated by a body of Zulus.

Isère, a river in the SE. of France, which after a course of 180 m., falls into the Rhône near Valence. It gives its name to a department. Area 3,178 sq. m. Pop. 572,700. Chief town, Grenoble.

Isfahan (*Isfahan*), the ancient capital of Iran (Persia), 226 m. S. of Teheran, on the R. Zanderud, which is spanned by a noble bridge of 34 arches; it stands in a fertile plain abounding in groves and orchids, amid ruins of its former grandeur; it is an important commercial centre, and produces rich brocades and velvets, fire-arms, sword-blades and much ornamental ware. Pop. c. 100,000.

Ishmael, the son of Abraham and the handmaid Hagar, cast out of Abraham's household at 15. He became skillful with the bow, and founded a great nation, the Arabs. For the offering of Isaac on Moriah the Arabs substitute the offering of Ishmael on Arafat, near Mecca. Mohammed claimed descent from him. He gives name in modern life to a social outcast driven into antagonism to social arrangements.

Ishtar, or *Istar*. See *Astarte*.

Isinglass, a gelatinous substance prepared from the sounds or air-bladders of certain fresh-water fishes, the sturgeon in particular; it is imported from Russia, Brazil and Canada.

Isis, an Egyptian divinity, the wife and sister of Osiris and mother of Horus, the three together forming a triad, which is characteristically Egyptian, and such as often repeats itself in Egyptian mythology, typifying the life of the sun. Osiris representing that luminous slain at night and sorrowed over by his sister Isis, reviving in the morning in his son Horus, and wedded anew to his sister Isis as his wife; the worship of Isis was extensively adopted by both Greeks and Romans.

Isis, name given to the upper reaches of the R. Thames above Oxford.

Islam, or *Islamism*, the religion of Mohammed, hammed (*q.v.*).

Islay, a large, mountainous island 13 m. W. of Kintyre, Scotland; much of it is cultivated; dairy produce, cattle and sheep are exported; there are lead, copper and manganese mines, marble quarries, salmon fisheries and distilleries. Pop. 6,000.

Isleworth, a part of the borough of Heston and Isleworth, Middlesex, England, 12 m. SW. of London, on the Thames. Soap is made, and there are breweries and market and nursery gardens. Syon House, formerly a famous Bridgettine convent, and later a seat of the Duke of Northumberland, is here.

Islington, a borough of London, 2 m. N. of St. Paul's; includes Holloway, Highbury, Barnsbury and Canonbury. Pop. 308,000.

Ismailia, a town in Egypt on the Suez Canal; was the headquarters of the work during the construction of the Canal. Pop. c. 15,000.

Ismailis, a Shiite Mohammedan sect, who maintained that the succession to the Prophet was vested in a line of *Imams*, or leaders, tracing through Moham-

med's son-in-law Ali, to be perfected in the future in a "hidden Imam" or "Mahdi" (*q.v.*).

Ismail Pasha, Khedive of Egypt from 1863, who was obliged by the Powers to abdicate in 1879. (1830-1895).

Isobars, lines on a map joining up all those points where the barometric pressure is the same.

Isocrates, an Athenian rhetorician, a first philosopher and speech-writer, later a teacher of oratory; he is said to have starved himself to death after the Battle of Chaeronea at the age of 98 because he could not bear to outlive the humiliation of Greece by Philip of Macedon and the destruction of its freedom. (436-338 B.C.).

Isomerism, the phenomenon of the existence of two or more chemical compounds whose molecules consist of the same number of similar atoms; the difference between such compounds or isomers being due to different arrangements of the atoms within the molecules. Thus the molecules of ordinary (ethyl) alcohol and dimethyl ether both consist of two atoms of carbon, six of hydrogen and one of oxygen though the arrangement of the atoms in the molecules of the two is different.

Isomorphism, similarity of form between the crystals of different chemical substances.

Isonzo, a river of Italy, rising at Monte Terzoun in the Julian Alps and flowing 78 m. to the Gulf of Trieste. Before the World War it was in Austrian territory. It was the scene of Italian victories under General Cadorna in 1915, and again in 1916; but at Caporetto in Oct.-Nov. 1917 the Italians sustained a crushing defeat, and General Diaz superseded Cadorna.

Isotherms, lines drawn on a map joining up all those places where the temperature is the same.

Isotopes, chemical elements which, although their atomic weights differ, have identical chemical properties; a state of things resulting from a variation in the number of neutrons present in the atomic nucleus. Naturally occurring forms of the elements are generally mixtures of isotopes; thus ordinary hydrogen consists of a mixture of three isotopes with atomic weights 1, 2, and 3 respectively.

Isotropic Substances, those which have the same properties in all directions, particularly with respect to elastic and optical properties. Substances which have different properties in different directions (*e.g.*, crystals) are known as *anisotropic* or *anisotropic*.

Israel, Kingdom of, the name given to the northern kingdom set up by the ten Israelite tribes which revolted from the kingdom of Judah after the death of Solomon.

Issus, a river in Cilicia, Asia Minor, where Alexander the Great defeated Darius, 333 B.C.

Istanbul, or *Constantinople*, former capital of the Turkish Empire, on the Bosphorus, situated on a peninsula washed by the Sea of Marmora on the

quarters of Galata and Pera, one of the finest commercial sites in the world. In 1923 Angora replaced it as the capital of Turkey.

Istanbul is renowned for its mosques, chief among them being St. Sophia, built as the Christian cathedral. Under the régime of

ST. SOPHIA

Kemal Ataturk the city has been considerably modernised. Nationalism is strong, but there is a large foreign population. The Golden Horn is almost exclusively populated with Europeans, and there are several thousand Jews, mostly descended from those exiled from Spain by Ferdinand V. The large Greek population, still flourishing despite the expulsion of Greeks in 1922, is controlled by the Greek Patriarch. The Central European railway system reaches Istanbul from Paris, via Belgrade and Sofia. Pop. 742,000. See also *Constantinople*.

Isthmian Games, one of the four Pan-Hellenic festivals; they were periodically celebrated in honour of Poseidon at the isthmus of Corinth, in Greece, whence the name.

Istria, peninsula at the NE. of the Adriatic Sea, formerly part of the Austrian Empire, since the World War incorporated in Italy as part of the province of Venezia Giulia; the population is mixed, Italian and Slav; chief towns, Trieste and Pola; yields olive-oil, figs and vines.

Italian Architecture. The style of architecture called Italian was first developed by Filippo Brunelleschi, and flourished during the 15th, 16th and 17th Centuries; it was an adaptation of classical circular-arch form to modern requirements. In Rome it conformed most to ancient types; in Venice it assumed its most graceful form. It was more suitable to domestic than to ecclesiastical work; but the dome is an impressive feature, and its noblest monument is St. Peter's at Rome.

Italian East Africa, name officially given by Italy in 1936, after the Italo-Ethiopian War, to the territories occupied by Italy in East Africa; they comprise the former colonies of Eritrea and Italian Somaliland, and are divided into five provinces, Eritrea, Amhara, Galla, Harrar and Somalia, the capital, Addis Ababa, being a separate district not included in any province. The people are Abyssinians, Gallas, Somalis and other negroes; they are mainly Christians and Mohammedans, but there are some pagans. The total area is estimated at 660,000 sq. m., and the pop. at 7,600,000.

Italic, a printing type of Italian origin first founded about 1500 by Aldus Manutius, a printer of Venice. The type slopes from the right downwards, though the capitals remained upright until the slope was introduced by the French. Italics are mostly used to give emphasis or to mark some other distinction.

Italy, the central peninsula of the three which jut into the Mediterranean Sea on the S. of Europe, has the Adriatic and Tyrrhenian Seas on the E. and W. respectively, and is separated from France, Switzerland and Austria in the N. by various ranges of the Alps. Between the Alps and the Apennines lies the extensive fertile plain of Lombardy, watered by the R. Po, and containing several large lakes, such as Garda, Como and Maggiore.

The Apennines form a picturesque chain of mountains 5,000 ft. high down the centre of the country. The climate varies in different districts, but is mostly warm. Agriculture is extensive, but in many parts not highly developed in its methods, and the peasantry are poor. The most important crops are cereals, including rice and maize, grapes, olives and chestnuts, and in the S. oranges and lemons. Italian wines are inferior to French in quality.

Coal and iron are scarce; sulphur is produced in large quantities in Sicily. There are large quarries of marble and alabaster. The most important industries are silk, metal-working, glass and porcelain. There is an extensive foreign trade, chiefly with France

and Great Britain; the exports consist of silk, sulphur, marble, fruit and wine; the imports of coal, iron and textile goods. The religion is Roman Catholic; education is now compulsory.

The Gothic kingdom of Italy was founded on the ruins of the Roman Empire, A.D. 489. In succession the country was conquered by the forces of the Byzantine Empire, the Lombards and the Franks. From the 11th Century onwards its history has been one of constant internal strife and confusion. The presence of the papal power in Rome, the rise of such rich trading republics as the cities of Milan, Florence, Naples, Genoa and Venice, the pretensions of French kings and German emperors, and factions like those of the Guelphs and Ghibellines, produced endless complications and ruinous wars.

In the 16th Century the influence of the Austro-Spanish house of Charles V. became dominant; his son, Philip II., was King of Milan and Naples. In more recent times the small states of Italy were continually involved in the wars which devastated Europe, and passed in alliance or in subordination into the hands of Austria, France and Spain alternately.

The 19th Century saw the unification of the kingdom. After the abortive movement of Mazzini came Cavour and Garibaldi, who, after severe struggles against the Austrians in the N. and the despots of Southern Italy, proclaimed Victor Emmanuel King of Italy in 1861. By various steps the whole of the peninsula, with the islands of Sardinia and Sicily, was brought into the kingdom. The temporal power of the Pope ended in 1870, though restored in a modified form in 1929.

The Government is a constitutional monarchy, though after 1922 power was vested in the Fascist under Mussolini (q.v.), who has since ruled autocratically, though nominally the franchise is exercised by every citizen who can read and write. Conscription is in force for army and navy. These are both strong, the navy being one of the largest in Europe.

Fascist policy has been to create a centralised Nationalist State and to increase the country's economic power by reviving industry, which was reorganised into national syndicates (1926). Frontier difficulties, notably that of Fiume, were surmounted; the friction that existed between France and Italy in 1924 and 1925 gave way to a gradual rapprochement though this was overlaid in 1937-1938; and Italian efforts towards European stability were by 1930 strengthened by various trade agreements.

Italy also signed the Locarno Treaty, and her position in Europe, apparently stabilised by the Three-Power Conference at Stresa with Great Britain and France in 1935, was radically altered by an aggressive policy towards Abyssinia. Following a frontier dispute, Mussolini's declared intention was to annex the country; by May 1936 Italy was in nominal possession, and the King of Italy was proclaimed Emperor of Abyssinia.

The Abyssinian War had not so impoverished Italy that she was unable to maintain her position as a strong Mediterranean Power, although Italian aims were delimited in the Anglo-Italian Mediterranean Agreement (1937). Italy's adherence to the anti-Komintern Pact, however, and her support of General Franco in the Spanish Civil War, brought about a close link with Germany.

The area of Italy is 119,720 sq. m. The 94 provinces are grouped into 19 Departments. The population is 43,580,000.

Itch Mite (*Sarcoptes scabiei*), tiny species of Arachnida, the female being about one-fiftieth of an inch long, and the male smaller. It lives on the skin into which the female burrows to lay her eggs causing in man the infectious skin disease

called "scabies" or "itch." It is usually contracted by sleeping in an infected bed, and affects uncleanly people more than cleanly.

Ithaca, one of the smallest of the Ionian Islands, known now under the name Thiaki; it was the home of Ulysses, and his domain as king when he set out for the Trojan War. Also a town in New York State, U.S.A., seat of Cornell University (q.v.). Pop. 21,000.

Ivan III., Russian Czar, surnamed The Terrible, Threatening, sought to free Russia from the yoke of the Tartars who had held it tributary for two centuries; gained victories over the Tartars and the Poles, and was the first to receive at Moscow ambassadors from other Powers of Europe; reigned from 1462 to 1505.

Ivan IV., Russian Czar, surnamed the Terrible, grandson of the preceding, assumed the sovereignty at 14, had himself crowned in 1545; overthrew the Tartars at Kazan and Astrakhan, receiving homage thereafter from almost all the Tartar chiefs. On the death of his wife in 1563 he lost all self-restraint, and entered on several ferociously fought wars. In a fit of passion he killed his eldest son, whom he loved, remorse for which embittered his last days and hastened his end. (1530-1581).

Iviza, Is., is hilly and well wooded, with fertile valleys, important fisheries and lead mines.

Ivory, the hard substance of which the tusk of the elephant consists; that of the African elephant is whitest, and therefore most valued. The tusk continues to grow during the whole lifetime of the animal, and sometimes reaches a weight of 200 lb. Ivory has from the earliest times been esteemed as a material both for constructional and ornamental purposes.

Ivory Coast, French colony in Africa, to the N. of the Gulf of Guinea, between Liberia and the Gold Coast; occupied by France from 1882; produces cocoa, cotton, rubber and timber; capital, Abidjan. Area 184,200 sq. m. Pop. 3,850,000.

Ivry, a village in France, in the dept. of Eure, N.E. of Dreux, famous for the victory of Henry of Navarre over the League in 1590.

Ivy (*Hedera Helix*), plant of the order Araliaceae, having smooth, shiny leaves, lobed on the climbing shoots but not on the inflorescence shoots, and bearing small green flowers which are followed by dark green berries. It is a root-climber. Ivy attains a great age. It is native of Europe, and of parts of Asia and Africa.

IVY
(flowering
shoot)

Ixion, in Greek mythology the King of the Lapithae, who being admitted to heaven attempted to do violence to Hera, and whom Zeus deluded to embrace a phantom image of her instead, whereby he became the father of the Centaurs. Zeus thereafter punished him by fastening him to an eternally revolving wheel in hell.

Izmir, city in Turkey, on the Aegean, a great trade depot and Turkish naval base; formerly known as Smyrna, an important port since classical times; with its hinterland was awarded to Greece after the World War, but recaptured by the Turks in 1922, being then largely destroyed by fire; an earthquake did great damage in 1928. Pop. 171,000 (vilayet 597,000).

J

Jabiru, a genus of storks found in Central Australia and Africa. They are handsome birds. The Black-necked Jabiru stands up to 5 ft. high and has white plumage with black head and neck.

Jaborandi, a drug prepared from the leaves of a Brazilian shrub, *Pilocarpus pennatifolius*, of the natural order Rutaceae; used in the treatment of Bright's disease.

Jacamar, the name of a family of birds (the Galbulidae) nesting in the banks of streams in Central and South America, and resembling Bee-eaters in appearance, but Puff-birds in habits. The plumage is usually brilliant and metallic, and the bill sharp, straight and slender except in the Great Jacamar (*Jacamerops grandis*), which has a curved bill. There are about 20 species in the family.

Jacana, the name of a family of birds (the Pardiidae), allied to the Plovers, but not unlike Rails in appearance. They have long toes and claws and widely-spreading feet, enabling them to walk on the leaves of water plants (water-lilies, etc.). They have a spur on the wings, which in some species is long and sharp. They are found in Australia (*Jacana gallinacea*),

South America (*Jacana jacana*), Africa (*Micropterus capensis*, the smallest species), and in India and the East (the Pheasant-tailed Jacana, *Hydrophasianus chirurgus*, the largest species).

Jacaranda, a genus of trees of the order Bignoniaceae, native to the northern parts of South America, whose fragrant wood, commercially known as rose-wood, is used for cabinet-making and veneering.

J'accuse (I accuse), title of an open letter by Zola (q.v.) to the French President, in 1898, on the Dreyfus Affair (q.v.); also title of a book published in 1915 in Switzerland by Richard Grelling, accusing Germany of responsibility for the World War.

Jack, a familiar form of John, the most likely to be derived from the French Jacques, or from Jankia, a distinctive form of Johan or John; Johnkin gives us Jock and Jockey; from its very common use it has acquired that slightly contemptuous significance observable in such compounds as "every man Jack," "Jack-of-all-trades," "Jackanapes"; and the name as applied to the knife in playing-cards, and to the small white ball used as a mark in the game of bowls is an example of its transferred sense.

Jackal, the name of certain species of wild dog, much resembling the wolf and fox, having bushy tail, and back of yellowish-grey toning lighter under belly. It is carnivorous, 2 or 3 ft. in length and will interbreed with the common dog. It hunts in packs and has a dismal cry. Jackals inhabit Southern Asia, Africa and Eastern Europe.

JACKAL

Jackdaw (*Corvus monedula*), a species of small crow, found in all parts of the Old World. It is of black plumage, with a bluish reflection, particularly on the wings. It commonly builds in turrets, and will imitate well the sounds of words, and is sometimes tamed as a domestic pet.

Jackson, (1) a prosperous manufacturing city in Michigan, U.S.A., on the Grand R., 76 m. W. of Detroit; has various mills and iron-works and bituminous coal-mines on its outskirts. Pop. 55,000. (2) Capital of Mississippi State, U.S.A., 42 m. E. of Vicksburg; trades in machinery and cottonseed oil. Pop. 48,000.

Jackson, Andrew, seventh President of the United States, born in Waxhaw, N. Carolina; in 1788 became public prosecutor at Nashville; took a prominent part in establishing the State of Tennessee. During the war with Britain (1812-1814) he crowned a series of successes by his great victory over Sir E. Pakenham at New Orleans. For a time he was Governor of the State of Florida, but, resigning, he entered the U.S. Senate in 1823. Five years later he became President, and in 1832 was again elected. His Presidency is associated with the readjustment of the tariff on a purely protective basis, the sweeping away of the United States Bank, the wiping out of the national debt in 1835, and the enforcement of claims against the French for damage done during the Napoleonic wars. He made a more frequent use of the President's veto than any of his predecessors. (1767-1845).

Jackson, Sir Barry Vincent, theatrical manager, born in Birmingham; founder (1913) and director of the Birmingham Repertory Theatre, which has produced over 400 plays, old and new; knighted 1925; has written children's plays, and translated Gheon's *St. Bernard*. (1879-).

Jackson, John ("Gentlemen Jackson"), pugilist, was the son of a London builder; had only three fights; beat Fewterel, near Croydon, 1788, in presence of Prince of Wales, defeated by Ingleson at Ingatestone, 1789, through breaking bones in a fall; beat Mendoza at Hornchurch 1793; Champion of England, till retirement in 1803. (1769-1845).

Jackson, Thomas Jonathan, known as Stonewall Jackson, an American general, born in Virginia; distinguished himself in the Mexican War; retired from the army in 1863, and became a professor in Mathematics and Military Science in Virginia; was appointed brigadier-general in the Confederate army at the outbreak of the Civil War; and earned the *nom de guerre* of "Stonewall" by his firmness at the Battle of Bull Run, July 21, 1861; was by mistake fired at and mortally wounded by his own men on May 6, 1863. (1824-1863).

Jacksonville, (1) the chief seat of commerce in Florida State, is situated on St. John's R., some 20 m. from its mouth; is a busy railway centre, and has an active river trade in lumber, cotton, fruits, etc., and is a health resort. Pop. 146,000. (2) Capital of Morgan County,

Illinois, is pleasantly situated on a fertile plain, 34 m. SW. of Springfield; is noted as an educational centre, and for its many charity asylums; its manufactures embrace woollens and paper. Pop. 18,000.

Jacob, a Hebrew patriarch, younger son of Isaac and Rebecca; he had twelve sons, the fathers of the twelve tribes of Israel; the story of his life is told in the book of Genesis.

Jacobean, a term applied generally to architecture and furniture of the reigns of the first four Stuarts (1603-1688), though it should in strictness apply only to that of James I. Jacobean furniture is generally in heavy oak, skilfully carved. Panelling is characteristic of the interior of the typical Jacobean house.

Jacobins, a political club, originally known as the Club Breton, founded in Paris during the French Revolution; so called from its place of meeting in the Rue St. Honoré, previously a Jacobin convent; it exercised a great influence over the course of the revolution, and had affiliated societies all over the country working along with it; its members were men of extreme revolutionary views, who procured the death of the King, exterminated the Girondists, roused the lowest classes against the middle, and were the ruling spirits during the Reign of Terror; Robespierre was their chief, and his fall sealed their doom.

Jacobites, the name given to the adherents of the Stuart dynasty in Great Britain after their expulsion from the throne in 1688, and derived from that of James II., the last Stuart king. They made two great attempts to restore the exiled dynasty, in 1715 and 1745, but both were unsuccessful, and the movement gradually died away.

Jacobs, Helen Hull, American champion lawn-tennis player, born in Arizona, U.S.A.; world singles champion, 1936; captain of winning American Wightman Cup team, 1936 and 1937. (1909-).

Jacobs, William Wymark, author, born in London; held a post in Savings-bank department of the Post Office, but retired in 1899 to devote himself to authorship. After publishing a volume of short stories entitled *Many Cargoes*, he made his name as a humorist, following up his success with *Sea Urchins*, *The Skipper's Wooing*, *A Master of Craft*, and other volumes of ser. life. One or two of his stories have been dramatised. (1863-).

Jacobus, a gold coin of the reign of James I., worth 25 shillings.

Jacquard Loom, a loom with an apparatus for weaving figures in textiles, such as silks, muslins and carpets, invented by a Frenchman, born in Lyons, named Joseph Marie Jacquard. (1752-1834).

Jacquerie, the name given to an insurrection of French peasants against the nobles in the Ile de France (the Paris district), which broke out on May 21, 1358, during the absence of King John as a prisoner in England. It was caused by the oppressive exactions of the nobles, and was accompanied by much savagery and violence, but the nobles combined against the revolt, and it was extinguished on June 9 following.

Jactitation, an action at law to set aside, as a false pretension or claim on the part of one person that he or she is married to another, made with malicious intention. An action may be brought by the party aggrieved, and silence enjoined on the offender.

Jade, a mineral of the pyroxene group, containing sodium, of a pale green, yellowish or white colour. It is found in New Zealand, Siberia and especially in China,

where it is worked up into various objects of art and ornament, often of extreme beauty of workmanship, which are known as jades.

Jael, the Jewish matron who according to the Biblical book of Judges, slew Sisera, the Canaanitish captain, smiting a nail into his temples as he lay asleep in her tent.

Jaen, a picturesque cathedral city, capital of a province of the same name in Andalusia, Spain, on a tributary of the Guadalquivir, 50 m. NW. of Granada. Pop. 43,000. The province (Area 5,200 sq. m. Pop. 710,500) lies along the valley of the Guadalquivir, and was once a Moorish kingdom.

Jaffa, seaport in Palestine, 30 m. NW. of Jerusalem, with an export trade in olive-oil, oranges, soap and wool; the Joppa of the Bible. The town is being rapidly developed, under the British Mandatory régime, by Jewish settlers, and has been almost entirely rebuilt in recent years.

Jagersfontein, town of Orange Free State, 67 m. SW. of Bloemfontein. Here are important diamond-mines. Pop. 4,000.

Jagger, Charles Sargeant, British sculptor, born near Sheffield. His best-known work is the Royal Artillery Memorial at Hyde Park Corner, London. (1885-1935).

Jaggery, a variety of sugar, coarse and brown, obtained in the East Indies by evaporation of the sap (called toddy) of various palms, especially of the Gomuti Palma (*Arenga saccharifera*), of the Palmyra Palm (*Borassus flabellifer*), and of the Coconut Palm (*Cocos nucifera*).

Jaguar (*Felis onca*), a ferocious quadruped of Southern America belonging to the cat or *Felidae* family. It is 5 to 7 ft. in length, generally tawny, with leopard-like spots arranged in larger and more defined groups, and is found in America only. It can climb trees and swim streams, and will attack horses, cattle and man.

JAGUAR

Jahangir, Mogul Emperor of India from 1605, in succession to his father Akbar; a self-indulgent ruler whose reign was marked by insurrections. (1569-1627).

Jail Fever, the popular name of a severe form of typhus, formerly frequent in prisons owing to their insanitary conditions, and sometimes spreading to judges, court officials, etc.

Jainism, a religion of India, instituted about the 6th Century B.C. by an ascetic named Mahavira, contemporary with Buddha. Its followers are called Jaines, or Jains, and still number about 1,250,000; like the Buddhists, they are divided into an ascetic class and a lay, but monasticism is not developed to the same degree among them. There are two principal sects, "the white-gowns" and the "air-clad"—i.e., naked—though it is only at meals, which they eat in common, that the latter strip naked. They abstain from animal food, drink only filtered water, breathe only through a veil, and go sweeping the ground before them for fear of swallowing or crushing any live thing. Some of their temples are among the most beautiful examples of Indian architecture.

Jalalabad, town of Afghanistan, by the Khyber Pass, the Kabul R., near the Khyber Pass. During the Afghan War it was defended by the British for 5 months. Pop. 4,000.

Jalap, in medicine, a purgative prepared from the root of a Mexican climbing plant, *Ezopogonium* (or *Ipomoea*) *purga*, of the family Convolvulaceae.

The name is derived from the town of Jalapa, near which the plant is found.

Jalapa, capital of the Mexican State of Vera Cruz, is prettily situated at the base of the Cordilleras, 60 m. NW. of Vera Cruz, city. Pop. 40,000.

Jalisco, a maritime State in Mexico chiefly of elevated plateau; enjoys a fine climate; has mining industries, some agriculture, and a trade in cotton and woollen goods, tobacco, etc.; capital, Guadalajara. Area 31,000 sq. m. Pop. 1,255,000.

Jamaica ("Land of Springs"), a British crown colony, the largest and most important of the British West India Is.; is one of the Greater Antilles group, and lies some 90 m. S. of the eastern end of Cuba. Its greatest length E. and W. 144 m.; is traversed by the Blue Mts. (7,400 ft.), whose slopes are clad with luxuriant forests of mahogany, cedar, satin-wood, palm and other trees. Of the numerous rivers, only one, the Black R., is navigable, and that for only flat-bottomed boats and canoes. There are many harbours (Kingston the finest), while good roads intersect the island. The climate is oppressively warm and somewhat unhealthy on the coast, but delightful in the interior highlands. The chief trade products are sugar, bananas, citrus fruits, ginger, logwood and coffee. It was discovered in 1494 by Columbus, and since 1655 has been a possession of England. Area 4,450 sq. m. Pop. 1,138,500, the majority negroes, with only a few thousand whites. The large supply of cheap black and coloured labour, coupled with the low world-price of sugar, has militated against high wages and a reasonable standard of living and there were serious riots in 1938. These, following on riots in Trinidad, led to the appointment in July, 1938, of a strong Royal Commission, under Lord Moyne, to inquire into conditions in the West Indies generally.

Jamboree, originally a drinking bout or merry-making, is the name applied by the Boy Scouts' Association to their national or world rallies. In the game of euchre it denotes a single hand containing the five highest cards.

James, the name of three disciples of Christ; James the elder, son of Zebedee, who by order of the high-priest was put to death by Herod Agrippa; James, the younger, son of Alphaeus; and James, the brother of the Lord, stoned to death.

James I. of England (VI. of Scotland), son of Mary Queen of Scots, and Darnley, was proclaimed King of Scotland when only 13 months old, in 1567; entrusted to the Earl of Mar, and educated by George Buchanan. Moray, Lennox, Mar and Morton were successively regents, till James assumed the government in 1581, executing Morton and choosing Arran and Lennox for his advisers. Plots and counter-plots, the Raid of Ruthven (1582), the siege of Stirling by some of the nobles with 10,000 troops, mostly from England, the surrender of the King and the fall of Arran in 1585, the insurrection of the Catholic nobles, 1491-1494, and the Gowrie Conspiracy in 1600, betrayed the restlessness of the kingdom and the weakness of the King. James married Anne of Denmark, 1589; on the death of Elizabeth in 1603, he succeeded to the throne of England as James I.; was at first popular, but soon forfeited all confidence by his

favouritism. He governed through such subordinates as Carr, Earl of Somerset, and the infamous Buckingham, whose indiscretion brought about a war with Spain in 1624; James died immediately afterwards. He has been described by Sully as "the wisest fool in Christendom." He held absurdly high views of the royal prerogative, sold patents of nobility, and was careless of the misdeeds of his ministers. (1566-1625).

James II., son of Charles I., reigned

1685 to 1688.

During the Commonwealth he was a soldier in France and Spain; at the Restoration, returned to England as Duke of York, and became Lord High Admiral. Avowing himself a Catholic in 1671, the Test Act of 1673 enforced his resignation, and thenceforward repeated attempts

were made to exclude him from the succession. On becoming king he promised to maintain the Church and to respect the liberties of the people, but his government was arbitrary and tyrannical. He paraded his Catholicism, persecuted the Covenanters, subordinated English interests to French, permitted the "Bloody Assize," suspended the Test Act, violated the rights of the Universities, gave Church Offices to Roman Catholics, and by these and many other acts of despotism made his deposition necessary. Leading statesmen invited William of Orange to assume the throne, and James fled to France. An invasion of Ireland in 1689 ended in his defeat at Roynce Water. He retired again to France, and lived at St. Germain till his death. (1633-1701).

James I., King of Scotland from 1424 to 1437, son of Robert III., born in Dunfermline. In 1406, while on a voyage to France, he was captured by the English and detained by Henry IV. for 18 years, during which time, however, he was carefully trained in letters and in all knightly exercises. Returning to Scotland in 1424 with his bride, Jane Beaufort, niece of the English king, he took up the reins of government with a firm hand. He avenged himself on the nobles by whose connivance he had been kept so long out of his throne, reduced the turbulent Highlanders to order, and introduced a number of beneficial reforms (e.g., a wider parliamentary franchise, a fixed standard for the coinage, a supreme court of civil jurisdiction, a renovated system of weights and measures), and widened Scotland's commercial relations with the Continent. He was a man of scholarly tastes, a patron of learning, and exhibited poetic gifts in his well-known poem, *The King's Quhair*. His vigorous efforts to lower the powers of the nobility procured him their inveterate hatred, and in 1437 he was murdered in the Dominican monastery at Perth by a band of conspirators. (1394-1437).

James II., King of Scotland from 1437 to 1460, son of preceding. During his minority the country was torn by rival factions amongst the nobility, the chief point of contest being the wardship of the young king. An attempt on the part of the conspirators who had murdered James I. to place their leader, the Earl of Athole, on the throne, was frustrated. In 1449 James assumed the duties of his kingship, and in the same year married Mary, the daughter of the Duke of Gueldres. An English war then being

JAMES II.

warred on the Borders was brought to a close, and the young King entered vigorously upon administrative reforms. In these efforts he was hampered by the opposition of the nobility, and his fiery temper led him to participate in the murder of the chief obstructionist, the Earl of Douglas. Protection given to the exiled Douglasses by the Yorkists led James to support the claims of Henry VI. in England. He was killed by the bursting of a cannon at the siege of Roxburgh Castle. (1430-1460).

James III., King of Scotland from 1460 to 1488, son of James II.; was during his minority under the care of his mother and Bishop Kennedy of St. Andrews, the Earl of Angus being lieutenant-general of the kingdom. After their deaths troubles arose among the nobility; the King married Princess Margaret of Denmark in 1469, and gave himself up to a life of quiet ease, surrounded by men of art and culture, while his brothers Albany and Mar, by their military tastes and achievements, won the affections of the nobles. James, becoming jealous, imprisoned them. Albany, who had intrigued with Edward IV., fled to France. Mar died in Craigmillar Castle. While the King and his army were marching to meet expected English action in 1482 the nobles instigated by Archibald, "Bell-the-Cat," seized and hanged the king's royal favourites at Lauder, and committed the king to Edinburgh Castle. A short reconciliation was effected, but was soon broken, and civil war ensued. The defeat of the royalist forces at Sauchieburn took place in 1482. The King escaped from the field, but was thrown from his horse and, taking refuge in a house at Beaton's Mill, was there slain. (1451-1488).

James IV., King of Scotland from 1488 to 1513, participated in the rebellion which overthrew his father, James III., and succeeded him. During his youth his supporters carried on the government in their own interests, and despoiled the nobles who had been loyal to the late King; but when he came to age he chose good advisers, among them Sir Andrew Wood. His reign was marked by resistance to the claims of the Pope, by the firm and wise administration of law, the fostering of agriculture, of shipbuilding and other industries. In 1503 James married Margaret, daughter of Henry VII. After that king's death relations between the two countries became strained. At the solicitation of the French queen, against the advice of his own Queen and nobles, he invaded England in 1513, the invasion ending in disaster at Flodden, he and the flower of his army perishing. (1473-1513).

James V., King of Scotland from 1513 to 1542, son of James IV.; an infant when he came to the throne. His mother was regent till her marriage with young Angus, when the nobles called James IV.'s cousin, Albany, from France, to assume the regency. French and English factions sprang up; Henry VIII. intrigued in the affairs of the country; anarchy and civil war ensued, and Albany retired to France in 1524. In that year the Queen-mother, aided by Henry, took the young King from Sir David Lindsay, to whom he had been entrusted, and assumed the government again in his name. The Douglas family usurped his person and the government in 1525; but James asserted himself three years later, and began to reign in person, displaying judgment and resolution, banishing the Douglasses and keeping order in the Highlands and on the Borders. He married (1) Princess Magdalene of France in 1537, and (2) Mary of Guise in 1538. Henry, aggrieved by James's failure to meet him in conference on Church matters, and otherwise annoyed, sent 30,000 men into Scotland in 1543. The Scottish forces were

routed at Solway Moss; the King, vexed and shamed, sank into a fever and died at Falkland. In this reign the Reformation began to make progress in Scotland, and would have advanced much further but for James's support of the clergy. (1512-1542).

James (James Francis Edward Stuart), the "Old Pretender." See Stuart.

James, George Payne Rainsford, historical novelist, born in London; wrote over a hundred novels, beginning with *Richelieu* in 1829, which brought him popularity, profit and honour; was appointed historiographer-royal to William IV.; was burlesqued by Thackeray. (1801-1886).

James, Henry, American novelist, born in New York; studied law at Harvard, but was eventually drawn into literature, and after a spell of magazine work established his reputation as a novelist in 1875 with *Roderick Hudson*. Most of his life was spent in Italy and England, writing novels, short stories and criticism. The style of his novels is involved, their plots almost non-existent; their strength lies in their remarkable psychological analysis. Best-known work, *The American and The Turn of the Screw*. (1843-1916).

James, William, American psychologist, brother of Henry James; was professor of Philosophy at Harvard; was the founder of the philosophical system known as Pragmatism, and published many books on psychological subjects, including *The Varieties of Religious Experience*. (1842-1910).

James, Epistle of, a catholic epistle of the New Testament, presumed to have been written by James, the brother of the Lord, addressed to Jewish Christians who, in accepting Christianity, had not renounced Judaism. It is concerned with Christian morality, agreeably to the standard of ethics given in the Sermon on the Mount. Its insistence on works as well as faith was much disliked by Luther, who called it "an epistle of straw."

James, St., James, the son of Zebedee, the patron saint of Spain, known as Santiago; his attribute the sword by which he was decapitated.

James Bay, a large inlet in the SE. corner of Hudson Bay, Canada. It is shallow and brackish, and measures 350 m. by 120 m. Its eastern shore is in Quebec province, its Western in Ontario. Mooseonee, at the mouth of the Moose R. in the E., is a trading-station of the Hudson's Bay Company.

James of Hereford, Henry, Baron, judge; born at Hereford, educated at Cheltenham College; liberal M.P. for Taunton, 1869-1885, and for Bury, 1885-1895; from 1886 became leader of the Liberal Unionists. Solicitor-General, 1873; Attorney-General, 1873 and 1880-1885; carried Corrupt Practices Act, 1883; spoke 12 days for *The Times* before Parnell Commission, 1889; chancellor of Duchy of Lancaster and Peer, 1895; joined Judicial Committee of Privy Council, 1896. (1828-1911).

Jameson, Sir Leander Starr, leader of the "Jameson Raid" upon Johannesburg, born in Edinburgh; studied medicine; established himself at Kimberley in 1878, and under the patronage of Rhodes became administrator for the S. Africa Company at Port Salisbury in 1891; from Mafeking, in Dec. 1895, started, with a body of 500 troopers, upon his incursion into the Transvaal to assist the Uitlanders of Johannesburg; at Krugersdorp the raiders were repelled by a superior force of Boers, and compelled to surrender; having been handed over to the British authorities, Jameson was tried in London where he was lionised, and condemned to 15 months imprisonment, but was

soon liberated; later became member of the Cape Legislative Assembly and Premier. (1853-1917).

James River, in Virginia, U.S.A. of the Jackson and the Cowpasture; it flows in a south-easterly direction, falling into the Atlantic at the S. end of Chesapeake Bay. It has a course of 450 m., and is navigable as far as City Point.

Jamestown, in Virginia, at mouth of the James R.; the first permanent English settlement in America, founded in 1607 by the colonies sent out by the London Virginia Company under Captain Newport.

Jammu, city in NW. India, 80 m. N. of Amritsar, the winter capital of the Maharaja of Jammu and Kashmir. Pop. c. 30,000.

Jamnagar, or **Nawanagar**, town of the native State of Nawanagar, capital of the native State of Nawanagar. It is a flourishing town on the Gulf of Cutch, with cloth factories and pearl fisheries. Pop. 42,500.

Janiculum, a hill in Rome on the right bank of the Tiber, in ancient times the site of a fortress on which a flag was displayed, the removal of which indicated that the city was in danger of enemy attack.

Janizaries, a Turkish military force organised in 1336; composed originally of Christian youths taken prisoners in war or kidnapped, and trained as Mohammedans; from being at first 10,000, and fostered by the privileges granted them, increased to 300,000 or 400,000 strong, till they became unruly and a danger to the State, when, after various unsuccessful attempts to crush them, they were in 1826 dissolved by Sultan Mahmud II.

Jan Mayen Land, a volcanic island, 35 m. in length, situated in the Arctic Ocean between Iceland and Spitsbergen; discovered in 1807 by Hudson. It was annexed by Norway in 1929, and has a weather forecasting station.

Jannsen, Cornelis, Dutch portrait-painter, born in London, where he did most of his work; left London 1643 and died at Amsterdam; worked at the court of Charles I. and painted a portrait of him. (c. 1595-1664).

Jansen, Cornelius, a Dutch theologian and Bishop of Ypres, born in Louvain; wrote a book entitled *Augustinus* in exposition of St. Augustine's doctrine of grace, which was published after his death, and which gave rise to a great controversy between his followers, in France especially, and the Jesuits. (1585-1638).

Jansenists, a former party in the Roman Catholic Church, supporters of Jansen's views, who, in opposition to the Jesuits, maintained the Augustinian principle of the irresistible nature of divine grace. The most celebrated members of the party were the Port-Royalists (q.v.) of France, in particular Arnould and Pascal, and they were opposed not only by the Jesuits, but also by both Louis XIV. and the Pope. Driven from France on the death of Louis, they took refuge in the Netherlands; in 1719 they were declared heretics by Pope Clement XI. A Jansenist Church still exists, numbering some 10,000 members.

Januarius, a Christian martyr under Diocletian, whose head is preserved in Naples with a phial containing his blood, which, on certain occasions is said to liquefy when brought into contact with the head. Festival, September 19.

January, the first month of the year, so called as sacred to Janus (q.v.).

Janus, a very ancient Italian deity who presided over the beginning of the several divisions of time, as well as the beginning of all enterprises, in connection with which he was worshipped. He had two heads or faces, one of which looked behind into the past and the other before into the future. The door of his temple in Rome was opened only in war, and kept shut in time of peace.

ROMAN COIN (AN AS) WITH REPRESENTATION OF JANUS

Japan, an island empire of the N. Pacific, lying along the E. coast of Asia, and separated from Korea and Asiatic Russia by the Sea of Japan, consists of Honshu, Shikoku, Yezo and 4,000 small islands. Though not of volcanic origin, the islands are the most mountainous in the world, have many volcanoes and sulphur springs, and are subject to earthquakes sometimes very destructive, as that at Tokyo and Yokohama in 1923, when 150,000 persons were killed. They are very picturesque, and have peaks from 8,000 to 12,000 ft. high. The rivers are too swift for navigation; the coast, not much indented, has yet some good harbours. The valleys are well wooded, but the soil is not very fertile.

Temperature and climate are varied; nowhere is the heat intense, but in some parts the winter is very cold. There is much rain, but on the whole the country is healthy.

The chief industry is agriculture; farming is very intensive; rice, cereals, pulse, tea, cotton and tobacco are raised, and many fruits. Gold, silver, all the useful metals, coal, granite and some decorative stones are found, but good building-stone is scarce. The manufacture of porcelain, lacquer-work and silk is extensive, and in some artistic work the Japanese are unrivalled. The chief ports are Yokohama, on the E. of Honshu, which has grown up since 1854, when the country was opened to trade, Kobe, Nagasaki and Osaka. The chief exports are tea, silk, cotton goods and rice; imports, cotton, woolen and iron goods and chemicals.

The Japanese, who are a mixed race of Mongol, Ainu and Malay blood, are a kindly, courteous, law-abiding folk, with highly developed artistic tastes; education is compulsory and well provided for; religions are Shintoism and Buddhism, but Christianity is gaining ground. The Government is in the hands of the Mikado, who rules with the aid of a Cabinet and Parliament; the whole modern civilisation of the country is on Western lines, though until 1868 foreigners were excluded. A civil war in 1867-1868 effected the change from the old feudalism, and the success of Japan in the wars against China in 1894, and against Russia in 1904, proved that the new civilisation was no mere veneer.

During the World War Japan joined the Allies, Japanese troops capturing Tsingtao on Nov. 1, 1914. By the Treaty of Versailles Japan was appointed mandatory of the Caroline and Marshall Is. In 1931 a dispute arose with China over Manchuria; after abortive efforts by the League of Nations to settle the problem, Japan resigned from the League and overran Manchuria, which in 1932 she reorganised as the Japanese-protected State of Manchukuo. Since then hostilities with China, though war has not been declared, have been almost continuous, and a large part of China has been overrun by Japanese armies, though Chinese resistance, at first feeble, has grown more determined.

The economic growth of Japan in recent

years has been remarkable. In common with the rest of the Great Powers, Japan has lately devoted much attention to re-armament; and in 1930 a treaty regulating naval strength was signed between Great Britain, the U.S.A. and Japan, but on its expiry in 1936 Japan refused renewal, demanding parity of naval strength with the other two Powers. Her air force is also being rapidly strengthened, and has been largely used for destructive bombing raids on Canton and other Chinese cities.

Japan, Sea of, stretches between Korea and Asiatic Russia and the Japanese Is.; though its tides are very slight, it is dangerous for navigation by reason of its many reefs, sandbanks and currents.

Japanning, the application of varnish in imitation of Japanese lacquer work, whence the name.

Japheth, one of the three sons of Noah, and the supposed ancestor of the European peoples, as Shem of the Semitic and Ham of the Hamitic or African races.

Japonica (*Cydonia japonica*), a well-known shrub of the Rosaceae family, native of China and Japan, introduced into England by Lord James Petre early in the 18th Century, with single and double white, orange or red flowers. It is cultivated as an ornamental wall plant.

JAPONICA

Jaques-Dalcroze,

Emile, composer of Swiss extraction born at Vienna, author of works for solo, choral and orchestral production of two comic operas and of pieces for rhythmical interpretation; originator of the method of musical and physical education known as eurhythmics, which he taught at Dresden and Geneva; principal of the Institut Jaques-Dalcroze at Geneva and visiting principal of The London School of Dalcroze Eurhythmics. (1865-).

Jargon, a crude mixture of languages such as is sometimes used for intercourse between natives of a country and foreign settlers. The word is also used to denote the phraseology peculiar to a trade or profession, as "legal jargon," the special terminology of the law. See *Slang*.

Jarnac, a town in France, on the Charente, celebrated as the scene of a victory which the Catholics, commanded by the Duc d'Anjou, afterwards Henry III., obtained in 1569 over the Huguenots commanded by Condé. Pop. 4,000.

Jarrah, an Australian tree, the *Eucalyptus marginata* or mahogany gum. Its wood is close grained, red and hard, and is particularly useful for road-paving and shipbuilding.

Jarrow, in Durham, on the Tyne, 7 m. below Newcastle; is a coal-shipping port, with shipbuilding and iron manufactures; formerly famous as the site of the monastery of Bede (q.v.); seriously affected by the industrial depression of 1931. Pop. 32,000.

Jasher, *Book of*, a Hebrew book twice quoted in the old Testament, no longer extant; believed to have been a collection of national ballads.

Jasione, a genus of plants of the natural order Campanulaceae, of which there are five species found in the European and Mediterranean districts, one of them, *Jasione montana* (Sheep's bit or scabious), being native to Britain. It is a hedge plant bearing blue flowers of fine shades, and is found in less cultivated districts.

Jasmine (*Jasminum*), a genus of plants of the natural order Oleaceae, comprising some 170 tropical and other species are erect or twining shrubs bearing scented flowers followed by a two-lobed fruit, some species being cultivated by gardeners for borders, or as wall-climbers, *Jasminum officinale*, being the Common Jasmine. The Cape Jasmine, *Gardenia florida*, is a species of Rubiaceae, the Carolina Jasmine, *Gracilium sempervirens*, a species of Loganiaceae.

COMMON
JASMINE

Jason, a mythological Greek hero, son of Aeson, King of Iolcos; brought up by the centaur Chiron; undertook the leadership of the Argonautic expedition, assisted by Medea; took her to wife, but cast her off for Creusa, whom Medea to avenge herself killed, with her father and her two sons by Jason, she herself escaping to Athens in a chariot drawn by winged dragons. Jason took refuge from her fury in the sanctuary of Poseidon near Corinth, where the timber of the ship Argo deposited there, breaking up, fell upon him and crushed him to death.

Jasper, an opaque quartz found in all colours, and spotted, striped and clouded; is valued in ornamental lapidary work because of the polish it takes.

Jassy (Jasi), city in Rumania, 89 m. N.E. of Bucharst; former capital of Moldavia; is the seat of an Orthodox archbishop, a Catholic bishop and a university, and has a large community of Jews; trades largely in corn, spirits and wine. Pop. 104,000.

Jataka, a Pali collection of stories of the Buddha, the ultimate source of many of Aesop's fables and Western folk-lore legends.

Jats, an Indian people numerous in the Punjab, where they number 4 millions, and are engaged in agriculture. There is much debate as to their origin and their racial relationship.

Jaundice, a discoloration of the skin, generally due to the absorption and circulation, along with the blood, of the colouring matter of the bile. It is sometimes nervous in origin, sometimes a symptom of inflammation of the liver, or may be due to obstruction in the larger bile ducts. In some cases it may, as indicating liver disintegration, be extremely serious.

Jaures, Auguste Marie Joseph Jean, French socialist leader, born at Castres; Professor of Philosophy at Albi, 1881; lecturer at Toulouse University, 1882; Deputy (radical) for Tarn, 1885-1889; (socialist) for Albi, 1893-1898, 1902-1914; conducted *La Petite République*; founded, 1904, *L'Humanité*. A fierce opponent of militarism, he was assassinated in Paris, on the outbreak of the World War, (1859-1914).

Java, a large island (area, with Madura, 50,750 sq. m.) of the Indian Archipelago, between Sumatra on the W. and Bali, on the E. with the Indian Ocean on the S. and the Java Sea separating it from Borneo on the N.; traversed by a mountain chain with a rich alluvial plain on the N. There are many volcanoes; the climate is hot, and on the coast unhealthy; the mountains are densely wooded, and the teak forests are valuable; the plain is fertile. Coffee, tea, sugar, rubber and tobacco are grown and exported; all kinds of manufactured goods, wine, spirits and provisions are imported. The natives are Malays, more civilised than on neighbouring islands. There are nearly

600,000 Chinese, many Europeans and Arabs; the island belongs to the Netherlands. The chief towns are Batavia and Samarang, both on the N. Pop. 42,000,000.

Java Man. See *Pithecanthropus*.

Java Sea, the wide strait between the islands of Borneo and Java, a shallow stretch of water with many small islands.

Javelin, a weapon of ancient warfare, resembling a spear, but short-handled; in athletics a steel-pointed, thin shaft of wood, in length about 8½ ft. Throwing the javelin has been an event in athletics for the past thirty years; the record being 255½ ft. (1 lb. 12½ oz.) by Jarvinen, of Finland, in 1936.

Jaw, the bones which form the framework of the mouth. In man the upper jaw is termed the superior maxilla; the lower jaw, the inferior maxilla or mandible. The latter, the largest bone of the face, consists of a horizontal portion and two upright portions, called the rami. Both jaws bear teeth. The closing and opening of the jaws is effected by four pairs of muscles, two attached to the outer, and two to the inner side of the rami of the lower jaw.

Jay, the common name of the birds of the sub-family Garrulinae of the Crow (Corvidae) family.

The species *Garrulus glandarius* is the common English jay, native to these islands and Europe. It is rather over a foot in length, with a crest of black and white feathers, a black tail, and white and black bars on the wings. It is common in woods, and mimics the cries of other birds.

Jay, John, American statesman, born in New York; took a part in the struggle for independence second only to Washington's; represented his country subsequently in Madrid and London; was first Chief Justice of the United States, and Governor of New York, 1795-1801. (1745-1829).

Jazz, syncopated dance music; that is to say, music which moves irregularly from bar to bar. It was introduced from America about 1918, and is derived from native music of Africa.

Jeanne d'Arc. See *Joan of Arc*.

Jeans, Sir James Hopwood, British astronomist, professor of Applied Mathematics at Princeton (U.S.A.), 1905-1909; lecturer at Cambridge, 1910-1912; Secretary of the Royal Society, 1919-1929; professor of Astronomy in the Royal Institution, 1924; author of many learned and popular works on cosmogony and astronomy, including *The Mysterious Universe* (1930) and *The New Background of Science* (1933). (1877-).

Jebb, Sir Richard Claverhouse, Greek scholar, born in Dundee; elected in 1889 Regius Professor of Greek in Cambridge; represented Cambridge in Parliament; edited *Sophocles*, *The Attic Orators*, *Introduction to Homer*, etc. (1841-1905).

Jebus, home of a Canaanite tribe, the Jebusites, mentioned frequently in the Old Testament; sometimes regarded as an earlier name for Jerusalem, which was in Jebusite possession until its citadel was captured by David. With other Canaanites, the Jebusites were reduced by Solomon to slavery.

Jedburgh, county town of Roxburghshire, shire, Scotland, on the Jed, 30 m. SW. of Berwick, and 10 m. SW. of

Jeddo, an ancient town of many historic memories; made a royal burgh by David I.; contains the ruins of an abbey, and has woollen manufactures. Pop. 3,000.

Jeddah, a town on the Red Sea, 65 m. W. of Mecca, and chief port of the Hejaz; used by pilgrims to Mecca, with which it is connected by motor route. Pop. c. 40,000.

Jefferson, Thomas, American statesman, born in Shadwell, Virginia; took a prominent part in the Revolution, and claimed to have drawn up the Declaration of Independence. He secured the decimal coinage for the States in 1783; was plenipotentiary in France in 1784, and subsequently minister there. Under his presidency (1801-1807) occurred the Louisiana purchase and the prohibition of the slave-trade. After his retirement he devoted himself to furthering education till his death at Monticello, Va. (1743-1826).

Jeffrey, Francis, Lord, critic and lawyer, born in Edinburgh; called to the Bar in 1794; devoted himself principally to literary criticism, and was first editor of the *Edinburgh Review* (q.v.), from 1802 to 1829, contributing to its pages articles of great brilliance; he was distinguished at the Bar in several famous trials; became Lord Advocate of Scotland in 1830, M.P. for Edinburgh in 1832, and in 1834 one of the judges in the Court of Session. (1773-1850).

Jeffreys, George, first Baron, born in Walcott, became Chief Justice of England in 1683 and Lord Chancellor, 1685; was one of the advisers of the tyrannical proceedings of James II.'s reign, and notorious for his harsh judgments as a judge; tried to escape on the arrival of William; was committed to the Tower, where he died. (1648-1689).

Jehoshaphat, King of Judah, 900-875 B.C.; son of Asa; allied successively with wicked Kings of Israel; narrowly escaped being slain in mistake for Ahab (q.v.) by Syrians at Ramoth-Gilead in 17th year of his reign.

Jehovah (Jahweh or Yahveh), Hebrew name of the supreme God, in the Bible said to have been revealed by God Himself to Moses. As it was considered by the Jews too sacred to be spoken, its real pronunciation has been lost. The correct form is JHVH.

Jehovist, name given to the supposed writer of those portions of the Pentateuch in which God is spoken of by the name Jehovah.

Jehu, King of Israel, 884-856 B.C., son of Jehoshaphat; a captain of the host under Ahab's son, Jehoram; anointed by Elisha, went to attack Jehoram; detected by a watchman through his furious driving. Killed Jehoram; caused death of Jezebel.

Jejunum, the upper part of the small intestine, about two-fifths of the whole, stretching between the duodenum above and the ileum below; its length is about 8 ft.

Jellicoe, John Rushworth, first Earl. British admiral; entered the navy at 13, saw service in the Egyptian War of 1882 and at Peking in the Boxer Rising, when he was wounded. From 1902 to 1910 he was at the Admiralty, and in 1910 became commander of the Atlantic Fleet. In Aug. 1911 he became commander of the Grand Fleet, a position he held till after the Battle of Jutland in 1916, when he handed over command to Beatty and became First Sea Lord, in which capacity he handled the U-boat menace. He was made a Viscount in 1910, and in 1920 went to New Zealand as Governor-General. Received an Maridom in 1925, and from 1928 to 1932 was President of the British Legion. (1859-1935).

Jelly, an elastic solid obtained by adding it to "set" in a container. Gelatinous jellies made from fruits, or by allowing meat juices to congeal, are much used as food, especially for invalids.

Jelly-fish, general popular name of various hydroids marine animals, especially the widespread family of the Medusae, bell-shaped organisms with large central mouth and tentacles which move by pumping water in and out of the bodily cavity by muscular contraction.

Jemadar, a native Indian officer of rank equal to that of lieutenant in the British.

Jemappes, a manuf. of BELGIAN town, 3 m. W. of Mons, where the French under Dumouriez defeated the Austrians in 1792. Pop. 15,000.

Jena, in Thuringia, Germany, on the Saale, 14 m. SE. of Weimar, an old town with memories of Luther, Goethe, and Schiller; has a university associated with Fichte, Schelling, Hegel and the Schlegels, who were teachers there; on the same day, Oct. 14, 1806, two victories were won near the town by French troops over the Prussians, the collective name for both being "the Battle of Jena." Pop. 57,000.

Jenkins' Ear, War of, between England and Spain in 1739, attributed to the conduct of the officer of a Spanish guardship towards the captain of an English trading ship of the name of Jenkins. The Spaniards boarded his ship, could find nothing contraband on board, but treated him cruelly, cutting off his left ear, which he brought home in wadding—an incident which inflamed public opinion in England against Spain.

Jenner, Edward, an English physician, born in Berkeley, and practised there; was the discoverer of inoculation with cowpox as a preventive of smallpox, or vaccination, a discovery which immortalised his name. (1749-1823).

Jenner, Sir William, an eminent physician, born in Chatham; held several professorships in University College; was physician to Queen Victoria and to Edward VII. when Prince of Wales; discovered the symptoms which differentiate typhus from typhoid fever. (1815-1898).

Jephthah, Judge of Israel, famed for victory to offer in sacrifice the first object that came out of his house on his return, which happened to be his daughter and only child whom he presumably sacrificed. The story is told in the Biblical Book of Judges.

Jerboa, a family of small, mouse-like rodents (Dipodidae) with several genera, including the American jumping mouse. It has usually very short fore- and long hind-legs, and a lengthy tail, and is found mainly in the Eastern Mediterranean countries.

Jeremiah, a Hebrew prophet, born in Anathoth, a city 3 m. N. of Jerusalem, where, after his removal thither, he spent the greater part of his life—viz. from 629 to 588 B.C.—his

ARMENIAN JERBOA.

prophecy was a protest against the iniquity and folly of his countrymen, and urged them to seek the help of Egypt against Assyria. More than one plot was laid against his life, but he lived to see the issue of his prediction in the captivity of the people; he appears to have died in Egypt. He was the author of *Lamentations*, and, it is thought, of sundry of the Psalms. His name has become a byword for declamatory denunciation, though his work hardly deserves its reputation for unalloyed misery.

Jerez de la Frontera, or **Xeres**, city of Spain, 10 m. NE. of Cadiz, with vineyards in the neighbourhood; the wine Sherry takes its name from the town; near by in 711 was fought the Battle of Guadalete which marked the Moorish conquest of Spain. Pop. 67,000.

Jericho, SW. of the plain of the same name that extends W. of the Jordan and NW. of the Dead Sea. It was the first city taken by the Israelites when they entered the Holy Land, the walls falling down before them after being compassed for seven days by the priests blowing on rams' horns and followed by the people. Recent excavations by Dr. John Garstang lend some support to the Biblical narrative, evidence having been found both of the collapse of the walls and of the burning of the city. In the World War Jericho was captured by Allenby after severe fighting in 1918.

Jericho, *Rose of, or Resurrection Plant*, a small annual herbaceous Levantine plant (*Anastatica hierochuntina*) of the order Cruciferae, which contracts into a ball in dry weather, unfolding and resuming greenness and growth on being placed in water.

Jeroboam, the name of two kings of Israel. (1) The son of Nebat; on Rehoboam's coming into Solomon's kingdom, his unpopularity caused transfer (970 B.C.) of the Northern part, "Israel," to Jeroboam. (2) The Son of Joash; reigned c. 823-782 B.C., and recovered territory that had been taken by Syrians.

Jerome, *Jerome Klapka*, dramatist and journalist, author of *Idle Thoughts of an Idle Fellow*, *Three Men in a Boat*, *Diary of a Pilgrimage*, etc., as also of plays; editor of the *Idler* and of a weekly magazine journal, *To-day*. (1859-1927).

Jerome, *St.* (in Latin, Hieronymus), a *St.*, Father of the Church, born in N. Illyria, of rich parents; became a Christian when adult; was ordained a priest, and retired to Bethlehem as a recluse with some women followers. His fame rests on a translation of the Scriptures into Latin, known as the *Vulgate*, which he executed at intervals from 385 to 404 A.D. and which is still the version in official use in the Roman Catholic Church, being by it considered as of equal authority with the original. He also wrote many exegetical and controversial treatises and letters. Feat. Sept. 30. (331-420).

Jerome of Prague, a Bohemian reformer, born in Prague; studied there and at Oxford, where he came under Wycliffe's influence, Paris, Heidelberg and Cologne; a man of great learning, energy and oratorical power; joined John Huss in his agitation against the abuses of the Church; became involved in the movement against Huss and, though he recanted, afterwards withdrew his recantation, and was burned at Constance. (c. 1355-1416).

Jerrold, *Douglas William*, dramatist and wit, born in London, son of a theatrical manager; began life as a printer; author of *Black-eyed Susan* and other plays; contributed *Mrs. Caudle's Curtain Lectures* among other pieces to *Punch*, and edited magazines. (1803-1857).

Jersey, the largest of the Channel Is., lies 15 m. off the French coast, 100 m. S. of Portland Bill, is oblong in shape, with great bays in the coast, and slopes from the N. to the SW. The soil is devoted chiefly to pasture and potato culture; the exports are early potatoes for the London market and the famous Jersey cattle, the purity of whose breed is carefully preserved. The island is self-governing, has a somewhat primitive land tenure, and has been under the English crown since 1066. The capital is St. Helier. Area 45 sq. m. Pop. 50,450.

Jersey City, the most populous city in New Jersey, U.S.A., is separated from New York, of which it is practically a part, by the Hudson River; is a busy railway centre; has very varied manufactures, including sugar, flour, machinery and chemicals, extensive shipping interests, and great trade in iron, coal and agricultural produce. Pop. 317,000.

Jerusalem, the capital of Palestine, a holy city of Jews, Christians and Mohammedans alike. It belonged originally to the Jebusites, but was captured by David and made his capital. A strong place, built on four hills, 2,000 ft. above the Mediterranean, enclosed within walls and protected nearly all round by deep valleys and rising ground beyond. It has been so often besieged, overthrown and rebuilt that the present city stands on rubbish-heaps, the ruins of ancient structures. It was captured by British troops under Allenby in Dec. 1917.

Among the many places of note are the Church of the Holy Sepulchre, the Tomb of David, the Crusaders' Church, the Mount of Olives and the Walling Wall. Seven gates pierce the old walls, within which are still to be found the ancient narrow streets and bazaars of the old city. Outside the walls Jerusalem has grown enormously since it has been under British mandate, and modern commercial buildings and dwelling-houses of all kinds have sprung up, including several garden cities. A modern water supply has been provided. Pop. 110,000 (two-thirds of whom dwell outside the walls of the city).

Jerusalem Artichoke. *See* *Artichoke*.

Jervaulx, hamlet of Yorkshire, England, in North Riding, site of the ruins of a fine Cistercian Abbey, the last abbot of which was hanged for his connection with the Pilgrimage of Grace.

Jesse, Ruth; father of David, second King of Israel; was a sheep farmer at Bethlehem. In his house David, his seventh or eighth son, was anointed King by Samuel.

Jessop, *Gilbert Laird*, English cricketer, doctor; born at Cheltenham, son of a doctor; educated at Beccles and Christ's College, Cambridge; captained the university team, 1899; played for Gloucestershire, 1894-1914; in test-matches against Australia in England, 1899, 1902, 1905, 1909; in Australia, 1901, 1902; five times scored over 200 in an innings. (1874-).

Jest-book, a book containing jests collected from various sources at different historical periods. The jokes frequently reflect the views of the times. Famous collections are *Variorum's Jests* (1525) and *Milner's Jest Book* (1739).

Jester, a professional story-teller and sayer of witty things for entertainment, frequently kept by princes and great men as a court or domestic officer in the Middle Ages. He was usually marked by a striped or "motley" garb, or a cap adorned with small bells.

Jesuits, or *Society of Jesus*, the religious Order founded by Ignatius Loyola (q.v.) in 1534, and approved by bull of

Paul III. in 1540, for the conversion of heretics and the propagation of the Roman Catholic faith; spread very rapidly, and was instrumental in regaining much of Europe from Protestantism to the Catholic Church; from the beginning has been specially active as foreign missionaries and in educational work; was suppressed for a time in the 18th Century, their alleged interference in politics having made them suspect in many European Courts, but soon restored; is now active in all parts of the world, and probably the most numerous of Catholic religious orders; maintains several schools and colleges in Great Britain and Ireland.

Jesuit's Bark, or *Peruvian Bark*, the bark of various trees of the genus *Cinchona*, natural order Rubiaceae, introduced into Europe from Peru by the Jesuits as a cure for fever. From it are extracted quinine, first isolated from it by Pelletier and Caventou in 1820, cinchonidine and other alkaloid drugs.

Jesus Christ, the founder of the Christian religion and, according to its teachings, the Son of God, born in human form of the Virgin Mary at Bethlehem in Palestine, in the early days of the Roman Empire; spent the first thirty years of His life in retirement, appearing at the age of 30 as a prophet with miraculous powers. After He had taught for three years, gathering round Him a small band of disciples, of whom the twelve most prominent members were known as Apostles, the Jewish priesthood, finding that His doctrines and claims were undermining their authority, secured His arrest, and with the consent of the Roman Governor, Pilate, He was crucified. His death, in Christian theology, effecting an atonement for human sin and reconciling mankind with God. After three days, according to His followers, He rose from the dead and ascended visibly into Heaven, leaving with His Apostles authority to establish the Christian Church. The story of His life and His teachings are recorded in the New Testament. (B.C. 4-30 A.D.)

Jet, a hard, black, bituminous lignite, capable of an excellent polish and easily carved, and much used for ornaments in Victorian times, though it has now lost most of its popularity; is found in France, Spain and Saxony, but the best supplies come from Whitby, Yorkshire.

Jethou, one of the Channel Is., subject to Guernsey; an unfertile, granite island, a mile in circumference, separated from Herm by a narrow channel.

Jetsam, goods cast overboard into the sea to lighten a vessel in distress, and which, unlike "flotsam," will sink when jettisoned.

Jeunesse Dorée (H. gilded youth), name given to a body of young dandies, who, after the fall of Robespierre, strove to bring about a counter-revolution in France.

Jew, *The Wandering*, a Jew bearing the name of Ahasuerus, whom, according to an old legend, Christ condemned to wander over the earth till He should return again to judgment, because he drove Him brutally away as, weary with the cross He carried, He sat down to rest on a stone before his door; probably a symbolic story intended to account for the dispersion of the Jewish people over the whole earth.

Jewellery. The craft of the jeweller is one of the oldest of arts, tracing back to the early days, when primitive man sought to adorn his womenfolk with the relics of the chase, bones and claws of birds being ingeniously combined with shells and pebbles to form necklaces, bracelets and nose and ear ornaments. From such uncultured methods and crude materials the art of the latter-day craftsman has evolved. The jewel-

lery of the ancient East—Egypt, Mesopotamia, Greece, Etruria, as well as of India and China—has never been surpassed, even by the finest efforts of Renaissance craftsmanship. In modern times the art has suffered largely from industrialism. Whilst the technique of the craft has been perfected and the value of the materials used has often been fabulous, the artistic standard has appreciably deteriorated. Many motifs of modern jewellery have been adopted by copying the finest productions of ancient artists. The production of "imitation jewellery" from materials of little intrinsic value has considerably reduced the demand for the finer productions.

Jewry, a portion of a city set apart for Jews; also known as a Ghetto. The street called Old Jewry, in the City of London, marks the site of London's ancient Jewish quarter. See also *Ghetto*.

Jews, The, a people of Semitic origin, who trace their descent to Abraham. Their history starts with the migration of the family of Jacob to Egypt, where they stayed for 200 years, until they were led out by Moses, and after by Joshua, into Palestine. About 1200 B.C. Saul became their first king, in 1066 B.C., and in 975 B.C. the country was split into Judah and Israel. The latter was conquered by Shalmaneser of Assyria and the people taken into captivity in Media in 720 B.C., and in 588 B.C. Nebuchadnezzar captured Jerusalem and took the tribes of Judah and Benjamin captive to Babylon. From the time of their captivity in Media the Israelites were lost, and their fate has given rise to speculations.

After 70 years' captivity in Babylon the tribes of Judah and Benjamin returned to Palestine, where they were in turn subject to Alexander the Great, Egypt, Syria and Rome, and in A.D. 135, after unsuccessful attempts to regain liberty, the country was laid waste and the inhabitants dispersed through Europe and the East, and during subsequent centuries have made their way into almost every country of the world. They are most numerous in Russia, Poland and the United States; there are some 300,000 in the British Isles, and a world total of perhaps 18 millions. They have engaged mainly in finance and commerce, and, never having been completely assimilated in the countries they have inhabited, have often been severely persecuted, especially in Europe in the Middle Ages.

The persecution has revived in modern Germany under the Nazi régime, which denies Jews German nationality and forbids their cultural or matrimonial admixture with the Aryan people. In 1917 the British Government agreed to assist them to establish a "National Home" in Palestine, and since then many thousands have migrated thither. The German absorption of Austria in 1938 has intensified their hard lot and, in July 1938, an International Conference met at St. Evian to discuss means of ameliorating their condition (as well as that of other refugees). In August 1938 anti-Semitic legislation was decreed in Italy also. They still maintain a pure monotheistic creed, and the more orthodox among them keep the Mosaic law in all its strictness, so far as that is possible out of Palestine.

Jew's-harp, pro-

perly Jew's harp, a small musical instrument consisting of a lyre-shaped metal frame and a flexible steel tongue. It is pressed against the player's teeth, and the

JEW'S-HARP

tongue struck with the finger. The pitch is controlled by the shape of the mouth.

Jeypore, or **Jaipur**, a native State in Rajputana, India; under British protection since 1818, and was loyal at the Mutiny; the soil is rocky and sandy, but there is much irrigation; copper, iron and cobalt are found; enamelled gold ware and salt are manufactured; area, 15,600 sq. m.; pop. 2,630,000. At the capital, Jeypore (pop. 144,000), there is a State college and a school of art; its business is chiefly banking and exchange.

Jezebel, the wicked wife of Ahab, King of Israel, gives name to a bold, flaunting woman of loose morals. She was thrown from a window at the command of Jehu and trampled to death under the feet of his horses.

Jezreel, ancient city of Palestine, 11 m. from Nazareth; was the capital of King Ahab. On the site is the modern village of Zerin.

Jhansi, district and city of the United Provinces, British India, the district lying between Gwalior and Bundelkhand. The city, a railway junction, 60 m. SE. of Gwalior, was the scene of a massacre in the Mutiny. Area 3,610 sq. m. Pop. (city) 76,700.

Jhelum. See **Hydaspes**.

Jib, a triangular sail placed foremost on the forward stay of a ship. It extends from the jib-boom, or spar projecting from the bowsprit, to the fore topmasthead. A spar added to the jib-boom is named the flying jib-boom, to which is attached the flying-jib.

Jibuti (*Gjibouti*), port and capital of French Somaliland, on the Gulf of Aden, the terminus of a railway to Addis Ababa in Abyssinia, of which it was formerly the chief trade outlet. Pop. 15,000 (1,200 Europeans).

Jig, an irregular and lively dance in triple rhythm which was popular in the British Isles in the 17th Century, and is still so in Ireland. The name is also given (usually as *jigue*) to the concluding member of a suite.

Jihad, name given by Mohammedans to a general religious war against Christians, infidels or other unbelievers.

Jina (*lit.* the "victorious" one, as contrasted with Buddha, the merely "awakened" one), in the religion of the Jainas (called Jainism, *q.v.*), a sage who has achieved omniscience, and who came to re-establish the law in its purity when it had become corrupted among men; 24 Jinas are supposed to have appeared at intervals after long periods of time.

Jingo, a name said to have originated in a given to a political party favourable to an aggressive, menacing policy in foreign affairs; first applied in 1877 to that political action in Great Britain which provoked the Turco-Russian War.

Jinn, in the Arabian mythology one of a class of genii born of fire, some of them good spirits and some of them evil, with the power of assuming visible forms, hideous or bewitching, corresponding to their character.

Joab, Israelite general, nephew of David; put to death by order of Solomon 1014 B.C.

Joachim, **Joseph**, a violinist, born near Presburg; famous as a youthful prodigy; was encouraged by Mendelssohn; visited London and frequently played at concerts; became head of the Academy of Music at Berlin in 1869. (1831-1907).

Joan, **Pope**, a woman who, in the guise of a man, is said for two years five months and four days to have acted as Pope of Rome (as John VII.) between Leo IV. and Benedict III. about 855-856, her sex being discovered

by the premature birth of a child during some public procession. She is said to have been of English parentage, and to have borne the name of Gilberto. The fable is first found in the *Chronicle* of Marianus Scotus.

Joan of Arc, **St.**, or **Maid of Orleans**, Domrémy, of poor parents, subject to fits of religious ecstasy, in one of which she seemed to hear voices calling to her from heaven to devote herself to the deliverance of France, then being laid desolate by an English invasion, occupied at the time in besieging Orleans. She sought access to Charles VII., then Dauphin, and offered to raise the siege referred to, and thereafter conduct him to Reims to be crowned; whereupon permission being granted, she marched from Blois at the head of 10,000 men, drove the English soldiers from their entrenchments and thereafter conducted Charles to Reims to be crowned. She afterwards assisted in raising the siege of Compiègne, was taken prisoner by the Burgundians, handed over to the English, and after an imprisonment of four months tried for sorcery, and condemned to be burned alive. She met her fate in the market-place of Rouen with fortitude. Her sentence was revoked in 1456, and she was canonised in 1920. (1412-1431).

Job, **Book of**, a poetic drama in the Old Testament, of unknown authorship (formerly ascribed to Moses), telling the story of the temptation of Job by Satan through a series of misfortunes in order that he might curse the Almighty. He resists the suggestions of the Evil One, and is at last restored to prosperity after his faith and righteousness have been tested and proved. Most of the book is taken up by discussions between Job and certain friends who visited him, dealing with the power and justice of God.

Jobber, **Stock Jobber**, a member of the Stock Exchange who, as distinct from a broker, buys and sells securities only from or to other members, and does not deal directly with the public, his "turn" or profit consisting in the difference between the prices at which he buys and sells.

Jocasta, wife of Laius, King of Thebes, she afterwards married the latter, not knowing that he was her son, and on discovery of the crime put an end to herself; the story was a favourite subject of Greek tragedy.

Jocelin of Brakelonde, a 12th-Century St. Edmundsbury monk, who left behind him a *Chronicle* of the Abbey from 1173 to 1202, which, published in 1840 by the Camden Society, gave occasion to the *Book or Part* entitled *The Ancient Monk* in Carlyle's *Past and Present*. (*d.* 1211).

Jockey Club, the governing body of flat-racing in England, with headquarters at Newmarket, and wide powers.

Jodhpur, largest State of Rajputana, India, under British protection since 1818; tin, lead and iron are found; salt is made at Sambhar Lake. The State revolted at the Mutiny. Area 35,000 sq. m. Pop. 2,126,000. Jodhpur, the capital, 350 m. SW. of Delhi, is connected by rail with Jeypore and Bombay. Pop. 95,000. The State has given its name to a variety of riding-breeds with long calves, which have of late become popular among British equestrians.

Joel, a Hebrew prophet, author of a book of the Old Testament that bears his name, of uncertain date, but probably written before the exile. It is the second of the "Minor Prophets."

Joffre, Joseph, French general. Joining the army in 1870, he was in charge of a battery during the siege of Paris that year. The outbreak of the World War found him commander-in-chief of the French army, and he held the position till 1917, co-operating first with French and after 1916 with Haig. In 1917 he resigned his command and was succeeded by Nivelle. (1852-1931).

Johannesburg, the largest town in the Union of South Africa, in the Transvaal Province, 30 m. S. of Pretoria, and 800 m. N.E. of Cape Town; it grew quickly at the end of the 19th Century, and is at present again developing rapidly, owing to its position as centre of the South African gold trade. It has many fine public buildings, and is the seat of the Witwatersrand University. Pop. (white) 258,000.

John, "The Blind," from 1310 King of Bohemia; his victory at Mühldorf in 1322 secured the crown of the Holy Roman Empire for Louis of Bavaria; he was killed at the Battle of Crécy, while fighting with the French. (1296-1346).

John, King of England from 1199 to 1216, a tyrannical and unpopular ruler; the son of Henry II. Before he came to the throne was sent to govern Ireland, and later attempted to usurp the throne in the absence of his brother Richard I.; succeeded the latter in 1199. His nephew, Arthur, claimed the French dominions, and was supported by the French King, Philip. In 1200 he married Isabel of Angoulême, a child-hers. This provoked the French barons; in the war that ensued Arthur was captured, and subsequently murdered either by John himself or by his orders; Philip invaded Normandy, and in 1204 most of the possession in France were lost to the English crown. Then followed John's quarrel with Pope Innocent III. over the election of Stephen Langton as Archbishop of Canterbury; in 1208 the kingdom was placed under an interdict, and next year the King was excommunicated. John on his side confiscated Church property, and exiled the bishops; but a bull deposing him and absorbing his vassals from allegiance, forced him to submit, and he resigned his crown to the Pope's envoy in 1213. The rest of the reign was a struggle between the King, relying on his suzerain the Pope, and the people, barons and clergy; the King was forced to sign Magna Carta at Runnymede in 1215, but the Pope annulled it, whereupon the barons appealed for help to the Dauphin, and were prosecuting the war when John died at Newark. (1166-1216).

John II., from 1350 to 1361, succeeded his father Philip VI.; at the Battle of Poitiers he was captured and carried to England. Four years later he was allowed to return on leaving his son as hostage. On the latter's escape, John returned to London, and died in captivity. (1319-1364).

John, the name of 23 Popes. **J. I.**, Pope from 527 to 528, was canonised. **J. II.**, Pope from 532 to 533. **J. III.**, Pope from 560 to 578. **J. IV.**, Pope from 640 to 642. **J. V.**, Pope from 686 to 687. **J. VI.**, Pope from 701 to 705. **J. VII.**, Pope from 705 to 707. **J. VIII.**, Pope from 772 to 782. **J. IX.**, Pope from 883 to 900. **J. X.**, Pope from 911 to 928. **J. XI.**, Pope from 931 to 936. **J. XII.**, Pope from 956 to 961—was only 18 when elected, led a licentious life. **J. XIII.**, Pope 965 to 972. **J. XIV.**, Pope from 984 to 985. **J. XV.**, Pope in 985. **J. XVI.**, Pope from 985 to 996. **J. XVII.**, Pope in 1003. **J. XVIII.**, Pope from 1003 to 1009. **J. XIX.**, Pope from 1024 to 1033. **J. XX.**, anti-Pope from 1043 to 1046, sometimes omitted in numbering the series. **J. XXI.**, Pope from 1276 to 1277. **J. XXII.**, Pope from 1316 to 1334—a learned, steadfast, and courageous

man. **J. XXIII.**, Pope in 1410, deposed in 1415. The last three are sometimes referred to as John XX, XXI and XXII respectively.

John, Augustus Edwin, British artist. He studied at the Slade School, started exhibiting with the New English Art Club in 1899, and specialised largely in portraiture. Although unconventional in his work, he became an A.R.A. in 1923 and an R.A. in 1928, but resigned in 1938 because of the Academy's rejection of a picture by another artist. (1878-).

John, Prester, a legendary king and priest of a medieval kingdom in the interior of Asia or East Africa; converted to Christianity by the Nestorian missionaries; supposed to have been defeated and killed in 1202 by Genghis Khan, who had been tributary to him, but had revolted.

John, Sir William Goscombe, Welsh sculptor; born at Cardiff. His statues include Edward VII., Liverpool and Capetown; David Lloyd George, Caernarvon; Viscount Wolsley, Horse Guards Parade, London; memorial to Sir Arthur Sullivan, Victoria Embankment, London, and many War Memorials. R.A., 1909; knighted, 1911. (1860-).

John, Epistles of, three short sections of the New Testament, presumed to have been written by the author of the Gospel, from the correspondence between them both as regards thought and expression, though many critics consider that the Second and Third are by another author; they are directed against the heresies which appeared in the early Church.

John, Gospel according to, the fourth Gospel, of which tradition alleges St. John the "Beloved Disciple" was the author. It differs widely from the other three Gospels in emphasising the divine character of Christ, and records many events of his ministry which the others pass over. Most critics now consider that it was intended less as an historical record of fact than as an idealised meditation on the life of Jesus. Its authenticity has been much debated, and the general modern opinion is that it was composed during the 2nd Century by a certain elder of Ephesus, named John, but not identical with the Apostle.

John, Knights of St., a religious order of defence of knights, founded in 1048, for the defence of pilgrims to Jerusalem; established a church and a cloister there, with a hospital for poor and sick pilgrims, and were hence called the Hospital Brothers of St. John of Jerusalem. On the fall of Jerusalem they retired to Cyprus, conquered Rhodes, and called themselves Knights of Rhodes. Driven thence they settled in Malta and took the name of Knights of Malta. In England the order was revived in 1834 as a civil body devoted to ambulance work. See also **Hospitallers**.

John, St., the Apostle, the son of Zebedee and Salome, the sister of the Virgin Mary; originally a fisherman on the Galilean Lake; after being a disciple of John the Baptist became one of the earliest disciples of Christ; much beloved and trusted by his Master, lived after His death for a time in Jerusalem, and then according to tradition went to Ephesus as bishop, where he died at a great age. Many critics now deny that he was the writer of the Gospel that goes by his name. He is represented in Christian art as either writing his Gospel, or as bearing a chalice out of which a serpent issues, or as in a cauldron of boiling oil.

John Bull, popular symbolic name for the typical Englishman; can be traced back to Arbuthnot's *History of John Bull* (1712). The name has been adopted at different times by several periodicals, and is at present used by a well-known English weekly of extensive circulation.

John Dory. See Dory.

John of Austria, Don, Spanish soldier, illegitimate son of Emperor Charles V. by Barbara Blomberg of Liegensburg where he was born; admiral in Hispano-Venetian campaigns against Turks, whom he defeated at Lepanto, 1571; Governor of Netherlands, 1576. Defeated Dutch at Gembloux, January 1578. (1545-1578).

John of Gaunt, Duke of Lancaster, third son of Edward III.; created Duke in 1362; attempted to secure the crown of Castile; supported the Wycliffites against the clergy; married Blanche of Lancaster, and later Constance, daughter of Pedro of Castile; was father of Henry IV., King of England. (1340-1399).

John o' Groat's House, on the Caithness coast, 11 m. W. of Duncairn Head, marks the northern limit of the Scottish mainland. The house was said to have been erected eight-sided, with a door at each side and an octagonal table within, to compromise on the question of precedence among eight branches of the descendants of a certain Dutchman, John o' Groat.

John's Eve, St., a festival celebrated with bonfires on Midsummer Eve; universally observed, and with similar rites throughout Europe, in the Middle Ages, its celebration being associated with many superstitious practices.

Johnson, Amy, English woman aviator; began life in a solicitor's office; took up flying in September 1928, and in May 1930 made a famous solo flight from England to Australia in 20 days; later made flights to Japan (1931) and South Africa (1932 and 1936); in 1932 married J. A. Mollison, the famous airman; marriage dissolved 1938. (1905-).

Johnson, Andrew, seventeenth American President, born in Raleigh, N. Carolina; was entirely self-educated, and became a tailor; settled in Tennessee, and sat in Congress from 1833 till 1835; was for four years Governor of Tennessee, and sat in the Senate from 1857 to 1863; though in favour of slavery, he discountenanced secession and supported Lincoln, whom he succeeded as President in 1865, and whose policy he continued, but lost the confidence of Congress; his removal of Secretary Stanton led to his impeachment for violation of the Tenure of Office Act; was tried before the Senate, but acquitted, and completed his term. (1808-1875).

Johnson, Jack, American negro boxer, born at Galveston, U.S.A.; first became known in 1907 by beating Fitzsimmons in two rounds at Philadelphia; became world's champion in 1908, by defeating Tommy Burns, and in 1910 won a celebrated battle at Reno over J. J. Jeffries. In 1915 he lost the championship to Jess Willard. (1878-).

Johnson, Samuel, English man of letters and lexicographer, born in Lichfield, the son of a bookseller; educated at Lichfield and Pembroke College, Oxford; started a boarding-school, which did not prosper, and removed to London. There he contributed to the *Gentleman's Magazine*, and reported Parliamentary debates. In 1740 he published the *Vanity of Human Wishes*, and about the same time commenced his *Diction-*

ary, published 1755. Meanwhile he edited the *Rambler*, writing most of the contents himself. In 1758 he started the *Idler*. In 1762 the King granted him a pension of £300; five years after he instituted the Literary Club. In 1770 he began his *Lives of the English Poets*, and in 1773 he made his famous tour in the Highlands with Boswell. The story of his life as written by Boswell (*q.v.*) is the most famous of English biographies. (1709-1784).

Johnston, Sir Harry Hamilton, British administrator, explorer and author; born in London; on scientific expeditions to various parts of Africa between 1882 and 1889; last-named expedition led to the founding of the British Central Africa Protectorate, of which he was administrator for six years; from 1899 to 1901 he acted as Special Commissioner and Consul-General for the Uganda Protectorate, and discovered the okapi in the Semliki Forest, in 1901; his writings include *The Opening-Up of Africa* and some novels. (1858-1927).

Johnston, Thomas, Scottish journalist and labour politician, born at Kirkintilloch; educated at Glasgow University; founded the Socialist organ *Forward*; later became a leader of the Independent Labour Party, and in 1929 was elected M.P. for West Stirlingshire; Under-Secretary for Scotland, 1929; Lord Privy Seal, 1931. (1882-).

Johnstone, town in Renfrewshire, Scotland, on the Black Cart, 3½ m. W. of Paisley; has cotton, paper and iron industries. Pop. 12,900.

John the Baptist, New Testament forerunner of Christ, according to the Gospel of St. Luke the son of Zachary and Elizabeth; preached repentance in the Jordan country and baptised Christ; was imprisoned by Herod, and later beheaded at the request of Salome. Feasts, June 24 and Aug. 29.

Johore, State in the S. of the Malay Peninsula, one of the Unfederated Malay States, under British protection; produces rubber. Pop. 630,000 mainly Malays and Chinese. Area 7,500 sq. m. The capital of the State is Johore Bahru, a free port. Pop. 15,800.

Joinery, the branch of woodwork concerned with the fittings of a building, and using planed wood as its principal medium, whereas carpentry has to do with the structural work, and uses mainly unplanned timber. The woods mainly used in joinery are oak, mahogany, teak and pine, cut into lengths called, according to their varying widths, strips, battens, deals or planks. The craft takes its name from the "joining" of sections of wood, which is one of the main operations with which it is concerned.

Joint, (1) in carpentry and joinery a method of connecting two pieces of wood. Various kinds of joints are in common use, including the square joint, formed by gluing two planed edges of wood into contact, the mitre, butt, tongued, dovetail, mortise and tenon, key, bevel, etc., most of which are found in several forms. Some of these joints may be strengthened by metal bolts.

(2) In anatomy, the bony or cartilaginous connection between two parts of an animal skeleton; often extended to cover a single section (such as the thigh), which is connected by a joint to another part of the body. Joints may be either immovable, as in the skull, formed by the actual junction of two bones or the connection of two membranes by a section of fibrous tissue; or movable, with greater or less freedom. The latter may be "half-joints" or amphiarthroses, where the connection is by a flexible ligament, or "perfect" joints, where the convex surface of one cap of

DR. SAMUEL JOHNSON

cartilage fits into the concave surface of another, connected by a synovial membrane. Either the synovial membrane or the bone itself may become a seat of disease; sprains are caused by mishaps to the ligaments which connect the bones.

Jointure, in law, an estate made over to a wife in satisfaction of her dower; or any provision made for a woman upon marriage in the event of her husband predeceasing her. The name originates from the practice of making the spouses "joint tenants," so that all property goes to the survivor.

Joinville, Jean, Sire de, French chronicler, Seneschal of Champagne, born in Châlons-sur-Marne; followed Louis IX. in the Crusade of 1284, but refused to join in that of 1270. He lived through six reigns, and his gossip and digressive *Vie de St. Louis*, a chronicle of the Crusades, is one of the most remarkable books of the Middle Ages. (1224-1317).

Joliette, a town of Quebec, Canada, on R. L'Assomption, 40 m. N. of Montreal. It is served by the C.P.R. and C.N.R. and produces paper and limestone. Pop. 11,000.

Jolly Boat, a small ship's boat used generally hoisted at the stern of the vessel.

Jonah, a Hebrew prophet of the northern kingdom. The book in the Bible named after him, though telling the story of his life, does not claim to be his own work. It dates from after the exile.

Jonathan, the name of several Biblical characters, especially (1) the son of Saul, and friend of David, killed in battle against the Philistines at Gilboa. (2) the son of Matathias, the Maccabee, one of the leaders in the Jewish revolt against the Syrian Bacchides.

Jones, Ernest, Chartist leader and poet, born in Berlin, of English parentage, educated at Göttingen; came to England in 1833; called to the Bar; in 1845 threw himself into the Chartist movement, and devoted the rest of his life to the amelioration and elevation of the working classes, suffering "two years" (1845-1850) solitary imprisonment for a speech made at Kensington; he wrote various pamphlets and papers in the Chartist cause, and several poems. (1819-1869).

Jones, Henry Arthur, dramatist, born at Grandborough, Bucks., author of *The Silver King*, *The Middleman*, *Judah*, *The Dancing Girl* and many other plays. (1851-1929).

Jones, Inigo, English architect, born in London, son of a cloth-worker; studied in Italy, and, returning to England, obtained the patronage of James I. The Royal Chapel at Whitehall (formerly the banqueting hall) is reckoned his masterpiece. Heriot's Hospital, Edinburgh, and Greenwich Hospital, are from his designs. His style follows Palladio of Venice. (1573-1652).

Jones, Paul, a naval adventurer, whose real name was John Paul, born in Kirkcubright, Scotland, son of a gardener; took to the sea, engaged in the slave-trade, settled in Virginia, and offered his services to the colonists in the War of Independence as a sea-captain with a ship of 18 guns; in 1778 made a descent on the shores of his native country. He also fought in the French service, capturing two British war-vessels off Flamborough Head. He died in Paris, where the National Assembly granted him a "ceremonial funeral." In 1905 his remains were carried over to the United States under escort of a U.S.A. naval squadron. (1747-1792).

Jongleurs, medieval minstrels of Provence and Northern France, who sang and often composed songs and tales, but whose jesting and buffoonery distinguished them from troubadours and trouvères.

Jonquil (*Narcissus jonquilla*), an ornamental plant of the *Amoryllidaceae* order, bearing small light-yellow fragrant flowers for the sake of which they are extensively cultivated in England.

JONQUIL

Jonson, Ben, English dramatist, born at Westminster, posthumous son of a clergyman of Scottish descent; first a bricklayer, afterwards a soldier in the Netherlands, whence he returned about 1592, and became connected with the stage. He was one of the most learned men of his age, and for forty years the foremost, except Shakespeare, in the dramatic and literary world. Killing his challenger in a duel nearly cost him his life in 1598; he was branded on the left thumb, imprisoned and his goods confiscated. In prison he turned Catholic but twelve years later reverted to Protestantism. The opening of the century saw the famous Mermaid Club at its zenith. For nine years after Shakespeare's death he produced no dramas. In 1619 he received the laureateship, and a small pension from the King; founded with Herrick, Suckling, Carew and others the Apollo Club at the Devil Tavern. He died in poverty, but was buried in Westminster Abbey, his tombstone bearing the words "O rare Ben Jonson" (meaning it has been suggested "Pray for Ben Jonson," or, being Latin for "Pray"). He wrote at least sixteen plays, among them *Every Man in his Humour* (1598), in which Shakespeare acted, *The Poetaster* (1601), the tragedy of *Sejanus* (1603), *The Silent Woman* (1609), a farcical comedy, and his most elaborate and masterly work, *The Alchemist* (1610). He wrote also thirty-five masques in the production of which Inigo Jones provided the mechanism; but his best work was his lyrics, among them "Drink to me only with thine eyes." (1573-1637).

Jonsong, a pass in the Himalayas, at an altitude of about 21,300 ft. in the ridge which connects Kanchenjanga with Nepal.

Joppa. See Jaffa.

Jordan, a river of Palestine, which rises on the western side of Mt. Hermon, and flows S. below Caesarea-Philippi within banks, after which it expands into lagoons that collect at length into a mass in Lake Merom (Huleh), 2 m. below which it plunges into a gorge and rushes on for 9 m. in a torrent, till it collects again in the Sea of Galilee, to lose itself finally in the Dead Sea after winding along a distance of 65 m.; at its rise it is 1,080 ft. above, and at the Dead Sea 1,300 ft. below, the sea-level.

Jordan, Mrs. Dorothea, English actress, her real name Miss Bland, born in Waterford; appeared at Drury Lane in *The Country Girl* in 1785; her popularity in comic rôles was immense; was from 1790 to 1811 the mistress of the Duke of Clarence, who, when William IV., ennobled her eldest son; she died in humble circumstances at St. Cloud, near Paris. (1762-1816).

Joseph, the name of four Biblical personages: (1) **Joseph**, the son of Jacob and Rachel, the story of whose life is told in Genesis. (2) **Joseph**, St., the carpenter, the husband of the Virgin Mary and the reputed father of Jesus. (3) **Joseph of Arimathea**, a member of the Jewish Sanhedrin, who begged the body of Jesus to bury it in his own tomb. (4) **Joseph**, surnamed **Barnabas**, one of the disciples of Jesus, unsuccessfully nominated to fill the place vacated by Judas, and defeated by Barnabas.

Josephine, the Empress of the French, born in Martinique; came to France at the age of 15; was in 1779 married to Viscount Beauharnais, who was one of the victims of the Revolution, and to whom she bore a daughter, Hortense, the mother of Napoleon III.; married in 1796 to Napoleon Bonaparte, to whom she proved a devoted wife as well as a wise counsellor. She became Empress in 1804, but, failing to bear him any children, was divorced in 1809, though she still corresponded with Napoleon and retained the title of Empress to the last, living at Malmaison, where she died. (1763-1814).

Josephus, Jewish historian, of royal and priestly lineage; gained favour at Rome; was present with Titus at the siege of Jerusalem, and by his intercession saved the lives of several of the citizens. He accompanied Titus back to Rome, and received the freedom of the city; there wrote the *History of the Jewish War* and *Jewish Antiquities*. He was of the Pharisaic party, but his religious views were rationalistic. (37-c. 100).

Joshua, a Jewish military leader, of the tribe of Ephraim, the minister and successor of Moses, under whose leadership the Jews obtained a footing in the Land of Canaan.

Joshua, The Book of, a book of the Bible, closely connected with the Pentateuch, which it continues, constituting along with it the Hexateuch, or six-fold book. It covers a period of 25 years, and relates the story of Joshua's leadership of the Jewish people, their entrance into the Promised Land, and its allotment among them.

Josiah, King of Judah from 639 to 609 B.C., was zealous for the restoration of the Jewish worship according to the ritual of Moses, as set forth in the "Book of the Law" discovered in the temple during his reign by the high priest Hilkiah; slain by the invading Assyrians.

Joss, a Chinese idol; a joss-house is a Chinese temple; a joss-stick is a thin stick of fragrant timber mixed with clay, used in China as incense and burnt before the statue of an ancestor or holy personage.

Jötunheim, in Norse mythology, the giants, as Asenheilm is that of the Norse deities.

Jötuns, a race of giants in the Norse mythology, representing the dark hostile Powers of Nature, such as Frost, Fire, Sea-tempest. They dwell in Jötunheim, in perpetual feud with the gods.

Jouffroy d'Abbans, Claude, Marquis de, is claimed by the French as the first inventor of the steamboat. He made a paddle-steamer ply on the Rhône in 1783, but misfortunes due to the Revolution hindered his progress, till he was forestalled by Fulton on the Seine in 1803. (1751-1832).

Jougs, an old Scottish instrument of punishment, consisting of an iron collar hung by a chain round a culprit's neck, who was thus exposed in a sort of pillory; in use from the 16th to the 18th Centuries.

Joule, a unit of work to 10 million ergs; it is equivalent to the energy supplied in one second by an electrical circuit of one watt.

Joule, James Prescott, English physicist, born in Salford; was a pupil of Dalton, devoted his time to physical and al research; made discoveries in connection with the production of heat by voltaic

electricity, demonstrated the equivalence of heat and energy, and established on experimental grounds the doctrine of the conservation of energy. (1818-1889).

Journalism, the profession of writing papers and periodicals; in ancient Rome and in China before the 15th Century daily news-summaries were produced, but the modern newspaper had its origin in the "news-letter" of the 17th Century. Highly priced and subject to a stamp tax for many years, the newspaper attained some approach to its modern form about the middle of the 1890's; the illustrated newspaper arising early in the 20th Century.

Journalists, National Union of, the professional interests of Journalists in Great Britain, founded in 1907. In 1937 it had over 6,600 members, including the majority of salaried staff journalists of daily and weekly papers.

Jovian, Flavius Claudius, Roman Emperor, peror, captain of the household troops of the Emperor Julian, whom he accompanied in his disastrous campaign against the Persians; elected Emperor in 343, after Julian's death, Jovian was forced to cede to the Persians five provinces beyond the Tigris. (c. 330-364).

Jowett, Benjamin, English classical scholar, born in Camberwell; fellow and tutor of Balliol College, Oxford, till his election to the mastership in 1870. He wrote an article "On the Interpretation of Scripture" in *Essays and Reviews*, and a commentary on certain epistles of St. Paul, but is best remembered for his translations of Plato's *Dialogues*, the *History of Thucydides*, and the *Politics of Aristotle*. (1817-1893).

Jowitt, Sir William Allen, English lawyer, and politician, son of a clergyman; educated at Marlborough and New College, Oxford; in 1922 elected Liberal M.P. for the Hartlepool; and in 1924 for Preston; joined the Labour Party in 1929; Attorney-General, 1929-1931, when he returned to practise at the Bar. (1855-).

Joyce, James, Irish novelist, born in Dublin, educated at Clongowes and the Royal University. He wrote verses, a play and a volume of short stories, *The Dubliners*, before he became widely known as the author of an extraordinary novel, *Ulysses*, which for over twenty years was banned in England. (1882-).

Juan Fernandez, a group of mountainous islands off the Chilean coast, 400 m. W. of Valparaiso; the lonely residence of Alexander Selkirk (1704-1709), the prototype of Defoe's *Robinson Crusoe*; used as a penal settlement from 1819 to 1835, and is inhabited by a few seal hunters; there is a wireless station.

Juba, river in Italian E. Africa, and flowing S. into the Indian Ocean, formerly the boundary between Italian Somaliland and Kenya. See *Jubaland*.

Jubaland, until 1914 a part of German E. Africa; by the Treaty of Versailles assigned to Great Britain; situated between Kenya and Italian Somaliland. It was ceded to Italy in June 1924, and is now a province of Italian Somaliland.

Jubbulpore (Jabalpore), a town, district and one of the four divisions of the Central Provinces, India; the town is an important commercial and railway centre, situated 228 m. SW. of Allahabad; cotton, cement and carpets are among its chief manufactures. Area (district) nearly 19,000 sq. m. Pop. (district) 2,300,000; (town) 135,000.

Jubilee, originally a festival among the Jews every fiftieth year; the word is now applied to the 25th (silver

jubilee), 50th (golden jubilee) or 60th (diamond jubilee) anniversary of such an event as the accession to the throne, or coronation, of a monarch, or other important political commemoration.

Jubilee, Year of, a year during which, among the Hebrews, it was required that all land which had passed out of the original owner's hands during the 50 years preceding should be restored, all who during that time had been forced to sell their liberty should be released, and all debts contracted in that period should be remitted.

Judæa, the southern portion of Palestine, extending in one direction between Samaria and the desert of Arabia, and in the other between the Mediterranean and the Dead Sea.

Judah, Kingdom of, the kingdom in the S. of Palestine formed by the two tribes of Judah and Benjamin that remained true to the house of David after the revolt of the other ten under Jeroboam.

Judaism, the religion of the Jewish people based upon the Old Testament, particularly the laws of Moses as set forth in the Pentateuch. Its distinctive features are strict monotheism, the Sabbath rest, circumcision, an elaborate dietary and sanitary code, and the keeping of certain festivals, especially the Passover and the Day of Atonement. As practised in Palestine before the fall of Jerusalem in A.D. 70, it also included sacrifice, offered by an organised priesthood supported by tithes. In modern times the strict following of the Mosaic laws is much relaxed among many "reform" and "liberal" Jews, especially in Western Europe and the United States. Worship is carried on in synagogues. The Talmud, a commentary on the law, is an authority second only to the Bible.

Judaizers, a party, called also Ebionites, in the primitive Church who taught that Christians were bound to observe the Jewish law so far as it was not in contradiction to Christian teaching. They died out after the fall of Jerusalem.

Judas, surnamed Iscariot, one of the twelve Apostles of Christ, who betrayed his Master to His enemies for 30 pieces of silver; after the Crucifixion he committed suicide by hanging. See also *Aceladama*.

Judas Maccabæus, a son of Mattathias (q.v.) who succeeded his father in the leadership of the Jews against the Syrians in the war of the Maccabees, and who gave name to the movement; with the elect of his countrymen of kindred spirit he encountered and overthrew the Syrians in successive engagements, till before a great muster of the foe his little army was overwhelmed and himself slain in 160 B.C. See *Maccabees*.

Judas Tree (*Cercis siliquastrum*), a small, deciduous, logarithmous tree bearing large purple flowers, which grows in Mediterranean countries, and is cultivated in England as an ornamental plant, its popular name being due to the tradition that Judas Iscariot hanged himself on such a tree. The flowers are papilionaceous and purple and appear before the leaves. Kindred species occur in America and China.

Jude, Epistle of, an epistle in the New Testament, of which Judas, the brother of James, was probably the author; written to some unknown community in the primitive Church affected by heresy. It was only received as canonical by the Church after considerable hesitation.

JUDAS TREE

Judge, an officer empowered by the State to hear and determine civil and/or criminal causes, and generally to administer justice in accordance with the established laws. In English legal theory it is for the judge to declare, and not make, the law; but in giving decisions precedents are created and a body of substantive law is built up, the "judge-made" law, evolved by the judges in deciding upon "competing analogies."

In England to-day the term "judge" is restricted to judges of the Courts of Appeal, High Court judges and County Court judges; judges of Borough Courts are called "recorders"; of Metropolitan Police Courts "stipendiary magistrates"; and of Petty Sessions "justices of the peace." The Lord High Chancellor, the head of the English Judicial system, appoints the puisne judges, of whom there are 6 in the Chancery Division (of which Division the Lord High Chancellor is titular president), 17 in the King's Bench Division, excluding the Lord Chief Justice (who, besides being president of the King's Bench Division is also a member of the body of Lords of Appeal in Ordinary) and 5 in the Probate, Divorce and Admiralty Division.

The Judges of the highest Court of Appeal, the House of Lords, regarded as a tribunal, are the Lord High Chancellor, Ex-Lord High Chancellors, 7 Lords of Appeal in Ordinary, the Lord Chief Justice, the Master of the Rolls and the President of the Probate, Divorce and Admiralty Division. There are 5 Lords Justices (q.v.), who form the penultimate Court of Appeal. All puisne judges are knighted on appointment, but are addressed as "My Lord" or styled "Mr. Justice —."

The Lord Chief Justice is merely the titular head of the King's Bench Division, but, since the institution in 1908 of the Court of Criminal Appeal, he presides over that Court. The Lord Mayor and Aldermen are titular judges of the Central Criminal Court (Old Bailey), but its regular judges are the Recorder of London, the Common Serjeant, and the 2 judges of the City of London Court. The County Court judges number 57.

Judge Advocate-General, a legal official charged with the duty of advising the Crown on matters relating to the proceedings and sentences of military courts, and who in person or by deputy attends all general courts-martial. Similar duties are performed in matters relating to naval courts by a Judge Advocate of the Fleet.

Judges, Book of, a book of the Old Testament, recording the story of the Hebrew people and their wars with their neighbours between the death of Joshua and the birth of the prophet Samuel, a period of some 300 years. The stories centre on the exploits of twelve national leaders or "judges" and include those of Samson, Jephthah, Gideon, and Deborah and Barak. The book is closely bound up with that of Joshua, of which it is a continuation. With the Books of Ruth, Samuel and Kings it probably originally formed one work.

Judgment (in law), the decision of a court of law in any cause heard therein. Final judgment disposes of the case, subject to any right of appeal; interlocutory or interim judgment, such as the grant of an injunction in the Chancery Division, disposes only of a particular issue, leaving the merits to be adjudicated at some other time or, as in the grant of a mandamus, in another and inferior court. A judgment binds only the parties to the particular case. A judgment summons is one which follows non-compliance with a default summons by a debtor who, in the Court's opinion, can but will not pay his debt; it asks the Court to make an order for payment subject, on further default, to committal to prison.

Judgment, Last, in C1 the divine decision by which eternal reward in heaven or eternal punishment in hell will be allotted to mankind. It is usual to distinguish the particular Judgment of each individual separately after death from the General Judgment, at the end of the world, whereat the human race will be judged *en bloc* and the sentences awarded and the various particular judgments ratified.

Judicial Committee of the Privy Council, the ultimate British Court of Appeal, founded in 1833; appeals lie to it from Dominion, Colonial and Ecclesiastical Courts, and in prize cases. The Court consists of the Lord President, such members of the Privy Council as hold or have held high judicial office, the Lords Justices of Appeal, and any two other privy councillors who may be appointed under the sign manual. Three members must be present at the hearing of a case, and no member may attend unless summoned.

Judicial Separation, a remedy in matrimonial disagreements created by the Matrimonial Causes Act, 1857; may be claimed by either spouse on the ground of adultery, cruelty, desertion without cause for not less than two years, or non-observance of a decree of restitution of conjugal rights. It differs from divorce in not enabling the parties concerned to marry again. Permanent alimony may be granted by the Court to a wife affected by such a decree.

Judith, a beautiful Jewish widow who, according to the book of the Apocrypha named after her, entered the camp of the Assyrian army under Holofernes, that lay investing Bethulia, her native place, won the confidence of the chief, persuaded him to drink while alone with him in his tent till he was intoxicated, and cut off his head. The story is an allegory, with no basis in historical fact; the book dates from the 1st Century B.C.

Juggernaut, Jagannath, or Puri, a Orissa, India, with a temple dedicated to Vishnu, containing an idol of him called Jagannatha (or the Lord of the World), which attracts thousands of pilgrims to worship at its shrine. At certain festivals the idol is dragged forth in a ponderous car, under the wheels of which pilgrims are said in former times to have sometimes thrown themselves while in a state of religious frenzy.

Jugular Veins, large veins in the neck conveying blood from the head, face and neck to the heart; the four chief are the external, internal, anterior and posterior jugulars. The severing of any of them, particularly the internal, by cutting the throat, is likely to result in death.

Jugurtha, King of Numidia, in Africa; succeeded by violent measures to the throne, and maintained his ground in defiance of the Romans, who took up arms against him and at last led him captive to Rome to die of hunger in a dungeon. Sallust's *Jugurtha* is a school classic. (d. 104 B.C.).

Ju-jitsu, a form of wrestling, originating popular in the West. Its aim is to render the opponent incapable of further resistance by allowing him to expend his energy uselessly, and to overcome him by so holding or striking him in some vulnerable part of his body, the display of physical strength being less important than anatomical knowledge.

Ju-ju, in W. Africa the name given to an fetish, or in a broader sense is applied to magic witchcraft generally; the practice has been often accompanied by human sacrifice.

and is said to have spread to the negro republics of Haiti in the W. Indies.

Jujube Tree, the name of several Eastern shrubs of the genus *Ziziphus* of the natural order Rhamnaceae, bearing small edible fruits. The chief species sometimes so called are the *Ziziphus vulgaris*, the Common or French jujube bearing red and yellow fruits, the *Z. Lotus* yielding what is supposed to have been the Lotus fruits of antiquity and the *Z. Spina-Christi*, from which Christ's Crown of Thorns is said to have been made. Also a sweetmeat resembling the jujube fruit in flavour.

Juliana, Louise Emma Marie Wilhelmina, Crown Princess of the Netherlands, only child of Queen Wilhelmina; married Prince Bernhard of Lippe-Biesterfeld, Jan. 7, 1937; her daughter, Princess Beatrix Wilhelmina Armgard was born Jan. 21, 1938. (1909-).

Julian Calendar, a rearrangement introduced by Julius Caesar in 46 B.C., providing for a year of 365 days, with every fourth year a leap year of 366 days, and the months arranged and named as they are to-day. The Gregorian calendar, now in use, is a modification of the Julian, introduced by Pope Gregory XIII. in 1582 and adopted in Great Britain in 1752.

Julian the Apostate, Roman Emperor for 18 months, from 361 to 363; was born at Constantinople, his father being a half-brother of Constantine the Great, on whose death most of Julian's family were murdered. Embittered by this event, Julian secretly renounced Christianity. As joint Emperor with his cousin from 355 he showed himself a capable soldier and a wise administrator. On becoming sole Emperor he proclaimed his apostasy, and sought to restore paganism, but without persecuting the Church. Though painted in blackest colours by the Christian Fathers, he was a just ruler. He was killed in an expedition against Persia. (331-363).

Julius, the name of three Popes; J. I., St. Pope from 337 to 352. J. II., Pope from 1503 to 1513. J. III., Pope from 1550 to 1555, of whom only J. II. deserves notice. J. II., an Italian by birth, was more of a soldier than a priest, and, during his pontificate, was almost wholly occupied with wars against the Venetians for the recovery of Romagna, and against the French to drive them out of Italy, excommunicating Louis XII. and putting his kingdom under an interdict in 1542. He sanctioned the marriage of Henry VIII. with Catharine of Aragon, commenced to rebuild St. Peter's at Rome, and was the patron of Michelangelo and Raphael.

Julius Cæsar. See Cæsar Gaius Julius.

Jullundur (Jalandhar), a town of the Punjab, India, 50 m. S.E. of Amritsar, with silk and cotton industries. Pop. 82,000.

July, the seventh month of the year, so called in honour of Julius Cæsar, who reformed the calendar and was born in this month. It was the month of the outbreak of the second French Revolution in Paris in 1830, hence called the July Revolution.

Jumna, an Indian river, rises in the Punjab, and flows through the NW. Provinces, having Delhi and Agra on its banks; joins the Ganges at Allahabad, the junction of the rivers being a holy place of the Hindus. Its course is 80 m. long, and it falls nearly 11,000 ft. Its waters are used for irrigation by means of canals, being of little use for navigation.

Jumping, as a form of athletics is practised in three principal varieties, the running long jump, the running high jump and the pole jump, while a fourth, less often seen at sports meetings, is the hop,

step and jump. The modern method of high jumping is to carry the body over the bar in a horizontal roll. World records are: High Jump, 6 ft. 10 in. (Walker, U.S.A.); Long Jump, 27 ft. 2½ in. (Owens, U.S.A.) and Pole Jump, 14 ft. 11 in. (Sefton and Meadows, U.S.A.).

Jumping Hare, or Springhaas (*Pedetes capensis*), a

rodent quadruped of South Africa, somewhat resembling the jerboa; so called from its springing manner of progression, similar to that of the jumping mouse and jumping shrew.

JUMPING HARE

Jumping Mouse,

or Jumping Rat,

an American rodent of the jerboa or Dipodidae, family, resembling a mouse, but with long hind limbs that enable it to take running leaps.

June, the sixth month of the year, so named from the Roman *gens* or clan Junius, or perhaps from Juno.

Juneau, the capital of Alaska, situated on the Gastineau Channel. It is the centre of the fishing, fur and mining industries of the country and has machine shops and paper mills. Pop. 4,000.

Jung, Karl, Swiss psychologist; was associated with Freud (q.v.) in the development of the system for the analysis of mental processes known as psycho-analysis, but a difference of opinion led to open rupture, and Jung returned to Zurich, where he founded a school of psycho-therapy. His works include *Psychological Types*, *Contributions to Analytical Psychology*, *The Secret of the Golden Flower* (with Richard Wilhelm). (1875-).

Jungfrau (Maiden), a peak of the Bernese Alps, 13,670 ft. in height; was first ascended by the brothers Meyer in 1811.

Jungle, originally any forest land or country overgrown with long grass and tangled vegetation, especially particular tracts occupied by wild beasts. The term is also used for similar areas in other countries. In Stock Exchange slang "The Jungle" means W. African Share Market.

Jungle-fowl, a genus of gallinaceous birds native of India and the East. There are four species, including the Red Jungle-fowl (*Gallus gallus*), from which the common domestic fowl is believed to have originated. There are many varieties, including one in Japan with wing-coverts growing as long as 12 ft. and another in N. India, a type to which the common domestic fowl reverts when let run wild in Malaya.

Juniper (*Juniperus*), a genus of evergreen shrubs of the natural order Coniferae, but especially the common juniper (*Juniperus communis*) of Europe (including Britain) and America. It bears needle leaves and dark blue berries of acrid taste, used in flavouring gin. *Juniperus virginiana* yields the cedarwood for penell-

RED JUNGLE-FOWL

making. Other species also yield useful woods.

Junius, Letters of, seventy satirical letters on public affairs which appeared under that signature in the *Public Advertiser* 1769 to 1772, and were with others reprinted in book form; the prototype of the modern leading article. Their authorship has never been discovered.

Junk, a Chinese boat with a square prow, a high stern, and a pole for mast.

Junker,

a name formerly given in Germany to the younger members of the aristocracy, or of the landed gentry, as representing a reactionary party in politics.

Junket,

in origin a cream cheese, made in a rush basket and served on a rush mat; but now used of a dish consisting of curds sweetened and flavoured, and served with scalded milk on top. In America a picnic or open-air meal is so called.

Juno, a Roman goddess, the wife of Jupiter, and the queen of Heaven, corresponding to the Hera (q.v.) of the Greeks; the impersonation of womanhood, and the special protectress of the rights of women, especially married women. She bore the names of *Virginialis* and *Matrona*, and was the patroness of household and State economy.

Junot, *Andoche, Duc d'Abantes*, French general; was Napoleon's aide-de-camp in his first campaign in Italy; took part in the expedition to Egypt; distinguished himself in the invasion of Portugal, but soon experienced reverse after reverse; in a fit of madness he threw himself one day out of a window and was killed. (1771-1813).

Junta, Spanish name for a committee or council, similar body which meets for political purposes or for making laws. It differs from a regular legislative assembly in that it is generally a *de facto* body called together or self-appointed during times of political upheaval, as e.g., the junta in Spain under General Franco in 1936. In English history the word (in the form "juncto") has usually a contemptuous significance, and has been applied to the Whig faction in the reign of William III., of which Russell, Lord Keeper Somers and Charles Montague were the leading members.

Jupiter, the chief of the gods of the Roman pantheon, equivalent to the Greek Zeus (q.v.).

Jupiter, the largest of the planets, revolving between Mars and Saturn, at a mean distance of 183 million m., in a period of 4,332 days; it rotates on its axis in 9 hrs. 55 mins.; accompanied by eleven moons, four of them, discovered by Galileo, much brighter than the rest; Jupiter is 1,300 times larger than the earth and 320 times as heavy; its density is only one-fourth that of the earth.

Jura, an Argyllshire island N.E. of Islay, mountainous, the twin peaks called the Paps of Jura being 2,400 and 2,700 ft. high. The eastern slopes yield some crops, but most of the island is deer-forest and cattle-grazing land. Area 160 sq. m. Pop. 570.

Jura, dept. of Eastern France, on the frontier of Switzerland, where stock-raising is carried on, salt produced, and clocks and watches and cheese made; there are large forests. Capital Lons-le-Saulnier. Area 1,950 sq. m. Pop. 239,000. The name is taken from the Jura Mts., a range about 200

m. long, in Franco and Switzerland, their highest peak being the Crêt de la Neige (5,650 ft.); they are thickly forested and heavily fissured, and give their name to the Jurassic system of rocks.

Jurassic, name given to the mesozoic and the Cretaceous. In England they consist of a broad band stretching from Lincolnshire to the Dorset coast, including the Oolite and Lias. The fossils of this period include corals, crinoids and ammonites, which are used as zone fossils, as well as giant reptiles or dinosaurs. The period is named after beds of that age in the Jura Mts.

Jurat, one of a body of magistrates in the Channel Is., chosen for life, who, together with the Bailiff, form the Royal Court of Justice; the office goes back to 1537.

Jurisprudence, the study of the principles or notions underlying any legal system or systems. English jurists restrict jurisprudence to a study of the meaning of such basic concepts as the "state," "law," "sovereign independence" and the like, and to an analysis of such general notions as property, possession, contractual relationship, intestacy, crime and actionable wrongs or torts. "Comparative jurisprudence" involves the reduction of all the above-mentioned common notions to some general form and comparing this with other particular legal systems. "Forensic medicine" or "Medical Jurisprudence" is the study of medicine in relation to the criminal law.

Jury, a body of citizens set to try a question of fact, or to assess damages. In England a jury numbers 12, and its verdict must be unanimous; a coroner's jury, however, may consist of any number from 12 to 23; of whom at least 12 must agree; in Scotland the verdict is by majority, and the jury numbers 12 in civil and 15 in criminal cases. The system in England dates back to the reign of King Alfred. The grand jury, recently abolished, examined criminal charges at assizes to decide whether sufficient evidence existed to justify bringing a case to trial.

Jus Gentium, in Roman law, the principles, supposed to be based on and in agreement with natural justice, which was administered in the city and later throughout the Empire by the Praetors. It became the foundation of much of what is now called International Law, though originally it was concerned with matters in dispute between private persons as well as with the relations between States.

Justice, **Royal Courts of**, English Courts, formerly housed in Westminster Hall, comprising until 1873 those of the King's Bench, Common Pleas and Exchequer—these being the Superior Courts of Common Law, as differentiated from the High Court of Chancery, with the Vice-Chancellor's Courts, which were the courts of Equity; there were also a High Court of Admiralty, a Prize Court, Probate Court and Divorce Court.

By the Judicature Act of 1873 the jurisdiction of the Superior Courts of Common Law and Equity, Admiralty, Probate, Divorce and of the Assize Courts was transferred to the Supreme or High Court of Justice, situated in the Strand, which Court consists of the two Courts of Appeal, the Court of Criminal Appeal (instituted in 1908); the King's Bench Division; the Chancery Division; the Probate, Divorce and Admiralty Division and the Railway and Canal Commission Court. Common law and equity were fused by this Act, so that the King's Bench and Chancery Divisions can each exercise both common law and equity jurisdiction, though all purely equity cases go to the Chancery Division.

Justices, **Lords**, are five in number and form, together with the Lord High Chancellor, the Lord Chief Justice, the Master of the Rolls and the president of the Probate, Divorce and Admiralty Division, as *ex-officio* members, the penultimate Court of Appeal in the United Kingdom. They are not peers. In practice, of the *ex-officio* members only the Master of the Rolls functions as a regular member of the Court. There are generally two Courts of three members each. Judges of the High Court may be called in to assist in the Court where necessary. The Lords Justices hear appeals from the High Court, but no appeal lies to them in criminal cases. The procedure on appeal is by motion for a new trial or to set aside a verdict or judgment. Mostly there is a right of appeal without leave, though the Court below may refuse a stay of execution. From this Court an appeal lies to the House of Lords.

Justices of the Peace, county or borough magistrates appointed by the Lord Chancellor on the recommendation of the Lords Lieutenant of Counties. The title is derived from the old Conservators of the Peace of the 14th Century, whose criminal jurisdiction in less grave cases has devolved on their modern representatives. In former times they also had various administrative functions such as the maintenance of highways, but these have long been transferred to the County Councils. There is now no property qualification and no honorarium. Women are eligible for appointment. All judges (*q.v.*), recorders, metropolitan police magistrates, mayors and chairmen of district councils are Justices of the Peace by virtue of their office. Two or more Justices constitute a petty sessional court, whose jurisdiction embraces admitting accused persons to bail, committing persons for trial, and the disposal of minor offences in pursuance of their powers of summary jurisdiction. Justices of the Peace may also grant separation orders, grant licences for the sale of intoxicating liquors and issue maintenance orders.

Justiciar, in English history, the chief political and judicial officer under the Norman and Plantagenet monarchs; he acted as regent in the King's absence, William Fitz-Osborn acting in that capacity for William I.; the office was enhanced in importance by Ranulf Flambard under William II. and the justiciar became supreme in justice and finance. The office ceased to exist in the reign of Edward I., and its powers passed to the Lord High Chancellor.

Justiciary Court, the highest court of criminal cases in Scotland.

Justification, (1) in the law of libel and slander, means a plea by the defendant that the defamatory words complained of were true in substance and in fact. To substantiate such a plea, the whole libel must be proved true, but a slight inaccuracy in one of its details will not prevent the defendant from succeeding, provided the inaccuracy in no way alters the complexion of the affair. Similarly in criminal cases, if the whole of the plea of justification is not proved, the Crown will be entitled to a verdict. (2) In theology, the act by which the soul is reconciled to God; it is equivalent to the remission of sins, and also (according to the canons of the Council of Trent) connotes the sanctification and renewal of the inner man.

Justinian I., Roman Emperor and jurist, born in Illyria; became co-emperor with Justin I. in 527; married Theodora, and for 38 years enjoyed a reign, the most brilliant of the late Empire, but not without dangers from foes outside and factions within. His fame rests on the codification and reform of the laws which he

(or Tribonian, the Quæstor, under his direction) carried out. He improved the status of slaves, revised the laws of divorce and of intestate succession, and in his *Digest*, *Institutes* and other sections of the *Corpus Juris Civilis*, first gave definiteness to Roman law and laid the basis of the civil law of most modern nations. (482-565).

Justinian Pandects, a code of Roman laws compiled under the direction of the Emperor Justinian, with a digest of the commentaries of the jurists thereupon.

Jute, a fibre obtained from the Asiatic plants *Corchorus capsularis* and *Corchorus olitorius*, annuals of the natural order Tiliaceæ,

growing 10 ft. high, with few branches. It is obtained from the inner bark of the plants, the stems being cut and retted in water before the fibre is beaten out. It is used in making cordage, canvas, tarpaulin and is the foundation of Brussels and Wilton carpets. The plant is cultivated in Bengal and Assam.

Jutes, a Tontonic people, generally held to be the forefathers of the modern inhabitants of Jutland, though ethnologists are at variance on the point. Whatever their precise origin, Jutes, together with the Angles

JUTE
(*Corchorus capsularis*)

and Saxons, invaded England in the 5th Century and settled on the E. coast, chiefly in Kent.

Jutland, peninsula at the mouth of the Baltic Sea, which comprises the continental portion of the kingdom of Denmark. Area 11,400 sq. m. Pop. 1,675,000. Off here in May 1916 was fought the biggest naval battle of the World War, in which 140 British vessels under Jellicoe and Beatty met 110 German under Von Scheer. The engagement was not decisive, Britain losing 14 and Germany 11 ships. The German fleet, however, returned to its base, and did not again challenge the British fleet in a general naval engagement.

Juvenal, Latin poet and satirist, born in Aquinum. His satires, 16 in number, are written in indignant scorn of the vices of the Romans under the Empire, and from his descriptions the historian finds a picture of the manners and morals of the time. (42-120).

Juvenile Offenders, children under the age of 16 found guilty of crimes. Since 1908 they have been dealt with separately from older criminals; they are remanded in separate places and tried in special juvenile courts from which the public are excluded. (Children under 14 cannot be sent to prison; but they can be placed on probation, sent to approved schools or awarded corporal punishment, and they or their parents can be fined on conviction).

K

Kaaba. See *Caaba*.

Kabul, on the Kabul R., at the foot of Takht-i-Shah Hills, 650 m. NW. of Delhi, is the capital of Afghanistan, an ancient, largely mud-built city, but progressing; trades in fruit and carpets; there is a University (founded 1932) and a military training academy; the town was taken by the British in 1839 and 1842, and again by (General Roberts in 1879. Pop. c. 80,000).

Kadijah, a rich widow, the wife of the been her steward and factotum, and whom he married when she was forty and himself only twenty-five. She was the first person to express her belief in his prophetic mission.

Kaffirs, including Kaffirs proper and *Zulus*, a division of the Bantu negroes, are a pastoral and latterly agricultural people of fine physique, found over the greatest part of S. Africa; Kaffir Wars broke out in 1834, 1846, 1850 and 1877; the name, which means infidel, was originally applied by the Mohammedans to all pagans.

Kaffraria, a district of S. Africa which was annexed to the then Cape Colony after the wars with the Kaffirs (1846-1853), thus advancing the border of the Colony to the Kei R.

Kagoshima, a port on Kishiu I., Japan, and capital of Satsuma province. Makes pottery, silk wares and cotton goods. Pop. 182,000.

KAFFIR

Kai-Feng-Fu, or *Kaifeng*, the capital of the Honan province of Central China, on the R. Hwang-ho. It had until recently an ancient Jewish community. It is a centre of trade in corn, rice, tea, indigo and cattle. Pop. 150,000.

Kainite, a mineral consisting of potassium sulphate, magnesium sulphate, magnesium chloride and water of crystallisation, which occurs at Stassfurt (N. Germany), and is used as an artificial manure.

Kaisar-i-Hind (i.e., Caesar of India), a title applied to Queen Victoria and subsequent British monarchs as Emperors of India.

Kaisariyeh, a city of Palestine at the foot of Mt. Argæus, 27 m. from Nazareth. Its former name was *Cæsarea*. St. Paul was imprisoned here. Pop. about 40,000.

Kaiser, the name, derived from the Latin *Cæsar*, given to the emperors of the Old Holy Roman Empire, and of the rulers of the German and Austro-Hungarian Empires before the World War.

Kaiserslautern, town in Bavaria, Germany, manufacturing sewing machines, bicycles, beer, shoes, etc. Pop. 62,500.

Kaiser Wilhelm's Land, former name of what is now N.E. New Guinea, which before the World War was a German colony; it is now mandated to Australia.

Kaka, a Maori name for a New Zealand of the genus *Nestor*; it is olive-brown, variegated with grey on the crown and dark red on the abdomen and rump. The name is imitative, like cockatoo.

Kakapo (*Stringops Labroptilus*), a New Zealand parrot which has green feathers mixed with dark brown and yellow and a disk of feathers round its eyes giving rise to its popular name Owl-Parrot. It is incapable of flight, and lives mostly on the ground, its fully-developed wings being used solely for the purpose of balance. It is a vegetarian feeder and is getting rare.

Kalahari Desert, in S. Africa, stretches far northward from the Orange R., between SW. Africa and the Transvaal; an elevated plateau, not really desert, but covered with scrub and affording coarse pasturage for cattle.

Kalamazoo, a railway centre and flourishing town in the SW. of Michigan, 144 m. N.E. of Chicago; manufactures machinery, paper and flour. Pop. 55,000.

Kalat, State in Baluchistan, British India, 73,280 sq. m.; a confederacy ruled by the Khan of Kalat. Pop. 342,000. The capital, bearing the same name, is an important military post on a hilltop 7,000 ft. high. Pop. 12,000.

Kaleidoscope, an optical instrument, invented by Sir David Brewster in 1817, consisting of a cylinder with two mirrors set lengthwise inside, two plates of glass with bits of coloured glass loose between them at one end and an eye-hole at the other, varying patterns being displayed on rotation.

Kalevala, a collection of Finnish folk-songs, current among the peasantry there from early times.

Kalgoorlie, a town of W. Australia, 375 m. E. of Perth. It is the centre of the gold-mining area E. of Coolgardie. Pop. 10,700.

Kalisz, chief town in the province of Lodz, Poland, situated on the Prosna. It has distilleries, and manufactures embroidery, lace and metalwork. Pop. 68,000.

Kalmar, seaport, in SE. of Sweden, on an island in Kalmar Sound; carries on a large timber trade, and manufactures tobacco and matches. Pop. 21,000.

Also a province of Sweden, taking its name from the town. Area 4,456 sq. m. Pop. 231,000.

Kalmuks, a Mongolian race widespread in Central Asia; they are Buddhists, nomadic, and have herds of horses and cattle.

Kalpa, Indian word for an age, especially for the immense period of time which in Hindu belief separates one destruction of the world from the next.

Kaluga, the capital of an industrial area, Russia, on the Oka R., 96 m. SW. of Moscow. It has many manufacturing industries, tanneries and sugar refineries. Pop. 60,600.

Kama, the Hindu god of love, one of the oldest gods of the Hindu pantheon, resembling the Greek Eros and the Latin Cupid.

Kamchatka, part of the Far Eastern Region of the U.S.S.R., a long narrow peninsula on the E. coast of Siberia, stretching southwards between the Behring Sea and the Sea of Okhotsk, with a precipitous coast and a volcanic range of mountains down the centre, has a cold wet climate, grass and tree vegetation, and many hot springs; the people live by fishing, hunting and trading in furs; farming is now being introduced under State supervision. Area 69,700 sq. m. Pop. c. 40,000.

Kamet, peak of the Himalayas, in the United Provinces, India, 25,447 ft. in height; it was twice scaled by F. S. Smythe in 1931, and is the highest mountain so far ascended by man.

Kampen, Dutch town on the Yssel, 3 m. from the Zuider Zee, and 61 m. W. of Zwolle; has shipbuilding and fishing industries. Pop. 20,000.

Kanaka, a native of the South Sea Is. word for "man". Strictly the Polynesian name for Polynesian races, it is commonly used to describe all South Sea Islanders, Polynesian, Melanesian, etc.

Kanara, of India, between Goa and Malabar, mostly malarial forest country with the Ghat Mts. and many rivers; N. Kanara is in Bombay Presidency, S. Kanara, capital Mangalore, is in Madras. From this area the Kanarese, one of the principal races of S. India, take their name.

Kanchenjunga, mountain in Nepal, the third highest peak of the Himalayas (28,146 ft.); unsuccessful attempts to scale it were made by expeditions in 1929-1930 and in 1931.

Kandahar, second city of Afghanistan, 250 m. SW. of Kabul; a well-watered, regularly built town in the middle of orchards and vineyards; a centre of the textile industries; it was held by the British through the war of 1839-1842, and again in 1880-1881. Pop. c. 60,000.

Kandy, a town on a mountain lake in the middle of Ceylon, 80 m. NE. of Colombo, former capital of the island; has the ruins of the palace of the old native kings, and a temple with the famous tooth of Buddha. Pop. 37,000.

Kangaroo, herbivorous marsupial mammal found in Australia

and some Pacific islands. There are over 30 species, but the best known is the *Macropus giganteus* or Great Kangaroo. The male is 6 to 7 ft. high and the female 4 to 5 ft. It has short, weak fore-limbs, used chiefly for grasping, and not in movement; powerful hind-limbs, and very muscular thighs and tail; lower legs and tail very long; colour, yellowish-brown darker above and paler below. The animal progresses by flying leaps, covering from 10 to 20 ft., and even more, in one leap. The stomach is pouched, and in the pouch the female carries its young. It is gregarious, inoffensive and timid, but when brought to bay it makes formidable use of its hind feet.

GREAT KANGAROO

Kangaroo Island, an island, about 1,700 sq. m. in area, off the south coast of S. Australia, of which it forms part. The first colonists landed here, but were almost immediately transferred to the mainland in 1836.

K'ang Té, Emperor of Manchukuo; became Emperor of China in 1909, at the age of three; retired to private life in 1912, on the proclamation of the Chinese republic, as Pu Yi, a name to which he subsequently prefixed the additional one of Henry; in 1932 was installed at Hsinking as administrator of Manchuria after the Japanese invasion; enthroned as hereditary emperor in 1934. (1906-).

Kano, a province of N. Nigeria, having an area of some 18,000 sq. m., inhabited mainly by the Hausa race. The chief town (pop. 77,000) has the same name.

Kansas, a central State of the American Union; lies in the basin of the Kansas and Arkansas Rs. It is a rolling prairie, with a fine climate subject to occasional extremes; raises crops of grain and sugar, and affords excellent grazing ground.

Pork and beef packing are the chief industries; oil and natural gas are produced. The State University is at Lawrence, and there is an agricultural college at Manhattan. The capital is Topeka, the largest other towns being Kansas City and Wichita. Area 82,158 sq. m. Pop. 122,500.

Kansas City, two contiguous towns Missouri R., 280 m. W. of St. Louis, are so called. The larger and more easterly one is the second city of Missouri, an important railway centre, and distributes the agricultural products of a large region; has pork-packing industries and iron manufactures. Pop. 400,000. The smaller, westerly city, is in Kansas, the largest town in that State; has two universities. Pop. 122,300.

Kansu, a province of NW. China. It is high, mountainous and not very rich. The climate is cold. Productions include tobacco, oil, gold, salt, wheat, barley, indigo and sheep. It has an area of 146,000 sq. m. and a population of 6,700,000. The capital is Lanchow. The province is bounded N. by Inner Mongolia, E. by Shen-Si, W. by Tibet and Sin-Kiang.

Kant, Immanuel, German philosopher, born in Königsberg, the son of a saddler, of Scottish descent; entered the university in 1740; wrote an essay, his first literary effort, on *Motive Force* in 1747; became a private lecturer in 1755; became professor of Logic and Metaphysics in 1770, when he was 46, and continued till his retirement, in 1797, from the frailties of age. His great work, the *Critique of Pure Reason*, was published in 1781, followed by the *Critique of Practical Reason* in 1788 and the *Critique of Judgment* in 1790. His works inaugurated a new era in philosophic speculation, and by the adoption of a critical method dealt a death-blow to speculative dogmatism on the one hand and scepticism on the other. Kant by his critical method did for philosophy what Copernicus did for astronomy. He centralised the intelligence in the reason or soul, as the latter did the planetary system in the sun. (1724-1804).

Kaolin, a pure form of clay (China-clay) used in the manufacture of porcelain; a hydrate aluminium silicate, white in colour, found in China, the United States and Cornwall.

Kapok, a silky vegetable fibre used for stuffing pillows, lifebelts and similar objects, is derived from the seed of the Javanese *Eriodendron anfractuosum*. It is cultivated in many British tropical dependencies, notably Ceylon and Tanganyika, but so far little attempt has been made to collect and prepare it for the market.

Kapp, Wolfgang, German politician who in 1930 attempted, in the so-called "Kapp putsch," to seize power in Berlin from the Republican Government with military aid; resisted by a general strike, he fled to Sweden, and on return to Germany the following year was arrested for high treason; he died while awaiting trial. (1868-1922).

Karachi, a seaport and the capital of Sind, British India, 500 m. from Bombay. It is essentially commercial, and is the terminus of the North-Western Railway, and an important air port on the Imperial Eastern route. The extensive docks and wharves are on the island of Kiamari, to which Karachi is joined by the mole. The chief manufactures are carpets and metal-ware. Pop. 264,000.

Karakoram, a range of the Himalayas, the Hindu-Kush eastward into Tibet, and a pass in the centre of it 18,000 ft. high. Also the name of the old capital of the Mongol Empire, under Genghis Khan and his successors, near modern Urga.

Kara-Kum, (1) a desert of about 110,000 sq. m. in Russian Central Asia. The greater part of it is in the Turkoman Republic; the remainder in the Kazak Republic. (2) A desert in Turkestan, known also as the Khiva desert.

Kara Sea, a portion of the Arctic Sea, on the NE. corner of Russia, between Novaya Zemlya and the Valmal; receives the Es. Obi and Yenisei, and is navigable from July to September.

Karelia, an autonomous Republic of the U.S.S.R., SE. of Finland, and lying between Lake Ladoga and the White Sea. The people are Finnish by race. Pop. 280,000. Capital, Petrozavodsk.

Karikal, a French possession in India, on S. of Madras; nears and exports rice in large quantities. Pop. 16,700 (with surrounding district 62,500).

Karlsbad. See Carlsbad.

Karlskrona, port of Sweden, and its chief naval station, built on four small islands in the Baltic, connected with the mainland by bridges. Pop. 28,300.

Karlsruhe, city in Germany, the capital of Baden, manufacturing machinery; has large railway workshops; built in the form of a fan, its streets radiating from the former ducal palace in the centre. Pop. 155,000.

Karma, term in Indian philosophy indicating the law regulating the sequence of cause and effect, especially in man, so that his state at any time is the necessary outcome of his former deeds and thoughts. It is a fundamental conception in Buddhism and Theosophy.

Karnak, a famous temple near Luxor in Egypt, built by Seti I. and Ramesses II., with other temples in the vicinity.

Karolyi, Michael Adam, Count, Hungarian statesman. Before the World War he was a democratic leader, and during it opposed the German hegemony. He formed a ministry upon the defeat of the dual monarchy in 1918, and in 1919 was provisional president of the new Republic of Hungary. From 1931 to 1932 he was Prime Minister. (1871-).

Karri, the native name of an Australian tree, *Eucalyptus diversicolor*; it is one of the "blue gums," and yields a hard red timber used for wood-paving.

Karroo, name for the high plains in Cape Province, S. Africa, especially the Great Karroo, in the S. centre of the province, which is 350 m. long and about 80 m. broad, and 3,000 ft. above the sea-level; they are used mainly for sheep-grazing.

Kars, town and vilayet of NE. Turkey, W. of Armenia and SW. of Georgia; in Russian hands from 1877 until after the World War. Pop. (vilayet) 306,000.

Kashgar, town of Sinkiang, or Chinese Turkestan, on the Kizil R.; for over 2,000 years an important trading centre; carpets, silk and cotton goods are manufactured; the people are mainly of the Turki race. Pop. c. 30,000.

Kashmir. See Cashmere.

Katabolism, the name for the processes which result in the oxidation or other decomposition of protoplasm within the living organism, as opposed to anabolism, which is the name given to the building-up of protoplasm, etc., from less complex substances. The two processes considered together are known as metabolism.

Katanga, a district of the Elisabethville province of the Belgian Congo. It is very fertile, and some of the richest copper-mines of the colony are situated around

Elisabethville, the capital. It has an area of 180,000 sq. m. and a population of about one million.

Kathiawar, a peninsula in W. India, between the gulfs of Cutch and Cambay, consisting of several native states in relation with the Imperial Government through the W. Indian States Agency. The pop. is about 4 millions.

Katrine, Loch, a long, narrow, beautiful lake in the Trossachs, Scotland, about 30 m. N. of Glasgow, to which it affords an abundant water supply, is 8 m. long and 2 m. broad; the splendid scenery of it is described in Scott's *Lady of the Lake*.

Kaunas (Kovno), a province and city of formerly Russian, is watered by the Niemen, and its chief industries are agriculture and cattle-raising. Area 15,400 sq. m. Pop. 1,857,000. Kaunas, the capital, is a handsome town, trading in grain, and seat of the Lithuanian Government. Pop. 107,000.

Kauri, Pine (or *Cowrie*, *Agathis australis*), a tall coniferous tree of New Zealand and the New Hebrides; it produces a valuable shipbuilding timber and a resin known as gum.

KAURI PINE

Kavalla, the capital of the dept. of Kavalla, Macedonia, Greece, on Lake Kavalla; an important tobacco trade centre. It was occupied by the Bulgars during the World War, but was retaken by Greece in 1918. Pop. (town), 50,000; (dept.) 118,000.

Kayak,

the Eskimo skin canoe, long, narrow and covered over; mostly to hold one occupant, but in some cases two-seated.

KAYAK

Kaye-Smith, Sheila (Mrs. J. P. Fry), English novelist; she passed her early days in Sussex, and her novels deal mainly with Sussex life. Her works include *The Tramping Methodist*, *Green Apple Harvest*, *Shepherds in Sackcloth* and *Susan Spray*. (1889-).

Kazakstan, an autonomous Republic of the U.S.S.R., situated in Soviet Central Asia, formed in 1920 from the former Governments of Uralsk, Turgai, Akmolinsk and Semipalatinsk, and enlarged in 1925 and 1936. The area of the Kazak S.S.R. is 1,048,000 sq. m., and the pop. 6,800,000. The capital is Alma-Ata. The Turkistan-Siberian railway traverses the territory.

Kazan, capital of the Tartar autonomous Republic of the U.S.S.R., one of the most historically interesting cities of Russia, with a university, cathedral, several mosques and a fortress. It is now an important industrial centre, producing soap, chemicals, leather and textiles. Pop. 259,000.

Kea (*Nesfor notabilis*), a green New Zealand species of the Loridae (Lories or Brush-tongued Parrots) family, its Maori name being imitative of its cry. As a result of their acquiring a liking for the flesh (especially the kidney fat) of sheep, the New Zealand Government put a price on their destruction.

Kean, Charles John, actor, second son of the following, born in Waterford; made his first appearance in Drury Lane in 1837, which proved unsuccessful, but became lessee of the Princess's Theatre, London,

where he distinguished himself by his revivals of Shakespeare's plays, with auxiliary effects due to scenery and costume. (1811-1868).

Kean, Edmund, English tragedian, born in London; on the stage from his infancy; his first success as Shylock in the *Merchant of Venice* in 1814, followed by equally famous representations of Richard III., Othello and Sir Giles Overreach. He led a very dissipated life, and under the effects of it his constitution gave way. He broke down one evening on the stage, and never appeared again. (1787-1833).

Kearsley, an urban district and town of SE. Lancashire. It has coal-mines and iron-works; paper and cotton manufactures are carried on. Pop. 11,000.

Keats, John, English poet, was the son of a livery-stable proprietor, born in

JOHN KEATS

Pinsbury, London; was apprenticed to a London surgeon, and subsequently practised medicine himself in London; from 1817 devoted himself to literature, made the acquaintance of Leigh Hunt, Hazlitt, Lamb, Wordsworth, and other literary men; left London for Carisbrooke, moved next year to Teignmouth, but on a visit to Scotland contracted consumption. In 1819 he was betrothed to Fanny Brawne, and struggled against ill-health and financial difficulties till his health completely gave way in the autumn of 1820; went to Naples and then to Rome, where, in the spring following, he died. His works were three volumes of poetry, *Poems* 1817, *Endymion* 1818, *Lamia, Isabella, and other Poems*, including *Hyperion*, and *The Eve of St. Agnes*, 1820. The dignity, tenderness, and imaginative power of his work contained the highest promise. His letters, of which many are extant, are famous. (1795-1821).

Keble, John, English poet and divine, born at Fairford, Gloucestershire; became Fellow of Oriel College, Oxford, in 1811; in 1827 appeared the *Christian Year*, which he published anonymously; in 1831 he was appointed professor of Poetry in Oxford; he was one of four who originated the Tractarian Movement at Oxford, and was the author of several of the *Tracts for the Times*; in 1835 he was presented to the vicarage of Hursley, which he held till his death. He was author of *Lyra Innocentium* and with Newman and others of *Lyra Apostolica*. In spite of Newman's secession he remained faithful to the English Church. (1792-1866).

Kedah, one of the unfederated British Malay States; situated on the W. coast of the Malay Peninsula. The State includes the island of Langkawi and a number of smaller islands in the S. The area of the mainland of Kedah is 3,660 sq. m. Products are rubber, coconuts, betel nuts, taploca and rice. Pop. 464,000.

Kedgerree, an Indian dish of rice boiled with onions, eggs, pulse and butter; in European cookery it is a breakfast dish of cold fish, boiled rice and eggs.

Kedron, a valley E. of Jerusalem, formerly traversed by a brook running towards the Dead Sea; near it was the New Testament Garden of Gethsemane. It was visited by Christ on his way to Gethsemane and by David in his flight.

Keelhauling, a naval punishment of Centuries, the 17th and 18th centuries; consisted in dropping the victim into the sea from one yardarm, hauling him under the keel and up to the yardarm on the other side; is now a term for a severe rebuke.

Keeling Islands. See Cocos Islands.

Keep, in architecture, the chief tower, or dungeon (donjon) of a castle; always the strongest and least accessible part of the building and higher than the rest; sometimes, as at Gisors in Normandy, erected on an artificial mound. The approach was through a bailey or outer court; often the keep was surrounded by a deep ditch; the lower storey contained vaults for keeping prisoners. Being built very solidly, the keeps of old castles are often still in almost perfect condition, as e.g., the White Tower of London, and the Keep towers at Rochester and Castle Rising in England.

Keewatin, E. mainland district of the N.W. Territories of Canada, N. of Manitoba; area, 228,000 sq. m.; very scantily inhabited.

Keighley, a Yorkshire town, on the Airc, 9 m. N.W. of Bradford; manufactures woollen and worsted fabrics and spinning machinery. Pop. 40,000.

Keith, Sir Arthur, British anthropologist and anatomist; professor at the Royal Institution, 1917-1923, Secretary 1922-1926 and treasurer 1926-1929; president of the British Association, 1927; author of popular and learned works on anthropology, including *The Antiquity of Man* (1915), *Religion of a Darwinist* (1925), *Darwinism and its Critics*, etc. (1866-).

Keith, George Keith Elphinstone, first Viscount, British admiral, son of the tenth Lord Elphinstone. He saw wide service in the Navy, and amongst other exploits commanded the fleet which defeated the Dutch and captured Cape Town in 1797. He was raised to the peerage as a baron in 1797 and made a viscount in 1814. (1746-1823).

Keith, James, known as Marshal Keith, born near Peterhead, of an old Scottish family; after sharing in the Jacobite rebellion fled first to Spain and then to Russia, doing military service in both, but quitted the latter in 1747 for Prussia, where, under Frederick the Great, he rose to be field-marshal; he distinguished himself in successive engagements, and fell, mortally wounded, at Hochkirch. (1696-1758).

Kelantan, one of the unfederated British Malay States; situated in the W. section of the Malay Peninsula. Area 5,700 sq. m. Population 390,000. The principal river is the Kelantan. The capital is Kota Bharu, with a population of 14,800. The main industry is agriculture; the chief products are rice, oil palm, coconuts, betel nuts and rubber. Manganese mining is carried on.

Keller, Helen Adams, American lecturer and writer, deprived at the age of 11 years of the senses of sight, hearing and smell; after a special education overcame these handicaps; graduated at Radcliffe College in 1904, and became the standard example of the possibilities of a developed mental life for the blind; wrote *The Story of My Life*, *The World I Live In*, etc. (1880-).

Kellermann, François Christophe, Duke of Valmy, French general, born in Alsace, son of a peasant; entered the army at 17; served in the Seven Years' War; defeated the Duke of Brunswick at Valmy in 1792; served under Napoleon as commander of the reserves on the Rhine, but supported the Bourbons at the Restoration. (1735-1820).

Kellogg, Frank Billings, American statesman. Born in Potsdam, New York, he became a barrister in 1877, and in 1923 was appointed American Ambassador in London. From 1925 to 1929 he was U.S. Secretary of State, and made his name as the originator of the Kellogg Pact (q.v.); winner of Nobel Peace Prize, 1929; from 1930 to 1935 he was a member of the Permanent Court of International Justice at the Hague. (1857-1938).

Kellogg Pact, a declaration signed in Paris in 1928 by the leading Powers of the world, stating that they renounced war as an instrument of national policy; the pact is named after F. B. Kellogg (q.v.), the United States Secretary of State, who initiated the preliminary negotiations.

Kells, an ancient town in Co. Meath, Eire (Ireland), with many antiquities; gives its name to the *Book of Kells*, a beautiful 9th-Century Celtic illuminated manuscript of the Gospels, now in the library of Trinity College, Dublin.

Kelp, a name given to the ashes of sea-weed, used as a source of iodine. In Normandy the corresponding name is varec or varoch. The purified kelp is mixed with manganese dioxide and concentrated sulphuric acid and distilled, when iodine vapour is set free and may be condensed.

Kelpie, an imaginary water-spirit which, it is said, appears generally in the form of a horse.

Kelso, a market-town in Roxburghshire, Scotland, beautifully situated on the Tweed, where the Teviot joins it, with the ruins of an abbey of the 12th or the early 13th Century. Pop. 4,000.

Kelvin, William Thomson, first Lord, British physicist, born in Belfast; educated at Peterhouse, Cambridge; professor of Natural Philosophy at Glasgow, 1846; president of the British Association in 1871, and of the Royal Society in 1890; received a peerage in 1892, and the Order of Merit in 1902; invented the siphon recorder for the Atlantic cable, and greatly improved the mariner's compass; made discoveries of high importance in thermodynamics, radiation and almost every branch of physics, and devised several important scientific instruments. (1824-1907).

Kemâl Atatürk (formerly Mustapha Kemal), Turkish

statesman, born at Thessaloniki. Led the Turks to victory in the Greco-Turkish War of 1922 (q.v.); on the overthrow of the Sultan in 1923 he was proclaimed first President of the Turkish Republic, and re-elected in 1927 and 1935; as virtual dictator of the country has set it on the road to complete modernisation on Western lines. (1881-).

Kemble, Frances Anne, English actress,

born in London; made her début in 1829, and proved a queen of tragedy; in 1832 went to America and married, but in 1848 resumed her maiden name, Fanny Kemble; she gave Shakespearean readings for 20 years. (1809-1893).

Kemble, John Philip, English actor, born in Prescot, Lancashire; began to study for the Roman Catholic priesthood, but adopted the stage, and appeared first at Wolverhampton in 1776; after touring in Yorkshire and Ireland he came to London in 1783, playing Hamlet at Drury Lane; became manager of that theatre in 1788; in 1802 transferred himself to Covent Garden; retired in 1817, and lived at Lausanne till his death. (1757-1823).

Kempenfelt, Richard, British admiral, born at Westminster; distinguished himself in several actions, was on board his flagship, the *Royal George*, when she went down at Spithead, carrying him and over a thousand others with her. (1718-1782).

Kempis, Thomas à, born at Kempen, near Düsseldorf, son of a poor but industrious craftsman named Hamorkin; joined, while yet a youth, the "Brotherhood of Common Life" at Deventer, in Holland,

KEMÂL
ATATÜRK

and at 20 entered the monastery of St. Agnes, near Zwolle, in Overijssel, where he chiefly resided for 70 years, and of which he became sub-prior; spent his time in acts of devotion and copying MSS., that of the Bible, among others, as well as in the production of works of his own, and in chief the *Imitation of Christ*, a work that, in the regard of many, ranks second to the Bible, and has been translated into many languages. (1380-1471).

Kempston, a village and parish of Bedfordshire, England, on the R. Ouse, 2 m. SW. of Bedford. Its industries are lace-making and brick and drain-pipe making. Pop. 5,500.

Ken, Thomas, English prelate, born in Little Berkhamstead; is famous as the author of hymns, especially the morning one, "Awake, my Soul," and the evening one, "Glory to Thee, my God"; was committed to the Tower for refusing to read James II.'s Declaration of Indulgence, and deprived of his bishopric of Bath and Wells, for refusing to take the oath of allegiance to William III.; afterwards became a leader of the Nonjurors. (1637-1711).

Kendal, county town of Westmorland, England, on the R. Kent, 38 m. S. of Carlisle; manufactures heavy woollen goods and paper. Pop. 16,311.

Kendal, Margaret Grimston (Madge), British actress; made her London debut as Ophelia at the age of 16; married William Kendal, the actor, in 1869; played under the managements of John Hare and Squire Bancroft, and retired after a long and successful career in 1908. (1849-).

Kenilworth, a Warwickshire market town, 5 m. N. of Warwick; noted for its castle, where Leicester sumptuously entertained Elizabeth in 1575; it was taken and destroyed by Cromwell in the Civil War. Tanning is the most important industry. Pop. 7,600.

Kennedy, Rev. Geoffrey Ankettol Studert, British cleric. Ordained in 1908, he served in France as a chaplain during the World War, earning the nickname "Woodbine Willie" among the troops, and afterwards wrote several books on social and religious problems of the day. (1883-1929).

Kennedy, Margaret, English novelist; educated at Cheltenham College and Somerville College, Oxford, where she studied history. In 1922 published *A Century of Revolutions*. She became famous with her novel *The Constant Nymph* in 1924. Her later works include *Red Sky at Morning* and *Escape Me Never*. (1896-).

Kennet, a tributary of the R. Thames, rising in Wiltshire, flowing through Berkshire, and joining the Thames at Reading.

Kenneth, name of two kings of Scotland, of whom the first, Kenneth Macalpine (reigned c. 833-860), became first ruler of the whole country by defeating the Danes and Picts, and establishing his capital at Scone; the second (reigned 971-995) gained territory in several wars in the border country between England and Scotland.

Kennington, a southern inner suburb of Lambeth. Here is the Oval, Surrey's cricket ground. Pop. 69,000.

Kensal Green, a district of NW. London, 4½ m. from Euston. It has two large cemeteries, where many eminent men are buried. Pop. 30,000.

Kensington, Royal borough of London, to the W. of Westminster. It stands Kensington Palace (Queen Victoria's birthplace), the Albert Memorial and Hall, several museums, the Imperial Institute, and many other institutions; it has been the place of residence of many famous artistic and literary men. Pop. 180,000.

Kent, English maritime county in the extreme SE.; lies between the Thames estuary and the Strait of Dover, with Surrey and Sussex on the W.; it is hilly, with marshes in the SE. and on the Thames shore; is watered by the Medway, Stour and Darent; has beautiful scenery, rich pasturage, and grows fruit, hops and market-garden produce; a large part of the NW. corner is now a residential suburb of London; includes the cathedral cities of Rochester and Canterbury, the ports of Dover and Folkestone, the naval dockyards of Chatham and Sheerness, and other large towns, including Gillingham, Gravesend, Margate, Ramsgate, Bromley and Beckenham. Area 1,525 sq. m. Pop. 1,220,000.

Kent, Duke of, a title held in former times by Plantagenets, Nevilles and Greys, and latterly by members of the British royal family. After the death of Edward, Duke of Kent (1767-1820), fourth son of George III. and father of Queen Victoria, the title was dormant until bestowed in 1934 on George, fourth son of King George V. and brother of King George VI., who was born Dec. 20, 1902, and trained for the navy, from which he retired in 1929. He married on Nov. 29, 1934, Marina, daughter of Prince Nicholas of Greece, and has two children, Prince Edward, born Oct. 9, 1935, and Princess Alexandra, born Dec. 25, 1936.

Kentigern, St. or St. Mungo, the Apostle of SW. Scotland, born in Culross; founded a monastery near Glasgow and another in Wales; was distinguished for his missionary labours; buried at Glasgow Cathedral. (518-603).

Kent's Hole, or **Kent's Cavern**, near Torquay, Devon, a limestone cave famous for the deposits of bones of mammoth, rhinoceros, hyena and cave-bear, and other animals now extinct in England, and of implements and remains of primitive man.

Kentucky, an American State in the S. of the Ohio basin, E. of the Mississippi; is watered by the Licking, Kentucky and Tennessee Rrs.; the climate is mild and healthy; much of the soil is extremely fertile, producing cereals, fruits and pasture in the "blue grass" region, and large tobacco crops; coal is found in both the E. and the W., and iron is plentiful, as are oil and natural gas; the chief industries are iron-smelting and working; is remarkable for its Mammoth and other limestone caves. Admitted to the Union in 1792, Kentucky was a slave-holding State, but did not secede in the Civil War. The capital is Frankfort, the largest city Louisville; the State University is at Lexington. Area 40,600 sq. m. Pop. 2,615,000.

Kenya, British possession in E. Africa, comprising Kenya Colony and Kenya Protectorate. It is bounded on the N. by Abyssinia and the Sudan, on the W. by Uganda, on the S. by Tanganyika and on the E. by the Indian Ocean and Italian Somaliland. The Protectorate consists of a mainland strip extending 10 m. inland along the coast, with a few islands, rented from Zanzibar. The Colony and Protectorate are traversed centrally from E. to W. by the equator. The land area is 225,000 sq. m.

It consists of a poorly watered land-area, this being three-fifths of the Colony; a plateau varying in height from 3,000 ft. to 8,000 ft.; the Rift valley containing Lakes Rudolf, Nakuru, Naivasha and others. Mount Kenya is 17,040 ft. in height. The chief rivers are the Tana and Athi. It is believed that the Arabs and Persians traded along the coast from the earliest times. Vasco da Gama visited Mombasa in 1498, when it was a flourishing trading centre.

The estimated population is 3,262,000, of whom 18,000 are Europeans. Products

include skins and hides, maize, cotton, sugar, tea and coffee; but financial difficulties, due largely to the raising of uneconomic products which cannot compete against long-established producers elsewhere, have for several years hampered the progress of the Colony. Since the war there has been considerable British settlement in the highlands. The natives are negroes of various stocks, with many Arabs on the coast, and a considerable number of Indian settlers. Mombasa is the seat of government.

Kepler, Johann, astronomer, born at Weil der Stadt, Württemberg, of poor parents; studied at Tübingen chiefly mathematics and astronomy, became lecturer on these subjects at Graz; joined Tycho Brahe at Prague as assistant; removed to Linz, where he studied the motions of the planets, and established what are known as Kepler's Laws; the first, that the planets move in elliptical orbits, the sun in one of the foci; the second, that, in describing its orbit, the radius vector of a planet traverses equal areas in equal times; and the third, that the square of the time of the revolution of a planet is proportional to the cube of its mean distance from the sun. Poverty pursued Kepler all his days; he died of fever at Ratisbon. (1571-1630).

JOHANN KEPLER

Keratin, a substance forming the chief constituent in the hair, feathers, nails and horn of animals.

Kerbela (Karbala), a sacred city of Iraq in the liwa of the same name. It is connected with the Euphrates by canal. It is much visited by pilgrims to the tomb of Hussein. It was occupied by British troops in 1917-1918. Pop. (town) 60,000; (liwa) 107,000.

Kerch, a Russian seaport on the E. shore of the Crimea; had a large export trade, which suffered during the Crimean War, but revived after. Pop. 67,000.

Kerensky, Alexander, Russian politician. A native of Turkestan, he became involved in revolutionary movements in Russia, and was leader of the first revolution in 1917. For five months he was Premier, but was driven from power by the Bolshevik revolution in November, and has since lived in W. Europe, mainly at Paris, conducting propaganda against the Soviet régime. (1881-).

Kerguelen Land, an island with rugged coasts, 85 m. long by 80 wide, of volcanic origin, in the Antarctic Ocean; so called after its discoverer in 1773, though called Desolation I. in 1776 by Captain Cook; belongs to France.

Kermes (or Kermes-grains). The dried bodies of the homopterous insects, *Coccus ilicis*, which yield a red and scarlet dye, much used before cochineal was introduced.

Kerosene, the high boiling-point fraction of petroleum, used as oil for lamps; in America the ordinary name for paraffin oil.

Kerry, Eire (Ireland), between the Shannon and Kenmare Rs., with Limerick and Cork on the E.; has a rugged, indented coast, Dingle Bay running far inland; is mountainous, containing Mt. Brandon, the Macgillivuddy and Dunkerron ranges, and the picturesque Lakes of Killarney; there is little industry or agriculture, but dairy-farming, slate-quarrying, and fishing are U.E.

prospered; iron, copper and lead abound, but are not wrought; county town, Tralee. Pop. 140,000.

Kesteven, Parts of, the SW. part of a separate administrative county. It has an area of 724 sq. m. and a population of 110,000. Grantham and Stamford are its largest towns.

Kestrel, a numerous genus of small

by the Common Kestrel (*Cerchneis tinnunculus*), a bird with grey head, rump and tail, reddish-brown back spotted with black; length about 12 in. The female has a brown head and a brownish back. It is a bird of prey, devouring mice, voles and insects, and hovers in the air when preparing to strike, whence the alternative name Wind-hover. It is a British bird, but migrates to India and Africa. The Lesser Kestrel (*Cerchneis naumanni*), a S. European bird, is also found in Britain as a rare visitor.

COMMON KESTREL

Keswick, market town and tourist centre of Cumberland, England, in the Lake District, on the R. Derwent, 20 m. SW. of Carlisle; manufactures woollens, hardware and lead-pencils; is the seat of an annual religious convention which gives its name to a certain phase of Evangelicalism. Pop. 4,700.

Ketch (corruption of Turkish *gaig*, a boat), a form of two-masted vessel, fore-and-aft rigged, main-mast forward, with a fore-and-aft rigged mizzen mast, the mizzen sail being larger and the mizzen mast stepped further forward than in the yawl.

Ketch, Jack, a notorious executioner of Charles II.'s reign, whose name became a synonym for his office; his most famous victims were the Duke of Monmouth and Lord Russell.

Kettering, market town in Northamptonshire, England, manufactures boots and shoes and other leather goods. Pop. 31,700.

Kew, a parish in the borough of Richmond, Surrey, England, connected with Brentford by bridge across the Thames. It is best known for the famous Royal Botanic Gardens, first formed by Augusta, Princess Dowager of Wales, mother of George III., in 1759. The collections of Captain Cook and Sir Joseph Banks were added to it, and in 1840 the gardens were presented to the nation by Queen Victoria. Subsequently they were extended from 11 to 300 acres. They contain orchids, ferns, cactus houses and museums of plant products. The herbarium is the largest in the world, comprising over three million specimens of plants. An observatory, built in 1799, stands in the Old Deer Park, which adjoins the Gardens.

Key, in engineering, a hand-tool for valve-control or a contrivance for obviating vibration. In architecture, something that holds two parts of a structure securely together—e.g., a keystone. In music, a set of notes definitely related and based on a particular note: the lowest tone in each scale is the tonic or keynote, and gives its name to the key, whether major or minor. Also the levers for the fingers in a piano or typewriter. Also an instrument, generally of iron, for moving the bolt of a lock forward or backward.

Keyes, Sir Roger, British admiral. He was Commodore of Submarines during the World War, and as commander of the Dover Patrol led the attack on Zeebrugge Mole in April 1918, when the *Vindictive* drew the German fire while black ships were sunk in the mouth of the canal. From 1919 to 1921 he was in charge of the Atlantic cruiser squadron; was Deputy Chief of Naval Staff

from 1921 to 1925, and Commander-in-Chief of the Mediterranean Fleet from the latter year till 1928. (1872-)

Keyham, a suburb of Devonport, in the city of Plymouth, Devon, England. There are naval dockyards, barracks and a naval college. Pop. 14,270.

Keynes, John Maynard, British economist, born at Cambridge; served in the India Office, 1906-1908; and in the Treasury, 1915-1919; represented the Treasury at Peace Conference, 1919; deputy for the Chancellor of the Exchequer on the Supreme Economic Council, 1919, resigning on rejection of his proposals, and wrote his famous *Economic Consequences of the Peace*; has written on Probability Theory and on Russia; wrote *The General Theory of Employment, Interest and Money*, 1936, to combat the classical theory. (1883-)

Keys, House of, the third estate in the Isle of Man, consisting of 24 members, elected by the adult inhabitants, men and women.

Keys, Power of the, power claimed, according to Matt. xvi. 19, by the authorities of the Church to admit or exclude from church membership, a power the Roman Catholics allege to have been conferred first on St. Peter and afterwards on his successors in office.

Keyserling, Hermann, Count, German Könnig, Livonia; journeyed round the world, 1911-1912, and returned with a knowledge of Oriental mysticism which he grafted on the early teaching he received from Houston Stewart Chamberlain. His philosophy distrusts reason and puts its faith in intuition. His best-known book is *The Travel Diary of a Philosopher*, 1919. (1880-)

Khaki, a buff-coloured material used for into use in the S. African War as a "camouflage" uniform, being calculated, by reason of its similarity in colour to that of the veldt, to lessen the conspicuousness of the wearers. Later it was adopted as the ordinary army dress in place of the earlier uniforms of scarlet and blue, though in 1936 Edward VIII. sanctioned a return to a walking-out dress of blue serge.

Khan, title given to a prince or ruler in other countries of the Middle East, e.g., Genghis Khan. The word is also used as the name of an inn or public hostel for travellers.

Kharga, or The Great Oasis, the largest oasis of Egypt, in the Libyan Desert. It is over 100 m. in length and approaches 50 m. at its greatest breadth, and produces cereals and dates. Pop. about 8,000.

Kharkov, largest city of the Ukraine, S.S.R., and until 1934 its capital; 350 m. N.E. of Odessa; a trading centre in agricultural produce, horses and wool, with important manufactures; it has a university. Pop. 654,000.

Khartum, capital of the Anglo-Egyptian Sudan just above the confluence of the Blue and White Niles, 1,100 m. S. of Cairo; formerly an active slave-trade centre; was captured by the Mahdists in 1885, when General Gordon fell; retaken by Lord Kitchener in 1898; is the educational centre of the Sudan and of increasing commercial importance. Pop. 47,000.

Khatmandu, the capital of Nepal, in the valley at the confluence of the Bāghmati and Vishnumati Rts., 74 m. N. of the Indian frontier; is the centre of a considerable trade. Pop. c. 80,000.

Khedyve, from 1867 to 1914 the title of the ruler of Egypt, roughly equivalent to "Viceroy"; the first to hold it being Ismail, the son of Ibrahim Pasha (q.v.), by grant of the Sultan, his suzerain.

Kherson, Russian city on the Dnieper, 19 m. from the sea and 60 m. E. of Odessa, with which it has a large trade; timber and tobacco are exported, and soap-making, brewing and wool-cleansing are carried on. Pop. 83,000.

Khingan, a range of volcanic mountains on the E. of the desert of Gobi, separating Mongolia from Manchuria.

Khiva, tract in Central Asia, S. of the Sea of Aral; formerly an independent state under Russian protection, now part of the Uzbekistan S.S.R.; the people are Uzbek Tartars, and the country is a sandy desert with many oases, and in some parts well irrigated from the Oxus; it produces wheat, rice, cotton and fruit; pop. about 520,000. Khiva, the capital, on a canal connected with the Amu, some distance from the left bank of the Oxus, and 300 m. NW. of Merv, was at one time one of the chief slave-markets in Asia till the trade was stopped by Russia. Pop. c. 21,000.

Khorassan (Khorasan), the largest province of Iran; is on the Afghan border, mountainous, and fertile only in the N., among the valleys of the Elburz range; grain, tobacco and medicinal plants are grown, gold and silver, turquoises and other gems found, and the wool of the district is renowned. The capital is Meshed, a sacred Moslem city, with carpet, jewellery and silk manufactures.

Khyber (or Khaiber) Pass, a narrow defile on the border of British India, 33 m. long, in one place only 10 ft. wide, through lofty and precipitous mountains; lies to the NW. of Peshawar, and is the chief route between the Punjab and Afghanistan; was the scene of a British catastrophe in the war of 1839-1842, but has been repeatedly forced since, and from 1879 has been under British control.

Kiang-si, an E. province of China. The chief products are tea, cotton, paper, porcelain, coal and other minerals. Area 77,300 sq. m. Pop. 15,820,000. Capital Nanch'ang.

Kiao-chau, a district of Shantung, China; occupied by Germany in 1897, and ceded to her on a 99 years' lease by China in 1898; it was captured by British and Japanese troops in 1914, and restored to China the following year. It extends for about 160 m. along the coast, and about 20 m. inland. The chief town of the district is Tsingtao.

Kidd, William, British pirate, born in Greenock; went to sea early, and served in privateering expeditions with distinction. Appointed to the command of a privateer about 1696, and commissioned to suppress the pirates of the Indian Ocean, he went to Madagascar, and there started piracy himself. Entering Boston harbour in 1700, he was arrested, sent to London, tried on a charge of piracy and murder, and executed in 1701.

Kidderminster, town in Worcester-shire, England, in the N. of Worcester, 18 m. SW. of Birmingham; noted for its carpets; manufactures also silk, paper and leather; was the scene of Richard Baxter's labours as vicar, and the birthplace of Sir Rowland Hill. Pop. 29,500.

Kidnapping, the carrying off, abduction or secreting of a person. Heavy penalties are imposed by the Habeas Corpus Act of Charles II. Child-stealing with a view to ransom is a felony punishable in England by seven years' penal servitude. The crime has recently been rife in the United States, where, largely in consequence of the kidnapping and subsequent murder of the infant son of Colonel Lindbergh (q.v.) in 1932, the punishment has been greatly increased.

Kidneys, two organs in the lumbar region on each side of the spine; the urinary ducts proceed from the kidneys to the bladder. The function of these organs is to excrete the products obtained from the blood by the secretory cells. The urea, which forms about 2 per cent. of the excretion of urine of the normal man, represents the nitrogenous protoids, and the kidneys are therefore the channels for excreting nitrogenous waste. Among diseases of the kidneys are *nephritis* or *Bright's disease* (the symptom being excessive discharge of urine, but as such discharge may be due to nervous disorders or other trouble, medical advice is always necessary); and *floating kidney*, an abnormal state in which kidneys are movable, but not ordinarily a serious disease. At the top of each kidney is attached a small ductless gland known as the suprarenals or adrenals.

Kiel, on the Baltic, 60 m. N. of Hamburg, is the chief town of Schleswig-Holstein, a German naval station and important seaport, with shipments of coal, flour and dairy produce; has shipbuilding and brewing industries, a university and library. Pop. 218,300.

Kiel Canal, officially the Kaiser Wilhelm Canal, connecting Kiel on the North Sea with Holtenau on the Baltic, was opened in 1895. In 1909 the canal was closed for deepening and widening, and was not again opened till June 1911. During the World War it was used as the headquarters of the German Fleet, and under the Treaty of Versailles it was thrown open to ships of all nations. Germany has now, however, repudiated this, among other provisions of the Treaty.

Kielce, the chief town of the county of the same name in Poland, on the banks of the Sileska. Its industries include brewing, brick, dye and munition making. Pop. (county) 2,930,000; (town) 58,000.

Kieselguhr, a fine earth found in (Hanover), consisting of the skeletons of minute algae called Diatoms. Chemically it is nearly pure silica. It is used extensively as an absorbent for nitroglycerine, the product being called dynamite.

Kiev, capital of the Ukraine S.S.R., on the Dnieper, 300 m. N. of Odessa, one of the oldest of Russian towns, and Russia's traditional "holy city," where Christianity was proclaimed the religion of the country in 938, and around which the Russian State inaugurated by Rurik was formed between 860 and 1100; has a university and many old churches and monastic buildings; famous for its great trade fairs. Pop. 539,000.

Kildare, inland county of Eire (Ireland), in Leinster, in the upper basins of the Liffey and Barrow, W. of Dublin and Wicklow; is level and fertile, with the great Bog of Allen in the N., and in the centre the Curragh, a grassy plain; agriculture is carried on in the river basins; the county town is Naas. Area 654 sq. m. Pop. 57,700.

Kilima-Njaro, group, its greatest peak 19,600 ft. high, in the N. of Tanganyika, E. Africa, 170 m. from the coast, with two peaks, Kibo and Kimawenzi. It has been climbed on several occasions, first by Meyer in 1885.

Kilkenny, inland S. central county of Eire (Ireland), in Leinster, watered by the Barrow, Suir and Nore; extremely fertile in the S. and E. producing fine corn, hay and green crops; is poorland, and devoted to cattle-rearing in the N. where also anthracite coal is abundant. Kilkenny, the county town, is noted for a fine black marble quarried near it. Area 796 sq. m. Pop. 68,600.

Killarney, market town and tourist centre, in Co. Kerry, Eire (Ireland), on the shores of the lake, 15 m. SE. of Tralee; has a Roman Catholic cathedral. Pop. c. 5,500.

Killarney, The Lakes of, three beautiful lakes at the northern foot of the Macgillcuddy Reeks, in Co. Kerry, Eire (Ireland), in the basin of the Loane, much resorted to by tourists.

Killiecrankie, Pass of, 15 m. NW. of Dunkeld, Perthshire, Scotland, where General Mackay was defeated by Claverhouse, who fell, in 1689; is traversed by a road and a railway.

Killigrew, Thomas, the elder, British playwright, was page to Charles I. in 1633, and later his groom of the bedchamber. Three of his plays produced before the Civil War—*The Prisoners*, *Claracilla* and *The Parson's Wedding*—display no poetic talent but considerable wit, and the third gross indecency. He built the first Drury Lane Theatre, 1663; the second, 1674. (1612-1683).

Kilmainham, a suburb of Dublin, Eire (Ireland), with a royal hospital for disabled soldiers and a jail. The Treaty of Kilmainham affecting Irish Government and policy was an agreement said to have been made in 1882 between Gladstone and Parnell, who was then confined in Kilmainham jail.

Kilmarnock, on the Irvine, 20 m. SW. of Glasgow, largest town in Ayrshire, Scotland; is an important railway centre, has carpet factories, and calico and shawls are manufactured; is in the middle of a rich coal and iron district, and has a great annual cheese and dairy-produce show. Pop. 38,100.

Kiln, a furnace for calcining; among the different kinds are kilns for vitrifying articles of clay, such as pottery, porcelain and bricks; limekilns, for breaking down calcium carbonate into lime and carbon dioxide; biscuit kilns for drying malt, hops, grain, fruit, starch, etc.

Kilogram, a metric measure of weight, equal to 1,000 grammes or approximately 2.2046 lb. 1,000 kilograms equal 1 metric ton, or 2,204.6 lb.

Kilometre, a metric measure of length containing 1,000 metres or 3,280.89 ft. or approximately five-eighths of a mile. A square kilometre equals 0.386 square mile, or approximately 247 acres.

Kilowatt, a measure of electrical power equal to 1,000 watts. The unit of electric power is the watt, or 1 joule (107 ergs) per second. The relationship between the volt, the ampere and the watt is as follows: volts \times amperes = watts. A kilowatt-hour is the amount of energy used in 1 hour at the rate of 1 kilowatt; it is the ordinary "unit" of electrical power companies.

Kilsyth, town in Stirlingshire, Scotland, 35 m. W. of Edinburgh, with coal and iron mines and cotton manufactures. Pop. 7,560.

Kilt, a kind of short petticoat reaching from the waist to the knees, worn by the Highlanders of Scotland as their national dress. It was proscribed by law after the famous rebellion of 1746, but this law was repealed in 1786. It is made of tartan (cloth woven in coloured stripes crossing at right angles). A pouch, called the Sporrán, is hung in front of the kilt. All Highland regiments are kilted except the Highland Light Infantry.

Kilwinning, Scotland, a market town of Ayrshire, 2 m. from the sea, 24 m. SSW. from Glasgow. Weaving, iron, fire-clay and engineering are the local industries. It was here that freemasonry was first established in Scotland. Pop. 5,300.

Kimberley, (1) city in Cape Province, Africa.

Modder and Vaal, 540 m. from Cape Town, which sprang up after 1870, when diamonds were found there. It was one of the first places to be besieged by the Boers in 1899, and was relieved in 1900 by Sir John French after a siege of 124 days. Pop. (European) 16,000.

(2) A district in the N. of W. Australia, famous for its goldfield, discovered in 1882.

Kin, Next of the person or persons closest in relationship to a deceased person, to whom is distributed the property, real or personal, of a person who dies intestate.

Kincardineshire, E. coast Scottish county, lying between Aberdeen and Forfar (Angus), faces the North Sea, with precipitous cliffs; has much fertile soil under corn, green crops and small fruit, also pasture and grazing land where cattle are reared; the fishing is important, and there are some coarse linen factories; chief towns, Stonehaven and Bervie. Area 382 sq. m. Pop. 39,900.

Kindergarten, a school for young children, where they are taught by the organising of their natural tendency to play, and by interesting them in simple forms of handwork and similar occupations; the method was initiated by Friedrich Froebel (q.v.).

Kinder Scout, a hill in Derbyshire, England, 2,088 ft. high, the summit of the Peak group of hills; gives its name to Kinder Scout Grit, a rough building-stone which occurs there.

Kinematics, the branch of mechanics dealing with problems of motion as such—that is, without taking into consideration the factors of mass and force. Speed is defined as the rate of motion, or the distance moved divided by the time taken. Velocity involves direction as well as rate of motion. For instance, a ship may have a speed of 16 knots; its velocity includes the direction in which it is moving—e.g., 16 knots SW. Acceleration is rate of change of velocity.

Kinetic Energy, the energy, or ability to do work, possessed by a moving body in virtue of its motion.

Kinetics, the branch of mechanics which deals with the effect of forces upon the state of a body with regard to motion, either causing it to move, or stopping it from moving, or altering its velocity or acceleration. The chief principles of kinetics were discovered by Newton, and are expressed in his three well-known laws of motion, the first of which is as follows: Every body continues in a state of rest or of uniform motion in a straight line unless it is acted upon by a force. The second deals with momentum, or the product of the mass and velocity of a moving body; it states that the rate of change of the momentum of a body is directly proportional to the magnitude of the force acting upon the body, and takes place in the direction in which the force is acting. The third law states that "action and reaction are equal and opposite," or that if a body A exerts a force upon a body B, then B is exerting at the same time an equal and opposite force upon A.

Kinetic Theory of Gases,

the theory that the molecules of a gas are in constant and rapid motion and, except in minute particulars, behave as perfectly elastic particles. This theory, due mainly to Clausius, Joule, Clerk-Maxwell, Boltzmann and van der Waals, satisfactorily explains the behaviour of gases under changes of pressure and temperature, the phenomena of diffusion and effusion, Avogadro's hypothesis, etc., and its main assumptions have now entered the realm of ascertained fact.

King, the chief ruler, magistrate or sovereign of a nation, or one who is invested with supreme authority over a nation, country or tribe. From early times we meet with kings in the valleys of the Nile and Euphrates; kings are found also in the countries of the Near and Middle E., ruling over fairly large territories; but often, too, the name is found to be only that of a ruler of a "city" or fortified village. The chieftains of the first settlers in England were distinguished only by the title of Eorldorman or Heretoga, the former word expressing the civil, the latter the military aspect of the same office. But the successful Teutonic leader soon assumed the regal title, as more accurately denoting his altered relation to his adherents. Anglo-Saxon kingship was personal, not territorial; and the royal prerogatives were not large. But under the Norman kings the royal prerogative was extensive and undefined, the royal power having increased greatly owing to the change from personal to territorial kingship, the growth of the wealth of the Crown and the alliance of Crown and people against the feudal nobles. For the rest, English history is a record of the gradual evolution of the constitutional monarchy as we know it to-day.

King, Rt. Hon. William Lyon Mackenzie, Canadian politician. After some years as a civil servant he became an M.P. in 1908, also acting from that year till 1911 as Minister of Labour; in 1919 he became leader of the Canadian Liberal party, and in 1921 Prime Minister and also president of the Canadian privy council and Secretary of State for External Affairs; he was defeated in 1930, but was re-elected to office by an overwhelming majority in 1935. (1874-).

King at Arms (also **King of Arms**), the title of the three principal officers, under the Earl Marshal, of the College of Arms—namely, Garter, principal King of Arms, and Clarenceux and Norroy, provincial Kings of Arms, with jurisdiction over heraldry S. and N. of the Trent respectively. There are also a Lyon King of Arms for Scotland and an Ulster King of Arms for Ireland.

King Charles Spaniel, a small black-and-tan, pug-nosed, silky-coated, dog, which came into vogue as a pet in the time of Charles I. Its drooping ears are a particularly marked feature.

King-crab, or *Xiphosura*, an order of Limulidae, the best-known form of which, *Limulus* or *Xiphosura*, is found on the E. coast of the U.S.A. It is over 2 ft. long, and is one of the few arachnids which can live under water. They delve into sandy bottoms and live on sea-worms. Another group, of which *Tachyporus* is representative, is found in the seas of E. Asia.

Kingfisher, the common name of a

family of birds (the Alcedinidae) comprising some 160 species found in all parts of the world, though mostly in Malaya. All live by streams and nest in banks. There are two sub-families: the fish-eating Water-Kingfishers (Alcedininae) and the insect, reptile and crustacean-feeding Wood-Kingfishers (Dacelotininae), distinguished also by their bills. The former have a long, slender bill; the latter a shorter, wider and stouter bill. The family is represented in Britain by one species: the Common King-

COMMON KINGFISHER

fisher (*Alcedo ispida*), a bird with brilliant plumage, very large head, and a long, keel-shaped beak, with comparatively short wings and tail. The Australian Laughing Jackass is a species of Kingfisher.

Kinglake, Alexander William, British historian, born near Taunton; gave up the legal profession, in which he had a lucrative practice, for literature; the author of two works, *Echoes* and the *History of the War in the Crimea*, the former a brilliantly written book of travels in the East, published in 1844. (1809-1891).

Kingmaker, The, a title popularly given to Richard Neville, Earl of Warwick, who was instrumental in raising Edward IV. to the throne of England by dethroning Henry VI., and afterwards in restoring Henry by the defeat of Edward.

Kings, The Book of, two books of the Old Testament, originally one, but divided in the Septuagint into two, containing the history of the Jewish kingdom under the kings from its establishment under David to its fall, and covering a period from 1015 B.C. to 560 B.C., during which time the kingdom fell into two, that of Israel and that of Judah. The author is unknown. In the Vulgate version the two Books of Samuel are called I and II Kings, and the A.V. books of Kings, III and IV Kings.

King's Bench Division, one of the three divisions of the English High Court of Justice. The court hears mainly common law actions, though, since the Judicature Act, 1873, all the High Court Divisions have jurisdiction, theoretically, in all cases. There are 17 King's Bench judges, and the titular president of the Division is the Lord Chief Justice of England. The court also hears application for writs of *certiorari* (q.v.) and *mandamus* (writs calling upon justices of the peace to show cause why they should not exercise their jurisdiction in a particular case); appeals from county courts and quarter sessions; and election petitions. King's Bench Division judges constitute the Court of Criminal Appeal and the so-called Commercial Court, which is merely one of the King's Bench judges to whom such cases are commonly assigned.

King's College, London, constituent college of the University of London, housed in the Strand; it has faculties of Arts, Laws, Medicine, Science, Engineering and Economics; and also a Faculty of Theology, which is separate from, but a school of, the University. There is also a King's College of Cambridge University, founded in 1441; and King's College, Newcastle-on-Tyne, is a part of Durham University.

King's Counsel, (or if a Queen is Queen's Counsel), an honorary distinction conferred on eminent barristers in England and Ireland, giving them precedence in court and the right to wear a silk gown. They may not act in cases against the Crown without special leave, which is never refused.

King's County. See *Offaly*.

King's Cup, a challenge cup presented by King George V. to be held by the winner of an air race instituted in 1922 by the Royal Aero Club over a 700 m. course in England.

King's Evidence, the evidence of an accomplice tendered by leave of the judge on behalf of the prosecution in a case where the committing magistrate has held out hope of acquittal to such accomplice in consideration of his supplying the want of sufficient evidence to secure the conviction of any one or more of several persons jointly charged. Such evidence is almost necessarily tainted with suspicion, and generally the court will require corroboration.

King's Evil, or *Scrofula*, a skin disease affecting especially the lymphatic glands of the neck, and now considered to be a form of tuberculosis. It was formerly believed in England and France that it could be cured by the touch of a king; touching was practised largely by the Stuarts up to the time of Queen Anne, who "touched" Dr. Johnson as an infant.

Kingsford-Smith, Sir Charles, Australian airman, born at Hamilton, Brisbane, and educated at Sydney. Fought with the Anzacs in the Gallipoli Campaign, 1915, and in France. After the War he took up commercial aviation and made a number of record flights. In 1935 he disappeared during a flight from England to Singapore. (1897-1935).

King's Inn, the headquarters in Dublin, of the Éire (Ireland) Bar resembling the Inns of Court of the English Bar; more fully, *The Honourable Society of King's Inn, Dublin*. There are 40 benches.

Kingsley, Charles, English divine and author, born at Holme, near Dartmoor; studied at Cambridge; became rector of Eversley, in Hampshire, in 1844; was the author of *Alton Locke* (1849), *Yeast* (1851), *Hypatia*, a brilliant book about early Christianity in Alexandria, and *Westward Ho!*, a narrative of the rivalry of England with Spain in the days of Elizabeth; besides other works, including *The Water Babies* and *Herculean Wake*, he was the author of popular ballads. (1819-1875).

Kingsley, Henry, younger brother of the preceding. After a brief experience of life in Australia he returned home and distinguished himself as a novelist. His principal novels were *Geoffrey Hamlyn*, one of the best novels on Australian life, and *Ravenshoe*, his masterpiece. (1830-1876).

Kingsley, Mary Henrietta, African traveller and authoress; niece of Charles Kingsley, born in London; wrote *Travels in West Africa* and similar records of her wanderings. (1862-1906).

King's Lynn, ancient market town and England, on the Great Ouse, 2 m. from the Wash. At the Norman Conquest Lynn was already a port with considerable customs. It was besieged by the Parliamentary troops in the Civil War. Industries include fisheries, breweries, corn-mills and machine-shops. Pop. 23,600.

King's Messenger (*Foreign Service*), a messenger or courier appointed by the Foreign Office to carry despatches to its representatives in foreign capitals. Their badge is the well-known silver greyhound.

King's Prize, a prize of £250 presented annually by the British Sovereign for award to the champion marksman at Bisley. The present conditions are 10 shots at 300, 500 and 600 yards, and 15 shots at 900 and 1,000 yards; the maximum score (since 1925) being 300. In 1930 the prize was won by a woman, Marjorie Elaine Foster, with a score of 289.

King's Proctor, the Treasury solicitor, who may intervene to stop decrees nisi in divorce being made absolute where collusion is alleged to have occurred and other instances where it would be contrary to morality to sever the marriage bond. He can demand to see all documents in divorce cases whether privileged or not.

King's Regulations, the official regulations for the organisation of the Army, drawn up in thirteen parts. They comprise some 1,650 articles or paragraphs dealing with the organisation or composition of the Army; duties of commanders; the duties of the general staff;

the appointment and promotion of officers; the service, promotion, employment and discharge of soldiers; discipline and court-martial; training and education; ceremonial; uniforms and equipment; movement of troops, etc. They are amended from time to time by Army Orders.

King's Speech, the oration made at the opening of a new session of Parliament. Although generally read by the King, it is composed by the Prime Minister and his Cabinet colleagues and sets forth the proposed legislative programme.

Kingston, (1) town in Ontario, Canada, the capital of Canada, on the NE. shore of the Lake, 150 m. E. of Toronto, with shipbuilding and engineering works; is the seat of Queen's University, military and medical colleges, and an observatory. Pop. 22,000. (2) Capital of Jamaica, on a great bay on the S. coast, on the edge of a sugar-growing district; exports sugar, tobacco and dye-woods, and imports cotton, flour and rice. Pop. 62,700.

Kingston-upon-Thames, town of Surrey, 10 m. SW. of London, formerly a seat of Saxon kings, with an old "coronation stone" in its market-place. Pop. 39,800.

Kingstown, former name of Dun Laoghaire (Dunleary), seaport of Dublin, Eire (Ireland), 7 m. SE.; was till 1817 but a fishing village; has a harbour designed by Rennie, which cost £525,000. Pop. c. 20,000.

Kingswinford, town of Staffordshire, England, 7 m. S. of Wolverhampton, with coal and iron mines and manufactures of iron, bricks, glass and nails. Pop. (rural dist.) 22,000.

Kinkajou (*Cercopithecus*), a nocturnal mammal of the Raccoon (*Procyonidae*) family, largely a vegetarian-feeder, and having a long, prehensile tail and soft, brownish fur. It occurs in S. America and Mexico.

Kinross-shire, a small Scottish county lying between Perth and Fife, round Loch Leven, is agricultural and grazing, with coal mines. The co. town, **Kinross**, is on the W. shore of Loch Leven. Area 82 sq. m. Pop. 7,450.

Kinsale Harbour, coastal inlet of Co. Cork, Eire (Ireland), at the mouth of the R. Bandon; to the W. is the Old Head of Kinsale, a promontory which is the first land seen by ships bound from America to Britain, off which the *Lusitania* was sunk in 1915; James II. landed here on his expedition to Ireland in 1689. Pop. of town of Kinsale, c. 1,800.

Kintyre, a long, narrow isthmus on the W. coast of Scotland, between the Atlantic and the Firth of Clyde; is chiefly hill and grass country; but at Campbeltown are great distilleries; forms part of Argyllshire.

Kipling, Rudyard, English author and poet, born in Bombay, and educated in England; went out to India as a journalist. His stories mainly deal with Anglo-Indian, and especially military, life in India, his *Soldiers Three*, with the rest that followed, such as *Wee Willie Winkie*, gaining for him an immediate and wide reputation. He afterwards issued several volumes of short stories and some distinctive novels, including *The Light that Failed* and *Kim*. As a poet his most successful effort is his *Barrack-Room Ballads*, instinct with a martial spirit,

but in *The Seven Seas* and *The Five Nations* he added greatly to his reputation as a forceful writer. Of his poems *The Recessional* is probably the best known. (1865-1936).

Kipp's Apparatus, so called after P. J. Kipp (1808-1864), an arrangement for generating gases such as carbon dioxide or hydrogen sulphide, the essential feature being that when the delivery-tap is turned off, the chemicals from which the gas is produced are automatically separated from one another by the rising pressure of the gas within the apparatus.

Kirghiz, a Mongolian Turko-Tartar people occupying the Kirghis steppes, an immense tract E. of the Ural R. and the Caspian Sea, numbering some 3 millions. In 1927 a Kirghiz Soviet Republic was organised, covering much of their territory, as a constituent region of the U.S.S.R. Area 76,000 sq. m. Pop. 1,300,000. Cap. Frunze.

Kirkby-in-Ashfield, Nottinghamshire, England, on the borders of Derbyshire, 10 m. from Nottingham; chief industries, brick-making and coal-mining. Pop. 17,900.

Kirkcaldy, a manufacturing and seaport town in Fifeshire, Scotland, extending 4 m. along the N. shore of the Forth, known as the "lang toon." It was the birthplace of Adam Smith, and Carlyle was once a schoolmaster there; manufactures textile fabrics and floorcloth. Pop. 43,900.

Kirkcudbrightshire, a Scottish county on the Solway shore between Wigton and Dumfries, watered by the Rs. Nith, Dee and Cree; one-third of its area cultivated, the rest chiefly hill pasture. Area 900 sq. m. Pop. 30,340. County town **Kirkcudbright**, on the Dee, 6 m. from the Solway; celebrated for St. Cuthbert's church. Pop. 2,300.

Kirke's Lambs, the soldiers of Colonel Kirke, an officer of the English army in the reign of James II., distinguished for their acts of cruelty inflicted on the Monmouth party.

Kirkintilloch, town of Dumbartonshire, Scotland, on the Forth and Clyde Canal, 8 m. NE. of Glasgow. It has chemical works, iron foundries, steam saw-mills, collieries and iron mines. Pop. 11,800.

Kirklareli, formerly **Kirk-Kilisse**, town and capital of the vilayet of the same name. It is built upon two hills in a fertile valley. The region is agricultural, while the town has a trade in coal, wines, flour, hides and tobacco. The scene of the first great Turkish defeat at the hands of the Bulgars in the Balkan War, 1912, it was ceded by Turkey to the Balkan States, but recaptured later in the year. Pop. (vilayet) 173,000.

Kirk Session, an ecclesiastical court in Scotland, composed of the minister and elders of a parish, subject to the Presbytery of the district.

Kirkstall, suburb of Leeds, on the R. Yorkshire, England. There are the fine ruins of the Cistercian Abbey of St. Mary (1147).

Kirkuk, Mosul; there is an oilfield of growing importance, and a trade in hides. Pop. (district) 138,000.

Kirkwall, capital of Orkney, in the E. of Thurso; has a fine cathedral named from St. Magnus, and some shipping trade; it was in medieval times subject to Norway, and was the residence of the jarls. Pop. 3,500.

Kirriemuir, a small town in Angus, Scotland, 5 m. NW. of Forfar, native place of Sir J. M. Barrie, and the "Thrums" of his books; manufactures brown linens. Pop. 3,300.

KINKAJOU

Kirschwasser (cherry water), a liqueur formed from ripe cherries with the stones pounded in it after fermentation and then distilled.

Kish, an ancient buried city of Chaldea, now known as El Ghelmir. Excavations since 1930 have revealed remains of a temple dedicated to the goddess Aruru, and many other relics of early civilisation.

Kismet (Arabic "Kismeh," fate or destiny), the Mohammedan conception of the arrangement of man's concerns as foreordained by Allah.

Kissingen, Bavarian watering-place on the Saale, 65 m. E. of Frankfort-on-the-Main, visited for its saline springs; its waters are used both internally and externally, and are good for dyspepsia, gout and skin diseases. Pop. c. 10,000.

Kistna, river of S. India, rising in the W. Ghats, Bombay Presidency, and emptying, after a turbulent course of 800 m., through an enormous delta into the Bay of Bengal, in Madras.

Kisumu, capital of Nyanza province, Kenya, the chief port on Lake Victoria; a centre of trade and an important air station. Pop. c. 20,000.

Kitcat Club, founded in 1703, ostensibly to encourage literature and art, and named after Christopher Cat. In whose premises it met; became ultimately a Whig society to promote the Hanoverian succession; Marlborough, Walpole, Congreve, Addison and Steele were among the thirty-nine members.

Kitchener of Khartoum,

Horatio Herbert, Earl, son of Col. Kitchener; joined the Royal Engineers, and was first engaged in survey work in Palestine and Cyprus; became a major of cavalry in the Egyptian army 1882, served in the 1884 expedition, was Governor of Suakin 1886, and after leading the Egyptian troops at Handub 1888, was made adjutant-general in the Egyptian army. He was appointed commander-in-chief of that army in 1892, led the expedition of 1898 which overthrew the Khalifa at Omdurman, for which he was awarded a peerage. He was made chief-of-staff to Lord Roberts in the Boer War of 1899, and succeeded him as commander-in-chief. He became War Secretary in Aug. 1914, and threw himself into the work of recruiting an army to face a long struggle, succeeding finally in securing a million men. He figured in several political disputes, and in 1916 sailed on a mission to Russia on the cruiser *Hampshire*, which struck a mine on June 5 and sank; Kitchener's body was never recovered. (1850-1916).

LORD
KITCHENER

Kite, the common name of a number of birds of prey of the Falcon family, including the Common Kite or "Gled"; (*Milvus milvus*). This species has a forked tail, is rufous above, rufous-brown below, has a narrow streak of blackish-brown down the feathers and the tail crossed with seven or eight black bars. Though formerly common, is now rarely seen in Britain. The Black Kite (*Milvus migrans*) also occurs in Britain as a straggler.

Kite, a sheet of paper, silk or some other material stretched over a light frame, and flown in the air by means of a cord attached to it and held from the ground. Kite-flying has long been a popular pastime in the Far East, and kites are used in Europe and America for the making of meteorological observations, military signalling and air photography.

Kittiwake, a species of gull, the *Rissa tridactyla*, receiving its zoo-

logical name from the fact that the fourth toe is only a small tubercle, without any horny projecting claw or nail. The head, neck and under-surface are white; back and wings grey. It is common on the coasts of the British Isles.

RED-LEGGED
KITTIWAKE

Kiu-kiang, treaty port of China, on the Yangtse-kiang, in Kiang-si. It is a centre of the tea trade. Pop. 80,000.

Kiung-chow, walled town of S. China, province, capital of the Island of Hainan. Three miles from the sea, it trades through the treaty port of Hoichow. Pop. 59,000.

Kiushiu, most southerly of the main islands of Japan, separated from Honshu by a narrow strait. It is mountainous and subject to earthquakes, and possesses in Aso-take the largest volcanic crater in the world. Coal and copper are mined, rice, beans, tea, wheat and tobacco are grown. Nagasaki, Kagoshima and Fukuoka are important towns. Area 16,200 sq. m. Pop. c. 9,000,000.

Kivu, beautiful lake of Belgian Congo, situated among lofty volcanic mountains. It is drained by the Ruzizi R. into Lake Tanganyika to the S.

Kiwi. See Apteryx.

Klagenfurt, town of Austria, capital of Carinthia, on the Glan R., 40 m. NW. of Laibach. Its fine old buildings include the cathedral, a church with a domed tower and the Landhaus. Pop. 29,700.

Klaipėda. See Mamel.

Klausenberg (now called Cluj), city of Rumania, formerly the capital of Transylvania. It is the seat of three bishops and has commercial, musical and agricultural academies. Pop. 100,000.

Kléber, Jean Baptiste, French general, born in Strasbourg; served with distinction in the Revolutionary army, accompanied Bonaparte to Egypt, and was left by him in command, where, while in the act of concluding a treaty with the Turks, he was assassinated at Cairo by an Arab fanatic. (1753-1800).

Kleptomania, a morbid tendency to theft for its own sake. It is not considered to be a specific disease, but, pathologically, is associated with various forms of mental aberration. It constitutes no defence to a charge of larceny, unless the medical evidence should prove that the accused laboured under such a defect of understanding as not to realise the character of his act.

Klerksdorp, town of South Africa, in the Transvaal. It is a centre of the cattle industry, and is on a gold-field. Diamonds, also, have been found. Pop. (white) 3,000.

Klipspringer (from Dutch "Kljp" a rock), a small S. African mountain antelope (*Oreotragus Saltator*), with an olive-coloured coat, large ears and short upright horns.

Klondike, a small section of the Yukon territory, in NW. Canada, where rich gold-mines were discovered in 1898.

Kluck, Alexander von, German general. He served in the Austro-Prussian and Franco-Prussian Wars, became a general in 1906, and in 1914 took command of the 1st army, which invaded Belgium. He was in charge of the German troops at Mons, the

Marne (commanding the German night wings), and the Alsene, but his failure to capture Solssons in 1916 led to his retirement. (1846-1934).

Knarensborough, Yorkshire, England, market town, 14 m. W. of York; manufactures woollen rugs, and trades in corn. Pop. 6,000.

Knebworth, village of Hertfordshire, England, 21 m. S. of Stevenage. Knebworth House, a fine Elizabethan mansion, is the seat of the Earl of Lytton.

Knee, the joint between the thigh and lower leg in man and the corresponding joint in animals. The knee-cap, or patella, is the bone in front of the knee-joint. The joint is almost surrounded by complex ligaments. The articulation of the joint is like that of a hinge, but there is slight rotatory movement. One of the chief diseases, apart from tuberculosis, to which it is liable is "water on the knee," due to inflammation of the synovial membrane which lines the ligaments, following strain. Dislocation, or fracture of the patella, may occur through a blow. Knock-knee is a condition in which the knees are together and the feet wide apart; in children it is caused by rickets; in older persons by pressure on the joint through strain.

Kneller, Sir Godfrey, portrait-painter, Rembrandt and in Italy, came to England in 1676, and was appointed court painter to Charles II., James II., William III., and George I.; practised his art till he was seventy, and made a large fortune; his residence at Twickenham, Kneller Hall, is now the home of the Royal Military School of Music. (1646-1723).

Knight, Charles, London publisher and editor, publisher of *Library of Entertaining Knowledge*, of the *Penny Magazine* and the *Penny Cyclopaedia*, etc., as well as a *Pictorial Shakespeare*. (1791-1873).

Knight, Dame Laura, British artist; resident at Nottingham, London and in America; she first exhibited at the Academy in 1903, and specialised largely in vivid painting of clowns and circus life. A.R.A., 1927; R.A., 1936. She was the first woman to be elected to the Academy for over a century.

Knighthood, a distinction granted next after that of commoners, ranking next after that of baronet, now bestowed by the Crown; formerly the knighthood was a military order, any member of which might create new knights. The former military element in the status of knighthood survives to-day in the accolade or symbolic act of dubbing a man knight by touching his shoulder with the point of the royal sword.

The most distinguished British Order is that of the Garter, and the next is that of the Bath. The Order of St. Michael and St. George is reserved for those who have rendered distinguished service in the Dominions or Colonies. Another British Order of Knighthood is that of the British Empire, founded 1917; the Knights of the Thistle are a Scottish, and those of St. Patrick an Irish, Order. There are two Indian Orders: those of the Star of India and the Indian Empire. Knighthood confers precedence over all other commoners. "Sir" is prefixed to the baptismal name of knights, and "Dame" is the legal designation of the wife of a Knight, though the title popularly used is "Lady"; the designation "Dame" is also given to women who are granted in their own right a dignity equivalent to knighthood.

Knight's Fee, in feudal tenure denoted of which the tenant had to render knight-service; that is, provide the King with so many knights for military service, according to the

amount of Knight's-fee in his estate. This form of land tenure was abolished in 1660.

Knights of the Round Table

King Arthur's knights, so called from the round table at which they sat, so that when seated there might seem no precedence; numbered popularly at twelve, though reckoned by some at forty; what is alleged to be the original Round Table is preserved as a relic in the Great Hall of Winchester Castle.

Knockmealdown, in Eire (Ireland), extending for about 12 m. along the borders of Tipperary and Waterford, N. of the Blackwater. Its highest point is 2,600 ft.

Knossus, an ancient city in Crete, 3 m. from the present Candia, famous in ancient legend as the home of the Minotaur (q.v.). It has been excavated in recent times by Sir Arthur Evans and others, extensive remains of an imposing civilisation having been unearthed, including remains of a building supposed to be that on which the legend of the Labyrinth was founded.

Knot, a loop made in a rope or string.

Very many varieties of knot have been evolved for use, particularly by seamen in securing ropes and cables on ships; they are broadly classified as knots proper, hitches, bends and splices, and each of these classes has many subdivisions, each with its own proper name. Among them are the overhand knot, made by passing the end of a rope over a portion of itself and then through the loop so formed; the unslippable reef knot, consisting of two overhand knots turned reverse ways; the bowline, fisherman's bend, timber hitch, shroud knot, etc.

REEF KNOT

Knot, a unit used for computing the speed of ships, equal to one nautical mile (6,080 ft. per hour). The word is frequently, but wrongly, used by landsmen to refer to the nautical mile itself as a measure of distance.

Knowsley, 5 m. W. of St. Helens. Here is Knowsley House, for centuries the seat of the Stanley family (Earls of Derby), containing many pictures by Rembrandt, Rubens and other painters.

Knox, John, Scottish ecclesiastic and reformer, born at Giffordgate, Haddington; studied at Glasgow University; after which he took priest's orders; came under the influence of George Wishart, and avowed the Reformed faith; took refuge from persecution in St. Andrews Castle in 1547; on its surrender was taken prisoner, and made a slave in a French galley for 19 months; liberated in 1549, assisted the Protestant cause in England; fled in 1553 to France; published in 1558 his *First Blast against the Monstrous Regiment of Women*; returned to Scotland for good in 1559, and became minister in Edinburgh; was tried for high treason before the Privy Council, but acquitted in 1563; began his *History of the Reformation in Scotland* in 1566; was in 1571 struck by apoplexy. (1513-1572).

Knnoxville, city of Tennessee, U.S.A., Tennessee R., 160 m. E. of Nashville. The seat of the State University, it is also a busy industrial town and centre of the Tennessee marble trade. Pop. 106,000.

Knutsford, urban district and market town of Cheshire, England, 15 m. SW. of Manchester. A picturesque old town, it was the original from which Mrs. Gaskell drew *Cranford*. Pop. 6,900.

Koala (*Phascolarctos cinereus*), a small marsupial of arboreal habit related

to the Wombats and Phalangers and found in Australia; hence known as the Australian bear. Has a grey-white coat, tufted ears and no tail. It is a vegetarian feeder and extremely delicate, and in spite of State preservation seems likely to become extinct.

KOALA BEAR

Kobe, seaport of the island of Honshu, 22 m. W. of Osaka, of which it is the port. It lies on the S. side of the island, on Osaka Bay, and has an excellent harbour. Shipbuilding, camphor-distilling and match-making are important industries. Pop. 912,000.

Koch, Robert, German bacteriologist, born in Klausthal, in Hanover; discovered sundry bacilli, among others the cholera bacillus and the phthiae bacillus and a specific against each. (1843-1910).

Koh-i-noor, a famous diamond, weighing 102 carats; once owned by the Great Mogul at Delhi; after passing through several hands it became the property of Queen Victoria in 1856, and has since been one of the British Crown Jewels.

Kohl, name applied to antimony or lead sulphide, when used in powdered form as a cosmetic for darkening eyebrows and eyelashes; it has long been popular in the East. The word alcohol is derived from its name, which the Renaissance chemist Paracelsus applied to spirits of wine.

Kolchak, Vladimir Vasilievich, Russian admiral. He fought in the Russo-Japanese war of 1904, and commanded the Russian Black Sea Fleet in the World War till the mutiny of 1917 deprived him of his command. Thereafter he made efforts at counter-revolution, and in 1918 formed his own Government at Omsk, waging war on the Bolsheviks, by whom he was captured and shot. (1874-1920).

Kolhapur, city and state of Bombay Presidency, India. The Western Ghats run through the State, but in the E. it is flat and well cultivated. The city has remains of ancient Buddhist temples, etc. Area 2,800 sq. m. Pop. (State) 934,000; (town) 70,000.

Köln, the German name for Cologne (q.v.).

Komintern, the popular name of the Third or Communist International (see International). It was founded in 1919 in Moscow for the organisation of the revolutionary forces of the world. Membership involves the vigorous organisation in the affiliated country of its communist activities. The headquarters are at Moscow.

Königgratz (Czech, Hradec Králové), a city of Czechoslovakia, 14 m. from Prague. Nearby is the village of Sadova where the Austrians suffered a severe defeat at the hands of the Prussians in 1866 during the Seven Weeks' War. Pop. 13,000.

Königsberg, the capital of E. Prussia, on the Pregel, with several manufactures and an extensive trade; has a university, and is the birthplace of Kant, where also he lived and died. Pop. 316,000.

Konya (Koniah), city of Asiatic Turkey, the Ikonium of the New Testament, ancient capital of the Seljuks. It is 140 m. S. of Angora, and has many fine old mosques. Silk and woollen goods, carpets and leather are made. Pop. 62,000.

Kopeck, a small Russian copper coin, in value the hundredth part of a rouble.

Köpenick, town in Prussia, Germany, on the outskirts of Berlin, manufacturing chemicals, linoleum, etc.; notorious for the exploits of the "Captain of Köpenick," a shoemaker who in 1906 masquerading as a military officer, induced the burgomaster of the town to part with the balance of the municipal funds, which were not returned.

Kopje, "Cape Dutch word, from "Kop," head," meaning a small flattened hill. In the S. African War they acquired a sinister significance, being used as cover for Boer marksmen.

Koran, or Quran, the sacred book of the Mohammedans, containing the revelations received by the prophet from the Angel Gabriel. It is the standard of Islamic faith and practice, and was arranged and edited by Mohammed's disciples after his death. The language of the original is Arabic.

Kordofan, province of the Anglo-Egyptian Sudan, on the W. bank of the Nile; an undulating dry country, furnishing crops of cotton and millet, and exporting gums, hides and ivory; was lost in the Mahdist revolt of 1883, but recovered by Lord Kitchener's expedition in 1898; El Obeid, the capital, is 230 m. SW. of Khartoum. Pop. c. 500,000.

Korea (Chosen), peninsula of E. Asia, jutting in a southerly direction between the Yellow Sea and the Sea of Japan, formerly an independent kingdom, but annexed by Japan in 1910. It is a mountainous territory; the people are Mongols, and Buddhists by religion. After being for 300 years tributary to China, it passed under Japanese influence, and by the Chinese defeat in the war with Japan, 1894-1895, was left independent. The climate is healthy, but subject to extremes; rivers are icebound for four months. The country is mainly agricultural, growing rice, cereals, cotton and tobacco. There are gold, iron, copper and graphite mines, and extensive manufactures of paper, and a silk industry. Most of the trade is with Japan. The capital is Kyo-fu (formerly Seoul). Area 85,000 sq. m. Pop. 22,900,000.

Kornilov, Lavr Georgievich, Russian general, who in 1917 led a rebellion against Kerensky (q.v.), and after his imprisonment and escape organised a volunteer army against the Soviet Government; this attempt being also unsuccessful he fled to the Caucasus, and was killed. (1870-1918).

Kosciusko, mountain peak of New South Wales, the highest in Australia (7,328 ft.), in the Australian Alps.

Kosciusko, Thaddeus, Polish general and patriot, born in Lithuania; first saw service in the American War on the side of the colonists, and returning to Poland, twice over did valiant service against Russia, but was taken prisoner at the battle of Maciejowice in 1794; set at liberty, he removed to America, but returned to settle in Switzerland, where he died; he was buried at Cracow beside John Sobieski. (1746-1817).

Kosher, from Hebrew *Kasher*, "fit" or "proper," connotes food prepared according to the Jewish Law; meat or other articles not so prepared are called "trifha," "unclean."

Kosice (formerly Kaschau), a beautiful town in Czechoslovakia, on the Hornad R., 140 m. NW. of Budapest; manufactures paper, pottery and tobacco, is noted for hams, and has an agricultural school. Pop. 70,000.

Kosovo (Kosova), former vilayet of Turkey, now included partly in Yugoslavia and partly in Albania, the latter

country having a prefecture of that name (pop. 49,000). The area was the scene of much fighting at various times, including a Turkish defeat in the First Balkan War and a Serbian rout in the World War.

Kossuth, Louis, Hungarian patriot, born near Zemplén; studied law, and later became editor of several Liberal papers in succession. Elected member of the Diet at Pest in 1847, he demanded autonomy for Hungary, and set himself in 1848 to drive out the Hapsburgs and establish a republic. He raised a large army and large funds, but Russia aided Austria, and the struggle proved in vain. Defeated at Temesvár and escaping to Turkey, he came to England in 1851, and lived there for many years. (1802 or 1806-1894).

Kostroma, district of Russia in the NW. coast of the Persian Gulf, adjoining Iraq. Area 2,000 sq. m. Pop. c. 80,000. Its capital, Kostroma, near the junction of the Volga and Kostroma Rr., has an old cathedral. Pop. 91,000.

Koweit, or Kuwait, semi-independent principality of Arabia on the NW. coast of the Persian Gulf, adjoining Iraq. Area 2,000 sq. m. Pop. c. 80,000. Its capital, Koweit, is an important seaport and trading centre, with the best harbour on the Persian Gulf. Pop. 60,000.

Kowloon, or Kaulung, peninsula in S. China, forming part of the British colony of Hong Kong. It contains the city of Victoria and the town of Kowloon (pop. 328,000) and was ceded to Great Britain in 1860.

Kowtow, a Chinese gesture of respect, consisting of a three-fold inclination of the forehead to the floor while in a kneeling posture; the refusal of this mark of respect to the Emperor of China by Lord Amherst's embassy from Great Britain in 1816 resulted in its dismissal in disgrace.

Kra, isthmus of, narrow isthmus of Siam, connecting the Malay Peninsula with the mainland, at its narrowest point only 10 m. across. It has been proposed to construct a ship canal through it, which would greatly shorten voyages to the Far East.

Kraal, a Hottentot or Kaffir village, being a stockade; and the community of such a village. The word corral, used of a cattle enclosure, is derivative from it.

Kragujevac, town of Yugoslavia, 60 m. S. of Belgrade, on the W. Morava. Once the capital of Serbia, it was held by the Turks for 400 years, and suffered severely in the World War. It has munition factories. Pop. 27,200.

Krakatoa, a volcanic island in the between Java and Sumatra; scene of a volcanic eruption in 1883, which destroyed the island and caused a tidal wave, which swept round the globe, causing great havoc in Java and Sumatra. The eruption raised quantities of dust, which made the sunsets in all parts of the earth unusually red.

Kraken, a huge fabulous sea-monster, reported as at one time seen in the Norwegian seas; it would rise to the surface, and as it plunged down drag ships and every floating or swimming thing with it.

Krassin, Leonid Borisovich, Russian politician; an engineer by profession, practised in Germany and elsewhere till 1914 after leaving Russia in 1908; became Commissar for Trade and Industry on formation of the Soviet Government; in 1920-1921 in England negotiated a trade treaty with Russia; afterwards Russian ambassador successively at Berlin, Paris and London. (1870-1926).

Krefeld-Ürdingen, in Rhenish W. of Düsseldorf; important manufacturing

town; noted for its silk and velvet factories founded by Protestant refugees; has also machinery and chemical works. Pop. 165,000.

Kreisler, Fritz, Austrian violinist. He where he was born, and in Paris; after touring America he made his London début in 1902; during the World War he fought in the Austrian army. (1875-).

Kremlin, a fortified area in the centre of Moscow, containing numerous buildings which are now used almost entirely as Government offices, museums, etc. It was founded by Ivan III. in 1485.

THE KREMLIN

Kreuger, Ivar, Swedish industrialist and financier, who, after working in America and S. Africa, returned to Sweden to found the Swedish Match Trust, which obtained a virtual international monopoly of match-making; his financial operations placed various European Governments under obligations to him; he committed suicide after the disclosure of certain financial scandals which had widespread repercussions. (1880-1932).

Kreutzer, German antecedents, to whom Beethoven's *Kreutzer Sonata* in A major was dedicated. (1766-1831).

Krishna (i.e., the swarthy one), an important figure of Hindu mythology, the latest incarnation of Vishnu (q.v.); his story is told in the *Bhagavadgita*, a Sanskrit poem which holds much the same place in Indian affections as does the New Testament in those of Europeans.

Krishnamurti, Indian religious leader, born in Madras; educated under Theosophist auspices by Mrs. Annie Besant (q.v.), and in 1911 the subject of a lawsuit between the latter and his father, who sought unsuccessfully to regain control over his upbringing; an "Order of the Star in the East" existed from 1911 to 1929 to prepare the way for his expected world campaign as a religious teacher; is the author of several works on theosophical lines. (1891-).

Krolewska Huta (formerly Königs-hütte), town in Polish Silesia, 5 m. SE. of Beuthen. Standing in a rich coal- and iron-field, it has large iron works. Pop. 79,000.

Krone, a silver coin of Denmark, Norway and Sweden, its value being about 1s. 1½d. at par. The Swedish name is Krona. The pre-war currency unit of the Austrian Empire (at par valued about 10½d.) was also so called.

Kronje, Piet Arnoldus, Boer general. He led the troops that captured the Jameson raiders of 1896, successfully commanded the Boer forces at Modder River and Magerfontein, but was defeated and captured by Roberts at Paardeburg in 1900, after which he was exiled for two years to St. Helena. (1840-1911).

Kronstadt, the port of Leningrad, at the mouth of the Neva; one of the chief Russian dockyards and naval stations. Pop. c. 32,000.

Kroo (Kru), a W. African negro race living on the coast of Liberia and its neighbourhood, also called Krooboyas. They are skilled as seamen.

Kroonstad, town of Orange Free State, S. Africa, 110 m. SW. of Johannesburg, centre for the dairy-farming and agricultural district of Kroonstad; there are some diamond-mines. Pop. 9,000 (including 4,000 white).

Kropotkin, Prince Peter, Russian anarchist, born in Moscow; after arrest and persecution in Russia and France, settled in England; his best-known works are *Mutual Aid*; *Fields, Factories and Workshops* and *The Conquest of Bread*. (1842-1921).

Kruger, Stephanus Johannes Paulus, South African statesman, born in Rastenburg; became member of the Transvaal Executive Council in 1872; in 1882 was chosen President, and was afterwards three times elected to the same office. He was in charge of the negotiations between the Boers and the British Government, the breakdown of which resulted in the South African War, at the outbreak of which he fled to Holland, dying shortly afterwards in Switzerland. (1825-1904).

STEPHANUS KRUGER

Krugersdorp, gold-mining town of Transvaal, S. Africa, in the W. Rand, 20 m. NW. of Johannesburg. Near here, at Doornkop, Dr. Jameson surrendered to the Boers. Pop. (white) 18,000.

Krupp Factories, great steelworks and arms and munition works at Essen, Germany, founded by Alfred Krupp (1810-1887); based on the introduction of the Bessemer process about 1857, an enormous business was built up, with its own collieries and iron-mines. During the World War over 100,000 persons were employed in the manufacture of military requirements. After the War the works turned to the production of various kinds of industrial machinery, etc., but since the advent of the Hitler régime and the rearmament of Germany they have again devoted their attention to armament production on a scale unsurpassed elsewhere in the world.

Krylenko, Nicolai, Russian lawyer and public prosecutor, born at Bielov. A protagonist of revolutionary ideas long before the World War, he was virtually exiled for his publications, which included *The Research of Orthodoxy*. Returned to Russia in 1916; at the Revolution of 1917 became a delegate to the first congress of Soviets; and later, after the fall of Kerensky, commander-in-chief of the Bolshevik forces. After this he earned considerable notoriety as a ruthless Public Prosecutor and Commissar of Justice until his supersession by Ovsyenko in 1937. (1885-).

Krypton, a non-metallic chemical element belonging to the group of rare gases; symbol Kr, atomic number 36, atomic weight 83.9. It occurs in the air in the proportion of about one part in 20,000,000, and was discovered in 1898 by Sir William Ramsay and Prof. M. W. Travers.

Kuala Lumpur, capital of Selangor, Malay Peninsula, and largest town in the Federated Malay States. Rubber growing and tin-mining are carried on. Pop. 114,000.

Kuban, river of S. Russia, in Ciscaucasia, rising in Mt. Elbruz and emptying, after a course of 450 m. in two streams into the Black Sea and Sea of Azov. It flows through the Kazak province of Kuban. Area 37,000 sq. m. Pop. 2,630,000.

Kubelik, Jan, Czechoslovak violinist, and composer, born in Michle, he studied at Prague Conservatoire, and commenced giving violin recitals in 1898, after which he toured Europe, America and Australia, besides being for a time Royal Violinist at the Rumanian Court. (1880-).

Kublai Khan, Mongol warrior and Kublai Khan, Emperor of China, completed the conquest of that country begun by

Genghis Khan, established Buddhism as the State religion, and ruled over the whole of Asia, excepting India, Arabia and Asia Minor; as well as European Russia and Hungary; his Oriental State is described by Marco Polo. (1216-1294).

Kudu, or *Koedoo* (*Strepsiceros kudu*), one of the largest African antelopes, a handsome beast with reddish-brown coat marked with white stripes. The male has long, spiral horns.

Kuen-Lun, Central Asiatic mountain range, N. of Tibet, 18,000 to 25,000 ft. high; stretches for 2,500 m., with a breadth of 100 m.

KUDU

Ku Klux Klan,

an American secret society founded in the Southern States after the Civil War to oppose the influence in American life of negroes, Roman Catholics and others of whom its founders disapproved; revived in 1915 by W. J. Simmons, to uphold the domination of whites and Protestants, some of its members undertook a campaign of terrorism which was responsible about 1924 for numerous lynchings and other lawless acts, its members using disguises and an esoteric ritual; after 1928 it fell into rapid decline.

Kumasi (Coomassie), the capital of Ashanti in the British Gold Coast Colony, W. Africa. At one time "blood-stained" and primitive, it is now a clean, modern town, with plentiful amenities. It was captured by Wolseley in 1874, since when it has been rebuilt. Pop. 40,000.

Kumiss (Koumiss), a beverage among the Kalmuks, made by fermentation from mare's milk.

Kümmel, a liqueur flavoured with cumin (q.v.) and sawdust seeds and containing 33 per cent. of alcohol; made mainly at Riga.

Kun, Béla, Hungarian communist of Jewish parentage; became journalist, and was during the World War a prisoner in Russia. Sent to Hungary by Lenin, he organised a Revolution in 1919, and became Dictator, the Karolyi Cabinet resigning. The revolt was crushed by Hungarian intervention, and Kun resigned, fled to Vienna, and thence to Russia. He returned to Vienna in 1928, but was sent back to Russia. (1886-).

Kuomintang, the Chinese Nationalist Party, formed originally by the followers of Sun Yat Sen (q. 1925). Its executive committee on Oct. 4, 1928, promulgated the "Organic Law (or Law Governing the Organisation) of the National Government of the Republic of China" though in December of 1931 this was considerably amended. The Chinese National Government at Nanking is appointed by the Party, to the Congress of which it is responsible.

Kuopio, province and town of Finland. The province includes N. Karelia, and is hilly country with many lakes, cattle-breeding, dairy-farming and iron-mining are carried on. Area 14,590 sq. m. Pop. 356,000. The capital, Kuopio, is an important trading point and centre of lake navigation. Pop. 23,000.

Kurdistan, stretch of territory in the Middle East, in Iraq, Iran and Turkey, inhabited by the Kurds, a wild, pastoral people who are largely fanatical Mohammedans, and have repeatedly risen against the Governments that attempt to control them, seeking autonomy or independence. They number about 14 millions.

Kuria-Muria Islands, a group of islets in the Arabian Sea, chiefly important as a cable station. Guano is obtained. Area 28 sq. m. Pop. c. 2,000.

Kurile Islands, a chain of 26 islands, the peninsula of Kamchatka, enclosing the sea of Okhotsk; they form the Japanese province of Chishima (area 3,350 sq. m.) and are very sparsely inhabited.

Kursk, town of Russia in the Central Black Soil Area, capital of the province of Kursk. It manufactures spirits, soap, candles and leather, and has a yearly fair. Pop. 103,000.

Kustendil, town of Bulgaria, on the Struma, 40 m. SW. of Sofia, seat of a Greek archbishop. Pop. 26,000.

Kutais, town of Georgia, in the U.S.S.R., and formerly capital of Georgia. Hat-making is the chief industry. Pop. 70,000.

Kut-el-Amara, province and town in Iraq, on the Euphrates, 290 m. from Basra. In 1915 General Townshend was besieged here by the Turks and surrendered after 143 days with 9,000 men, British troops having lost 20,000 men in trying to relieve the town. Under General Maude it was recaptured in 1917. Pop. (prov.) 120,000.

Kwang-chau-wan, small territory in South China, east of the Lui-Chow peninsula, leased by France from the Chinese Government since 1898, and governed as part of French Indo-China; a free port, exporting swine, cattle and ground-nuts. Area 200 sq. m. Pop. 230,000.

Kwang-si, mountainous province of S. China, between Yunnan and Kwang-tung. It is watered by the Si-kiang and its tributaries. Timber and cinnamon are produced, and there are many minerals, but little worked. Yungning is the capital. Area 84,000 sq. m. Pop. 13,385,000.

Laager, an encampment, especially one of the S. African veldt. At first used by Boer pioneers when trekking, laagers were widely employed as military encampments during the S. African campaigns.

Laaland, Danish island in the Baltic, separated from Schleswig-Holstein by Fehmarn Belt. It is fertile and low-lying, and has oak and beechwoods. Maribo is the capital. Pop. 87,000.

Labarum, the standard which was borne before the Emperor Constantine, symbolising the vision of the cross in the sky which led to his conversion to Christianity. It consisted of a gilded spear bearing a cross-bar from which depended a jewelled purple cloth, the spear being crowned by a golden wreath, in the centre of which were the first two letters of the name of Christ.

La Bassée, industrial and mining town of France, 16 m. SW. of Lille. It was taken by the Germans in 1914, and remained in their hands for four years, being reduced to ruins by bombardments. Pop. 34,000.

Labiatae, a large family of herbaceous or shrubby plants, with four-cornered stems and leaves devoid of

Kwang-tung, coastal province of S. China, including Hainan I., and the ceded territories of Hong-Kong. It is rich industrially and agriculturally, and has important fisheries. Its largest city is Canton; its capital, Kwangchow. Area 84,000 sq. m. Pop. 32,300,000.

Kwei-chau or **Kwei-chow**, interior province of China, mainly mountainous and sparsely inhabited, largely by aboriginal tribes. It is watered by the Yangtze and the Wu, and has an unhealthy climate. Its mineral wealth is great but imperfectly exploited. Kwei-yang is the capital. Area 69,200 sq. m. Pop. 9,000,000.

Kyd, Thomas, Elizabethan dramatist, born in London, and trained a scrivener, but won fame as a writer of tragedies, of which the best was *The Spanish Tragedy*. (1557-1595).

Kyles of Bute, narrow, curved strait separating Bute from the Scottish mainland (Argyllshire), and opening at both ends into the Firth of Clyde. It is 16 m. long, and noted for its beautiful scenery.

Kyoto, from 784 to 1868 the capital of Japan, and now its fourth largest city, on the Kamo R., inland, 190 m. W. of Yedo; is the centre of Japanese Buddhism, and is noted for its pottery, bronze-work, crêpes and velvets. Pop. 1,080,000.

Kyrie Eleison, means "Lord have mercy upon us," and with *Christe Eleison*, "Christ have mercy upon us," occurs in all Greek liturgies, in the Roman Mass, and, in its English equivalent, in the Book of Common Prayer; it is known as "the Lesser Litany."

Kyrle, John, English philanthropist, celebrated by Pope as the "Man of Ross," from the name of the place in Herefordshire where he lived; was distinguished for his benefactions; gave his name to the Kyrle society, founded, among other things, for the betterment of the homes of the people. (1037-1724).

stipules and covered with glands secreting aromatic oil. They occur in most parts of the world, some 200 genera and 3,000 species being recognised, among the chief genera being *Rosmarinus* (rosemary), *Lavandula* (20 species, including lavender), *Salvia* (550 species, including sage), *Thymus* (33 species, including thyme), etc.

Labour, in economics, one of the three cardinal agents in the production of wealth, the other two being land and capital. Labour, however, may be unproductive, or only indirectly productive of wealth. Industrial processes have been greatly facilitated by the labours of scientists, so that the labour of an "unproductive labourer" may be productive of wealth.

Division of labour is an important consideration in political economy. Its three advantages, according to Adam Smith, are (1) increase of the workman's dexterity, (2) saving of time by the workman's concentration upon one employment, and (3) the greater likelihood of suitable machinery being invented if the mind of the workman is concentrated on a special process. A fourth advantage is that each workman can be employed solely on the work most suited to him.

A still more powerful agent in increasing

productiveness than division of labour is co-operation, and this may be either simple or complex. Karl Marx claimed that he was the first to point out the twofold nature of the labour embodied in a community, the concrete labour which creates "use-values," and counts qualitatively, being work, while the abstract labour which creates value and counts quantitatively is labour. This formula leads to Marx's analysis of the "errors" of the orthodox economists and his fundamental axiom that the economic structure of society is, and always has been, the basis upon which everything else rests.

Labour, Ministry of, a department of the British government, established in 1916 to replace the Labour Department of the Board of Trade, in order to administer unemployment exchanges and deal with wage disputes, unemployment insurance and questions of labour administration generally. Its wide powers, especially in relation to trades unions, also embrace the adjudication of industrial claims through the Industrial Court, and there is a special department which co-operates with the International Labour Organisation of the League of Nations. The secretarial, employment, training and unemployment assistance departments, and the industrial relations and international labour branches are all located at Montague House, Whitehall; there are also out-stations at Bristol, Birmingham, Manchester, Leeds and Edinburgh.

Labour Day, the first Monday in September, held as a legal public holiday in all parts of the U.S.A. and Canada and their dependencies, except the Philippine Is., and celebrated by labour processions. In Europe, Socialist organisations have for many years regarded May 1st as their Labour Day.

Labour Exchanges, centres where the unemployed are informed of vacancies and where employment insurance benefits are paid. They were established in England in 1910, and are now known as Employment Exchanges (q.v.).

Labour Party, since the post-War Liberal Party one of the two great rival political organisations of Great Britain. It formed its first Government in 1924 and its second in 1929, though in neither case did it have control of a majority in the House of Commons. Its eventual purpose is the establishment of a Socialist commonwealth. Besides its individual membership, a number of organisations are affiliated to it, including most of the British trades unions. Not until 1906 did it secure any great measure of Parliamentary representation, but in that year it returned 40 members to the Commons, and by 1922 this figure had risen to 142.

At the 1929 election it returned 287 members, but the Labour Government then formed fell in 1931 as a consequence of the financial crisis which developed in that year, and led to a split in the Cabinet, the then leader of the Party and Prime Minister, J. Ramsay MacDonald, deserting it to lead a combination of the Conservatives and many Liberals with a small rump of "National Labour" men. The ensuing General Election reduced the Labour Party in the Commons to 52, but at the 1935 Election it returned 154 members. In 1936 George Lansbury (q.v.) was succeeded as Leader of the Party by Major Attlee.

At the beginning of 1937 the National Executive decided that at the next General Election it would concentrate on a programme of social reconstruction which could be carried during the lifetime of a single Parliament. It has refused on various occasions to co-operate with the Communist Party in a "United Front," but at present (1938)

conversations are taking place as to the possibility of resumed co-operation with the Independent Labour Party, which broke away from the Labour Party in 1932 and has since acted independently.

Labrador, peninsula of E. Canada, the Greenland Sea, and the Gulf of St. Lawrence; it forms a high tableland, with many lakes and rivers, and forests of birch and fir. The climate is too severe for agriculture. Summer is very short, and plagued with mosquitoes. The rivers abound in salmon; the fox, marten, otter and other animals are trapped for their fur; iron and labradorite are plentiful. The inhabitants are chiefly Eskimos. Area 510,000 sq. m.

The name Labrador is specifically applied to the region along the E. coast of the Labrador peninsula, between Blanc Sablon, in the S., and Cape Chidley, in the N., with an area of about 110,000 sq. m. It is a dependency of Newfoundland, to which it was attached in 1927 by a decision of the Privy Council, in settlement of a boundary dispute between Newfoundland and the province of Quebec, to which the rest of the peninsula belongs. Pop. (dependency) 4,700.

Labradorite, a mineral of the felspar group, found in many igneous rocks, especially in those of Labrador. It often displays brilliant, iridescent colours, and is then used in jewellery.

La Bruyère, Jean de, French essayist and moralist, born in Paris; was tutor to the Duke of Bourbon, the grandson of the great Condé, and spent a great part of his life in Paris in connection with the Condé family. His most celebrated work is *Les Caractères de Théophraste* (1688), which abounds in wise maxims and reflections on life, but offended contemporaries by its satires under disguised names. (1645-1696).

Laburnum, a genus of small, hardy, deciduous trees of the natural order Leguminosae. There are only three known species, one of which, *Laburnum vulgare*, is an ornamental tree common in Britain, and noted for its hanging racemes of beautiful yellow flowers. The roots, bark and seeds are poisonous.

Labyrinth, a name given to a structure composed of intricately winding passages. The most remarkable examples were those of Egypt and of Crete. The Egyptian labyrinth, to the E. of Lake Moeris, consisted of an endless number of dark chambers, connected by a maze of passages; it was possibly a vast cemetery. The Cretan labyrinth was supposed to have been built by Daedalus, to imprison the Minotaur; Perseus, however, aided by Ariadne, penetrated the labyrinth and slew the monster, being guided on his return by a skein of thread. The nearest modern approach to the labyrinth of antiquity is the garden maze, of which that at Hampton Court is perhaps the most celebrated example.

Lac, or Lakh, a term employed in India for a hundred thousand; 100 lacs make a crore, the word rupees often being understood.

Laccadive Islands, a group of low-lying islands 200 m. W. of the Malabar coast of India, 14 in number, mostly barren (9 only are inhabited) and yielding chiefly coconuts. Boat-building and the manufacture of coir are carried on. They were annexed by Great Britain in 1877 and are under the Administration of Ceylon. Area 86 sq. m. Pop. 16,000.

LABURNUM
VULGARE

Lace, a name for various kinds of fine, open fabric, often of elaborate pattern, as in the case of Mechlin lace and Honiton lace. In the trade, the varieties are classified into "needle-point," "machine-made" and "pillow" lace. Needle-point, or "point," originated as embroidery or twisted braid, and is worked on a fabric foundation. The earliest point lace was made in Venice in the 16th Century. Brussels point lace is characterised by a star or flower ornament worked separately and sewn on to the foundation. Machine-made originated in Nottingham in 1768, at first taking the form of tulle or net to be used as a foundation for "pillow" lace, which is lace made by hand with bobbins on a pillow or cushion. Modern machine-made lace, made by power-driven looms, repeats most of the features of hand-made lace. The invention of the bobbin-net machine by John Heathcote in 1809 was the first great advance in the machine-made lace industry. The machines in general use to-day are those based upon the loom invented by John Levor in 1813.

Lacedæmon, an alternative name for Sparta, capital of Laconia and the chief city of Peloponnesus.

Lachesis. See Fates.

Laconia, or **Laconica**, ancient name for Sparta, a country of the Peloponnesus, the inhabitants of which were noted for the brevity of their speech, whence the word "laconic" in English.

Lacquer, a substance used in the Far East for ornamenting the surface of wood and, more rarely, metals. It consists of the sap of the lacquer tree (*Rhus vernicifera*), strained and slightly evaporated, applied in successive layers and allowed to harden. It is then polished, and may afterwards be embellished by the application of gold and silver in various forms, mother-of-pearl or other shells, or precious stones. Lacquer can also be coloured successfully by the addition of various substances, Chinese red lacquer, coloured cinnabar, being especially celebrated. In the West the word lacquer is often applied to a solution of shellac or other resins in a solvent such as alcohol, applied to metal surfaces to preserve them from rust or tarnish.

Lacrosse, a pastime originating among the N. American Indians, which has become a national sport in Canada, and thence has spread over most of the English-speaking world. It was introduced into England in 1876, the English Lacrosse Union being formed in 1892; there is a county championship, as well as international and inter-varsity matches.

The game is played with a rubber ball, 4½ oz. in weight, and each player is provided with a peculiarly shaped stick or "crosse," which gives the game its name. The crosse is made of hickory, and is of any convenient length, but must be no more than 12 ins. in maximum breadth; one end is bent at an obtuse angle, and sustains a triangular coarse net of thongs or catgut, the apex of which is attached to the handle.

There are two 6 ft.-square goals, standing 100-130 yds. apart, with agreed side boundaries. Each team consists of 12 players, and the object is to catch the ball in the net of the crosse and throw, or kick, it through the opposing goal. Players are permitted to carry the ball upon the crosse, but (except the goalkeeper) must not handle it.

Lactation, the process of feeding the mother, or suckling, young with the milk of all mammals. It is a characteristic of the mammary glands, of which there are two in the human mother, while the number increases with the number of young in other mammals.

Lactic Acid, the general name for several isomeric organic acids, having the same chemical formula and composition, of which the most familiar is the acid produced in sour milk by the fermenting action of bacteria upon lactose, or milk-sugar; other isomeric forms of lactic acid occur in fermenting cane-sugar and in muscle tissue, accumulations of the latter being responsible for the phenomenon of muscular fatigue.

Lactometer, an instrument for determining the amount of butter-fat in milk. In its usual form it is a graduated glass tube which is filled with the milk to be tested; the latter is allowed to stand until the cream separates, when its amount is read from the scale.

Lactose, or **Milk-Sugar**, the sugar which forms an integral part of all mammalian milk; it is left in the whey after removal of the casein by the action of rennet, and can then be obtained in crystals by evaporation. Though less sweet than sucrose, or cane-sugar, it is more easily assimilated, and is therefore preferable for feeding infants.

Ladino, a variety of the Spanish tongue, based on the Castilian of the 16th Century, spoken especially in the Near East (Turkey, the Levant, etc.) by Sephardic Jews descended from those expelled from Spain and Portugal at the end of the 16th Century. The name is sometimes also given to Romansch, a Romance language spoken by many inhabitants of Canton Grisons, since 1937 recognised as one of the national languages of Switzerland.

Ladoga, the largest lake in Europe, situated almost equally in Russia and Finland, the frontier between which intersects it; Leningrad is about 25 m. from its S.W. end. The lake is more than 120 m. in length and 80 m. wide; with an area of 7,000 sq. m., nearly as large as Wales. It receives the Rts. Volkhov, Voska and Svir, and drains into the Gulf of Finland by the Neva; but so dangerous is navigation that the extensive shipping is carried round the S. shores by a system of canals.

Ladrones, or **Marian Islands**, a widely scattered group of islands in the N. Pacific, 1400 m. E. of the Philippines; they are 14 in number, and together have an area of 24,100 sq. m. A number of them, towards the N., are uninhabitable, owing to the presence of active volcanoes; the S. islands produce cotton, indigo and sugar. Guam is the largest island and belongs to the U.S.A., being ceded in 1898 by Spain, which formerly owned all the islands. The remainder were sold to Germany in 1899, and since the World War have been governed by Japan under mandate. Pop. (natives) 50,000. (Japanese) 20,000.

Ladybird (Coccinellidae), a family of beetles (coleoptera), exhibiting bright red or yellow colouring, with black or white spots. There are 2,000 species, all having short, clubbed antennae and heads largely concealed by the thorax. Most species feed on the larva and imagines of Aphides and other insects destructive to crops. In various parts of the world species of ladybirds have been introduced for the specific purpose of thus helping agriculture.

Lady Chapel, the Virgin Mary attached to a church.

Lady Day, the festival of the annunciation of the Virgin Mary, March 25; a quarter-day in England, Wales and Northern Ireland.

LADYBIRD

Lady's Mantle (*Alchemilla vulgaris*), a perennial plant of the family Rosaceae; a native of temperate climates, and found wild in Great Britain. It bears small yellow or green blossoms in clusters and large, many-lobed leaves. Alpine Lady's Mantle (*Alchemilla alpina*) is a more useful garden species.

Ladysmith, town of Natal, S. Africa, near the Klip R., 200 m. NW. of Durban, at an elevation of 3,280 ft.; it is an important railway junction, and has railway workshops. Founded in 1851 and named after the wife of Sir H. Smith, Governor of the Cape, it was besieged by the Boers for 121 days (Nov. 1899–Feb. 1900) during the S. African War. Pop. 7,000.

La Fontaine, Jean de, French poet and fabulist, born at Château-Thierry, in Champagne; began his serious literary career with a metrical translation from Terence, which brought him the patronage of the Intendant Fouquet. In 1664 appeared the first part of his *Fables*, which are remarkable for their exquisite grace of expression and sparkling wit, while his celebrated *Fables* began to appear in 1608, and ever since have delighted readers of all ages. (1621–1695).

Lager, a light beer produced in Bavaria (Munich) and elsewhere on the Continent. It differs from the typical English beer in that the mashing process is of the "decoction," and not of the "infusion" type; also a different yeast is used, which sinks during fermentation instead of remaining at the top. Lager has to be stored for some four or five months and cooled before being ready for consumption. It has an alcoholic content of 3 per cent., as against about 4 per cent. in ordinary English beer.

Lagoon, a shallow lake of salt or brackish water, communicating with the sea, but separated from it by a bar or sand-spit. Lagoons are usually found along flat coast-lands where the tide is but slight. Another form of lagoon is that enclosed by a coral atoll (q.v.).

Lagos, town and seaport of Nigeria, of which it is also the capital. It stands upon an island near the N. shore of the Bight of Benin, and is joined to the mainland by a bridge. It has large docks, floating docks and wharves and is connected by rail with Kano, 700 m. to the NE. There is a large and valuable trade with all parts of Nigeria, especially in palm oil and kernels, cotton, cocoa, ground nuts, hides and rubber. Pop. 130,000.

Lagrange, Joseph Louis, Comte, French mathematician, born at Turin; had gained at the age of twenty-five a European reputation by his abstruse algebraical investigations. Appointed director of the Berlin Academy in 1766, he pursued his researches there for twenty years. In 1787 he removed to Paris, where he was appointed professor of mathematics and received a pension from the Court. Napoleon made him a count. His writings include important treatises on mechanics, analysis, the calculus, and the theory of functions. (1736–1813).

La Hague, or *La Hague*, a promontory of France, forming the N. extremity of the Cotentin peninsula, dept. of Manche, about 12 m. NW. of Cherbourg. In the neighbouring roadstead a French fleet sent by Louis XIV. to invade England on behalf of James II. was destroyed by the combined English and Dutch fleets, May 19–23, 1692.

Lahore, city of India, on the Ravi, a tributary of the Indus, 1,250 m. by rail NW. of Calcutta. It is the capital of the Punjab, and an important railway centre; it has many fine buildings, both English and native, the latter including the Mogul fort

and its mosques; there is also a university and a medical school. The town is the headquarters of a division of the Indian Army. Pop. 430,000. The district of Lahore, one of the most important in the province, is well irrigated by the Bari Doab Canal, and produces plentiful crops of cereals, pulse and cotton. Area 2,700 sq. m. Pop. 1,131,000.

Laissez-faire (*lit.* let things alone), the name given to the "let-alone" system of political economy, in opposition to State interference or regulation in private industrial enterprise.

Lake (dyeing), a generic name for a variety of insoluble red and other pigments, prepared mostly by precipitating solutions of organic colouring matters with a metallic mordant. The colouring matter of common lake is Brazil wood, but superior varieties are made from cochineal, lac, kermes, and the root of the madder-plant.

Lake, a sheet of water formed in a depression of the earth's surface. When very large, lakes are known as inland seas, such as the Caspian Sea, while small mountain lakes go by the name of tarns. Geologically, lakes are classified into those which once formed part of the sea but have been cut off by the elevation of the sea-bed; and depressions in the land-surface which receive a portion of the drainage. The Caspian and the Sea of Aral are instances of the first class; the Great Lakes of N. America, Lake Tchad, and indeed most other lakes belong to the second. These depressions may arise either from partial sinking of the land, or from the eroding effect of glaciers. The world's largest lakes are the Caspian Sea and Lake Superior.

Lake District, a region of Northern England, in Cumberland and Lancashire, which, within a circle roughly 30 m. in diameter, contains the chief English lakes, including Windermere, Rydal Water, Conistone Water, Ullswater and many others. The mountain, lake and river scenery is of world-famous beauty, and is much frequented by tourists. Sca Fell Pike, Sca Fell, Helvellyn and Skiddaw are the highest peaks, the first-named being 3,210 ft. high. The village of Keswick is perhaps the most popular centre for visiting the Lake District; others are Ambleside, Windermere and Grasmere. The District is rich in literary associations, with memories of Wordsworth, Gray, Coleridge, Southey, Keats and others.

Lake Dwellings, primitive settlements, the remains of which have been found in many parts of Europe, but chiefly in Switzerland, the N. of Italy, Austria, Hungary, Germany, Scotland and Ireland. In the Swiss lakes, piles, consisting of unbarked tree trunks, were driven in a short distance from the shore, and strengthened by cross-beams; extensive platforms laid on these held small villages of rectangular huts. These were sometimes accessible only in canoes, but more often were connected with the shore by a narrow bridge. In Scotland and Ireland the erection was rather an artificial island constructed in shallow water with brushwood, logs and stones.

La Linea, Spanish town in the province of Cadiz, N. of Gibraltar; its main occupation is supplying fruit, dairy produce, etc., for the inhabitants of Gibraltar. Pop. 63,000.

Lamaism, the form of Buddhism prevalent in Tibet and Mongolia, which has become very much corrupted from the original teaching of Buddha and is overlaid with magic and divination. It is characterised by a highly developed system of male and female monasticism and a complicated hierarchy of priests, chief of whom are the Dalai Lama, who inhabits the Potala at

Lamas, and the Tashi Lama, who lives at Shigatse; each is regarded as the incarnation of a previous lama.

Lamarck, Jean Baptiste, French naturalist, born at Bazentin. **Picardy**; entered the army at the age of 17 and served in the Netherlands. In his *Flora Française* (1778) he adopted a new method of classification of plants. In 1778 was appointed botanist in what ultimately became the Jardin des Plantes, and in 1793 became professor of Zoology, devoting himself particularly to the study of invertebrate animals. He held advanced views in biology, which were not appreciated till the advent of Darwin. (1744-1829).

Lamartine, Alphonse Marie de, French poet, born at Mâcon. His first volume of poetry, *Méditations*, appeared in 1820; *Harmonies* in 1830, *Chute d'un Ange* and *Jocelyn*, 1837 and *Recueillements*, 1839. Of his prose works, which range from short tales to historical monographs, the most celebrated is the *Histoire des Girondins*, 1847. He played a notable part in contemporary politics, entering the Chamber as a royalist in 1834, and becoming a member of the provisional Government and Foreign Minister in 1848; unsuccessfully stood for the presidency, 1849 and was pensioned under the Empire. (1790-1869).

Lamb, Charles, English essayist and critic, born in London: entered the East India Office in 1792, where he served for 33 years. His first poems appeared in 1796, but his plays *John Woodvil* (1802) and *Mr. H—* (1806) were failures; collaborated with his sister Mary in *Tales from Shakespeare* (1807), and contributed to Leigh Hunt's *The Reflector*; from 1820 contributed to the *London Magazine* the series of immortal essays later (1823) collected as *The Essays of Elia*, upon which his fame chiefly rests. The friend of Wordsworth, Southey, Leigh Hunt and others, his letters are almost as delightful as his essays. (1775-1834).

CHARLES LAMB

Lamb, Mary Anne, English authoress, sister of Charles Lamb (q.v.), in whose care she lived after having at the age of 32, in a fit of insanity mortally stabbed her mother. She was part-author of the popular *Tales from Shakespeare*. (1764-1847).

Lambeth, a metropolitan borough of London, lying between Southwark and Camberwell on the E. and Westminster and Wandsworth on the W., and including the districts of Kennington, Brixton, Vauxhall and parts of Norwood. Its notable buildings and establishments include the London County Hall, St. Thomas's Hospital and Lambeth Palace, the official residence of the Archbishop of Canterbury, which has a magnificent library and portrait-gallery. It is largely an industrial quarter, producing chemicals, soap, pottery and earthenware, etc. Pop. 277,000.

Lamellibranchia. See *Bivalves*.

Lamentations, Book of, one of the Old Testament, traditionally ascribed to Jeremiah, but more probably the work of several unknown hands; written apparently after the fall of Jerusalem, in 586 B.C., and in sight of its ruins.

Lamia, in Greek legend, a vampire who and fed upon the blood of her lovers; the subject of the well-known poem of the same name, by John Keats.

Lammas, the first day of August, literally "the loaf-mass" day or festival day at the beginning of harvest; it is one of the cross quarter-days, Whitsuntide, Martinmas and Candlemas being the other three.

Lammermoor, or **Lammermoor**, range of hills in Lothian and Berwickshire, Scotland, culminating in Lammer Law (1,733 ft.). They terminate at the North Sea coast in St. Abb's Head.

Lampblack, a very finely divided, by burning fats, resins or the oily products of coal-tar distillation in a limited supply of air. It is used in the manufacture of motor-tires, printer's ink, copying paper, black pigments and other commodities.

Lampoon, a scurrilous personal piece of satire, generally on some prominent individual. The word is from the French "lampon," a drinking-song, so called from the exclamation "lampons!" i.e., "let us drink," frequently introduced into such songs.

Lamprey, an order (Hyperoartia) of the fish remarkable for the powerful sucker bearing horny teeth which it has in place of jaws, and by means of which it attaches itself to other fish to feed, scraping away the flesh with its rough tongue. They occur in N. and S. temperate seas, three species being found in British waters—the sea-lamprey (*Petromyzon marinus*), large and spotted and a yard or more in length, the river lamprey, partly inhabiting fresh-water, and the lampern (*Lamprologus furcatus*) which is found in estuaries and has a habit of attaching itself to a stone by its mouth. Lampreys were at one time a favourite article of food.

Lanark, county town of Lanarkshire, Scotland, on the Clyde, 31 m. SE. of Glasgow; has a cattle-market and carries on cotton-spinning, weaving and tanning; 1 m. to the S. is New Lanark, associated with the socialistic experiments of Robert Owen. The district is a noted beauty-spot, including as it does the Falls of the Clyde and the ravine of Cartland Craig, and is historically rich, with memories of William Wallace. Pop. 6,000.

Lanarkshire, inland county of Scotland, occupying the valley of the Clyde; the middle and S. are hilly, with such outstanding peaks as Tinto (2,335 ft.), and are adapted for cattle and sheep-grazing and for dairy-farming. The NW. region is very rich in coal and iron, and consequently includes many industrial towns, such as Glasgow, Motherwell, Hamilton, Coatbridge and Airdrie. Fireclay, shale and lead are also found; comparatively little grain is grown, but fruit-farming and market-gardening are productive. The other industries include ship-building, engineering and the manufacture of textiles. Lanark is the county town, though Glasgow is by far the largest and most important. Area 880 sq. m. Pop. 1,686,000.

Lancashire, county of England, extending along the shore of the Irish Sea from the Lake District and the mountains of Cumberland in the N. to the Mersey in the S. It is bounded on the E. by Yorkshire and Westmorland; the northern portion forms the peninsula of Furness, which comprises a district of Lakeland. The sea-coast is mostly occupied by a plain. Nowhere does the land stand higher than 1,831 ft. The chief rivers are the Mersey, Lune and Ribbles, with their tributaries. The Manchester Ship Canal and a number of other artificial waterways are important means of transit.

The soil is a fertile loam, which produces

wheat, oats, potatoes and other crops; while there is much dairy-farming and sheep-rearing. Iron and coal are the chief minerals, and support vast mining and manufacturing industries, chief among the latter being the spinning and weaving of cotton and other textiles, as well as engineering, shipbuilding, bleaching, dyeing and the manufacture of iron, steel, glass, soap, leather, rubber, paper and chemicals.

The county town is Lancaster, but the largest and most important towns are Liverpool, Manchester, Burnley, Blackburn, Wigan, Bolton and Preston; Blackpool, Southport, Morecambe and Lytham St. Anne's are popular holiday resorts. Liverpool and Manchester are university towns and also, with Blackburn, bishoprics. Area 1,869 sq. m. Pop. 5,039,000.

Lancaster, county town and riverport of Lancashire, England, on the estuary of the Lune, 50 m. NW. of Manchester; manufactures furniture, linoleum, cotton, machinery and railway plant; the Norman castle is now used as the assize court and jail. Pop. 43,400.

Lancaster, city of Pennsylvania, U.S.A., 70 m. W. of Philadelphia; tobacco, linoleum and machinery are among the principal manufactures. Pop. 60,000.

Lancaster, House of dynasty that ruled England 1399-1461, taking its name from the dukedom of Lancaster possessed by its founder Henry IV. (q.v.). Henry IV. was succeeded by his son Henry V., who in turn was succeeded by his son Henry VI.; on the latter's deposition in 1461, the House of Lancaster came to an end, and the Yorkist dynasty began in the person of Edward IV.

Lance, a horseman's long spear used formerly in tilting and jousting at tournaments. Later it became a cavalry weapon, and as such was used in most European armies. The modern British cavalry lance has a bamboo shaft 9 ft. 1 in. in length, with a triangular steel point, and bears a red and white pennon. In 1927 it was abolished in the British army for all but ceremonial use.

Lance Corporal, in the British infantry, a non-commissioned officer below the rank of corporal, or an acting corporal; those on the establishment of a battalion wear a single chevron on each sleeve. A lance-sergeant is a corporal acting as sergeant.

Lancelet (*Amphioxus lanceolatus*), a small marine animal having a gristly

rod or notochord in place of a spine; from 1½ to 2½ in. in length, it resembles a eel, and has been found in British seas and is tapered at both ends. It inhabits coastal waters. It has no proper head, eye or gills and no fins apart from one on the back. It has a flattened side bearing striated lines.

LANCERLET

Lancers, cavalry regiments whose chief weapon was the lance. Regular lancer regiments were introduced into Western European armies by Napoleon, after the pattern of those in the Polish service. After Waterloo several regiments of British Light Dragoons were converted into lancers, and there were eventually British lancer regiments whose arms included, besides the lance, a sword and, later, a carbine. The German Uhlans were also equipped like British lancers and classed as medium cavalry. See also *Lance*.

Lancers, the name of a set of quadrilles or square dances of French origin; there are five figures and eight dancers make up a set.

Lanchester, town of Durham, England; it is a coal-mining centre, and has saw-mills; remains of a Roman station crown a nearby hill. Pop. 33,700.

Lanchow, city in Western China, capital of the province of Kansu, on the Hwang-ho; it is the trade centre of the district, which produces coal, silk, furs and coarse textiles. Pop. c. 400,000.

Lancing, village of Sussex, England, on the coast, 2 m. E. of Worthing; chiefly noted for its boys' public school (with a fine chapel) founded by Canon Woodward in 1848. Pop. 3,900.

Land, in English law, includes not only dry land and land covered by water (such as stretches of river), but buildings of all kinds, and indeed everything which comes within the popular description of "property," as that word is used in the unscientific but easily understood phrase, "the property market." English land laws grew out of the feudal system as that system was adapted to the needs of a monarch who was not prepared to allow his baronial adherents to rival the royal power. The greatest interest an English subject can have in land in England is an "estate in fee simple," which, however, falls short of an absolute title only in that it is subject to the vague overlordship of the Crown.

Until recently English land laws were still remarkable for certain feudal archaisms, such as fines on succession to copyholds, but Lord Birkenhead's Law of Property Act, 1925, swept away these survivals, including among them ancient forms of land tenure such as copyhold and gavelkind, and also the time-honoured device of entailing estates so as to preserve continuity of succession in a direct line. In 1936, an Act was passed for the compulsory redemption of the tithe-rent charge. The law has also been much altered so as to confer wider powers of development on the tenant of land for life under a marriage settlement. The rules of intestate succession were also amended, so that land now passes on intestacy to the next-of-kin, in the same way as personality; the institution of primogeniture and the heir-at-law has thus virtually disappeared.

The old law of conveyance always presupposed transfer of land by deed, but, although a deed is still the customary mode of transfer, a system of land-registration has, theoretically, replaced it in the County of London and in one or two towns; but even there it is supplementary only, and most purchasers would be advised by their solicitors to rely on a deed. Land may be taken compulsorily by or through the state for public undertakings, such as railways, etc., subject to compensation to the owners according to the provisions of the Land Clauses Act.

Land-crab, the common name of a

crab of the family of the Geocaridae. Some are amphibious (especially those of the genus *Uca* which are found in tropical America often in mangrove swamps). Other species are found in the West Indies. These are the true land-crabs, but the term is sometimes extended to include species of other families which are terrestrial in habit.

LAND-CRAB

Another important genus is *Geocarcinus*, dept. of SW. France, on the Landes, Bay of Biscay; it is called after the landes, the extensive sandy and marshy tracts along the coast; forest products, iron and bones are among its principal products. Area 3,666 sq. m. Pop. 251,506.

Landgrave, title given to certain noble men of the Holy Roman Empire and conferring a greater dignity than that of a simple count. It was restricted to a few families, notably those of Hesse and Fürstenberg. It is now obsolete.

Land League, an organisation founded by Michael Davitt in Ireland in 1879 to deal with the land question, and suppressed in 1881 as illegal.

Landlord and Tenant.

The relation of landlord and tenant arises when one person gives to another exclusive possession of land, buildings or mines, for a definite period, or from year to year; the interest in the property which remains to the landlord is called the reversion, and usually (though not necessarily) he has the right to receive from the tenant payment in the form of rent.

It is not essential that the tenant should actually enter upon the property for the relationship of landlord and tenant to arise; but exclusive occupation is essential to the relationship; and a transaction on any other terms, leaving the landlord in control, is not a lease, but a mere licence. A lodger is a tenant and not a licensee if he has a separate apartment, and the landlord, whether resident or not has no control over that part of his premises.

Tenancies are either for a fixed term of years, called a leasehold, or from year to year, called a yearly tenancy, or for some shorter term than a year, including e.g., the tenancy of a lodger. The essential terms of an agreement for a lease (i.e., the contract entered into prior to the drafting of the formal lease) are (1) identification of the parties, (2) identification of the premises to be leased, (3) commencement and duration of the term and (4) the rent or other consideration to be paid. A precise or technical form of words is not required to constitute a valid lease, but it is advisable to make use of conventional precedents, especially from the tenant's point of view, inasmuch as omissions generally mean additional burdens upon the tenant, and not upon the landlord.

Agreements for a lease are not enforceable unless evidenced by a written memorandum, though, if the tenant enters into possession, the agreement takes effect as a tenancy at the will of the landlord, and if the landlord accepts rent, it is construed as a yearly tenancy. A lease taking effect for a term not exceeding 3 years, at the best rent which can be reasonably obtained, may be made orally or by writing under hand only; but all leases for over 3 years must be by deed, otherwise they are void for the purpose of conveying or creating a legal estate, though they may constitute an interest at will only, i.e., a tenancy that can be terminated by either party at will. Such a tenancy is implied upon a mere general letting, unless the circumstances show that a tenancy from year to year was intended.

A weekly or other periodic tenancy is determinable by notice to quit, which should be given so as to expire at the end of any completed period of the tenancy; but any question as to the validity of the notice can be avoided by giving it in general form, i.e., to quit at the end of the next completed week (or month, year, etc.) of the tenancy after the date of the notice.

The tenant usually covenants to pay rent, rates and taxes (except landlord's property tax); to keep the premises in tenantable repair, and at the end of the term to deliver up the premises in good repair; to insure the premises against fire, to permit the landlord to enter and view the state of repair; and not to assign or sublet without the landlord's consent. (By the Landlord and Tenant Act, 1927, the

landlord cannot unreasonably refuse consent to assignment of the tenancy.) The landlord usually covenants that the tenant shall have quiet enjoyment.

In the absence of express agreement, the tenant and not the landlord is bound to do repairs. Failure to do the repairs may be followed by notice of breach of covenant and, if the repairs are not done in a reasonable time thereafter, by proceedings for ejectment. A tenant who has tried to comply with the request to repair may, however, get relief in the courts. If the premises be burnt down, the tenant must still pay rent in the absence of express proviso in the lease to the contrary, and if he is under a repairing covenant, he must also pay so much of the expenses of repair as are not covered by the insurance moneys.

The right of the landlord to distrain for rent is subject to numerous limitations and, usually, distress is only levied by a certificated bailiff holding a warrant. The law of landlord and tenant remains unaffected in principle by the post-war Rent Restriction Acts, but is much affected in practice. (See *Rent Restriction Acts*.)

Landor, Walter Savage, English author, born at Warwick; figured first as a poet with *Gebir* (1798) and the tragedy *Council Julian* (1812), and then as a writer of prose in his *Imaginary Conversations* (1824-29), *William Shakespeare* (1834), *Pericles and Aspasia* (1836) and *The Penelamron* (1837); in his *Hellenics* (1847) and *Antony and Octavius* (1856) he reverted once more to poetry. (1775-1864).

Landrail, or *Corncrake* (*Crex crex*), a British summer bird, wintering in Africa, with reddish-brown plumage and a harsh note (giving rise to the name crake). It nests on the ground and is frequently heard on open cornlands. See *Crake*.

LANDRAIL
(ADULT MALE)

Landscape Gardening,

the art of arranging artificial gardens to produce the most pleasing effects by due combination of their various elements. The art was developed by the Italians of the Renaissance, and carried thence to France, where it reached a high degree of perfection in the parks of the palaces of Versailles and Fontainebleau. In England perhaps its greatest exponents were "Capability Brown," who in the 18th Century was responsible for the Gardens at Blenheim Palace, and Sir Joseph Paxton (q.v.). The art has reached its highest pitch in Japan, where the "Miniature garden" of a few square yards sometimes combines all the possible features of a beautiful garden by the skilful use of flower, tree and water effects.

Landseer, Sir Edwin Henry, English animal-painter, born in London; sketched animals before he was six years old, and at 12 exhibited in the Royal Academy. In his early period he portrayed simply the form, colour and movement of animal life, but later he added usually some appealing sentiment, which made his pictures enormously popular. Elected A.R.A. in 1826, and R.A. in 1831, he was knighted in 1850. The Lions of the Nelson monument in Trafalgar Square were modelled by him. (1802-1873).

Land's End, a bold promontory of granite, its rock on the SW. coast of Cornwall, with scenery of wild grandeur; it is the most westerly point of England. A mile off-shore is the Longships lighthouse.

Land Tax, a tax on freehold and leasehold property, payable on any land in respect of which the tax has not been redeemed. The Finance Act, 1910, introduced four new taxes—namely, duties on increment value, reversions, undeveloped land and mineral rights—but the first three were repealed in 1920.

Lane, Sir William Arbuthnot, British surgeon, born at Port George, N.B.; demonstrated the effect of the "Lane kinks" in connection with intestinal stasis; author of manuals on surgery and anatomy; founder and president of the New Health Society and a popular writer on health topics. Created a baronet, 1913. His name was removed from the Medical Register in 1931 at his own request. (1856-).

Lanfranc, Archbishop of Canterbury, born at Pavia early in the 11th Century; became prior of the monastery of Bec, France, in 1045, and head of a famous school; in 1066 was elected prior of the abbey of St. Stephen at Caen, and came over to England with William the Conqueror, who appointed him to the archbishopric rendered vacant by the deposition of Stigand (1070); he was William's trusted advisor, but his influence declined under Rufus. (d. 1089).

Lang, Alexander Matheson, British actor-manager; born in Montreal, a cousin of Dr. C. G. Lang, Archbishop of Canterbury. Acted in the companies of Sir F. Benson, Mrs. Langtry, Ellen Terry and George Alexander; a popular dramatic actor, being especially successful in Shakespeare and such plays as *Mr. Wu* and *The Wandering Jew*. (1879-).

Lang, Cosmo Gordon, British divine, born at Aberdeen; became a canon of St. Paul's in 1901, was Bishop of Stepney from 1901 to 1908, and in the latter year was made Archbishop of York; in 1928 he became Archbishop of Canterbury, and as such officiated at the coronation of George VI. in 1937. (1864-).

Langland, William, the presumed author of *Piers the Plowman*, who is supposed to have been born about 1332 at Cleobury Mortimer, Shropshire; took minor orders, married and removed to London; the greater part of his active life was occupied with his great poem, which presents a vivid picture of English life under Richard II. Some authorities, however, have questioned Langland's existence, ascribing *Piers the Plowman* to unknown authors. (d. 1288).

Langton, Stephen, English prelate, educated in France; in 1206 was made Cardinal by Innocent III., presented to the archbishopric of Canterbury, and consecrated at Viterbo in 1207. King John refused to acknowledge him, and the kingdom was put under an interdict. Eventually established in the primacy, 1213, the prelate took up a constitutional position, and mediated between the King and the barons to the advancement of political liberty. He helped to formulate Magna Carta. (d. 1228).

Langtry, Lily, English actress; the daughter of W. C. de Breton, Dean of Jersey; went on the stage, 1881; distinguished for her beauty (she was known as "the Jersey Lily") and for her performance of Shakespearean parts; in 1899, married, as her second husband, Sir Hugo de Batho. (1852-1920).

Languedoc, a former province in the S. of France, annexed to the French crown in 1361, and now comprising roughly, the depts. of Haute Garonne, Ariège, Hérault, Aude, Gard, Lozère, Tarn, Ardèche and Pyrénées-Orientales.

Lanoline, a greasy compound of wool-fat and water used as a basis of various ointments for application to the human skin.

Lansbury, George, British Labour politician, born in Suffolk. In early life he worked as a labourer in the service of a railway company; in 1884-1885 was in Queensland, Australia, and on his return entered his father-in-law's timber business. Abandoning Liberalism for Socialism, in 1890, he became two years later a Poor Law Guardian, and in 1903 a Borough Councillor for Poplar, and served on the Royal Commission on the Poor Laws, signing the Minority Report in 1909. He entered Parliament for Bow and Bromley in 1910, resigning in 1912 to fight a by-election as a Women's Suffrage candidate. From 1912 to 1922 he edited Britain's first Labour newspaper, the *Daily Herald*. He was Mayor of Poplar in 1919-1920, and was imprisoned for his refusal, with certain other Councillors, to authorise payment of the County rate.

He entered Parliament again in 1922, and in 1927-1928 was chairman of the National Labour Party. In the Labour Government of 1929-1931 he was First Commissioner of Works, and was responsible for the institution of the "Lansbury Lido," the popular bathing-place at the Serpentine, Hyde Park. After the General Election of 1931 he became leader of the Parliamentary Labour Party, resigning in 1935, as his strongly pacifist views were not accepted by a majority of the party. He has written an autobiography, *My Life*, and various pamphlets and books on political questions. In 1938 he undertook a number of trips abroad with a view to urging on the heads of other States the necessity for a round-table conference settlement of the world's difficulties. (1859-).

Lanthanum, a chemical element, one of the rare earth metals. A white, malleable and ductile metal, was discovered by Mosander in 1839. It is attacked by water, with the evolution of hydrogen. Symbol, La; atomic number, 57; atomic weight, 138.9; density, 6.15.

Laocoön, a Trojan priest of Apollo, who, for having offended the god, was, with his two sons, crushed to death in the coils of two enormous serpents. This legend inspired one of the grandest examples of ancient Greek sculpture, which is now preserved in the Vatican.

Laodicea. Eight ancient cities bore this name, of which the chief was situated on the Lycus, in Phrygia. A city of great commerce and wealth, it boasted schools of art, science, medicine and philosophy, and an early Christian bishopric. Though the Church was stigmatised for lukewarmness in the Revolution, two councils assembled here in A.D. 363 and 476, the former of which influenced the determination of the canon of both Testaments.

Laomedon, the founder of Troy, who persuaded Apollo and Neptune to assist him in building the walls, but refused the recompense when the work was finished. In consequence, Neptune sent a monster to ravage the country, which could be propitiated only by the periodical sacrifice to it of a maiden. The lot having fallen on Hesione, the King's daughter, Hercules at the latter's entreaty slew the monster and delivered the maiden.

Laon, town of France, capital of the dept. of Aisne, 87 m. N.E. of Paris. It has a fine 12th-14th Century cathedral, and its history goes back to Roman days. Captured by the Germans in Aug. 1914, it was retaken by the French in Oct. 1918. Pop. 14,000.

Laos, a French protectorate in Indo-China, N. of Siam; it produces rice, cotton, teak, gold and tropical fruits. The capital is Vientiane. Area 89,300 sq. m. Pop. 1,012,000.

Lao-tze, a Chinese sage, born in the province of Honan about 604 B.C., a contemporary of Confucius. He composed the celebrated Tao-tê-King, or canon of the "way" of reason and virtue, which on account of its high ethics has become one of the sacred books of China. He was the founder of Taoism, one of the three principal religions of China, the other two being Confucianism and Buddhism.

La Paz, dept. of NW. Bolivia; comprising an arid plateau in the N. and mountains in the S. Area 40,686 sq. m. It is rich in agricultural and forest products, and llamas and alpacas are reared; copper and tin are mined. Pop. 800,000. Also the name of a town of Bolivia, situated 12,000 ft. above the sea, 48 m. SE. of Lake Titicaca. It is the seat of a bishop and a university town, and has railway connection with the Pacific; it has been the actual capital of Bolivia since 1898, though Sucre is still the legal capital. Pop. 150,000. Also the name of the capital of the southern portion of Mexican Lower California. Pop. 8,000.

Lapis Lazuli, a mineral of an attractive blue colour, much used in jewellery and lapidary work; as a source of the pigment ultramarine it has been largely superseded by chemical compounds. The best lapis lazuli comes from Afghanistan, Siberia and S. America.

Laplace, Pierre Simon, Marquis de, French mathematician and astronomer, born at Beaumont-en-Auge, Normandy. After teaching in his native place, he went to Paris (1787), where he became professor in the Royal Military School, and, in 1785, a member of the Academy of Sciences. He published many treatises on lunar and planetary problems and on electricity, magnetism, physics and mathematics, but his most brilliant achievements include the demonstration of the stability of the solar system and the production of the *Mécanique Céleste* (1799), in which he carried on the work of Newton and other scientists and promulgated a nebular hypothesis. (1749-1827).

Lapland, a region in the N. of Europe, stretching from the White Sea, to the W. coast of Norway and divided between Norway, Sweden, Finland and Russia. Mountainous in the W., it becomes more level in the E., where are many marshes, lakes and rivers. In summer the daylight is unbroken, but in winter there is perpetual darkness for from two to three months; the climate is, on the whole, severe. Most of the region is densely forested, while in Swedish Lapland especially there are rich deposits of iron and copper, which have been made accessible by the electric railway from Luleå, on the Gulf of Bothnia, to Narvik, on the Atlantic coast. The Lapps, a race partly nomadic, are allied to the Finns, small of stature, thick-lipped, and with small, piercing eyes. Though nominally Christians, they are very superstitious.

La Plata, city and port of Argentina, founded in 1882 as the capital of the province of Buenos Aires. It has some handsome buildings, including a cathedral, treasury, government house, assembly building and municipal hall. There is a university and an observatory, while the museum is of outstanding importance. Meat-packing is the main industry. There is a large harbour, communicating by canal with the port of Ensenada, on the La Plata estuary. Pop. 191,000.

La Plata River, a broad estuary in S. America, from 28 to 140 m. broad and 200 m. long, with Uruguay on the NE. and Argentina on the SW., through which the Uruguay and Paraná rivers pour into the Atlantic. It is much exposed to storms; its best harbour is at Montevideo.

Lapwing, or **Green Plover** (*Vanellus vanellus*), a familiar British bird of the plover (Charadriidae) family; distinguished by an erectile black crest on the head, white on the sides on the neck and abdomen, and a glossy black back.

The bird has a distinctive and erratic flight. Its unusual cry has given it the name of peewit. It is found in fields and marshland. The eggs are brown, mottled with olive. It is an offence punishable with a fine up to £5 to sell the bird or the bird's eggs for human consumption between March 1 and Aug. 31.

LAPWING

Larceny. Simple larceny is defined as the felonious taking and carrying away of the goods of another with intent to deprive him of them permanently. Compound larceny is theft accompanied by aggravation, such as stealing from the person with violence, or from the house or person of another, with or without violence; but in such cases the offence really becomes merged in the more serious offence of burglary, housebreaking or robbery. Larceny by finding is the offence of appropriating goods, the true owner of which may be found by inquiry.

Larch (*Larix*), a genus of coniferous trees, with small, linear, deciduous leaves, natives of Europe, Asia and N. America. They yield a tough, durable timber, resistant to moisture, and provide a valuable turpentine. Some of the Far-Eastern species are beautiful ornamental trees. The Common Larch (*Larix europæa*) is extensively cultivated.

Lard, strained and purified swine's fat, used in cooking, the manufacture of margarine and the production of candles. It is not infrequently adulterated with other animal fats, and synthetic imitations are produced from cottonseed oil and other vegetable bases.

Lares, household deities of the Romans. Originally the tutelary gods of the family agricultural holdings, they were afterwards regarded as the presiding deities of home life, and in each household images of them—in the form of youthful beings bearing a cup and drinking-born—were kept in a shrine near the hearth. Some authorities, however, support the traditional view that the lares were the deified family ancestors. Besides the domestic lares there were public lares, who were protectors of the whole community.

Largo, market town and seaside resort of Fifehire, Scotland, 3 m. NE. of Leven. Fishing is the chief industry. Alexander Selkirk was a native. Pop. 3,200.

Largs, burgh and seaside resort of Ayrshire, Scotland, on Largs Bay, Firth of Clyde, 12 m. SW. of Greenock; a tunnel covers those slain in the Battle of Largs (1263), between the Scots and Norsemen. Pop. 8,000.

Lark, a family (Alaudidae) of small birds inhabiting N. of Europe and N. Asia, though one genus, the *Otocorys*, is represented in the Now World and is not distinguishable from the Shore Lark of Europe and Asia (*O. alpestris*). Nearly all of them nest on the ground in grassy lowlands. All sing as they soar. The family is represented in Britain by the skylark (*Alauda arvensis*) and the Wood-lark (*A. arborea*), both of which are residents. The Shore Lark or European Horned Lark (*Otocorys alpestris*) is a winter visitor to this country, but is a native of only the extreme N. of Europe, particularly

Norway. Some seven other species including, e.g., the Short-toed and the White-winged Lark, are also very occasionally found as stragglers. The name Lark is also frequently applied to many birds which do not belong to the *Alandidae* as now understood. Thus the Mud Lark, Rock Lark and Tit Lark, which are all pipets, and the Grasshopper Lark which is a warbler.

Larkspur. See *Delphinium*.

Larne, seaport of northern Ireland, in Co. Antrim, 24 m. N. of Belfast; with a good harbour at the mouth of Lough Larne, and regular steamer services with Stranraer, Glasgow, Liverpool, etc.; linen is made. Pop. 8,000.

La Rochefoucauld, François, Duc de, French writer of maxims, born at Paris. Imprisoned in the Bastille for a Court intrigue, he later joined the Fronde under the influence of Mme. de Longueville, and was twice severely wounded in the ensuing hostilities. His celebrated *Maxims* appeared in 1665, and at once established his reputation as the greatest French writer of his type. They are brief and pithy aphorisms, the fruit of a long and varied experience of life. His *Letters* and *Memoirs* are also noteworthy. (1613-1680).

Larva, the first condition of an insect on coming from the egg, when usually it is in form a grub, caterpillar or maggot. The name is also applied to an immature insect from the time it breaks through the shell, whatever degree of development it may have reached in the egg. In the orders Orthoptera, Hemiptera and Homoptera, the larvæ resemble the perfect insect, except in wanting wings, while in the Hymenoptera, Coleoptera, Neuroptera, Diptera and Lepidoptera, they completely differ. The term is also applied to the immature forms of the lower animals, such as those of frogs, crustaceans, etc.

Laryngitis, inflammation of the larynx, known as "sore throat"; in its simpler forms it may be acute or chronic. Acute laryngitis usually develops from a simple cold, but it may accompany some other disorder, such as influenza, scarlatina, measles or small-pox. Chronic laryngitis results generally from over-use or straining of the voice, giving rise to hoarseness, and tickling in the throat. Paroxysmal laryngitis occurs in young infants, especially those suffering from rickets or adenoids; it causes a reflex spasm of the glottis, which, unless prompt medical assistance is forthcoming, may terminate in fatal asphyxia.

Laryngoscope, an instrument for inspecting the larynx. It consists of a small plane mirror on a thin stem, which is introduced into the back of the throat, and a large concave mirror for reflecting light upon it. The reflector may be fixed to a stand or attached to the forehead of the operator.

Larynx, the organ of voice, situated in the upper part of the throat. It is built up on the cricoid cartilage above the trachea, and takes the form of a cylindrical box. The movements of the glottis, or aperture between the muscles of the larynx, produce the voice, by altering the size and shape of the glottis.

La Salle, René Cavalier, Sieur de, French explorer, born at Rouen; settled in Montreal in 1680, and in 1689-1670 carried out exploration in Canada; later visited France on several diplomatic missions; in 1679, with a few companions, explored the neighbourhood of Lake Michigan and the upper course of the Mississippi, and next year descended that river to its mouth, claiming its basin for Louis XIV. of France

as "Louisiana," of which he was made governor; visited France, 1683, and on his return to the Mississippi to found a settlement, lost his way and was killed by his followers during a mutiny. (1643-1687).

Lascars, East Indians serving as seamen on board British vessels. They have proved very tractable and make excellent sailors; they are mostly Mohammedans.

Laski, Harold Joseph, English political economist, born in Manchester. Lecturer in history, McGill University, Montreal, 1914-1916; at Harvard, 1916-1930 and 1933; Dublin, 1936. Connected since 1920 with the London School of Economics; appointed professor of Political Science in London University, 1926. Author of *Political Thought from Locke to Bentham*, 1920; *Foundations of Sovereignty*, 1921; *A Grammar of Politics*, 1925; *Communism*, 1927; *Dangers of Obedience*, 1930; *Rise of European Liberalism*, 1936. (1893-).

Las Palmas, town and seaport of the capital of the Spanish province of Las Palmas; situated on the N.E. coast of Grand Canary. It has an excellent harbour, with coaling and other facilities. There is an old cathedral, and the town is a holiday resort. Pop. 84,000.

Lassalle, Ferdinand, German socialist, born at Breslau, of Jewish extraction; became a disciple of Hegel; took part in the Revolution of 1848, and was imprisoned. In 1861 his *System of Acquired Rights* started an agitation of labour against capital. Next year he founded an association to secure universal suffrage and other reforms and in 1863 established the beginnings of the Social Democratic Party. At Geneva, having fallen in love with a young lady betrothed against her will to a Rumanian nobleman, Lassalle challenged the latter to a duel and was mortally wounded. (1825-1864).

Lasso, a long-noosed rope, generally of raw cowhide, used by the gauchos of Argentina for catching wild cattle. Its use has thence spread to the cowboys of N. America.

Last Supper, the memorial meal celebrated by Jesus on the eve of His betrayal, at which He blessed the bread and wine, offered thanks to God, and commanded the perpetual repetition of the act in memory of Himself. The Christian sacrament or ordinance, variously known as the Mass, Eucharist or Communion Service, is the renewal of this sacramental meal.

László de Lombos, Philip Alexius, Hungarian painter, born at Budapest; studied at Munich and Paris. At first a genre-painter, in 1892 he turned to portraiture; from 1907 resided in England, becoming a naturalised British subject in 1914. A popular society painter, his sitters included many members of the British and other royal families and many other celebrities. (1869-1938).

Lateen Sail, a triangular sail common to boats of the Mediterranean, the term being a corruption of "Latin."

Latent Heat, the heat used in changing a substance from solid to liquid form (latent heat of fusion), or from liquid to vapour (latent heat of vaporisation).

Lateran, the palace, originally a basilica, built in Rome by Constantine about 333, and serving as the residence of the Pope till 1308; from it no fewer than five oecumenical councils received their names. The Lateran Treaty, between Italy and the Pope, by which the

LATEEN SAILS

former recognised the Pope's sovereignty over the Vatican City State, was signed there in 1929. The church near by, called the Church of St. John Lateran, is the cathedral church of the Pope, as Bishop of Rome; it was erected upon the site of a palace of *Plautius Lateranus*.

Laterite, a soft, friable, reddish-brown rock containing oxides of iron and aluminium and covering large areas in S. India, Malaya, W. Africa, S. America, Australia and elsewhere.

Lathe, a machine used in engineering workshops to rotate a piece of wood, metal or other material while shaped by a tool held against it in order to produce cylindrical work. The ordinary lathe performs numerous operations, including plain and taper turning, facing, boring and screw-cutting. There are many types used for special purposes, such as watchmakers', turners' and gear-cutters' lathes, as well as the very large ones such as are used for boring big guns and turning railway axles.

Latimer, *Hugh*, English bishop and Protestant martyr, born near Leicester; gained the favour of Henry VIII. by approving of his divorce, and was appointed Bishop of Worcester in 1535. As a preacher of the Reformed faith, he lost the royal favour and was thrice imprisoned. Under Edward VI. his zeal as a preacher had full scope, but under Mary he was tried for heresy and burnt at the stake at Oxford with Nicholas Ridley. (c. 1490-1555).

Latin, the language of the ancient Romans. It is a branch of the Aryan group of tongues, and exhibits affinity with Celtic. With the conquest by the Romans of all the neighbouring tribes, the Latin language slowly spread over Italy, and then gradually prevailed throughout Christendom. In the third Century B.C. Latin was a mere patois, but by the period of the Empire it had reached a maturity which made it an admirable language for historians and orators; but it has never been pre-eminently a vehicle for lyric poetry, a fact which may explain the survival to this day of other Italian dialects. Nor again is it a medium for highly imaginative thought, which accounts for the favour accorded by ancient Roman philosophers and others to the Greek language and culture. Yet it became the language of diplomatic Europe and out of it grew the Romance languages, French, Spanish, Italian, Portuguese, Rumanian, etc.

Latitude, in geography, the angular distance of a place on the surface of the earth from the equator, measured on the meridian of the place. Latitude is North or South, according as the place is N. or S. of the equator. Circles whose planes are parallel to that of the equator, are called circles of latitude, or parallels of latitude, the latitude of every point upon each circle being the same.

Latitudinarians, the name given to a body of theologians belonging to the Church of England who, at the end of the 17th Century, sought to subordinate the dogma and ceremonial of the Church to the principles of liberal philosophy and reason.

Latium, a territory of ancient Italy extending from the Tiber to the Mediterranean, and inhabited by a people known as Latins, who formed the Latin League of 30 States. The Latin colony at Rome was admitted to the League, and eventually became its head, defeating the rest of the Latins in 340 B.C. Subsequently, many of the towns of Latium were admitted to Roman citizenship. To-day Latium comprises a dept. of Italy, with an area of 6,636 sq. m. Pop. 2,619,000 (including that of Rome).

Latten, a metallic alloy of copper and zinc, not distinguishable in practice from brass, used widely in the Middle Ages for making various goods and for the brasses of sepulchral monuments. The name is now used only for the varieties of brass that are fashioned into articles of ecclesiastical use.

Latter-day Saints. See *Mormonism*.

Latvia, Republic of Europe, situated round the E., S. and W. shores of the Gulf of Riga; it contains many lakes and marshes. The chief river is the Dvina. Agriculture and dairy-farming are among the chief industries but there are extensive forests and the timber trade is very valuable. The mineral wealth is inconsiderable; fishing is carried on, and flax, timber, butter, paper and glass are exported. The capital is Riga, which is also an important seaport; other large towns are Liepaja (Libau), Daugavpils (Dvinsk) and Jelgava (Mitau). Until 1918 Latvia formed part of the Baltic provinces of Russia. Its constitution, as defined in 1922, is that of an independent democratic Republic, with a President elected triennially. Pop. 1,950,000.

Laud, *William*, Archbishop of Canterbury, born at Reading, son of a clothier; was ordained in 1601; early gave evidence of his High-Church proclivities and his hostility to the Puritans; rose rapidly in the Church, becoming Archbishop of Canterbury in 1633. High in favour with Charles I., he joined Strafford as one of the King's chief advisers, his rigorous persecution of dissenters making him almost universally detested. His high-handed Church policy brought about his impeachment and execution for high treason. (1573-1645).

Laudanum, an alcoholic tincture of opium, which contains the alkaloids morphine and narcotine. A soporific and anodyne, it is sometimes administered for gastric troubles, looseness of the bowels, etc., and as an outward application in cases of lumbago, inflamed joints and similar ailments.

Lauder, *Sir Harry MacLennan*, Scottish comedian, born at Portobello. After working as a mill-boy and coal-miner, he took to the stage as an amateur, and made his professional debut in London in 1900, subsequently achieving immense popularity on both sides of the Atlantic by his Scottish songs, largely of his own composition, such as *Roamin' in the Gloamin'* and *I Love a Lassie*; he was knighted in 1919, and received the freedom of Edinburgh in 1922. His only son was killed in the War. (1870-).

Lauderdale, *John Maitland, Duke of*, Scottish politician. At first a zealous Covenanter, he attended the Westminster Assembly as a Commissioner for Scotland, 1643. A royalist in the Civil War, he was captured at Worcester, 1651, and imprisoned for nine years. As Scottish Secretary of State at the Restoration, he devoted himself to establishing the absolute power of the King in Church and State, his measures being responsible for the rising of 1666 and, in part, for that of 1677. Appointed to the Privy Council, he sat in the "Cabaret" ministry, was made duke in 1672, and remained in power till 1680. Harsh, biroted and unscrupulous, he was long hated in Scotland for his severity against the Covenanters. (1616-1682).

Lauenburg, a former duchy of N. Germany, between Holstein and Mecklenburg, at one time belonging, with Holstein, to Denmark; annexed by Prussia in 1865, and now forms a district of the province of Schleswig-Holstein. Area 453 sq. m. Pop. 56,000. The capital is Ratzeburg.

Laughing Gas. See *Nitrous Oxide*.

Laughing Jackass, a genus (*Dacelo*) of birds of the Alcedinidae (Kingfisher family, *q.v.*) found in Australia, the principal species being *Dacelo gigas*, a large brown bird so named from its peculiar laughing cry.

Laughton, Charles, English actor, who made his first stage appearance in 1938. He has appeared with his wife, Elsa Lanchester. **LAUGHING JACKASS** His film successes in America and English productions from 1932 onwards including *The Private Life of Henry VIII*, *Ruggles of Red Gap*, *Mutiny on the Bounty* and *Rembrandt*. (1899-)

Launceston, town of Cornwall, England, 18 m. NW. of Tavistock, the scene of fighting during the Civil War. Pop. 4,000. Also the name of a seaport of N. Tasmania, at the head of the estuary of the It. Tamar, 40 m. SE. of Port Dalrymple. It is a holiday resort and an important industrial centre, carrying on tin-smelting, engineering, saw-milling and the manufacture of woollens, furniture and china. Pop. 33,000.

Laundry, an establishment for cleansing clothes and textile fabrics. In large modern laundries different fabrics are treated by different processes, all articles being classified before cleaning. The process used depends on the kind of soiling matter present, whether it is soluble in water or albuminous, greasy or oily, or a stain with a semi-dyeing effect. In addition to water, the materials used are soap, alkalis and mixtures of these. Thorough rinsing, essential for the production of good colour, consists in a series of dilutions. The machines used are washing machines, usually of the rotary type; hydro extractors; a drying-room through which air is circulated by fans to drive away steam; calenders, or mangles, and polished and heated ironing-beds. The industry has a research association for the investigation of its problems.

Lauraceae, an order of evergreen plants, dicotyledonous, native to the temperate regions, of which the laurel is a typical genus.

Laureate, Poet, originally an officer of the royal household whose business it was to celebrate in verse any joyous occasion connected with royalty, such as the sovereign's birthday. It is now an honour bestowed by royalty on an eminent poet, with a definite obligation to produce verse on occasion. The present Poet Laureate is John Masefield.

Laurel, a genus of a glossy-leaved evergreen, green shrubs of the order Lauraceae, containing two species *Laurus nobilis*, the Sweet Bay, a Mediterranean plant now cultivated in Britain, and *Laurus canariensis* found in the Canaries and Madeira. The bay tree grows to as much as 60 ft. high, is deep green to olive in colour, with dusky or purplish-black berries. The berries and oil have astringent properties; the leaves are aromatic and are used in condiments. The name laurel also forms part of the popular term for a number of other trees, the Cherry-laurel (*Prunus Laurocerasus*) being a species of Rosaceae, the Spurge-laurel (*Daphne Laureola*) a British species of Thymelaeaceae.

Laurentian Rocks, a system of over 30,000 ft. in thickness, and covering an area of over 200,000 sq. m., N. of the St. Lawrence R. in Canada. They consist of an immense series of crystalline rocks, limestone, gneiss, quartzite and mica schist. The series forms a sub-division of the Archaean system, lower and older than the Cambrian.

Lausanne, town of Switzerland, on the slopes of the Jura, 1 m. from the N. shore of Lake Geneva; the capital of the canton of Vaud. It is noted for its educational institutions—especially the historic university—and museums, and its magnificent 13th-Century cathedral. It has manufactures of tobacco, chocolate and machinery, and does a considerable trade, as well as being a tourist resort. Pop. 76,000.

The Treaty of Lausanne (1923), signed here, defined the post-war frontiers of Turkey. The Lausanne Conference (1932) was attended by European Powers for the discussion of reparations.

Lausanne, Treaty of, the treaty which terms between the Allies and Turkey, after the World War. After Turkey's unconditional surrender in 1918, a peace treaty was concluded at Sévres, 1919; but the Angora Turks refused to accept this treaty which placed Smyrna under Greek control, and, declaring war on Greece, expelled her armies from Asia Minor. The Lausanne Treaty gave E. Thrace, including Adrianople, to Turkey, mandated Palestine and Iraq to Britain, and Syria to France, and abolished Turkish claims to Arabia. An important clause guaranteed the freedom of the Dardanelles, but by the Montreux convention, 1936, Turkey regained the right to fortify the Straits.

Lava, ing in molten streams from volcanoes; includes traps, basalts, pumice and obsidians. The surface of a lava stream cools and hardens quickly, presenting a cellular structure like pumice, while below, the heat is retained much longer and the rock when cooled is compact and columnar or crystalline.

Laval, Pierre, French statesman; born at Châteldon (Puy-de-Dôme). He entered the Chamber in 1914, and filled various ministerial posts before becoming Prime Minister, 1931-1932. Minister of Colonies, and later of Foreign Affairs, 1934, he retained that office on again becoming Prime Minister, at the end of that year. He was responsible, with Sir Samuel Hoare (*q.v.*) for the abortive Hoare-Laval plan for satisfying Italian aspirations in Abyssinia, 1935, and in 1936 resigned to give way to Blum after the Left victory at the Elections. (1883-).

La Vallière, Louise, Duchesse de, mistress of Louis XIV. of France; born at Tours, she became maid-of-honour to the King's sister-in-law Henrietta. Louis originally made her his mistress to conceal an amour with Henrietta, but ended by returning her ardent affection. A modest, religious and good-hearted woman, her influence upon the King was salutary while it lasted, but about 1687 she was supplanted by Mme. de Montespan, and eventually entered a convent. (1644-1710).

Lavender (*Lavendula*), a genus of fragrant flowering shrubs of the natural order Labiatae. There are some 20 species native to the Mediterranean and India, a number of which are cultivated in England for the sake of their fragrant perfume and for the volatile aromatic oil obtained from them. The chief species so cultivated are the Dutch Lavender (*Lavendula vera*), with its hoary leaves and greyish-blue flowers, and *L. Spica*, the old English Lavender. All species yield good honey.

DUTCH LAVENDER

Lavery, Sir John, British artist, born in Belfast; he studied in Glasgow, London and Paris, and became celebrated for his portraits; he was knighted in 1918 and was made an R.A. in 1921. (1856-).

Lavoisier, Antoine Laurent, French chemist, born in Paris; a gold-medallist of the Academy of Sciences (1788). He became assistant chemist to that body, 1788; introduced improvements in manufacturing gunpowder; discovered the composition of the atmosphere and the nature of oxygen and of the phenomenon of combustion, and overthrew the "phlogistic" doctrine, thus ranking as one of the founders of modern chemistry. Called to account during the Revolution for his actions as a farmer-general of the revenues, he was guillotined. (1743-1794).

Law, in jurisprudence, a general rule of external human action enforced by a sovereign political authority, to which in theory conduct must under penalty conform, and thus distinct from a "law" of God, nature or ethics, to which the conduct of men or things either ought to, or is in practice observed to, conform. Law in this sense has its source in legislation by statute or other ordinance of the sovereign authority, or in precedent, judicial decisions of the past being taken as authoritative declarations of law for the future. Equity is really a form of the latter kind of law. The "Common Law" of England is the result of the growth of a body of principles founded on past decisions in particular cases, and owing much of its importance to its co-ordination by Coke. The volume of Statute law, in Great Britain as in other countries, has grown enormously in recent years, and is added to almost daily by new Acts of Parliament, by-laws and Orders in Council, etc.

A practical division of the field covered by national law is into (1) Private Law, further divided into Civil Law and Criminal Law, which in their turn are further subdivided into "Substantive Law" or rights and duties, and "procedure" or remedies; and there are yet further divisions into "Property" (real and personal), "Obligations" (contractual relationships, actionable wrongs or Torts, etc.), and Status (e.g., the law of master and servant, of husband and wife, etc.); and (2) Public Law—i.e., Constitutional Law and Administrative Law. By Public Law is meant not the whole of the law that is applicable to the State and to its relations with its subjects, but only those parts of it which are different from the Private Law concerning the subjects and their relations to each other. Administrative Law is concerned with the numerous forms and instruments in and through which the lower ranges of governmental activity manifest themselves.

Generally, all questions which arise for consideration and determination in a court of law are either questions of law or of fact, meaning by the former a question as to what the law is on a particular point; questions of fact, where there is a jury, are for its decision; questions of law are for the Court to decide.

Law, Andrew Bonar, British politician, born in New Brunswick, Canada. He entered Parliament as a Conservative in 1902; in 1902 he became Parliamentary Secretary to the Board of Trade, and in 1911 succeeded Balfour as leader of the party; Colonial Secretary in the 1915 Coalition. He declined the premiership the following year, and served under Lloyd George as leader of the House of Commons, Chancellor of the Exchequer, and, in 1919, Lord Privy Seal. He was a British envoy at the Peace Conference of 1919. In 1922 he led the Conservative party out of the Coalition and took office as Prime Minister, but resigned after some months. (1858-1923).

Law, John, Scottish financier, born in Edinburgh; visiting London in 1691, he got into debt, killed a man in a duel, and escaped to Amsterdam. In 1716 he

started a private bank in Paris, the success of which induced the Regent Orleans in 1718 to institute the "Royal Bank of France," with Law as director. Next year he floated the "Mississippi Scheme" for the settlement of Louisiana, but after a show of success the scheme proved a bubble. He had to fly to Brussels, his property being confiscated. He died at Venice. (1671-1729).

Law, William, English author and divine, born at Kingscliffe, Northamptonshire, took orders in 1711, and in 1727 became associated with the family of the elder Gibbon, grandfather of the historian, and spent ten years with them as tutor, friend and spiritual director. He was an able theologian and dialectician, and an exponent of German mysticism, and his writings, especially *A Serious Call to a Devout and Holy Life*, contributed greatly to the evangelical revival. (1686-1761).

Law Courts, a building in the Strand, London, occupied by the Supreme Court of Judicature; it was erected in 1874-1882, at a cost of £1,000,000, from the designs of G. E. Street, completed by Sir A. Blomfield and A. E. Street.

Law Lords, those members of the House of Lords, including Lords of Appeal, who are selected to act as members of the House when acting as the highest court of appeal.

Lawn, a fine white cotton or linen fabric, of an open texture, plain or printed. The white sleeves, which are a characteristic part of the dress of an English bishop, are of lawn, whence, derivatively, the word connotes the dignity or position of a bishop.

Lawn Tennis. See Tennis.

Lawrence, city of Massachusetts, U.S.A., 25 m. NW. of Boston; its industries include textile and foundry goods. Pop. 85,000.

Lawrence, Arabella Susan, British Labour politician; educated at Newnham College, Cambridge. She was a member of the London School Board, 1900-1904, the London County Council, 1910-1928, and the Poplar Borough Council, 1919-1924. Labour M.P. East Ham North, 1923-1924, 1926-1931, she became Parliamentary Secretary to Ministry of Health, 1929-1931. Organiser of the National Federation of Women Workers, 1912-1921. She became chairman of the Labour Party in 1930. (1871-).

Lawrence, David Herbert, British poet and novelist, born at Eastwood, Nottinghamshire, the son of a coal-miner. He was educated, with the aid of a scholarship, at the high school and University College, Nottingham, and became a school-teacher, afterwards travelling in Italy, Australia, Mexico and elsewhere. His novels include: *The White Peacock*, 1911; *Sons and Lovers*, 1913; *The Rainbow*, 1915 (suppressed by police prosecution); *The Plumed Serpent*, 1926 (about Mexico); *Lady Chatterley's Lover*, 1928. Among his poems are *Amores*, 1916, and *Look! We Have Come Through!*, 1917. He also wrote several plays. (1885-1930).

Lawrence, John, Lord (Laird Lawrence), British soldier and administrator, born at Richmond, Yorkshire; entered the Bengal Civil Service in 1829, and on the annexation of the Punjab was appointed Commissioner and afterwards Lieutenant-Governor. By his justice and the reforms he carried through he so won the esteem of the Sikhs that at the Mutiny (1857) he was able to disarm the Punjab mutineers, raise 59,000 men and capture Delhi. As Governor-General of India (1864), his rule was characterised by wise policy and sound finance. He was raised to the peerage in 1869. (1811-1879).

Lawrence, Sir Henry, elder brother of the preceding, born at Matara, Ceylon; joined Indian army in 1823, fought in the Burmese, Afghan and the 1st and 2nd Sikh Wars, and in 1856 became Chief Commissioner of the Punjab. During the Mutiny, which he had foreseen and tried to avert, he organised the heroic defence of Lucknow, in which he perished. He wrote much on Indian affairs, and also founded the Lawrence Military Asylums. (1806-1857).

Lawrence, Sir Thomas, British painter, born at Bristol, the son of an innkeeper; as a boy, supported his family by his portraits; moved to London, 1785, and studied at Royal Academy, soon becoming popular; an A.R.A. in 1791, he was next year appointed painter to the King; in 1794 he became an R.A., being then the most fashionable painter of the day; knighted in 1815, he became P.R.A. in 1820. (1769-1830).

Lawrence, Thomas Edward, British scholar and soldier, who became the "unrowned King of Arabia." Born at Tremadoc, Wales, he specialised in Oriental languages at Oxford, and in 1911 helped to excavate the site of Caracemish, travelling much in Syria and Iraq. In the World War he provoked the Arab rebellion against the Turks and helped to break down their rule in the Near East; was prominent at the Peace Conference, 1919, but disgusted with what he considered a betrayal of the Arabs by the Allies, he threw up his rank of colonel and enlisted in the Air Force under the name of Shaw. He was killed in a motor-cycle accident. His story of the Arab war, *The Seven Pillars of Wisdom* (1926) caused a sensation; an abridged version, *Revolt in the Desert*, appeared in 1927. He also published an original translation of Homer's *Odyssey*. (1888-1935).

Lawrence, St., a deacon of the Church at Rome, who suffered martyrdom under Valerian, 258, by being roasted on a gridiron, which he is represented in Christian art as holding in his hand. His feast is kept on Aug. 10.

Lawyer, the common name for a legal practitioner who may be in England either a Solicitor (q.v.) or a Barrister (q.v.).

Layamon, an early English poet who lived in the late 12th Century, and was by his own account a priest at Elnley, near Radstone, on the Severn. He was the author of a poem of 32,240 lines called *Brut*, paraphrased from Robert Wace, which purports to be a chronicle of Britain, and is of interest as showing the transition between Anglo-Saxon and the English of Chaucer. It is written chiefly in alliterative (q.v.) verse though in places rhyme is introduced and the alliteration dropped.

Lay Brother, a member of a monastery who is under the monastic vows of obedience and chastity, but is exempted from study and from performing certain duties at religious services.

Layering, the operation of propagating plants by layers; it consists in bending the shoot of a living stem into the soil, the shoot afterwards striking root while still fed by the parent plant.

Lay Reader, a layman licensed to read the English Church, and perform other minor religious functions. See also *Lay Vicar*.

Lay Vicars, in the English Church, officers of a cathedral whose duty it is to sing as much of the service as might be performed by laymen, or by those in minor orders. In the older cathedrals they sometimes formed a corporation; in others they were persons in holy orders, but in the majority of the later cathedrals they are merely paid singers.

Lazaretto, a plague hospital; also a building or ship in which the crew and passengers of a vessel arriving from some infected port are placed in quarantine.

Lea, river of Bedfordshire, Hertfordshire, and Middlesex, England, rising near Luton and flowing generally E. and S. to meet the Thames at Poplar. Its length, including tributaries, is about 60 m.

Leacock, Stephen Butler, Canadian humorist and economist; born at Swanmore, Hants., England; but migrated to Ontario, 1876. Graduating Ph.D. at Chicago, 1903, he was lecturer in Political Science, McGill University, Montreal, 1901-1908, and professor of Political Economy, 1908-1936; has toured the Empire as a Rhodes lecturer, and written many books on economics and literature. He is best known as a humorist, as such being the author of, among others, *Literary Lapsea*, 1910; *Nonsense Novels*, 1911; *Moonbeams from the Larger Lunacy*, 1915; *Further Foolishness*, 1917; *Fellelements of Economics*, 1936. (1869-).

Lead, a metallic chemical element belonging to the same group as carbon, silicon and tin. Symbol, Pb; atomic number, 82; atomic weight, 207.22. Lead, which occurs naturally mainly as its sulphide, PbS, in the mineral galena, is a soft, bluish-white metal of high specific gravity (11.35); it is stable in dry air, and is only slowly attacked by moist air, hence being useful for roofing purposes.

On account of the ease with which it can be manipulated, it is made into plumbers' fittings and water-pipes, though these are not ideally suitable for use with drinking-water if the latter is pure, since lead passes into solution in such water. All soluble lead compounds are poisonous, giving rise to a serious and often fatal condition known as plumbism. With hard water, an impervious lining is soon formed on the inside of the pipes, and no further solution takes place. A number of salts of lead, however, have application in medicine on account of their astringent properties.

Mixed with a little antimony, lead is used in making shot, and many valuable alloys, such as pewter, and various antifriction metals contain lead as one of their ingredients. Among the compounds of lead, white lead, a basic lead carbonate, is the basis of most oil paints; red lead is used in plumbing and as a pigment; and sugar of lead, or basic lead acetate, is employed in the cotton and dyeing industries. Lead tetraethyl is the anti-knock agent in "ethyl" petrol. Lead and lead oxide or litharge are used for the plates in an electrical accumulator, while lead chromate is used as a yellow pigment ("chrome yellow"). The so-called "blacklead" of pencils is not lead, but graphite, a form of carbon. The world's chief lead-producing districts are SE. Missouri, U.S.A., Broken Hill, in Australia, and parts of Central Spain.

Lead, an instrument, consisting of a piece of lead attached to a line or cable, used at sea for measuring the depth of water.

Lead Poisoning, or *Plumbism*, poisoning by the introduction into the body of some compound of lead, such as white lead, or sugar of lead. Chronic lead poisoning may show one or more of the following symptoms: pains in limbs, anaemia, colic, paralysis, nephritis and impairment of vision. In Great Britain, lead workers are protected as far as possible by stringent Home Office regulations.

Leaf, part of a plant's foliage, normally consisting of a green blade on a stem. A leaf consists of two parts, a stalk, called the petiole, and an expanded surface called the blade or lamina (when the petiole is absent, the leaf is said to be sessile). The under-surface generally differs from the upper in colour and structure, being usually paler and less glossy. Leaves are the breathing

became the mother of Castor and Pollux and of Helen of Troy; was frequently the subject of ancient art.

Lee, the side or quarter of a ship opposite to that from which the wind blows; or the sheltered side. The lee-shore is the shore under the lee of a vessel, the shore towards which the wind blows; and a lee-tide is one which runs in the same direction as the wind. Leeway is the deviation or loss from her course which a ship makes by drifting to leeward.

Lee, Nathaniel, English playwright. His tragedies include *Nero*, *The Rival Queens*, *Constantine the Great*. With Dryden, he adapted Sophocles' *Oedipus* and wrote *The Duke of Guise*. (1653-1692).

Lee, Robert Edward, American soldier and Confederate leader in the Civil War, born at Stratford, Virginia. Educated at West Point, he became captain of engineers in 1838; distinguished himself in the Mexican War, 1846; head of the U.S. Military Academy, 1852-1855. On the outbreak of the Civil War he was appointed General by the Confederate Congress of Virginia, 1861. Succeeding General Johnston in command of the army at Richmond, he won the Seven Days' Battle against McClellan; later fought, and on the whole successfully, some of the greatest battles of the war, including Antietam, Fredericksburg, Chancellorsville, Gettysburg and Spottsylvania; invaded Maryland and Pennsylvania, but was forced to surrender, with 28,000 men, to Grant at Appomattox, April 9, 1865. Forfeiting his estates after the war, he became President of Washington College (since called the Washington and Lee University), which post he held until his death. He was a man of devout religious faith, a high sense of duty, great courage and ability as a soldier. (1807-1870).

Lee, Sir Sidney, English writer and scholar, born in London. In 1883, he became assistant-editor of the *Dictionary of National Biography*, and editor in 1891. His *Life of William Shakespeare*, 1898, has become a standard work, and he edited an authoritative edition of Shakespeare's works in 1906. His remaining works include lives of Queen Victoria, Edward VII. and others. He was knighted in 1911, and from 1913 to 1924 was professor of English Literature at East London College. (1859-1926).

Leech, the common name of all the sucking, worm-like, aquatic annelids (q.v.) of the order Hirudinea. Some species in Egypt and the Near East can cause great distress and even death from hemorrhage to human beings and animals when they enter the larynx and nasal cavities with water. One species was formerly much used in medicine in England and on the Continent for bleeding patients when cupping was inadvisable. It is green in colour with yellow bands.

Leeds, city of England, on the Aire, 25 m. SW. of York, in the W. Riding of Yorkshire. The many fine buildings include the city hall (opened in 1933), royal exchange, corn exchange, art gallery and infirmary. The university, founded 1904, has a celebrated medical college. The prominent industries are those connected with woollens and clothing; in addition, there are printing, coal-mining, engineering and leather industries. Pop. 483,000.

Lee-Enfield Rifle, a rifle, loaded by breech-bolt action, introduced in 1902, and, as improved five years later, adopted in the British Army. The magazine can hold ten cartridges, which are forced up by the action of a spring in the magazine.

Leek, market town of Staffordshire, England, 10 m. NE., of Stoke-on-Trent. Silk thread, ribbons, etc., are made. It has the remains of an abbey. Pop. 19,400.

Leek (*Allium porrum*), a biennial plant of the family Liliaceae; its long, cylindrical bulbs are eaten as a table vegetable. It contests with the daffodil the honour of being the national symbol of Wales, and is, often worn by Welshmen on St. David's Day, March 1.

Lee of Fareham, **Arthur Hamilton**, British politician. He entered Parliament in 1900, filled several minor offices, and became Minister of Agriculture, 1912-1921, and First Lord of the Admiralty, 1921-1922. He gave Choquers Court, Buckinghamshire, to the nation as a country residence for Prime Ministers, 1920. Created a baron in 1918, and Viscount in 1922. (1868-).

Leeuwarden, city of the Netherlands, capital of the province of Friesland; it produces musical instruments, goldsmiths' work and dairy products. Pop. 54,000.

Leeward Islands, a group of islands forming part of the Lesser Antilles, and constituting a British crown colony, now united with the Windward Is. under one Governor. They are in the Caribbean Sea, N. of the Windward Is., and comprise the five presidencies of Antigua (with Barbuda and Redonda), St. Christopher with Anguilla and Nevis), Dominica, Montserrat and the Virgin Is. (with Sombro). The capital is St. John, in Antigua. Products include sugar and molasses, cotton, limes, tomatoes, coconuts, tobacco and salt. Total area 727 sq. m. Pop. 138,000.

Le Fanu, Joseph Sheridan, Irish journalist and author; now principally remembered for his novel *Uncle Silas*, first published in 1864. (1814-1873).

Leg, the limb, or hinder limb, of an animal; strictly only that portion from the knee downwards, built around two bones, the tibia or shinbone and the fibula. The human leg has been considerably modified as a result of man's adoption of the erect posture in walking. Invertebrate animals frequently have numerous legs, insects generally having six and crustaceans eight or ten.

Legacy, in English law, a gift of personal property by will. A specific legacy is the gift of a particular identifiable thing, whereas a general legacy is a simple money gift. A "demonstrative" legacy is one which is partly specific and partly general, e.g., a sum of money left with reference to a particular fund for payment. The legatee's vested right to the gift is not complete without the assent of the executor.

Legacy Duty, a duty payable on all bequests of or successions to personal estate. It is payable by the beneficiary unless the will provides that the legacy shall be free of duty, in which case it comes out of the estate. The rates of duty are: husband and wife, lineal ascendants or descendants and their spouses, 1 per cent.; brothers and sisters of deceased or their descendants, 5 per cent.; other persons, 10 per cent. Duty is not payable where the net value of the estate does not exceed £1,000, or on specific legacies (other than in cash) under £20 in value.

Legal Practice. See Lawyer.

Legal Tender, the form of money, whether coin or notes, which a creditor must accept if offered in payment of debt. Bank of England notes, including £1 and 10s. currency notes, and gold, are legal tender up to any amount; silver is legal tender up to £2, and copper up to one shilling.

Legate, the title of the Pope's highest diplomatic representative. In medieval times this office was attached to

certain bishoprics, such a bishop being styled *legatus natus*, and the title is still a prerogative of some sees. There was another and more important kind of legate, the *legatus missus* entrusted with a definite mission from the Pope; he could be either *legatus delegatus*, with restricted powers, or *legatus a latere*, in this case generally a cardinal, who had very wide authority. The functions of legates are generally performed to-day by the lesser representatives known as nuncios.

Legation, the official residence of a political envoy or ambassador to a foreign country; also the ambassador or envoy sent to any foreign Court on a mission, together with his staff. The name "legation" is now confined to the diplomatic representatives of the Papacy.

Leghorn (Ital., *Livorno*), Italian city in Tuscany, originally the seaport of Pisa, which it has outgrown; it has a shipbuilding industry and a naval academy, and is an important shipping centre. Pop. 125,000.

Legion, one of the main formations of the Roman Army, a body of some six thousand troops composed of both cavalry and infantry, which fought in a fixed formation. Each legion was commanded by a *legatus*, or lieutenant, and divided into ten cohorts. The legions were distributed over various parts of the Empire, three being usually stationed in Britain.

Legion of Honour, a French institution by Napoleon to provide distinctions for meritorious civil or military service. The President of the Republic is its head, and the members are divided into five classes, Grand Crosses, Grand Officers, Commanders, Officers and Chevaliers.

Legislation, the making or enacting of laws, more especially by representative assemblies. Legislation as now understood in England is a development of the 14th Century. Prior to the reign of Edward II., almost all changes in the law had been initiated by the King and the Council, or the Magnates, though the Commons had always had the right of petitioning the Crown for the removal of grievances, and it was this right which developed into a right to initiate legislation. Aided chiefly by their control over supply, the Commons exercised an ever-increasing influence on legislation during the later medieval period. The Crown can still legislate on various matters by means of Orders in Council, but this power is nowadays dependent upon its receiving authority from Parliament to do so in specific cases.

Legislature, a person or, more generally, body of persons invested with the power to make, amend or repeal the laws of a country or State and of raising and appropriating the national revenues. In democratic countries it usually consists of two Houses, one at least of them popularly elected, acting concurrently; and generally requires the assent of the Supreme Executive Authority to validate its Acts; in many countries, however, the veto of the latter may under prescribed conditions be overridden. In "totalitarian" States the legislature is superseded by, or dependent upon, the will of the dictator or national leader.

Legitimacy, the status of a child born out of lawful wedlock. A child born out of lawful wedlock may, however, be legitimated in the eyes of the English law (under an Act of 1826), provided that both parents were free to be married at the time of the birth of the child, and the child then suffers no legal disabilities, except that it cannot succeed to or transmit any title or dignity. Such legitimization has long been recognised in Scots law.

Legitimists, a name given to the supporters of the elder branch of the Bourbon dynasty in France, after the revolution of 1830, as opposed to the Orleanists, who supported the claims of Louis Philippe.

Leguminosae, a natural order of plants comprising the pulses (peas, beans, etc.), acacias, mimosa, clover, gorse and many other species. The food value of many of the species is largely due to a protein, known as legumin, found in the seeds, which grow in symmetrical pods.

Lehár, Franz, Hungarian composer, born at Komorn; became conductor at Vienna. His first serious opera *Die Gipsy* (afterwards called *Tatiana*), 1896, being unsuccessful, he turned to light opera, beginning with *Wiener Frauen* and *Der Baselibinder* in 1902. *Die Lustige Witwe* (*The Merry Widow*), 1905, made him famous. Among his other operas are: *The Count of Luxembourg*, *Gipsy Love*, *Fräusquita*, *The Land of Smiles*, *Giuditia*. (1870-).

Leibnitz (Leibniz), Gottfried Wilhelm, German mathematician and philosopher, born at Leipzig; studied at Leipzig university and in 1686, became doctor of law at Altdorf, and soon afterwards served the Elector of Mainz in a legal and diplomatic capacity; visited Paris and London on political work, and associated with the leading savants of the day; afterwards served the House of Brunswick, becoming librarian at Wolfenbüttel, 1690; life president of new Berlin Academy, 1700. Of his numerous scientific achievements, the most important is his discovery of the calculus. In philosophy he propounded the doctrine of substance and the system of "monadology," in which matter was conceived of as existing in the form of monads, or atoms, simple, self-active beings in mutual harmony, but each animated by an individual force emanating ultimately from God. The statement of these philosophical views is to be found in his *Theodicee* and *Monadologie*. (1646-1716).

Leicester, a county town of Leicestershire, England, on the Soar, 40 m. E. of Birmingham. Once an ancient Roman town on the Fosse Way, it has important Roman, and other remains, including a Roman forum, a basilica and bath, excavated in 1937. There are a number of ancient churches, including the cathedral of the diocese, as well as ruins of a Norman castle, and 12th-Century abbey. The University College was founded in 1921. The manufacture of hosiery, boots and shoes are the staple industries; woollens, cotton and lace, rubber goods, furniture, beer, ironware and bricks are also produced. Leicester became a city in 1919. In 1935, its boundaries were extended. Pop. 262,000.

Leicester, Robert Dudley, Earl of, Queen Elizabeth's favourite,

fifth son of the Duke of Northumberland. Winning the Queen's notice about 1558, he received many offices and honours, and on the death in 1560, under suspicious circumstances, of his wife, Amy Robsart, aspired to the Queen's hand. In 1564 he was proposed as husband to Mary Queen of Scots, and in the same year was made Earl of Leicester. He married the dowager Lady Sheffield in 1573, and afterwards, bigamously, the Countess of Essex. After a short term of disfavour, he was appointed commander in the Netherlands, 1585, and subsequently at Tilbury, but proved an incapable soldier. (c. 1531-1588).

EARL OF
LEICESTER

Leicestershire, midland county of England, bounded by the of Nottingham, Lincoln, Rutland, Northampton, Warwick and Derby. An 8 Eng upland watered by the Soar, # is under corn and pasture. Leicester cattle and sheep are noted, and there is an important dairy industry. Melton Mowbray being celebrated for its pies. There are coal and iron-mines, and granite, slate and limestone are obtained; hosiery-making is the chief industry. The chief towns are Leicester, the county town, Loughborough, Hinckley and Melton Mowbray. Area 824 sq. m. Pop. 542,000.

Leigh, market town of Lancashire, England, 7 m. S.E. of Wigan. Coal is mined, and textiles, iron and brass are made. Pop. 45,000.

Leighton, Frederick Leighton, Baron, English artist, born at Scarborough; studied in the chief art-centres of the Continent; in 1855 exhibited at the Royal Academy "Cimabue's Madonna carried in Procession through Florence," which was followed by many well-known pictures, chiefly devoted to Greek classical themes, such as "Captive Andromache," "The Bath of Psyche," "Perseus and Andromeda," and "The Return of Persephone," which show the scholar as well as the artist. He became an R.A. in 1868 and president of the Royal Academy in 1878. In 1896 he was made a peer. (1830-1896).

Leighton Buzzard, urban district town of Bedfordshire, England, 7 m. NW. of Dunstable, on the Grand Junction canal. Straw-plaiting is carried on. Pop. 7,100.

Leinster, the SE. province of Eire (Ireland), including the counties of Carlow, Dublin, Kildare, Kilkenny, Leix, Longford, Louth, Meath, Offaly, Westmeath, Wexford and Wicklow. Area 7,600 sq. m. Pop. 1,219,500.

Leipzig, city of Germany, in the W. of Saxony, 70 m. NW. of Dresden. The old portion is narrow and quaint, with historic buildings; the new is well built with splendid edifices. It is the seat of the Supreme Court of the Republic, and boasts an old university, which has a magnificent library and well-equipped medical school, and one of the finest conservatories of music in Europe. Its chief trade is in books, furs, leather and cloth, and its chief industries include printing, bookbinding, type-founding and the manufacture of musical instruments, artificial flowers, tobacco, chemicals, etc. It was the birthplace of Leibnitz and Wagner, and is associated also with Bach and Mendelssohn. It is noted for its annual fairs, which attract visitors from all over the world. Napoleon was defeated by the Allies here in 1813, in the famous "Battle of the Nations." Pop. 713,000.

Leith, seaport of Scotland, on the Forth, contiguous to Edinburgh, with which it was incorporated in 1920, and whose port it is; has large docks and shipyards, and extensive stores for wine and whisky. Manufactures include sugar, soap, flour, sail-cloth, spirits, chemical manures and engineering products. Pop. 81,000.

Leitrim, county of Connaught, Eire (Ireland), on the Northern Ireland (Fermanagh) border, with a short coastline on Donegal Bay. Carrick-on-Shannon is the county town. Lough Allen divides it in two. Area 590 sq. m. Pop. 50,900.

Leix (formerly Queen's County), one of the inland counties of Leinster, Eire (Ireland), N. of Offaly (King's County). The Slieve Bloom Mountains are in the N. and the principal rivers are the Barrow and the Nore. Agriculture and dairy farming are the chief

activities. Port Laoighise (Maryborough) is the county town; others are Portarlinton and Abbeylisk. Area 664 sq. m. Pop. 49,950.

Lely, Sir Peter, English painter, born in Westphalia. After studying in Holland, he settled in London in 1641, and soon devoted himself exclusively to portrait-painting, being patronised by Charles I. and Cromwell. Under Charles II. he reached the height of his career, being knighted (1679) and appointed painter to the King, whose courtiers and favourites comprised the majority of his sitters. His series of portraits of the Court ladies is at Hampton Court Palace. (1618-1680).

Leman, Lake, another name for the Lake of Geneva (g.v.).

Lemberg, alternative name for the town of Poland also known as Lwów (g.v.).

Lemming, a rodent of the family Scandinaavia, but found in most Continents. It is about 6 in. in length, blackish-brown in colour, with fawn on the back. The lemmings are remarkable for migrating in great numbers at the approach of winter; it is said that large numbers of them rush at times into the sea to drown.

Lemnos, an island in the Egean Sea, 30 m. SW. of the Dardanelles. Rich in Greek classical associations, it was especially famous for its medicinal earth, formerly widely exported as an antidote to poisons. Kastro, on the W. coast, is the principal town. Grain, wine, fruit and tobacco are produced. Annexed by the Turks in 1657, it was restored to Greece after the World War. Pop. 4,000.

Lemon, the popular name of the *Limonum* variety of the Citron tree (*Citrus medica*), of the natural order Rutaceae; also of its fruit, which resembles that of the citron, but is longer, less knobbed at the extremity, and has a thinner skin. Lemons are largely grown in Southern Europe, Palestine and the West Indies.

Lemon Sole, a flat fish (*Pleuronectes microcephalus*) allied to the common sole, but smooth-skinned and of an orange hue, marked with brownish spots. It is edible, but its flesh is inferior in quality to that of the sole proper.

Lemur, the common name of the mammals of the sub-family Lemurinae, of the family Lemnuroidea, and sub-order Lemnuroidea of Primates, this being regarded as the lowest sub-order. They are characterised by long snouts, a small, flat skull, giving them a fox-like appearance, long, narrow bodies, fore- and hind-limbs of equal length and opposable thumbs. Their chief habitat is Madagascar. The related sub-families in the same group include the Lorises and the Aye-aye.

SMITH'S DWARF LEMUR

Lena, river of Siberia, rising near Lake Baikal and flowing past Yakutsk after a course of 2,875 m. into the Arctic Ocean.

Lenglen, Suzanne, French lawn-tennis player, born at Compiègne. Instructed by her father, she became champion of Picardy at the age of 14, and in 1914 won the hard-court singles and doubles. On her début at Wimbledon in 1919 she won the English ladies' singles championship and also the ladies' doubles, retaining the former until 1923 and regaining it in 1925, after a

period of illness. In 1927 she became a professional, but retired next year. She was Olympic champion in 1921. (1899-1938).

Lenin, N., the pseudonym of Vladimir Ilyich Ulianov, Soviet Russian political leader, born at Simbirsk (now called Ulianovsk in his honour). As a law student at Kazan he joined the revolutionaries with his brother, who was executed in 1881 for an attempt on the Czar's life, while Vladimir was temporarily banished. In 1894 as "N. Lenin" he engaged in Marxist propaganda in St. Petersburg, for which in 1896 he was imprisoned and sent for 3 years to Siberia, where he wrote his important *Development of Capitalism in Russia*. After his release, he lived for a time in London, returning to Russia to take part in the 1905 revolution. From 1907 he was not in Russia again till 1917, when he helped to overthrow the provisional government of Kerensky. As president of the Soviet (council) of People's Commissaries, he established the Soviet régime, though inclining towards the end of his life to "the new economic policy," which departed from communism in some measure to allow capitalism to function under rigid control. His tomb in the Red Square, Moscow, has become a place of pilgrimage for his followers from all over the globe; Petrograd was re-named Leningrad in his honour. (1870-1924).

Leninakan (formerly *Alexandropol*), the largest town in the Erivan district of Russian Armenia, with trade in silk. Pop. 65,800.

Leningrad, city of Russia, at the head of the Gulf of Finland, on the banks and delta of the Neva. A large number of bridges span the main stream and its numerous divisions; massive stone quays hold back the waters, but a rise of 12 ft. floods the city, an annual occurrence in the older parts. The river is icebound for half the year, but the short summer is very hot. Its public buildings, cathedrals, churches and monuments are magnificent, while the Nevski Prospekt (now Prospekt of 25th October) is one of the finest streets in Europe. One of the centres of Russian culture, Leningrad has a university and numerous libraries, museums and scientific institutions, as well as theatres and art galleries. The Winter Palace was the magnificent former residence of the Czsars, while there are other large palaces at the nearby Peterhof, Gatchina and Oranienbaum. As Petersburg, the city was founded by Peter the Great in 1703, as a "window upon Europe"; until 1918 it was the capital of Russia. During the World War its name was altered to Petrograd, and after the Revolution to Leningrad. It has been considerably extended and modernised under the Soviet rule. Connected with the Volga basin by a canal, it is a railway centre and Russia's chief port, with a huge foreign trade. Pop. 2,776,000.

Lennox, an ancient district of Scotland of Dumbarton and part of Stirlingshire, Perth and Renfrew. It gave its name to an earldom of the Stuart family, several holders of which have figured prominently in Scottish history from the 13th Century; it was elevated into a dukedom in 1581. The dukedom of Richmond and Lennox was created in 1875 for the illegitimate son of Charles II. by the Duchess of Portsmouth.

Lennox Hills, a Scottish range in Stirlingshire, near the Dumbarton border, of which the Campsie Fells are a part; Earl's Seat, the highest, is almost 1,900 ft. in height.

Leno, Dan, British comedian, born at George Galvin. Trained as an acrobat and contortionist, he travelled the country as a dancer, being the world's champion clog-

ger in 1890; first appeared as "Dan" in London, 1883, at the Oxford Theatre; 189 appeared in *The Babes in the Wood* pantomime at Drury Lane, and thereafter appeared annually in pantomime at that theatre, being the most popular comedian of his time. (1861-1904).

Lens, a spherical piece of glass (or more rarely, crystal or fluorspar) for refracting rays of light passing through it, and so magnifying or diminishing the apparent size of an object. Lenses are made in a variety of shapes, according to the functions they have to perform. Double convex or double concave lenses are those in which both surfaces are convex or concave respectively, while plano-convex and plano-concave lenses have one surface convex or concave, as the case may be, and the other plane or flat; there are also concavo-convex lenses. The point where the previously parallel rays of light converge, after being refracted by a lens, is called the focus, the distance of which from the centre of the lens is the "focal length."

LENSES:
convex (left)
and concave

Lens, town of France, in the dept. of Pas-de-Calais, 13 m. NNE. of Arras. The centre of an important coal-mining area, it is an industrial town, with steel, engineering and other works, and is a railway junction. It has been a strategic point in several wars. The Prince of Condé defeated the Spaniards here in 1648, and, occupied by the Germans almost throughout the World War, it was the scene of intense fighting and suffered extensive damage. Pop. 30,000.

Lent, a period of fasting previous to Easter; at first lasting only forty hours, but gradually extended to three, four or six days, different churches eventually prolonging it to three and six weeks. In the early 7th Century Pope Gregory the Great fixed it for the Western Church at forty days from Ash Wednesday to Easter Sunday, excluding Sundays; in the Eastern Church it begins on the Monday after Quinquagesima, and excludes both Saturdays and Sundays. In the Anglican Church the season is marked by special services, but the fast is not rigidly kept.

Lenthall, William, Speaker of the House of Commons, born at Henley-on-Thames. Called to the Bar in 1616, he entered the Short Parliament, 1640, and in the same year became Speaker of the Long Parliament. His behaviour when Charles I. ordered him to reveal the whereabouts of the five members he had come to arrest is celebrated. He became master of the Rolls, in 1643, was again Speaker in 1654, and Lord Keeper in 1659. Though he had helped to bring about the Restoration, he was dismissed from office on the accession of Charles II. (1591-1662).

Lentil (*Lens esculenta*, or *Ervum lens*), a small branching plant, resembling the vetch, with pale blue flowers in twos and threes, and short legumes with two or four seeds. It is cultivated in France and Germany for the sake of the seeds which are used as a food-stuff, and frequently in preparing soup.

Leo, the fifth sign of the zodiac, which the sun enters about July 22. The constellation of Leo contains the two bright stars Regulus and Deneb, of first and second magnitude respectively. The meteoric shower known as Leonids emanates from a point in Leo, and is observed annually, about Nov. 12.

Leo, the name of six emperors of the E., of which the chief was Leo III., Emperor of the East, surnamed the Isaurian, born in Isauria; a capable general, he was raised to the throne by the army in 717.

defeated on sea and the Saracens who threatened Constantinople, and introduced liberal measures in taxation and the status of Jews; he headed the iconoclast movement, which provoked the opposition of the people and the hostility of the and clergy, and led to the secession of the province of Ravenna from the Greek empire. (c. 680-740).

Leo, the name of many popes, the chief of which were L. I., Saint surnamed the Great. He was distinguished for his zeal against heretics, presided at two councils, and persuaded Attila to retire from Rome on his invasion of Italy (452), as he persuaded Genseric in 455 to moderate the outrages of his troops. He formulated several leading doctrines of the Church. (d. 461). L. III., proclaimed Charlemagne emperor of the West in 800. Driven in 799 from the papal chair by a conspiracy, he was reinstated by Charlemagne, who next year visited the city and was crowned emperor by the pope. (d. 816).

L. IX., otherwise Bruno. Held the Easter synod of 1049 at which collation of the clergy was re-enjoined. He was pope from 1049 to 1058. L. X., Giovanni de' Medici, son of Lorenzo the Magnificent, a patron of art, science and letters. It was his issue of indulgences to raise funds for the rebuilding of St. Peter's that aroused the indignation of Luther and provoked the Reformation. (1475-1521). L. XIII., born at Carpineto, became as doctor of theology, and in 1587 became a priest; as delegate of Pope Sixtus V. in 1588, introduced many reforms; he became a bishop and nuncio to France in 1593, archbishop, 1596, and cardinal, 1598. Elected pope in 1587, he displayed enlightened views on the trend of modern thought, but refused to compromise where Church interests were affected. He encouraged the study of Church history and threw open the Vatican archives and library to students. (1580-1603).

Leominster, borough of Herefordshire, England, 12 m. N. of Hereford. An ancient town, once a centre of the wool trade, it now trades in hops and cider. Pop. 5,700.

Leon, a province and former kingdom of Spain, NW. Spain, with the Cantabrian mountains to the N. and W., and the plain of Castile to the S. and E. It is mainly devoted to agriculture and sheep-rearing. Area 5,935 sq. m. Pop. 454,300.

Leon, town of Spain, the capital of the province of Leon, situated on a mountain slope, 174 m. NW. of Madrid, at the confluence of the Tago and Bernesga. It has a beautiful 13th-Century cathedral, and an 11th-Century collegiate church. The town has been of historical importance from Roman days; belonging in turn to Goths and Moors, it became the capital of the Christian kingdom of Leon in the early 10th Century. Pop. 22,000.

Leon, city and former capital of Nicaragua, S. America; there are textile manufactures, and a university. Pop. 60,000.

Leonardo da Vinci, Italian artist and savant, born at Vinci in the Val d'Arno; showed early a wonderful aptitude for art; studied under Andrea del Verrocchio, 1470-1477, and then worked as a master for Lorenzo the Magnificent, the first of several distinguished patrons. His pictures are few, but of the sublimest quality; they include "The Virgin of the Rocks," "The Battle of the Standard" (now lost), "The Virgin with St. Anne" and the immortal "Mona Lisa." His masterpiece was the famous tempera painting of the "Last Supper" on the wall of a convent refectory at Milan (1494-1498), which, though much damaged by damp and neglect, remains one of the artistic wonders of the world. By

common consent, Leonardo was animated by none of the greatest intellects of all time and was a man of universal genius. Poet, musician, scientist, engineer, philosopher and mystic, he epitomises in a single individual the spirit and achievements of the entire Renaissance. His *Treatise on Painting* has been widely translated. He also wrote papers on the structure of the eye, hydraulics and the classification of plants, and invented a flying-machine, as well as the camera obscura. (1452-1519).

Leoncavallo, Ruggiero, Italian operatic composer, born at Naples. After studying at the Naples conservatoire, he became a professional musician and led a wandering life. His opera *Pagliacci* (1892) swiftly brought him popularity, which, however, was not fully sustained by his later works, of which *Zaza* (1900) and *La Bohème* were the most successful. (1858-1919).

Leonidas, King of Sparta, succeeded to the throne about 489 B.C. During the Persian invasion of Greece by Xerxes, Leonidas, with 300 Spartans and 1,100 other troops, was entrusted with the defence of the Pass of Thermopylae, where, apart from a contingent which surrendered, they fell fighting to the last man.

Leonids. See Leo.

Leopard (*Felis pardus*), an animal of the cat family (Felidae), found in

Africa, Ceylon, the East Indies and Borneo. Its colour is fawn to red-buff, thickly studded with dark rosette-shaped spots, which unite to form bands on the hindquarters and legs. Its length may be as much as 4½ ft. It is fierce and bloodthirsty, often killing far more than it can devour, and has been known to eat human flesh.

LEOPARD

Leopold I., King of the Belgians, son of the Duke of Saxo-Coburg-Saalfeld; in his youth, served in the Russian army; visited England in 1816, and in 1816 married Princess Charlotte, who died next year. He declined the throne of Greece in 1830, but became King of the Belgians in 1831, and proved a wise, firm, constitutional sovereign. In 1832 he married the princess Louise, daughter of Louis Philippe of France. (1790-1865).

Leopold II., King of the Belgians, successor of Leopold I.; he travelled much in Europe, N. Africa and the East. In 1885 he founded the Congo Free State as his personal property, out of which he made a fortune in a questionable manner, his cruel and arbitrary treatment of the natives, which was notorious, leading to the annexation of the territory by the Belgian State in 1908 after an inquiry. He married in 1883 the Archduchess Marie of Austria, but his private life was the subject of much scandal. (1835-1909).

Leopold III., King of the Belgians, the son of King Albert; educated at Eton College and the university of Ghent, and entered the Belgian army; in 1926 married Princess Astrid of Sweden, who was killed in a motor accident in 1935; succeeded his father in Feb. 1934. (1901-).

Leopoldville, capital of the Belgian Congo, on the Congo, S. of Stanley Pool. It is connected by railway and oil pipe-line with Matadi, and is an important centre for Congo steamer services. Pop. (white) c. 2,000.

Lepanto, or Spakto, small port of Greece, N. of the Gulf of Corinth, once an important town. Near it

from the East to visit the infant Jesus (Matt. II) are known as the Three Magi. Traditionally their names were Gaspar, who brought frankincense, the emblem of divinity; Melchior, who brought gold, the emblem of royalty; and Balthasar, a negro, who brought myrrh, the emblem of mortality. Their bodies are alleged to have been translated in the Middle Ages to Cologne, where their bones are still shown in the Cathedral.

Magic, the supposed art of influencing the course of nature or future events by occult means; the word is derived from the "Magi" (q.v.) who were believed to be skilled in enchantment. Magic, extensively practised by primitive man, is one of the main sources from which has grown religion on the one hand and natural science on the other. It has been practised in one form or another in every age and country; and has frequently been developed into an elaborate system. "Black" magic is that directed to the production of harmful or undesirable effects, or which involves supposed communication with evil spirits. "White" magic is either beneficent or neutral, and includes such widely different practices as astrology and conjuring.

Magic Lantern, a device for casting diagrams from an illuminated slide on to a screen, for entertainment or instruction. The lantern has a concave mirror to increase the intensity of the light (generally an incandescent lamp or an arc), a condensing lens which distributes the light over the slide, and a projection lens to focus the image on the slide. The slide is a transparent positive of the required picture printed from a glass negative on to a glass plate.

Magistrate, one in whom is vested authority in affairs of civil government; in other words, an administrator of the law. In this sense the King is the first magistrate in a monarchical state, while in a republic the President is the chief magistrate. The word is now more usually applied to subordinate officers to whom a part of executive judicial power is delegated; in England it means, specifically, a minor judicial officer, such as a justice of the peace, a stipendiary, or a police magistrate; in Scotland a provost or bailie of a burgh. Prior to the Local Government Act, 1888, the administrative work of the county fell to the lot of the justices or magistracy, but that Act, while leaving them their judicial functions, took away the bulk of their administrative functions. (See also *Justice of the Peace*).

Magna Carta, "the great charter," extorted from King John by the barons of England at Runnymede on June 15, 1215, that guaranteed various rights and privileges to the subjects of the realm, and established the supremacy of the law over the will of the monarch; it has ever since been looked upon as the foundation-stone of English political liberties.

Magna Græcia (Great Greece), name given in classical times to the southern part of Italy, which had been extensively colonised by the Greeks.

Magnalium, a light, easily-worked alloy of aluminium (about 95 per cent.) and magnesium (about 5 per cent.). It is used in the construction of aircraft, internal combustion engines, etc.

Magnesia, the old-fashioned name for a variety of magnesium compounds. Thus calcined magnesia is magnesium oxide, MgO ; *magnesia alba levis* is a white powder precipitated on addition of sodium carbonate to a cold solution of magnesium sulphate; *magnesia alba powderosa* is a somewhat similar compound obtained by adding sodium carbonate solution to a boiling concentrated solution of magnesium sulphate.

U.E.

Fluid magnesia is a solution of magnesium carbonate. Calcined magnesia is used as a refractory lining for electric furnaces; the other varieties find application in medicine for the relief of minor ailments of the alimentary canal.

Magnesium, a metallic chemical element, related to beryllium, calcium and zinc. Symbol Mg ; atomic number 12; atomic weight 24.31. Being chemically very active, it is not found free in nature. It is, however, widely distributed in the form of its compounds, e.g., dolomite (a double carbonate of magnesium aluminate), magnesite, spinel (magnesium aluminate), and asbestos or calcium magnesium silicate. It is also one of the constituent elements of the green colouring matter (chlorophyll) of plants, and is therefore essential to plant life. It is a silvery-white metal which burns with an intensely brilliant white light and is therefore used in fireworks, star-shells, flashlights, etc. It is also an ingredient of many alloys, and magnallium (q.v.).

Magnesium Sulphate. See *Epsom salt*.

Magnetic Induction, a magnetic power of producing magnetism in pieces of iron or steel near it.

Magnetic Poles, (of the earth), two points on the earth's surface, where the dip of the needle is 90° . They are at a considerable distance from the geographical poles, and their positions are not constant.

Magnetism. Magnets have been known since classical times, and owe their name to the fact that lumps of natural magnet-stone (lodestone, i.e., "way-stone" or "guiding-stone"—chemically, magnetite) were found in the earth near Magnesia (the modern Manissa, near Smyrna). The use of lodestone in compasses was quickly superseded when it was discovered that a steel needle could itself be magnetized by rubbing it (always in the same direction) with a fragment of lodestone, and in the 12th Century Alexander Neckham describes the pivoted needle that was carried on ships to show sailors their course. The modern science of magnetism began with William Gilbert, who, in 1600, published his celebrated treatise *On the Magnet and on that Great Magnet the Earth*.

It is a peculiar fact, hitherto unexplained, that the earth behaves as though it were a huge magnet, with poles near (but not at) the N. and S. geographical poles. Upon this behaviour, the use of the magnetic compass depends, the N.-seeking pole of the compass needle pointing towards the N. magnetic pole of the Earth, and the S.-seeking towards the S. Every magnet is surrounded by a region in which its influence may be experienced, and this is known as its magnetic field. A magnetic field may be mapped by sprinkling iron filings in the field and observing their subsequent conformation.

If a coil of insulated wire is wound round a piece of soft iron and a direct current of electricity is passed through the coil, the iron is found to be a magnet as long as the current is passing, but loses its magnetism as soon as the circuit is broken; this property is made use of in various instruments, e.g., the electric bell. A similar coil of wire, without the iron, and free to rotate in a horizontal plane, is found to behave like a compass needle when the current is flowing; it is, in fact, a magnet. If the coil forms a closed circuit, without a

MAGNET
(showing
field of force)

supply of electricity, & momentary current is induced in it if a magnet is suddenly pushed into it. This fact, discovered by Faraday, is the principle of the dynamo or generator.

Magneto, an apparatus for generating high-voltage alternating electric currents to produce ignition in an internal combustion engine. It is used in aeroplanes, tractors, motor boats, etc., but has generally been superseded in motor cars by a coil and battery circuit.

Magnificat, The, the hymn of the Virgin Mary (Luke i, 46-55); used as part of the evening service in both the Anglican and Roman Catholic Churches, and often sung to elaborate musical settings.

Magnitude, in astronomy the measure of a star's brightness. Ptolemy, in cataloguing the stars, assigned the fifteen brightest known to him to the first magnitude, and those just visible to the naked eye to the sixth. On the modern scale those of the first magnitude are $2\frac{1}{2}$ times as bright as those of the second, those of the second $2\frac{1}{2}$ times as bright as the third, and so on. Some have a fractional or even negative magnitude, e.g., that of the sun is minus twenty-six; the absolute magnitude is the intrinsic brightness, making allowance for the star's distance.

Magnolia, the typical genus of the comprising 21 species of trees and shrubs native to China, Japan and North America. They bear large flowers and foliage, on account of which they are cultivated in England. Some hybrid varieties have been developed.

Magpie (*Pica pica*), a familiar bird of the crow (Corvidae) family, common in the British Isles. It is about 18 in. long, has a long glossy tail, greenish-black plumage and black and white wings and underparts.

MAGPIE

Magyars, the dominant race in Hungary, a people of Finno-Ugric stock who appear to have migrated from the plains of Central Asia.

Mahabharata, one of the two great Indian, a work of slow growth, with no single author. It relates the story of a war between two peoples in Northern India, in the early days of the Aryan settlement, and consists of upwards of 100,000 verses.

Mahaffy, Sir John Pentland, Irish scholar, born in Switzerland. He was educated in Germany and in 1856 entered Trinity College, Dublin, where he became a fellow in 1864. In 1871 he became Professor of Ancient History and was knighted in 1918. His published works include *Greece from Homer to Menander*, *History of Classical Greek Literature*, and *Alexander's Empire*. (1839-1919).

Mahanadi, a great Indian river which, after flowing eastward for over 500 m., the last 300 of which are navigable, falls into the Bay of Bengal near Cape Palmyra. Its volume in flood is enormous, and renders it invaluable for irrigation.

Mahatma, literally "great soul." In Theosophists, for a prominent religious teacher; in recent times it has frequently been applied to Gandhi.

Mahdi, a religious teacher and revivalist, Jewish Messiah, whom certain Mohammedan sects expect to arise in a future age and lead

them against the infidel world. The name was applied particularly to Mohammed Ahmed, a fanatic born in Dongola about 1843 who claimed the title, and at the head of an army of dervishes raised his standard in the Sudan. He was unsuccessfully opposed by the Egyptians, and Khartoum, occupied by them, fell into his hands, General Gordon being slain just as the British relief army under Lord Wolseley approached its walls in 1885, a few months after which Ahmed died at Omdurman.

Mah Jongg, a Chinese game played with 144 domino-like pieces, or tiles, usually by four players. The pieces are arranged in six suits, and counters are used. The game had an era of popularity in America and Europe in the nineteen-twenties.

Mahler, Gustav, Austrian musical composer, of Jewish antecedents, born at Kalischt. He conducted from 1880 in various parts of Europe, and in 1897 became director of the Court Opera at Vienna. Visited England and conducted German opera at Drury Lane, 1892. He composed several symphonies, and the famous *Lied von der Erde*. (1860-1911).

Mahmud II, Sultan of Turkey; came to the throne in 1809; crushed a rebellion on his accession by putting to death his brother, on whose behalf the Janissaries had risen; introduced various military and administrative reforms; by his defeat at Navarino in 1827 he lost Greece, which declared its independence, and at his death was in conflict with Mehemet Ali, Governor of Egypt. (1785-1839).

Mahmud of Ghazni, Sultan of Afghanistan from 999, who, after deposing his brother Ismail, founded a powerful Afghan state from which he made repeated raids into India. (d. 1030).

Mahogany, a name applied to a number of timbers of various botanical origins. The true mahogany is the wood of *Swietenia Mahagoni*, a tree indigenous to tropical America. The colour varies from yellow to a rich red brown; it is very hard and fine-grained and can be highly polished; hence its great popularity for furniture. Other varieties include the *Swietenia macrophylla* of British Honduras, and "Spanish" mahogany, grown in the West Indies. The *Khaya senegalensis*, or African mahogany, grows in Nigeria and Uganda.

Mahomet. See *Mohammed*.

Mahony, Francis, Irish author, born in Cork, a priest, who became known by his *nom de plume* of Father Prout; contributed to *Fraser's Magazine*, and was foreign correspondent to the *Daily News* and the *Globe*; his poem *The Bells of Shandon* is well-known. (1804-1866).

Mahrattas, Hindu race in Central India, which in the 18th Century secured power over a large part of that country, but came into conflict with the British, and were finally subdued in 1843. Their successors still rule in Gwalior, Indore, and Baroda.

Maia, in Greek mythology, the daughter of Atlas, the eldest of the seven Pleiades (q.v.), and the mother by Zeus of Hermes.

Maiden, The, an instrument of execution, resembling the guillotine, that appears to have been in use in Scotland during the 15th and 16th Centuries; one is preserved in the Antiquarian Museum, Edinburgh.

Maiden Castle, a prehistoric hill-fort, top earthenwork in Dorsetshire, England, near Dorchester. It was inhabited from neolithic times and was finally captured and destroyed by the Romans.

Maidenhair Fern, the common ferns of the genus *Adiantum* of the order Polypodiaceae, comprising 190 species of world-wide distribution but especially abundant in tropical America, *Adiantum Capillus-veneris*, a small, delicate European fern with many spreading capillary branches, used for ornament, is occasionally found in Britain.

MAIDENHAIR-FERN

Maidenhead, market town of Berkshire, on the right bank of the Thames, 25 m. W. of London. It is a popular river resort, famous for the beautiful woods in the neighbourhood; regattas are held annually. Pop. 24,000.

Maid of Norway, daughter of Eric II., king of Norway, and through her mother heiress to the Scottish crown; died on her passage to Scotland in 1240.

Maid of Orleans, Joan of Arc, so called from her defence of Orleans against the English. See *Joan of Arc*.

Maidstone, county town of Kent, on the Medway, 30 m. S.E. of London; has several fine old churches and historical buildings, a grammar school and a school of art and music, numerous paper-mills and breweries, and does a large trade in hops. Pop. 47,000.

Maimonides, Moses, Spanish-Jewish born at Cordova; was a man of immense learning, and physician to the Sultan of Egypt; codified the principles of the Jewish faith, and drew up the "thirteen principles" which became its recognised summary; his best-known work is *Moreh Nebuchim*, or *The Guide of the Perplexed*. (1135-1204).

Main, the largest of the right-bank tributaries of the river Rhine, Germany, 310 m. in length and navigable for about 200 m.; it flows by Würzburg and Frankfurt to meet the Rhine at Mainz.

Maine, the most N.E. State in the American Union, lies between Quebec and New Hampshire on the W. and New Brunswick and the Atlantic on the E., and is a little larger than Ireland; a picturesque State, with high mountains in the W. (Katahdin 5,000 ft.), many large lakes, including Moosehead, numerous rivers, and a much indented rocky coast. The climate is severe but healthy, the soil only in some places fertile. The rainfall is abundant; hunting and shooting are good. Dense forests cover the N.; potatoes, oats, hay and apples are the chief crops. The principal industries are the making of paper, boots and shoes, and textiles; the fisheries are valuable; timber, building stone, cattle, wool, and ice are exported. Early Dutch, English and French settlements were unsuccessful till 1630. From 1651 Maine was part of Massachusetts, till made a separate State in 1820. The population is English-Puritan and French-Canadian in origin. The capital is Augusta; Portland is the largest city and chief seaport; Lewiston has cotton manufactures. Area, 32,560 sq. m. Pop. 767,000.

Maine, former French province, S. of Normandy, its chief town being Le Mans. It was captured by William the Conqueror from the French King in 1073; Henry II. inherited it from his mother, Matilda, wife of Geoffrey of Anjou. In 1446 the English ceded the province to René, Count of Anjou, and in 1481 it was annexed to France. It is now represented by the depts. of Sarthe and Mayenne.

Maine, Sir Henry, English jurist, legal member of the Council in India, and Professor of Jurisprudence at Oxford; wrote on *Ancient Law*, and important works on ancient institutions generally. His *Ancient Law* is chiefly notable for its brilliant identification of modern with ancient institutions through the (then) new method of evolution and it was really this work which earned for him his knighthood. (1822-1888).

Maine-et-Loire, France, watered by the rivers Loire and Maine; mainly agricultural, producing cereals, fruits, flax and hemp, with textile manufactures. Capital, Angers. Area, 2,810 sq. m. Pop. 477,700.

Maintenance, crimson velvet cap used in the Coronation ceremony of British monarchs.

Maintenon, Françoise d'Aubigné, Marquise de Niort, where her father was incarcerated as a Protestant; became a Catholic, married the poet Scarron in 1652, but was widowed in 1680; was entrusted with the education of the children of Louis XIV. and was secretly married to him in 1684. She exercised a great influence over him, and on his death in 1715 retired into the Convent of St. Cyr, which she had herself founded. (1635-1719).

Mainz, or *Mayence*, in Hesse, on the Rhine, opposite the mouth of the Main, one of the oldest cities in Germany, and the centre from which Christianity spread over that country; it has a magnificent cathedral, restored in 1878; a large transit trade is done, and the making of furniture, leather goods, and machinery are important industries; Gutenberg (q.v.) was a native. Pop. 143,000.

Maistre, Joseph, Comte de, French writer, born in Chambéry, was ambassador at St. Petersburg from 1803 to 1817; wrote numerous works, especially in defence of Catholicism, the chief *Du Pape* and *Soirées de St. Petersburg*. (1754-1821).

Maitland, Frederic William, English legal historian, born in London; educated at Eton, and Trinity College, Cambridge; Reader of English Law, Cambridge, 1884; Downing Professor, 1888; founded, 1887, the Selden Society, for the study of the history of English law; edited many of its publications, and threw a new light on many ancient legal institutions, by applying the evolutionary principle. (1850-1906).

Maize, a cereal grass, *Zea Mays*, also called mealies and Indian corn; in America it is called simply corn. It appears to have originated from Mexico but is now extensively cultivated in other tropical and sub-tropical parts of the world. There are wide variations in the colour and shape of the grain of different varieties, the colour ranging from yellow to white and the shape from spherical to almost flat. The type chiefly grown in Kenya and other E. African territories and in S. Rhodesia is a flat white "dent" maize. The seeds and stems yield respectively animal food and ensilage. The hulled corn for human consumption is known as frumenty. Dextrine, glucose, maltose and dextrose are other products from the plant.

MAIZE

Majolica, a kind of enamelled pottery of Majorca, imported into Italy from Majorca, known also as faience from its manufacture at Faenza, and applied also to vessels made of coloured clay in imitation.

Major, a commissioned army officer ranking next above captain and below lieutenant-colonel; in rank he is the lowest of the field officers. In the British infantry one major is second-in-command of the regiment while two hold company commands. His badge is a crown.

Majorca, the largest of the Balearic Is., is 130 m. N.E. of Cape San Antonio, in Spain; mountains in the N. rise to 5,000 ft., their slopes covered with olives, oranges, and vines; the plains are extremely fertile, and the climate mild and equable; manufactures of cotton, silk, and shoes are the industries; the capital, Palma, is on the S. coast, at the head of a large bay of the same name. The island was a stronghold of the insurgents during the Spanish Civil War which broke out in 1936. Pop. c. 240,000.

Major-General, in the British army, an officer next below a lieutenant-general in rank; holds a divisional command and his badge is a crossed sword and baton surmounted by a star.

Majuba Hill, a spur of the Drakensberg in Natal, famous as the scene of a defeat of a small British force under Sir G. Colley in a night attack in the first Anglo-Boer War, 1881.

Malabar, district of India, in the W. of Ghats down to the Indian Ocean, and extending along the coast for 145 m.; very rainy; covered with vast forests of teak; produces rice, coffee, and pepper. Calicut is the chief town. Pop. c. 2,500,000.

Malacca, one of the British Straits Settlements, in the S. of the Malay Peninsula, a Portuguese possession from 1511 until 1841, when the Dutch captured it, being driven out by the British in 1795; restored to the Dutch in 1818, it finally became British in 1824. Rice, tapioca, rubber, and fruit are produced, and tin mined. Area, 640 sq. m. Pop. 212,000. The capital of the same name, about 100 m. NW. of Singapore, has a pop. of 38,000.

Malachi, the last of the "Twelve Minor Prophets" of the Old Testament, a book of unknown authorship, the name meaning "My Messenger." It is an appeal for greater sincerity in devotion to Jehovah, and was written after the Temple had been rebuilt.

Malachite, a copper ore, found chiefly in Russia, consisting chemically of the basic carbonate of copper. Good specimens are used for decorative jewellery, etc., since the substance is of a fine green colour and can easily be cut and polished.

Malachy, St., archbishop of Armagh in the 13th Century; full name Malachy O'Morgair; was a friend of St. Bernard, who wrote his life and in whose arms he died at Clairvaux; a famous series of prophecies relating to future popes goes by his name, but is a forgery. (1094-1148).

Malaga, Spanish seaport, 65 m. N.E. of Gibraltar, an ancient Phœnician town; it exports olive-oil, wine, raisins, lead, etc.; and manufactures cotton, linen, machinery, pottery, etc.; its magnificent climate makes it an excellent health resort. Pop. 304,000.

Malaria, a morbid condition, also known as marsh or jungle fever, common in tropical swampy regions, such as the Gold Coast, Honduras and Ceylon, but also well known in Palestine, Italy and parts of America, and carried by certain mosquitoes—particularly *Anopheles*—and gnats. It affects the system through the blood often as long as 12 months after the subject has been exposed to it, and may exert its influence throughout life. It induces ague, intermittent fevers and some kinds of yellow fever, while certain forms are characterised by particular

kinds of periodicity. Preventive measures include the installation of tanks with fish to devour the larvae of the mosquito, the reclamation of swampy land, and so forth. The sole known effective remedy for the disease is quinine. As a prophylactic, doses up to 3 or 4 grains are taken regularly by persons living in regions, such as Ceylon, where malaria is endemic.

Malaya, or British Malaya, the southern portion of the Malay Peninsula, comprising (1) the colony of the Straits Settlements, viz., Singapore, Penang, Malacca, Labuan, Wellesley Province, Christmas and Cocos Islands; (2) the Federated Malay States, viz., Perak, Selangor, Negri Sembilan and Pahang; (3) the Unfederated Malay States, viz., Johore, Kedah, Perlis, Kelantan, and Trengganu. The total area is about 51,000 sq. m. Trading is chiefly in the hands of Chinese. Crops include rubber, copra, areca nuts, coffee, tea, spices and tobacco, and the minerals gold, tin, coal, tungsten ores, iron ore, and phosphates. Pop. c. 4,800,000.

Malay Archipelago, the group of hundreds of islands stretching from the Malay Peninsula S.E. to Australia between the North Pacific and the Indian Ocean, of which Borneo, Sumatra, Java, and Celebes are the largest. They are divided between Great Britain and the Netherlands.

Malay Peninsula, the easternmost peninsula of S. Asia, comprising British Malaya and the portion of Siam immediately to the N. as far as the Kra Isthmus. The total length is about 700 m. The chief products are rubber, rice, tea and tin.

Malays, the native inhabitants of the neighbouring islands, a mixed people of Mongolian, Negro and Australoid elements. They are of a dark-brown or tawny complexion, short of stature, having flat faces, black coarse hair, and high cheek-bones; the more civilised of them are Mohammedans.

Malcolm Canmore, Scottish king, Duncan whom Macbeth slew, succeeded his father in 1040 as King of Cumbria and Lothian, and in 1057, on Macbeth's death, became King of Scotland. After 1066 his reign was one long conflict with the Normans in England; in 1093 he was slain in battle at Alnwick. His second wife was the saintly Margaret, whose influence did much to bring Scotland into touch with European civilisation. There were other Malcolms, Kings in Scotland, ruling over the Southern part of the country.

Maldivé Islands, a chain of several hundred tiny coral islands in the Indian Ocean stretching 550 m. southward from a point 300 m. SW. of Cape Comorin, a dependency of Ceylon; grain and fruits are produced; the people are Mohammedans. Pop. 80,000.

Maldon, a municipal borough and ancient market town of Essex, on the R. Blackwater. Malting, flour-milling, boat-building and fisheries are carried on. It is a favourite yachting centre. Pop. 8,800.

Malebranche, Nicholas, French philosopher, born in Paris; in early life a priest of the Oratorian congregation. His famous work, *De la Recherche de la Vérité*, published in 1675, seeks to bridge over the gulf which separates mind from matter by establishing that the mind immediately perceives God, and sees all things in Him. (1638-1715).

Male Fern, a common hardy fern (*Nephrodium Filix Mas*) of the order Polypodiaceae, found wild in Britain and elsewhere in the northern hemisphere. It has light green lance-shaped fronds that may reach a length of 4 ft.

Malesherbes, *Lamignon de*, French Paris; adviser of Louis XVI, and his defender at his trial, for performing which office he was afterwards guillotined. He had been censor of the press, and to his liberal-minded censorship the world owes the publication of the *Encyclopédie*. (1721-1784).

Malherbe, *François de*, a French lyric poet and miscellaneous writer, born in Caen; is from his correct though affected style regarded as one of the reformers of the French language. (1555-1628).

Malic Acid, an acid, discovered by Scheele in 1785, which occurs in the juice of many unripe fruits, e.g., apples (whence the name, from the Latin *malum*) and gooseberries. It is a white crystalline solid, readily soluble in water.

Malice, in law, indicates not merely evil will but criminal intention. Sometimes the mere doing of a thing is made a crime by statute and intention is immaterial—e.g., abducting a girl under 16 years of age; but where a vicious will (*mens rea*) is essential, it may be manifested by criminal intention or criminal negligence. Criminal intention or malice in the technical sense is simply the design of doing an act forbidden by the criminal law without just cause or excuse. Malice in this sense is thus found not only where the mind is actively in fault but also where there is culpable inattention or negligence. Malice may be "express" or "in fact" as where a person deliberately and with formed design kills another; or "implied" or "in law" as where one wilfully poisons another though no enmity can be proved. Malice is "presumed" in homicide, and therefore it lies on the accused to prove that the killing was justifiable or excusable.

Malines, or Mechlin, a Belgian City on the Dyke, 14 m. S. of Antwerp; manufactures lace and tapestry; has an ancient cathedral and various art treasures. Pop. 62,000.

Malines Conversations, unofficial negotiations between Roman Catholic and Anglican ecclesiastics to explore the possibilities of a reunion of the churches, opened at Malines in 1920 and lasting over several years. Lord Halifax (q.v.) was one of the chief negotiators on the Anglican side.

Mallard, the wild duck (*Anas boschas*), more especially the drake; the parent stock of our tame breed of duck. The male has a glossy green head and neck, and is grey or white underneath; the female is speckled, brown and buff. The bird migrates in large numbers in late autumn.

MALLARD

Mallarme, *Stéphane*, French poet, leader of the Symbolist school, born in Paris; Professor of English at Tournon, and elsewhere from 1862 to 1892. His *Après-Midi d'un Féeve* appeared 1876; French translation of Poe's poems, 1888; *Vers et Prose*, 1893; complete works, 1897. (1842-1898).

Mallee, a short, scrubby eucalyptus tree which grows in desert districts of Australia; eucalyptus oil is obtained from it.

Mallow, a town in the province of Cork, Eire (Ireland). There are mineral springs which are much visited in autumn. Pop. 4,500.

Mallow, the common name of plants of the genus *Malva*, natural order Malvaceae, comprising 30 species, 3 of which are found in Britain. They are some-

what weedy perennials. The common or Large Mallow (*Malva sylvestris*) bears a flower with a purple centre, five long and narrow petals, mauve streaked with purple; the sepals are green; it is much visited by insects for the honey it secretes. The Small Mallow (*M. rotundiflora*) also occurs, as well as the Musk Mallow (*M. moschata*) which bears rose-pink flowers. The Marsh-Mallow is the species *Althaea officinalis* of the same natural order. The Tree-Mallow (*Lavatera arborea*) bearing pink purple-veined flowers in summer and autumn also occurs in Britain on rocks by the coast.

Malmédy, a town of Belgium in the province of Liège. It was ceded by Germany to Belgium by the Treaty of Versailles, 1919. Pop. 5,400.

Malmesbury, a borough and market town in Wiltshire on the Lower Avon, 10 m. N. of Chippenham, famous for the remains of its Benedictine Abbey, said to have been founded in the 6th Century. The historian, William of Malmesbury, died here in 1142. Pop. 2,300.

Malmesbury, William of, English Century, and one of the chief authorities for the history of his time; his chief works were *Gesta Regum Anglorum* and *Gesta Pontificum Anglorum*, followed by his *Historia Novella*. (c. 1093-1143).

Malmö, important seaport and third town of Sweden, opposite Copenhagen; ships farm produce, cement, matches and timber; has cigar and sugar factories, and some shipbuilding. Pop. 144,000.

Malmsey, a strong sweet white wine, named from Malvasia in Greece, and afterwards made in Madeira, the Azores and Sicily, from grapes which have been left to shrivel on the vine.

Malory, Sir Thomas, English author, flourished in the latter part of the 15th Century; a Warwickshire knight; was the author of *Morte d'Arthur*, a prose translation and collection of Arthurian legends which was finished in the ninth year of Edward IV., and printed fifteen years after by Caxton.

Malpighi, *Marcello*, Italian anatomist and professor of Medicine; noted for his discovery of the corpuscles of the kidney and the spleen, named after him. (1628-1694).

Malplaquet, a hamlet in the dept. of Nord, France, where Marlborough and Prince Eugene were victorious in 1709 over the French, under Villars, in one of the most famous battles of the Seven Years War.

Malt, grain, usually of barley, steeped in water and fermented, by which the starch of the grain is converted into saccharine matter, dried on a kiln, and then used in brewing (q.v.) ale, stout, beer or porter, and in the distillation (q.v.) of whisky. Brown or amber malts are used to give colour to mild ales, while black or chocolate malts give the dark colour to porter and stout.

Malta, a small British island in the Mediterranean, 80 m. S. of Sicily; a strongly fortified and most important naval station, headquarters of the British Mediterranean fleet; was annexed to Britain in 1814. The island is treeless, and with few streams, but fertile, and has many wells. Wheat, potatoes, and fruit are largely cultivated, and silkree work and cotton manufactured. The people, who are Roman Catholics, are said to be descended from the ancient Carthaginians. There is a university at Valette, the capital. In 1921 a more liberal constitution was granted, but owing to defects in its working and to interference in politics by the clergy and later by "pro-

Italian influences this has been twice suspended, in 1930 and in 1933, and legislative power vested exclusively in the Governor. In 1938 a measure of Crown Colony Government was granted, but the new Maltese Legislature will not have power to legislate on the language question. Maltese is the language of general intercourse, and with English is the official language, Italian having been deposed from parity with them. The small islands of Gozo and Comino are included in the colony. Area (of 3 islands), 122 sq. m. Pop. 262,000.

Malta Fever, a febrile disease which in Malta and the Mediterranean coasts generally, having probably been spread by Maltese goats. The symptoms are high temperature, rheumatic pains and debility. The cause is a micro-organism discovered by Sir David Bruce.

Maltese Terrier, properly Maltese small lap-dogs of Maltese origin. The type has been preserved for more than two thousand years. It has a white, silky coat which naturally parts from head to tail, long drooping ears, head short and full, eyes dark, and legs short.

Malthus, Thomas Robert, an English in Surrey; is famous as the author of an *Essay on the Principle of Population*, of which the first edition appeared in 1798, and the final, greatly enlarged, in 1803. This work aimed at showing how the progress of the race was held in check by the limited supply of the means of subsistence and suggested that the human race increased more rapidly than its food supply. From him Malthusianism, or the conscious and deliberate limitation of the birth rate, takes its name. (1766-1834).

Malton, market town and urban district on an eminence on the N. bank of the river Derwent. In 1138 it was burned down by Thurstan, Archbishop of York, who besieged the town in order to drive out the Scots. Pop. 4,400.

Maltose, or Malt-Sugar, a disaccharide of starch, e.g., by the enzyme diastase in malt. It is a solid substance crystallizing in white needles, and is converted by the enzyme maltase (e.g., in yeast) into glucose or grape-sugar.

Malvern, Great, a watering-place in Worcestershire, on the side of the Malvern Hills, much frequented by invalids; the first hydropathic establishment in the country was opened here in 1842. There is a famous public school, founded in 1865. Every year a festival of drama is held here. Pop. 16,700.

Mamelukes, originally slaves from the regions of the Caucasus, captured in war or bought in the market-place, who from being the bodyguard of the Sultan in Egypt in the 13th Century, rose to rule the country and choose the Sultans from their own number until 1517. They remained powerful thereafter, and resisted Bonaparte, who defeated them, at the battle of the Pyramids in 1798, but recovering their power after his withdrawal they were annihilated in 1805 and 1811 by Mehmet Ali, who became Viceroy of Egypt under the Porte.

Mammals, or Mammalia, the highest kingdom of animals; the females are characterised by the possession of mammae (teats) enabling them to suckle their young. They are usually marked by a peculiar cranial conformation, a highly developed brain, a hairy body, and by having two sets of teeth in their lifetime, the "milk teeth" and permanent teeth. The class, which is sometimes popu-

larly but erroneously called quadrupeds, includes some sea animals (whales, dolphins, etc.), and flying animals (bats). There are some 5,000 living species, and many more known only as fossils; and they are distributed over the whole globe. They are divided into Primates (monkeys, apes and man); Chiroptera (bats); Carnivora (cats, dogs, bears, etc.); Insectivora (insect-eaters); Rodentia (gnawing animals); Ungulata (hoofed animals); Edentata (sloths, etc.); Sirenia (dugongs and manatees); Cetacea (whales and porpoises); Marsupials (Kangaroos, etc.), and Monotremata (the echidna and ornithorhynchus).

Mammoth,

an extinct long-haired elephant-like mammal of enormous size found fossilised in Northern Europe and Asia in deposits together with human remains, and yielding a supply of fossil ivory; its tusks have a length sometimes exceeding 10 ft.

MAMMOTH

Mammoth Cave, a cave in Kentucky, U.S.A., the largest in the world, several miles in extent, and rising at one point to 300 ft. in height, with numerous side branches leading into grottoes traversed by rivers, which here and there collect into lakes.

Man, a quadruped of the order Primates, whose forelimbs have been specialised as tools and are not used for progression; he thus has an erect posture. He is also differentiated from other mammals by his exceptional mental development, his opposable thumb, and prominent chin. The use of articulate speech and the possession of a moral sense, and possibly the faculty of laughter, also appear to be peculiar to him. He is remarkable for his scanty growth of hair; his skin-colour ranges from pinkish-white through yellow and brown to black. His food covers a wide range of animal and vegetable substances; unlike any other animal he submits much of it to the action of heat before consuming it. He is found in all parts of the globe except the extreme Arctic and Antarctic regions. He lives in communities; the development of his hands and the possibility of communication of thoughts and ideas between individuals of the species consequent upon his faculty of speech have enabled him to exercise considerable mastery over his environment and to use the products and forces of Nature for his own ends. Man appears to have developed from a lemur-like ancestor, and the oldest fossil remains of a man-like creature so far known suggest that he has existed for at least a million years. All living men belong to a single species, *Homo sapiens*, but there have in the past been other species—*Homo neanderthalensis*, *Homo primigenius*, etc.—which are now extinct. See also Races of Mankind.

Man, Isle of, a small island in the Irish Sea, 35 m. W. of Cumberland, and about the same distance E. of Ireland; from its equable climate and picturesque scenery is a favourite holiday resort; it has lead mines at Laxey and Foxdale; fishing and cattle-grazing are profitable industries. The people are of mixed Celtic and Norse extraction, and until a century ago spoke a Celtic language, Manx. The island has its own government, the Court of Tynwald, comprising a Council composed of the Bishop, deans, etc., and an elected House of Keys, and a Lieutenant-Governor; and is not bound by acts of the British parliament. The capital is Douglas. Area, 220 sq. m. Pop. 49,500.

Managua, the capital of the state of Nicaragua and the chief town of the department of the same name. It is situated on Lake Nicaragua. The town was almost entirely destroyed by earthquake on March 31, 1931. It is being rebuilt and has a university and considerable commerce. Pop. about 80,000.

Manaos, the capital and river port of the state of Amazonas on the Rio Negro, Brazil. Its exports include rubber, Brazil nuts, cocoa and hides. Pop. 89,000.

Manasseh, Ben Israel, a Jewish author, born in Lisbon; settled at Amsterdam; wrote several works in the interest of Judaism, and induced Cromwell to permit the re-settlement of Jews in England, from which they had been excluded for several centuries. (1604-1657).

Manatee, or Sea-Cow, the three species of the genus *Manatus* of the order Sirenia. They are inoffensive animals and inhabit the shallow coastal waters of tropical America and Africa, feeding on aquatic vegetation. The body is naked and stout, shaped like

MANATEE

a whale's, and has a shovel-shaped tail. They have paddles as forelimbs and digits with flat nails; the eyes and ears are small. Manatees are valued for their skin, flesh and oil. The three species are the *Manatus senegalensis* of Africa, the *M. americanus* of America and the *M. inunguis* of the Amazon.

Manche, La, the French name for from its resemblance to a sleeve, which is the meaning of the French name.

Manchester, on the Irwell, in the SE. of Lancashire, 30 m. E. of Liverpool, the centre of the English cotton-manufacturing district, with many other textile and related industries, is the fourth largest city of England. It has many fine buildings, including a Gothic Town Hall and Assize Court House; there is a picture-gallery, several excellent schools, and the famous John Rylands library; Owens College was the nucleus of Manchester University. The city grew enormously during the Industrial Revolution, and its industrial struggles in the beginning of the 19th Century were severe, and included the famous "Peterloo massacre." The famous Ship Canal, which connects it with the Mersey estuary, makes it a port of first importance. The railway to Liverpool was one of the first in England. Pop. 744,000.

Manchester, a town in the county of Hillsborough, New Hampshire, U.S.A., on the Merrimac R. Its manufactures include paper, foundries, and weaving. Pop. 76,900.

Manchester Ship Canal, a canal between Liverpool and Manchester, the construction of which, sanctioned by Parliament in 1885, converted Manchester into a port. The course is via Eastham, Runcorn and Latchford, and it is linked with natural water-courses. Its length is 35½ m., depth 28-30 ft., and the narrowest width, apart from the locks, 120 ft. At Manchester the dock accommodation covers 100 acres, with a quay area of 150 acres. The quays have a total length of 6 m. It cost £15,500,000 to build.

Manchukuo. See Manchuria.

Manchuria, region of NE. Asia, lying between Mongolia and Korea, with the Amur R. on the N. and the Yellow Sea on the S., is five times the size of England and Wales. The N., central and E. parts are mountainous; the Sungari is the largest river; the soil is fertile, producing

large crops of millet, maize, hemp, etc., but the climate in winter is severe. Fine forests abound; the country is rich in gold, silver, coal, and iron; beans, silks, skins, and furs are exported; cotton and other manufactures are rapidly increasing. The chief towns are Hsinking (the capital), Mukden, Harbin, and Antung. Until the fall of the Chinese Empire in 1911, the country was part of China, Russian influence having been replaced by Japanese after the war of 1905.

In 1930 Japan alleged that her interests, especially in the S. Manchuria railway, were being jeopardised by Chinese action, and began the military occupation of the area, overcoming Chinese resistance, and setting up in 1932 a new Japanese-protected state of Manchukuo, consisting of the former provinces of Fengting, Kirin, Heilungchiang, and Jehol, the former Chinese Emperor being set up as, first, President, and in 1934, hereditary Emperor of the state. A League of Nations commission of enquiry under Lord Lytton was sent out, and reported unfavourably to Japan, but no action was taken. The state of Manchukuo has an area of 460,000 sq. m. and a pop. of 34,350,000; the population is mainly Chinese, but Japanese and Koreans are immigrating in large numbers.

Manchus, Manchuria (q.v.), only a fraction of the present population, which consists mainly of Chinese immigrants. The Manchus proper are a Tungusian race with Mongolian characteristics; they invaded China in the 17th Century, and a Manchu dynasty ruled there until the advent of the Chinese Republic in 1911.

Mandalay, capital of Upper Burma, on the Irawadi, in the centre of the country, 360 m. N. of Rangoon; was seized by the British in 1885. The Aracan Pagoda, with a brazen image of the Buddha, attracts many pilgrims, and Buddhist monasteries cluster outside the town. There are silk-weaving, gold, silver, ivory, and wood work, gong-casting and sword-making industries. Pop. 148,000.

Mandamus, in law, an order of the Crown, requiring a person, corporation or inferior court to do something pertaining to their office, but generally used of a writ of mandamus from the High Court to test the legality of an inferior court's action in some case of a public nature in respect of which no other legal remedy exists.

Mandarin, the name given by foreigners to Chinese official functionaries, of which under the Empire there were some nine orders, distinguished by the buttons on their caps; the name is also applied to the standard form of the Chinese language used for official purposes. Also the name of a small sweet orange from which a liqueur is made.

Mandated Territories, these, which as a result of the World War ceased to be under the sovereignty of the Central Powers and which by agreement of the Allied and Associated Powers were mandated to various countries, the mandates being formally submitted to the League of Nations for approval. Great Britain received mandates for Iraq, Palestine, Tanganyika Territory, part of the Cameroons and of Togoland, and Trans-Jordan; France received Syria, part of the Cameroons and of Togoland; German SW. Africa went to the Union of South Africa; all the former German possessions in the Pacific S. of the equator, excepting Nauru and Samoa, went to Australia; Samoa to New Zealand; Nauru to Great Britain; and all Pacific possessions N. of the equator were assigned to Japan. Under the provisions of the mandates, the Mandatory is enjoined to submit an annual report of progress to the Permanent Mandates Commission of the

League of Nations, thereby affording a guarantee of the equitableness of the system. Britain has relinquished the mandate for Iraq, which is now independent; and that for Syria is to be relinquished by France in 1938; Japan, having left the League of Nations, now looks upon the territories mandated to her as her own possessions.

Mandeville, Bernard de, Anglo-Dutch writer, born in Dordrecht, Netherlands, who came to London to practise medicine, and wrote the *Fable of the Bees*, a cynical treatise on vice and virtue directed against the ethics of Shaftesbury (q.v.). (1670-1733).

Mandeville, Sir John, English adventurer, who from his own account travelled over 30 years in the East and wrote a narrative of the marvels he experienced in a book of voyages and travels published in 1356. The authorship of this book has been questioned, it being affirmed that the actual author was Jean de Burgoyne, of Liège, while there is evidence that much of the matter has been borrowed from other narratives.

Mandoline, musical instrument of the string family, Italian in origin; it has a short finger-board and pear-shaped body, and is played with a plectrum.

Mandrake (*Mandragora*), a small genus of hardy herbaceous perennial plants of the order Solanaceae comprising 3 species native to the Mediterranean areas and the Himalayas. The Common Mandrake or Devil's Apples (*Mandragora officinalum*) bears blue or white flowers in May. All kinds of wonderful properties were formerly attributed to these plants and for long they were deemed typical of all manner of dreadful things; but there is some little doubt as to what plant the ancients really meant when they spoke of the mandragora, to which they ascribed marvellous virtues. Soporific qualities were attributed to it and it formed an ingredient in love-potions.

Mandrill (*Papio maimon*), a ferocious variety of baboon found in W. Africa. It has naked cheeks striped in blue and vermillion, a short tail and ischial callosities of a bright red colour.

Mandrills associate in large numbers and often plunder villages and growing crops.

Manes, the general name given by the Romans to the departed spirits of good men who are conceived of as dwelling in the nether world, and as now and again ascending to the upper.

Manet, Edouard, French artist. Son of a Paris magistrate, he studied under Couture, travelled round Europe, settled down and produced paintings in a natural style, exhibiting at the Salon from 1861. (1832-1883).

Manganese, a metallic chemical element discovered by Gahn in 1774. Symbol Mn; atomic number 25; atomic weight 54.95. It finds little application except in the manufacture of alloys; but here its importance is considerable. Manganese steel is extremely hard and tough, and has proved invaluable for railway metals, protective helmets for military purposes, and many similar objects. Among the compounds of manganese, the chief are the permanganates of sodium and potassium. Both of these salts are powerful germicides, and a solution of the former is sold, under a trade name, for disinfection. Potassium permanganate is an almost black crystalline solid, the sodium salt—dissolves in

water to give a deep purple solution. Manganese dioxide is used in the laboratory as a catalyst in the preparation of oxygen by the action of heat on potassium chlorate, and also for preparing chlorine from hydrochloric acid.

Manganin, an alloy of 7 parts of copper with 1 part of manganese and a small proportion of nickel; it is used for resistance coils in electricity, as the conductivity varies very little with change of temperature.

Mange, a disease of the skin occurring in dogs, cats, horses and cattle; it is similar to the itch in human beings. The disease is produced both by the carcioptic mite and by a mite which infests the capillary follicles. It is very contagious and necessitates the burning of the patient's clothing and bedding.

Mangin, Charles Marie Emmanuel, French general, born at Sarrebourg; served in the Sudan (1895-1898), Tonking (1901-1904), West Africa (1907-1911) and Morocco (1912-1913); and in the World War organised the army of French colonial troops. In command of the 8th Infantry Brigade, he gained successes at Verdun in 1916; from the end of 1917 he commanded the 10th Army and after the armistice, the army of the Rhine. (1866-1925).

Mango, the fruit (a large drupe) of the natural order Anacardiaceae, grown abundantly in the tropics though native to the East Indies. It is used as an ingredient of chutney.

Mangold-Wurzel, a coarse kind of beet, pale yellow in colour, larger than the garden beet, and grown as cattle feed. It is derived from the sea-beet (*Beta maritima*).

Mangosteen (*Garcinia mangostana*), a tropical evergreen fruit tree of the order Guttiferae, whose delicately flavoured brown fruits, not unlike oranges, are eaten in the East.

Mangrove (*Rhizophora*), a tropical tree with thick leaves, large flowers and an edible fruit. Its bark is used in medicine and as a dyestuff. The netlike formation of the widely-spreading roots about which decaying vegetable matter easily collects, cause the tree to be planted in swampy regions as an aid to land reclamation.

Manhattan, a long island at the mouth of the Hudson, on which a great part of New York stands.

Mani, or **Manes**, the founder of Manichæism (q.v.), a native of Ecbatana in Persia at the court of whose king, Sapor I, he preached. He was crucified A.D. 274.

Mania, a term applied to insanity characterized by mental exaltation. In simple mania the brain over-functions and the patient is talkative and displays a marked absence of sustained purpose, though unweariness in mental activity. The degree of insanity is mild. In acute mania the motor functions of the brain are affected and the patient is increasingly active, incoherent in speech, and while seemingly untiring in both mind and body, gradually becomes exhausted with possibly fatal results.

Manichæism, a religious system founded by Mani, a Persian, which ascribes the created universe to two antagonistic principles, the one essentially good—God, spirit, light; the other essentially evil—the devil, matter, darkness. It was based in part on Zoroastrianism, and was for a time a serious rival to Christianity, especially in the E.; the Abigènes in Southern France were largely Manichæan in their belief. St. Augustine (q.v.) of Hippo was a Manichæe before his conversion to Christianity.

MANDRILL

Manila, capital of the Philippine Is.; at the head of a great bay on the W. coast of Luzon; is hot, but not unhealthy; suffers severely from storms and earthquakes, and is largely built of wood. It has a cathedral, university, and observatory. Its main industry is cigar-making; the exports include manila hemp, sugar, and coffee. The population, chiefly Tagals, includes Chinese, Spaniards and Europeans. In the Spanish-American War of 1898 Admiral Dewey captured the city. Pop. 378,000.

Manila Hemp, a fibre from the leaf stalks of *Musa textilis*, a plant of the Philippine Is. It is mostly used for making ropes, twine, etc., but the finer qualities are woven for sails, scarves and other wearing apparel.

Manipur, a native state of India between Burma and Assam. It has an area of 8,400 sq. m. and a population of 445,000 of whom one-third are animistic tribes.

Manitoba, a "prairie" province of Canada, with the United States on its S. border, Saskatchewan on the W., and Ontario on the E.; the S. is a level prairie and arable country, scantily wooded but well watered, having three large lakes, Winnipeg, Winnipegosis, and Manitoba, and three large rivers, Assiniboine, Souris and Red R. The soil is very fertile, producing fine wheat; mixed farming, dairy, cattle, and sheep farming are carried on successfully. Coal is found in the S., and gold, copper and zinc in the N.; fishing is pursued on the lakes and rivers. Constituted a province in 1870, Manitoba was the scene of the Riel rebellion, quelled that same year. In 1912 its territory was greatly extended. The capital is Winnipeg, the seat of a university and of extensive flourmills. Area, 251,800 sq. m. Pop. 700,000.

Manlius, a Roman hero who, in 300 B.C., saved Rome from an attack of the Gauls, and was afterwards for treason thrown down the Tarpeian Rock.

Mann, Thomas, German novelist, born in 19; practised literature while engaged in an insurance office. After issuing several minor works became famous with *Buddenbrooks*, 1903—a long novel describing experiences of an old Lübeck family. Other works: *Der Tod in Venedig* (Death in Venice), *Der Zauberberg* (The Magic Mountain), 1924. Nobel prize winner, 1929. He left Germany after the rise of the Nazis. (1875-).

Mann, Tom, British labour leader; born at Foleshill, Warwickshire; in youth worked on a farm, in a mine, and as an engineering apprentice, joining in 1881 the Amalgamated Society of Engineers, of which he was Secretary from 1918 to 1921. Became a Socialist in 1885, and was one of the leaders of the 1889 Dock Strike, becoming president of the Dockers' Union in 1890. From 1894 to 1896 secretary of the Independent Labour Party; from 1899 to 1902 kept a London tavern. In 1902 went to Australia and later to South Africa, returning to England in 1910 to lead the Syndicalist movement; in 1912 was imprisoned for exhorting soldiers against action in labour disputes. In 1927, having become a Communist, visited the interior of China on a revolutionary mission. (1859-).

Manna, the food with which the Israelites were miraculously fed in the wilderness, a term said to mean "What is this?" being the expression of surprise of the Israelites on first seeing it, but more credibly derived from the Hebrew *mān*, a gift; identified with a species of tamarisk from the stem of which exudes a saccharine sap.

Mannheim, German city in Baden, on the Rhine, 55 m. above Mainz; has manufactures of tobacco, chemi-

cals, and iron goods, and a growing river trade. An old historical city, it was formerly capital of the Rhenish Palatinate, and a resort of Protestant refugees; later the capital of the Grand Dukes of Baden. Pop. 275,000.

Manning, Henry Edward, cardinal, born Merton, Oxford, and a leader in the Tractarian Movement there; became rector in Sussex; married, and became Archdeacon of Chichester; dissatisfied with the state of matters in the Church of England, in 1851 he joined the Church of Rome, became Archbishop of Westminster in 1865, and Cardinal in 1875; was a strong supporter of infallibility at the Vatican Council of 1870; interested in social questions. (1808-1892).

Manoel I. ("the Happy"), king of Portugal 1495-1521; sent Vasco da Gama round the Cape of Good Hope to India, 1497; Cabral on the voyage in which he discovered South America, 1500; Corte Real to Labrador, 1500; Almeida and Albuquerque to the East Indies, 1505. (1469-1521).

Manoel II., king of Portugal 1908-1910; son of King Carlos I., on whose assassination he succeeded to the throne, being expelled from the country two years later on the establishment of the Republic; afterwards resided in England at Twickenham, engaged in literature, and in 1913 married Princess Augusta Victoria of Hohenzollern. (1889-1932).

Manometer, an instrument for determining the pressure of gases or vapours. A common form is a bent glass tube open at both ends and containing mercury at the angle. When gas or vapour is applied to one end the mercury rises in the other. Manometers which measure gaseous pressure by the tension of a spring are used for steam-gauges.

Manor, under the feudal MANOMETER system of land tenure, a piece of land held by a lord who occupied so much as was necessary for the use of his family and granted the remainder to tenants for stipulated rents or services. The manor was usually granted by the sovereign to the lord of the manor, who could hold a court of his tenants and impose fines for misdemeanours, and later exercised criminal jurisdiction. After the Norman Conquest the King's Courts absorbed much of the power of the manorial courts. In 1285 the granting of new manors ceased under the statute of *Quia Emptores*. Labourers on the manor were serfs who had no freedom.

Mans, capital of the French dept. of SW. of Paris, on the R. Sarthe, 170 m. SW. of Paris; has a magnificent cathedral; is an important railway centre, and has tobacco and textile factories. It was the scene of a great French defeat by the Germans in January, 1871. It is the scene of an annual motor race. Pop. 85,000.

Mansard, the name of two French François, architects, born in Paris—François, who constructed the Bank of France (1698-1686), and Jules Mansard, his grand-nephew, architect of the dome of the Invalides and of the palace and chapel of Versailles. (c. 1645-1708). François was the designer of a type of roof, consisting of 4 planes inclined to one another and hinging on one another and usually provided with dormer windows (q.v.); popular in France in the 17th Century.

Mansfield, market-town of Nottinghamshire, shire, England, 14 m. N. of Nottingham, in the centre of a mining district, with iron and lace-thread manufactures. Pop. 48,800.

Mansfield, Katherine, English writer, born in New Zealand; her several collections of short stories include *Rhiss*, *The Garden Party*, *Something Childish*. She was the wife of John Middleton Murry (1889-1923).

Mansfield, William Murray, Earl of, Lord Chief Justice of England, born in Perth, called to the bar in 1730; distinguished himself as a lawyer, entered Parliament in 1743, and became Solicitor-General; accepted the chief-justiceship in 1756; was impartial as a judge, and is acknowledged as the founder of present-day commercial law; raised to the peerage in 1776, and resigned his judgeship in 1789. (1705-1793).

Mansion House, in the Poultry, London, the official residence of the Lord Mayor of London, erected in 1739 at a cost of £42,638, with a banqueting-room accommodating 400 guests.

Manslaughter, is the unlawful killing of another without malice (*q.v.*) aforethought, express or implied; and is said to be voluntary or involuntary. Voluntary manslaughter is where death is caused by a sudden act of revenge whilst the accused is still under provocation; and it differs from excusable homicide in self-defence, because there has been no attempt to get away before killing in self-preservation the person who gives the provocation. Killing through culpable negligence is also manslaughter. In Scots law, the term is not used; the cardinal division of criminal homicide is into murder and culpable homicide. The punishment for manslaughter is up to penal servitude for life.

Mansurah, a city of Lower Egypt and Dakhla on the Nile about 25 m. from Damietta. It is a centre of trade in cereals, grain and cotton. Pop. 68,700.

Mantegna, Andrea, an Italian painter and engraver, born in Padua. His works were numerous, many of them altar pieces and frescoes, his greatest "The Triumph of Caesar." He was a man of versatile genius, was sculptor and poet as well as painter, and his influence on Italian art was great. (1431-1506).

Mantes, town in dept. Seine-et-Oise, France, with manufactures of brushes, baskets, etc. It was here that William the Conqueror received his death wound. Pop. c. 11,000.

Mantilla, a head-covering, commonly of lace, worn by women in Spain. It is used as a veil, and is draped around the shoulders. The term is also used to denote a woman's light shoulder cloak.

Mantis (Mantidae), a family of carnivorous orthopterous insects. The European Praying Mantis (*Mantis religiosa*) is so called from the attitude of its forelegs, as of a person at prayer, while lying in wait for its prey.

Mantling, or Lambrequin, in heraldry, the ornamental drapery flowing from the helm or crest in a coat-of-arms.

Mantra, the Hindu name for a religious poetical incantation or charm, especially a verse from the Vedas used for that purpose.

Mantua, city in Italy, in SE. Lombardy, on two islands in the R. Mincio, 83 m. E. of Milan, has a fine cathedral, and many other medieval buildings; there are silk-spinning, weaving and tanning industries. *Vergil* was born herein 70 B.C. Pop. 40,500.

PRAYING
MANTIS

Manu, Code of, a Hindu book, containing a code of religious and social legislation, dating in its present form from about the 1st Century B.C. It expounds the doctrines of Brahminism, inculcating "sound, solid, and practical morality," and contains evidence of the progress of civilisation among the Aryans from their first establishment in the valley of the Ganges. Manu, the alleged author, appears to have been a primitive mythological personage, conceived of as the ancestor and legislator of the human race.

Manure, any material used for treating the soil in order to increase the productivity of plants. Manure is necessary to replace the ash-constituents and air-food of exhausted soil, though to some extent this replacement proceeds naturally through decomposition of mineral matter, the absorption of carbonic acid, etc. The natural supply of plant food in soils has long been supplemented by the application of manures and by waste products of the farm or of industrial processes; but modern scientific research has revealed the nature of the principal plant foods and shown that such foods could be added to the soil in the form of simple chemical compounds almost equally beneficially.

Manzoni, Alessandro, Italian poet and novelist. Born in Milan; converted in early life from scepticism to Catholicism; wrote a volume of hymns entitled *Inni Sacri*, and a tragedy, *Adelchi*, his masterpiece, as also a novel, *I Promessi Sposi*, which gave him a European reputation. In 1860 was made a senator of the kingdom of Italy. (1785-1873).

Maoris, the natives of New Zealand, a Polynesian race, who appear to have reached that country from Hawaii; a well-developed, intelligent and brave people, now numbering about 80,000, and completely civilised. They are said to have been cannibals before their Europeanization; they were formerly famous for their custom of elaborately tattooing their faces and bodies.

Maori Wars, conflicts between the settlers of New Zealand and the aborigines over boundaries. They were fought from 1843-1847, 1863-1864, and 1869-1870.

Map, a plane diagram depicting the physical or other features of the whole, or any part, of the earth's surface. The system on which the meridians and parallels (see *Latitude* and *Longitude*) of a map are drawn is called the projection. One of the most common is Mercator's Projection, in which meridians and parallels are depicted as straight lines at right angles to each other. This scale is exaggerated in high latitudes, but is universally used at sea, since a ship keeping a constant course follows a straight line on the map or chart. A conical projection has the meridians represented by straight lines converging on a centre and parallels by concentric circles at right angles to these lines. A modified conical projection is the orthomorphic, with two standard parallels, usually called Lambert's second Projection. In the later stages of the World War such maps were used by the Allies. The choice of projection depends upon the purpose of the map. Modern survey maps are now made by a system of aerial photography, a series of photographs, one overlapping another, being taken and the prints assembled.

Map, or *Mapes*, Walter, Welsh author, born probably in Herefordshire. He was a Canon of Lincoln and Archdeacon of Oxford from 1196. His one undoubted literary work is *De Nuptis Curialium*, consisting of rough notes and reminiscences, with gibes at monastic orders and the Roman court. Parts of the Arthurian legend, much satirical verse, and a famous drinking-song, are ascribed to him. (c. 1140-c. 1209.)

Maple, the common name of the trees of the genus *Acer*, natural order Aceraceae. *Acer campestre* is indigenous in Britain. Other species are Silver, Oregon, Red swamp, Box elder and Sugar Maple. Maple sugar, a coarse sugar used in Canada and in Western states of U.S.A., is obtained by making incisions in the stem of the sugar maple (*A. saccharinum*) and evaporating and crystallizing the sap which flows therefrom. Good timber is obtained from the Oregon, Box elder and other kinds.

MAPLE

Marabou, a stork of the genus *Leptoptilus*. There are two species: *Leptoptilus marabou*, a native of Western Africa and *Leptoptilus dubius* the adjutant bird (q.v.) of India. The tail-covert feathers of both are used by milliners.

Marabouts, a sect of Mohammedan venerated in N. Africa, believed to possess supernatural power, particularly in curing diseases, and exercising at times considerable political influence.

Maracaibo, a Venezuelan city on the Lake Maracaibo; has handsome streets and buildings, and exports coffee and valuable woods. The lake of Maracaibo is a large freshwater lake in the W. of Venezuela, connected with the Gulf of Maracaibo by a wide strait, across which stretches an effective bar. Pop. 110,000.

Marañon, one of the head-waters of the Amazon, rising in Lake Lauricocha, Peru, and flowing N. and E. till it joins the Ucayali and forms the Amazon; the name is sometimes given to the whole river.

Maraschino, the fermented juice of the *marasca* cherry which was originally distilled as a cordial in Dalmatia. It is flavoured with broken kernels. It is now produced in other countries.

Marat, Jean Paul, French revolutionary leader, born in Neuchâtel, his father an Italian, his mother a Genevaise; studied medicine at Bordeaux, and afterwards practised in London and Paris, was arrested and imprisoned in 1789, and while subsequently hiding in Paris sewers contracted a skin disease; was prominent in demanding the death of Louis XVI, and a popular hero, but was assassinated by Charlotte Corday (q.v.) one evening as he sat in his bath. (1743-1793).

Marathon, a village, 22 m. N.E. of Athens, on the sea border of a plain where the Greeks under Miltiades defeated the Persians under Darius in 490 B.C. The plain on which the battle was fought extends between mountains on the W. and the sea on the E.

Marathon Race, an event in the Olympic Games held every fourth year in various parts of the world. It is also the name for similar races wherever held, generally over a course of 21 m. The name is derived from the classical story of Pheidippides, who ran from Marathon (q.v.) to Athens with news of the battle.

Marazion, or Market Jew, small town on the S. coast of Cornwall, facing St. Michael's Mount, 3 m. from Penzance. It was burnt by the French in 1513, and again in 1549 during the Arundel rebellion in the reign of Henry VIII. Its name has been thought to commemorate the site of an ancient Jewish settlement. Pop. c. 1,000.

Marble, a calcareous stone of compact texture which can be highly polished. It consists of granules of uniform size which, in severance, split along the

rhombohedral cleavage plane presenting glistening facets. Marbles are metamorphosed limestones. They are of great economic value on account of their durability and many records on marble are of great antiquity. Marble is used for statuary and in ornamental architecture. Its distribution is very wide.

Marble Arch, a London landmark as a gateway to Buckingham Palace, and in 1850 removed to its present position by the N.E. corner of Hyde Park, London.

Marburg, German university town in Hesse-Nassau, on the Lahn, 40 m. N.E. of Limburg; has many old buildings; its Gothic church contains St. Elizabeth's tomb; Luther and Zwingli held a conference in the castle, 1529; William Tyndale and Patrick Hamilton were students at its university, which has a fine library. Pop. c. 20,000.

Marcellus, Claudius, Roman general; killed their chief, Viridomarus, with his own hands, whose spoils he dedicated as *spolia optima* to Jupiter; took Syracuse, which long baffled him through the skill of Archimedes, and fell fighting against Hannibal, 208 B.C.; he was five times consul.

March, the third month of our year; was as in the Roman calendar, the legal year beginning on the 25th. It is proverbially stormy, and is the season of the spring equinox. It was dedicated to the Roman god Mars, whence the name.

March, market town and urban district of the Isle of Ely, Cambridgeshire, 29 m. N. of Cambridge, on the R. Nene. It is the centre of a corn and fruit growing district. Pop. 11,300.

March, a boundary, used especially of *Marches*, the border countries between England and Wales and Scotland respectively. The Earl of March (q.v.) took his title from the Welsh Marches, and in the Middle Ages the governors of the border districts were known as Wardens of the Marches. The name is alluded to the German "Mark," with a similar meaning, as in the "Mark of Brandenburg." A Marquis was originally the ruler of such a "March."

March, Roger Mortimer, first Earl of Wigmore, Herefordshire; as Viceroy of Ireland in 1316, defeated the rebellion of the Lacys and repulsed Edward Bruce. Antagonised by encroachments of the Despencers in Wales, he rebelled; was imprisoned two years in Tower; escaped to the Continent; became paramour of Edward II.'s queen, Isabella; returned in 1326 and led the movement that deposed the king (soon afterwards murdered). He was made an Earl in 1328, and exercised kingly authority. Captured at Nottingham Castle by Edward III., he was carried to London and hanged. (1287-1330).

Marchand, Jean Baptiste, a French emissary in Africa; was sent in 1890 to explore the sources of the Niger and other districts, and was afterwards appointed to push on to the Nile, where he arrived in 1898, hoisting the French flag at Fashoda, an incident which gave rise to tension with England. He was obliged to retire and find his way back to France. (1863-1934).

Marchesi, Blanche, Baroness Caccamisi, French singer, born in Paris; appeared in Wagnerian and other operas in Berlin, Prague, Paris, and London with great success; afterwards taught singing. (1826-1913).

Marcon, a heretic of the 2nd Century, born in Sinope, in Pontus, who rejected the Jewish elements in Christianity,

refused to acknowledge the Old Testament, and took his stand on the words of Christ and the interpretation of St. Paul. He held that an ascetic life was of the essence of Christianity; his followers were called Marconites.

Marconi, *Guglielmo*, *Marchese*, Italian scientist, inventor of wireless telegraphy; born at Bologna of an Irish mother. Studied in Florence and Leghorn, and at Bologna university. He came to England in 1896, and took out the first patent for radiotelegraphy. A company to exploit it was formed in London, 1897. Communication between England and France was established, 1899, and between Cornwall and Newfoundland in 1901. Marconi shared the Nobel Prize for physics in 1909. During the World War, he had charge of the Italian radio system. He was Italian plenipotentiary at the Peace Conference, 1919, and was created a *Marchese*, 1929. (1874-1937).

Marcus Aurelius, *Antoninus*, Roman emperor, was adopted by Antoninus Pius, when the latter was adopted

by Hadrian, and married Faustina, daughter of the licentious wife of Antoninus. On the death of Antoninus in 161, he succeeded to the throne, but most of his reign was spent in warring with the Marcomanni and Quadi. He is chiefly famous for his devotion to the Stoic philosophy, and is commonly called "the philosopher."

His *Meditations* is a record of his religious and moral principles, and is a most famous classic. (121-180 A.D.)

MARCUS AURELIUS

Mardi Gras, the French name for the eve of Lent and concluding day of the carnival, marked by a procession through the streets of a prize ox, a burlesque of an old Roman sacrificial custom, together with mock priests, a band, and other merry-makers.

Maremma, a malarial coast district of Italy, N. of the Campagna, stretching from Orbelleto to Guardistallo, with few villages or roads. Part of it was improved by draining and planting (1824-1844), and is cultivated in summer by the Apennine farmers; in winter it is used for pasturage.

Marengo, a village of N. Italy, S.E. of Alessandria, where Napoleon defeated the Austrians under Baron Melas on June 14, 1800.

Maréotis, Lake, a lagoon in the N. of Egypt, 40 m. long by 18 m. broad, separated from the Mediterranean by a tongue of land on which part of Alexandria is situated.

Mare's Tail (*Hippuris vulgaris*), a water plant of almost cosmopolitan distribution, growing in ponds. The leaves are narrow and pointed, growing in circles up the stem at short distances, the upper ones projecting above the water. The flowers grow from the joint of the leaf and are without petals.

Margaret, Queen of Denmark, Norway, and Sweden, was the daughter of Waldemar IV. of Denmark, whose crown, on his death in 1375, she received in trust for her son Olaf. Her husband, Haakon VII. of Norway, died in 1380, and left her queen; the Swedes deposed their king next year, and offered Margaret the throne, which she accepted, and ultimately brought about the Union of Calmar (1397), which provided for the perpetual union of the three crowns. (1345-1412).

Margaret, the "Maid of Norway," daughter of Eric II. of Norway and Margaret, daughter of Edward III. of Scotland, affianced to Edward III. of England, but died on her way from Norway. (1283-1290).

Margaret, *St.*, a Christian martyr, Antioch, the type of feminine innocence, represented as a maiden bearing the palm and crown of a martyr and attended by a dragon. Festival, July 30.

Margaret, *St.*, Queen of Scotland, and sister of Edgar Atheling, born in Hungary; brought up at the court of Edward the Confessor; after the conquest sought refuge in Scotland, and married its king, Malcolm Canmore; was a woman of beautiful character and great piety and did much to civilise the country by her devotion and example. She was canonised by Innocent IV. in 1250. Festival, June 16 or November 16. (1047-1093).

Margaret of Anjou, *Queen* of England, and daughter of the good King René of Anjou; was distinguished for the courage she displayed during the Wars of the Roses, though, after a struggle of nearly twenty years, she was defeated at Tewkesbury and committed to the Tower, from which, after four years of incarceration, she was afterwards released by ransom. (1430-1482).

Margaret of Navarre, Queen of Navarre, sister of Francis I., married in 1527 Henri d'Albret, king of Navarre, by whom she became the mother of Jeanne d'Albret; protected the Protestants, and encouraged learning and the arts. She left a collection of novels, under the name of *Heptameron*, and a number of interesting letters, as well as some poems. (1492-1549).

Margaret of Valois, *St.*, daughter of France and Catherine de' Medici; married Henry IV., by whom she was divorced for her immoral conduct. (1563-1615).

Margaret Rose, *Princess*, second daughter of King George VI. and Queen Elizabeth of England; born at Glamis Castle, Angus, Scotland, Aug. 21, 1930.

Margarine, a butter substitute made from vegetable oils and fats, frequently with the addition of milk or milk substitutes. Its manufacture and sale are carefully regulated by law, and all butter substitutes exposed for sale must be clearly labelled as margarine.

Margarita, Venezuelan island in the Caribbean Sea, 45 m. long by 30 m. at its greatest breadth. It is mountainous, fertile in the interior, produces maize, cotton and bananas, and there are magnesite deposits. Pear fishing is a government industry. Capital, Asuncion. The main port and chief commercial centre is Porlamar (pop. 4,900). - Pop. c. 60,000.

Margate, a seaport and watering-place, 3 m. W. of the North Foreland, Kent, England, is with its firm sands, bathing facilities, and various attractions a favourite resort of London holiday-makers. It is particularly famous for its beautiful sunsets. There are large almshouses and orphanages, and other charitable institutions. Pop. 40,000.

Margay (*Felis tigrina*), a spotted and striped tiger-cat of South America. It is about the size of a house-cat and can be domesticated. It is useful as a destroyer of rats and mice.

Margrave, ancient German title of a military governor in charge of a frontier or "mark." The title in its territorial sense went out of use in 1806, but was retained as a courtesy title.

Marguerite, name for large species of *Chrysanthemum* of the order Compositae, generally bearing white flowers; especially for the *Chrysanthemum frutescens*, with yellow or white flowers, the best known garden variety.

Mariana, Juan, Spanish political philosopher, born in Talavera; joined the Jesuits in 1554, and taught in their colleges in Rome, Sicily, and Paris; returning to Toledo, he gave himself to literature. His *History of Spain* appeared in 1592 and 1601. For certain theological writings he incurred persecution, and his greatest work *De Rege et Regis Institutione* in which he defended the right of the people to cast out a tyrant, was condemned by the general of his order. (1538-1624).

Maria Theresa, Empress of Austria, daughter of the Emperor Charles VI., whom on his death in 1740 she succeeded on the throne, associating her husband, Francis of Lorraine, with her in the government as Francis I.; despite the Pragmatic Sanction, which assured her of her dominions in their integrity, she was assailed by competing claimants, in particular by Frederick the Great, who wrenched Silesia from her. The war thus occasioned, known as the war of the Austrian Succession, lasted seven years, and was concluded by the Peace of Aix-la-Chapelle in 1748. Backed by France, she soon renewed hostilities in the hope of compelling Frederick to restore what he had taken, but the Seven Years War left things in this respect as they were though she gained some territory, including Galicia and Lodomeria, as a result of the first Partition of Poland. She also secured Bukovina from the Porte and some territory from Bavaria. In the intervals of the wars Maria Theresa introduced many internal reforms including the curbing of abuses of the Church. (1717-1780).

Marie Antoinette, Queen of France, fourth daughter of Maria Theresa; was married in 1770 to the Dauphin, later Louis XVI. Beautiful, haughty, indiscreet and extravagant, she grew in unpopularity until the outbreak of the Revolution. She was guillotined nine months after her husband. (1753-1793).

Marie de' Medici, daughter of the Grand-Duke of Tuscany, born in Florence; was married to Henry IV. of France in 1600, with whom she lived unhappily till his murder in 1610; she was then Regent for seven years. In 1617 her son assumed power as Louis XIII. She was for two years banished from the court, and on her return so intrigued as to bring about her imprisonment in 1631. Though a lover of art she was neither good wife nor good queen. Escaping from confinement, she died in destitution at Cologne. (1572-1642).

Marie Louise (Leopoldine Françoise Thérèse Joséphine Lucie), second Empress of Napoleon I.; eldest daughter of the Austrian emperor Francis I.; born at Vienna. Napoleon obtained her in marriage, after divorcing Josephine in 1810. In 1811 she bore him "Napoleon II., the King of Rome," and "Duke of Reichstadt" (d. 1832). In 1812 she accompanied her husband to Dresden and was nominal regent during his absence in the field, 1814. On his exile to Elba, she returned to Vienna. The Duchies of Parma, Piacenza, and Guastalla, were reserved for her son; she was ably assisted in their government by Count Neipperg, who married her in 1822. She died in Vienna. (1791-1847).

MARGUERITE

Marienbad, or Mariánské Lázně, a high-lying

Czechoslovakian watering-place 18 m. S. of Carlsbad; it is much frequented for its saline springs. Pop. c. 5,000.

Marigold, a name covering varieties of composite garden flowers. *Calendula officinalis* (or Pot Marigold), indigenous in S. Europe, is common in British gardens. It has orange or lemon-coloured flowers, used to impart a yellow colour to cheese. Other kinds are African (*Tagetes erecta*); Field (*Calendula arvensis*); Marsh (*Callith palustris*); French (*Tagetes patula*).

POT MARIGOLD

Mariner's Compass. See Compass.

Marines, Royal, the name used to designate raised and organised for the dual purpose of serving either on shore or afloat in ships. The first record of such a body is in 1664 when Charles II. embodied the Duke of York and Albany's Maritime Regiment to consist of 1,200 "land soldiers." The present 1st East Lancs., 1st East Surrey, and 1st Duke of Cornwall's Light Infantry all started as marine units. In 1803 marines were designated Royal and their facings altered from white to blue.

Formerly there were two distinct divisions, the Royal Marine Artillery and the Royal Marine Light Infantry, but they were amalgamated in 1923. When serving ashore the Royal Marines are subject to the Army Act and when afloat to the Naval Discipline Act. In the World War the Royal Marines were conspicuous in various places, particularly Gallipoli and the Belgian Coast. They rendered valuable service in the third Battle of Ypres and took part in the famous exploit at Zeebrugge (q.v.).

Mariolatry, worship of the Virgin Mary; a term used by Protestants, usually in a derogatory sense, to censure what in their view is the undue honour paid to the Virgin Mary by the Greek and Roman communions since the 5th Century, and in recent years imitated by some Anglicans.

Marionette, a jointed puppet, representing a human being or animal, and operated by concealed controls for the purpose of entertainment.

Mariotte, Edmé, a French physicist, born in Dijon; discoverer of the law that the volume of a gas varies inversely as the pressure; it bears the name of Mariotte's law on the Continent and Boyle's law in England. (1650-1684).

Marius, Gaius, a celebrated Roman general, born near Arpinum, uncle by marriage to Julius Caesar, head of the popular party, and the rival of Sulla; conquered the Teutons and the Cimbri at Genua, and made a triumphal entry into Rome. Having obtained command of the war against Mithridates, Sulla marched upon the city and drove his rival beyond the walls. Marius fled the city, and was condemned to die, but his executioner allowed him to escape to Carthage, whence he later returned to Rome, and with Cinna organised a general slaughter of the partisans of Sulla. He reorganised the Roman army and made it a power in the field. (156-86 B.C.).

Marjoram (*Origanum*), a genus of small hardy shrubs and perennial herbs of the order Labiateae, native of Europe and Mediterranean regions. The Sweet Marjoram, *Origanum Marjorana*, yields an aromatic oil on distillation, used in cookery for flavouring. The Wild or Common Marjoram, *Origanum vulgare*, a native of Europe (including

Britain), bears purple flowers and is commonly grown in old-world gardens, especially the golden-leaved variety, *aurum*.

Mark, a German silver coin, with a pre-war value of 11½d. After the World War the Mark completely lost its value, and eventually was replaced by the Rentenmark, converted at the rate of one trillion marks to one Rentenmark. In 1923 the Rentenmark was established on a gold basis, which after depreciation in the currency crisis of 1931 was replaced by the Reichsmark, with a par value of 11½d., but exchanging in 1938 at about 1s. 7d.

Mark, Gospel according to, probably the earliest of the Gospels to assume its present form. It was used as a source by the authors of the first and third gospels. There seems no reason to question its traditional attribution to Christ's disciple Mark, "the interpreter of Peter." It was written primarily for Gentile readers, and is a vivid but unadorned account of the life of Christ, for the events of whose career it is the principal authority.

Mark, John, the traditional author of the Barnabas' sister, who ministered to Christ, and whose house in Jerusalem was a place of resort for the disciples of Christ after the resurrection; accompanied Paul and his uncle on their first missionary journey and afterwards accompanied Peter. He is regarded as the founder of the Coptic Church, and his body is said to have been buried in Venice, of which he is the patron saint, the cathedral of that city being named St. Mark's after him. He is represented in Christian art as a man in the prime of life accompanied by a winged lion, with his Gospel in his left hand and a pen in his right. Feast, April 25.

Mark Antony. See Antonius, Marcus.

Market, a public place to which by custom, goods are brought to be exposed for retail sale. Such institutions were of great importance before the rise of modern methods of rapid and easy communication, and could only be established by licence of the Crown. They were generally held at fixed intervals; such names as Newmarket and Stowmarket still commemorate important markets of an earlier day. An annual market, or fair, is still held at many centres in Europe. The name is now most generally used of a place where agricultural and dairy produce is exchanged between the producers or wholesalers and the retail sellers; as Covent Garden (for fruit and vegetables) and Smithfield (for meat) in London.

Market Drayton, a market town of Shropshire, England, with manufactures of agricultural implements, a foundry and cattle market. Blore Heath, in the vicinity, was the scene of a battle in the Wars of the Roses. Pop. 4,700.

Market Garden, a piece of land where fruit, vegetables and flowers are grown for sale at a market. Such gardens are usually near large towns, to minimise costs of transport. Success depends upon the right choice of produce for the particular soil, having regard both to quality and quantity. Flower cultivation under present conditions is the most profitable form of market gardening. In fruit gardening apples yield the most permanent results. Vegetable market gardens can be made to yield, given the right conditions, potatoes, cabbages, carrots, turnips, onions, and salads without difficulty.

Market Harborough, manufacturing and market town in Leicestershire, England, 8½ m. from London, in the centre of a hunting country. There is a cattle market, and manufactures of combs and brushes. Pop. 9,500.

Markham, Mrs., pseudonym of Elizabeth Penrose, author of children's books, second daughter of Rev. Edmund Cartwright (reputed inventor of the power loom), born in Leicestershire. In 1823 her *History of England*, partly in conversational form, appeared; in 1828, her *History of France*. She died of cancer. (1780-1837).

Markievicz, Constance Georgina, Countess, Irish politician, daughter of Sir Henry Gore-Booth, and wife from 1900 of a Polish count; was active first in the Labour and later in the Sinn Féin movement, and was sentenced to death for her part in the 1916 rebellion, the sentence being commuted to imprisonment. In De Valera's revolutionary government she was Labour Minister. She was the first woman to be elected to the British House of Commons, being returned for St. Patrick's, Dublin, in December, 1918, but she never took the oath or her seat. (1884-1927).

Mark Twain. See Clemens.

Marl, in geology, a sedimentary rock of intermediate composition between the calcareous and the argillaceous rocks, and sometimes called clayey limestone; generally laid down in freshwater lakes, and contains plentiful remains of fresh-water crustaceans, gastropods and algae. Red and green marls exist in the trias of England just below the bone-bed. In agriculture, marl means any soil which readily falls to pieces on exposure to the air, even though it has no lime in its composition.

Marlborough, market town in Wiltshire, England, on the Kennet, 38 m. E. of Bristol, with sack and rope making, brewing, and tanning industries, and a famous public school founded in 1843. The Marlborough Downs, near the town, are used for racehorse training. Pop. 3,900.

Marlborough, Duke of, soldier and statesman, born in Devonshire, and served in

Tangier in 1667; sent to help Louis XIV. in his Dutch wars, his courage and ability won him a colonelcy. He married Sarah Jennings in 1678, and 7 years later became Baron Churchill on James II.'s succession. As general he was employed in putting down Monmouth's rebellion; he succeeded to William of Orange in 1688, and received from him the earldom of Marlborough. He was in dis-favour from 1694 till the outbreak of the Spanish Succession War, in which he gained his great renown. Beginning by driving the Spaniards from the Netherlands in 1702, he won a series of important victories—Blenheim 1704, Ramillies 1706, Oudenarde 1708, and Malplaquet 1709—and contributed to enhance the military glory of England. Queen Anne loaded him with honours; large sums of money, Woodstock estate, Blenheim Palace, and a dukedom were bestowed on him. His wife was the Queen's closest friend, and the duke and duchess virtually governed the country, till in 1711 the Queen threw off their influence, and charges of misappropriation of funds forced the duke into retirement. He was restored to many of his offices by George I. in 1714, but for the last 6 years of his life he sank into imbecility. (1650-1722).

DUKE OF MARLBOROUGH

Marlborough House, mansion in London, built by Wren for the great Duke of Marlborough c. 1710, and since 1817 Government property. It has been used as a

residence by Edward VII. when Prince of Wales, Queen Alexandra, and Queen Mary, widow of George V.

Marlow, town of Buckinghamshire, England, on the Thames, 32 m. from London. Marlow Lock, one of the oldest on the Thames, was reconstructed in 1927. There are extensive beech woods and the surrounding scenery is remarkably beautiful. There are paper mills, a brewery, a cabinet factory and annual cattle show. Pop. 5,300.

Marlowe, Christopher, English dramatist and poet; son of a shoemaker at Canterbury. Besides a love poem entitled *Hero and Leander*, he was the author of 7 plays, the most famous being *Tamburlaine*, *Doctor Faustus*, *The Jew of Malta*, and *Edward the Second*. He made no attempt at comedy. Was killed at Deptford in a brawl. (1564-1593).

Marmalade, a general name for various fruits, especially citrus or those which have an acid taste, such as oranges, lemons, or barberries. The name is derived from Portuguese "marmelo," the quince, from which fruit marmalade was originally prepared. *Vitellaria mammosa* (the marmalade tree) is a West Indian tree of the family Sapotaceae, a milky tree with leathery leaves and large pulpy fruits.

Marmont, Auguste Frédéric, Duke of Ragusa, and marshal of France, served under Napoleon; received the title of duke for his successful defence of Ragusa against the Russians in 1805; was present at Wagram, Lützen, Bautzen, and Dresden, but came to terms with the allies after the taking of Paris, which led to Napoleon's abdication in 1814; obliged to flee on Napoleon's return, he came back to France and gave his support to the Bourbons. (1774-1852).

Marmora, Sea of, 175 m. long and 50 m. broad, lies between Europe and Asia Minor, opening into the Aegean through the Dardanelles and into the Baltic through the Bosphorus; the Gulf of Ismid indents the eastern coast. Marmora, the largest island, has marble and alabaster quarries.

Marmoset (*Hapalidae* or *Callithricidae*), a family of small

Anthropoid monkeys found almost exclusively in forest-areas of tropical S. America. The size of the different species varies from a few inches in length to one foot. The tails are long, bushy, and non-prehensile. The fur is thick and soft and of varying colours; the face short, with tufts of fur over the ears. Marmosets live on insects; they are sometimes kept as domestic pets.

MARMOSET

Marmot, the common name of the mammals of the genus *Arctomys* in the squirrel tribe of Rodenta, one species the common Marmot (*Arctomys marmotta*), being found in the Alpine regions of Europe. They have short bushy tails and the body is about 14 in. long. In colour they are greyish-brown. They commonly live in communities, burrow, and in winter often remain in a torpid state. Insects, roots and other vegetation form their diet. Prairie-Marmots or Prairie-Dogs (s.v.), are rodents of the genus *Cynomys*.

Marne, and Haute-Marne, contiguous departments in the N.E. of France, in the upper basin of the Marne R.; in both cereals, potatoes, and wine are the chief

products, the best champagne coming from the N. In the former, capital Châlons-sur-Marne, building stone is quarried; there are metal works and tanneries; in the latter, capital Chaumont, are valuable iron mines and manufactures of cutlery and gloves. It was the scene of two important battles in the World War. (See *Marne, Battles of the*.) Area (Marne), 3,170 sq. m.; (Haute-Marne), 2,420 sq. m. Pop. (Marne) 410,000; (Haute-Marne), 188,500.

Marne, Battles of the. The first Battle of the Marne in the World War began on Sept. 6, 1914, during the retreat of the Allies from the Sambre-Meuse line. It lasted seven days, and was really won on the extreme left by the British forces and the 5th French Army. The crisis was reached on Sept. 9. Von Kluck had aimed at dividing the British from the French Army, but British troops moving N.E. caused him to draw back on Château-Thierry. In the centre Foch successfully resisted attacks by Von Bülow, but his wings being driven back, eventually decided to push his centre forward, attacking the famous Prussian Guard. The German retreat now began. The German Army was forced to assume the defensive on the Aisne heights, and German hopes of a speedy victory were destroyed.

The second battle began with a great German attack on May 27, 1918. The line extended from Flanders to the R. Oise. After Ludendorff's successful attack, the French Army retreated to a line from Château-Thierry to Dormans. The 2nd American Division, with U.S.A. marines, counter-attacked and secured the SW. angle of the Salient. Ludendorff's last attempt began on July 15, but Foch's great counter-attack from Château-Thierry to the Aisne drove the German Army back. With their retreat across the Vesle the battle ended.

Maronites, a sect of Syrian Christians, originally Monothelites heretics, dwelling on the eastern slopes of Lebanon, where they settled in the 17th Century, and who joined the Roman Catholic Church in 1445; they maintained a long sanguinary rivalry with their neighbours the Druses (s.v.). A few are now settled in Cyprus. They number at present about 300,000.

Marot, Clément, French poet, born in Cahors; was valet-de-chambre to Margaret of Navarre; his satirical wit often brought him into trouble. His poems have left their impress on both the language and the literature of France, but in his own day he was best known for his metrical versions of the Psalms, which were commonly sung by the Huguenots. (1496-1544).

Marprelate Tracts, a series of scurrilous tracts published under the name of Martin Marprelate, but the work of different writers in the time of Elizabeth, aimed against prelacy. They gave rise to great excitement and some inquisition as to their authorship.

Marque. See *Letter of Marque*.

Marquesas Islands, a group of 13 small volcanic mountainous islands in the S. Pacific, 3,600 m. W. of Peru, under French protection since 1842; are peopled by a handsome but savage race, which is rapidly dying out; Chinese immigrants grow cotton. Area, 480 sq. m. Pop. 2,400.

Marquess (*Marquis*), a title of nobility in Great Britain and other European countries, derived from *marchio*, a name given to rulers of the border counties adjoining Wales and Scotland. The first English creations were those of Robert de Vere, Earl of Oxford, as Marquess of Dublin in 1386, and that of the Earl of Somerset as Marquess of Dorset in the following year. A Marquess

ranked below a Duke and above an Earl. At present (1938) there are 27 Imperial, 4 Scottish and 9 Irish marquesses.

Marquetry, the inlaying of pieces of the surface of another. It includes buhl, mosaic, parquetry, etc., and the work is done by cutting designs in low relief in pieces of wood or plates of metal and inserting portions of the second material, which may be ivory, stone, mother-of-pearl, coloured marble, or wood.

Marquette, Jacques (Père), French missionary and explorer, born in Laon; a Jesuit, he went to Canada in 1666; in 1673 accompanied Joliet in the exploration of the Mississippi, re-discovering the river; died while on a missionary journey to the Indians of the Illinois region. (1637-1675).

Marrakesh, town in Morocco, former capital of the Moorish empire, in the French zone, about 125 m. E. of Mogador and to the N. of the Great Atlas Mts. It is a residence of the Sultan of Morocco and an important trade centre, with manufactures of carpets. Pop. 190,300.

Marriage, in law, the voluntary union of one man and one woman to the exclusion of all others. It is a contract, and during its subsistence the personal rights and duties of the spouses are regulated by law. Varied forms of marriage are found among different peoples: polygamy, or plurality of wives; polyandry, where a woman has several husbands, usually brothers, at the same time, and cross-cousin marriage where the orthodox union is for a man to marry the daughter of his mother's brother, or of his father's sister.

To-day the monogamous marriage forms the basis of civilised society. In English law marriage cannot now be contracted by a person of either sex under the age of 16. Neither party may be bound by a subsisting legal marriage, be physically incapable of consummating the marriage, or be insane, but a marriage entered into during a lucid interval is not invalid. The parties to a marriage must not be within the prohibited relationships, namely brothers and sisters, uncles and nieces, aunts and nephews, half-blood relationships by affinity. A marriage may be invalidated by fraud or duress. Damages may be awarded for breach of promise.

Before a marriage can take place banns must be published for three successive Sundays in the parish or parishes, in which the two parties have resided for the preceding 15 days, the marriage taking place within 3 months of the last publication. As an alternative, notice may be given to a registrar of the district in which each party has resided for the preceding 7 days. A third necessary preliminary is the issue of a licence by the bishop or local incumbent.

Marriage at a church may take place only between the hours of 8 a.m. and 6 p.m. As soon as the registrar's certificate has been granted, a marriage may take place in any registered place of worship in the presence of the registrar or authorised representative. In Scotland marriages are regular or irregular. The former may be celebrated by a clergyman after the publication of banns, or a notice under the Notices Act of 1878. The latter is a form of marriage consisting of any acknowledgement followed by consummation: it may be registered before a sheriff.

Marrow (tissue), the medulla or soft filling the large intestinal cavities of the bones, especially the longer ones, the spongy tissue, and the articular extremities of these and the short rounded bones. It is an oily fluid contained in vessels. That which is contained in the tissues is reddish and contains cells from which the red corpuscles of the blood are derived.

Marryat, Frederick, novelist, born in Westminster; after service in the royal navy, which he entered in 1806, and in which he attained the rank of commander, he retired in 1830, and commenced a series of novels, *Peter Simple* and *Midasman Easy* being reckoned the best. (1792-1848).

Mars, the Roman god of war, the reputed father of Romulus, and the recognised protector of the Roman State, identified at length with the Greek Ares.

Mars, the exterior planet of the Solar system nearest the earth, of one-half its diameter, with a mean distance from the sun of 141,500,000 m., round which it takes 686 days to revolve, in a somewhat eccentric orbit, and 24½ hours to revolve on its own axis, which inclines to its equator at an angle of 29°. Examination of it shows that there is 4 times as much land as water on it, the so-called "seas" being now accepted as tracts of vegetation, apparently linked by a series of canals, the latter not actually defined as of objective existence. It is accompanied by 2 satellites, an outer making a revolution round it in 30 hours 18 minutes, and an inner in 7 hours and 38 minutes; they are the smallest heavenly bodies known to science.

Marsala, a seaport of Trapani province of Sicily, 70 m. from Palermo. It is renowned for the wines which take its name. It has also manufactures of soap, cement, and bricks. The district is largely devoted to fruit growing. Pop. 57,000.

Marseillaise, the hymn or march of the French republicans, composed, both words and music, at Strasbourg by Rouget de Lisle one night in April, 1792, and sung by the 600 volunteers from Marseilles who entered Paris on July 30 following. Prohibited during the monarchy and empire, it became eventually the national anthem of France.

Marseilles, second city and first seaport of France, on the shore of the Gulf of Lyons, 27 m. E. of the mouth of the Rhône; has extensive dock accommodation; does great trade in wheat, oil, wine, sugar, textiles, and coal, and manufactures soap, soda, macaroni, and iron. There is a cathedral, picture-gallery, museum, and library, schools of science and art. Founded by colonists from Asia Minor in 600 B.C., it was a Greek city till 300 B.C. After the days of Rome it had many vicissitudes, falling finally to France in 1575, and losing its privilege as a free port in 1660. Always a Radical city, it proclaimed the Commune in 1871. A cholera plague devastated it in 1885. Pop. 914,000.

Marshal, historically, an official who regulated combats in tournaments, or rank and precedence at feasts or processions. This latter function has devolved to some extent on the Earl Marshal of England, who is an hereditary officer of State, the Chief of the College of Arms, and performs important ceremonial functions at the Accession and Coronation of the Monarch. The Earl Marshal or Marshal of Scotland was a State officer who commanded the cavalry under the Constable. There were also law court Marshals, such as the Marshal of the King's Bench who had charge of old King's Bench prison in Southwark, and the Marshal of the Royal Household who heard pleas of the Crown. Field Marshal is the highest title of rank in the British Army; it was instituted in 1736, and the sign of rank is the baton. Marshal is also the highest title in the French, German and Italian Armies.

Marshall Islands, a group of islands under Japanese mandate. There are two groups, of which several islands are uninhabited: Ratak (13 islands) and Ralik (11 islands). Copra is exported. They belonged

to Germany from 1885 until the Treaty of Versailles, 1919. Pop. 10,000.

Marshal of the Air Force,

the highest rank in the Royal Air Force, corresponding to Admiral of the Fleet and Field-Marshal in the Navy and Army, respectively. In the same force the titles Air Chief Marshal, Air Marshal and Air Vice-Marshal correspond to Vice- and Rear-Admirals and Commodores in the Navy and to the various grades of general in the Army.

Marshalsea, former prison in Southwark, London, under the jurisdiction of the Royal Household. It was later a debtors' prison. In 1842 its prisoners and those of the Fleet prison were transferred to the Queen's Bench Prison.

Marsh Gas. See Methane.

Marsh-Mallow (*Althaea officinalis*),

a shrubby biennial or perennial herb of the order Malvaceae. It grows in marshes near the sea in temperate parts. The flowering stalks are about 3 ft. high and the flowers pale-rose. A demulcent derived from the root is used in making confectionery.

MARSH-MALLOW

Marsh's Test, a test for arsenic, which depends upon the fact that when a substance containing arsenic is added to a mixture of zinc and dilute sulphuric acid, the hydrogen coming off from the mixture will carry away the arsenic in the form of the gaseous compound arsine or arsenuretted hydrogen. On passing the issuing gas through a heated glass tube, the arsenic is completely deposited as a black lustrous mirror. By comparing this mirror with standard mirrors made under known conditions, the weight of arsenic in the specimen under examination may be determined with extreme accuracy and reliability. Antimony gives a similar reaction, but the arsenic mirror is soluble in a solution of bleaching-powder ("chloride of lime") whereas the antimony mirror is unaffected.

Marston, John, English dramatist, whose dramas are remembered chiefly for the poetic passages they contain. His masterpiece is a comedy entitled *What You Will*. (1575-1634).

Marston, Philip Bourke, poet, son of a dramatist; wrote three volumes of verse, admired by Rossetti and Swinburne; was blind from boyhood. (1850-1887).

Marsupials, an order of mammals, American opossums restricted to Australasia, and including kangaroos, wallabies, wombats, bandicoots, dasyures, etc., called marsupials because the female of most species has a pouch or fold of skin (*marsupium*) on the belly, in which the young are carried after birth.

Martello Towers, round towers of strong build, erected as a defence at one time off the low shores of Sussex, Suffolk, and Kent. They are of Italian origin, being named after a tower on Cape Mortello, in Corsica.

MARTELO TOWER

Marten, a quadruped of the weasel family and genus *Mustela*, of which there are several species. All inhabit the N. Hemisphere. The name applies especially to the common

pine-marten (*Mustela martes*) about 18 in. long with short legs, and dark brown fur, those in the N. of England and Scotland being yellow at the throat. The continental marten has a white throat. The skins are much valued as furs.

Martha, St., the traditional sister of Mary and Lazarus, the patron saint of good housewives, represented in art in homely costume, with a bunch of keys at her girdle and a pot in her hand. Festival, July 30.

Martial (Marcus Valerius Martialis), a Latin poet, born in Bilbilis, in Spain. His epigrams are distinguished for their wit, diction, and indecency, but are valuable for the light they shed on the manners of Rome at the period. (43-104).

Martial Law, law enforced by a military court. It was originally administered by the medieval Court of Chivalry or Court of the Marshal and Constable, the jurisdiction of which was laid down by a statute of 13 Richard II. It fell into abeyance under the Tudors and discipline was thereafter enforced by Articles of War issued by the Crown through its prerogative. These articles, valid only in time of war or rebellion, were frequently abused, and ultimately the enforcement of martial law against rioters or rebels was condemned by the Petition of Right (1628). But on the establishment of a standing army provision for discipline was made by the Mutiny Act, 1689, and courts martial were empowered to deal with mutiny and desertion in time of peace. Ultimately the provisions of the Mutiny Act and of the Articles of War were consolidated in the annually passed Army Act. In this sense martial law is merely a synonym for military law, a code by which only persons "subject to military law" under the Army Act are triable. For ordinary civil offences even a soldier is amenable to the civil courts. In another sense martial law is merely a popular expression denoting the authority exercised by military forces in occupation of a territory during civil or international disturbances, superseding the ordinary civil law. It is based on military expediency rather than any written code, and is not recognised by English law. Indeed, any act done by a military court after a so-called "declaration of martial law" can be inquired into by the ordinary civil courts after their restoration. Hence the necessity for duly regularising their procedure before they take over the duties of the ordinary civil courts.

Martin, the popular name of certain birds of the swallow (*Hirundinidae*)

family, especially applied in England to the House-Martin (*Chelidon urbica*), which nests under the eaves of houses and is distinguished from the swallow chiefly by its white rump and underparts; and to the Sand-Martin (*Cottia riparia*) which nests in a tunnel in a bank. Both are summer visitors to the British Isles.

HOUSE MARTIN

Martin, the name of five Popes: M. I., Pope from 640 to 655; M. II., Pope from 882 to 884; M. III., Pope from 943 to 946; M. IV., Pope from 1281 to 1285; M. V., Pope from 1417 to 1431, chosen to reunite the contending parties after the Great Schism, and distinguished for having condemned Huss to be burned.

Martin, Sir Theodore, Scottish man of letters, born in Edinburgh; acquired his first fame under the pseudonym of Ben Gaultier; is author of the *Life of the late Prince Consort*; with Aytoun wrote a *Book of Ballads*, and translated the *Odes of Horace*.

Dante's *Vita Nuova* and Goethe's *Faust*. (1816-1909).

Martin, St., bishop of Tours, born in a soldier, and meeting with a naked beggar one cold day in winter divided his military cloak in two, and gave him the half of it; was conspicuous both as monk and bishop for his compassion on the poor; was largely responsible for the spread of Christianity in France. d. 397. Festival, Nov. 11.

Martineau, Harriet, English authoress and economist, born in Norwich; she was an "advanced" thinker, and a disciple of Auguste Comte; wrote a number of successful stories bearing on social questions; her best-remembered book is *Feats on the Fjord*. (1802-1870).

Martineau, James, rationalistic theologian, born in Norwich, brother of the preceding; began life as an engineer; was at first a follower of Bentham and then a disciple of Kant. At one time a materialist, he became a theist, and eventually a Unitarian minister. He was a thinker of great power, and did much both to elevate and liberate the philosophy of religion. Author of the *Endeavours after the Christian Life*, *Hours of Thought on Sacred Things*, and *The Seat of Authority in Religion*. (1805-1900).

Martini, Friedrich, Hungarian inventor, born at Mehadia; as an engineer officer in the Austrian Army, fought against Italy in 1859, later becoming a gun manufacturer in Switzerland; won a competition opened by British Government, 1871, for the best rifle; with adaptations it became the Martini-Henry, used till 1889. (1832-1897).

Martinique, a West Indian French possession, one of the Lesser Antilles; has a much-indented, precipitous coast. A mountain range in the centre is densely wooded; the plains are fertile, and produce sugar, coffee, and cotton which with fruit and rum are the exports. The climate is hot and unhealthy. The island has been French, with three short intervals, since 1635; St. Pierre, the chief town, was destroyed in an eruption of the volcano Mont Pelée in 1902. The capital is Fort de France. Area, 385 sq. m. Pop. 247,000.

Martinmas, the feast of St. Martin (q.v.) on Nov. 11; a quarter day in Scotland.

Martyr, "witness," a term for those who suffer ignominy and death for the Christian religion. Festivals and prayers were offered at their tombs. The cultus of the martyrs rapidly spread, and became the basis of the honour paid to saints and holy men in general by the Roman Catholic and Eastern churches. A collection of the lives of martyrs and other saints is known as a martyrology. By extension the word is now used of any person who suffers or dies for his beliefs or opinions.

Marvell, Andrew, English poet and politician, born in Yorkshire; was first a lyric poet, and in politics much of a Royalist, at last a violent politician on the Puritan side, having become connected with Milton and Cromwell. He wrote a tract *On the Growth of Popery and Arbitrary Government in England* after the Restoration, which brought him into trouble. Being a favourite with the king, the king sought to bribe him, but in vain. He died suddenly, and an unfounded rumour was circulated that he had been poisoned. (1621-1678).

Marx, (Heinrich) Karl, a German Socialist and philosopher, born in Trèves, of Jewish descent; was at first a student of philosophy and a disciple of Hegel, but soon abandoned philosophy for social economy on a democratic basis and in a materialistic interest; early adopted socialistic opinions, for

his zeal in which he was driven from Germany, France, and finally Belgium, to settle in London, where he spent the last 30 years of his life; founded the "International" (q.v.), and wrote a work *Das Kapital*, which laid the foundations of modern Communist theory. He is buried at Highgate. (1818-1883).

Mary I., Queen of England, was born at Greenwich, daughter of Henry VIII. and Catharine of Aragon. After her mother's divorce she was treated with aversion. During Edward VI.'s reign she lived in retirement, clinging to her Catholic faith. On her accession in 1553 a Protestant plot to put Lady Jane Grey on the throne failed; she began cautiously to restore Catholicism, imprisoning reformers and reinstating the old bishops. On her choosing Phillip of Spain for her husband a revolt broke out under Sir Thomas Wyatt, and though easily put down was the occasion for the execution of Lady Jane Grey and the imprisonment of Elizabeth. After her marriage in 1554 the religious reaction gained strength, submission was made to Rome, and a persecution began in which 300 persons, including Latimer, Ridley, and Cranmer, perished in three years. Ill-health, Phillip's cruelty, and her childlessness drove her to melancholy; a war with France led to the loss of Calais in 1558, and she died broken-hearted, a virtuous and pious, but bigoted and relentless woman. (1516-1558.)

Mary II., Queen of England, daughter of James II., and Anne Hyde; was married to her cousin William of Orange in 1677, ascended the English throne with him on her father's abdication in 1688, and till her death was his much loved, good, and gentle queen. Greenwich Hospital for disabled sailors, which she built, is her memorial. (1662-1694).

Mary, Queen (Victoria Mary Augusta Louise Olga Pauline Claudine Agnes), consort of King George V. of Great Britain; daughter of the Duke of Teck; born at Kensington Palace on May 26, 1867. She was betrothed to the Duke of Clarence, eldest son of King Edward VII., but after his death, which occurred a month after the engagement was announced, married his younger brother, then Duke of York, and later King George V., on July 6, 1893; to him she bore five sons (the eldest being Edward, Duke of Windsor, the second King George VI.) and one daughter. After the death of her husband she made her home at Marlborough House, London. (1867-).

Mary, Queen of Scots, daughter of James V. of Scotland, and Mary of Guise, born in Linlithgow, became queen ere she was a week old. She was sent to France in 1548, and married to the dauphin in 1558, who for a year, 1559-1560, was King Francis II.

On his death she returned to assume the government in Scotland, now in the throes of the Reformation. She retained her own Catholic faith, but chose Protestant advisers. Against all advice she married her cousin Darnley 1565, who tried to force her to settle the succession on him and his heirs, and had her favourite Rizzio murdered, with Mary's connivance. Her only son, afterwards James VI., was born in 1566. The murder of Darnley took place in February, 1567, being accomplished by Hepburn, Earl of Bothwell, her marriage with whom in May alienated the nobles. They rose, took the queen prisoner, and forced her to abdicate. Next year, escaping, she fled to England, and

MARY
QUEEN OF SCOTS

was there for many years a prisoner. Catholic plots were formed to liberate her and put her in place of Elizabeth on the English throne; at last she was accused of complicity in Babington's conspiracy, tried, found guilty, and executed in Fotheringhay Castle, Feb. 8, 1587. (1542-1587).

Mary, the *Princess Royal*, third child and only daughter of King George V. and Queen Mary, born April 25, 1897. She married, on Feb. 28, 1922, Viscount Lascelles, afterwards 6th Earl of Harewood, to whom she has borne two sons, George, Viscount Lascelles (b. Feb. 7, 1923) and the Hon. Gerald Lascelles (b. Aug. 21, 1924).

Mary, The Virgin, mother of Jesus Christ. All that is known of her life is what is recorded in the New Testament, principally the gospel of St. Luke. According to tradition she lived at Ephesus with St. John after the crucifixion, and died there. In Roman Catholic theology her part in the plan of redemption has made her an object of worship next after the Divine Persons.

Maryborough, (1) county town of Co. Leix, Eire (Ireland), on a tributary of the Barrow, 50 m. SW. of Dublin. Pop. 3,200. (2) A town in March county, Queensland, Australia, 178 m. from Brisbane. It is on the R. Mary, 25 m. from its mouth, and in railway connection with mining, pastoral, and sugar-growing districts. Pop. 11,800. (3) A town of Talbot county, Victoria, Australia, 112 m. from Melbourne, a busy railway junction, with railway workshops. Pop. 5,700.

Maryland, an Atlantic State of the U.S.A., one of the 13 original states, occupying the basin of the Potomac and of Chesapeake Bay, with Pennsylvania on the N., Delaware on the E., and the Virginias on the W. and S.; has a much indented coast-line, affording great facilities for navigation. The soil is throughout fertile; on the level coast plains tobacco and fruit, chiefly peaches, are grown; in the undulating central land wheat and maize. The mountains in the W. are well wooded with pine; there are coal-mines in the W., copper and chrome in the midland, and extensive marble quarries; the shad and herring fisheries are valuable. The manufacture of clothing stuffs, meat packing, and metal goods is extensive. The climate of Maryland is temperate. The Johns Hopkins University is in Baltimore. Colonisation began in 1634, and a policy of religious toleration and peace with the Indians led to prosperity; the State was active in the War of Independence, and remained with the North in the Civil War. The capital is Annapolis, but the largest city is Baltimore, a great wheat-shipping port and centre of industry. Cumberland has brick and cement works, and Hagerstown has machine, farm implement, and furniture factories. Area, 12,300 sq. m. Pop. 1,632,000.

Marylebone Cricket Club.

See M.C.C.

Maryport, a market town and seaport of Cumberland, England, at the mouth of the R. Ellen. It has a harbour, docks, a prawn-fishing industry and an iron foundry. There are coal mines near. Pop. 12,400.

Masaccio, or Tommaso Guidi, an Italian painter, born in Florence; went when very young to Rome, where he painted in the church of St. Clement a series of frescoes, his greatest work being the frescoes in the Brancacci chapel of the Carmine Church. He was a great master of perspective and colour. (1401-1428).

Masai, a warlike Negro tribe in Africa, between the coast of Zanzibar and Victoria Nyanza, of powerful physique. From about 1850 to 1885 they were a formidable power in N. Africa, asserting themselves

with success against the Arab slave-raiders, but their power declined, largely through internal wars, and they later settled in reserves under British rule and engaged in stock-raising.

Masaryk, Thomas, Czechoslovakian statesman, son of a coach builder; trained for the teaching profession. During the World War he worked with Dr. Benes (q.v.) for the liberation of his country from Austria-Hungary, and on the declaration of its independence he became first President in Nov. 1918, retaining that office till 1935, and being admired by all Europe for his skill in managing its international relations. (1850-1937).

Mascagni, Pietro, Italian composer, born at Leghorn; wrote his most famous opera *Cavalleria Rusticana* in 1890, since when numerous others have been produced, with less success. (1863-).

Masefield, John, British poet, author, and playwright; on the death of Robert Bridges in 1936 he became Poet Laureate. His early days were spent in wandering around the world, many of them as an ordinary sailor, and in 1902 he published *Salt Water Ballads*, which caused a stir by their freshness. His poems are marked by great power and originality. *The Everlasting Mercy*, published in 1911, is his most celebrated poem; among his novels are *Captain Margaret* and *Sard Harker*. (1875-).

Mashonaland, district of central South Africa, a plateau 4,000 ft. high crossed by the Unvukwe Ntse, lying to the NE. of Matabeleland and S. of the Zambesi R., of which its streams are tributaries. It is now a part of the British Colony of Southern Rhodesia, having been under British protection since 1888. The natives are of Bantu stock; the country is very rich in iron, copper, and gold, and has traces of ancient scientific gold-mining.

Mask, Lough, lake in Eire (Ireland), about 11 m. long by 3 m. broad, forming a portion of the boundary of Mayo and Galway counties, and remarkable for its beautiful scenery.

Mason, Alfred Edward Woodley, novelist, born at Dulwich, London; educated at Dulwich College and Trinity College, Oxford. Liberal M.P. for Coventry, 1900-1910. His best-known novels are *The Courtship of Morris Buckler* (1896); *The Four Feathers* (1902); *At the Villa Rose* (1910); *The House of the Arrow* (1924). (1865-).

Mason and Dixon's Line,

so-called after two English engineers who surveyed it, 1764-1767, is the boundary separating Maryland from Pennsylvania and Delaware. During the Civil War the name was used of the boundary (not coincident with the real Mason and Dixon's line) dividing the free from the slave-holding states.

Masonry, the art of building in natural stone or artificial stone (concrete), and by extension, in brick, moulded earth (adobe, pisé), etc. The term also refers to the building itself. Stones vary in durability, hardness, etc.; those most commonly used are granite, gneiss, porphyry, marble, limestone, and sandstone. Cut stones are often backed with brick or with rubble masonry, the latter being composed of irregular stone, smaller in size than that used for dressed stone masonry. Rubble masonry may be given a squared facing, but the finest facing given to dressed stone masonry is called ashlar, this being a cut-stone masonry composed of large regular stones, carefully finished with cutting tools. At the present time the use of real stone in masonry has largely given way to that of artificial stone, or reinforced concrete, which can be moulded into any form for decorative work, arches, etc. in masonry

It is all-important that the blocks should be laid truly horizontally, with the joints truly vertical.

Maspero, Gaston Camille Charles, French Egyptologist, born at Paris; made extensive explorations and important discoveries in Egypt; wrote, among works bearing on Egypt, *Histoire Ancienne des Peuples de l'Orient*. (1846-1916).

Masque, a species of dramatic 'entertainment in which originally the performers wore masks of peculiar forms suggestive of the allegorical character assumed. Its essential feature was the presence of a group of dancers called masquers, who were frequently noblemen or courtiers. They neither spoke nor sang, their function being the creation of "an inspiring show" by their gorgeous costumes and fine presence, enhanced by artistic grouping and decoration. The speech and songs of the masque were always in the hands of a professional entertainer. The poetical background supplied by the genius of such writers as Ben Jonson and Fletcher enhanced the success of the 17th century Court masques in England. Milton's *Comus* is commonly reputed the finest example of a masque.

Mass, the name given by Roman Catholics (and some Anglicans) to the Christian service commemorating Christ's last Supper. *High Mass* or *Solemn Mass* is the most elaborate form of celebration, with music and incense; *Low Mass* dispenses with these ceremonial accessories. A *Requiem Mass* is one celebrated on behalf of the dead. In Catholic theology the Mass is a real sacrifice of the Body and Blood of Christ, offered to God the Father under the species of bread and wine; attendance at Mass on Sundays and certain great feasts is obligatory on every Catholic. The Mass may only be offered by a duly consecrated priest.

Mass, in physics, the measure of the quantity of matter in a body, as distinguished from *weight*, which is the force of gravity upon a body.

Massachusetts, a New England State of the U.S.A., lies on the Atlantic seaboard between New Hampshire and Vermont on the N. and Rhode I. and Connecticut on the S., with New York on its western border; has a long, irregular coast-line and an uneven surface, rising to the Green Mountains in the W. The scenery is of great beauty, but the soil is in many places poor, the farms raising chiefly hay, potatoes, tobacco, and dairy produce. The winters are severe. Its industries include cotton, woollen, worsted, clothing, leather and leather goods, iron and iron goods, printing. There are several important universities and colleges, including Harvard, Boston, Williams and others. Founded in 1620 by the Pilgrims.

Massachusetts had many hardships in early days, and was long the scene of religious intolerance and persecution. The War of Independence began at Bunker's Hill and Lexington in 1776. The capital and chief seaport is Boston; Worcester has machinery factories, Springfield paper, and Lowell cotton mills; Concord was for long a literary centre. Area, 8,270 sq. m. Pop. 4,250,000.

Mass Action, in chemistry, discovered in 1864 by Guldberg and Waage, states that the rate of a chemical reaction is proportional to the active masses of the substances taking part in it, i.e., to their concentration in gram-molecules per litre. It has been of great value in the study of chemical dynamics.

Massage, in medicine, a process of kneading, stroking, and rubbing with the fingers and palms of the hands, to the body as a whole or to locally affected parts, to allay pain, promote circulation, and restore nervous and vital energy.

It was practised in very early times in China and India; was known to the Greeks and Romans, and has been considerably developed in modern times as a therapeutic method.

Massagetae, in classical times a people said to live on the N.E. of the Caspian Sea, and to kill and eat the aged among them, in an expedition against whom, it is said, Cyrus the Great lost his life.

Massawah, seaport and capital of the province of Eritrea, Italian East Africa, situated on a barren island of the Red Sea. It is the chief port of Italian East Africa; pearl-fishing is carried on. Pop. 4,200, chiefly Somalis.

Masséna, André, Duc de Rivoli, Prince of Essling, one of the most illustrious marshals of France, born in Nice. He distinguished himself at Rivoli in 1796, at Zurich in 1799, at the siege of Genoa in 1800, at Eckmühl and at Wagram in 1809, and was named by Napoleon the favoured child of victory. He was recalled from the Peninsula by Napoleon for failing to expel Wellington. (1758-1817).

Massey, William Ferguson, New Zealand politician. Born in Ireland, he emigrated at the age of 14, and went in for farming. His political career started in 1894, when he became a local M.P. In 1903 he became leader of the opposition, and in 1912 Prime Minister, in which capacity he was a member of the Imperial War Cabinet and attended the Peace Conference in 1919. (1856-1925).

Massillon, Jean Baptiste, celebrated French pulpit orator, born at Hyères, Provence; entered the congregation of the Oratory, and was called to Paris. He was made bishop of Clermont, and next year preached before Louis XV., now king, his famous *Petit Carême*, a series of ten sermons for Lent. He was a devoted bishop, and the idol of his flock. (1663-1742).

Massinger, Philip, English dramatist. Little is known of his history except that he studied at Oxford, lived in London, and was buried as "a stranger" in St. Saviour's, Southwark. Of his 37 plays only 18 remain and of these the most famous is the comedy entitled *A New Way to Pay Old Debts*. Much of his work, it is alleged, was by way of collaboration with Dekker, Fletcher and other dramatists. (1583-1640).

Master, the title given to the heir of a Scottish peerage below the rank of earl, as Master of Sempill.

Master and Servant. In law a one who has contracted to lease his services to another for a limited period. Servants consist of two classes, those who engage to perform certain duties for certain wages and apprentices, who may receive something by way of wages, but who have to be taught a trade. The chief classes of servants are: agricultural labourers, operatives or skilled labourers, and menials or domestic servants.

In England, a contract for service for more than a year must be in writing: if for a year and if the servant be discharged without just cause during the year, he may claim wages up to the end of the year: on the other hand, if he leave without cause before the time no wages may be claimed. If he happen within the year to fall sick, or be hurt or disabled in the service of his master, the master cannot, apart from agreement, put him away or abate any part of his wages for that time.

If a domestic servant be engaged under no special contract, a month's warning or payment of a month's wages is all that is necessary to terminate the engagement. Operatives may be discharged or may leave at a week, fortnight or month's notice, according to the

recognised local or trade usage. The grounds on which a servant may be legally discharged without warning are: wilful disobedience of lawful commands, gross immorality, habitual negligence, dishonesty, permanent disability from illness, etc.

A master has no right to chastise a servant, but has the right of moderately correcting an apprentice under age. He is held liable in cases where his servant, in the course of his duty, injures a third party. A master can dismiss a servant without notice and without cause, on payment of wages for the full term of the contract, or for one month if there be no special agreement.

The death of a master terminates the contract, but in Scotland the servant can claim wages for the period of the contract, and in that case must serve the executor. In the case of bankruptcy of the master the servant, if a labourer or workman, is a privileged creditor for wages due, but not exceeding £25. If he be a clerk, shopman, etc., the period is four months, the limit £50.

Master of the Rolls, the custodian of the Record Office and principal Judge of the Court of Appeal; ranking in the English legal hierarchy immediately after the Lord Chief Justice.

Mastic, a brittle transparent resinous substance obtained in liquid form by making incisions in the mastic-tree (*Pistacia Lentiscus*) of the order Anacardiaceae. It is used as the main constituent of varnish and as a stopping in dentistry.

Mastiff, a massive and powerful British dog, weighing 155 to 175 lb.; The head should be broad and square forehead flat with depression in centre; muzzle short; ears thin; eyes small and wide apart; chest and ribs wide and deep; forelegs straight; loins and back wide and muscular; coat close and short, apricot or silver fawn in colour, with black ears and muzzle.

MASTIFF

Mastodon, one of an extinct species of elephant, of more primitive type than the mammoth, and belonging to the Miocene and Pliocene periods.

Mastoid, a mass of bone containing cavities which projects from the side of the human skull behind the ear. The mastoid antrum communicates with the middle ear and if the latter is diseased, is liable to suppurate. Suppuration may follow influenza or be caused by failure to keep the ear clean. The inflammation may cause an abscess and, if this is allowed to burst, grave danger may ensue.

Masurium, a supposed metallic chemical element, the discovery of which was claimed by Noddack and Tacke in 1926. Symbol Ma, atomic number 43, atomic weight undetermined. There is doubt whether the discovery can be authenticated.

Matabeleland, name (now little used) for the southern part of S. Rhodesia, the area conquered in 1840 by the Zulu Matabele tribes. It became British territory in 1890, native risings in 1893 and 1896 being put down. See Rhodesia.

Matanzas, province of Cuba, E. of m. Pop. 344,000. Also its chief town, 32 m. E. of Havana, with a large harbour; exports sugar and guavas. Pop. 70,000.

Match, a splint of wood or length of taper capable of ignition. Phosphorus tapers existed in the 15th Century, these being sealed matches which lighted by contact with

the air. The discovery of sulphide of phosphorus revolutionized match-making, and matches which ignite by friction with any surface are tipped with this substance. The "safety-match" resulted from Von Schrotter's discovery in 1855 of amorphous phosphorus, which acts as an oxidising agent to the material with which the match is tipped. Match-making has grown from a cottage occupation to a huge industry, especially in the countries round the Baltic, where the great forests supply matchwood.

Mate (*Ilex paraguayensis*), a species of holly, native of S. America, whose leaves, roasted and powdered, are used for the beverage "maté tea." It has a somewhat bitter flavour and is taken either neat or with lemon or sugar.

Materialism, the theory which, denying the independent existence of spirit, resolves everything within the sphere of being into matter, or into the operation and the effect of the operation of forces latent in it, or into the negative and positive interaction of mere material forces, to the exclusion of intelligent purpose and design. It is the first philosophical attempt to conceive the world as a unity, and is found in Buddhism as well as in the religious systems of the Chinese and Egyptians.

The clearest exposition is that of the Atomists, especially Democritus of Abdera who explained matter as an aggregation of atoms endowed with motion. He formulates the great principles of the indestructibility of matter and of the conservation of force. The doctrine was revived in England by Hobbes, in France by La Mettrie and Helvétius and in Germany as a reaction against the Idealism of Fichte and Hegel by Moleschott and Vogt. Materialists so far have failed to explain satisfactorily either the ultimate nature of the atoms or the phenomena of consciousness by means of atoms and motion.

Mathematics, owes its origin to the antiquity, of the rules for the arithmetical operations of addition, subtraction, multiplication and division, the need for systematic land measurement and the observation of periodical events in the skies which gave rise to a fixed calendar. Its progress was largely held back by the absence of any convenient way of expressing numbers and quantities, and the introduction into Europe about the 10th Century A.D., of the Indian Arabic system of numerals, 1, 2, 3 . . . , together with a special symbol for zero, marked a great advance. Arithmetical calculations were further simplified in the 17th Century by the introduction of logarithms.

About 600 B.C. the Greek, Thales of Miletus, made use of the deductive method in proving some theorems of geometry. Starting from certain axioms or hypotheses which were believed to be self-evident, Thales was able to show what other facts could be demonstrated by logical deduction. The application of this new method quickly led to the development of the subject of geometry (q.v.) and was gradually applied in all branches of mathematics. The 15th Century A.D. saw the growth of the science of algebra, and the following century the foundation of analytical geometry.

From the 17th Century onwards mathematical methods received greater and greater application in the physical sciences, and the problems requiring solution demanded, in their turn, the development of new and powerful branches of mathematics, such as the calculus and differential equations. The growth of mathematics has been particularly rapid during the last two or three centuries, and, at the present day, a mere catalogue of its chief branches would require a long list of subjects.

Mather, Cotton, an American divine, born in Boston; notorious for his belief in witchcraft, and for the persecution he provoked against those charged with it. His book, *Wonders of the Invisible World*, is famous as an attack upon alleged witches. (1683-1728).

Matilda, or Maud, daughter of Henry I., of England and wife of the Emperor Henry V., on whose decease she was married to Geoffrey Plantagenet of Anjou and became mother of Henry II.; on the death of her father succeeded to the English throne, but was supplanted by Stephen, by whom she was finally defeated. (1102-1167).

Matisse, Henri, French post-impressionist painter, born at Le Cateau. From 1895 to 1899 he worked in the classical tradition, and lived some time in Morocco. Under Gauguin's influence, he joined the Fauvist school, and soon became one of its leaders. (1869-)

Matlock, a watering-place in Derbyshire, on a slope overlooking the Derwent, 15 m. N.W. of Derby; famous for over two centuries for its waters. Pop. 16,600.

Matoppos Hills, a range of hills in Rhodesia, some 20 m. S. of Bulawayo. Cecil Rhodes is buried here.

Matriarchy, an order of society in precedence, more especially in reckoning descent, over the father. The existence of matriarchal rule, at one time supposed by many writers to have been not uncommon among primitive peoples, is now generally called in question.

Matriculation, in the general sense indicates admission to membership of any corporate body, but academically it means the formal entry into a university. The matriculation certificate of the University of London makes its holder an undergraduate of that University, and entitles him to become, under certain conditions, an undergraduate member of Manchester, Liverpool, Birmingham and some other universities. The standard of knowledge required by candidates is that which would be expected of a pupil of average ability who had been at a secondary school until reaching the age group of 16 to 18 years. As a preliminary to a course of study for external university degrees, all persons over the age of 16 are eligible. The choice of subjects is wide.

Matrix, the cavity in which anything is formed, and in mineralogy the natural material in which any metal or stone, etc., is embedded. In typography, a mould from which a stereo plate is made; also a mould used in making the face of a letter.

Matron, a term used to denote a married woman or a woman who has reached an age of staid demeanour, whether or not married. The term is particularly applied to women in charge of staffs of homes and such institutions as hospitals and homes for girls. See also *Nursing*. A jury of matrons, composed of married women, may be empanelled to inquire into the truth of a plea of pregnancy advanced in stay of execution by a woman sentenced to capital punishment.

Matsys, Quentin, a Flemish painter, born in Louvain, originally a blacksmith; did altar-pieces, especially that of Antwerp Cathedral, and genre paintings. (1468-1530).

Mattathias, Jewish national hero, the father of the Maccabees (q.v.), who in 170 B.C. refused the request of a Syrian embassy to sacrifice to the Syrian gods, slew the priest who offered to act in his place, and set up in the Judean wilderness the standard of revolt against Syria thus opening

the Maccabean war which eventually brought national independence.

Matter, in physics, is roughly defined as occupies space. The law of the conservation of matter states that matter can neither be created nor destroyed, and in ordinary circumstances this law holds good with extreme accuracy. Modern research has, however, shown that matter may be converted into energy, 1 gram of matter (of whatever kind) yielding 9×10^{10} ergs; the reverse process, viz., the conversion of energy into matter, is also possible. It is therefore more correct to restate the laws of the conservation of matter and energy as follows: the sum total of energy plus matter in the universe is a constant.

Matterhorn, a sharp Alpine peak, 14,780 ft. high, on the Swiss-Italian border, difficult of ascent; first scaled by Whymper, 1865.

Matthew, a tax-collector or publican, one of the twelve apostles of Christ, also known as Levi; generally represented in Christian art as an old man with a large flowing beard, and often as occupied in writing his gospel; Feast, Sept. 21.

Matthew, Gospel according to, the first book of the New Testament, based largely on a collection of sayings of Jesus or "Logia," and on the Gospel according to Mark; it was originally written in Aramaic; both its date and its authorship are uncertain.

Matthias Corvinus, King of Hungary from 1458, born in Klausenburg. Though arbitrary in his measures, he promoted commerce, dispensed justice, fostered culture, and observed sound finance. He founded the University of Budapest, an observatory, and great library, but his reign was full of wars. For nine years he fought the Turks, and took from them Bosnia, Moldavia, and Wallachia. From 1470 till 1478 the struggle was with Bohemia, from which he wrested Moravia, Silesia, and Lusatia; then followed war with Frederick III., the capture of Vienna, 1485, and a large part of Austria, 1487. He made Vienna his capital. (1443-1490).

Maubeuge, a strongly fortified town of France in the dept. of Nord, on the Sambre. In the World War it was taken by the Germans in 1914 and held until Nov. 1918. It has a large arsenal. The industries include metal and marble works. Pop. 22,000.

Maude, Cyril, English actor-manager, the leading comedian of his time; born in London, educated at Charterhouse. First appeared at Denver, Colo., in *East Lynne*, 1884; in England, at the Criterion, 1886, in *The Great Divorce Case*; in first performance of *The Second Mrs. Tanqueray*, 1893; joint-manager at the Haymarket, 1896-1905; built the Playhouse, 1907, which he managed until 1913. (1862-)

Maude, Sir Frederick Stanley, British general. Of Irish birth, he entered the Coldstream Guards, saw service in the Sudan and Boer War, and in Oct. 1914, took command of the 14th brigade in France. He was in charge of the 13th division in Gallipoli, and later in Mesopotamia, where he succeeded Townshend and captured Bagdad, where he contracted fever and died. (1864-1917).

Maugham, William Somerset, English born in Paris; educated at the King's School, Canterbury, and Heidelberg University; studied medicine, but in 1897 published his first novel, *Liza of Lambeth*. Besides several volumes of short stories, he has written many novels and plays, among the former *Of Human Bondage*, and among the latter *Our Betters*, a

social satire performed in New York, 1917, and London, 1932. His autobiography, *The Summing Up*, appeared in 1938. (1874-).

Maumbury Rings, circular earth mounds situated about $\frac{1}{2}$ m. S. of the town of Dorchester, Dorset, England. They form a circle capable of holding 12,000 persons. Excavations carried out 1908-1913 disclose that the original work was an earthen circle, with an interior ditch, dating from the late Neolithic to Early Bronze Age (c. 1800 B.C.). In Roman times the work was converted into the amphitheatre of the town of Durnovaria (the modern Dorchester).

Maundy Thursday, the Thursday before Good Friday, on which day it was customary for princes, rulers and other great persons to wash the feet of a number of poor people, and on which a distribution of alms ("Maundy money") is still made on behalf of the King to a certain number of poor persons.

Maupassant, Guy de, a French novelist, born in Fécamp; served in the Franco-Prussian War, and afterwards gave himself to letters, producing novels, stories, lyrics, and plays; died insane. (1850-1893).

Maurice, Frederick Denison, a liberal, born at Normanton, near Lowestoft, the son of a Unitarian minister; for a time edited the *Athenaeum*, and took orders in the English Church in 1834; held professorships in Literature, in Theology, and Moral Philosophy; was a disciple of Coleridge, a Broad Churchman, and with Kingsley, one of the originators of Christian Socialism, and the founder of the Working-Men's College. (1805-1872).

Maurice of Nassau, Dutch statesman, Prince of Orange; one of the most famous generals of his time; was son of William the Silent, on whose assassination he was elected Stadtholder, and became the liberator of the United Provinces of Spain. (1567-1625).

Maurier, Sir Gerald du, English actor-manager, born at Hampstead; made his first stage appearance in 1894. Among his successes were the parts of Captain Hook in *Peter Pan*, Hamlet, and Brewster, in *Brewster's Millions*. He was knighted in 1912. (1873-1934).

SIR GERALD
DU MAURIER

Mauritania, under the Roman empire name of the African country W. of the Muluya R. and N. of the Atlas Mts., from which supplies of corn and timber were obtained.

Mauritius, British possession in the Indian Ocean, 550 m. E. of Madagascar, a volcanic island with mountains 3,000 ft. high, a tableland in the centre, and many short streams. Formerly well wooded, the forests have been cut down to make room for sugar, coffee, maize, and rice plantations; sugar is the main export. The population is very mixed, including many Indians; there are also descendants of French settlers and Europeans. Discovered by the Portuguese about 1510, it was abandoned 90 years later; the Dutch held it for 112 years, and abandoned it in turn. Occupied by the French in 1721, it was captured by Britain in 1810. Area, 720 sq. m. Pop. 405,000. Port Louis (pop. 55,000) in the NW. Is the capital and a British naval coaling station.

Maurois, André, pseudonym of Émile French author, born at Elbeuf, educated at Rouen. Knowing English thoroughly, he was an official interpreter during the World War. His

first book, *Les Silences du Colonel Bramble*, 1918, displayed knowledge of English character. Other works are *Lives of Shelley*, *Disraeli and Byron*, and *Poets and Prophets*. (1885-).

Maurras, Charles Marie Phébus, French monarchist writer; born at Martigues (Bouches-du-Rhône); educated at Catholic College of Aix. With Léon Dauvet, conducted *L'Action Française* from 1908; imprisoned, 1926. His atheism antagonized the Church; but his authoritarian politics helped to form Italian Fascism. (1868-).

Mauser Rifle, a military rifle with ridges under the receiver in front of the trigger guard. The magazine box, which is movable, may be charged with a single cartridge or with five. It was invented by Paul Mauser, a German, and adopted as the standard rifle of the German Army. The Belgian Army adopted it in 1889, and the Argentine Republic two years later.

Mausolus, a king of Caria, husband of Artemisia, who in 353 B.C., at Halicarnassus, raised a monument to his memory, called the Mausoleum, reckoned one of the Seven Wonders of the world. From this is derived the use of the word to cover any large and imposing tomb.

Mauveine, the first of the aniline dyes to be prepared, was obtained by Sir W. H. Perkin in 1856 by the action of chromic acid upon aniline made from coal-tar benzene. The discovery was accidentally made while Perkin was trying to synthesize quinine.

Mawson, Sir Douglas, British explorer. He went to the Antarctic in 1907 with Shackleton, and in 1911 commanded the Australian Antarctic expedition, a venture which ended in failure and of which he was the only survivor. Knighted in 1914, he undertook a fresh voyage in the *Discovery* in 1929. (1882-).

Maxim, Sir Hiram Stevens, inventor, born at Tangerville, Maine, U.S.A., later a naturalized British subject; is best known in connection with the invention of the gun named after him, but among his other inventions are the smokeless powder, the incandescent lamp carbons, and searchlights and he also carried out early experiments in flying. (1840-1916).

Maximilian, Emperor of Mexico, was younger brother of Francis Joseph I., born in Schönbrunn; was made Mexican emperor under French influence in 1863, but roused the Liberal party against him, and at the head of 8,000 men was defeated at Queretaro, taken prisoner, tried by court-martial, and shot. (1832-1867).

Maximilian I. German Emperor, son of Frederick III., acquired Burgundy and Flanders by marriage, which involved him in a war with France; became emperor on the death of his father in 1893; became by marriage Duke of Milan, and brought Spain under the power of his dynasty by the marriage of his son Philip to the daughter of Ferdinand and Isabella. It was he who assembled the Diet of Augsburg at which Luther made appeal to the Pope. (1859-1919).

Max-Müller, Friedrich, philologist, born at Deesau, son of a German poet, Wilhelm Müller; educated at Leipzig and Paris, and came to England in 1846; was appointed Taylorian Professor at Oxford in 1854, and in 1868 professor of Comparative Philology there, a science to which he made large contributions, editing and translating many Hindu, Buddhist and other Eastern works, and writing much on the origin and development of language. (1823-1900).

Maxton, James, Scottish politician, educated at Glasgow, by profession a teacher. Member of Glasgow Education Authority, and Scottish organizer of Independent Labour Party, 1913-1922; M.P. for Bridgeton from 1922. Is leader of the Independent Labour Party group in Parliament, leading it in secession from the official Labour Party in 1931. (1885-

JAMES MAXTON

May, the fifth month of the year, so called from the Latin *Maia*, itself derived from a Sanskrit word signifying to grow, as being the shooting or growing month.

May, Phil, British artist who, after some work on the *Sydney Bulletin* in Australia, made a name by comic drawing, especially his Cockney studies in *Punch* and other periodicals and his work for the *Graphic*. (1864-1903).

Mayas, an ancient people of Central America, whose high pitch of culture is revealed by the monuments, remains of palaces, temples, and pyramids found in Yucatan. At the present time the race is represented strongly in Yucatan, where the language is still spoken.

Mayenne, inland dept. of NW France; mainly agricultural; cattle and horses are raised, and stone quarried; capital, Laval; area, 1,985 sq. m. Pop. 251,400.

Mayfair, a western district of London, containing some of its most fashionable residential and shopping centres. It includes Curzon Street, Berkeley Square, and Grosvenor Square; it is bounded roughly by Oxford Street, Bond Street, Piccadilly, and Park Lane.

Mayflower, The, the name of the small brigantine on which the "Pilgrim Fathers" (q.v.) sailed from Plymouth on Sept. 6, 1620, landing at Plymouth Rock, Massachusetts on December 21. This band of English Separatists formed the nucleus of the earliest permanent colony in Massachusetts.

Mayfly. See *Ephemera*.

Maynooth, village in co. Kildare, Eire (Ireland), 15 m. W. of Dublin; is the seat of a Roman Catholic seminary founded by the Irish Parliament in 1795 on the abolition of the French colleges during the Revolution; an annual grant of £9,000 was made, increased to £26,000 in 1846, but commuted in 1869 for a sum of £1,100,000, when State connection ceased; the college houses 500 students for the priesthood.

Mayo, maritime county in Connaught, Eire (Ireland), between Sligo and Galway; has many indentations, the largest Broadhaven, Blacksod, and Clew Bays, and Achill and Clare Is., with a remarkable peninsula, The Mulllet; mountains in the W. and E. are more level, and has Lough Conn and the Moy R. Much of the county is barren and bog, but crops of cereals and potatoes are raised; cattle are reared on pasture lands. There are valuable slate quarries and manganese mines. Castlebar, in the centre, is the county town; Westport, on Clew Bay, has some shipping. Area, 1,324,000 acres. Pop. 161,000.

Mayors, chairmen of city and borough over which they preside. The office dates back to the time of Henry II. London and 1 of the large provincial cities have Mayors. The equivalent name in 11s Provost.

Mayweed (*Matricaria inodrata*), an annual or perennial plant of the order Compositae with finely dissected leaves and with white ray florets and yellow discs. It grows throughout Europe and Asiatic Russia.

May Week, the annual summer inter-collegiate races for the headship of the river held at Cambridge every June, when the college balls also take place.

Mazarin, Jules, Italo-French cardinal and statesman, born in Piacenza, Abruzzi. Having been sent by the Pope on an embassy to France, he gained the favour of Richelieu, whom he succeeded, being naturalized as a Frenchman in 1642. He brought the Thirty Years' War to an end by negotiating the peace of Westphalia, crushed the revolt of the Fronde (q.v.), and imposed on Spain the treaty of the Pyrenees. At first a popular minister, he began to lose favour when cabals were formed against him, and he was dismissed, but he contrived to ally the storm, regained his power, and held it till his death. He died immensely rich, and bequeathed his library, which was a large one, to the College Mazarin. A bible in the Mazarin library, dated 1456, is known as the "Mazarin Bible." (1602-1661).

Maze, a building or place constructed of egress difficult. Such devices were known to the classical world, existing in Crete and Egypt. There is a well-known maze at Hampton Court made in the reign of William III., the paths of which are bordered with yew trees. See also *Labyrinth*.

Mazeppa, Ivan, hetman of the Cossacks, born in Podolia; became page to John Casimir, king of Poland; was taken by a Polish nobleman, who surprised him with his wife, and tied by him to the back of a wild horse, which galloped off with him to the Ukraine, where he joined a Cossack band, became secretary to their hetman, and finally hetman himself. He won the confidence of Peter the Great, who made him a prince under his suzerainty, but in an evil hour he allied himself with Charles XII. of Sweden; fled to Bender on the defeat of the king at Pultowa in 1709. (1645-1709).

Mazurka, a lively Polish dance, executed by four or eight couples, and much practised in the N. of Germany as well as in Poland; a favourite form of composition with Chopin.

Mazzini, Giuseppe, Italian patriot, born in Genoa, his life spent in political agitation for the regeneration of his country on a democratic basis; was arrested in 1831 and expelled from Italy; organized at Marseilles the secret society of Young Italy whose motto was "God and the People"; lived in Marseilles, Switzerland and London, until on the outbreak of the Revolution in 1848 at Paris he hastened thither to join the movement, which had spread into Italy, where in 1849 he was installed one of a triumvirate in Rome and conducted the defence of the city against France, but refused to join in the capitulation; he returned to London and eventually retired to Geneva. (1805-1872).

M.C.C., the Marylebone Cricket Club, formed about 1787 as a development of the White Conduit Cricket Club, whose members played cricket at White Conduit Fields, Islington. In that year Thomas Lord acquired a ground for the club at what is now Dorset Square. The club's present ground at St. John's Wood was acquired in 1808. During the whole of its existence it has been recognised as the controlling authority of cricket.

Mead, a beverage made by fermenting barley, honey, used in civilized and barbarous Europe from very early times.

Meadow Grass, a general name for *Poa* of which there are 150 species, 8 being found in Britain. They include some of the commonest grasses, small or tall, with spreading panicles, and some useful pasture grasses. The spikelets have two or more florets.

Meadow Rue (*Thalictrum flavum*), a herbaceous British wild

plant of the natural order Ranunculaceae. It has fine compound leaves. The stems, short or tall, are crowned with numerous small flowers, giving a feathery effect. A number of other allied species, also so called, are grown in gardens as perennials for the sake of their fern-like foliage and attractive flowers.

MEADOW RUE

Meadow Saffron, or Autumn Crocus. See Colchicum.

Meadow Sweet (*Spiraea Ulmaria*), a plant of the rose (Rosaceae) order, growing wild in Britain. It bears sweetly-scented creamy-white clustered flowers and grows in moist soil, frequently by ditches and ponds. It grows 2 ft. to 4 ft. high. At least one variety (*S. ulmaria flore pleno*) is grown in moist peaty soil in gardens.

Mealie, the South African name for Indian corn or maize (q.v.)

Measles, an acute infective and eruptive fever, caused by a specific germ, as yet unidentified. It is a serious illness, chiefly on account of possible complications, such as broncho-pneumonia, laryngitis, inflammation of the ear, and various nervous disorders. It most commonly occurs in young children, during the winter or spring. The incubation period is generally a fortnight, and quarantine 15 days. The rash appears on the fourth day, spreading from below the ears to the face and over the body; earlier symptoms are acute catarrh of the eyes and nose, an aversion from light, and a fairly high temperature. The rash, consisting of groups of raised spots, begins to subside after 2 days, the temperature returning to normal after a week.

Meath, a county of Leinster, Eire (Ireland), touching the Irish Sea between Louth and Dublin, watered by the Boyne R. and its tributary the Blackwater. The surface is undulating, the soil fertile; some oats and potatoes are grown, but most of the county is under pasture. There is a little linen and coarse woollen industry. The chief towns are Navan, Kells, and the county town, Trim. Meath was in ancient Ireland, one of the five kingdoms into which the country was divided. Area, 903 sq. m. Pop. 61,300.

Meaux, French town, on the Marne, 28 m. N.E. of Paris, a well-built town, with Gothic cathedral; has a large corn and provision trade, and copper and cotton industries; Bossuet was bishop here, and it contains his grave. Pop. 13,000.

Mecca, the birthplace of Mohammed, the capital of Hejaz and the former capital of Arabia; in the midst of sandy valleys, and 60 m. distant from Jeddah, its port; a city to which every Mussulman must make a pilgrimage once in his life. Pop. 80,000.

Mechanics, that branch of physical science which studies forces and their effect upon bodies as regards motion, acceleration, equilibrium, etc. The science was founded by Galilei (q.v.), Stevinus (1548-1630), and Newton (q.v.), and the Newtonian system is still entirely adequate for all except the most minutely accurate requirements, where it is supplemented by the

recent work of Einstein. See *Statics*, *Dynamics*, *Kinetics*, *Kinematics*.

Mecklenburg, a German "land" the union of the former states of Mecklenburg-Schwerin and Mecklenburg-Strelitz, on the shores of the Baltic between Schleswig-Holstein and Pomerania; is mostly a level, fertile plain, with numerous small rivers and many lakes. Agriculture is the chief industry; merino sheep are renowned; there are iron-founding, sugar-refining, and tanning works, and amber is found on the coasts. Schwerin (pop. 54,000) on Lake Schwerin, is the capital. Rostock, a busy port on the Baltic has a University. Area, 8,200 sq. m. Pop. 805,000.

Medal, a small plate of metal bearing an inscription or design, struck to commemorate some notable occasion or event; the word to-day has only this specialised sense, but in classical times medals were not differentiated from coins. The art of striking medals reached its height between the 14th and 15th Centuries. Two schools, the Italian and the German, were particularly prominent, the former distinguished by the work of Vittore Pisano, the latter by that of Albrecht Dürer. The 17th Century saw the rise of the French and Dutch schools. In England, medals have been struck since the 16th Century. Since Waterloo (1815), campaign medals have been regularly awarded, as well as medals for valour and distinguished conduct. The Victoria Cross was instituted in 1856, the Conspicuous Gallantry Medal in 1855, the Distinguished Conduct Medal in 1846. There are special medals for the R.A.F. (the Distinguished Flying Medal, 1918), and life-saving medals are awarded by various institutions, the Royal Lifeboat Institution, the Board of Trade, etc. Since Edward VI. there has been an uninterrupted series of Coronation medals.

Medallion, a coin or medal struck to commemorate some particular event. In architecture the name is used of a tablet, in relief, for mural decoration.

Medea, a famous sorceress of Greek legend, daughter of Æetes, king of Colchis, who assisted Jason (q.v.) to acquire the Golden Fleece, and accompanied him back to Greece as his wife. By her art she restored the youth of Eson, the father of her husband, but the latter having abandoned her she avenged herself on him by putting the children she had by him to death. Her story is the subject of a play by Euripides.

Media, a country on the SW. of the Caspian Sea, originally a province of the Assyrian empire, from which it revolted; was after 150 years of independence annexed to Persia by Cyrus, of which it had formed the NW. portion; it is now part of Iran.

Medici, an illustrious family who, at Florence in the 15th Century, the most celebrated members of

which were: Cosimo de', surnamed the "Father of his country," was exiled for ten years but recalled, and had afterwards a peaceful and prosperous reign; was a student of philosophy, and much interested in literature (1389-1464).

Lorenzo de', the Magnificent, did much to demoralise Florence, but patronised literature and the arts (1448-1492). Other celebrated members of the family were Pope Leo X., Clement VII., and Catharine and Mary de' Medici.

LORENZO DE' MEDICI

Medicine, the science of treating disease with a view to cure, has in the Western world a continuous history since Hippocrates, a Greek of 400 B.C., whose methods have been preserved in the Hippocratic Corpus. The second great figure in medical history was a Roman, Galen, who began to practise in the 2nd Century A.D., and after whom for fourteen centuries medicine remained almost stationary. In the Middle Ages the foremost practitioners were Arabs and Jews. In the 16th Century three men stand out—Paracelsus, a Swiss; Vesalius of Flanders; and Ambroise Paré of France. During the 17th Century special progress was made in anatomy, physiology, chemistry and ophthalmology. In the second half of the 19th Century surgical practice made rapid strides after the discovery of anaesthetics (first widely used by Simpson of Edinburgh), and the antiseptic principles of Lister, who applied the work of Pasteur, the founder of modern bacteriology (see also *Surgery*). The discovery of X-rays towards the end of the century had an immediate effect in the treatment of injuries, lesions, diseased tissues, etc. (See *Radiology*.) During the 20th Century the preventive side of medicine was developed. Laws were made relating to public health, sanitation, and the health of the worker, and clinics were established to deal with tuberculosis, venereal disease, and for maternity and child welfare. Before beginning medical practice the student must have his name entered on the Register of the General Medical Council, and for this certain medical degrees or other recognised qualifications are necessary.

Medicine Hat, a town of Alberta, is found in the district, and among its industries is that of flour-milling. It is an air-port. Pop. 10,300.

Medick (*Medicago*), a genus of clover-like plants with yellow or purple flowers. Some species, including alfalfa or Lucerne (*M. sativa*), are grown as fodder. Six species are found in England, known as medick, nonsuch, burweed, etc.

Medina (lit. the city), called also *Medina-en-Nabi*, 210 m. N. of Mecca, the city where Mohammed found refuge after his "flight" from Mecca in 632, and lived thereafter. His tomb is in a beautiful and rich mosque called El Haram (i.e., the inviolate), erected on the site of the prophet's house. Pop. c. 20,000.
